entire county in which it stands, have permanently retained. The first of the family who settled in Scotland, was Robert de Montgomery. Walter, the son of Allan, the first steward, having obtained from David I. several Scottish estates, Robert accompanied him from Wales to take possession of them, and received from him the manor of Eaglesham in Renfrewshire. This was, for two centuries, the chief possession of the Scottish section of the Montgomeries. John de Montgomery, seventh laird of Eaglesham, married Elizabeth, daughter and sole heir of Sir Hugh de Eglinton, and niece of King Robert II., and obtained through her the baronies of Eglinton and Ardrossan. At the battle of Otterburn he had the command of part of the Scottish army under the brave Earl of Douglas, and, by his personal valour and military conduct, contributed not a little to the celebrated victory which was achieved. The renowned Henry Percy, well known by the name of Hotspur, who was general of the English army, Sir John Montgomery took prisoner with his own hands; and with the ransom he received for him, he built the castle of Polnoon in Renfrewshire: see article **EAGLESHAM**. His grandson, Sir Alexander Montgomery, was raised by James II., about 1488, to the title of lord Montgomery, and inaugurated into the office of king's baillie of Cunningham. His son, Hugh, was elevated, about 1508, to the title of Earl of Eglinton; and, a few years previously, in June, 1498, obtained a charter to himself and his heirs of the office of baillie of Cunningham, and chamberlain of the town of Irvine. About the time of his obtaining this charter, a feud arose between him and Lord Kilmaurs, which continued between the families, and occasionally blazed forth in deeds of violence, and originated tedious and fruitless appeals to umpires, till after the union of the crowns. Hugh, one of the line of Earls, came into possession of the earldom when considerably under 16 years of age; and having, for a time, been placed or rather coercively brought under the curatorship of his grand uncle, Sir Neil Montgomery, of Langshaw, he eventually enjoyed his inheritance during only ten months when he fell the victim of his family's hereditary feud. Riding from his own castle, towards Stirling, on the 20th of April, 1586, he was, at the river Annock, waylaid and shot by David Cunningham of Robertland, and other Cunninghams, the emissaries of the Earl of Glencairn, the descendant of Lord Kilmaurs. Though this atrocious act of assassination created a strong sensation throughout the country, and was afterwards partly punished by Robert, the master of Eglinton, it was at length, under the feeble and capricious administration of the pedant, James VI., formally pardoned. So late as twenty years after this event, on the 1st of July, 1606, the old feud broke out in a violent tumult at Perth, under the very eyes of parliament and the privy-council. In the 18th century, all the valuable improvements in gardening, planting, and agriculture, which, during half-a-century, were made in the parish of Kilwinning, and throughout a great part of Ayrshire, proceeded, in a great measure, from the spirited exertions, combined with the fine taste of Alexander, Earl of Eglinton. Nor was his successor in the peerage less distinguished for his magnificent and costly, though considerably unsuccessful, schemes to enrich the district of Cunningham, and advance the public weal of Scotland, by improving the harbour of Ardrossan, and cutting a canal to it from the city of Glasgow: see **ARDROSSAN**. Happy would it be for themselves, their posterity, and the population of the territories in which their estates are situated, if persons of rank and fortune copied the example of this munificent and patriotic nobleman. But something different must be said respecting the enormous expenditure,

at Eglinton castle, in the month of August, 1839, upon a gorgeous pageant, in imitation of the tournament of the Middle ages,—a “passage of arms,” as a tilt with wooden poles smoothly rounded at the end, over lists carefully strewn with saw dust five inches deep, yielding soft repose to unhorsed knights, was somewhat facetiously termed.—Susanna, the third wife of Alexander, the ninth Earl of Eglinton, and daughter of Sir Archibald Kennedy of Culzean, is celebrated for her personal beauty, and for her transmission of a nobleness of mien, distinguished at the period as “the Eglinton air,” to a family of one son and seven daughters.

EGLISHAY. See **EAGLESHAY**.

EIGG, or **EGG**, one of the Western isles, attached to the county of Inverness, and one of the cluster which composes the parish of Small Isles. It is $6\frac{1}{2}$ miles in length, and from 2 to 3 in breadth; and is about 8 miles west of Arisaig, the nearest part of the mainland. It is partly flat, and partly hilly and rocky, having a small valley running through it. The low grounds are tolerably productive. The superficial area is 5,580 Scots acres, whereof 935 are arable; and the gross rental, in 1826, was £650. Basaltic pillars here and there appear over the whole island; along the coast, the rocks are chiefly of a light honey-comb lava, having a great resemblance to other volcanic productions. Scure Eigg, according to Mr. Jameson, is the highest part of the island. This hill, from its peculiar shape, has at a distance a singular appearance; but, as we approach nearer, it rises in grandeur, and at length, a stupendous columnar promontory bursts on our view. The whole of this promontory is perfectly mural, extends for upwards of $1\frac{1}{2}$ mile, and rises to the height of 1,340 feet. It is entirely columnar, and the columns rise in successive ranges until they reach the summit, where, from their great height, they appear diminutive. Staffa, the most magnificent assemblage of natural columns that has yet been discovered, is the only one that can bear a comparison with Scure Eigg. On the south coast of Eigg, there is a small island, called Eilan-Chastel, on which a few persons, tending cattle, live during part of the summer months. The sound between this island and Eigg makes a tolerable harbour for vessels not exceeding 70 tons. The air is generally moist, and the weather rainy; the climate, however, is healthy. The language principally spoken and universally understood is Gaelic, and from it the names of places seem mostly to be derived. There are various Danish forts; and, on the farm of Kill-Donnain, near an old Popish chapel, is a barrow which is said to be the burial-place of Donnain, the tutelary saint of Eigg. The population, in 1801, was 500, and continues stationary; about one-half are Roman Catholics. The minister of Small Isles has his manse on this island, which is ecclesiastically in the presbytery of Skye.

EIL (**LOCH**), the upper part of an inlet from the sea, which nearer the ocean is known by the name of Loch-Linnhe. From Corran-ferry, where the loch changes its name, it stretches 10 miles north-east, between the counties of Argyle and Inverness, to Fort-William, where it takes a sharp turn, and extends 12 miles in a west-north-west direction. Near its head is the house of Loch Eil, the residence of the chief of the family of Cameron.

EILDON HILLS, a brief mountain-range of three conical summits, in the parish of Melrose, Roxburghshire. The central summit rises, according to some, 1,330 feet, and according to Sir John Leslie, 1,364 feet above the level of the sea, and is celebrated for the opulence of the scenery which it overlooks; and the north-eastern summit, scarcely less elevated, and commanding a minute view of the rich beauties at its

base, and a full view of most of the landscape seen from the loftier summit, is famous for its monuments of antiquity. From the north only these summits—each more important than the third—are visible; and, as seen from that quarter, they possess a lovely outline, and exquisite proportions, towering aloft on a base of irregular but generally rapid acclivity from the banks of the Tweed, and forming a magnificent back-ground to a picture full of minute and various beauties. Seen from the south, all the summits are in view, but heathy and bleak in their appearance, and serving as a foil to the luxuriance and the brilliant displays of the surrounding country. Looking down from the Eildons, an observer sees at his feet the fine abbey of Melrose peering out from among trees, and the joyous movements of the Tweed, windingly prolonging its stay among villas and clusters of plantation and verdant slopes and all the varieties of a gay river's adornments of holiday dress; lifting his eye higher, he surveys a sea of hills, wearing the uniform hue of pastoral wildness, till they terminate in the distant ranges of Lammermoor and the Yarrow braes; and, turning slowly southward, he observes minutely the attractions of Cowdenknows and the lands of Dryburgh, and sees all Teviotdale and the Merse—rich in scenery as in song—hung out before him like a panorama, till the horizon is hemmed in by the long blue line of the hazily seen Cheviots. On the side of the Eildons is an artificial tumulus, called the Bourgo, of great extent, and currently believed to have been the scene of Druidical orgies. On the north-eastern summit are vestiges of a Roman camp, fortified with two fosses and earthen mounds more than $1\frac{1}{2}$ mile in circuit; and having a level space near the centre, where was the pretorium, or general's quarters. The camp included springs of good water, and an ample supply of wood for fire; and—affording abundant space for man, beast, and baggage, and lifting the eye away to even a very distant view of any enemy—it had all the properties of a well-chosen station.—Mr. Kemp, the intelligent manager of the gas-works in Galashiels, has discovered appearances on the Eildon hills of the same kind as the famous parallel roads of Glen Roy. There are no fewer than sixteen distinctly traceable terraces running round these hills, and rising one above another like the steps of a stair.

EISDALE. See EASDALE.

ELCHIES, an ancient vicarage, now comprehended in the parish of KNOCKANDO: which see. It is 11 miles south by west of Fochabers.

ELCHO-CASTLE. See RHYND.

ELDERSLIE, a village in the Abbey parish of Paisley, Renfrewshire, about 2 miles westward from the cross of that town. The inhabitants are chiefly weavers, cotton-spinners, and workmen at the neighbouring coal-pits and quarries. As the village is intersected by the high-road leading from Paisley westward, and as the canal from Glasgow to Johnstone, and the railway from Glasgow to Ayrshire, both pass close to it, it enjoys great facilities for commercial intercourse. "There is a copious supply of excellent spring water, especially from the Bore, a spring so called from its water having come in contact with a shaft which was put down about the beginning of this century, when boring for coal. Population, in 1831, 1,099.—A neat church, connected with the Establishment, was erected here in 1840; it contains 800 sittings.

Mr. Ramsay, in his *Notices of Renfrewshire*, says: "The place called Elderslie, also written Ellerslie, has been rendered classical by its association with the name of the renowned Sir William Wallace:—

Aft have our fearless fathers strode
By Wallace's side,
Still pressing onward red-wat-shod,
Or glorious died."

Near the west end of the village, and close to the north side of the turnpike-road which passes through it, stand the shattered remains of the celebrated tree, called 'Wallace's Oak,' among the branches of which, when in full leaf, tradition affirms that our great patriot-hero concealed himself from the English. In transmitting this tradition, the popular voice, ever prone to exaggerate, has magnified it so much as to assert that the branches afforded shelter, not only to Wallace, but also to 300 of his followers. The modified form of the narrative is surely sufficient to induce every true Scotsman to contemplate this 'monumental oak' with reverence. In the year 1825 the trunk measured 21 feet in circumference at the ground, and 13 feet 2 inches at 5 feet from the ground. It was 67 feet high, and the branches extended 45 feet east, 36 west, 30 south, and 25 north, covering altogether a space of 19 English poles. Since that time the dimensions of the tree have been much diminished, partly through natural decay, but chiefly by the cutting-off of portions, which are preserved in many a form as mementos of the indomitable supporter of his country's independence.—The barony of Elderslie belonged to Sir Malcolm Wallace, and here, as is generally believed, his heroic son first saw the light. Near the oak-tree, but on the south side of the road, a plain building of rather ancient appearance is pointed out as the very house in which Wallace was born; but the architecture and the condition of this edifice show that it must be referred to an era much more recent than that in which he flourished. Any mansion which then existed at this place must have decayed, or been destroyed, in the course of the five centuries which have since rolled away. Adjoining the house just noticed is an old garden, from the foundations of the walls of which there was dug, about 30 years ago, a stone bearing the following inscription, cut in Roman letters: 'W. W. W. CHRIST IS ONLY MY REDEEMER.' These initials probably indicate two proprietors of Elderslie, William Wallace, father and son, who lived in the 16th century. In the garden there is to be seen a fine and very old specimen of the Scottish yew. The name of 'Wallace's Yew' has been assigned to it, probably for no other reason than because it stands at a spot hallowed by his name.—Elderslie remained for nearly five centuries, after Wallace's time, in the possession of various branches of the family from which he was descended. In 1729 it fell to an heiress, Helen Wallace, only child of John Wallace of Elderslie, and wife of Archibald Campbell of Succoth. The late Sir Ilay Campbell, Bart., Lord-president of the court of session, was one of the children of this marriage. In 1769 Mrs. Campbell sold the estate to the grandfather of the present proprietor, Alexander Speirs, Esq.—A large straggling village now occupies the grounds of Elderslie. It shows the thriving state of our manufactures, but it degrades this interesting spot, and tends to repress the enthusiasm with which, from its connexion with the history of the illustrious Scottish champion, it would otherwise be contemplated."

Elderslie house, the seat of Mr. Speirs, is situated upon the left bank of the Clyde, adjacent to the burgh of Renfrew, at the distance of $5\frac{1}{2}$ miles from the village of Elderslie. It was built in 1777-82 by his grandfather, who, in 1760, had purchased the ground on which it stands, and who gave it the name of the estate from which he took his designation. Elderslie house has, since that time, been enlarged and improved. It fronts to the south, and is surrounded by a fine park.

"At Wallace's name what Scottish blood
But boils up in a spring-tide flood!"

ELGAR, one of the Orkneys; constituting part of the parish of Shapinsay. It lies about a furlong to the south of Shapinsay, and is separated from it by a reef of rocks that are almost dry at low water.

ELGIN,* a parish in the county of Moray or Elgin, bounded on the north by Spynie; on the east by St. Andrew's Lanbride; on the south by Birnie; and on the west by Alves. It is of irregular form, but extends about 10 miles in length, and 6 in breadth; its superficial contents have been estimated at about 18 square miles. Houses 1,116. Assessed property, in 1815, £7,186. Population, including the burgh of Elgin, in 1801, 4,345; in 1831, 6,130. The surface of this parish is flat. The vales of Mosstowie and Pluscardine are separated by a steep hilly ridge; and the district rises gently from the vicinity of the town towards the Black-hills, the summits of which terminate its southern extent. The only river of any importance is the Lossie, to which a tributary stream runs northwards from the Black-hills. The Lossie flows slowly through the level lands also northwards, partly through the parish, but dividing it from Spynie on the north before it falls into the Moray frith at Lossie mouth. This river frequently overflows even its artificial banks. In 1829 the 'Morayshire floods,' so graphically described by Sir Thomas Dick Lauder, committed great havoc here. In the back parts of the parish the soil is chiefly light and sandy clay with calcareous particles; but many places, particularly on the river banks, are of a rich loam and clay, exceedingly fertile, and yielding excellent crops. Great part of the parish is under cultivation. Even in remote times tillage seems to have been attended to in this part of Scotland, and indeed considerably advanced, as the scattered facts collected from among the less useful and important records of political and military history by the writer of the Old Statistical Account of this parish sufficiently evince. About 3,000 acres, however, are still waste, or in pasture. Thriving plantations now cover much of the old wastes. Some of these are extensive, while others consist of scattered belts and clumps of various foliage, which add greatly to the beauty of the landscape. The secluded glen, at the west end of the parish, in which the fine ruins of Pluscardine abbey stand, has been so judiciously wooded that the interest and romantic beauty of the scene are greatly enhanced: see article PLUSCARDINE ABBEY. The property now belongs to the Earl of Fife, who is one of the principal proprietors in this parish. The chief mineral product of this parish is a bed of secondary limestone, tinged of a dark colour by the oxide of iron. It is used as manure, and for mortar. It runs from the southern vicinity of the town eastward as far as the Moray frith. The hilly ridge between Mosstowie and Pluscardine consists of strata of a peculiar hard and pale-coloured sandstone, which is considered superior to all others found in Scotland, except, perhaps, that of Craigleith, near Edinburgh. In 1826 a considerable quantity was exported to London for the building of the new London bridge. The old red sandstone also appears in this district.†—The

* The name of Elgin is generally supposed to have been derived from Helgy, a general of the army of Sigurd the Norwegian Earl of Orkney, who, about 927, conquered Caithness, Ross, Sutherland, and Moray, and probably made a settlement at Elgin, which is so ancient as to have been a town of some note, and a favourite and usual royal residence, even before it became the Episcopal see of the diocese. As the word *Helgyn* is still used in the inscription on the corporation seal, it is probable that this etymology is correct.

† While preparing this article [November 1840] we have been informed that a cave, full of curious and instructive remains, has been discovered in the old red sandstone at Hope-man, near Elgin, during the process of quarrying in that vicinity. An eminent geologist, Mr. P. Duff, has furnished the following description of this geological treasure:—"A considerable part of the cave had been quarried away before its interest was suspected, nor until considerable quantities of

parish is in the presbytery and synod of Moray or Elgin. Patron, the Crown. The charge is collegiate. Stipend of both charges £240 7s. 6d.; glebe of each valued at £17. Unappropriated tithes £52 11s. 6d.

—Schoolmaster's salary about £50, with fees and other emoluments of about £45 per annum. The school is attended by about 160 children, and entered in the returns as parochial, but strictly speaking is not so, but is an academy consisting of 4 schools, and conducted by 6 teachers. There are 16 other schools in the parish, attended by about 580 children. About 200 receive gratuitous instruction.

ELGIN, a royal burgh in the above parish, the capital town of the county of Moray or Elgin, once an important episcopal city, the see and cathedral seat of the great bishopric of Moray, is situated 144 miles north of Edinburgh; 63½ north-west of Aberdeen; 12 east of Forres; 9 west of Fochabers; and 5 south of Lossiemouth, its sea-port. It extends for nearly a mile in length, along the southern bank of the river Lossie, in the midst of scenery so beautiful and foliage so luxuriant that the inhabitants delight, and justly so, in claiming, for the environs of their ancient city, the distinguished appellation of "the Garden of Scotland." Of all the Scottish towns, Elgin bears the strongest resemblance to St. Andrews. Doubtless this must be attributed to the circumstance of its having once been, like that venerable metropolis, the important and wealthy seat of a see; the respectable,—nay, in the less fastidious, though quite as stately, eyes of ages that are past,—the sumptuous, and luxurious residence of a numerous corps of dignified Papistical, and quite as dignified Episcopal ecclesiastics, and of affluent provincial gentry, drawn together here as to a common centre of attraction. Many of their houses are still pointed out:

"Bright towers of warlike chiefs around appear,
The lowly roof and noble dome are here.
Sweet is the scene: yet, Scotia, turn thine eyes
And weep, for lo! thy church a ruin lies."†

although, like those of a similar stamp in Edinburgh and elsewhere, ancient mansion-houses here were long since 'handed down' to artizans and others in the lower ranks of life; and though it may be said, not only that a new town has sprung up, but that the old indeed has, in a measure, 'cast its skin,' and now become completely renovated; nevertheless the period is by no means yet remote, when Elgin wore the antiquated, still, and venerable aspect which so well befits and harmonizes with the meditative

bones had been exposed. It would appear, from the quantity of calcined wood and burnt stones which strewed the outer entrance, that the cave had been used by man as a shelter, in which the process of cooking had gone on; subsequently it had been taken possession of by foxes, or other predaceous animals, which had hoarded the bones now found of deer, dogs, hares, rabbits, seals, birds, and fishes; but the most interesting feature of the cave is, that it proves by its contents, the upheavement of an ancient sea-beach, with its rolled pebbles, sea-sand, and shells, lying undisturbed, and above them a mass of brown mould evidently derived from the decomposition of animal matter. Many of the shells—such as the turbo and patella—may have been carried there for food; but the sand, besides being nearly half made up of fragments of shells, contains many entire specimens of minute shells which could not have been brought thither for any economical purpose, either by man or animals. Here, then, we have a portion of the sea-shore or beach elevated from seventeen to twenty feet above high water-mark, with its sand, shells, and pebbles lying undisturbed, as they are seen lying and undisturbed on the beach which is every day washed by the ocean waves."

‡ *Arcebus heroum nitidis urbs cingitur, intus
Plebeis radiant, nobiliumque lareis;
Omnia delectant; veteris sed rudera templi,
Dum spectas, lacrymis Scotia tinge genas.*

Johnstoni Poemat.
Transcribed from 'Sketches of Moray,' edited by William Rhind, Esq., and illustrated by D. Alexander, Esq., 1 vol. 8vo., 1839. Amongst other authorities, we are indebted to these spirited and faithful 'Sketches' in the compilation of a part of this article, and to them we recommend our readers for general reference, and for much graphical and interesting information on the antiquities of Moray.

habits and repose of genuine ecclesiastics, in the full enjoyment of an intellectual '*otium cum dignitate*.'

The houses of the long main street of Elgin, as it then existed, were of venerable age, with high-crowned roofs, overlaid with heavy slabs of priestly gray; presenting, to the street, like those—we may now almost also say of *old*—in Dy-art, Edinburgh, and other towns, the portly fore-stair, and a double range of the more distinguished open piazza, consisting of a series of pillared arches in the front wall, over the entrance to a paved and sheltered court within, in which, as well as in his humbler small dark shop or cellar, was the ancient 'merchant' wont, at times, with carelessness, but with complete security, to leave his goods, and walk unceremoniously off,—his "half-door on the bar,"—to breakfast, dinner, or his evening stroll. But few of these piazzas now exist, and some that do, are either built entirely up, or otherwise converted into shops of modern style. Of those which still retain them open, with a railing, Elchies-house is one. Diverging from the main street, the essential form of which—as widened in the centre of the town, to comprehend 'the Muckle kirk,' 'the Little kirk,' its adjunct, and the Town-house, or Tolbooth,—is still the same, though much improved in length and breadth as well as substance, numerous lanes and closes, flanked by houses of inferior grade, stretched off, rectangularly, as they still do, like the ribs from a spinal ridge. The dates of their erection, and the names of their proprietors, were usually inscribed upon the lintels of these ancient domiciles, with here and there a holy benediction. The pavement of the high or main street was an ancient causeway, which tradition modestly reports to have been the work of no more ancient hands than those of Cromwell's soldiers; though, most likely, it was many ages older. It rose high in the middle; and 'the crown of the causeway,' where the higher-minded folks delighted to parade, was elevated and distinguished by a row of huge stone blocks, while those of a more moderate calibre occupied the sloping sides. The drains which ran along the street were crossed, rectangularly, by the common gutter, which, in heavy rains, was often swelled into a mighty torrent. The street had no side-pavements, till Lord Fife, aided by the citizens, and the road-trustees, introduced them in 1821.

St. Giles's, or 'the Muckle kirk,' has now no local habitation. It was razed, in 1826, to make way for the present splendid substitute. The period when the original St. Giles was built is not on record. It was very ancient, and is early mentioned as a parsonage. In the high and palmy days of the cathedral's glory, it was in the bishop's pastoral charge. It stood upon two rows of massive pillars, spreading into pointed Gothic arches, with a vaulted roof, weighed down by heavy hewn stone, instead of slate. In 1679, on Sunday, 22d June, and, providentially, in the interval between the services, the roof fell in, and, except the arched tower in the centre, and the pillars at the sides, the total fabric was destroyed. In 1684, it was rebuilt, when two long aisles were added, on each side, to the original form of the church. The Little kirk, where service was performed on week days, was appended to the middle tower, upon its eastern side, but was demolished half-a-century ago. Although the interior of the Muckle kirk, with its rows of massive sandstone pillars running along its aisles, and terminating upwards in the high peaked arches which upheld its vaulted roof, possessed a dignity and grandeur of no common order, heightened and enhanced as was the *tout ensemble* by its richly carved and massive oaken pulpit, galleries, and seats, the exterior was by no

means rich in architectural display—presenting nothing worthy of record, indeed, except the lofty pointed gable of its western aspect, which was occupied by a large and fine Venetian three-arched window; and the central, Gothic, grand front entrance from the paved square called the Plainstones. The central tower was a square and heavy mass without a steeple. It possessed a curious old fashioned clock, however, and a bell whose long familiar tones were held in veneration by the natives, as indeed was every thing connected with the Muckle kirk:—so much that its demolition caused a general feeling of deep regret, if not dismay, amongst them, which the unequivocal symptoms of decay, and the impending probability of other dangers such as those of 1679, did little to diminish.

"The Tolbooth, biggit wt stanes frae ye kirk-yard dyke, and sclaited wt stanes frae Dolass," in the year 1605, is now, like 'the kirk-yard dyke' itself, amongst the things that were. It stood in the middle of the market-place, and consisted of the court-house, and the jail, a square uncomely tower, which terminated in a short spired roof. A new and elegant court-house having been erected, it was doomed, in 1840, no longer to incur the ground; and immediately behind the court-house a new prison, containing 15 separate apartments, is about to be erected at an expense of about £1,500, to be defrayed by the county of Moray, the town or city of Elgin, and the town of Forres. [See 2d Report of the General Board of Directors of Prisons in Scotland. Appendix, p. 100.]—'The Muckle cross' stood also in the market-place, but was many years ago removed. 'The Little cross' still stands entire near the entrance to Grant-lodge,—Lord Seafield's house,—and opposite an old piazzad mansion. Here it probably marked the old burgh-boundary on the east. The burgh, it is thought, was once surrounded by a wall: at all events there were two entrances or gateways to the town, one called the East port, and another called the West.

On the flattened summit of the Lady-hill, a mount with conical and precipitate slopes, north-west of the High-street, there was anciently a royal fort erected so early as the reign of William the Lion, for protection to the town, which probably then crept close around it. Ruins of the castle-walls, of extraordinary thickness, are still visible: they seem

* "The bells," says a writer in the Forres Gazette, "did not escape the general reformation."† They had been, indeed, great transgressors. For centuries they had summoned the people to the idolatrous sacrifices of the mass, and were thereby polluted; and it was necessary that they should undergo a process of purification. Accordingly, two or more of them were sent to Turriff in 1589, to be recast into one solid, sound Presbyterian bell. This new bell was hung in the kirk-steeple, where it continued till 1713, when it was rent by a woman striking it violently with a heavy key, for the purpose of arousing the inhabitants to quench a fire which had broken out in the town during the night. It was again recast, August 17th, 1713, at the head of Baillie Forsyth's close, by Albert Gely, founder in Aberdeen, the expenses being again defrayed by the town. It is said that numbers of the rich inhabitants of Elgin repaired to the founding-place, and cast in guineas, crowns, half-crowns, and the poorer people shillings and sixpences, during the time the metal was melting, which contributed, in no small degree, to enrich its sound as well as its substance. It was again elevated to its former place, in the kirk-steeple; and used on all solemn and joyful occasions, till it fell a victim to excessive loyalty;—the boys having over-rung and rent it on the king's birth-day, June 5th, 1785. It was taken down, and refounded at London, on the 17th October following, having the names of the then magistrates cast on its body: the charges were of course defrayed by the town. This is the history of 'the Big bell' for a period of 250 years."

† It would appear that the 'Prayer bell,' commonly called the minister's bell, has come scathless through this trying time. The inscription around it, 'Thomas de Dunbar me fecit, 1402,' tells that it is an ancient,—the only relic (save and except the Ronald bell of Birnie) of the former dispensation. This venerable piece of metal was given to the town of Elgin, by the Earl of Moray, 435 years ago. It has, with equal fidelity, lifted its sonorous voice in behalf of papists, presbyterians, and episcopians; and has rejoiced at the success of royalists and round-heads, whigs and tories, as well as sounded forth the requiem of eighteen sovereigns, during that period.

to have been grouted or cemented into one hard mass, as durable as rock, with hot run lime. As the warlike spirit of the age subsided, Elgin castle fell into decay, but legends of the nursery give other causes for its disappearance. These assure us that the inmates were afflicted with the plague or pest,* and that, *hac causa*, we presume,—

——“the castle in a single night,
With all its inmates, sunk quite out of sight.
There, at the midnight hour, is heard the sound
Of various voices talking under ground,
The rock of cradles,—wailing infants’ cries,
And nurses singing soothing lullabies.”

A place is now occupied beside the castle by a monumental pillar to the memory of the late Duke of Gordon, the funds for which were raised by a county subscription.

In the hollow ground to the eastward of that venerable and most splendid of the Scottish churches, the cathedral of Elgin, stands a pool, which is traditionally believed, by every Elgin school-boy, to be of unfathomable depth. It is called ‘the Order pot,’—most probably a name corrupted from ‘the Ordeal pot,’ a place where witches underwent their ordeal by water, or were made to ‘choose their horn’ of the rather grave dilemma into which our fathers, in the plenitude of a sagacity profound and deep as the Order pot itself, beguiled ‘the devil’s bairns’ by the simple practical alternative of—‘sink or swim.’ So late as 1560, witches were publicly and legally punished in the burgh of Elgin.† There are no authentic records of the Ordeal pot, however;‡ but there is an ancient prophecy, believed to

be one of that worthy old orthodox seer, Thomas-the-Rhymer that—

“The Order Pot and Lossie gray
Shall sweep the Chan’ry kirk away;”—

and, at all events, it requires no seer’s eye to perceive that some peculiar and mysterious subterraneous communication must exist between the Order pot and the Lossie; for, “whenever the Lossie is swelled by unusual floods, it makes for its old haunt,” the Order pot,—a phenomenon which has led to the natural supposition that the channel of the Lossie—which is known to have deviated in this vicinity—must have passed, at an era more or less remote, through the Order pot.

Amongst other and more important features yet to be described, of the ancient state and consequence of Elgin, as a city, is Thunder-house, the ancient town-house of the family of Sutherland of Duffus. In its pristine grandeur, it consisted of a great imposing edifice, adorned with a tower and bartizan, the top of which was skirted by a curiously chiseled balustrade. This house fell ultimately into the possession of a jocular auctioneer, named Batchen, who, when questioned as to what he meant to make of ‘the Muckle house,’ dryly assured his inquisitive friends that he “meant to make a kirk and a mill of it,”—a joke, the point and edge of which they came to see, when John had let the great hall as a chapel, and had fitted up a windmill in the bartizan. The property has since been sold in building-lots; and a neat Congregational chapel was built upon a part of the site in 1821.

In the train of the Roman Catholic establishment were numerous institutions and religious houses,—Friars “black and gray,” knights of St. John, with wandering monks, innumerable. The ruins of a chapel, and a portion of the convent walls, once occupied by a brotherhood of the Grey friars, and endowed by Alexander II., may be still seen, near the Elgin institution, at the east end of the town. The Elgin institution was itself erected on the site of ‘the House of God,’—‘Maison Dieu,’—a kindred institution, founded in the 13th century, and largely endowed, by Bishop Andrew Moray, for reception of poor men and women. It was burnt by ‘the Wolfe of Badenoch,’—of whom hereafter. The extensive revenues of this establishment were given to the magistrates for special purposes, in 1620, by King James; but from the funds some Beadsmen are supported still, in houses near the site of the original establishment. A Leper-house stood also in the neighbourhood, some crofts still passing by the name of ‘Leper lands.’ This place was for reception of those labouring under leprosy, a very prevalent disease in Scotland in the Middle ages, but now utterly extinct in Britain. It is the house alluded to in the curious legend of the withering of the arm by witchcraft previously transcribed.—Upon the ground called Black-friar’s-haugh, between the Lossie and the North-back-street, and at the point from whence the river is supposed to deviate from its ancient course, was formerly a Black-friar’s monastery. No vestige of it now remains. A turretted edifice, occupied, in 1840, as a library, is said to have been inhabited by Templars. In the front of it are escutcheons of the family of Rothes.

The cathedral, the seat of the see of Moray, in the days of its perfection, was no less the chief glory of Elgin than it was the boast of Moray:—nay, Bishop Barr characterized the original edifice not only as the chief ornament of the district, but “the glory of the kingdom, and the admiration both of foreigners and natives.” “It is an allowed fact, which the ruins seem still to attest,” says Chambers

* That the plague raged in Elgin about the middle of the 16th century, evidence is produced by Mr. Rhind in the following extract from the burgh-records. “Item, 18s, for an quart of wyne and bread, and an glass giffen to ye baillies of Forres at ye eist port ye time of ye infectioun of ye pest.”

† “The comptar, viz. Andrew Elie, discharges him of 40s, debursed be him at ye towne’s command, for the binners to ye wyffs yat war wardit in ye stepill for witches in summer last by-past.”—*Burgh Records*.

‡ The following extract, transcribed from an old MS. by Mr. Rhind, though unauthenticated, may be interesting, as alluding to the Order pot. The good and enlightened ‘Maister Wyseman,’ the ‘clerk,’ in the legend, does look a little apocryphal, but for certain reasons, *ex facie*, we think it probable that this is only ‘a curious coincidence’—the tale itself is told with graphic, touching, and peculiar, felicity.—

“The wylk day ane great multitude, rushinge thorough the Pannis-port, surroundit ye pool, and hither wis draggit, thorough ye stoure, ye said Marjory Byseth, in sore plight, wid her grey hairs hanging loose, and crying ‘Pitie! pitie!’—Now Maister Wyseman, the samin clerk who had stode up at her tryal, stepped forward, and said: ‘I kno thys womyan to have been ane peaceable and unoffendinge aue, living in ye privacy of her widowhoode, and skaithing or gamsaying no aue.—Quhat have ye furthir to say agan her?—Then thir was gret murmuring and displeasance among ye peopel, but Maister Wyseman standand firm, agen asked,— Quhat have ye furthir to say agan her?—Then did ye Friares agen repeate, how that she had mutterd her ayes backward, and others that the maunkin, started at Byrseft, had ben traced to her dwellinge, and how that the aforesaid cattel had died by her convivance. Bot she hearing this, cried the more, ‘Pitie! pitie! I am guiltlesse of ye fause crynes, never sae much as thought of be me.’ Then suddennlie there was ane motion in ye crowd, and ye peopel parting on ilk syde, ane leper cam downe frae ye hous, and in ye face of ye peopel bared hrs hand and his hale arm, ye which was wythered, and covered over with scurs, most piteous to behold; and he said, ‘At ye day of Pentecost last past, thys womyan did give unto me ane shell of oymtent, with ye which I anoynted my hand, to cure ane imposthume, which had com over it, and beholde, from that day forth, untill thys, it hath shrunk, and wythered, as ye see ye it now.’ Whereupon ye crowd closed rounde, and becam clamorous; but ye said Marjory Byseth cried piteously, that God had forsaken her—that she had meyned gude only, and not evil—that the oymtent was ane gift of her husband, who had ben beyond seas, and that it was ane gift to him from ane holy man and true, and that she had given it free of reward or hyre, wishing only that it mote be of gude; but that gif gude was to be payed backe with evil, sorrow and gif Satban mot not have his ovin. Whereupon the people did presse roun’ and becam clamorous, and they take ye womyan, and drag her, amid mony tears and cryes, to ye pool, and crie, ‘To tryal! to tryal!’ and sae they plunge her in ye water. And quhen, as she went down in ye water, ther was ane gret shout; bot as she rose again, and raised up her armes, as gif she wode have come up, there was silence for ane space, when agane she went doune with

ane bublinge noise, they shouted finallie, ‘To Satban’s kyngdome she haib gone,’ and forthwith went their wayes.”

in his 'Picture of Scotland,' "that this was by far the most splendid specimen of ecclesiastical architecture in Scotland, the abbey-church of Melrose not excepted. It must be acknowledged that the edifice last mentioned is a wonderful instance of symmetry and elaborate decoration; yet, in extent, in loftiness, in impressive magnificence, and even in minute decoration, Elgin has manifestly been superior. Enough still remains to impress the solitary traveller with a sense of admiration mixed with astonishment." Shaw, in his description of it, even ventures to assert, that this "church, when entire, was a building of Gothic architecture inferior to few in Europe." "The prevailing impulse of the religion of the period," observes Mr. Rhind, "led its zealous followers to concentrate their whole energies in the erection of such magnificent structures; and while there was little skill or industry manifested in the common arts of life, and no associations for promoting the temporal comforts of the people, the grand conceptions displayed in the architecture of the Middle ages, the taste and persevering industry and the amount of wealth and labour bestowed on those sacred edifices, find no parallel in modern times." When entire, then, and in its pristine glory, this magnificent temple must have afforded a splendid spectacle. A vast dome, extending from the western entrance to the high altar, a length of 289 feet, with its richly ornamented arches crossing and recrossing each other to lean for support on the double rows of stately massive pillars—the mellowed light streaming in at the gorgeous windows above, and flickering below amid the deep and dark shades of the pointed aisles, while the tapers of the lit up altars twinkled through the rolling clouds of incense—the paintings on the walls—the solemn tones of the chaunted mass—the rich modulated music of the choir—and the gorgeous dresses and imposing ceremonies and processions of a priesthood sedulous of every adjunct to dazzle and elevate the fancy,—must have deeply impressed with awe and veneration, a people in a remote region, in a semi-barbarous age, and with nothing around them, or even in their uninformed imaginations, in the slightest degree to compare with such splendour. No wonder that the people were proud of such a structure, or that the clergy became attached to it! It was a fit scene for a Latin author of the period, writing on the "tranquillity of the soul," to select, for his 'Temple of Peace,' and under its walls to lay the scene of his philosophical dialogues.*

This great religious foundation owes its origin to Bishop Andrew Moray, who is said to have founded it on the site of an old church in the year 1224. But after standing 166 years, the original fabric was destroyed, in June 1390, by the lord of Badenoch, Alexander Stuart, son of Robert II., usually called the Wolf of Badenoch. From resentment against the bishop, Alexander Barr, who had excommunicated him, for keeping violent possession of church property, this ferocious incendiary burnt the city, Maison Dieu, the parish-church, and another edifice devoted to religion, with 18 houses of the canons, besides the cathedral itself. His only punishment was doing penance in the Black friars' church at Perth, before the altar. Bishop Barr began soon after to rebuild it, but many painful years were spent, together with a third of all the revenues of the bishops; ere that one dark day's disaster was repaired; and even after its completion, in 1506, the great central tower fell down. This new misfortune was also remedied, however; and, from 1538, the fabric continued in a state of perfect preservation till the Reformation, ten years after which, in 1568, the

privy-council actually had the execrable meanness to appoint the Earl of Huntly, sheriff of Aberdeen and Elgin, with some others, "to take the lead from the cathedral-churches of Aberdeen and Elgin, and sell the same" for the maintenance of Regent Murray's soldiers! The displeasure of Providence itself seemed to be manifested at the base deed done by these ultra-Goths, for so base a purpose; for the vessel freighted with the metal had scarcely left the harbour of Aberdeen, on her way to Holland, where the sacrilegious plunder was to be sold, than she sunk with all her infamous cargo. Since that period, the cathedral of Elgin, unprotected from the weather, has gradually gone to ruin and destruction. Still, however, do its splendid ruins amply justify even the highest estimate of its original magnificence, and constitute the chief amid the numerous attractions of this limited but interesting city. Government has latterly caused much attention to be paid in clearing out the ruins† of this and other of our Scottish cathedrals, and in preventing them from falling into complete decay: this queen of ruins is therefore now more than ever an object of great and impressive interest.

Like all similar fabrics of its time, the cathedral of Elgin stood due east and west, and was built in the form of a Jerusalem or Passion cross. The choir and altar faced the east, or head of the cross, with the branches, transepts, or cross wings, to the north and south, and the grand entrance through the western extremity, or foot of the cross. The grand tower rose from its centre. The west gate, flanked with two massive but elegant towers, and the chapter-house, appended to the northern cloisters, with parts of the transepts, are all tolerably perfect; the whole displaying workmanship of the most intricate and exquisite beauty. The western towers, however, form the most entire part of the ruin. The great gate, between these, is ornamented with fluted pilasters, and above it is a central window, lancet arched, 28 feet high, and originally fitted up with mullions and tracery. The great gateway is entered by a flight of steps, and leads to the nave, which occupied the centre of the church, where the numerous and splendid Papal processions took place, while the multitudes who witnessed them were present in the aisles, at the sides, which were separated from the nave by rows of stately pillars, rising up to support the roof: the foundations of these alone, and a few of the pedestals, remain. Between the nave and the choir where the sacred rites were actually performed, stood the walls of the great central tower, and on each side were the transepts. The choir extends eastward to the chancel, in the sanctum sanctorum at the head of the cross, where stood the grand altar. The chancel was separated from the choir by a screen. The grand altar stood beneath the eastern windows, and was lighted up by a double row of five slender windows, with pointed arches,—the whole surmounted by a large wheel window, with rich ornamental tracery. The choir and nave were also lighted by a double row of windows with pointed arches, the lower range being the largest, while both tiers ran along the whole extent of the church. The windows were filled with richly tinted glass, in various devices, fragments of which have been found amongst the ruins. The authors of the 'Sketches of Moray,' have succeeded in effecting a very beautiful restora-

† The public, we believe, were, at first, less indebted to privy-councils and governments than to the zeal and good taste of the present superintendent, John Shank, who had no sooner succeeded to his charge, in 1825, than he set personally to work, and cleared out from the ruins no less than nearly 5,000 barrow loads of rubbish. Numerous dilapidated ornaments, figures, tombs, and other objects, were thus discovered, or laid open, and additional interest and gratification thereby afforded to the visitor.

* Volusenus, Scotus. De Tranquillitate.

tion of the plan of this cathedral, whereby it appears abundantly evident, from the consummate harmony of effect, though mixture of Norman and Saxon styles, displayed throughout the whole sketch, and from the massive form, broad buttresses, and general severity of architectural style in the two great western towers themselves, that these were surmounted, each by four small turrets, and not raised and tapered into spires like the central tower, as has been erroneously conjectured. The spire of the central tower, as restored in 1538, rose to the height of 198 feet, and, in the sketch alluded to, it forms a superb and appropriate coronal ornament to the whole, the effect of which would have been manifestly injured by association with other spires of any magnitude in the same edifice. The great tower fell in 1711. The dimensions of the cathedral given in the New Statistical Account, and which are said to be "nearly accurate," are as follow:—"length of cathedral over walls, 264 feet; breadth, 35; traverse, 114; height of centre tower, 198; eastern turrets, 60; western towers without the spires, 84; side wall, 36." According to the elevation above alluded to, however, the dimensions furnished by the architect, Mr. Kemp, the author of the beautiful design for the monument to Sir Walter Scott, at Edinburgh, are as under:—

	Feet.
Length from east to west, including towers, . . .	289
Breadth of nave and side aisles, . . .	144
Breadth of choir, including walls and aisles, . . .	79
Length of transept, including walls, . . .	120
Height of west towers, . . .	83
Height of east towers, . . .	64
Height of middle tower, including spire, . . .	198
Height of grand entrance, . . .	26
Height of chapter-house, . . .	24
Breadth of . . . do . . . with walls, . . .	37
Height of great western window, . . .	25
Diameter of eastern wheel window, . . .	12
Height of side walls, including choirstry, . . .	43
Breadth of side aisles, . . .	18

The chapter-house, attached to the northern cloister of the cathedral, is extremely elegant. It is an octagon, with a pillar of elaborate workmanship in the centre, supporting a richly groined roof. Arched pillars from every angle terminate in the grand pillar, which is 9 feet in circumference, crusted over with 16 pilasters or small pillars, alternately round and fluted. It is lighted by seven large windows, and, in the walls, are niches, where the oaken stalls of the dignified clergy, who formed the bishop's council, were placed: the central one for the bishop or dean being more elevated than the rest. This a partment was richly ornamented with sculptured figures, and it now also contains the grotesque heads and other devices which occupied niches and capitals of the pillars in other parts of the church.* This, like similar choice portions of other ecclesiastical edifices of the Middle ages, is called, 'The Apprentice's aisle,' being built, according to the curious but hackneyed legend, by an apprentice in the absence of his master, who, from envy of its excellence, had murdered him on his return,—a legend so general [see article ROSLIN] that probably it never did apply to any cathedral in particular, but originated in the mysticisms of those incorporations of free-masons, who, in the Middle ages, traversed Europe furnished with papal bulls and ample privileges to train proficient in the theory and practice of masonry and architecture:—indeed to such a common origin have the similarity of plan and execution so prevalent in the gorgeous cathedrals of the Middle ages been themselves attributed.

* The Elgin pillar, a Runic obelisk, discovered in 1823, about 2 feet beneath the surface, when the streets of the town were under repair, is now preserved in the cathedral. It is 6 feet long, 2½ broad, and 1 thick; but it is evidently incomplete.

Surrounding the cathedral was a substantial wall, 8 feet in height, and entered by five gates. It enclosed an area 900 yards in circumference, called the College, and included the manse and gardens of the dean, the prebendaries, and the other dignified members of the chapter. A paved street ran round this area. The only gate to the precincts now remaining is the eastern, named the Water-gate, or Pann's port, which was formerly defended by an iron portcullis. Near it, is a large and venerable beech, with wide-spread branches. The college was the residence of the dean, who was rector of Auldearn. The manse of the sub-dean still exists, but has been much enlarged and altered. The episcopal palace is on the south of the cathedral. In the reign of James IV., it became the property of Alexander Seton, Earl of Dunfermline, and was hence named Dunfermline-house. The Duke of Gordon subsequently purchased it, but it is now in ruins. In the immediate vicinity of the college, westward, was a small suburb under the jurisdiction of the bishop.

The chapter consisted of 22 canons who resided within the college. They were chosen from the clergy of the diocese, and officiated in the cathedral:—part of them constituted the council of the bishop. Besides a manse and garden in the college, each had a portion of land, called a prebendum, allotted to him for his services. Hence they were also called prebendaries. They enjoyed these benefits over and above the revenues of their vicarages in the country parishes whence they were chosen:—these were—

Auldearn	(Dean)	Kinmore	Advie
Forres	(Archdeacon)	Dallas	Duffus
Inveravon	(Chancellor)	Inverkeithnie	Rounie
Kinnedar	(Treasurer)	Dippie	Spynie
Alves	(Chantor)	Botarie	Croy
Vicar of Elgin		Aberlour	Moy
Kingussie		Duthil	
Rafford		Pettie	

As already observed, the dean presided in the chapter during the absence of the bishop; he also presided in synods and all church-courts, and was anciently superior over 10 canons. The archdeacon was the visitor of the diocese and the bishop's vicar. The chancellor was judge in the court of the bishop, secretary to the chapter, and keeper of their seal. The names of the chanter and treasurer also denote their respective offices. The bishop had civil, criminal, and ecclesiastical courts, and officers; and his power within his diocese was almost supreme. The seat of the bishopric was originally at Spyynie; and indeed, prior to the 13th century, the bishop transferred his chair from one church to another as suited his convenience; but, at the request of the chapter, and of King Alexander II., it was translated to Elgin, in virtue of a bull from Pope Honorius, dated 10th April, 1224. The diocese was a very extensive one. It comprehended the whole of the present counties of Moray and Nairn, and also part of Aberdeen, Banff, and Inverness. The precise date of its erection into a bishopric is not known, the early records of the diocese having been destroyed on the burning of the cathedral, by the Wolf of Badenoch, and the chartulary going no farther back than the year 1200; but it is supposed to have been about the beginning of the 11th century, in the reign of Alexander I., previous to which, the bishops in Scotland wore blue gowns, with their hair tucked under a cap, and having no particular diocese assigned them, were itinerant. The first bishop on record was Gregory, in the end of Alexander's reign, or the beginning of the reign of his successor, David I. From this period till the Revolution, the see was filled by, at least, 36 bishops, of whom 28 were Roman Catholic prelates, and 8 Protestant. The following is a list of them in succession:

Gregorius.

William, Papal legate to Scotland—died in 1161.

Felix—died in 1170.

Simeon de Tocoyn, buried at Birnie, in 1184.

Andrew—died in 1185.

Richard, Clericus Regis—elected in 1187.

Brictius de Moravia, or Murreff, prior of Lesmahago, elected in 1203;—see at Spynie; petitioned the Pope for its removal to Elgin—died in 1222.

Andrew de Moravia, son of Hugh de Moravia, Lord Duffus;—see transferred to the old church of Holy Trinity at Elgin, after his consecration in 1223—buried in the choir, 1242.

Simon—died in 1252.

Archibald, built and resided in palace of Kinnedar—died in 1298.

David de Moravia, consecrated by Pope Boniface in 1299—a zealous supporter of Bruce.

John Filmore, Burgess of Dundee, elected Bishop of Ross, and postulated Bishop of Moray—died in 1362.

Alexander Barr, consecrated at Avignon, by Pope Urban V., in 1382—excommunicated the Wolf of Badeuch, who in revenge burnt the cathedral—died at Spynie in 1397.

William de Spynie, Chantor of Moray—died in 1406.

John de Innes—died in 1414, buried under great central steeple which he began to rebuild.

Henry de Leighton, LL.D., translated to Aberdeen in 1441.

David succeeded till 1429.

Columba de Dunbar—died in 1435.

John Winchester, L.B. Clericus Regis, Provost of Lincluden, Lord-register—died in 1460.

James Stewart, of Lorn—died in 1455.

David Stewart, his brother, built great tower of Spynie palace—died in 1475.

William Tulloch, bishop of Orkney, translated in 1477—keeper of the privy seal—died in 1482.

Alexander Stewart, son of queen-mother by her second marriage with Sir James Stewart of Lorn—died in 1501.

Andrew Forman, in great fa-

your with James IV., translated to St. Andrew's in 1514.

James Hepburn, abbot of Dunfermline, and high-treasurer—died before November, 1524, when the Earl of Angus wrote to Cardinal Wolsey to solicit the Pope for the bishopric of Moray and the abbacy of Melrose, "whilk is are baith vacant," for his brother.

Robert Schaw, abbot of Paisley—died in 1527.

Alexander Stewart, son of Duke of Albany—died in 1527.

Patrick Hepburn, son of first Earl of Bothwell, and uncle to Darnley. He alienated the church-possessions, and braved the Reformation, being the last Popish bishop—died in 1573.

George Douglas, natural son of Archibald, Earl of Angus, appointed first protestant bishop, in 1573. At his death, the temporality of the bishopric was erected by James VI. into a temporal lordship, in favour of Alexander Lindsay, created Lord Spynie; but it was repurchased by the Crown, and given to the Episcopal establishment in 1606.

Alexander Douglas, presbyterian minister of Elgin, ordained first Episcopal bishop in 1606—died in 1623.

John Guthrie, minister in Edinburgh, deposed by the General Assembly, in 1638; garrisoned his castle in self-defence, but afterwards surrendered. The see remained vacant till the Restoration.

Murdock Mackenzie, chaplain to the great Gustavus Adolphus, of Sweden, originally a pre-byterian; translated to the see of Orkney in 1676.

James Aitkens, translated to Galloway in 1680.

Colin Falconas, bishop of Argyll, translated to Moray in 1680, being ignorant of the Gaelic language—died in 1686.

Alexander Ross, principal of St. Mary's college, St. Andrew's; translated to Edinburgh in 1687, after his consecration.

William Hay, D.D., ejected at the Revolution in 1688, after his consecration.

Lindsay, a son of the Earl of Crawford, and grandson of Cardinal Beaton, for payment of 10,000 gold crowns, the sum which he had lent his majesty when in Denmark, Lindsay being at the same time, as already observed, created Lord of Spynie. After the king had prevailed on Lord Spynie to resign the lands to obtain a revenue for the Protestant bishops, the latter's rights of patronage were reserved till the extinction of his family in 1670, when they were reassumed by the Crown as *ultimus hæres*. The Crown conveyed them by charter, in 1674, to James, Earl of Airlie, who disposed them to the Marquis of Huntly in 1682.

Elgin's ancient glory has departed with its princely bishopric, and gorgeous religious rites; but the light of a new regeneration, while it has been rapidly obliterating even the shadow of its former glory, is as rapidly providing a solatium for the loss more truly in accordance with the modern march of human progress. "Forty years ago," observes the writer of the New Statistical Account of Elgin, "there were no turnpike-roads leading to or from it, no stage-coaches, no gas-work, no lighting or side-pavement to the streets, no hospital for the sick, no institution for the support of old age and the education of youth, no academy, no printing-press or newspaper published in the town." In 1812 the first mail-coach was started in the north. "The blast of its horn, as it entered the town of Elgin with a couple of horses and a guard in royal livery, excited no small interest among the inhabitants, and was hailed as the harbinger of a new era." So indeed it was. The mail and several stage-coaches now enter and leave the town every day; carriers regularly go to Aberdeen, Banff, Inverness, and all the adjacent towns and villages. The turnpike roads are excellent, and diverge in every direction, crossing, here, the river Lossie, by four modern one-arched bridges, three of stone and one of iron. New and very handsome houses occupy the places of the old. New streets have even started up; and villas, built in an elegant style, and interspersed with shrubberies and gardens, now adorn the southern suburbs. The streets and shops, and even private houses, are brilliantly lighted with gas, and the town is now well-drained and cleaned. The population of the burgh, in 1831, was 4,493. Houses 811. Assessed property, in 1815, £2,435. In the vicinity of the town there is a small suburban village called Bishopmill, the superior of which is Lord Seafield.—The new church is one of the most elegant structures in the north. It has a spacious portico of Doric columns covering its western entrance, and a handsome tower with clock and bells, surmounted by a lantern with a richly chiseled cupola. The Trinity Episcopal chapel, with a handsome Gothic front, now forms a neat termination to North-street,* and, besides a Roman Catholic chapel, there are two for congregations of Seceders, and one for Independents. Elegant Assembly-rooms were erected and tastefully fitted up in 1822, and Sir Archibald Dunbar's town mansion, Westerton-house, &c., are of recent erection. Printing-presses have been introduced, and, in 1827, was established the Elgin Courier, which has been succeeded by the Elgin Courant. There is an excellent public library in the town, a literary association, a museum, a literary and debating society, a speculative society, a horticultural society, two bible societies, &c. &c. The academy of Elgin has been long celebrated. It is under the patronage of the burgh, and partly supported by endowment, partly by funds appropriated, for the establishment of a music-school, by King James, in 1620, from the revenues of the Maison Dieu.

* Moray or Elgin is still a conjoined diocese of the Scottish Episcopalian church.

Besides the school-fees the classical master has a salary of £50 per annum, and the mathematical and English masters £45 each. These sums are independent of the Dick bequest. The three principal teachers appoint their own assistants. The branches taught in the academy are English reading and writing, English grammar and composition, arithmetic, geography, practical mathematics, French, Latin, and Greek, with an occasional course of lectures on natural philosophy illustrated by experiments. There are 10 or 12 schools in the town. The trades of Elgin patronize a school for teaching reading, writing, arithmetic, grammar, and geography; and besides the free-school, to be afterwards alluded to, there are also two schools for the education of young ladies, a drawing-school, a dancing-school, an infant-school, &c.

The Elgin Institution, at the east end of the town, was founded and endowed in 1832, from funds amounting to £70,000, bequeathed for the maintenance of aged men and women, and the maintenance and education of poor or orphan boys and girls, by General Anderson—a gentleman who rose from the rank of a private soldier—to which, itself, indeed, in the first place, he may truly be said to have also risen; for, as observed by Mr. Robert Chambers in his highly illustrative and interesting ‘Picture of Scotland,’ “there was something even below poverty in his origin. A small apartment is shown amidst the ruins of the cathedral where his mother, an indigent and infirm old widow, who could afford no better lodging, lived for many years, while he was a boy; and this, I humbly conceive to be, in one sense, the greatest curiosity about Elgin. In a crib not more than five feet square, surrounded by melancholy ruins, and the dread-inspiring precincts of a church-yard, Anderson spent all his early years; the boy who was, on this account, perhaps the most wretched and despised of all the boys in the town, being all the time destined to reach superior honours, and to make provision for numbers of such outcasts as himself. Let the stranger inquire for, enter, and ponder upon this humble cradle of genius and greatness.” The rank this man of noble ambition ultimately held was that of Major-general in the Honourable East India Company’s service. The philanthropic and splendid monument which he may be said to have thus raised to his own honourable and immortal memory, is a beautiful and appropriate piece of architecture. With the simple elegance of outward proportions, and built of native sandstone which even marble cannot excel, its internal accommodations present every comfort suited to the inmates,—advantages which are enhanced by able and methodic management. It is a quadrangular building of two stories, surmounted by a circular tower and dome. The institution for the children contains a school-of-industry; the children are apprenticed also to some trade or useful occupation. The house-governor and teacher of the school of industry has a salary of £55 per annum, and his maintenance and lodging in the institution. A public-school, on the Lancasterian system, is attached to the institution as a free-school, for the education of male and female children whose parents, though in narrow circumstances, are still able to maintain and clothe them. The male and female teachers have a joint salary of £75.

Gray’s hospital, or infirmary and dispensary, constitutes another beneficent institution also founded by a native of Elgin, Dr. Gray, who was afterwards resident at Calcutta. It is intended for relief of the sick poor of the town and county of Elgin, and was founded and endowed from a bequest of £26,000. The building was erected in 1819, on a slight but spacious eminence at the west end of the town. Its

situation is singularly well chosen, and being a very handsome edifice, in the Grecian style, with a projecting portico of Doric columns on its eastern front, from a design of Gillespie, it forms a splendid termination to the High-street.—A small Lunatic asylum for paupers has been lately erected on the Hospital grounds. The founder also established a charity “for reputed old maids of the town of Elgin.” Other charities connected with the town besides the almshouses, supported out of the preceptory of Maison Dieu, are the Guildry charitable fund, for the benefit of decayed brethren, widows, and children:—income, in 1835, £300 per annum; Lang’s, Bracco’s, and Petrie’s, mortifications, and several friendly and religious societies.

Elgin was made a royal burgh by William I. It is classed with Banff, Cullen, Inverury, Kintore, and Peterhead, in returning one member to parliament. The parliamentary constituency, in 1839, was 249. The constitution of the burgh, previous to the operation of the burgh reform act, was fixed by an act of the convention of burghs, 8th July, 1706. The council consisted of a provost, four bailies, dean-of-guild, treasurer, and two other councillors. It is now governed by a provost, four bailies, and twelve councillors. Its municipal constituency, in 1839, was 204. The revenue of the burgh, in 1839–40, was £538 14s. 5d. In 1832 it was £715 0s. 4d., inclusive of £74 for anchorage and shore dues at Lossie-mouth, where the corporation built a harbour, on which the burgh had from time to time expended considerable sums for repair, which the revenue thus arising was not nearly sufficient to meet; a joint stock company was, therefore, afterwards formed for the erection of a deeper harbour at Stotfield point, to the north of the old harbour. Of the burgh-revenue, in 1832, £241 4s. 1d. arose from feudal duties, £107 18s. 9d. from rental of land, and £187 11s. 11d. from entries of feu-vassals, burgesses, &c. and other casualties. The expenditure on an average of five years to 1832 was £887 18s. 4½d. The amount of debt then due by the burgh was £794 10s., besides the sum of £18 12s. 7d. per annum for the application of which the burgh was answerable, arising from sums mortified in their hands for charitable purposes. Besides the appointment of the burgh-officers the principal patronage of the corporation in 1832 consisted of the academy. The number of burgesses, in 1832, was 141, of whom 40 had rents or tenancy under £5. In 1832 there were 213 houses of £10 and upwards rental within the burgh. Assessed taxes £800 6s. 1d.—Elgin is the head-burgh and seat of the sheriff-court of the shire of Elgin and Forres; and the centre of a large and well-improved agricultural district. Branches of several metropolitan banks are settled in the town, and there is also a savings’ bank. There are weekly markets on Tuesday and Friday, and cattle markets on the 3d Friday of February, 3d Friday of March, 3d Friday of April, 2d Friday of May, 1st Tuesday of June, 3d Tuesday of July, 3d Tuesday of August, 3d Tuesday of October, and 3d Wednesday of December. Elgin gives the title of Earl to a branch of the illustrious and royal house of Bruce. Thomas, 3d Lord Bruce of Kinross, was created Earl of Elgin, in 1633, by Charles I. A descendant of this noble family, Thomas, the 7th earl, formed the valuable collection of the Elgin marbles in the British museum.

ELIBANK, an estate in the shire of Selkirk, and parish of Yarrow; on the south bank of the Tweed, 8 miles north-west of Selkirk. In 1613, Sir Gideon Murray was appointed a lord-of-session, by the title of Lord Elibank; and, in 1643, Elibank furnished a baronial title to Sir Patrick Murray.

ELLAM, or ELD-HAM, an ancient rectory, now

comprehended in the parish of Longformacus, Berwickshire. The ruins of the ancient church, and of the hamlet of Ellam, stand on the north side of the Whitadder, near a ford, whence the place has been called Ellam-Ford.

ELLANDONAN. See ALSH (LOCH).

ELLIOCH. See SANQUHAR.

ELLIOTT (THE), a rivulet in Forfarshire. It rises in Dely moss, on the western verge of the parish of Carmylie, and flows through that parish to the south-eastward, dividing it into two nearly equal parts, and receiving several small tributaries in its course; it next, over $1\frac{1}{4}$ mile's distance, flows eastward, forming the boundary-line between Carmylie and Arbirlot; and it then enters the latter parish, cuts it from north-west to south-east into parts of one-third and two-thirds, receives, about its centre, the waters of Rotten-Raw burn flowing to it from the west, and eventually falls into the German ocean about $1\frac{1}{2}$ mile south-west of Arbroath. Its whole course is about $8\frac{1}{2}$ or 9 miles. Its banks towards Guynd are naturally picturesque and romantic, and have been beautified by the pleasure-grounds of the proprietor of the soil; and, near its confluence with the ocean, they are finely covered with trees, and rise into an overhanging precipice which is surmounted by the romantic-looking castle of Kelly.

ELLISLAND. See DUNSCORE.

ELLON, a parish in Aberdeenshire, bounded on the north by Deer; on the east by Cruden and Logie Buchan; on the south by Logie-Buchan and Udney; and on the west by Tarves and New Deer. It is about 10 miles in length from north to south, and about 7 in breadth from east to west. Extent about 42 square miles. Assessed property, in 1815, £5,591. Houses 509. Population, in 1801, 2,022; in 1831, 2,304; and, in 1837, according to a census taken by the minister, 2,805. The parish is intersected by the river Ythan, a few miles from its mouth, and which is navigable for large boats to within half-a-mile of the village of Ellon. There is an excellent salmon-fishery on this river: near it are some small plantations of fir, ash, elm, and alder, but they serve more for ornament than use. The surface of the parish is uneven, rough, and bleak in appearance, and not very productive. Though there is a good deal of rising grounds, the height of these is not considerable. The soil on the low ground is dry; but in the northern parts it is generally wet and mossy. The grounds, especially near the river, are well-cultivated. The village of Ellon contains about 380 inhabitants, and is pleasantly situated on the Ythan, which is here crossed by a handsome bridge. It is 17 miles north by west of Aberdeen, and a like distance south by west of Peterhead.—The parish is in the synod of Aberdeen, and presbytery of Ellon. Patron, the Earl of Aberdeen. Church built in 1777, and repaired in 1828. Sitings 1,120. Stipend £219 2s. 7d., with glebe valued at £18 per annum. Unappropriated teinds £568 11s. 8d.—There is an Episcopalian chapel, built in 1815; sittings 262. Minister's salary £95 per annum. The congregation has existed since 1688.—There is also an United Secession chapel, built in 1827; sittings 340. Minister's salary £74 4s. and a house and garden.—An Independent chapel was built in 1825; sittings 350.—Schoolmaster's salary £28, with £25 fees and an interest in the Dick bequest. There are two private schools in the parish kept by males, and eight or ten by females who principally teach knitting and sewing.

ELPHINSTONE. See DUNMORE.

ELST (LOCH), a lake in the parish of Crieich, Sutherlandshire. It is about 2 miles in length, and

discharges itself into the Dornoch frith by a rivulet of the same name.

ELVAN (THE), a small river in Lanarkshire, in the parish of Crawford, which has its rise near the Lowther-hill, on the confines of Dumfries-shire, and, after a north-east course of some miles, falls into the Clyde at Elvanfoot, in the parish of Crawford: see next article. It is famous for the particles of gold which have been occasionally found in its sands. See GLENGONAR.

ELVANFOOT, a stage-inn on the road from Glasgow to Carlisle, at the junction of the Elvan and Clyde; 18 miles south-east of Douglas-mill, and 12 north-west of Moffat.

ELY, or ELIE, a small parish in Fifeshire, on the sea-shore, west of St. Monan's. It originally formed part of the parish of Kilconquhair, from which it was disjoined about 1639. In length it is 2 miles from east and west, and nearly 1 in breadth from north to south. It is bounded partly by the frith of Forth, which here forms the bay of Ely, and partly by the parish of St. Monan's on the south; by the same parish on the east; and by the parish of Kilconquhair on the north and west. About a mile to the north-west of the principal part of the parish, there is another portion, which is entirely cut off from it by the intervention of a part of Kilconquhair, and is bounded by that parish on the south, east, and north, and by Newburn on the west. There are no hills, and scarcely even a rising ground in the parish, the whole surface being flat, and a considerable part of it near the sea-shore forming sandy links. The promontories which form the two extremities of the bay of Ely consist of amygdaloid and basalt, the latter exhibiting sometimes a columnar structure. Between these headlands the beach is low, and composed of alternating, thin beds of sandstone and shale, with occasionally seams of coal and strata of limestone,—the whole belonging to a carboniferous system, and inclined at high angles in different directions, and without any regularity. Basalt occurs in numerous places, extending in long reefs far into the sea,—the beds of sandstone and shale dipping from them on both sides; but at one point in the western part of the bay the strata are said to dip under the basalt.* The population, in 1801, was 730; in 1831, 1,029. Houses, in 1831, 180. Assessed property, in 1815, £3,857. The greater proportion of the parish belongs to Sir W. C. Anstruther of Anstruther, Bart. Originally it formed what was called the barony of Ardross, and belonged to a family of the name of Dischington, from whom it came about the beginning of the 17th century, to Sir William Scott, who held the office of director-of-chancery during a part of the reign of Charles I. From his descendants the barony was acquired about the close of that century, by Sir William Anstruther

* "About 2 miles to the eastward of Elie is a small promontory, near the extremity of which is situated a bed of marine shells. The extent of the deposit across the promontory does not exceed 80 yards; its range inland has not been ascertained. The bed rests unconformably upon strata of sandstone and shale, containing masses of ironstone, and consists principally of coarse sand, with rounded fragments of sandstone and ironstone. The shells are sometimes imbedded in clay, but are more frequently scattered irregularly through the deposit, and belong, without exception, to existing species. The point at which they were first noticed, is about 5 feet above high-water mark, and the shells were very much broken. As the bed gradually rises towards the north-east, they are more numerous, and better preserved; the greatest height at which they were noticed, by Mr. Hamilton, being 12 or 14 feet above the level of high tide. The strata, on the baset edges of which the shelly bed rests, Mr. Hamilton conceives were thrown into their highly inclined position by the agency of the neighbouring trap, and before the accumulation of the gravel and sand; but, in consequence of the angle presented by the latter, and the distribution of their component materials, a subsequent elevatory movement has taken place, to which he ascribes the difference of level between the deposit and the present shore."—*Geological Transactions* for 1835.

of Anstruther, ancestor of the present proprietor. The ruins of the ancient castle of Ardross, the manor-place of the barony, still remain, about a mile east of the village. Ely house, the present mansion-house, is situated north of the village, and in its immediate vicinity. It is a large building, erected apparently rather more than 150 years ago in the semi-classic style introduced by Sir William Bruce of Kinross. The grounds are beautifully wooded, and have been laid out with great taste, but have been for some time greatly neglected. There are 1,570 imperial acres in the parish, of which 56 acres have never been cultivated; and about 50 acres are in wood. The rent of the arable land varies, according to its quality, from £1 to £4 per acre; the average being nearly £1 15s. per acre. The valued rent is £4,105 13s. 4d. Scots; the rental, in 1836, was about £2,562 sterling.—This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Sir W. C. Anstruther, Bart. Stipend £149 8s. 8d.; glebe £28 17s. 6d. The parish-church is situated in the village. It appears that the spire was built in 1726, and it is probable the church was built much about the same time. The church received a thorough repair in 1831. It is seated for 610.—There are 3 schools in the parish. The parochial school is in the village, and is well-attended. The teacher has the maximum salary, besides school-house, dwelling-house, and garden. About 50 children from this parish attend school at Earlsferry.

The village of Ely, situated on the sea-shore, is a burgh-of-barony. It is neat and well-built; the streets are wide, clean, and regular. It is well-sheltered from the east wind, and has for a long time been a place of considerable resort during summer for sea-bathing. No market is held in the town, but Colinsburgh—in the parish of Kilconquhair—which is only $2\frac{1}{2}$ miles distant—has regular weekly and yearly markets. There is a post-office in the village, which is a sub-office to that of Colinsburgh. A coach from St. Andrews to Largo passes regularly through Ely every day during the summer, to meet the steam-boat for Newhaven; and the Aberdeen and Dundee steam-boats land and take on board passengers twice, and sometimes three times a-day. There are also two regular packets that sail weekly to Leith, exporting grain, potatoes, &c., and importing articles of merchandise for the shopkeepers in the district. The harbour is naturally an excellent one, and forms a safe and accessible shelter for vessels, during a gale from the west or south-west. Some care appears to have been at one time taken to improve its natural advantages, by the erection of quays and a pier; but nothing has of late been done for their preservation.* Notwithstanding the advantages which Ely enjoys as a fishing-station, very little profit is derived by its inhabitants from that branch of industry. There are few fishermen in the place; and these merely fish along shore for white fish, to supply the consumption of the village and neighbourhood.

EMANUEL, or MANUEL PRIORY, an ancient edifice, now in ruins, in the parish of Muiravonside, on the north bank of the Avon, about a mile above Linlithgow bridge. It was founded in 1156, by Malcolm IV., surnamed the Maiden, and was occupied by nuns of the Cistercian order. Besides the endow-

ments bestowed by the royal founder, it received considerable donations from others at different periods. The prioress of this house swore fealty to Edward I., on the 28th of July, 1291; as did Alice, her successor, at Linlithgow, in 1296. Of this nursery little now remains except the western end of the church. It is of hewn stone, but unadorned; yet there is an elegant simplicity in it, and with the beauty of the surrounding objects, it makes a very picturesque appearance. Grose has preserved a view of it.

EMBO. See DORNOCH.

ENDER (THE), a streamlet in the parish of Blair-Athol, formed by the junction of several smaller brooks, which, uniting a little above Dalmean in the west part of Athol, fall into the Garry, at the hamlet just named.

ENDRICK (THE), a small river which rises in the Gargunnoch hills, parish of Gargunnoch, Stirlingshire, and flowing towards the south-east, is joined a small distance from its source by the Burnfoot burn, after which it forms, for about a mile and a half, the western boundary of the parish of St. Ninian's. It then makes a sharp turn to the westward, entering the parish of Fintry a little below the old ruin called Sir John de Graham's castle. A little farther on, it falls over a perpendicular rock 60 feet in height, forming a singular cataract well-known in the district by the name of 'The Loup of Fintry.' Continuing its westerly course, it leaves the kirk of Fintry on the left, and the woods of Culcreuch a little on the right, and then quitting the parish for Fintry, it forms, for about 5 miles, the boundary between the parish of Balfron on the north, and that of Killearn on the south. Near the western extremities of these parishes it makes a bend towards the south-west, and enters the parish of Killearn between the mansion-houses of Boquhan and Carbeth. After describing various windings it turns directly southward, forms a singular and romantic waterfall called the 'Pot of Gartness,' near the once favourite residence of the illustrious Napier, and is joined by the Blane near Croylecky. On receiving this accession to its waters, it describes a sort of curve, and turning abruptly towards the west, enters the parish of Drymen. It is shortly afterward joined by the Catterburn from the south, upon which it makes a slight northerly bend, but immediately reverting to the original direction of its course, it passes a little to the south of the kirk-town of Drymen and the Earl of Montrose's noble mansion-house of Buchanan, forms the bounding-line between the counties of Stirling and Dumbarton, and finally falls into Lochlomond at the distance of little more than a mile south-west from the kirk of Buchanan, and about half-a-mile from the small island Aber in Lochlomond. Many parts of the banks of the Endrick are of great beauty, and the valley through which it flows has been celebrated in Scottish song under the name of 'Sweet Innerdale.' Franck, in his quaint 'Northern Memoirs,' (1694,) speaks of "the memorable Anderwick, a rapid river of strong and stiff streams; whose fertile banks refresh the borderer, and whose fords, if well examined, are arguments sufficient to convince the angler of trout; as are her deeps when consulted, the noble race and treasure of salmon; or remonstrate his ignorance in the art of angling. Besides this Anderwick," he adds, "there are many other small rivulets that glide up and down these solitary parts."

ENHALLOW, one of the Orkneys, constituting part of the parish of Rousay. It is about a mile in circumference, and is separated from Rousay by a reef of rocks, which, being covered at high water, have sometimes proved fatal to the unwary mariner.

* Mr. Stevenson has given a plan for its improvement, at an expense of not more than £4,000 to £5,000; and some correspondence has in consequence taken place, but nothing has, as yet, been done in the matter. To the eastward of the harbour, and at a small distance from it, is Wadehaven, so called, it is said, from General Wade, who recommended it to Government as a proper harbour for men-of-war. It is very large, and has from 20 to 22 feet water at common tides.

The sound of this name is on the south, between it and the island of Pomona; as it is narrow, and the tide rapid, it should only be attempted with a fair wind, and in moderate weather.

ENNERIC (THE), a river in Inverness-shire, rising in Loch Cluny, in Glenmoriston, which falls into Loch Ness.

ENSAY, one of the Harris isles. It is about 2 miles long and 1 broad; is verdant all over, and well-cultivated.

ENZIE. See RATHVEN.

EOAPIE-POINT. See LEWIS.

EORSA, a small island of the Hebrides, lying between the islands of Mull and Icolmkill. It is inhabited.

EOUSMIL, an insulated rock about half-a-mile in circuit, lying on the west side of North Uist. It is noted for its seal-fishing.

EOY, a small island of the Hebrides, lying between Barra and South Uist.

ERCHLESS-CASTLE. See STRATHGLASS.

ERCILDOUNE. See EARLSTON.

ERES (Str.), an old chapel in the parish of Wick, Caithness; a little below Ackergill tower.

ERIBOLL (Loch), an arm of the Northern Atlantic ocean, in the parish of Durness, in Sutherlandshire: see article DURNES. It is about 11 miles in length, and varies in breadth from 1 to 3 miles, and in depth from 15 to 60 fathoms. At Camisendunbay, about 7 miles from its entrance, is excellent anchorage, and a ferry, 2 miles broad. Its eastern shore, from the Whiten-head southwards, presents a series of caves and arches "the most extensive and extraordinary," according to Macculloch, "on any part of the Scottish coast." At its upper end is some fine Alpine scenery, amongst mountains of quartz and grey slate, in which BENHOPE [which see] is conspicuous. Near the entrance of this loch is the pleasant island of Hoan, about a mile in length and half-a-mile in breadth; and a little above Camisendunbay ferry is another island, of nearly the same dimensions, called Choarie.

ERICHT, or EROCHD (Loch), a lake partly in the parish of Fortingall, county of Perth, and partly in the parish of Laggan, county of Inverness. It is about 16 miles in length, and 1 mile in breadth. The recent Statistical Account mentions, that according to an ancient tradition, the district now covered by the waters of this lake was formerly dry, and constituted an entire parish called Feadail; and that the entire parish, with its inhabitants, was overwhelmed in one night, by the sudden bursting of an immense body of subterranean water. The tradition also states, that for long afterwards the church and part of the principal village could be seen under the water in clear weather. Its waters are emptied into Loch-Rannoch, which lies about 5 miles to the south, whence they flow, through Loch-Tummel, into the river Tay. There is no road to Loch-Ericht; but it may be visited at its southern extremity, either from the head of Loch-Rannoch, to which there is a road along that lake, or from the inn at Dalnacardoch on the Great North road. From either of these places a huge extent of bog, muir, moss, and mountain has to be traversed; but by approaching from Loch-Rannoch, a much less portion of this sort of travelling is necessary than if the visitor attempts to cross the mountains from Dalnacardoch. There is no road along its banks, and no house, with the exception of a solitary hunting-lodge, and the hut of a shepherd near its upper extremity. Few, therefore, we should think, will be inclined to make the attempt of penetrating to its northern extremity, along its rocky margin, or climbing over the nearly perpendicular precipices which almost entirely form

its boundary. Nothing can exceed the solitude and desolation of its shores. Rocks bared by the winter storm,—lofty, precipitous, and sometimes altogether perpendicular,—surround it; and every where are scattered huge blocks of stone which frost or torrents of rain have detached from the mountains. Vegetation seems here almost at an end. The bleating of sheep, the barking of the dog, or the cry of the shepherd, seldom if ever break the silence of this silent place: the visiter finds himself alone amid the silence of nature,—of nature in its wildest form. At the south end, where the waters of the lake are discharged towards Loch-Rannoch, is a rock of 800 or 400 feet perpendicular height. Its summit is accessible with great difficulty; and here is to be seen an ancient fortification or place of strength, the laborious work of an early people who had at one time inhabited this district. It is about 500 feet in length, and 250 in breadth, over the walls. The walls are upwards of 15 feet in thickness, and are constructed of large squared broad stones, firmly laid together, though without mortar. The general purpose of such an erection is abundantly obvious; but the time when, or the people by whom, it was erected, it is now impossible to ascertain.—On the east side of the lake, about a mile or two from the south end, a small cave is pointed out as having afforded shelter and concealment to the young Chevalier after the battle of Culloden. He had wandered previously for some time amid the wilds of Moidart, the islands, and Lochaber, and had made many hairbreadth escapes from being taken by his ruthless pursuers, when, learning that Cameron of Lochiel, and M'Donald of Keppoch, two of his most devoted followers, were concealed in Badenoch, he set off to them, and found them at this cave on the shores of Loch-Ericht. The cave is small, and is formed by detached blocks of stone which, having fallen down to their present situation, form a small opening which might receive two or three individuals. The fugitive, however, had enlarged its dimensions, by erecting a hut of trees in front of its entrance, from which circumstance it obtained the name of the cage, by which it was popularly known at the time. A more effectual place of concealment, or one less likely to be intruded upon than this at Loch-Ericht, could hardly have been selected.—Dr. Macculloch says: "At the southern extremity, Loch-Ericht terminates in flat meadows, vanishing by degrees in the moor of Rannoch, and in that wild and hideous country which extends to Glen Spean along the eastern side of Ben Nevis. This is indeed the wilderness of all Scotland. The wildest wilds of Ross-shire and Sutherland are accessible and lively, compared to this. They might, at least, contain people though they do not; which this tract never could have done, and never will nor can. I know not where else we can travel for two days without seeing a human trace: a human trace,—a trace, a recollection, of animal life; and with the dreary conviction that such a thing is impossible. It is indeed an inconceivable solitude; a dreary and joyless land of bogs, a land of desolation and grey darkness, of fogs ever hanging on Auster's drizzly beard, a land of winter and death and oblivion. Let him who is unworthy of the Moor of Rannoch be banished hither; where he can go next, I know not; unless it be to New South Shetland. Every where else in Scotland, wild as it may be, (and assuredly it is often wild enough,) if we do not see the marks of a living world, of something that speaks of man or beast or insect, we can yet conceive that such things might have been, or that they may be at some future time. If even there is not much expectation of life, there is still the hope left. But, here, to live, is impossible; and if there are any trout in its waters, doubtless

they escape to Loch-Ericht, or elsewhere, as fast as they can."*

ERICHT (THE), a stream which issues from the southern end of the above lake, and after a course of a few miles falls into Loch-Rannoch.

ERICHT (THE), a river in the east of Perthshire. It is formed by the junction of the Airdle and the Shee in the parish of Blairgowrie, which it crosses, and flowing in a south-easterly direction forms the boundary between that parish and the parish of Rath-bay. It then flows through the parish of Bendochy in the same direction and falls into the Isla nearly opposite Balbrogy, in the parish of Cupar-Angus. Its channel is rocky, and its stream rapid and turbulent. The scenery on its banks is in many places singularly romantic, particularly in the neighbourhood of Blairgowrie, at a spot called Craigloch, where the rocks rise perpendicularly on each side to a height of more than 200 feet, and for about 700 feet along the western bank are as smooth as if hewn with the chisel. The entire course of the river does not exceed 17 miles.

ERICKSTANE BRAE, a lofty hill at the head of Clydesdale, along the side of which, above a dangerous declivity, the public road from Edinburgh to Dumfries passes. Here an immense hollow, of a square form, made by the approach of four hills towards each other, receives the popular name of the Marquis of Annandale's Beef-stand,—the Annandale reavers having, in former times, often concealed stolen cattle in this place.

ERISA (LOCH). See **MULL**.

ERISAY, one of the smaller Hebrides, lying between North Uist and Harris.

ERISKAY, a small island of the Hebrides, on the south side of South Uist. It is noted for having been the first place upon which Prince Charles Stuart landed, in his attempt to regain the throne of his ancestors. *

ERNE. See **EARN**.

ERNGROGO (LOCH), a small lake near the centre of the parish of Crossmichael, in the stewardry of Kirkcudbright. It covers about 40 acres, and is remarkable for two islets which are much resorted to by sea-gulls during the breeding-season.

ERROL, a parish on the northern shore of the Tay, in the earse of Gowrie, Perthshire. Its average length is about 5½ miles; its average breadth about 3 miles; and its superficial extent, as ascertained from actual survey, 8,626 imperial acres, or rather more than 15 square miles. It is bounded on the north by the parishes of Kinnaird and Inchture; on the south by the frith of Tay; on the west by the parishes of Kilspindie, Kinfauns, and St. Madois;

and on the east by the parish of Inchture. Forming an integral part of the earse of Gowrie, its surface is generally flat. In the west, however, there are several ridges of slight elevation, which extend in a direction nearly parallel with the Tay, and give a pleasing diversity to the landscape. The soil is principally composed of alluvial clay, and the writer of the recent Statistical Account states that scarcely a single rood of land in the parish is out of cultivation. At the quarry of Clashbennie, near the western extremity of this parish, a number of remarkable fossil remains and impressions have been discovered. † The quantity of sandstone excavated from this quarry yearly, is stated in the last Statistical Account, at between 4,000 and 5,000 tons. The chief wealth of the district consists in the agricultural produce. The valued rent of the parish is £16,982 Scots. The real rent in 1829, was £2,600 sterling. The population of this parish, in 1801, was 2,652; in 1,831, 2,992. Houses 552. In 1836, a private census returned the population at only 2,942; of whom 2,023 belonged to the Establishment, and 908 to other denominations. Of the population, 1,218 are assembled in the village of Errol; 17 families in the village of Westown; 16 families in the village of Grange, and 35 families in the adjoining villages of Seatown and Chapelhill. This parish gives a title to the family of Hay, who were created Earls of Errol in 1452. The family, however, ceased about the middle of the 17th century to possess property in the parish. The principal heritors are J. L. Allen, Esq. of Errol; Col. Allen, of Inchmartin, and Lord Kinnaird. The parish of Errol is in the presbytery of Perth, and synod of Perth and Stirling. Patron, J. L. Allen, Esq. of Errol. Stipend, £268 3s. 6d. Church built in 1831–32, at a cost of above £5,000; sittings 1,434.—There are three dissenting congregations in the parish. A United Secession congregation was established at Errol more than 80 years ago. Church built in 1809, at a cost of upwards of £400; sittings 242.—Another United Secession congregation was established at Petrodie in 1788. Church built in 1789; sittings 320. Stipend £80, with £1 for window-tax, and a house and garden valued at £14 a-year.—A Relief congregation was commenced at Errol in 1795. Church built in 1796; sittings 751.—The parochial schoolmaster has a salary of £32 per annum, with about £35 school-fees; other emoluments £25 annually, as kirk-treasurer and session-clerk. Average attendance about 94. There are two private schools in the parish, attended on an average by about 175 children.

The village of Errol is situated near the sea-coast, about half-way between the eastern and western boundaries of the parish. Its position is very delightful, on a slight rising ground which commands a delightful prospect, particularly towards the south and west. The population of the village which, as already stated, amounts to 1,218, consists chiefly of operative weavers and their families.

ERSKINE, ‡ a parish in Renfrewshire, bounded on the north by the Clyde; on the west by Kilma-collm; on the south by Houston; and on the east by Inchinnan. Its length from east to west is about 7 miles; its breadth about 1½ mile in all parts, except

* Dr. Macculloch, in his 'Letters on the Highlands and Western Islands,' [vol. i. page 452.] says of this lake, in his usual caustic manner, that he found it an enormous gutter, or huge cess-pool; and makes sundry sore grumbings about the difficulties he encountered on visiting it, and the small pleasure received in viewing it after this had been attained. That a visit to Loch-Ericht is indeed an arduous and laborious task, few who have made the attempt will deny. But the objects to which it was assimilated in the imagination of the learned Doctor, will occur to few minds except such as have vegetated amid the streets and lanes of the metropolises: whose knowledge of picturesque scenery is bounded by the waterfall in Vauxhall, or the scenery of Covent-Garden. That the scenery around Loch-Ericht is not beautiful, is certain; and it is equally so, that it is not picturesque. But few cultivated minds can contemplate the wild shores of this lake without acknowledging their sublimity, and feeling emotions of awe press upon the soul. Even the Doctor, with all his talent for sarcasm, could not have written what we have quoted from him in the present article, while his impressions of this scenery were recent. In the solitude which reigns around Loch-Ericht there is sublimity; in the utter silence,—here undisturbed even by the hum of an insect,—there is another source of the sublime; while amid the dark mountains, and lofty black rocks which form the boundaries of the lake, the spectator is at once impressed with the variety, the greatness, and the grandeur of Nature.

† Among these the impression of an unknown kind of fish, measuring 27½ inches by 13, which was discovered in 1836, is the most interesting as yet found. A drawing of this singular remain was exhibited in the geological section of the British Association at Bristol, in 1836, and another and more correct representation of it has since engaged the attention of Professor Agassiz.

‡ The name is probably derived from the British *ir-sigga*, signifying 'the Green rising ground.' A foolish legend derives it from a person who is said to have received the surname *Eris Skyne*, on occasion of a military achievement in the reign of Malcolm II., 1003–33.

on the east side, where it extends to $3\frac{1}{2}$ miles. The parish contains 6,365 English acres, of which about a half is arable, and well improved; the remainder is occupied as pasture-ground, and by wood, natural or planted. The tract along the Clyde is flat and fertile: behind that plain the ground rises considerably. A hilly ridge extends through the western district. The soil in general is light, but some tracts are a deep clay. In the north-east division, a dark grey mould is mixed with gravel; in some places there is till on a bed of freestone; in others a deep clay. This parish abounds with good water, but it does not contain any lake or river; only some small streams or burns. The Clyde greatly increases in breadth, and begins to assume the appearance of an estuary, as it passes along the border of this parish. It is here crossed by two ferries: one of these, called Erskine ferry, nearly opposite to the village of Kilpatrick, being furnished with quays, serves for transporting horses and carriages, as well as foot-passengers;* the other, called the West ferry, is opposite to the castle of Dumbarton, and is chiefly used for foot-passengers. In the eastern part of the parish, there are some freestone quarries. The two great lines of communication between Glasgow and Greenock, namely, the railway, and the turnpike-road, pass through the parish.—The lands of Erskine were the most ancient possession of the distinguished family who assumed that as their surname, and afterwards became Lords Erskine and Earls of Mar. They remained in the possession of this estate till the year 1638, when it was sold by John, Earl of Mar, to Sir John Hamilton, of Orbiston.† In 1703, it was purchased from the Hamiltons, by the noble family of Blantyre; to whom it still belongs. The old mansion-house of Erskine, which is still in good condition, is situate near the bank of the Clyde. On a rising ground, a little farther down the river, stands the magnificent modern mansion, the building of which was commenced by Robert Walter, 11th Lord Blantyre, who perished accidentally during the commotions at Brussels, in September, 1830. The structure is in the Elizabethan style, and presents a fine appearance from the river. From the house itself the views are varied, beautiful, and extensive. The pleasure-grounds are finely wooded, and a handsome obelisk, which was erected to the memory of the lamented person just mentioned, by the nobility and gentry of the county, forms a striking and appropriate accessory to the scene.—The estate of Bishop-ton in this parish, now the property of Sir John Maxwell, originally belonged to the family of Brisbane, represented by Sir Thomas Makdougall Brisbane.—The estate of Dargavel belongs to an ancient family, named Maxwell. The house was built in the year 1574, as appears from a stone in the front wall. It is in the French style, which was introduced into Scotland in the reign of Mary; and having undergone little alteration, forms a good specimen of the dwellings of the Scottish gentry about that period. The lower story is strongly vaulted, and the flank-

ing towers are loopholed for musketry. Facing the gate there is an ancient yew, which in size and beauty excels any other tree of the same kind in Renfrewshire.—Bargarran, a noted scene of witchcraft, has been described in a separate article.—Walter Young, D.D. and F.R.S. Edinburgh, minister of this parish, from about 1770 till his death in 1814, was distinguished for his profound and scientific knowledge of harmony. His successor, Andrew Stewart, M.D., who died in 1839, possessed great skill in pulmonary complaints.—Population, in 1801, 847; in 1831, 973. It is a remarkable fact that the population in 1831 was exactly the same as in 1821. Houses in 1831, 130. Assessed property, in 1815, £7,459.—Erskine is in the presbytery of Greenock, and synod of Glasgow and Ayr. Patron, Lord Blantyre. The present church is a handsome edifice. Stipend £279 2s. 9d.; glebe £9 12s. 6d. Unappropriated teinds £382 2s. 4d.—Salary of parochial schoolmaster £30, with about £31 fees and emoluments. There is also a side-school, partly supported by a small contribution from the heritors, and partly by the fees.

ESK (THE), a river of Dumfries-shire, formed by the confluent waters of the Black Esk and the White Esk. From the point where these streams unite, the Esk flows $3\frac{1}{2}$ miles south-south-eastward through the parish of Westerkirk. Hemmed in here by Craighill, it sweeps with a rapid circuit round its base, going off in a direction due north, and assuming a direction due south, in the progress of $\frac{3}{4}$ of a mile. It now, for $1\frac{1}{2}$ mile forms the boundary line between Westerkirk and Langholm. Entering the latter parish, it flows east, north, and east, and debouches to the south, within the space of $1\frac{1}{2}$ mile; and thenceforth continues, with the exception of unimportant sinuosities, to have a direction to the east of south, till it receives the waters of the Liddal, and thence to the west of south, till it falls into the Solway frith. It intersects Langholm parish considerably to the eastward of its middle, and flows past the town of Langholm, and there receives Ewes water from the north-east, and Wauchope-water from the south-west. At the point of leaving Langholm-parish, it is joined by Tarras water from the east; and, entering Canonbie, it cuts that parish into two nearly equal parts. At Canonbie-holm, it receives from the north-east the wealthy tribute of the Liddal; and afterwards, for about a mile, forms the boundary-line between Scotland and England. It then enters Cumberland, and having become an English river, it receives from its fatherland the tribute of Glenzier burn, and from the land of its adoption the richer tribute of Line river, and, having flowed past Kirkandrews, and Longtown, pours along toward the Solway frith at a point about $1\frac{1}{2}$ or 2 miles from Sarkfoot, the extreme verge of Scotland. The Esk is a river of no common beauty. Till it reaches Broomholm in the south of Langholm parish, it has its path among mountains or uplands, and afterwards it traverses a fertile plain. But even in its upland regions, especially in the vicinity of the town of Langholm, it is brilliant in the dresses and opulent in the ornaments of river-beauty. Over a great part of its entire course, it has a shelving or gravelly bottom, and glides along amidst lovely woodland scenery and smiling luxuriant haughs, which, in former ages, have oft re-echoed to the shouts of war. Measured from the confluence of the Black and the White Esk, its course, before leaving Scotland, is about 16 miles; and after entering Cumberland, between 7 and 8.

ESK (THE BLACK), a river of Dumfries-shire. It rises in the mountain-range which forms the boundary of the county, near the north-eastern point of the parish of Eskdalemuir. For 6 miles it flows near

* Until 1832, the operation of ferrying cattle across here, was a very awkward and even perilous one. The animals were thrust into a deep boat, in the most awkward and dangerous manner possible, and blows innumerable had often to be applied to them ere they could be prevailed on to embark. Now a strong, neat, roomy, and commodious boat, built expressly for the purpose, on the most approved principle, plies here; and is found to answer the end admirably. Forty head of cattle can, by means of it, be conveyed over at once, and that too, with such ease that the cattle, until they see the shore receding from their view, scarcely seem to know that they are afloat. The boat, instead of being guided by poles or oars, is pulled across by a chain, in a way similar to the cattle-boat at Renfrew. Equestrians, coaches, and loaded carts, can also be conveyed over, with the greatest safety and expedition.

† In Swan's Views on the Clyde, p. 65, it is erroneously stated that this sale was made by Charles, Earl of Mar, "shortly previous to the year 1689."

the eastern boundary of that parish, in a direction due south, cutting its way through a field of mountains, and receiving numerous tributary rills in its course; it then debouches almost at a right angle, and for $1\frac{1}{2}$ mile flows due east; it now bends suddenly round, and for another $1\frac{1}{2}$ mile flows to the east of south; and afterwards, over a distance of $2\frac{1}{2}$ or 3 miles, it wends in remarkable bold sinuosities, east, south, west, east, north-east and east, forming, part of the way, the boundary-line between Eskdalemuir and Westerkirk, and eventually, at the south-east extremity of the former parish, forming a confluence with the WHITE ESK: which see. Its whole course is about 12 miles, through rugged mountain scenery, and terminates at a place called Kingpool, where, according to tradition, a Pictish king was drowned.

ESK (THE NORTH), a river of Forfarshire, formed, according to some representations, by the confluent streams called the East water and the West water, but including, according to others, the whole course of the former of these streams. Even the East water, otherwise the North Esk, is formed of three confluent streams, the Mark, the Lee, and the Brany, which unite their waters near the centre of the parish of Lochlee, at Invermark castle. All the three rise amidst the mountain-range of the Grampians, on the northern boundary of the county. The Brany, the shortest of them and the most easterly, rises at the hill of Cairney, and flows due south over a distance of $4\frac{1}{2}$ miles. The Lee, the most westerly, rises at the base of Bousties-Ley, and flows very sinuously in an easterly direction, bearing the name of the water of Urick till it enters Lochlee, and on its egress thence assuming its proper name; and traversing altogether, till the point of confluence with the other streams, a distance of about 11 miles. The Mark, the central stream and the longest, rises between Wester Balloch and the Black hill of Mark, flows northward for about $5\frac{1}{2}$ miles, and then bends round to the south-east, and traverses $6\frac{1}{2}$ miles further distance till it meets the Brany, and $\frac{1}{4}$ of a mile farther down, the Lee. The East water, or North Esk, now formed by these united streams, flows eastward $5\frac{1}{2}$ miles till it touches the parish of Edzel; it then debouches and goes northward about $1\frac{1}{2}$ mile, forming the boundary-line between that parish and Lochlee; it now enters Edzel and intersects it, flowing first eastward, and next south-eastward, over a distance of 6 miles; and it finally forms, for 5 miles, the boundary-line between Edzel and Kincardineshire, and at the extreme south-east angle of Edzel, makes a junction with the West water. In its course it receives the Effock, the Tarf, the Kieny, the Turret, and numerous brooks and rills; and till it emerges from among the Grampians, 4 miles above the point of confluence, it careers rapidly along a rugged path, and wears the character of strictly a Highland river.—The West water rises at Stoney loch, in the extreme west of the parish of Lethnot, and flows south-east $6\frac{1}{2}$ miles, north-east $1\frac{1}{2}$ mile, east 2 miles, and again south-east 4 miles, cutting the parish into two nearly equal parts, receiving numerous small tributaries, and bearing for a while the name of the Water of Saughs. It now flows north-eastward for $2\frac{1}{2}$ miles, forming the boundary-line between Lethnot on the west, and Menmuir and Strickathrow on the east; and then flows south-westward, 5 miles, dividing the latter parish on the south from Edzel on the north, when it unites with the East water to form what all nomenclatures agree in calling the North Esk. In the upper and longer part of its course it resembles the East water in being strictly a mountain-stream; and it flows altogether, in its independent course, about 22 miles.—The North Esk of the united waters pursues a direc-

tion somewhat sinuous, but in general easterly, traversing a distance of 9 miles,—dividing the parishes of Strickathrow, Logieport, and Montrose on the south, from Kincardineshire on the north,—diffusing its treasures over a basin of generally a pleasing, and at intervals a beautiful appearance,—and gliding away from an overhanging bank tinted with the hues of fine landscape, to lose itself in the German ocean, 3 miles north of Montrose. Its entire course, from the head-waters of the Mark, is about 40 miles.

ESK (THE NORTH), a small river of Edinburghshire. It rises in the parish of Linton in Peeblesshire, in two sources, respectively at the Boar-stone and the Easter-Cairn-hill, amid black and barren mountain-scenery. Having flowed $\frac{2}{3}$ of a mile eastward, it first turns to the south-east, and next resumes its easterly direction, forming for nearly 5 miles the boundary-line between Peeblesshire and Mid-Lothian, and receiving, in its course, several tiny tributaries, the chief of which is Carlops-burn, on its right bank. Entering Edinburghshire at the Powder mills, it flows about 4 miles north-eastward, till it sweeps past the village of Penicuik; when it turns northward, and, for about $1\frac{1}{2}$ mile, forms the boundary-line between the parish of Penicuik on the west and that of Lasswade on the east. It now runs sinuously for nearly a mile, turning successively to nearly every point of the compass, and receiving on its left bank the tribute of Glencross-burn, and touching over a brief space the parish of Glencross, and then, over a direct distance of 4 miles, but with constant meanderings in its course, flows in a direction east of north to Polton. Over half-a-mile hence it touches the parish of Cockpen on its right bank, next sweeps past the village of Lasswade on its left bank, and then, over the distance of a mile, bends eastward, intersecting a wing of Lasswade parish. It now, a little eastward of Melville castle, enters, in an easterly direction, the parish of Dalkeith, and, after a mile's run, sweeps past the town and the ducal mansion of Dalkeith; and having already assumed a direction east of north, it forms, half-a-mile farther on, at the northern limit of the parish of Dalkeith, a junction with its sister-stream, the South Esk. The united waters of the Esks, denuded of their distinctive epithets of North and South, henceforth intersect the parish of Inveresk, cutting it into two nearly equal parts, and become ingulfed in the sea at the town of Musselburgh. The banks of the North Esk, over nearly its whole course, after entering Mid-Lothian, are delightfully picturesque and romantic. Though an inconsiderable brook, while traversing the parish of Penicuik, it then forms the grand charm of the beautiful demesnes of Penicuik and Newhall; and over the parish of Lasswade, it wends its course through a deep and sequestered and richly scenic vale, sweeps round and almost encompasses the venerable pile of Roslin castle, and runs thenceforth along a deep and romantic glen past the caves and mansion of Hawthornden. Where it looks up the banks of one of its tributaries, it even suggests the classic thoughts associated with 'the Gentle Shepherd' of Allan Ramsay: see HABBIE'S HOWE. Amid all its beauty and its wealth of landscape, too, this river contributes largely to the useful and productive aims of agriculture and manufactory,—driving, in its progress, the machinery of numerous paper and other mills. Its manufactories and its mills, however, have destroyed its reputation as a fishing-stream.

ESK (THE SOUTH), a river of considerable magnitude in Forfarshire. It rises in the extreme north-west of the county, among the highest of the Grampian range within half-a-mile of the source of a chief

tributary of the Aberdeenshire Dee. It flows eastward 5 miles, and south-eastward 7, intersecting longitudinally the oblong parish of Clova, in the extreme west of which it rises, and receiving in its progress White water, and a large number of mountain-rills. It now enters the parish of Cortachie, and in a south-easterly direction traverses it over a distance of 7 miles. Hitherto it moved along a mountain-path, and was cheerless in its aspect; but henceforth it luxuriates amid the fertility and the culture and the woodland beauties of Strathmore, and the richest part of the coast-district which intervenes between that fine strath and the sea. For 3 miles after its intersection of Cortachie, it continues to flow south-eastward, and divides that parish on the west from Tannadice on the east; and it then, coming in contact with the friendly but powerful and unceremonious tribute of Prosen water, pouring down upon it from the east, makes a gentle bend, and, over the rest of its course, maintains a direction, interrupted and varied by numerous brief windings, but generally due east. From the point of its confluence with the Prosen, it divides the parishes of Kirriemuir, Oathlaw, and Aberlemno, on the south, from those of Tannadice, Menmuir, and Brechin on the north; it then enters the last of these parishes, sweeps past the town of Brechin, situated on its northern bank; and after leaving the parish, divides for 2 miles Marytown on the south from Dun on the north; and then suddenly expands into the beautiful lagoon, $2\frac{1}{2}$ miles by 2, called Montrose basin: see DUN and MONTROSE. From this fine expanse,—which alternately gleams in splendour under the flow of the tide, and, during the recess of the waters, darkens into the desolate aspect of a wide field of mud—the river emerges by two narrow outlets, which fork round an island, and then open into a channel $\frac{1}{4}$ of a mile wide, along which the river runs to embrace the ocean at the distance of $1\frac{1}{2}$ mile from the exit from the basin. So narrow are the two gulleets along the sides of the island, compared with the area and depth of the lagoon, that the tide, both in entering and in receding, moves with the impetuosity of a resistless current. Chiefly on this account, the South Esk, though here washing the walls and forming the harbour of the populous town of Montrose, and having on its opposite bank the flourishing fishing-village of Ferrydon, and though overlooked in its inland progress by the important town of Brechin, and many of the opulent lands as well as some of the stirring villages of Forfarshire, is of no benefit as a watery highway of communication further than $\frac{3}{4}$ of a mile from the sea. The banks of the river are adorned with numerous elegant seats and demesnes, and, in particular, with those of Brechin castle, Rossie, and Kinnaird. The family of Carnegie, the proprietors of the last of these, are descended from noble ancestors who, accepting title from the river, were called Earls of Southesk. This river, in a former age, produced pearls of great value, but has eventually suffered such an exhaustion of its mussel-beds that no shells have, for a considerable period, been found old enough to contain the precious gems.

ESK (THE SOUTH), a small river of Edinburghshire, the sister-stream of the North Esk. It issues, in the parish of Eddleston in Peeblesshire, from a small lake called West loch, and flows due north over a distance of $3\frac{1}{4}$ miles, forming the boundary-line between Peeblesshire and Mid-Lothian over the last $\frac{3}{4}$ of a mile of that distance, and entering Mid-Lothian at a point only 5 miles east from that where the North Esk enters. Running for half-a-mile first north and then east, it intersects a small wing of the parish of Temple, receives on its right bank the tri-

bute of Tweeddale-burn, as far-fetched and as wealthy as its own waters, and begins, over a distance of $2\frac{1}{2}$ miles, and flowing in a northerly direction, to divide the parish of Penicuik on the west from that of Temple on the east. It now, though beginning to run in constant and beautiful sinuosities which characterize all its subsequent course, assumes a general direction east of north, and, over a distance of 2 miles, divides the parish of Carrington from that of Temple, and receives the wealthy tribute of Gladhouse water, which, after traversing the whole parish of Temple from a point on the limits of Mid-Lothian 2 miles farther south than the source of the South Esk, flows down upon that river where it debouches to the east, and drives it suddenly round to a northerly direction. The South Esk, after its junction with the Gladhouse, divides, over a distance of 2 miles, the parish of Carrington on the west from that of Borthwick on the east, and receives another important accession in Borthwick water. It now, for $\frac{3}{4}$ of a mile, meanders north-westward, dividing the parish of Carrington on its left bank from that of Cockpen on its right; it then, resuming its northerly direction, intersects the latter parish over a distance of $1\frac{1}{2}$ mile; and thenceforth till, 3 miles farther on, it blends its waters with those of the North Esk, it intersects a wing of the parish of Newbattle, and sweeps past the town and the palace of Dalkeith, enclosing them between its own waters and those of its sister-stream in a long and beautiful peninsula. The banks of the South Esk are, in general, richly clothed in sylvan dress, and possess a romance and an attractiveness of character little inferior to the banks of the North Esk, though less frequented by the tourist and more seldom celebrated in description and song. The district watered by the South Esk was formerly a lordship or barony, which derived the name of Eskdale from the river, and belonged to the Maxwells, but was attained in consequence of that family's attachment to the dethroned house of Stuart.

ESK (THE WHITE), a river of Dumfries-shire of similar character to the Black Esk, and flowing parallel to it at an average distance of 3 miles to the east. Its sources, according to popular nomenclature, are in the mountains a mile east of Ettrick Pen. But a stream called Bloodhope-burn rises a little to the north-east of these, and flows circuitously over a considerably longer course than is traversed by the nominally parent stream previous to their confluence. The White Esk, with the exception of very numerous and sudden but uniformly brief sinuosities, flows, over its whole course, almost due south, intersecting the parish of Eskdalemuir, a little to the eastward of its middle; and it receives, in its progress, the tributes of Davington and Garwald from the west, and of Langshaw burn and Rae burn from the east,—all, like itself, rising in the central mountain-range of the Southern Highlands of Scotland. Its basin, though looking occasionally up some cleughs, and containing a few spots of some interest, is rather the deeply-cut course of a mountain-stream than a dale or valley. The course of the river, till it forms a confluence with the Black Esk, is, including windings, about 15 or 16 miles.

ESKDALE, the eastern district of Dumfries-shire, and the smallest of the three dales or sections into which that county is popularly divided. These sections seem never to have had fixed or accurately defined boundaries; and are loosely represented as corresponding with the watersheds of the great rivers, the Nith, the Annan, and the Esk, by which they are respectively traversed. The considerable territory, consisting of the parishes of Gretna, Half-Morton, Kirkpatrick-Fleming, Dornock, and part of

Middlebie, would thus be debateable-ground between Annandale and Eskdale, or rather would properly belong to neither. But as that portion of this ground which lies nearest the Annan is popularly reckoned part of Annandale, so Half-Morton is fairly viewed as belonging to Eskdale. What lies within the watersheds of the Esk and its tributaries, is the territory of the large parishes Eskdalemuir, Westerkirk, Ewes, Langholm, and Canonbie. But in some old documents, Ewes, consisting of the basin of the tributary river Ewes, is treated as itself a section of Dumfries-shire, in common with the these large sections [see EWES]; and in popular language, it is still styled Ewesdale. Excepting the parish of Canonbie, and a stripe of the southern part of that of Langholm, which are a fine flat country, all Eskdale is hilly or mountainous, constituting a large part of the Southern Highlands of Scotland, and presenting a bleak and rugged aspect relieved at intervals by glimpses of beauty. The immediate basin of the Esk, till it approaches the southern boundary of Langholm, is rather a deep river-course than a valley; and it opens, at frequent intervals, particularly at the confluences with its own stream of the Black Esk, the Meggot, the Ewes, and the Wauchope, into lateral river-courses similar in character to itself. Nearly the whole of the upland and greatly larger section of Eskdale, is, in consequence, pastoral and thin in population.—In all its parts, Eskdale was settled, early in the 12th century, by Anglo-Norman barons and their followers. Robert Avenel received from David I., in reward of military services, Upper and Lower Eskdale: he seems to have been a counsellor of Malcolm IV., and a courtier of William the Lion. Having granted a large portion of the estates to the monks of Melrose, he retired from the world and joined their cowed society. Gervaise, his son and heir, confirmed to the monks the grant of Upper Eskdale, and, in 1219, was buried in their cemetery. Roger Avenel, the successor of Gervaise, though acknowledging the monks' property in the lands they had obtained, disputed their right to hunt upon them, and successfully made an appeal against that right to Alexander II. and his barons. The property of the Avenels seems now to have passed, by female heirs, into the possession of other families. The manor of Westerkirk, occupying the middle part of Eskdale, was probably granted, along with Liddesdale and some lands in Teviotdale, by David I., to his follower Ranulph de Soules. This estate, however, was forfeited by the Souleses during the critical and tempestuous period of the war of the succession. During the reign of Malcolm IV., the lower part of Eskdale was held chiefly by two brothers of the name of Rossedal. Guido de Rossedal possessed lands on both sides of the Lower Liddal. Turgot de Rossedal, and afterwards his successor William, owned a large part of the lands between the Esk and the Liddal, and between the Esk and the Sark; and Turgot founded a religious house, called the Priory of Canonbie, on the former section of the property, and bestowed the adjacent estate on the monks of Jedburgh. During the reigns of Robert I., and his feeble son David II., Eskdale, including Ewesdale, was, in a great measure, acquired by the grasping Douglas, and, with ample jurisdiction, erected into a regality. This extensive and powerful lordship remained with the Douglasses till their forfeiture in 1455; and was then acquired by the Maxwell family, and continued with them throughout the 16th and 17th centuries. In 1610, John, Lord Maxwell, erected the town of Langholm into a baronial burgh; and the jurisdiction of Eskdale was sometimes, in consequence, called the regality of Langholm. After

the regality came into the possession of the family of Buccleuch, it was enlarged by the annexation of what had belonged, in upper Eskdale, to the monks of Melrose. In 1747, the Duke of Buccleuch was compensated for the jurisdiction by the receipt of £1,400 sterling.

ESKDALEMUIR, a parish in the district of Eskdale, Dumfries-shire. It is bounded on the north by Selkirkshire and Roxburghshire; on the south-east by Westerkirk; and on the south-west by Hutton and Corrie; and on the west by Moffat. It has nearly the figure of a flying kite,—the arc of a circle subtended by a long acute angle, the point of the angle being towards the south. It measures in extreme length, from the highest source of Bloodhope-burn on the north, to the confluence of the White and the Black Esk on the south, $11\frac{3}{4}$ miles; in extreme breadth, from Loch-Fell on the west to half-a-mile above the source of Rae burn on the east, $9\frac{1}{2}$ miles; and in superficial area about 42,250 English acres, or 66 square miles. Nearly all its surface is mountainous, heathy, and of a moory appearance, and appropriately designated *Eskdale-muir*. The highest summits are Etterick Pen on the northern boundary, and Loch Fell on the western. The former rises 2,200 feet above the level of the sea, and is also, and more justly, called *Eskdalemuir Pen*, constituting a prominent feature in the landscape of Eskdalemuir, and being imperfectly and limitedly seen in Etterick. The soil of the parish is, in general, very deep, but mossy, unproductive of fine vegetation, and carpeted with heath, or with a coarse grass. Along the banks of the White Esk the hills are, for the most part, green, and afford excellent pasture; and there are a few meadows or holms which repay cultivation. The parish is cloven into mountain-ridges by the White and the Black Esk, and very numerous tributaries. Near the northern boundary, on the brook Finglandhope, is a cascade called Wellsburnspout, of about 56 feet in height. In the western division, on Garvald water, is another cascade, peculiarly romantic: see GARVALD WATER. On almost every hill of the parish are marks of encampments, some rectangular, and some of a circular or oval form. On the top of a hill on the farm of Yetbyre, near the confluence of the Esks, is a very complete oval encampment, which has long and generally been regarded as the celebrated Roman camp of Castle-over, Castle-o'er, or Overbie, which, as an upper station, communicated by a causeway with the camps of Middlebie and Netherbie. But Dr. William Brown, the venerable minister of the parish, and the statistical reporter of it both in the Old Account, of Sir John Sinclair, and in the New, now in course of publication, though he followed the prevailing opinion in his first report, became of opinion that the encampment in question is of Saxon origin; and he discovered, considerably to the north of it, on a tongue of land at the confluence of the White Esk and Rae burn, what appears to be the true Castle-o'er. This camp, elaborately described by Dr. Brown in the New Statistical Account, contains, in its present state, an area of 5 acres, 1 rood, and 30 poles, English; and is supposed to have contained, in its original condition, 6 acres, 3 roods, and 24 poles. Within the larger area is a space, 270 feet by 100, enclosed and fortified. The vallum and fosse remain still distinct; and the ditch, 20 feet wide, is, on an average, 5 feet deep. On the farm of Coatt are two circles of erect stones, in the form of what are popularly styled Druidical temples; the one entire, measuring about 90 feet; and the other, worn partly away by the Esk, measuring about 340 feet. On the peninsula at the confluence of the Esks, an annual fair was, in former times, held, at which a

remarkable custom prevailed. At any anniversary of that fair, unmarried persons, of the two sexes, chose companions suitable to their taste, with whom they agreed to live till next anniversary. This strange paction was called 'hand-fasting,' or 'hand in fist.' If, at the return of the fair, they were mutually pleased with their companionship, they continued together for life; and if not, they separated and were free to make another choice.* The parish is traversed from north to south along the White Esk by one line of road, and diagonally from south-west to north-east by another. Population, in 1801, 537; in 1831, 650. Houses 114. Assessed property, in 1815, £6,329.—Eskdalemuir is in the presbytery of Langholm, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £220 15s. 10d.; glebe £20. Unappropriated tithes £719 14s. The parish originally constituted part of Wester Kirk, and was disjoined from it in 1703. The church was built in 1826. Sittings nearly 400. There are 2 schools; one of them unendowed. Parochial schoolmaster's salary £34 4s. 4½d, with school-fees amounting to about £10.

ESSIE. See RHYNIE and ESSIE.

ESSIE AND NEVAY, two parishes consolidated into one, on the western verge of Forfarshire. They are strictly coterminous, and of not unequal size.—Essie on the north, and Nevay on the south. The united parish is bounded on the north by Airlie; on the east and south-east by Glamis; on the south by Newtyle; and on the west by Perthshire. It is of somewhat an oblong form, stretching from north to south; and measures, in extreme length, from Dean river near Blackhill to Banquo tower, 4½ miles; in extreme breadth, from Newmill on the west to a point near Eanie on the east, 2½ miles; and in superficial area about 5,120 English acres, or 8 square miles. The eastern division consists of the declivity of the Sidlaw hills, and the western of a portion of Strathmore. The Dean river flows sluggishly along the north, forming the boundary-line over a distance of 2½ miles; and is noted for the large size and delicious flavour of its trouts. Three rivulets, two of them indigenous, intersect the parish, or, for a short way, trace its boundary. One of these, the burn of Essie, rises at the hill of Auchterhouse, in the parish of the same name, flows northward through Glamis, and, after entering Essie, drives a mill, bathes the wall of the churchyard, and at length, 6 miles sinuously from its source, falls into the Dean. The soil of the eastern or upland division is a thin black mould on a bottom of mortar, and more fertile than that of any part of the opposite declivity of the Sidlaws; but toward the summit of the hills it degenerates, and is suitable only for plantation or for pasturage. The soil of the eastern or strath division is, in the south, a level and marshy tract continuous with the moss of Meigle; and, in the north, it is in some places thin but fertile, and in others a strong and rich clay, partially subject to occasional overflowings of the Dean. A vein of silver ore, too inconsiderable, however, to be worked, was, at one time, discovered in the south-east corner. There is a quarry of excellent freestone of a light grey colour, and capable of a fine polish. The parish is intersected by the turnpike between Perth and Forfar, and by three other roads, one longitudinally, and two across its breadth. Population, in 1801,

* Persons of high rank seem to have taken the benefit of this custom. Lindsay, in his reign of James II., says: "James, sixth Earl of Murray, begat upon Isabel Innes, daughter of the Laird of Innes, Alexander Dunbar, a man of singular wit and courage. This Isabel was but *handfast* with him, and deceased before the marriage; where-through this Alexander he was worthy of a greater living than he might succeed to by the laws and practices of this realm."

638; in 1831, 654. Houses 130. Assessed property, in 1815, £2,195.—The parish is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, Lord Wharmcliffe. Stipend £161 5s. 2d.; glebe £15. Both parishes have churches in which divine service is performed alternately. The manse, situated near the church of Essie, has a commanding prospect to the west and north-west. The parishes were united before the middle of the 17th century.—Schoolmaster's salary £34 4s. 4½d., with school-fees £17 5s. 7d. Besides the parochial school there is one unendowed.

ESSIL, an ancient parish, now comprehended in that of SPEYMOUTH: which see. It is 3 miles north of Fochabers.

ETIVE (LOCH), a navigable inlet of the sea in Argyleshire, nearly 20 miles long, but of very unequal breadth. Its shores are pleasant, being indented with creeks and bays, which afford safe anchorage in any wind. The extremity of Loch Etive bends its course, from Bunawe ferry, in a north-easterly direction, till it terminates in a point, where it receives the waters of the Etive river, running through Glen Etive. About 7 miles from its entrance from the sea, it contracts into a narrow channel: see article CONNAL. "Loch Etive, between the ferries of Connal and Bunawe," says Professor Wilson, "has been seen by almost all who have visited the Highlands—but very imperfectly; to know what it is you must row or sail up it, for the banks on both sides are often richly wooded, assume many fine forms, and are frequently well embayed, while the expanse of water is sufficiently wide to allow you from its centre to command a view of many of the distant heights. But above Bunawe it is not like the same loch. For a couple of miles it is not wide, and it is so darkened by enormous shadows that it looks even less like a strait than a gulf—huge overhanging rocks on both sides ascending high, and yet felt to belong but to the bases of mountains that sloping far back have their summits among clouds of their own in another region of the sky. Yet are they not all horrid; for nowhere else is there such lofty heather—it seems a wild sort of brushwood; tall trees flourish, single or in groves, chiefly birches, with now and then an oak—and they are in their youth or their prime—and even the prodigious trunks, some of which have been dead for centuries, are not all dead, but shoot from their knotted rhind symptoms of life inexhaustible by time and tempest. Out of this gulf we emerge into the Upper Loch, and its amplitude sustains the majesty of the mountains, all of the highest order, and seen from their feet to their crests. Cruachan wears the crown, and reigns over them all—king at once of Loch Etive and of Loch Awe. But Buachaille Etive, though afar off, is still a giant, and in some lights comes forwards, bringing with him the Black Mount and its dependents, so that they all seem to belong to this most magnificent of all Highland lochs. 'I know not,' says Macculloch, 'that Loch Etive could bear an ornament without an infringement on that aspect of solitary vastness which it presents throughout. Nor is there one. The rocks and bays on the shore, which might elsewhere attract attention, are here swallowed up in the enormous dimensions of the surrounding mountains, and the wide and ample expanse of the lake. A solitary house, here fearfully solitary, situated far up in Glen Etive, is only visible when at the upper extremity; and if there be a tree, as there are in a few places on the shore, it is unseen; extinguished as if it were a humble mountain-flower, by the universal magnitude around.' This is finely felt and expressed; but even on the shores of Loch Etive there is much of the beautiful;

Ardmatty smiles with its meadows, and woods, and bay, and sylvan stream; other sunny nooks repose among the grey granite masses; the colouring of the banks and braes is often bright; several houses or huts become visible no long way up the glen; and though that long hollow—half a day's journey—till you reach the wild road between Inveruran and King's House—lies in gloom, yet the hillsides are cheerful, and you delight in the greensward, wide and rock-broken, should you ascend the passes that lead into Glencreran or Glenco. But to feel the full power of Glen Etive you must walk up it till it ceases to be a glen. When in the middle of the moor, you see far off a solitary dwelling indeed—perhaps the loneliest house in all the Highlands—and the solitude is made profounder, as you pass by, by the voice of a cataract, hidden in an awful chasm, bridged by two or three stems of trees, along which the red-deer might fear to venture—but we have seen them and the deer-hounds glide over it, followed by other fearless feet, when far and wide the Forest of Dalness was echoing to the hunter's horn."

ETTON, a district in the parish of Castleton in Roxburghshire, formerly a rectory and vicarage, and the churchyard of which is still in use. It is situated on the west side of the Liddel, at the head of the dale.

ETTRICK, a parish in the south-west of Selkirkshire; bounded on the north by Yarrow; on the east by Yarrow and Robertson; and on the south and west by Dumfriesshire. Its figure is a square with considerable sinuosities of outline. Diagonally, from Cadgercraig on the north-east to Micklewhin Fell on the south-west, it measures $12\frac{1}{2}$ miles; and from Merecleugh on the north-west to Moodlaw loch on the south-east, 10 miles; and it contains an area of 43,968 imperial acres, or 68.69 square miles. The surface is a sea of hills, beautiful and varied in appearance, and everywhere wearing the mantle of romance. Seen along the water-courses they rise crest above crest, hazy and of bleak aspect in the distance; but, seen in succession, or in near groupings, they are, in general, exquisitely rounded, and richly arrayed in verdure, with just a sufficient number of heathy spots and clumps of plantation to be ornamental to their dress. Toward the sources of the streams, along the western and the southern boundaries, the summits tower aloft to a considerable elevation. Old Ettrick hill is 1,860 feet above the level of the sea; Wardlaw or Weirldaw hill, 1,986; and Ettrick Pen, 2,200. But the last, though the highest summit in the parish, and commanding over three-fourths of a circle a most extensive prospect, is so situated behind a congeries of elevations at the head-waters of the Ettrick as to be very limitedly a prominent feature of the landscape. The streams of the parish, the Ettrick, and its tributaries, Tima water, Rankle burn, and Tushielaw burn, are rapid and impetuous in their upper course, appearing, from the overseeing heights, like threads of silver in fair weather, and like thin long wreaths of soiled snow when swollen into torrents; and they cut their way through gorges or narrow defiles which afford no scope for expansion into vale or basin. The Ettrick, however, begins, about the middle of the parish, occasionally to smooth down the surface on its banks into rich, luxuriant, blooming haughs; and, when receiving the waters of its chief tributaries, it is joyous and opulent in the beauties of its scenery, and looks aside among the mountains through vistas delightfully picturesque. The parish, from its extreme south-west angle to the middle of its north-east boundary, is cut into two nearly equal parts by the Ettrick; and is traversed southward in its southern section by Tima water and Rankle burn, and

eastward in its northern section by Tushielaw burn. In the north-western verge is the Loch of Lowes, less than a mile in length, fed by five mountain-rills, and particularly by the incipient stream of Yarrow, flowing into it like the drainage from a city. Communicating with the Loch of Lowes, lying within a furlong south of it, and stretching away from the boundary-line into the conterminous parish of Yarrow, is the beautiful lake called **ST. MARY'S LOCH**: which see.—Half-a-mile west from this lake, at the north-west angle of the parish, a scarcely visible tract styled the King's road, mounts over the summit of the hill of Merecleughhead, and is pointed out as the path by which James V. entered the district to inflict the summary and unsparring chastisement so lugubriously commemorated in song and story.—On Ettrick water, almost at the centre of the parish, stands the little hamlet of Ettrick, presided over by the chastely constructed parish-church. The heights immediately around are lofty and of Highland aspect, suggesting thoughts of solitude and mountain might and darkness which are almost oppressive. One of the very few houses, near the lonely church and its burying-ground and its little straggling retinue of trees, was the birth-place of Hogg, the Ettrick Shepherd. In the sequestered cemetery is a fine monument, of recent erection, over the ashes of probably the best man who ever hallowed the 'bushy dells' of Ettrick with the breathings of sentiment as superior to mere earthly poetry as the music of the spheres excels the creaking of a rusty hinge,—the adopted and cherished instructor, for three generations bygone, of the wisest of Scotland's peasantry,—Thomas Boston, the well-known author of 'The Fourfold State.'—On the south side of the Ettrick, nearly opposite the church and beneath the shadow of an existing stronghold called old Ettrick house, formerly stood a village, which was barbarously destroyed about the commencement of the 18th century.—A mile-and-a-half below the church, on the same side of the stream, are the modern mansion and the ancient tower of Thirlestane, both finely shaded by some venerable ash-trees, and beautified by a rising plantation. Thirlestane is the seat of Lord Napier, the lineal descendant of the ancient family of Scotts of Thirlestane, and the inheritor, by maternal right, of the name of Napier. On the opposite side of the river, at half-a-mile's distance, are vestiges of the tower of Gamescleuch, built by one of Lord Napier's ancestors.—Two miles farther down the vale of the Ettrick is touched from the south by the minor vale of Rankle burn. Following the latter between a dense pressure of hills, and a sabbath silence and an awfulness of solitude, a tourist arrives, after a progress of $2\frac{1}{2}$ miles, at the two lonely farm-steading of the Buccleuchs, on one of the earliest estates of the powerful family to whom it has given title: for

"In Scotland no Buckleuch was then,
Before the buck in the cleuch was slain."

Both tradition and song trace the name to the seizing and killing of a buck in a cleuch; and they minutely describe and even identify the localities of the event,—a spot in the cleuch where the buck was taken, and the spot on which it was slain. In the cleuch thus celebrated by association with the name and the splendours of a ducal family, are moss-grown traces of an old corn-mill, sung and satirized by poetry,—there never having been an acre of corn raised in the whole glen. A mile-and-a-half higher up Rankle burn, in a deep solitude, frequented only by the sheep in their upland walks, are traces of the wall and the church-yard-dike of the old parish-church of Buccleuch: see **BUCCLEUCH**.—Overlooking the confluence of Rankle burn with the Ettrick, on a declivity rising from the left bank of the latter stream, stand

Sheep on the Hill

Residence of the Ettrick Shepherd.

the dingy ruins of the old tower of Tushielaw, celebrated alike in song, in tradition, and in history. Tushielaw was the property and stronghold of a powerful section of the clan Scott, and figures in many a story of their stirring and ruthless movements as reavers and freebooters. Adam Scott, one of the family, and currently called 'king of the thieves' and 'king of the border,' roused by his exploits the slumbering wrath of James V.; and, in the course of a judicial excursion of the monarch among the fastnesses of 'the forest,' is traditionally reported to have been one morning seized by him before breakfast, and summarily hung up under the shadow of his own stronghold. The tree from which he was suspended is an old ash, still standing among the ruins, and still currently called the gallows-tree; and, strangely enough, still bearing along its branches numerous nicks and hollows traced by ropes in his ruthless execution of wretched captives on whom he inflicted the fate which eventually became his own.—A road, in excellent condition, leading up from Selkirk, passes along the whole vale of the Ettrick, and leaves the parish at Permanscore, to lead down to Moffat. A branch-road from this strikes off half-way between Thirlestane and Ettrick church, and goes up Tima water, leaving the parish at the source of that stream to pass through Dumfriesshire on to Carlisle. Another road leads off, from the head of Ettrick, round along the west to the head of the vale of Yarrow. A neat and comfortable inn, for the accommodation of tourists, was recently built on the highway near the tower of Tushielaw. Population, in 1801, 445; in 1831, 530. Houses 88. Assessed property, in 1815, £7,148.—Ettrick is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, Lord Napier. Stipend £249 9s. 7d.; glebe £28. Unappropriated tithes £55 ls. 7d. Sittings in the parish-church nearly 500. The present parish includes, on the east, the old parish of Buccleuch. In the south-west, in the glen of Kirkhope burn, there was, in ancient times, a church called Kirkhope. In the north-west corner, in a vale called Chapel-hope, at the south-west angle of the Loch of Lowes, there was a chapel, probably subordinate to the mother-church of St. Mary in Yarrow.—Schoolmaster's salary £34 4s. 4½d., with £16 school-fees. Though there is no permanent unendowed school, one or two small non-parochial schools are held during winter.

ETTRICK (THE), a river of Selkirkshire. It rises in the extreme south-west angle of the county; and, with few sinuosities, pursues a north-easterly direction over its whole course. The source of its highest head-water is on the south side of the central summits of the highest mountain-range of the southern Highlands, among some rushes between Loch-fell and Capel-fell, 2 miles above a farm-house which is reported to be the most loftily situated in Scotland. For 12 miles, including windings, it intersects the parish of Ettrick, receiving innumerable rills or mountain-torrents, and three considerable tributaries in its course, and spanned by a bridge above the confluence with Tima water. It now, for half-a-mile, divides Ettrick from Yarrow; and, having entered the latter, traverses it over a distance of about 8½ miles, making a beautiful detour below Gilmanscleuch, and crossed by a bridge at the village of Ettrick bridgend. It then, for 2½ or 3 miles, very circuitously forms the boundary-line between Yarrow and Selkirk; receives, on the left bank, the rejoicing waters of the Yarrow; and, over a distance of 2½ miles, intersects the parish of Selkirk, flowing past the burgh, and crossed there by a neat bridge. It now, for half-a-mile, intersects a tiny wing of Roxburghshire; next, for 1½ mile, divides

that county from Selkirkshire; and then falls into the Tweed 2 miles below the town of Selkirk. Its entire course is about 28 miles. As to the appearance of its banks, see the articles **ETTRICK**, **YARROW**, and **SELKIRK**.

ETTRICK FOREST, a popular, poetic, and historical name for the whole or chief part of Selkirkshire. All the country watered by the Ettrick, the Yarrow, and their tributaries, and the kindred district watered by the Cadon northward of the Tweed, besides the upper ward of Clydesdale, were anciently a literal forest, the remains of the ancient Caledonian forest. The most numerous woods were oaks, mingled with birch and hazel. Great numbers of oaks have even very recently been dug up in mosses which evidently owed their formation to the stagnation of waters upon the neglected woodlands. The forest, judging from the prevalence of a Saxon nomenclature throughout the district, appears to have been early settled by the Northumbrian Saxons. From the time of Earl David, through several centuries, many grants were made, chiefly to the abbays of Selkirk, Melrose, and Kelso, of various 'ease-ments' within the ample scope of the forest. At the close of the 13th century Edward I., acting as the sovereign of Selkirkshire, gave away the forest's timber; and was followed, in his conduct, by Edward II. and Edward III. At the accession of Robert Bruce the forest was given to Sir James Douglas in guerdon of his services; and it continued with his family till their forfeiture in 1455. On the 4th of August, in that year, Ettrick forest was, by act of parliament, annexed to the Crown. Abounding in beasts of chase and birds of prey, the forest now became again—what it had been before its possession by the Douglasses—a favourite hunting-ground of the Scottish kings. In 1528, James V. "made proclamation to all lords, barons, gentlemen, landward-men, and freeholders, that they should compare at Edinburgh, with a month's victuals, to pass with the king where he pleased, to danton the thieves of Tiviotdale, Annandale, Liddisdale, and other parts of that country; and also warned all gentlemen that had good dogs to bring them, that he might hunt in the said country as he pleased: The whilk the Earl of Argyle, the Earl of Huntley, the Earl of Athole, and so all the rest of the gentlemen of the Highland, did, and brought their hounds with them in like manner, to hunt with the king, as he pleased. The second day of June the king past out of Edinburgh to the hunting, with many of the nobles and gentlemen of Scotland with him, to the number of twelve thousand men; and then past to Meggitland, and hounded and hawked all the country and bounds; that is to say, Pappert-law, St. Mary-laws, Carlavirick, Chapel, Ewindoores, and Longhope. I heard say, he slew, in these bounds, eighteen score of harts." [Pittscottie's 'History of Scotland,' folio edition, p. 143.] After this stately hunting, James, who 'made the rush-bush keep the cow,' in order to increase his revenues, poured into it 10,000 sheep, to figure there under the tending of a thrifty keeper, instead of 10,000 bucks which scoured its woodlands during the bounteous age of Edward I.; and by this act, he led the way to such a conversion of the entire forest into sheep-pasture, as occasioned a rapid and almost total destruction of the trees. The last sovereign of Scotland who visited it for the sake of the chase was the beautiful Mary. Excepting a few straggling thorns, and some solitary birches, no traces of 'Ettricke foreste fair' now remain, although, wherever protected from the sheep, copses soon arise without any planting.

EU (LOCH). See **EWE**.

EUCHAN WATER, a rivulet in the northern part of Nithsdale, Dumfries-shire. It rises in Black Larg-hill, on the boundary-line between Dumfries-shire and Ayrshire; flows 3 miles north-eastward, and then $5\frac{1}{2}$ eastward; having its whole course in Sanquhar parish, amid mountain-scenery, and falling into the Nith opposite the old castle of Sanquhar.

EUCHAR (THE), a rivulet in Argyleshire. It takes its rise from Loch Scammodale, in the district of Kilninver, and, after a rapid course to the north-west, falls into the sound of Mull.

EVAN WATER, a rivulet of Lanarkshire and Annandale, forming a sister-exception with the Nith, to the entire separation of waters by the extended mountain-range which constitutes the northern boundary-line of Dumfries-shire. The Evan rises in the parish of Crawford, at Clydes-law, so near the source of what is popularly reckoned the parent-stream of the Clyde, as now to receive the waters of a rill which formerly was a tributary of that noble river. It first flows about 2 miles westward; then suddenly debouches, and flows $3\frac{1}{2}$ miles south-eastward; and now assumes a southerly direction, passing $1\frac{1}{2}$ mile to the boundary of the two counties, and there entering the parish of Moffat, to intersect it over a distance of $2\frac{1}{2}$ miles. It now receives Cloffin burn, and enters the parish of Kirkpatrick-Juxta, taking a direction to the east of south on entering it; and, after traversing that parish over a distance of $4\frac{1}{2}$ miles, and receiving in its progress the tribute of Garlpool burn, it forms a confluence with the river Annan, at the point where that river receives on its opposite bank the tribute of Moffat water, 2 miles south of the town of Moffat. Its entire course is about 14 miles; one half in Lanarkshire, and the other in Dumfries-shire. The rivulet is chiefly remarkable for its cutting a channel through a high and precipitous part of the Southern Highland mountains, for the safe and easy line of mail-coach road, well-known, as the Evandale road, between Glasgow and Carlisle. Its upper course is over rugged rocks, among hills and mountains generally acclivitous, and, in some instances, nearly perpendicular. As it rises, and for some distance flows, at an elevation nearly 1,000 feet above the level of the sea, it has in many places the impetuous motion of a torrent. In its lower course, as it approaches the Annan, it flows between two hilly ridges, and has become comparatively tranquil.

EVANTOWN. See KILTEARN.

EVELICKS (THE), a river in the county of Sutherland, which falls into the frith of Dornoch. It abounds with trout and salmon; and a small fishing-village of the same name is situated at its mouth.

EVIE AND RENDALL, a united parish in the mainland of Orkney; extending about 12 miles in length, by about $5\frac{1}{2}$ in greatest breadth. It includes the isle of Gairsay, which is separated from Rendall by a very narrow sound, and contains about 60 inhabitants: see GAIRSA. Population, in 1801, 1,415; in 1831, 1,450. Houses 322. Assessed property, in 1815, £375.—This parish is in the presbytery of Kirkwall, and synod of Orkney. Patron, the Earl of Zetland. The parish-church is in Evie; sittings 498. Stipend £154 6s. 10d.; glebe £50.—There is an Independent congregation in Rendall.—Schoolmaster's salary £30. There were 5 private schools here in 1834.

EVORT (LOCH), a safe harbour on the east coast of NORTH UIST; which see.

EWE (LOCH) or **ET**, an arm of the sea, on the western coast of Ross-shire, into which a broad and rapid river called the Ewe, issuing from Loch Maree, empties itself at Pol-Ewe, after a course of only a mile in length. This loch, and Loch Maree, appear to have originally formed one loch, under the name

of Loch Ewe, as the village at the head of Loch Maree is named *Cean-Loch-Ewe*; that is, 'the Head of Loch Ewe.' See article LOCH MAREE. The river Ewe is praised by Sir Humphrey Davy for its finely-stocked pools, from which, at certain times, a couple of skilful anglers might load a horse with grilse and sea-trout.

EWES or **EWESDALE**, a parish in the district of Eskdale, Dumfries-shire. It is bounded on the north and east by Roxburghshire; on the south by Canonbie and Langholm; and on the west by Westerkirk. Its figure is a broad oval, with indentations on the north-east and south. It is 8 miles in length from north to south, and $5\frac{1}{2}$ miles in average breadth; and contains 17,563 Scotch acres, or $34\frac{1}{2}$ square miles. In some ancient writings it is regarded as a separate and independent district of Dumfries-shire. "Beyond the Tweed," says Boethius, "to the middle march under the Cheviot hills, lieth Tevidale, that is to say, the vale of Tiffe. Beyond it is Eskedale, or the vale of Eske, of a river so called that runneth through the same. Over against Eskedale, on the other side, lieth Eusdale, so named of the river Eus, that passeth thereby, and falleth into the water of Annand." The whole parish is a double basin, surrounded on three sides by mountains which form a water-line; and it discharges all its aggregated waters, in the two streams Ewes and Tarras, through openings on the south. The Tarras rises at Hartsgarth Fell, and intersects the eastern division for $4\frac{1}{2}$ miles, and then, for $1\frac{1}{2}$ mile, forms the boundary-line between it and Langholm. The Ewes rises at Moss-paul, in the extreme north. After a progress southward of $2\frac{3}{4}$ miles, it receives on its left bank Blackhill burn, which had flowed $3\frac{1}{2}$ miles from Tudhope hill. Passing onwards, it receives the waters of Unthank burn, Mosspebble burn, Muckledale burn, and numerous tiny streams; and after a course, from its origin, of winding $9\frac{1}{2}$ miles, it enters the parish of Langholm, and, $1\frac{1}{2}$ mile farther on, closes in, with the river Esk and Wauchope water, to decorate the brilliant scenery in which the town of Langholm lies embosomed. Ewesdale, along the banks of this stream, is one of the most beautiful districts in the Southern Highlands. The hills on both sides are mostly covered with verdure, and fringed with thriving plantations, belted or spotted at intervals with heath; and they exhibit many groupings and phases of lively and picturesque landscape. Haughs and stripes of valley stretch along the margins of the river, and, in favourable seasons, luxuriate under culture. The parish is traversed in its whole length, down the vale of the Ewes, by the great mail-road between Edinburgh and Carlisle. Population, in 1801, 358; in 1831, 335. Houses 53. Assessed property, in 1815, £5,001.—Ewes is in the presbytery of Langholm, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £220 13s. 7d. Unappropriated tithes £657 6s. 11d. The parish-church contains about 200 sittings. Before the Reformation there were two churches and two chapels. The principal church was dedicated to St. Cuthbert, and stood on the west side of the Ewes, at a hamlet which was called Kirk-town of Nether Ewes. The other church was situated in the upper part of the vale, at a place now uninhabited except by a solitary shepherd, and called Ewes-durris, or the pass of Ewes, where a pass leads into Teviotdale. Of the two chapels vestiges still exist, respectively at Unthank and at Moss-paul. Schoolmaster's salary £34 4s. 4d., with £9 other emoluments.

EYE (LOCH), a small lake in the parish of Fearn, in Ross-shire, about 2 miles long, and half-a-mile broad. From it proceeds the small river Eye,

forming in its course a succession of smaller lakes, which are much frequented by aquatic fowls. It falls into the Moray frith, near the fishing-village of Balintore.

EYE (THE), a small river in Berwickshire. It rises among the Lammermoor hills in the parish of Cockburnspath, pursues a south-eastward course over a distance of 11 miles, and then, making a sudden bend, flows $3\frac{1}{2}$ miles north-eastward to the sea at Eyemouth. Over $2\frac{1}{2}$ miles it intersects Cockburnspath; over the next mile it divides a detached portion of Oldhamstocks from Coldingham; over 6 miles it traverses the latter parish; over the next $1\frac{1}{2}$ mile, it divides Coldingham from Ayton; and it now receives a small tributary from the west, and makes its debouché to the north-east. Half-a-mile from this point, it sweeps past the village of Ayton; $1\frac{1}{2}$ mile farther on it receives, from the west, the considerable tribute of **ALE WATER**, [which see,] and it thence, to its embouchure, divides Ayton on the east from Eyemouth on the west. The river abounds in trouts, of excellent quality, though small in size; and, as to the appearance of its banks, is, in many parts, pleasing and beautiful.

EYEMOUTH, a small parish on the coast of Berwickshire; bounded on the north by the German ocean; on the east and south by Ayton; and on the west by Coldingham. It may, in a general view, be regarded as a square figure, $1\frac{1}{2}$ mile deep; but it has a rugged outline on the north and west, and embosoms in its centre a small detached portion of Coldingham parish. The boundary-line on the south is the Ale, and on the east is the Eye. Both streams, while they touch the parish, are picturesque and ornamental. The tide flows about half-a-mile up the Eye. The coast rises, along the whole line, in rocky and precipitous abruptness from the sea, to 80 or 90 feet above its level; and is sliced down at intervals by deep fissures or gullies, and at one place perforated by a cavern; but, except at two points where roads have been scooped down its openings, and at Eyemouth, where its gigantic breastwork is interrupted by the Eye, it admits no access to the beach. So far back as fifty years ago, not a foot of bad or waste ground was in the parish. The soil, in general, is excellent, and throws up prime crops of every sort of grain.—Upon a bold small promontory called the Fort, north of Eyemouth, are the remains of a regular fortification, erected by the Duke of Somerset in his invasion of Scotland, while he held the regency of England under the minority of Edward VI. Though all the rocks along the coast are of the common hard whinstone, the promontory of the Fort consists of puddingstone remarkably hard, capable of a polish like marble, and offering strong resistance to the action of fire. This fortification, soon after its erection, was, in the reign of Mary, demolished in terms of a treaty between France and England which followed the battle of Pinkie. A few years afterwards it was reconstructed under Regent Murray to aid a contemplated interference of Scotland in the war which was going on between France and England; but, at the subsequent peace, it was again demolished; and, the crowns becoming united in the next reign, it was allowed thenceforth to continue in ruin. Grassy mounds, indicating the lines of demolished wall, are almost the only traces of its existence; but they sufficiently show it to have been a place of considerable strength and importance.—The old manor-house of Linthill, overlooking the confluence of the Ale and the Eye, is the only noticeable mansion; and in 1752 was the scene of the murder of the widow of Patrick Home, its proprietor.—The great Duke of Marlborough received from Eyemouth, though he had no connexion

with it, the title of Baron in the Scottish peerage. Population, in 1801, 899; in 1831, 1,181. Houses 207. Assessed property, in 1815, £3,734.—Eyemouth is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £130 19s. 6d., exclusive of vicarage teinds not valued; glebe £30. Unappropriated teinds £130 19s. 6d. Schoolmaster's salary £34 4s. 4½d., with £23 12s. 11½d. school-fees, and some other emoluments. There are 4 schools non-parochial. The church, situated in the town, was built in 1812; sittings about 450. A small Baptist chapel, but no other dissenting place of worship, is in the town; dissenters of other denominations being connected with congregations in Coldingham and Ayton. The parish was formerly included in the territory of Coldingham priory, and did not assume a parochial form earlier than the reign of James VI. A chapel connected with Coldingham, and served by a nominee of the prior, anciently stood within its limits.

EYEMOUTH, an ancient little sea-port, and a burgh-of-barony, lies at the mouth of the Eye, in the north-east angle of Eyemouth parish, 6 miles north of Berwick. Its plan is altogether irregular, and, considering its size, is not a little intricate. "The whole town," says Chambers, in his 'Picture of Scotland,' "has a dark, cunning look, is full of curious alleys, blind and otherwise; and there is not a single individual house of any standing but what seems as if it could unfold its tales of wonder." But he alludes, in this summary picture, to the character which it once wore as a nest of smugglers, and looks upon it through the thick screen which contraband traders hang round their scene of action. The town, though not elegant, contains many good houses, possesses a neat spire towering up from its church, and is supplied with water by iron pipes kept in a state of cleanness and repair. Coal-fuel is cheap and plentiful, being easily procured by land-carriage from Berwick, or sea-communication from the Forth and the Tyne. A large building, formerly occupied as a barrack, and several modern and spacious erections, are used as granaries, and indicate the existence of important traffic with the surrounding agricultural country. The town is the market for a somewhat extensive district, and the only sea-port in Berwickshire. Yet territorial limitation, or the drawing of an imaginary or artificial line over the corner of a district geographically unique, does not prevent the population of the county from viewing Berwick as still, what it anciently was, their principal port and their county-town. Eyemouth, in consequence, is, both as a market and a port, but a gleaner of straws in the vicinity of a reaper of sheaves. Yet for a long series of years it has been the depot and the shipping-place of a large quantity of exported grain. Even half-a-century ago 20,000 bolls annually, and in some years more than 40,000 bolls, were shipped here for Leith and other markets. The corn-trade falling considerably off, a change of the weekly market-day took place, in 1832, to Thursday; and was followed by such prosperous results that, during the succeeding twelve months, grain to the value of £20,000 was disposed off in the market. The contraband trade, which once characterized it to such a degree that every house is said to have had its secret cellars for the concealment of goods, and which has winged and poisoned many an envenomed shaft of taunt and satire against the modern population, has long since entirely disappeared. The latest dealers in it had all died or removed to distant places several years before the writer in the Statistical Account of 1792 drew up his report; and both they and their predecessors had all, according to his statement, sunk into poverty, bankruptcy, or at best the pos-

session of a mere competence. The herring-fishery of Eyemouth was for many years so opulent and productive that 10,000 barrels were made up annually; but since 1820, it has gradually declined; and eventually it has fallen so low that a large proportion of its fleet of 100 or 150 boats have permanently removed to more prosperous fishing-grounds. Along with the remnant of this traffic, which sends its white herrings to Ireland or the Baltic, and its red or smoked herrings to England, a fishery of cod and haddock employs 9 or 10 boats, each manned by 6 men, and produces about £2,000 a-year. When the inhabitants of the parish—who all, excepting about 80, reside in the town—have a season of leisure from agricultural or other avocational labour, they usually carry off the produce of the fishery to Edinburgh and Glasgow, and occasionally penetrate even to distant and third-rate towns. Such of the produce as they cannot export by land, is sent away to the Thames, or up the Forth, and sometimes along the Forth and Clyde canal. A manufacture of kelp, which formerly employed a number of poor persons, was destroyed at Eyemouth, as, in other places, by the lowering of the duty on barilla.

The bay and the harbour of Eyemouth are objects of unusual interest. The bay, though only $\frac{1}{4}$ of a mile in breadth, and on the north or more extended side little more in length, is both beautiful in landscape, and highly adapted to utility. On one side it is overhung by the high promontory of the Fort, and on the other is overlooked by the projection of Gunsgreen. From point to point it sweeps gracefully round in a semicircle, washing the town at its extremity, and receiving the waters of the Eye considerably south-eastward of the centre of its outline; and in front it is protected by a singular ridge of rocks called the Harkers, past either end of which vessels sail inward to the harbour. Its encincturing coast-line everywhere, but especially on the Fort, commands a magnificent and most extensive sea-view; and its bed slopes, in most places, so gently from the beach, and is so finely sheeted with a gravelly bottom, as to allure to its waters many a summer bather. "The harbour of Eyemouth," said the well-known Smeaton after professionally surveying it, "lies at the corner of a bay in which ships can work in and out at all times of the tide, or lie at anchor, secure from all winds except the northerly or north-easterly. From this circumstance, its situation is very advantageous." In all the space along the rugged and dangerous coast between the Forth and the Humber, no harbour except this is accessible in stormy weather. Vessels, therefore, which are arrested by contrary winds, or otherwise endangered in their transit, very numerously run to it for protection. At Mr. Smeaton's recommendation, a voluntary association of gentlemen, who had employed him to survey it, erected, at the cost of £2,500, a break-water pier to defend it from north-east gales, and also to deepen it by preventing the return of the gravel which is forced out by floods in the river. From this improvement, and some later ones of not less moment, it has acquired valuable advantages; and were it duly provided with suitable appliances, it might be made such a station for the custom-house and excise yachts, and for privateers and small vessels acting offensively, as would, over a long stretch of coast including the mouth of the Forth, effectually scare away, in times respectively of peace and of war, every smuggler, and every enemy's prize-hunter from taking even a distant look of the land. The flow of the tide here, as generally in other harbours on the east coast, averages 10 feet at neap-tides, and 16 feet at spring-tides. By an act of parliament, obtained in 1797, the harbour was

vested in a body of trustees, consisting of the merchants and principal inhabitants of the town, the baron-baillie ex officio, and at least eight of the freeholders and commissioners of supply of Berwickshire residing within 12 miles of Eyemouth. The trustees levy dues which average about £60 a-year; and expend their revenue in effecting improvements. Formerly vessels had to get sufferances to unload and clearances to sail, all the way from Dunbar; but now, except a small proportion trading to foreign ports, they are entered and cleared by an officer of customs on the spot. The annual number of arrivals and departures of vessels—not including any which run into the bay simply for shelter—is about 200. The cargoes outwards are agricultural produce, fish, malt, and aqua; and those inwards are coals, slates, tiles, bricks, timber, rags, bones, and merchant goods.

Eyemouth, as a dependency of the monks of Coldingham, and as the only port within their limits, must have, at a remote date, sprung into existence. So early as the reign of William the Lion, or between the years 1174 and 1214, it is mentioned in a charter among the records of the priory. In the 14th century, the harbour had sufficiently become a place of resort as to incite, on the part of the lord of the manor, a demand for anchorage dues. In 1597, by a charter from James VI., in favour of Sir George Home of Wedderburn, it was erected into a free burgh-of-barony, with the privilege of a free port. A little before the accession of James VI. to the throne of England, Logan, the Laird of Restalrig, had a house or castle in the town; and dated from it one of his well-known letters relative to Gowrie's conspiracy. A notorious inhabitant, at the same epoch, was the famous or infamous Sprott, the professional agent of Logan, and a notary or writer of the town, who, coming under suspicion of being in the secret of Gowrie's conspiracy, was, in 1608, apprehended, tried, and executed: see FAST CASTLE. The Protector Cromwell, in his progress into Scotland, visited Eyemouth with the view of examining its capabilities as a harbour; and soon after ordered, as a means of defending the entrance to the Eye, the construction of a place of strength, on the site of the ruined fortification on the promontory called the Fort, and appointed the place to be under the authority of the governor of Berwick.—By the charter of barony, the inhabitants and free burgesses were empowered, with the consent of Sir George Home and his heirs, to make an annual election of magistrates,—to buy and sell and exercise every art and trade as in other free burghs,—to hold a weekly market and two annual fairs,—and to build a gaol, hold courts, and appoint clerks and officers; but, as regards every thing municipal or jurisdictional, they seem never to have exercised the privileges conferred, but to have yielded themselves unreservedly to the will of their superior. The Homes of Wedderburn have been in the practice of appointing and paying a baron baillie and baron officer for the government of the town. Occasionally, during the last century, and even within these few years, the baillie has held a court for the determination of petty causes; but, in general, he has no scope within the small community of his jurisdiction for acting as a judicial functionary. The town formerly paid £10, and now pays £5 a-year, in name of cess, to the convention of royal burghs, for participating in the privilege of foreign trade.—The town has a branch-office of the Commercial Bank of Scotland, a parochial library, and a friendly society. In the room used for the meetings of the St. Abb's Lodge of free masons the poet Burns received initiation. Population of the town in 1831, about 1,100.

EYLT (Loch), or **AILT**, a small lake, about 3 miles in length by half-a-mile in greatest breadth, in the district of Moidart, Inverness-shire. Its waters flow into the head of Loch Aylort, by a stream of about $1\frac{1}{2}$ mile in length, which sweeps around the northern base of Benebeg.

EYNORT (Loch), a very irregular arm of the

sea, 3 miles in length, indenting the east coast of the island of South Uist, and nearly meeting the head-arms of Loch Bee from the opposite side of the island. The scenery of Loch Eynort is remarkably wild and picturesque; and only wants trees or a clothing of copse-wood to be, in many places, enchantingly beautiful.

LOCH-AN-FILAN.

F

FAD (Loch), a small lake in the island of Bute, 3 miles south from the town of Rothesay. It is about 5 miles long, and scarcely half-a-mile broad; but from the rude, rocky, and picturesque appearance of the hills which surround it, it presents quite a miniature picture of some of the larger Highland lakes. The slopes of a few of these hills are cultivated; but the greater proportion, especially as we proceed towards the head of the loch, are in a state of nature. Though not remarkable for height, their outline is in general broken, varied, and interesting; and the serrated summits of the Arran mountains on the one hand, or the hills of Cowal on the other, afford fine terminations to the view, whether up or down the lake. Loch-Fad forms a pleasant excursion for tourists, or sea-bathing visitors at Rothesay; and since the period that Kean made it a place of repose during the intervals from his exertions in his arduous profession, it has been much more visited than it had ever previously been. The house erected by Mr. Kean, though of sufficient size, is a very ordinary looking one, and generally disappoints the visitors. Had it been somewhat more of the cottage-style, it would have better pleased the eye, and been more in accordance with the situation, which is indeed well-chosen. The grounds are very agreeably laid out, and form a singular contrast with the rudeness and romantic nature of the surrounding scenery. In 1827—when Kean was in the meridian of his fame—the following account of his retirement on the banks of Loch-Fad appeared in one of the Glasgow newspapers:—"The banks of Loch-Fad now swarm with pilgrims to the residence of our greatest dramatic performer, who has kindly instructed the old lady—a native of London—who acts as guardian of the premises, to allow all respectable persons who may call a full view of the cottage and grounds. Nothing can be more rurally simple, and at the same time more tasteful and elegant, than the residence here erected by Kean. It is a tolerably capacious house, two stories in height, with a small one-story building at either end. On the ground-floor is a splendid dining-room, furnished in a costly manner, as is every other part of the house; and behind it is a library stocked with a valuable collection of books, among which are several containing fine engravings of the costumes of different countries at different periods, and also the works of Hogarth, Hume, Gibbon, Robertson, &c., a fine edition of the Spectator, and a beautiful old copy of Shakspeare in one volume folio, printed about the middle of the 17th century, and presented to Kean by Mr. Price, the manager of the New York theatre. In the library are also many items of the paraphernalia of an actor—such as swords, daggers, &c., besides an excellent engraving of Kean in Brutus, one of Garrick, one of the Earl of Essex, and several others of distinguished British characters. Within a niche in the lobby stands an admirable bust of Kean, also in the character of Brutus, which, as an accurate resemblance, exceeds the engraving. On the second floor, or upper story, is a large drawing-room, elegantly fitted up, and in a style entirely dramatic—in so far, at least, as regards the fancy papers with which the wall is decorated, these being full of scenic representations of character, most of them taken from prominent subjects in history and mythology. From the windows of this apartment an enchanting view is obtained of

Loch-Fad, and of the expanse of land and sea to southward, the remembrance of which can never be lost by those who once have seen it. Indeed no language can do justice to the varied charms of the situation; it must be seen to be fully appreciated. The garden and grounds are laid out in a style displaying the finest perception of the beauties of the place. Here a soft flower blooms in the hard cleft of some jagged rock; there a walk, edged with box-wood, winds along amid sinuosities so serpentine as almost to render a continuous walk impossible; and on the top of the eminence at the base of which the cottage is situated, there stands a fog-house, supported by massy rustic pillars, its floor paved with small pebbles from the loch, its seats supported by hazle cuttings, and its prospect in front commanding a few glimpses of Loch-Fad, an indistinct view of Rothesay in the distance, of the tranquil bay beyond it, and of the Argyle mountains still more remote, swimming in a kind of blue haze that softens their outline and imparts to them a character of almost perfect ideality. Mr. Kean"—the account continues—"has it in contemplation to erect, within the precincts of his little territory, an asylum for the retreat of decayed actors, who may be recommended to him either by personal knowledge, or by the society for the relief of such individuals, which has now for a considerable time been established in London." We need scarcely add, that the benevolent design here recorded—like many others of the projector—never reached its consummation in performance.

FAD (Loch). See COLONSAY.

FAIRAY. See FARAY.

FAIR ISLE, an island lying betwixt Orkney and Shetland, 29 miles south by west of Sumburgh-head. It is upwards of 3 miles in length, and nearly 2 in breadth; and rises into three lofty promontories. It is everywhere inaccessible, save at one point upon the south-east, where it affords a safe station for small vessels. One of the promontories, the Sheep-craig, is nearly insulated, rising from the ocean in a conical shape to the height of 480 feet. The soil is tolerably fertile, and the sheep-pasture on the hills excellent. In 1588 the flag-ship of the Duke de Medina Sidonia, the admiral of the Spanish armada, was wrecked on this island; and tradition still points out the residence occupied by the shipwrecked noble. Sir Robert Sibbald says, in his 'Description of the Isles of Zetland,' "One memorable accident here occurs, namely, that the Duke of Medina, admiral of the formidable Spanish armada, (in the reign of Queen Elizabeth, anno 1588,) here suffered shipwreck in a creek on the east side of this isle, where the ship split, but the Duke with 200 men came to shore alive, and wintered here in great miserie; for the Spaniards at first eating up all they could find, not only neat, sheep, fishes, and fowls, but also horses, the islanders in the night carried off their beasts and victuals to places in the isle, where the Spaniards might not find them: the officers also strictly commanded the soldiers to take nothing but what they paid for, which they did very largely, so that the people were not great losers by them, having got a great many Spanish ryaills for the victuals they gave them; but now the people fearing a famine among themselves, kept up their victuals from the Spaniards. Thus, all supply from the isle failing them, they took their own bread (which they had preserved), which being dipt in fish

oys, they did eat; which being also spent, it came to pass, that many of them died for hunger, and the rest were so weakened, that one or two of the islanders finding a few of them together, could easily throw them over the banks, by which means many of them died. At length all sustenance failing, not only to the Spaniards, but also to the islanders, they sent a small boat or yole to Zetland, desiring a ship to carry them out, lest all the inhabitants of the isle should be famished. Notice came to Andrew Umphrey of Burry (then proprietarie of the isle), who having a ship of his own, instantly went to the isle and brought them to Zetland, where, for the space of 20 days or a month, they met with better entertainment. The Duke stayed at Quendale till the ship was readie, where, (imagining the people did admire him,) he made his interpreter ask Malcolm Sinclair of Quendale, if ever he had seen such a man? To which Malcolm, in broad Scots (unintelligible to the interpreter) replied, 'Farcie, in that face, I have seen many prettier men hanging in the Burrow-moor!' From Zetland, Andrew Umphrey carried them in his little ship to Dunkirk, for which the Duke rewarded him with three thousand merks." Fair Isle is reckoned one of the Shetland isles, and is annexed to the ministry of Dunrossness. Population, in 1801, 160; in 1811, 168; in 1831, 317.—There is a small church in connexion with the Establishment here, but service is very seldom performed in it. There is also a Methodist chapel, capable of accommodating about 300. There is a schoolmaster on the island, under the Society for propagating Christian knowledge, who has a salary of £18; and there are 3 Sabbath evening schools.

FAIRLEY, a *quoad sacra* parish, divided from the parish of Largs, in 1835, by authority of the General Assembly. It is about 7 miles in greatest length, and 6 in greatest breadth, and comprises 6,264 acres. Population 427. Church built in 1833-4; sittings 300. Stipend £75, with certain extra allowances. The bulk of the inhabitants reside in the village of Fairley, which is beautifully situated on the coast, opposite the larger Cumbræ, 2 miles south of the town of Largs. The coast, on both sides of it, is for a short way studded with neat villas. Opposite to it is a good roadstead, formed by the Cumbræ, and affording safe anchorage. Fairley castle, an old square tower, formerly the seat of a family of the name of Fairley, stands in the vicinity of the village.

FALA and SOUTRA, two parishes compactly erected into one, the former situated on the south-eastern verge of Edinburghshire, and the latter on the north-western verge of Haddingtonshire. Each parish is a stripe of territory stretching from north to south; and the two jointly form a parallelogram, 4 miles long and 3 broad. One-half of Fala, and one-third of Soutra, constituting the northern division of the united parish, are a slightly undulating but on the whole level tract of country, well-cultivated and fertile, composed of a clayey soil, and producing all the variety of crops common in the Lothians. The rest of the district, commencing on the north with Soutra hill, which rises about 1,184 feet above the level of the sea,* is part of the most westerly ridge of the Lammermoor mountains, covered for the most part with heath, and, excepting a few cultivated spots, all laid out in sheep-pasturage. To a traveller from the south, who has, over a considerable distance, traversed a dreary moorland carpeted with heath, Soutra hill suddenly discloses the finely cultivated and beautiful expanse of the Lothians, variegated with hill and dale, and woods and waters, and richly foiled

on the back-ground with the gay estuary of the Forth, and the brilliant scenery of the coast of Fife; and a panorama is thus hung out to the view which as much enchants by its attractions, as it astonishes by the suddenness of its revelation. On the south-east of Fala, are marshy grounds, extending to some hundreds of acres, called Fala-Flow, from part of which peats are dug for fuel. On the north side of Soutra hill is a fountain of excellent water, called Trinity well, which, though not now appearing to possess any medicinal qualities, was formerly in great repute and much frequented among invalids. The great road from Edinburgh to Lauder, intersects the united parish south-eastward through its northern division; and sends off several cross-roads to the north, and one to the south, which runs along the eastern verge of Soutra, to form a junction with the road down Gala water in the parish of Stow. On the Edinburgh and Lauder road stands the village of Fala, 15½ miles from Edinburgh, the seat of the parish-church, and of a Meeting-house of the United Secession, with their respective manse. The church and part of the village are situated on a small conical hill of the class called "laws;" and hence the name Fallaw, abbreviated into Fala, and signifying 'the Speckled hill.' At the western limit of the parish, on the same road as Fala, stands the hamlet of Fala-dam, 14¾ miles from Edinburgh. Population of the united parish, in 1801, 354; in 1831, 437. Houses 87. Assessed property in 1815, £1,248.—Fala and Soutra is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patrons, the Town-council of Edinburgh, and Sir John Dalrymple of Cousland, now Earl of Stair. Stipend £169 6s. 10d.; glebe £25 10s. with pasturage for 20 sheep. Unappropriated tithes £76 6s. 8d. Schoolmaster's salary £34 4s. 4½d., with £25 school-fees. Fala parish was united to Soutra about the year 1600, its church becoming the place of worship for both parishes. On the summit of Soutra hill formerly stood the church and village of Soutra, appropriately and graphically designated by that name, which signifies, in the Cambro-British, 'the hamlet with a prospect.' This village was anciently a place of consideration and resort, and a scene of the stirring ostentatious charity of the Middle ages. Malcolm IV. founded here, in 1164, an hospital for the relief of pilgrims, and the shelter and support of the poor and the afflicted; and he endowed the institution with some lands near St. Leonard's in the vicinity of Edinburgh, and conferred upon it the privileges of a sanctuary. The masters and brothers of the hospital were owners of the property and appurtenances of the church. A causeway leading from the vale of the Tweed to Soutra, and still commemorated in various traces among the sinuosities of the mountains, bore the significant name of Girthgate, meaning the asylum or sanctuary-road, and affords proof that the refuge of Soutra was potent and famous. A small eminence or rising ground about half-a-mile south of the site of the hospital, is still called Cross-chain-hill, and would appear to have had a chain suspended for a considerable way along its summit to mark the limits of the privileged ground. When Mary of Gueldres, founded the Trinity or College church of Edinburgh, she perversely bestowed upon it the endowments of Soutra hospital, and converted its dependent church into a vicarage. The Town-council of Edinburgh, getting possession in 1560-1 of Trinity church and its pertinents, became in consequence proprietors of the ecclesiastical appurtenances of Soutra, and the patrons of its church. By the seizure of its charity revenues, the ruin of its hospital, and the reduction, and afterwards the abandonment of its church, the village of Soutra was suddenly stripped of its importance, and brought to desola-

* This admeasurement is Mr. Thomas Telford's, in 1821. The level is taken from the surface of the quay at Berwick.

tion. The seat of conviviality and busy though doubtful charity, of many public-houses, of a great hospital and of a general refuge for the distressed debtor, the weary traveller, the friendless pauper, and the afflicted invalid, is now silent and wild, and utterly abandoned to the lonely visits of the mountain-sheep. Some hardly perceptible tumuli, overgrown with herbage, faintly indicate the site of prostrate dwellings. Slight irregularities of surface, with not a tomb-stone or the small tumulus of a grave, dimly mark the limits of a cemetery. A single aisle of the chapel, rising amidst a dreary sward of heath, and conserved from the common trackless ruin by its enclosing the burial-place of the Maitland of Poggie family, is the sole memorial of Soutra, and the only monitor on this once-stirring and famous area of the instability and utter vanity of the institutions and erections of mortal man. The town of the pleasant prospect, Soutra, which once looked joyously down upon the gay and far-spreading landscape of the Lothians and the Forth, has utterly disappeared:

"Sweet smiling village, loveliest of the lawn,
Thy sports are fled, and all thy charms withdrawn;
Sunk are thy bowers in shapeless ruin all,
And the long grass o'ertops the mouldering wall."

FALKIRK,* a parish in the eastern part of Stirlingshire; bounded on the north by Dunipace, Larbert, and Bothkennar; or the east by Polmont and Muiravonside; on the south by Slamannan and Lanarkshire; and on the west by Dumbartonshire and Denny. In figure, it is nearly an oval, stretching north-east and south-west, but has a small flattened oval attached to its south-east side. Its greatest length, from Castlecary on the south-west, to the boundary beyond Grangemouth on the north-east, is $8\frac{1}{2}$ miles; and its greatest breadth, from Carron water opposite Larbert on the north-west, to a bend in Avon water, at Elrigg on the south-east, is $5\frac{1}{2}$ miles; but its average breadth is none or little more than 3 miles. Nearly all its boundaries are traced by streams. A head-stream of Bonny water rises at Sauchierigg, on the southern boundary of the south-west end of the great oval of the parish, and bends away westward, northward, and north-eastward, round the limits, receiving from without two streams which combine with it to form the Bonny, and everywhere, over a distance of $5\frac{3}{4}$ miles, tracing the boundary till within a mile of the Carron, when it runs across a small wing to make a confluence with that river. Carron water touches the boundary 5 furlongs north-west of where the Bonny makes its detour inward; and thence, over a geographical distance of 6 miles, traces, in general, the boundary on the north; but, in the lower part of this course, it becomes somewhat sinuous, and being rivalled in sinuosity by the capriciousness of the boundary-line, it intersects three tiny wings, and makes three brief

recessions, all within $1\frac{1}{4}$ mile of Grangemouth. West Quarter burn rises at the line of attachment between the main body or large oval of the parish, and the small flattened oval, runs to the limit of the former, and flowing north-eastward and northward, traces the boundary over a distance of 6 miles, and then at Grangemouth falls into the Carron. Avon water rises 3 furlongs south of the source of West Quarter burn, flows $2\frac{1}{2}$ miles westward through the parish, and thence runs south-westward, south-eastward, and eastward, tracing, over a distance of $7\frac{1}{2}$ miles, the boundary with Dumbartonshire, Lanarkshire, and Slamannan. Four rills rise in the parish, three of which run northward to the Bonny or the Carron, and one eastward to West Quarter burn. Near the southern extremity, Loch Elrigg, a narrow boggy lochlet about 6 furlongs long, sends off its superfluent waters in a brief stream to the Avon. In the south-western part of the great oval, is a tiny lochlet, called Loch Green.—At its north-east end, the parish approaches within $\frac{2}{3}$ of a mile of the Forth; and from its boundary in that direction, till near the town of Falkirk, as well as farther inland along the banks of the Carron, it is a sheet of perfectly level and exceedingly rich and fertile land. But fame has completely anticipated any modern topographical writer in proclaiming through Scotland the opulence and the peerless agricultural beauty of "the carse of Falkirk." Behind the carse, the surface slowly rises, and becoming quite changed in the character of its soil, belongs, for the most part, to the class of dryfield. Though it is here materially less fertile, and presents a different picture to the eye, yet it possesses, in the undulations and softly hilly and variegated risings of its surface, and in its fine enclosures and thriving woods, its villas and burgh and multitudinous human dwellings, not a few features of interest which challenge and fix the attention of a tourist. But in the small oval of the parish, or the tract which marches with Slamannan, the whole surface was originally a dull and gloomy bog; and even with the aids and results of georgical operation, still retains a strong dash of its pristine appearance. Yet nowhere than in this parish as a whole has agricultural skill been more vigorously plied or more successful in improvements. Almost every useful novelty in the art of husbandry which appears in other districts, is copied or adopted; and the farmers are conspicuous for the enterprising spirit which has won fame to Stirlingshire as an agricultural county. Coal is so good and abundant as fully to compensate—especially in connexion with unusually rich facilities of water and land communication—for the absence of other valuable minerals. Some of the more elevated parts of the parish—including not only eminences, but such stretches of territory as permit a tourist or traveller to move along and possess a continuous enjoyment of the intellectual treat—are hung round by a panorama of no common beauty. The view from the manse and churchyard of Falkirk, is noticed by Sir Walter Scott, as one of the finest in Scotland. From this point, or from other places northward and north-westward of the town, a luxuriant country, 12 or 14 miles square, spreads out before the eye, almost luscious in the beauties of its vegetation, dotted with mansions and rural spires, picturesquely chequered in its tracery by the tall masts and the intricate rigging of ships passing along the canal or harboured at Grangemouth, intersected by the opening estuary of the frith of Forth bearing along its sail-clad ships or its smoking steamers, and shut in by the fine outline of the Ochil hills, over whose summits look up in the far distance the cloud-wreathed or snow-capped tops of some Highland mountains. When this prospect is mantled in the darkness of night, crimson

* The church was formerly called *Ecclesbrae*, or, 'the Church on the brow,' and according with the descriptiveness of this name, it and the town around it, stand on an eminence or rising ground which, on all sides, has a declivity or brae. In the Gaelic language, it is called an *Eglais bhris*, but more commonly *Eglais bhrac*. The former of these phrases signifies 'the Broken church,' and, as not inaptly translated, 'Falkirk,' or 'the fallen,' or 'falling church.' Nor may the name have been without allusion: the parish place of worship which preceded the present one, having presented undoubted appearances of not being all built at one epoch. In 1166, it was given by the Bishop of St. Andrews to the monks of Holyrood; and, as it now became a mere vicarage, and may have suffered neglect, it possibly fell into ruin, and assumed the properties, and consequently the name, of a 'fallen-kirk.' The other Gaelic designation, *eglais bhrac*, signifies 'the Spotted church,' and is adopted by Buchanan in the translated name, 'Varium Sacellum,' applied by him to Falkirk, and supposed to allude to the party-coloured appearance of its stones. Another derivation of the modern name, is from *vallum* and *kirk*, easily transmutable into Falkirk, and signifying 'the church upon the wall,' in allusion, as is alleged, to the near vicinity of the wall of Antoninus.

and lurid flashes bursting fitfully up from the Carron iron-works, give it an aspect like that of beauty conflicting with death; and, when refracted by a thick and moist atmosphere, or borne down by a pressure of clouds, assume by turns a majestic, or a sublime and awful appearance. A hill on the grounds of Mr. Forbes of Callendar, a little to the south-east of Falkirk, commands a prospect scarcely inferior in beauty, and considerably greater in extent, and one which Bruce, the traveller to the sources of the Nile, declared to be finer than any which he had seen in the whole course of his wanderings.—The Carron works, though not in the parish, stand close on its boundary, not 2 miles distant from the town, and have an intimate connexion with both its population and its interior trade. See CARRON. The principal estate is that of CALLENDAR: which see. The Forth and Clyde canal commences at the north-east limit of the parish at Grangemouth; runs south-westward past Grahamston and Camelon; is carried over the Glasgow and Edinburgh north road, at the latter place, by a short and low-arched aqueduct; now bends westward till it nearly touches Bonny water, the boundary-line of the parish, at Bonny mill; and thence runs south-westward along the bank of Bonny water till it enters Dumbartonshire at Woodneuk; thus intersecting the parish at its greatest length, and describing a course through it of 9 miles. About $4\frac{1}{2}$ miles from its commencement, at a point where it has been raised by 16 locks from the level of the sea, it sends off, on its south side, the Edinburgh Union canal. The latter, immediately on retreating, describes the arc of a circle, and over that arc is lifted up by a rapid series of locks, which have a shelving appearance, along the face of the gentle and curved acclivity; it then runs a mile eastward, penetrates the body of a hill, and passes through it in a tunnel upwards of half-a-mile in length; and after a further course of $1\frac{1}{2}$ mile, first south-eastward, and next eastward, passes away into Polmont. See articles FORTH AND CLYDE CANAL, and UNION CANAL.—The Edinburgh and Glasgow railway also intersects the parish, and will send off a branch to Falkirk; and it is in contemplation to carry a line of railroad from Falkirk to Stirling: see article EDINBURGH AND GLASGOW RAILWAY. The north road between Edinburgh and Glasgow stretches nearly due east and west 6 miles within the limits of the parish, and goes through Laurieston, Falkirk, and Camelon. At the last of these places, the road to Stirling branches off, but runs along only $1\frac{1}{2}$ mile before passing into Larbert. Other roads are so numerous and intricately ramified that to trace them would be insufferably tedious. The towns or villages, besides the burgh of Falkirk, and its suburb of Grahamston, are, GRANGEMOUTH, CAMELON, LAURIESTON, and BRAINSFORD: which see. Population of the parish, in 1801, 8,838; in 1831, 12,743. Houses 1,646. Assessed property, in 1815, £22,298.

In the barony of Seabegs, in this parish, are several of those artificial earthen mounds, called moats, which occur in so many localities in Scotland, and were anciently the seats of justiciary courts and deliberative assemblies. In various places, urns filled with ashes, and stone coffins containing human bones, have been dug up; and in the hollow of a free-stone quarry near Castlecary, some wheat was found, 70 years ago, which had become black, and was supposed to have lain concealed from the period of the Roman possession. In several parts of the parish are traces of ANTONINUS' WALL: which see. From the line of this wall, nearly opposite Callendar house, an earthen wall of considerable height and thickness, without a fosse—broad at the top, and designed apparently to be both a road and a line of defence—branches off eastward,

runs through West Quarter house garden, and passes away toward the old castle of Almond. Though it can hardly, if at all, be traced beyond that castle, it may be presumed to have originally extended to the Roman camp in Linlithgow, on the spot which afterwards became the site of the royal palace. Old Camelon—houses and streets of which were traceable at a comparatively late date—was anciently a Roman town; and is even spoken of—fabulously, we suspect—as the scene of opulence and royal adornings at the period when the Romans took possession: see CAMELON. The parish of Falkirk is notable in history as the scene of two important battles. The first battle of Falkirk was fought on the 22d of July, 1298, between Scottish and English armies, headed respectively by Sir William Wallace, the guardian of Scotland, and Edward I. of England. The Scottish army, consisting of 30,000 men, collected by Wallace and other chiefs, took post somewhat more than half-a-mile north of the town of Falkirk, to await the approach of the English; and were drawn up in three—the English writers say four—divisions of a circular form, with their spears advanced horizontally, and with intermediate lines or bodies of archers. While Wallace had the chief command, Sir John Comyn of Badenoch, Sir John Stewart of Bonkill, Sir John Graham of Abercorn, and Macduff, the uncle of the Earl of Fife, shared his responsibilities, and appeared with him in the field. The English army, amounting, according to some accounts, to 86,000 foot, but really consisting of a conjectural number of infantry, and a fine body of veteran cavalry, who constituted the main strength, advanced in three great bodies; the first led by the Earl Marshal and the Earls of Hereford and Lincoln, the second by the Bishop of Durham and Sir Ralph Basset de Drayton, and the third—which was probably intended as a corps de reserve—by King Edward in person. A morass which was in front of the Scottish army, but is now drained by the canal, considerably embarrassed the English in their attack. The first division, advancing with great ardour, became momentarily embarrassed, and found that they could not rush onward to the front of the foe; but, turning to the left they found firm ground, and ran down upon the Scottish army's flank. The second division, more wary of the ground, and hurried on by the impetuosity of Sir Ralph Basset, their commander, assailed the left wing of the Scots almost at the moment of the first division charging the right. The Scots made so brave a resistance that the English, depending mainly on their cavalry, could not, for some time, make any impression; but eventually they were thrown into disorder, and subjected to fearful carnage. Stewart and his division were surrounded; and, after a gallant defence, both the commander and the most of his troops were hewn down. Wallace, for a brief period, continued the combat against the whole power of the enemy; till seeing himself about to be attacked in the rear and surrounded, he retreated with such valour and military skill as to cross the Carron, at a ford near Arthur's Oven, in view of the victorious army. Though no monuments exist on the field, there are two in its vicinity. On the summit of a hill, a mile south-east of Callendar wood, stands a stone 3 feet high, $1\frac{1}{2}$ broad, and 3 inches thick, called Wallace's stone, commanding a full prospect of the field of action at the distance of two miles, and probably marking the spot on which Wallace took post previous to the battle. In the churchyard of Falkirk, is the gravestone of Sir John Graham, who fell in the action, and who, as well as Sir John Stewart, was buried in the cemetery. The gravestone has been treble renovated; or rather there are three superincumbent stones, each of the

upper ones being a copy of the one beneath it. On all are the following inscriptions:

"Mente manueque potens, Vallæ fidus Achates,
Conditor hic Gramus, bello interfectus ab Anglis.
xxii. Julii, anno 1298."

"Heir lyes Sir John the Grame, baith wight and wise
Ane of the chiefs who reschewit Scotland thrice.
Ane better knight not to the world was lent,
Nor was gude Grame of truth and hardiment."

The second battle of Falkirk was fought on the 17th of January, 1746, between 6,000 of the royal troops, and about an equal or probably superior number of the troops of Prince Charles Edward. While the Pretender invested Stirling, Lieutenant-general Hawley, at the head of the small royal army, marched from Edinburgh to relieve the castle; and arriving at Falkirk, he encamped between the town and the former field of battle, intending to wait there till he should obtain sufficient intelligence for the effective arrangement of his operations. His antagonists, so far from being intimidated by his approach, resolved to attack him in his camp; and, marching from their rendezvous, adroitly used such stratagems to divert and deceive the royal troops, that they were about to cross the Carron at Dunipace, before they were perceived. Hawley, the commander, was not at the moment in his camp; but, finding his troops formed on his hurried arrival from the vicinity, and seeing the Highland infantry rapidly marching toward a hill upwards of a mile south-west of his position, and about a mile due south of the aqueduct bridge since erected, he ordered his dragoons, consisting of three regiments, to take possession of the hill, and commanded his infantry to follow. The Highlanders won the race, which was now run for the occupancy of the vantage-ground, and drew up in a battle-array of two lines, with a reserve in the rear. The royal troops, making the most of their circumstances, formed in two lines along a ravine in front of the enemy; but, owing to the convexity of the ground, saw their antagonist force, and were seen in their turn, only in the central part of the line. Their dragoons were on the left, commanded by Hawley in person, and stretching parallel to more than two-thirds of the enemy's position; and their infantry were on the right, partly in rear of the cavalry, and outlined by two regiments the enemy's left. The armies standing within 100 yards of each other, both unprovided on the spot with artillery, Hawley ordered his dragoons to advance, sword in hand. Meeting with a warm reception, several companies, after the first onset, and receiving a volley at the distance of 10 or 12 paces, wheeled round, and galloped out of sight, disordering the infantry and exposing their left flank by the flight. The Highlanders taking advantage of the confusion, outflanked the royal forces, rushed down upon them with the broad sword, compelled them to give way, and commenced a pursuit. The king's troops were greatly incommoded by a tempest of wind and rain from the south-west, which disturbed their vision and wetted their gunpowder, but did not annoy their antagonists; and, but for the spirited exertions of two unbroken regiments and a rally of some scattered battalions, who checked the pursuers, they would have been entirely routed. Prince Charles with his army remained during the night at Falkirk, and next day returned to Bannockburn. Hawley's total loss in killed, was 12 officers and 55 privates, and in killed, wounded, and missing, 280. Among the persons of rank who were left dead on the field, were Sir Robert Munro of Foulis, Bart., and his brother Duncan, a physician. They were buried beside each other in the churchyard of Falkirk, and commemorated in a superb monument erected over their ashes, and in-

scribed with a succinct statement of the circumstances of their death.

Falkirk is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend £339 4s. 2d.; glebe £20. Unappropriated teinds £1,474 18s. 1d. Inconsiderably populated parts of the parish, *quoad civilia*, are annexed *quoad sacra* to the parishes of Slamannan and Cumbernauld. The parish-church was built in 1811; sittings 1,300.—In 1838, a church connected with the Establishment was erected at Grangemouth, wholly at the expense of Lord Dundas. Sittings, about 700. In the same year, from £1,300 to £1,400 had been raised toward the erection of three other churches, respectively at Laurieston, Camelon, and Brainsford; all of which were designed to have annexed to them *quoad sacra* parochial territories. That at Laurieston was planned to accommodate 800 sitters, and those of Camelon and Brainsford, about 1,700.—The Relief congregation was established in 1770. The present church was built in 1800, at a cost of from £1,400 to £1,500. Sittings 1,230. Stipend £170, with about £10 sacramental expenses, and a manse and garden, worth from £15 to £20. The congregation has a library of upwards of 1,000 volumes.—The first United Secession congregation was established in 1742-3, and their present place of worship built in 1818 or 1820. Sittings 1,258. Stipend £160, with a manse worth about £15. The congregation has a library.—The second United Secession congregation was established in 1782. The church was built in 1806, at a cost of £850 exclusive of the materials of the old church. Sittings 580. Stipend £145, with a manse and garden.—The congregation of Original Burghers was established in 1804, and their church built in 1811. Sittings 566. Stipend not known.—The Reformed Presbyterian congregation was established about the year 1787. The church was built in 1788, at an expense of probably about £300. Sittings nearly 300. Stipend £85, with between £2 and £3 sacramental expenses, and a manse and garden.—The first Baptist congregation in Falkirk, was established before the year 1808. Their place of meeting is a house built for public worship, and rented at £6. Sittings 300. Stipend £50. The minister is chiefly salaried, and much employed, as a home missionary.—The Scotch Independent congregation was established about the year 1832, and meets in a school-house rented at £2. Sittings about 60.—The second Baptist congregation of Falkirk consists of about 12 members, and meets in a house which they have fitted up as a place of worship.—The Baptist congregation of Grangemouth consists of about 10 members. A Roman Catholic place of worship was built in 1839.—There are two parochial schools, one of them English, and the other classical. The master of the former—which was established in 1835—has £34 besides fees, which, during the 7 months succeeding the commencement of the school, amounted to £24; and the master of the latter, who employs an assistant, has £17 2s. 2½d. salary, with £35 fees, and £8 6s. 8d. other emoluments. There are 33 schools not parochial, conducted by 39 teachers, and attended by a maximum of 1,774 scholars. One of them is a charity school; 7 are held in the evening; 12 are situated in Falkirk, 7 at Grahamston, 2 at Brainsford, 4 at Grangemouth, 3 at Laurieston, 2 at Camden, 1 at Bonnybridge, 1 at Craigieburn, and 1 at Glenburn.

Large as the parish of Falkirk still is, it was formerly so extensive as to include the present parishes of Denny, Slamannan, Muiravonside and Polmont. All of these, except the last, must have been detached from it at a very early period; and Polmont was detached in 1724. When the estate of Callendar was

sold after its confiscation in 1715, such tithes as were not made part of it, were conveyed under the stipulation that they should be subject to the stipend of a minister for a new parish to be detached from Falkirk. Polmont accordingly draws stipend from the parishes both of Falkirk and of Denny, in which the estate is situated.

FALKIRK, a parliamentary burgh, the capital of the eastern part of Stirlingshire, and a town of considerable importance, is situated in $55^{\circ} 59'$ north latitude, and $3^{\circ} 44'$ longitude west of Greenwich; 11 miles east of Stirling, 24 east by north of Glasgow, and 24 west of Edinburgh. It stands, as to its main body, on a gently rising ground, dotted round in its environs with neat and beautiful villas, and sending off in different directions two elongated and thin suburbs. Seen from the soft eminences to the north and north-west, it presents, with its fine spire and its thick grouping of buildings, a beautiful foreground to the brilliant and fascinating landscape over which it presides; but, when entered, the town is far from being in general of a pleasing aspect. An utter want of uniformity or neatness or tastefulness in its buildings, the absence of all spaciousness and plan in the arrangement of its streets, and a deficiency in the indications of enterprise and refinement in the number or architecture of its public edifices, depreciate it as a town far below the importance which belongs to it as a market, and as the seat of a great population. Its High-street, or main street, indeed, is, over most of its length, of half-a-mile from east to west, wide and airy,—and has, in its wide parts, large houses and good shops,—and, about its middle, sends back in one side a recess in which stands the town-hall; but even this is uniform in nothing, mean in some of its edifices, constantly changeful in its breadth, and destitute of the trivial grace of straightness. Over nearly half its length, from a little west of its middle eastward, the sides of this street are subtended by mimic crowds of tiny streets, which pressing in upon it at various angles of junction, or of divergency from parallelism,—though they do give the town an extreme breadth of not more than 300 yards—occasion more serious perplexity to a stranger than he feels in two-thirds of the far-spreading New town of Edinburgh. The branch-streets, and their divergent and intersecting alleys, are no fewer than about 20 in number, several of them only about 100 yards in length, some of them not more than about 60 yards; and, with scarcely an exception, they are confined, narrow, unpleasant thoroughfares. An area, however, at the west end of the clustered part of the town, and graced with the stately form of the parish-church, fully partakes the airy appearance of the principal part of the High-street. But the town, properly viewed, is quite as remarkable for the straggling extension of its limbs away among cornfields, and an open agricultural territory, as for the squeezing up of its main body within oriental street limits. Both the east and the west ends of its High-street are, in fact, solitary street lines which look as if they were wandering away from the town with which they communicate. Another thoroughfare, called Kerse-lane, after being reached by angular turnings, or irregular debouchings through the north wing of the town, straggles away in utter loneliness upwards of $\frac{1}{4}$ of a mile on the road to Grangemouth. But, more surprising than all, a thoroughfare leading due north from the area at the middle of the High-street, runs onward to fully the distance of a mile $3\frac{1}{2}$ times the length of the body or compact part of the town, and 6 times its breadth; and this enormous elongation, over two-thirds of its way, is but a solitary street, and over the other third, which is the central one, sends off branch streets averaging not more than 160

yards in length. The extreme third of it begins on the north side of the canal, and is the village or suburb of Brainsford, and the central third is the village or suburb of Grahamstown. These suburbs owe their rise to their being on the road to the great iron works of Carron, leading down on the one side from these works, and on the other from Falkirk to the most convenient point on the canal. At Brainsford a basin projects out from the canal; and a railway communication comes up to this from the iron-works. On the other or Grahamstown side of the canal, are the premises of the Falkirk foundry. Grahamstown, had it occupied an independent position, or been unassociated as a suburb with a town of utterly irregular arrangement, would have been a village of pleasing aspect, presenting, in its uniformity of plan, and the spaciousness of its street called the Avenue, and the villa form of several of its houses, a neat and orderly appearance. The steeple of the Town-hall in the central area or market-place of Falkirk, was built about 30 years ago, is 130 feet high, and presents much elegance of outline. The parish-church, with its Gothic windows, would be a finer fabric, had it such an accompaniment in the form of tower or steeple as should be in keeping with its own style. Falkirk has branch-offices of the bank of Scotland, the National bank, the Clydesdale bank, and the Commercial bank of Scotland; public reading rooms; public libraries; a school of arts; a geological society; and several friendly societies.

Falkirk is not, in the strict sense, a manufacturing town. Its principal manufacture appears to be leather; but even this is not of considerable extent. The town has no factories, but, in 1838, it had 180 hand-loom for the weaving of cottons. The foundry at Grahamstown, the basin and railway terminus at Brainsford, a distillery half-a-mile farther down the canal, intermediate extensive corn-mills, and a yard for the repair of barges and boats, employ many persons, and occasion stir and an appearance of prosperity in the suburbs. But the grand importance of Falkirk consists subordinately in its being the depot of the internal trade for a considerable circumjacent district, and primarily in its having great fairs or 'trysts'—the greatest in Scotland, and probably in Great Britain—for the exposure and sale of black cattle, sheep, and horses. The trysts are held thrice a-year, on the 2d Tuesday of August, the 2d Monday of September, the 2d Monday of October, and following days, generally for three days at a time. Pennant mentions that the number of cattle yearly exposed for sale at these trysts, when he visited Scotland in 1772, amounted to 24,000. Dr. Graham, in his 'View of the Agriculture of Stirlingshire,' published in 1812, states that at the first or August tryst there are generally exhibited from 5,000 to 6,000 black cattle; at the September tryst about 15,000 black cattle, and 15,000 sheep; and at the October tryst from 25,000 to 30,000, and even 40,000 black-cattle, and about 25,000 sheep. At the last two trysts, especially at that of October, a great number of horses are also exposed to sale. "Thus it appears," says Dr. Graham, "that there are annually exhibited at these trysts above 50,000 black cattle, together with about 40,000 sheep. Taking the former at the moderate average value of £8, and the latter at that of 15s. each, the value of the whole will amount to £430,000. An intelligent friend who lives near the spot calculates that 50,000 black cattle are exposed to sale at the last two trysts alone; and he estimates on good ground that the total value of the cattle bought and sold at these trysts must amount to half-a-million sterling. All the black cattle brought to these markets are lean stock intended for wintering. But the

number, it is remarked, has of late been diminishing, owing to many dealers being now in the habit of driving their own cattle to England instead of disposing of them at these fairs to English dealers, who are the principal purchasers." The remark, however, is not confirmed by the later accounts which we have received. A correspondent in Falkirk who has good opportunities of being acquainted with the amount of business transacted at the trysts, informs us that at the last October tryst (1840) not fewer than from 80,000 to 90,000 black cattle, and and from 90,000 to 100,000 sheep appeared upon the ground. This number, indeed, was rather greater than that which is usually exposed to sale, but the same correspondent informs us that at least 300,000 head of cattle appear at the various trysts throughout the year. We give this statement as sent us, without pledging ourselves to its perfect accuracy. Our correspondent, though he may have somewhat overrated the numbers, has, we believe, good opportunities of being well-informed on the subject. Nor can there be any doubt that the number of cattle brought to this great fair is immense. For many days previous to the two last trysts, all the highways which lead from the north to the trysting-ground exhibit, from morning to night, an almost uninterrupted line of sheep and oxen. As an instance of their multitudinousness our informant mentions that a few years ago some unexpected obstacle having presented itself at the St. Ninian's toll-bar to the passing of the droves, the whole line of road northward from that point as far as to Sheriffmuir, a distance of not less than 5 or 6 miles, was, in the course of a few hours, completely blocked up. The stir which the trysts occasion in the neighbourhood may readily be conceived to be very great. The inns at and around Falkirk are completely occupied for several days before each market. Not less than a hundred large and commodious tents are erected on the ground for the purpose of affording refreshments to the crowds which resort thither, and agents of the principal banks in Scotland always attend for the purpose of facilitating monetary transactions. The ground on which the Falkirk trysts are held is about 3 miles to the north-west of the town, on a large uncultivated field called Stenhouse-muir, on the estate of Stenhouse, and in the parish of Larbert. They have been held here since about the year 1775. Before that time the trysts were held for many years on the Bonnymoor, about 4 miles to the west of Falkirk; and at a still more remote period they were held on the Reddingrig-moor, still a large uncultivated piece of ground, on an elevation in which a monument to Sir William Wallace was erected in 1810.

Falkirk is a town of considerable antiquity, and the site of one of those military stations on the Roman wall, known by the name of the Forts of Agricola,—hence a number of the relics of the Roman people have been found from time to time in that place and the neighbourhood. About thirty years ago there were discovered at Parkhouse, about a quarter of a mile to the north-west of Falkirk, two urns containing human bones, which bore evident marks of having been subjected to the action of fire: these must have been Roman, for no other people ever possessed this country with whom incineration was a customary practice. About ten or twelve years ago a number of fragments of earthenware were dug up in a garden in the Pleasance of Falkirk, and among them one vessel, round the margin of which the word 'Nocturna,' was legible; they were generally unglazed, of a white or brown colour, and some ornamented with raised figures on the outer surface. A piece of ornamental brass, that apparently

had been used as the top of a flag-staff, was also discovered near Camelon, by workmen employed in digging the foundations of a distillery.—It is supposed to have once been wholly comprehended within the ancient barony of Callendar. After having become dependant first on the see of St. Andrews, and next on the abbey of Holyrood, its lands came to be included in the extensive barony and lordship of Kerse, belonging to this abbey, which was, in 1393, erected by Robert III. into a free regality. At the Reformation, the monastery of Holyrood feued out its temporal possessions to Sir John Bellendean, Lord-justice-clerk, whose son, Sir Lewis, obtained in 1587 a Crown-charter from James VI. of these acquisitions, which were constituted into the new barony of Broughton. The barony of Kerse, called Abbots-Kerse, comprehending the lands of Falkirk, and the patronage of the church, was included in this new barony. In 1606, Sir Lewis Bellendean conveyed the lands of Falkirk to his brother-in-law, Alexander, 7th Lord Livingstone, who possessed the barony of Callendar. The family of Livingstone obtained the barony of Callendar in the reign of David II. Part of the town of Falkirk held of this family. In 1600 James VI. granted a charter of *novi damus* in favour of Alexander Lord Livingstone, of the barony of Callendar, in which the town of Falkirk was erected into a free burgh-of-barony, with privileges of merchandise and artificers, as in other free burghs, and with power to Lord Livingstone of creating burgesses, holding weekly markets, having two fairs annually, of electing bailies and other officers for the government of the burgh, and of holding courts within the burgh. This charter also contained a grant of regality, but which it was provided should evacuate on payment of £10,000, said to be due to Lord Livingstone by the Crown. In 1634 Alexander, Earl of Linlithgow, granted the barony of Callendar to his brother, Sir James Livingstone, who was created by Charles I. successively Lord Almond and Falkirk, and Earl of Callendar. In 1637 the Bishop of Edinburgh, to whose see the possessions of the abbots of Holyrood had been annexed, with consent of his dean and chapter—the minister of Falkirk being one of his prebendaries—conveyed to Lord Almond, by charter of *Novi damus*, the whole barony of Falkirk, with all the feudal casualties and powers formerly held by the abbots of Holyrood. This charter confirmed the grant of Alexander Earl of Linlithgow to Lord Almond, and conveyed a power to the grantee of bailiary and justiciary, &c. In 1646 the Earl of Callendar obtained a charter from the Crown, erecting his estates, including the baronies of Callendar and Falkirk, into a free regality, to be called the regality of Callendar, with the usual powers and privileges. By this charter, the town of Falkirk, as well that part of it which from ancient times was held of the abbots of Holyrood as the remaining part of the town which was from ancient times part of the barony of Callendar, is united and erected into one whole and free burgh-of-regality, to be called the burgh of Falkirk. Power is given to build a court and prison, to erect a market-cross, to elect and name bailies and other magistrates, to create free burgesses, with liberty to them to sell all staple goods and others imported from within or without the kingdom, and generally to exercise all the privileges of a burgh of regality. There is also a grant of two weekly market-days and four free fairs, with power to the earl and his bailies to draw the customs of the fairs and markets, and to apply them as they think proper. This charter was ratified by parliament, March 27th, 1647; but the ratification is now lost. The estate of Callendar, on the earl's resignation, passed to Alexander Lord Livingstone,

his nephew, who, in 1663, obtained a charter from Charles II., which recites the charter of Charles I., and besides conferring various privileges, and constituting the whole estates of the grantee into an earldom, it of new erects the town of Falkirk, with the pertinents thereof, into a free burgh-of-regality, with all the privileges in the charter recited. The town continued to hold of the family of Livingstone till the attainder, in 1715, of the Earl of Linlithgow and Callendar. During the time of the estate of Callendar being held by the York buildings' company, there was always a resident baron-bailie; and, after it was acquired by Mr. Forbes, a person continued to be appointed by him to that office till about the end of the last century. Since then the office has been vacant, and the old barony jail was allowed to go to ruin, and afterwards removed. The management of the affairs of the town and community became now vested in two separate bodies, the stent-masters and the committee of feuars. The stent-masters are a very ancient body, and their records go back more than 150 years. They are elected annually, and are 24 in number: four being chosen by the merchants, two by each of the trades of hammermen, wrights, weavers, shoemakers, masons, tailors, bakers, and brewers, and four from the suburbs of the town. Every person who carries on business in any of these trades is qualified to vote for and be elected a stent-master of his craft. After election the stent-masters name out of their body a preses and treasurer, and they have also a clerk. The stent-masters are the governing body in the town, and their powers are founded on immemorial usage. They have no jurisdiction, however, and apply to the sheriff by ordinary action, in name of their preses and treasurer, to have their decreets enforced; and, it is said, that judge has uniformly supported their authority. The committee of feuars is of more recent origin. The greater part of the town is held feu of the estate of Callendar. The feuars had by their titles generally a right of pasturage, and of feal and divot, and quarrying stones in the muir of Falkirk. But a declarator of division of the common having been brought by the proprietor of Callendar, the feuars obtained by a decree of the court of session, in return for a renunciation of their rights of property, common, or servitude in the muir, certain important privileges and immunities. Since the date of this decree the feuars have held meetings as a separate body. They elect a preses, treasurer, and clerk, and keep a record of their proceedings. The property of the town consists of its water-works and wells; of a piece of land called the washing-green; of Callendar riggs, extending to about an acre, on which the markets are held; of the customs of the town, formerly levied by the superior; and of the town's steeple, with a shop under it. The debts of the town amount to about £1,700, borrowed on bills granted by the preses and treasurer of the stent-masters. This debt has been contracted principally on account of the town's water-works and the steeple, for erecting which the feuars contributed £500. The revenue arises chiefly from an assessment collected from the inhabitants under the name of stent, or water-money, amounting to about £200 per annum. The town draws besides £14 per annum for the shop under the steeple. The annual expenditure is estimated at £174 2s. The powers of the stent-masters extend over the regality, which includes some arable land, but excludes the suburbs of Grahamstown, Brainsford, &c., which are comprehended within the parliamentary boundary. The stent has never been levied in these suburbs; but this has not proceeded, it is said, from any opposition being apprehended to its payment, but because

the inhabitants have not the benefit of the water, on which account it is chiefly levied. There is no burgh-jurisdiction of any sort; but justice-of-peace courts for the district are held in the town once a-month. There is no corporation or persons now possessed of exclusive privileges. During the existence of the regality powers in the family of Livingstone, burgesses were created, and corporations of craftsmen erected. The burgesses were admitted by the superior himself, who subscribed the Burgess ticket. The corporations appear to have had charters from the superior, one of which to the hammermen, dated 1st July, 1689, is still extant, granting them exclusive privileges, and giving power to choose a deacon and box-master. These privileges are now obsolete, and the only remnant of the privileges of the corporations is their voice, as separate bodies, in choosing the stent-masters. By the Act 3 and 4 William IV. c. 77, the town of Falkirk has obtained a municipal constitution. The council consists of twelve, viz., a provost, three bailies, a treasurer, and seven councillors. There is no local statute providing for the police of the town, and it has not yet thought fit to take advantage of the general police act lately passed. There is a police-constable appointed by the sheriff of the county; and a sheriff-substitute, and the procurator-fiscal for the eastern district of Stirlingshire reside in Falkirk. On any emergency the inhabitants watch the town, under the name of the town-guard. There is no jail in the town, and the nearest one is that of Stirling. Falkirk unites with Linlithgow, Hamilton, Lanark, and Airdrie, in returning a member to parliament.

FALKLAND,* a parish in the Cupar district of Fifeshire, about 5 miles in length from east to west, and about $2\frac{1}{4}$ miles in breadth from north to south at its two extremities, but about $3\frac{1}{2}$ miles in breadth at the centre. It is bounded by the parishes of Portmoak, Leslie, and Markinch on the south; by those of Markinch and Kettle on the east; by Kettle and Strathmiglo on the north; and by the parish of Strathmiglo on the west. The surface is beautifully diversified; and in many places finely ornamented with wood. At the north, near the Eden, there is a considerable tract of level ground, which ascends as we proceed south, until it rises into the East Lomond hill, and the high ridge which connects it with the West Lomond; and on the south of this range it descends until it joins the parish of Leslie; but the lowest elevation of the southern part of the parish is considerably above that of the northern portion near the Eden. In the general landscape of this portion of the county, the range of the Lomonds, with the two lofty peaks which form their eastern and western terminations, are beautiful and interesting features; and the different views from their summits are extensive and finely diversified. The height of the East Lomond hill in this parish, as ascertained by the Trigonometrical survey made under the direc-

* "The name of this place," says Dr. Jamieson, [*Royal Palaces of Scotland*, Edn. 1830, p. 29,] "apparently claims a Gothic origin. It may have been formerly known from some celebrated breed of kawks, *q. Falcon-land*; from Suiio-Gothic *falk*, A. S. *walh*, Teut. *valch*, a species of hawk. This, however, must be left as uncertain, because of the variations in the orthography of names: for this is not only written *Falkland*, *Faukland*, *Faukland*, and, by Irvin, *Falcoland*; but in a charter of Malcolm IV. A. 1160, mention is made of *Scradimigglock*, *Falecklen*, *Radhult*, and *Cuttel*, in which forms the names of Strathmiglo, Falkland, Rathillet, and Kettle, appear." Anciently the name of this parish was *Kilgour*; arising either from the lands of Kilgour, about a mile from the burgh of Falkland, where the church originally stood, or from the name given to the church and now preserved by these lands. The origin of the word *Kilgour* is not very obvious; but *Kil-our* in the Celtic means 'the yellow church.' The name of the parish seems to have been changed about the time that the church was transferred from its old site to its present, within the burgh of Falkland.

tion of the Board of Ordnance, is 1,466 feet above the level of the sea, and 255 feet lower than the summit of the West Lomond in the parish of Strathmiglo: see article *THE LOMONDS*. The parish is well-provided with roads, there being 6 miles, 1,330 yards of turnpike-roads; and 9 miles, 196 yards of statute-labour roads, within it.—Of the ancient forest of Falkland, in which the Scottish kings so often enjoyed the pleasures of the chase, nothing now remains, except the natural wood at Drumdreel in the neighbouring parish of Strathmiglo. It had been carefully preserved, so long as Falkland remained a royal residence; but it is probable that after the departure of James VI. to England, less care had been taken of it. It was utterly destroyed, however, in 1652, by Cromwell, who ordered the trees to be cut down, for the purpose of their being used in the construction of the fort he erected at Dundee. “This year,” says Lamont, “the English began to cut downe Fackland wood; the most part of the tries were oakes.”—About a mile west of Falkland, amidst pleasant and well-wooded enclosures, is Nuthill, the residence of Mr. Bruce. Farther west is Kilgour, where the old church once stood, also the property of Mr. Bruce. On the south side of the Lomonds, and at the west end of the parish, a lead-mine was at one time worked, and silver extracted from the ore, but it has been long given up. As to this mine, George Buist, Esq., in an essay on the Geology of Fife, quoted by Mr. Leighton, says: “After a minute and laborious inquiry, I was enabled to reach the site of the East Lomond silver-mine,—for as such it was worked, the galena being argentiferous. The vein, which is externally covered over with earth, seems to cut the sandstone and limestone which there prevail from north-west to south-east. Judging from the aspect of the rubbish still existing, the veinstone seems to have been hornstone, or other siliceous matter. The mine was worked about sixty years since at the expense of the then proprietor, Mr. Stewart of East Conland, under the management of an Englishman of the name of Williamson. The water-mine which drained it, is still visible, and the traces of the workings are observable, partly obliquely by the end and in front of the farm-house of the Hangingsmyre. Williamson seems to have been the Douterswivel of his time, and managed to make the proprietor take on himself the whole outlay, while he appropriated all the returns. A considerable quantity of metal was melted at temporary works erected on the spot, and its silver said to have been extracted. At length, under pretence that it would be more profitable to transport the ore to England, about 6 tons were sent to Perth for shipment; and Williamson himself absconded with the ore, leaving his half-ruined employer unable to proceed farther with the mining operations. It will thus be seen that the lead-ore here has never yet been properly searched for, or worked, and the mine may contain metal worthy of more minute inquiry than has yet been made with regard to it.”—The population of this parish in 1755, according to Dr. Webster, was 1,795. In 1801, it was 2,211; and in 1831, 2,658, of whom about 2,100 are in connexion with the Established church. Few parishes have made greater advances in agricultural improvement than this. At the time the first Statistical Account was written, about one-half of the parish was pasture-ground; but since the division of the Lomonds, this is no longer the case. The extensive drainage effected by the late Mr. Bruce, and continued by his successor, has reclaimed a great extent of ground; and excellent grain crops are now produced far up the Lomonds, where formerly there was only pasture for sheep. The soil of the parish is very varied; but through-

out the whole of the northern part of the parish especially, it has been improved by draining and enclosures. The valued rent of the parish is £5,824 Scots. Assessed property, in 1815, £8,144 sterling.—A great part of the population in the town of Falkland, and in the villages, are employed in the weaving of linen goods of different descriptions. Dowlas and sheeting are chiefly made for the manufacturers of Dundee, Newburgh, Cupar, and Ceres; diaper and towelling for the manufacturers of Dunfermline; and drills for those of Kirkcaldy and Dysart. There are no manufacturers carrying on business on their own account in the town of Falkland; but one manufactures dowlas and sheeting in the village of Newton of Falkland; and six are engaged in the manufacture of window-blinds in the village of Freuchie.—This parish is in the presbytery of Cupar, and Synod of Fife. Patron, Bruce of Falkland. Stipend £252 8s. 8d.; glebe £18. Unappropriated teinds £842 18s. 3d. The church of Falkland is a very old building, altered about 1770, situated in the principal street of the town; sittings 687. There is a Secession chapel in the village of FREUCHIE, [which see,] and a small Baptist meeting-house in the town of Falkland.—The parish-school is in the town of Falkland; and the average attendance of scholars is about 100. The schoolmaster has the maximum salary, and £20 per annum in place of a house and garden. There are two unendowed schools in the town; and there is also a well-attended school in the village of Freuchie.

This parish contains several objects of antiquarian interest, which Colonel Miller has endeavoured to connect with the movements of the Roman and British armies previous to the battle of Mons Grampius, which he supposes to have been fought at Mearlsford. “The fortifications on East Lomond hill,” he says, “have been perfected with great labour, and very considerable skill, although the works are irregular. On the summit there are two works, 150 yards in circumference. There have been four defences on the north side, the lower ditch of which is carried through the rock in one place. On the west side there is a ravelin which would not disgrace a modern engineer; and on the south side there is a ditch about 100 yards below the summit, and nearly 200 yards long, which has either been filled in at the east end, or never finished. The remainder of it is about six feet deep, and the earth is thrown up in the inside to form a rampart, which is still in excellent preservation. Between the East and West Lomonds, and about half-way below these summits, the ground presents the appearance of a plain, sloping gently towards the east, although very much broken. This, I conceive to have been the position of the Caledonians previous to the battle. This plain slopes gently down towards the neighbouring country on the south side, which is still very swampy, and must then have been a bog, and impassable for an army. Along the edge of this bog there still exist what appear to me to be very distinct traces of fortification, particularly at the farm of Glasslie, where there are the remains of three circular forts surrounded by ditches, although much obliterated by the plough. On the north side of the plain, a ledge of rocks extends almost the whole way, which makes the position very strong on that side; except on the north side of the West Law, where there has been a slide of the mountain called the Hoglayers, by which I conceive the Caledonians descended to battle. A mile west of Falkland also, there is a part of the mountain called the Greenhill, which projects from the main ridge; and between that and the East Law the ground slopes gradually down to Falkland, which renders the ascent on that side comparatively easy.

On the west side of the Greenhill there is also a narrow pass called the Arrities, on the west side of which there is a chain of small circular forts amounting to eight or nine; and in the gorge between these two there is an old fort in excellent preservation, called the Maiden castle. It occupies an oval hill, and is 400 yards in circumference. The ditch runs round the base of it, and the earth is thrown outwards, owing to the steepness of the ground: the scarp being in some places 20 feet high, and along the northern brow of the hill there are traces of huts having been excavated. On the east side of the castle, and a considerable distance from it, there are five or six small circular forts, some of which have been built principally of stone." [*Inquiry on the Battle of Mons Grampius*, pp. 17—22.] These various works, Colonel Miller supposes to have been constructed when the Caledonians took up a position here after their defeat at Lochore, and previous to the great battle fought at Mearlsford. That they are British forts there can be little doubt; but whether they were all constructed at the period alluded to, and for the purpose conjectured, or whether they were constructed on different occasions and for other purposes, it would be rash to decide.—West of Falkland, and on the lands of Nuthill, are the remains of extensive lines which the Colonel supposes had been constructed by the Roman general previous to his taking up his position in the camp at Pitlour. These works were quite entire about 40 years ago. "The only part of them now remaining is six ditches, an hundred yards distant from the base of the hill. The greatest length of them is about 250 yards, but they formerly extended about 50 yards farther east. They lie upon the west end of a low ridge which comes to a point; and do not run parallel to each other, but follow the nature of the ground, and approximate towards the west; several of them join; several of them are cut partly through rock, and are still about 20 feet deep, but were formerly much more. At their western extremity, a narrow valley cuts the position obliquely, through which a brook runs; and only two ramparts have been carried across this valley, apparently for the purpose of forming an inundation. On the north side of this, three immense ramparts, with corresponding ditches, extended in a north-west direction about 800 yards. These were levelled about twenty-two years ago, but can still be partially traced. In front of the existing ditches, which formed the centre of the position, but a little to the right, and resting apparently upon the inundation, two parallel ditches and ramparts commenced, and extending due east about 1,100 yards, terminated opposite the East Law near to Falkland; but these works were not so large as the others, as the ground was more favourable. These lines thus formed an obtuse angle with the right thrown back from the mountain, and they appear to have been quite open to the rear. The centre is the weakest point, and the nearest to the mountain; hence the extraordinary manner in which it has been fortified. It is evident they must have been occupied with reference to an enemy on the mountain above them. This, I think, clearly appears from their proximity to it, from the defences being all on that side, and from its being altogether a forced position, and possessing no natural advantages. Hence the skill and extraordinary labour that have been required to make them defensible. As far as I am able to judge, it must have required the labour of as many hands as could be employed on them at least a fortnight."

The town of Falkland stands at the north-east base of the East Lomond hill, and consists of one principal street, and some smaller streets and lanes. Its appearance, taken in connexion with the palace

and the church, is, notwithstanding some modern buildings, antique, and its situation pleasant and agreeable. This town was originally a burgh-of-barony belonging to the Earls of Fife; but it was erected into a royal burgh in 1458, during the reign of James II. The preamble to the charter of erection states as the reasons for granting it, the frequent residence of the royal family at the manor of Falkland, and the damage and inconvenience sustained by the many prelates, peers, barons, nobles, and others of their subjects, who came to their country-seat, for want of innkeepers and victuallers. This charter was renewed by James VI. in 1595. Among the privileges which these charters conferred, was the right of holding a weekly market, and of having four fairs or public markets annually. To the public markets two others were subsequently added,—one called the lintseed market, held in Spring, and the other the harvest market, held in Autumn. There are now seven public markets held throughout the year; these occur in the months of January, February, April, June, August, September, and November, and are generally well-attended. Like the neighbouring burgh of Auchtermuchty—although certainly entitled originally to have done so—Falkland does not appear at any time to have exercised its right of electing a member to the Scottish parliament; consequently its privileges were overlooked at the time of the Union; but since the passing of the reform bill, its inhabitants having the necessary qualification are entitled to a vote in the election of a member for the county. In all other respects, however, this burgh enjoys the privileges of a royal burgh. It is governed by a town-council, consisting of 3 magistrates, 15 councillors, a treasurer, and a town-clerk. The revenue of the burgh amounts, on an average of three years, to about £60 yearly. The magistrates, besides managing with the council the civil affairs of the burgh, hold courts from time to time for the decision of questions arising out of civil contracts, and petty delicts. The town-house, which is ornamented with a spire, was erected in 1802, and contains a hall in which the burgh-courts and the meetings of the town-council are held, and two rooms for a prison, which, however, are but seldom used, except for the temporary purpose of a lock-up-house. No town probably in Scotland is better supplied with spring-water. This was effected in 1781, by bringing water from the neighbouring Lomonds by means of pipes, and which is distributed by wells situated in different parts of the burgh. This useful public work cost about £400 sterling, and was executed at the expense of the incorporation. There is no guildry, neither are there any incorporated trades within the burgh.—Although now little better than a country village, Falkland must formerly have been a place of great resort, and of considerable importance. The frequent residence of the royal family at the palace, during the reigns of the three last Jameses, brought—as we have seen—the nobility and the wealthier of the lesser barons often to the town, and many of them had residences within it or in its immediate neighbourhood. A natural consequence of this was, it may easily be supposed, the superior refinement of the inhabitants; and 'Falkland bred,' had become an adage. The superiority, however, of Falkland breeding is, like the former grandeur of the town and palace, now, alas! among the things that were.—At the distance of about a mile to the east of the burgh, is the village of Newton-of-Falkland, and about another mile farther east is the village of Freuchie; both built on feus from William Johnston, Esq., of Lathrisk. Sergeant Spankie, who has long been eminent at the English bar, is a native of Falkland: his father having been minis-

ter of the parish. The name of Mrs. Brown, wife of the Rev. Andrew Brown, also minister here, has become well-known since the publication of 'the Minstrelsy of the Scottish Border,' of Sir Walter Scott, and the 'Popular Ballads and Songs' of Robert Jamieson, A.M., in consequence of the acknowledgments by both these editors of the assistance they received from that lady's great knowledge of the popular poetry of Scotland. Richard Cameron, who for a time acted a conspicuous part in the resistance to Episcopacy in the reign of Charles II., was born in Falkland, where his father was a merchant. He was originally himself an Episcopalian, and acted as schoolmaster of the parish, and precentor to the curate. He appears afterwards to have attended the preaching of the indulged Presbyterians, but ultimately to have joined the party who refused the indulgence, and sought the glens and the lonely muirs for their places of worship. He was licensed to preach by the ousted ministers, and soon became a leader of the high party. His preaching, though highly acceptable to the people who followed him, became most obnoxious to the Government; and, in 1680, a reward of 5,000 merks was offered for his apprehension. He was killed at ARDROSS, in Ayrshire, the same year: see that article.

The lands of Falkland, including what now constitutes the burgh, belonged originally to the Crown; and were obtained from Malcolm IV. by Duncan, 6th Earl of Fife, the fifth in descent from Macduff, upon the occasion of his marriage with Ada, the niece of the king. In the charter conferring them, which is dated in 1160, the name is spelled "Falecklen." The lands of Falkland continued, with the title and other estates, with the descendants of Duncan, until 1371, when Isobel, Countess of Fife, the last of the ancient race, conveyed the earldom and estates to Robert Stuart, Earl of Monteith, second son of Robert II., who thus became 16th Earl of Fife, and was afterwards created Duke of Albany. On the forfeiture of his son, Murdoch, in 1424, the lands of Falkland reverted to the Crown; and the town was shortly afterwards erected into a royal burgh. The court of the stewartry of Fife—which comprehended only the estates of the earldom—was also removed from the county-town of Cupar to Falkland, where they were afterwards held as long as the office of steward existed. In 1601, Sir David Murray of Gospetrie, 1st Viscount Stormont, obtained a charter of the Castle-stead of Falkland, with the office of ranger of the Lomonds, and forester of the woods; and he also held the office of captain or keeper of the palace, and steward of the stewartry of Fife. The lands called the Castle-stead, with the offices and other parts of the lands of Falkland, were afterwards acquired by John, 1st Duke of Athol, who was appointed one of his Majesty's principal secretaries of state in 1696, and lord-high-commissioner to the Scottish parliament the following year. He was twice appointed to the office of keeper of the Privy seal, and was made an extraordinary lord of session in 1712. The lands and offices thus connected, afterwards, so far as not abolished in 1746, came into the possession of the family of Skene of Halyards, from whom they were purchased by the late J. Bruce, Esq., descended from the family of Bruce of Earlshall, one of his Majesty's printers for Scotland. At his death, he was succeeded in these estates—consisting of 1025 acres—by his niece, Miss Bruce, now the wife of O. Tyndale Bruce, Esq.—Falkland gives the title of Viscount to the English family of Carey; Sir Henry Carey being created Viscount Falkland by James VI., 1620.

At an early period, the Earls of Fife had a residence

here, called the castle of Falkland. Not a vestige of this building now remains, but its site appears to have been in the immediate neighbourhood of where the palace was afterwards built, on a part of what now forms the garden of Mr. Bruce. This fortalice had in effect the honours of a palace, while it was occupied by one of the blood-royal, Robert, Duke of Albany, who, for thirty-four years, had all the power of the state in his hands, under the different titles of lieutenant-general, governor, and regent. Although Robert gives it the more humble designation of "Manerium nostrum de Fawkland," it was in fact the seat of authority; for his aged and infirm father constantly resided in the island of Bute. It receives its first notoriety, in the history of our country, from the horrid cruelty here perpetrated by Albany on his nephew David, Duke of Rothesay, eldest son of Robert III. The governor, in consequence of the great promise of this young prince, fearing that he would prove the rival of his power, used the basest means to prejudice his imbecile father against him, and prevailed with him to issue an order to arrest and confine him for some time, it being represented to him that this was necessary for curbing the violent humours of the youth. Being inveigled, under false pretences, into Fife, he was shut up in the tower of Falkland, where he was consigned to the cruel fate of dying by famine. His life was for some days feebly sustained by means of thin cakes, pushed through a small crevice in the wall,* by a young woman, daughter to the governor of the castle; but her mercy being viewed by her ruthless father in the light of perfidy to him, she was put to death. Even this brutal act did not deter another tender-hearted female, employed in the family as a wet-nurse, who supplied him with milk from her breasts by means of a long reed, until she, in like manner, fell a sacrifice to her compassion. After the lands and castle of Falkland came to the Crown, by the forfeiture of the earldom, the first three James's occasionally resided at the castle, enjoying the pleasures of the chase in the adjoining forest, and on the Lomond hills; and in consequence of this the charter was granted by James II., erecting the town into a royal burgh. It is impossible now to ascertain whether James III. or James IV. began to build the palace, as both of these monarchs were fond of architecture, and both of them employed workmen at Falkland; but the work was completed by James V., and the palace from that time became a favourite residence with the Scottish monarchs. Here James V. held his court in all the barbaric magnificence of the period; and here he died of grief, at the disgrace brought upon his Crown and his country by the opposition of his factious and turbulent nobility. Here Mary of Guise, his widowed queen, often resided, while she governed the kingdom for her infant-daughter; and here she found it necessary to give her reluctant consent to the armistice agreed to at Cupar-muir, between the lords of the Congregation, and the Duke of Chatelherault, and Monsieur D'Oysel. Here, too, the unfortunate Mary, after her return from France,† oft sought relief in the sports of the field from the many troubles of her short but unhappy reign. She appears first to have visited it in September, 1561, on her way from St. Andrews to Edinburgh.‡ She

* Bellenden states it differently: "It is said, an woman hauand commiseratioun on this duk, leit meill fall down throw the loftis of the toure." This more literally expresses the meaning of Boece's language: "Per strictum quoddam foramen farinam fundens," &c.

† When, according to Buchanan, a plot had been laid by Bothwell and the Hamiltons to take away the life of her natural brother, the Earl of Murray, that the queen might be completely in their power, Bothwell urged that the method of compassing it was easy. The Queen being then at Falkland,

returned in the beginning of the following year, having left Edinburgh to avoid the brawls which had arisen between Arran and Bothwell; and resided partly at Falkland, and partly at St. Andrews, for two or three months. She occupied her mornings in hunting on the banks of the Eden, or in trials of skill in archery, in her garden; and her afternoons in reading the Greek and Latin classics with Buchanan, or at chess, or with music. During 1563, after her return from her expedition to the north, she visited this palace, where she made various short excursions to places in the neighbourhood; and again, in 1564, and after her marriage with Darnley in 1565. After the birth of her son, she visited Falkland, but this appears to have been the last time, as the circumstances which so rapidly succeeded each other, after the murder of Darnley, and her marriage with Bothwell, left her no longer at leisure to enjoy the retirement it had once afforded her. James VI., while he remained in Scotland, resided often at the palace of Falkland, and indeed it seems to have been his favourite residence. After the raid of Ruthven, James retired here, calling his friends together for the purpose of consulting as to the best means of relieving himself from the thraldom under which he had been placed; and he was again at Falkland in 1593, when the Earl of Bothwell made one of his desperate attempts on the king's person, which led to the imprisonment of Wemys,

'The wanton laird o' young Logie,'

whose escape forms the subject of an ancient ballad. After the riots in Edinburgh, in 1596, James again retired here, where he employed himself partly in hunting, and partly in plotting the destruction of the Presbyterian religion, and the introduction of Episcopacy. In the end of 1600, James was again residing at Falkland, when the Gowrie conspiracy, as it has been called, took place. The king, one morning, was about to mount his horse, to follow his favourite sport, when the mysterious message was delivered to him by Alexander Ruthven, brother to the Earl of Gowrie, which led to the death of both these young noblemen. In 1617, when James, now king of Great Britain, visited Scotland, he, in his progress through the kingdom, paid his last visit to Falkland. In 1633, when Charles I. visited Scotland, he slept three nights here, on his way to Perth; and on his return, he slept two nights in going to Edinburgh, and created several gentlemen of the county knights on the occasion. Upon the 6th of July, 1650, Charles II., who had returned from the continent on the 23d of the preceding month, visited Falkland, where he resided some days, receiving the homage of that part of his subjects who were desirous of his restoration to the Crown of his ancestors; and here he again returned, after his coronation at Scone, on the 22d of January, 1651, and remained some days.*

in the neighbourhood of which there was a small wood where stags were kept, whither, or at least to its vicinity, she daily resorted with a slender retinue, it was said that she might be surprised without any difficulty. At this time it was thought that they might easily destroy Murray, while unarmed, and without suspicion; and thus obtain possession of her Majesty's person. According to Knox, this charge of treason was exhibited by Arran, in 1562. He seems, however, to think that the charge originated from the frenzy of this nobleman.

* After describing his Majesty's progress from the north where he landed, by Dundee to St. Andrews, and thence to Cupar, Lamont, in his Diary, page 20, says:—"After this he went to Falkland all night. All this time the most part of the gentlemen of the shyre did goe alongs with him. The tyme that he abode at Faklande, he went downe one day and dynd at the E. of Wemys' house, and another at Lesley with the E. of Rothus. * * * From St. Johnston he cam to Faklande, Jan. 22, 1651.—Sir James Balfour, in his Annals of Scotland, says:—"The 5 of Julij 1650 his Matie cam from St. Andrews, and was banqueted in Couper to his aune house of Falkland on Saturday. My L. the Earle of Arundall inter-

The oldest portion of the palace, which was erected either by James III. or James IV., forms the south front, and is still partially inhabited. On each floor there are six windows, square-topped, and divided by mullions into two lights. Between the windows, the front is supported by buttresses, enriched with niches, in which statues were placed, the mutilated remains of which are still to be seen, and terminating in ornamented pinnacles which rise considerably above the top of the wall. The lower floor is the part inhabited, and the upper floor is entirely occupied by a large hall, anciently the chapel of the palace. The western part of this front of the palace is in the castellated style, and of greater height than the other; it is ornamented with two round towers, between which is a lofty archway which forms the entrance to the court-yard behind, and which, in former times, was secured by strong doors, and could be defended from the towers which flank it. James V. made great additions to the palace, and appears to have erected two ranges of building, equal in size to that described, on the east and north sides of the court-yard. As completed by him, therefore, the palace occupied three sides of a square court, the fourth or western side being enclosed by a lofty wall. The range of building on the north side of the court has now entirely disappeared, and of that on the west, the bare walls alone remain; these two portions of the palace having been accidentally destroyed by fire in the reign of Charles II. Having erected his addition to the palace, in the Corinthian style of architecture, James assimilated the inner front of the older part of the building, by erecting a new façade in the same style with the rest of the building. The building consisted of two stories, a basement or lower floor, and a principal one, the windows of which are large and elegant, when we consider the period. Between the windows, the façade is ornamented with finely proportioned Corinthian pillars, having rich capitals; and above the windows are medallions, presenting a series of heads carved in high relief, some of which are beautifully executed, and would lead us to believe that more than native talent had been engaged in the work. On the top of the basement which supports the pillars, the initials of the king, and of his queen, Mary of Guise, are carved alternately. The architect who designed this building, and superintended its erection, was in all probability Sir James Hamilton of Finnart, a natural son of the 1st Earl of Arran, who was cup-bearer to James V., steward of the household, and superintendent of the royal palaces. He was accused of high treason, tried, convicted, and executed as a traitor, in August, 1540. The palace of Falkland, deserted by its royal inmates, was for a long series of years suffered to fall into decay.

"The fretted roof looked dark and cold,
And tottered all around;
The carved work of ages old
Drooped wither'd on the ground;
The casement's antique tracery
Was eaten by the dew:
And the night-breeze, whistling mournfully,
Crept keen and coldly through."

It is now the property of Mr. Bruce, who takes great

tained until Monday at night. Falkland 9 Julij. I deuyssed for the impresse to be putt on hes Majesties coronation pices at hes command; hes face to be one the one syde of it, with this circumscription—'Carol: Secundus, D. G. Scot: Angl: Fran: et Hyber: Rex, Fidei defensor,' &c.; and on the reverse, a lyone rampant, holding in his paw a thistell of 3 stems, with this circumscriptione, 'Nemo me impune lacessit'; and below the lyons footte one the lembe, 'Coronat: Die Mensis Ao 1650.' * * * Mr. Thomas Nicolson, his Maiesties Aduocat, was knighted in the withdrawing roume at Falkland, after supper on Wednesday, the 10 of Julij instant. His Majesty stayed at Falkland untill Tuesday the 23 of Julij, from quhence he did remoue to Perth for one night, quher he was feasted with all his traine by the magistrats.¹

interest in its careful preservation, as well as in ornamenting the court-yard with flowers and shrubs, and the ground in its immediate neighbourhood, which he has laid out as a garden. The view from the southern parapet of the palace has long been admired, and as it can now be attained not only with safety but even without any apprehension of danger, it will be often resorted to and enjoyed. On the one hand, the Lomond hills spread out their green sides, and point their conical summits to the sky; on the other, the whole strath of Eden, the Howe of Fife from Cupar to Strathmiglo, lies open and exposed; and whilst the spectator will naturally inquire after and regret the woods of Falkland, he will find that the present proprietor is doing all that he can to make up for the spoiliations of Cromwell's soldiery. There is a large plain, on the east of the palace, in which a little knoll rises here and there above the level. This consists of moss, which has lately been well-drained; exhibiting the remains of what was called the Rose loch,—the knolls having been islets. The water of this lake must then have washed that part of the building which was discovered at the bottom of the garden. Some, yet surviving, say they have shot wild ducks on this loch. It might reasonably be supposed, that, while Falkland continued to be the occasional residence of royalty, it was not only a place of resort to the higher classes, but that the peasantry would be permitted to enjoy that festivity here which was most congenial to their humours. As it was a favourite residence of that mirthful prince James V., it might well be conjectured, from his peculiar habits, that he would be little disposed to debar from its purlieus those with whom he was wont frequently to associate in disguise. Accordingly,—although it is still matter of dispute among our poetical antiquaries, whether the palm should not rather be given to his ancestor James I.,—one of the most humorous effusions of the Scottish muse, which contains an express reference to the jovial scenes of the vulgar at Falkland, has, with great probability, been ascribed to the fifth of this name:

Was nevir in Scotland hard nor sene
 Sic dansin nor dera,
 Nouthir at Falkland on the Grene,
 Nor Pebillis at the Play,
 As wes of wowaris, as I wene,
 At Christis kirk on aue day: &c.

Christis Kirk on the Grene, st. i.

According to Allan Ramsay, and the learned Callander, 'Christis Kirk' is the kirktown of Leslie, near Falkland. Others have said, with less probability, that it belongs to the parish of Lesly, in that part of the county of Aberdeen called the Garrioch. Pinkerton thinks that, besides the poems of 'Christis Kirk,' and 'Pebilis to the Play,' a third one, of the same description, had been written, which is now lost, celebrating the festivities of 'Falkland on the Grene.' This phraseology might refer to what has been called 'the park at Falkland.' Sir David Lyndsay, being attached to the court, must have passed much of his time at this royal residence. According to his own account—notwithstanding the badness of the ale brewed in the burgh—he led a very pleasant life here; for, in the language of anticipation, he bids adieu to the beauties of Falkland in these terms:

Fare weill, Falkland, the forteress of Fyfe,
 Thy polite park, under the Lowmound law:
 Sun tyme in the, I led a lustie lyfe,
 The fallow deer, to se thame raik on raw.
 Court mek to cum to the, thay stand grait aw,
 Sayand, thy burgh bene of all burrows bail,
 Because, in the, they never gat gude aill.

Complaynt of the Papingo.

FALLOCH (THE), a rivulet of Perthshire and Dumbartonshire. It rises on the north-east side of

Benchroan, on the southern limit of the parish of Killin, runs $3\frac{1}{2}$ miles northward to Coilater-More; it there turns abruptly round, and thence runs $3\frac{3}{4}$ miles south-west, receiving on its right bank the waters of Auld-Ennochbay and Auld-Churn, the former coming $3\frac{1}{4}$ miles from Loch Suss, and the latter $5\frac{1}{4}$ miles from Mealmicran; and after its confluence with Auld Churn, it flows 2 miles due south to the head of Loch Lomond. Its entire length of course is upwards of 9 miles; and its motion is throughout rapid and garrulous. From Coilater-More downward, it flows along a romantic glen to which it gives its name, overlooked by high mountains, the lower acclivities of which, for some way, as well as up the vale of Auld Churn, are clothed in plantation.

FALSIDE. See **INVERESK.**

FANNICH (LOCH), a lake in the wilds of Ross-shire, about 12 miles in length, and from 1 to $1\frac{1}{2}$ in breadth. It discharges itself by a small river into Loch-Luichart, which empties itself by the river Conon into the frith of Cromarty.

FANNYSIDE MOOR. See **CUMBERNAULD.**

FAR, or **FARR**, a mountainous parish in Sutherlandshire; extending about 40 miles in length from north-east to south-west, the breadth varying from 3 to 20 miles. It is wholly the property of the Duke of Sutherland; and is chiefly laid out in sheep-walks. It is bounded on the north by the Northern ocean; on the east by Reay and Kildonan parishes; on the south by Kildonan, Clyne, Rogart, and Lairgs; and on the west by Edderachylis and Tongue. The soil is in general barren and shallow, but on the banks of the rivers Naver and Borge it is deep, and tolerably fertile. Strathnaver extends from the coast to the roots of Beinchlibrig, a distance of above 30 miles. The extent of sea-coast is 13 miles; the shore is high and rocky, and consists of Strathy-head and bay, Armidale-bay, Far-head and bay, and several other smaller promontories and bays. The whole coast is excavated into extensive caves; which afford retreat to immense numbers of seals. **LOCH NAVER** [which see] is the principal lake in the district, and there are several smaller lakes from which rise a few rivulets. Beinchlibrig, the highest mountain in the district, is in the south-west extremity of the parish. There are a few Pictish castles, and a ruin on the promontory of Far-head. "Betwixt Far and Kirtomay, in this parish," says Pennant, "is a most singular curiosity, well worth the pains of a traveller to view, being the remains of an old square building or tower, called Borge, standing upon a small point joined to the continent by a narrow neck of land not 10 feet wide. This point or head is very high, consisting of rock, and some gravel on the top; on both sides is very deep water, and a tolerable harbour for boats. This tower seems to be built by the Norwegians; and the tradition is that one Thorkel, or Torquil, a warrior mentioned by Torfæus, was the person that built it. They speak likewise of a lady that was concealed there; she is said to be an Orkney woman, and Thorkel was an Orkney man. But what is most curious, is, that through the rock upon which the tower stands, there is a passage below of 200 feet in length, like a grand arch or vault, through which they row a boat. The writer has been one of a company that rowed through it. The passage is so long, that when you enter at one end, you fancy that there is no possibility to get out at the other, and vice versa. How this hard rock was thus bored or excavated, I cannot say; but it is one of the most curious natural arches, perhaps, in the known world." Population in 1801, 2,408; in 1831, 2,073. The decrease in the population is to be attributed to extensive emigration. Houses, in 1831, 417. Assessed property, in 1815, £2,371.—This parish is in the pres-

bytery of Tongue, and Synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend £166 14s. 8d.; glebe £8. Church built in 1774; sittings 750.—There is a Government church at Strathly, 10 miles east from the parish-church. There are 4 schools in the parish.

FARA, a small island of the Hebrides, lying between Barra and South Uist.

FARA, one of the small Orkney islands, about a mile south-east of Hoy.

FARAY, or **FAIRAY**, and sometimes **PHARAY**, one of the Orkney islands, about a mile long, and half-a-mile broad, separated by a narrow sound from the island of **EDAY**: which see. It affords excellent pasture.

FARE, a hill forming the southern boundary of the parish of Mid-Mar, Aberdeenshire. It rises from a base of 17 miles in circumference, to an eminence 1,793 feet above sea-level. It affords excellent pasture for numerous flocks of sheep, producing mutton of a very superior flavour. The interior part contains valuable moss for fuel, and its luxuriant and beautiful heaths abound in muir-fowl, hares, and other game. Here are chalybeate springs, the water of which is dyed of a deep black by a small infusion of tea, as is the case of the well-known medical spring at Peterhead. "In the middle of this eminence," says the writer of the old Statistical Account of the parish, "is the vale of Corrichie, well-known as the scene of battle, wherein the contending parties were headed by the Marquis of Huntly, and the Earl of Murray. Huntly fell in this engagement, in which his forces were routed by those of his antagonist, the general of the unfortunate Mary. A small possession, on the north side of the hill, retains, at this day, the name of Craig-Hume, in memory of one of that family, who was slain in that battle, and is interred in the neighbourhood. It is proper also to observe here, that the name of Queen's Chair, is given to an excavation—I know not whether natural or artificial—on the side of a rock near this valley. Here Mary is said to have sat, while returning southwards from Aberdeen, to view the scene of the recent engagement. In the neighbourhood of this spot, a remarkable echo is occasioned by the contiguity of three small eminences."

FARG (THE), a rivulet in the extreme east of Perthshire. It rises among the Ochil hills, on the boundary between the parishes of Forgandinn and Arngask; traces that boundary southward for $1\frac{1}{2}$ mile; then suddenly debouches, and, for $2\frac{1}{4}$ miles eastward, traces the boundary between Perthshire and Kinross-shire; then, after another sudden bend, traces for $2\frac{3}{4}$ miles north-eastward, the boundary between Perthshire and Fifeshire, passing the church of Arngask, and carrying down the turnpike from Edinburgh to Perth along its banks. It now runs into Perthshire and soon enters Strathearn, and, after a northerly course of $\frac{3}{4}$ or 4 miles from the point of its leaving the boundary of the county, loses itself in the river Earn at Culfargie. Its entire length of course is about $10\frac{1}{2}$ miles; and till it reaches Strathearn, it flows, in general, along a deep and narrow glen.

FARNELL, **FARNWELL**, or **FERNELL**,* a parish in the eastern division of Forfarshire. It is bounded on the north by the river South Esk, which divides it from Brechin; on the east by Maryton and Craig; on the south by Kinnell; and on the west by Kinnell and Brechin. The district occupies the

centre of a strath, which extends eastward about 5 miles to Montrose; and—with the exception of a hilly ridge of inconsiderable height which rises in the south-west, and forks away in two lines into the parishes of Maryton and Craig—is, in general, flat. The soil on the rising grounds and in the west, is of an inferior quality, consisting chiefly of light black earth; but, in the other parts of the parish, it is a very fine clay and rich loam, equal to the best soil in Scotland, and very much resembling that of the carse of Gowrie between Perth and Dundee. The South Esk, along the northern boundary, has tastefully wooded banks, and opulent in its fishery. Pow water rises in numerous head-waters among moorlands south and west of the parish, and sometimes brings down upon the eastern district, before disengorging into the Esk, such inundating freshets as overflow the fields, break down the fences, and spread around extensive though temporary desolation. In the western division is a moorland of 1,500 or 1,600 acres covered with plantation. On the north side of the church, near the centre of the parish, stands an ancient castle, kept in repair as a sort of parochial work-house, which was formerly the seat of the Ogilvies of Airlie. Sir James Carnegie, Bart. of South Esk, is the proprietor of the whole district. His seat, Kinnaird castle, situated in the north, has a very magnificent and rich appearance. It is built in the form of a square, with a tower at each angle, and surrounded by a spacious lawn and the numerous decorations of a tasteful and fascinating demesne. The parish has neither town, nor village, inn, nor ale-house; and suffers no retardation of its rapid career of improvement and prosperity by wanting the appliances of spirituous stimulation. A recently formed road between Montrose and Forfar intersects it for 2 miles, and various other roads amply provide it with facilities of communication. Population, in 1801, 576; in 1831, 582. Houses 109. Assessed property, in 1815, £16,022.—Farnell is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend £250 10s. 5d.; glebe £20, with the privilege of feal and divot. Unappropriated tithes £652 15s. 10d. Schoolmaster's salary £30, with £13 10s. school-fees, and £4 15s. 3 $\frac{1}{4}$ d. other emoluments. A non-parochial school is taught by two females. The district of Kinnaird, forming the western division, was disjoined from Farnell, and erected into a separate parish, about the year 1633; but, excepting a small part which was incorporated with Brechin, it was reannexed by the court of session in 1787. The parish-church was built in 1806. Sittings 330. A parochial library, consisting of popular religious works, is creditably used.

FAROUT-HEAD, a conspicuous promontory in the parish of Durness, Sutherlandshire. See **DURNESS**.

FARRALINE (Loch), a small sheet of water in the high mountains on the east side of Loch-Ness, in the parish of Dòres; on the left of the road leading from the top of Strathnairn into Stratherrick; 16 miles from the Perth road; and $2\frac{1}{2}$ from the banks of Loch-Ness, by the pass of Inverfarrakaig. In May 1841, as some men were engaged in the drainage of part of this loch, they came upon a quantity of old fire-arms, a brass blunderbuss in excellent preservation, about a dozen of muskets, the scabbard of a sword, and several other articles. "There has been a tradition among the people of the district for many years," says the editor of the 'Inverness Courier,' "that a quantity of arms was thrown into the lake at the stormy period of the rebellion in 1745, which seems to be confirmed by this occurrence. In the immediate neighbourhood, is the house of Gortuleg, which, in 1745, was the property

* The ancient and true orthography of the parish, is Farnell; but it is usually written Farnall, or Farnawell. Farnell is said to be of Gaelic origin; *fern* signifying, in that language, 'a den,' and *nell*, 'a swan'; so that it should seem to have derived its name from an adjoining den, which, at that time, had been the abode of swans.

of the chamberlain and agent of Lord Lovat. Old Lovat himself resided at Gortuleg at this interesting time, and hence we may suppose took place this accumulation of fire-arms which were afterwards thrown into the loch when the battle of Culloden had decided the fate of the Jacobites. It is well-known that, after his defeat, Prince Charles retreated through Strathnairn—a district possessed by the clan Mackintosh, of whom their leader, and every individual of rank, had fallen in the action—and came towards evening to the house of Fraser of Gortuleg. Lovat had prepared a sumptuous feast in anticipation of victory. The house was crowded with the retainers of Charles Edward and Lovat, and, connected with this, Mr. Fraser used to relate a touching and striking anecdote. The children of the family were, for convenience, placed in a small room between the Prince's chamber and another, but which had communication with both. The whispers of the children, afraid to speak out, produced a suspicion in the mind of Charles that he had been betrayed, and he exclaimed, with agitation, 'Open the door! open the door!' One of the boys having complied with his request, the unfortunate prince presented a countenance so strongly marked with terror, that its features were indelibly impressed on the minds of his juvenile beholders. One of them described, in vivid terms, the fair oval face and blue eye, distended with fear and agitation, of the tall handsome young wanderer. Seeing his mistake, Charles gave way to the pathetic exclamation—'How hard is my fate, when the innocent prattle of children can alarm me so much!' words which long dwelt in their memories, and often moved the household to tears. Charles was too much agitated to think of rest. He changed his dress, and, taking a glass of wine, left the house at 10 o'clock at night for Invergarry, the seat of Macdonell of Glengarry."

FARRER (THE), an important branch of the river Beaulie in Inverness-shire. It rises in Loch Monar, on the north-west point of the county, and flows eastwards through Glen-Farrer until it joins the Glass, the other main branch of the Beaulie, near Erchless castle. A little above the junction of the two streams, nearly opposite Struey, 10 miles from Beaulie, there is a fine bridge across the Farrer, by which the road from Beaulie is carried into Strathglass. There is a graphite or black-lead mine in Glen-Farrer, of which the following account is given in 'The New Philosophical Journal.' "Nearly opposite to Struey, beautiful veins of red granite are to be seen traversing the gneiss strata, which range from north-east to south-east, and dip to the south, and generally at a pretty high angle. The glen to the black-lead mine, appears—as far as we had an opportunity of examining it, in our rapid journey—to be principally composed of gneiss, which frequently, when the quartz predominates, passes into mica-slate. It is sometimes grooved, with projections fitting into these grooves, as we have observed to be the case with quartz-rock, sandstone, and even trap-rock. We did not reach the black-lead mine until 12 o'clock, the distance being greater from Beaulie than we had calculated on: it proving to be 20 or 22 miles. The excessive heat of the day, and the torment of the midges, was intolerable. My face, lips, and eyes were speedily distorted by them, and one of my eyes fairly closed up. The rock in which the graphite or black-lead occurs is gneiss, in which the direction is a little to the east of north, and dip west 80°. The gneiss in some places is very micaceous, contains garnets, and here and there is traversed by veins of granite. The graphite is not in beds or veins, but in masses imbedded in the gneiss. The first mass, or bed, as it is called, is fully three feet

thick where broadest. The whole mass appeared to be scaly foliated; no regular crystals were observed, although, judging from the crystalline nature of the deposit, I think it probable that in cavities varieties of its regular form—which is rhomboidal—will be met with. It is not throughout pure, but is occasionally mixed with the gneiss, which occurs either in apparent fragments, or its ingredients, especially felspar, are disseminated in grains or crystals."

FAST CASTLE, a relic of feudal ages, situated on the verge of a lofty rock which overhangs the German ocean, near St. Abb's Head, in the parish of Coldingham, in Berwickshire. It is a tower surrounded by flanking walls, and accessible only by one path, which is but a few feet wide, and is bordered on either hand by frowning precipices. It was an ancient fortress of the Earls of Hume. In 1410, it was held by Thomas Holden, and an English garrison, who had long infested the country by their pillaging excursions, when Patrick, son of the Earl of Dunbar, with a hundred followers, took the castle and captured the governor. According to Holinshed, Fast castle again fell into the hands of the English, but was recovered by the following stratagem in 1548: "The captain of Fast castle had commanded the husbandmen adjoining to bring thither, at a certain day, great store of victuals. The young men thereabouts having that occasion, assembled thither at the day appointed, who taking their burdens from their horses, and laying them on their shoulders, were allowed to pass the bridge, which joined two high rocks, into the castle; where laying down that which they brought, they suddenly, by a sign given, set upon the keepers of the gate, slew them, and before the other Englishmen could be assembled, possessed the other places, weapons, and artillery of the castle, and then receiving the rest of the company into the same, through the same great and open gate, they wholly kept and enjoyed the castle for their countrymen." Sir Nicolas Throgmorton, in 1567, characterizes it as a place "fitter to lodge prisoners than folks at liberty;" and, in 1570, when only tenanted by ten Scots, Drury, Marshal of Berwick, after taking Home castle, was sent to invest Fast castle with 2,000 men, it being the next principal place that belonged to Lord Home. "In the reign of James VI.," says Sir Walter Scott, in his 'Provincial Antiquities,' "Fast castle became the appropriate stronghold of one of the darkest characters of that dark age, the celebrated Logan of Restalrig. There is a contract existing in the charter-chest of Lord Napier, betwixt Logan and a very opposite character, the celebrated inventor of the logarithms, the terms of which are extremely singular. The paper is dated, July 1694, and sets forth, 'Forasmuch as there were old reports and appearances that a sum of money was hid within John Logan's house of Fast castle, John Napier should do his utmost diligence to search and seek out, and by all craft and ingine to find out the same; and, by the grace of God, shall either find out the same, or make it sure that no such thing has been there.' For his reward he was to have the exact third of what was found, and to be safely guarded by Logan back to Edinburgh. And in case he should find nothing, after all trial and diligence taken, he refers the satisfaction of his travel and pains to the discretion of Logan." Logan was next engaged in the mysterious plot of the Gowrie conspiracy. It was proposed to force the king into a boat from the bottom of the garden of Gowrie-house, and thence conduct him by sea to that ruffian's castle, there to await the disposal of Elizabeth or of the conspirators. Logan's connection with this affair was not known till nine years after his death, when the correspondence betwixt him and the Earl of Gowrie was discovered in the pos-

session of Sprott, a notary public, who had stolen them from one John Bour, to whom they were intrusted. Sprott was executed, and Logan was condemned for high treason, even after his death, his bones having been brought into court for that purpose. See article DIRLETON.

FEACHAN (LOCH), an arm of the sea in Argyleshire, in the district of Lorn.

FEACHLIN (THE). See FOYERS.

FEACHORY (THE), a rivulet in Athol, Perthshire. It rises in two springs 3 miles asunder, the one north, and the other south of Craigvad, near the eastern limit of the parish of Fortingall. The two head waters having flowed respectively south-east and north-east over a distance of $2\frac{1}{2}$ miles to a confluence, the united stream runs due east, dividing Fortingall from Blair-Athol for 2 miles, and then entering the latter parish, it intersects it for $7\frac{1}{2}$ miles, assuming in the lower part of its course the name of Erockkie water, and falls into the Garry at Strowan. Its entire length of course is 13 miles.

FEARN,* a parish of small extent in the county of Ross, forming a square of about 2 miles; bounded on the south by Nigg; on the west by Loggie (Easter); on the north by Tain; and on the east and south by Tarbet and the Moray frith. The surface is nearly flat, with the exception of a few eminences which are nearly all under cultivation. In the centre of the parish the soil is a deep loam; towards the south and west it is a rich clay; the north and east parts are sandy. The average rent of land per acre in 1792, was 15s. per acre; it is now 32s. The valued rent is £4,037 12s. 11d. Scots; the real rental is above £5,000. Assessed property, in 1815, £1,859. Loch Eye, a sheet of water about 2 miles in length, and half-a-mile broad, occupies the central district. The coast on the Moray frith is flat and sandy for about a mile; on it are the small fishing towns of Balintore and Hilltown. The remainder of the coast is bold and rocky. The village of Fearn is situated near the site of the old abbey, which is a ruin of great antiquity, founded by Ferguard, first Earl of Ross, in the reign of Alexander II. It was annexed to the bishopric of Ross in 1607 by James VI. Patrick Hamilton, abbot of this place, for his adherence to the doctrines of the Reformation, was burnt before the gate of St. Salvador's college, St. Andrews, in 1527. The revenue of this house, in 1561, was £165 7s. 1½d.; bear 30 ch., 2 bolls, 2 pecks; oats 1 ch., 6 bolls. The abbey is traditionally said to have been at "first made up of mud. The principal part of it was 99 feet in length, within walls; $25\frac{1}{2}$ feet in breadth; and the walls 24 feet high above the ground. The abbacy was not only the place of worship before the Reformation, but ever since, until October 1742, when, on a sudden, in time of public worship, the roof fell in. There were 36 persons killed instantly, by what fell in of the roof and slate, on that melancholy occasion; 8 more died soon after.—The castle of Lochlin, in the north-east corner of the parish, is another remarkable building. It is said to be of 500 years' standing. It stands upon an eminence, about one mile north-east of the loch of Eye, and about six miles east from Tain, and is indeed one of the most conspicuous objects in this country. It was certainly built as a place of security against sudden incursions in the days of violence. Its shape resembles two figures, nearly square, joined together by the corners, in which junction there is a staircase to the top: the lesser one, which looks towards the west, being about 20, and the greater, which looks towards the east, about 38 feet square. The castle is 60 feet high. It is fortified with three large turrets, of which, one stands upon

the lesser square, and two upon the greater. These turrets are each of them capable of holding three or more men with ease; and in each of them are five small round holes, of about four inches diameter, with three larger above them, of a quadrangular form. The latter, it is imagined, were intended for the sentries or watchmen to see through, and the others for shooting of arrows. The outer door of the kitchen was made of strong bars of iron, as thick as an ordinary man's leg, and the windows were closed with small grates or twisted stanchions of iron, so that it may be readily supposed that it was almost impregnable at the period in which it was erected.—There is another very ancient castle, that of Cadboll, equally old, if not older than either the abbacy or the castle of Lochlin. There are little remains of it now, but two or three vaults. There is a very singular and remarkable tradition concerning this castle, that though it was inhabited for ages, yet never any person died in it; and many of those who lived in it, wished to be brought out of it, as they longed for death, especially Lady May, who resided there about 100 years ago; being long sick, and longing for death, she desired to be brought out of her castle, which at last was accordingly done and no sooner did she come out of it, than she expired." [Old Statistical Account.]—Not far from the abbey, a high square column is erected, covered all over with Saxon characters, but illegible. It is said that the celebrated lawyer, Sir George Mackenzie, king's advocate in the reign of Charles II., was born in the castle of Lochlin. Population, in 1801, 1,528; in 1831, 1,695. Houses 376.—This parish, formerly a vicarage, is in the presbytery of Tain, and synod of Ross. Patron, the Crown. Stipend £205 13s. 8d; glebe £9. Unappropriated Crown teinds £242 8s. 10d.—Schoolmaster's salary £36 7s. 1½d. There is one private school.

FEARN, or FERN, a parish near the centre of Forfarshire. It is of an ellipsoidal form, and measures in extreme length $6\frac{1}{2}$ miles, and in extreme breadth 3 miles. It is bounded on the north by Lethnot; on the east by Menmuir and Careston; and on the south and west by Tannadie. The south-eastern section, comprising about one-fourth of the area, is a patch of Strathmore, rich and fertile in its soil, and gently sloping in its surface. The other sections consist of two parallel ridges, the northern higher than the southern, and sending off spurs toward the first summit of the Grampians; and two tracts of valley overlooked respectively by the ridges. The hills and the northern valley afford excellent pasturage for the sheep, while the southern valley is adapted to tillage, and resembles, in soil, the low grounds on the strath. Cruick water rises in two head-streams at the northern boundary, runs down the middle of the parish southward over two-thirds of its length, then debouches to the east, and leaves it near Balmaditty; wearing, over the whole of this course, an unsurpassably tame appearance, having scarcely a shrub to apologize for the utter nudity of its banks. Noran water, after flowing parallel with the parish over nearly its whole length, suddenly turns round and comes down upon it from the west, and forms, over its whole breadth, the boundary-line on the south; and, so long as it touches Fearn, it is remarkably pellucid in its waters, and not a little beautiful in its banks. On the brink of this stream, at a point where it rushes through a romantic little dell, stand the ruins of Vain castle, supposed to have been built by Cardinal Beaton. The writer of the article Fearn in the New Statistical Account of Scotland, gives a description of a truly remarkable antiquity,—a human abode which is referrible to an epoch many generations earlier than

* This name is supposed to be derived from the Gaelic *Fearnn*, 'an Alder tree.'

the introduction of Gothic architecture to the country. The upper part of the parish is wholly unprovided with facilities of communication; and the lower part possesses only such roads as would be a nuisance in a less sequestered district. Population, in 1801, 448; in 1831, 450. Houses 88. Assessed property, in 1815, £753.—Fearn is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend £155 3s. 5d.; glebe £18 18s., with the privilege of cutting peat and divot. Schoolmaster's salary £28 12s. 6d., with £13 10s. school-fees, and a house and the legal garden-ground.

FEDDERATT CASTLE. See DEER (NEW).

FEDDICH. See FIDDICH.

FENELLA'S CASTLE. See FETTERCAIRN.

FENTON, See DITLETON.

FENWICK, a parish in the district of Cunningham, Ayrshire; bounded on the north by Renfrewshire; on the east by Loudon; on the south by Kilmarnock; and on the west by Stewarton. It is about 9 miles long from east to west, and 6 miles broad, and contains an area of 14,500 acres. Though high above the level of the sea, it is not mountainous; and seen from the hills of Craigie in Kyle, it appears a large plain; but it possesses, in reality, a sloping surface, inclining easily from its boundary with Renfrewshire to the south-west, and commanding, on many spots, or from almost every farm and every house, extensive views toward Kyle and Carrick, the frith of Clyde, and the Arran and Argyleshire mountains. At a former period the district was almost all a fen or bog; and, in 1642—when it was disjoined from Kilmarnock, and erected into a separate parish—was considered as a moorland region. Except in the southern or lower division, the soil in every part is still mossy; and nearly one-fourth of the entire parish continues to be bog. All the surface of the reclaimed sections, though thinly sheltered with plantation, has a verdant and cultivated aspect, and is distributed chiefly into meadow and natural pasture, with about 1,600 acres of tillage. The live stock consists of nearly equal numbers of sheep and milk cows, a considerable proportion of pigs, and about 160 horses. The climate, though humid, is not unhealthy. Two small brooks, each having tiny tributaries, rise in the northern limits of the parish and flow south-westward through it to make a confluence after entering the parish of Kilmarnock. The brooks abound with trouts, but possess no scenic beauties. A thin seam of coal and a free-stone quarry occur on the western limits. Limestone is abundant, and exhibits numerous marine shells, and other memorials of the ancient inhabitants of the ocean. The great road from Glasgow to Kilmarnock traverses the parish in a direction west of south, and sends off one branch-road southward to Galston, and another westward to Stewarton.—The village of Fenwick stands on the Glasgow road, at the point where that to Stewarton branches off, nearly 4 miles north by east from Kilmarnock; and is a considerable agglomeration of small houses occupied almost all by weavers as dwelling-houses and work-shops. Here are the parish-church, and a capacious meeting-house of the United Secession. Another village, called Rose-Fenwick, similar in character to Fenwick, but smaller, stands half-a-mile south of it on the Glasgow road. Population of the parish, in 1801, 1,280; in 1831, 2,018. Houses 279. Assessed property, in 1815, £8,987.—Fenwick is in the presbytery of Irving, and synod of Glasgow and Ayr. Patron, the Earl of Glasgow. Stipend £149 8s. 1d.; glebe £23. Unappropriated tithes £132 17s. 5d. Schoolmaster's salary £25 13s. 3d., with from £15 to £18 school-fees, and about £3 other emoluments. There are three schools not

parochial, attended by a maximum of 137 scholars. Maximum attendance at the parish-school 68.—Fenwick, for some time after its establishment as a separate parish, was called New Kilmarnock; but it eventually acquired its present descriptive name, which means the village of the fen.—This parish is celebrated for having enjoyed the ministry of the devout though eccentric Guthrie, not the least of Scotland's worthies, a firm assertor of the cause of Presbyterianism under the persecuting innovations of the Stuarts, and the author of writings which have shed the light of heaven over the hearts and minds of the inmates of many a cottage.—In this parish is the venerable dwelling of the Howies of Lochgoin, that during the persecution frequently afforded an asylum to those who for conscience' sake were obliged to flee from their homes,—to such men as Captain Paton, and to many such worthy ministers as the intrepid Richard Cameron, which rendered this house so obnoxious that, during these trying periods, it was twelve times plundered, and the inmates forced to take refuge in the barren muirs around. Here are preserved many of the relics of those days of "fiery trial," in the Bible and the sword used by Captain Paton,—the flag of Fenwick parish,—the drum beat at the battle of Drumclog, &c. If antiquity can add any lustre to birth, the present generation of the Howies may lay claim to a remote ancestry; being descended from the great Waldenses, three brothers of whom, of the name of Howie—probably *Hovv*, still common in France—fled for safety and settled in Ayrshire, in 1178. One of these brothers took up his residence in Lochgoin, and his posterity to this day inhabit the same spot, retaining all the primitive and pastoral habits which distinguished the Waldenses. The father of the present generation, John Howie, compiler of the lives of the 'Scots Worthies,' will be remembered by every Scotsman with a peculiar interest, in having furnished his country with short though valuable sketches of the most remarkable transactions of those who suffered for the covenanted work of reformation.

FERGUS (SR.),* a parish politically belonging to Banffshire,† but situated in the district of Buchan,‡

* This parish was originally named Inverugie, and occasionally Lagie, until 1816, when the name—for what reason is not known—was changed to St. Fergus. We may here observe that the Rev. John Craigie, writer of the Old Statistical Account of St. Fergus, and minister of the parish, in stating that the common patois, or "dialect, called Broad Buchan, is spoken here," as it still continues to be, although it is now losing much of its provincial peculiarity, and that "it is thought to approach nearer to the ancient Gothic than the language of any other district in Scotland,"—remarks, that "as the Picts were the ancient inhabitants of the east coast of Scotland, they imposed names on the different places, expressive, (in their language,) of their situation, or some particular property. It is not easy to assign any good reason for attempting to derive the names of places in this country from the Celtic, as there is no evidence that it was inhabited by the Celts. The names of all the places in this parish and the adjacent country plainly appear to be Gothic, Saxon, or Danish."

† The reason of this political connexion is said, in the Old Statistical Account, to have been, "that the Cheynes of Inverugie, the ancient proprietors, who were heritable sheriffs of Banff, obtained an act of the legislature, declaring their own lands to be within their own jurisdiction. St. Fergus, Fetterangus, and Straloch, in New-Machar parish, which also belonged to the Cheynes, pay the land-tax and window-tax, as parts of Banffshire, but in every other respect are subject to the jurisdiction of the sheriff of Aberdeen."

‡ The Cumines, Earls of Buchan, and proprietors of this district, were anciently the most eminent family in Scotland. "The chief of this family was Cumine, Lord Badenoch, of whom were descended the Earls of Buchan and Monteith, and 32 knights. This faction, with the Earls of Marr and Athole, with whom they were connected by marriages, ruled the kingdom as they pleased, during some years in the latter part of the reign of Alexander the II. and during the first part of the reign of Alexander III. The male line of the ancient Earls of Buchan failing in the person of Fergus, the last Earl of the ancient race, his daughter Marjory married William Cumine of the house of Badenoch, who in his right became Earl of Buchan about the beginning of the 13th century. His posterity continued to enjoy this great estate for 100 years, and were the

Aberdeenshire. It is bounded on the north by Crimond; on the east by the German ocean; on the south by Peterhead; and on the west by Longside. Its form, according to the Old Statistical Account, constitutes "two segments of a circle; the one beginning at the mouth of the Ugie, terminates at Scotstown-craig, and the other extends from there to Rattray-head." Its greatest length from east to west is $5\frac{1}{2}$ miles; its greatest breadth $3\frac{1}{2}$ miles. Area 12 square miles. Houses 313. Assessed property, in 1815, £3,179. Population, in 1801, 1,270; in 1831, 1,334. The surface exhibits an alternate and beautiful succession of rising grounds and valleys, but there is no hill, except a small eminence in the vicinity of Inverugie castle. The lower grounds near the sea are flat, and bordered, seaward, by a natural rampart of clay and sand-hills, carefully fixed with bent, which protects the land, in the interior, from the blowing of the sand. Extending along the coast for several miles, but of unequal breadth, with-

in this ridge, is ground called the Links of St. Fergus, constituting, probably, one of the most pleasant plains in Scotland, and producing—from its wild thyme, white clover, and short grass, it is thought—mutton of peculiar delicacy and fineness of flavour. Along the shore, which is low and sandy, is an inexhaustible quantity of shells, which have been advantageously used as manure. The soil of this parish in general is rich and fertile clay. Almost the whole face of the country is well-cultivated, and presents a pleasing landscape though rather deficient in trees. About 5,000 acres are arable, 200 in pasture, and not above 20 in trees. "It would appear that the woods in this country had, at one time or other, been destroyed by fire, as the marks of that element are visible on many of the roots and trees that are dug up in the mosses. It may not be an improbable conjecture, that this happened anno 1308, when King Robert Bruce defeated Cumine, Earl of Buchan, near Inverury. Fordun, after narrating this defeat, adds, 'comitatum de Buchan igne consumsit.'" [Old Statistical Account.]

—Upwards of 500 acres are mossy grounds, but improvements have been effected even on some of these. Valued rent of the parish, in 1762, about £900; in 1840, about £5,700. The annual produce is at present upwards of £17,000. The river Ugie, which separates St. Fergus from Peterhead, has a bridge across it in the line of the turnpike-road from Fraserburgh to Peterhead. There has been rather a good salmon fishery in this river, but it is injured by an accumulation of sand at the Ugie's confluence with the sea. There is no other stream of any importance.—On a bend of the Ugie stands the castle of Inverugie, now in ruins. Within a few paces of the wall of the north court are the ruins of an old ice-house, probably the first of its kind in Scotland. This castle was the ancient seat of the family of Cheyne; the most ancient portion of the ruins has, from time immemorial, been called Cheyne's tower. It is probable, however, that the principal part of the edifice—which appears to have been a very noble one—was erected by the great family of the Earls Marischal of Scotland; especially by George, Earl Marischal, the founder of Marischal college, Aberdeen, whose chief and principal residence, Inverugie castle, became the seat of the Cheynes, by the intermarriage of one of his family with that of the Cheynes. At what particular period the Cheynes became proprietors of this parish, is not certainly known; but it would appear, that they were in possession of this estate before the Cumines succeeded to the Earldom of Buchan. Sir Reginald Cheyne of Inverugie was the founder of the Carmelites' house in Aberdeen; and, besides other revenues, bestowed upon it 40s. yearly out of his lands of Blackwater, in this parish. By his wife, a daughter of Cumine, Lord Badenoch, he had two sons; Sir Reginald, who, in 1267, was promoted to the office of Lord-chamberlain of Scotland, and Henry Cheyne, who was elected Bishop of Aberdeen, in 1281. He was one of those who swore fealty to Edward, anno 1296. As he was nearly related to the Cumines, he adhered to that party, and was obliged to leave this country, and take refuge in England, where he remained in exile until King Robert was pleased to recall him. He was so happy in being allowed to resume his functions, that he applied all the revenues of the see—which, during his absence, had increased to a very considerable sum—in building the bridge over the Don at Aberdeen. He died anno 1329, having been bishop of Aberdeen 48 years. The direct male line of the Cheynes of Inverugie failed in the reign of David II., and the parish of St. Fergus, with the other estates belonging to the family, fell to two heiresses, the eldest of whom, Mariotha Cheyne,

most powerful subjects in the kingdom. This Earl founded the abbey of Deer, and endowed it with a considerable revenue in lands situated in the county of Aberdeen, anno 1218. He was constituted great justiciary of Scotland by Alexander II. in 1220; and his brother Walter was, by the same king, created Earl of Monteith, he having married the heiress of that family, by whom he got a large estate. The Cumines being now so rich and powerful they became formidable, not only to the nobles, but even to the king. They were called to answer before the king and estates, anno 1255, for their various acts of tyranny, oppression, murder, and sacrilege, and not appearing, a sentence of outlawry and forfeiture was pronounced against them; but Government was too weak to put this sentence in execution. The faction, greatly irritated by this sentence, resolved to take the first opportunity of getting the king's person into their power. Walter, Earl of Monteith, was the principal actor in this plot, and having along with him William, the 2d Earl of Buchan of the name of Cumine, the Earl of Athole, Lord Badenoch, the Earl of Marr, and others of their adherents, they entered the royal apartments at Kinross, early in the morning of the 28th October, 1255, made the king a prisoner before he was awake, and carried him to Stirling. They then dismissed his Majesty's servants, and filled all places of trust with their own adherents. So great was their power that the king, after he had recovered his liberty, thought it prudent to give them a full pardon. Alexander, the 3d Earl of Buchan, of the name of Cumine, was justiciary and Lord-high-constable of Scotland, and was appointed one of the six governors of the kingdom, after the death of King Alexander III. He founded an hospital at Turrit, anno 1272, for twelve poor husbandmen, and another at Newburgh, both in Aberdeenshire. John, the 4th Earl of Buchan, constable of Scotland, was one of the arbiters chosen on the part of John Balliol, in the competition for the crown between him and Robert Bruce. At this time, John Cumine, Lord Badenoch, commonly called the Black Cumine, claimed the crown of Scotland, as being descended of Hexsilda, daughter and heiress of Gothicus, son and heir of Donald king of Scotland. It is well known how this affair was determined by Edward I. of England. To the Black Cumine succeeded his son John Cumine, Lord of Badenoch, commonly called the Red Cumine. Scotland had now for a considerable time groaned under the yoke of English servitude; Balliol had meanly given up his pretended right to the Crown to Edward; and Bruce had secretly intimated to his friends his intention of asserting his title to the royal dignity. Cumine, ever mindful of his own interest, made a solemn engagement with Robert, to aid him with all his power in mounting the throne, provided he should be restored to the large possessions which his family had formerly enjoyed; but, after deliberating upon the affair, he began to doubt the event. If the attempt failed he was undone; and he did not know how to retract. His own black heart suggested the detestable remedy. His hopes of great reward from English patriots to Edward; and Bruce, finding that he was betrayed, with difficulty escaped to Scotland, where, discovering clear proof of the villany of Cumine, he pursued him to the church of Dumfriess, whither, from conscious guilt, he fled for refuge, and punished him as his crime deserved, on the 10th of February, 1306. Having no issue, he was the last Lord Badenoch of the name of Cumine. The slaughter of the Red Cumine by Bruce inspired the whole clan with a desire to revenge his death. They continued violently to oppose Bruce; but by defeating the Earl of Buchan at Inverurie, anno 1308, he put an end to the greatness of this too powerful family. Bruce pursued the Cumines to Fyvie, where they were entirely dispersed. He encamped there until the return of the parties which he had sent out to burn the Earl of Buchan's estate,—the Earl was then forfeited and outlawed." [Old Statistical Account of St. Fergus.] In the parliament holden at Perth, anno 1330, the king divided the Earl's lands among his own friends. The parish of St. Fergus, however, and some other small estates, seem to have previously been given off by the ancient Earls themselves.

married John Keith of Ravenscraig, second son of Sir Edward Keith, Marischal of Scotland, who in her right became proprietor of this parish about the year 1360. The direct male line of John Keith failed in the person of Sir William Keith of Inverugie, who fell in the battle of Flodden. He left two daughters, the eldest of whom was married to William the 4th Earl Marischal, sometime before 1538. By this marriage Earl Marischal became proprietor of St. Fergus. He was possessed of one of the greatest land-estates at that time in Scotland. In the years 1530 and 1540, he got charters on many lands lying in the counties, Caithness, Inverness, Moray, Banff, Aberdeen, Kincardine, Angus, Fife, Linlithgow, &c. It is said, that after Queen Mary's captivity, he took no concern in public affairs, and by living a retired life in his castle of Dunottar, he got the name of William in the Tower. He so much improved his estate, that at his death it was reckoned worth 270,000 merks Scots, or £14,208 6s. 8d. sterling. This estate was so situated, that in travelling from the north point of Caithness, to the borders of England, he could sleep every night on his own ground. This Earl was a zealous promoter of the Reformation, but opposed all violent proceedings in that affair. When the Confession of Faith was presented to Parliament, in 1560, the Earl Marischal stood up, and said, "It is long since I carried some favour to the truth, and was somewhat zealous for the Roman religion; but this day hath fully resolved me of the truth of the one, and the falsehood of the other; for, seeing (my lords) the bishops, who, by their learning, can, and for the zeal they should have for the truth, would, as I suppose, gainsay any thing repugnant to it, say nothing against the Confession we have heard, I cannot think but it is the truth of God, and the contrary of it is false detestable doctrine." This noble lord died in an advanced age, in 1581, and was succeeded by his grandson George, the 5th Earl Marischal, one of the most eminent men of his time. After having studied at Geneva, under the famous Theodore Beza, he travelled through Italy and Germany, where he visited the Landgrave of Hesse, Prince of the Catti, who, understanding who he was, received him kindly, and treated him with great magnificence, as a Scotch descendant of the ancient Catti. In 1589 he was sent ambassador-extraordinary to the court of Denmark, to espouse the Princess Anne in the name of James VI. of Scotland, and I. of England. Being possessed of a great estate, he appeared with all the lustre and magnificence with which the wealth of Scotland could adorn him, and that chiefly on his own expenses. In 1593, he made the noble foundation of the Marischal college, and obtained from the Crown, for the support of it, the lands and houses belonging to some of the religious at Aberdeen, which had not been feued off before the Reformation. Inverugie continued to be the residence of the succeeding proprietors, until the attainder of George Earl Marischal, who engaged in the rebellion of 1715; when it escheated to the Crown, by whom it was afterwards sold and again repurchased by George Earl Marischal, a son of the attainted Earl, in 1761;*

* The great Field-marshal Keith, brother to this last Earl Marischal, "was born at Inverugie, in this parish, and was baptized, 16th June, 1696, by the names of James-Francis Edward. He early entered into the military service abroad, rose to the highest rank in the army, and was inferior to no general of his time in military capacity. He accompanied his brother Earl Marischal to the battle of Dunblane, and afterwards went abroad to seek preferment at the Spanish court; but not finding a quick promotion there, he entered into the Russian service, and was by Peter the Great promoted to the rank of a general officer. He afterwards entered into the service of Frederic III., king of Prussia, who raised him to the rank of field-marshal. He commanded that king's armies, sometimes alone, and, at other times, along with his Majesty, until the

it was again sold by him, however, in 1764, to James Ferguson, Esq., a senator of the College of Justice, with whose family it has ever since continued. While the great lords of Inverugie were yet in all the pride of their wealth and power, Sir Thomas Learmont, the Rhymer, is traditionally said to have fulminated the following vaticination, from a place in the vicinity of the castle, still called Thamas's stane:

"Inverugie by the sea,
Lordless shall thy lands be."

The villages of Inverugie and St. Fergus are situated in this parish. The latter, which is situated inland, near the middle of the parish, contains the church.—St. Fergus is in the synod of Aberdeen, and presbytery of Deer. Patron, the Crown. Stipend £217 9s. 4d.; glebe valued at £18. Church built in 1763, repaired or adorned in 1836; sittings 610. There is a small Baptist chapel in the parish, but it has no fixed minister. Schoolmaster's salary £30, with fees and other emoluments amounting to £16 per annum. There are 5 private, 4 of which are Dames', schools.

FERN. See FERN.

FERNELL. See FARNELL.

FERNIHURST, or FAIRNHURST, a seat of the ancient family of Ker, in the parish of Jedburgh, 1½ mile south of Jedburgh. It is on the banks of the Jed, and the ancient castle has figured frequently in the Border wars. See JEDBURGH.

FERNESS, a promontory on the west coast of the isle of Eday, one of the Orkneys.

FERRINTOSH, a village and barony in the parish of Logie and Urquhart, in Ross-shire, but politically belonging to the county of Nairn. It long possessed the exclusive privilege—originally granted to the proprietor Forbes of Culloden—of distilling whisky from barley of its own growth, free of duty; but this privilege was withdrawn by Government in 1785, and the superior of the barony allowed about £20,000 as a compensation. The district occupies about 8 square miles, and stretches along the south shore of the Conan and the frith of Cromarty, about 2½ miles.

FERROGAN-BEN, a mountain in the parish of Dull, Perthshire; 8 miles south of Blair-Athol.

FERRY (EAST and WEST). See BROUGHTY-FERRY.

FERRY (LITTLE and MEIKLE), two small villages in Ross-shire, on the coast of the frith of Dornoch.

FERRYDEN, a large village, on the left bank of the South Esk in Forfarshire; ¾ of a mile above the point of the river's entrance to the sea. The village stands in the parish of Craig, stretching a considerable way along the shore of the Esk opposite Montrose harbour; and, but for the width and rapidity of the intervening stream, and circuitousness of communication by the bridge, would be strictly a

fatal battle of Hochkirchen, on 14th October, 1758. The field-marshal, returning from a separate command, found that the king had encamped in a very improper place, and instantly told his Majesty that Daun would surprise him that night. His prediction proved too true; and the field-marshal, making a glorious defence, was unfortunately killed. He was buried in the churchyard of Hochkirchen, but the king of Prussia had his corpse taken up, and sent to Berlin, where he was again interred with the greatest military honours. The field-marshal, with all his great qualities, was a very bad economist; and sometimes absented himself from court when he could not pay his debts. On one of these occasions, the Great Frederic called for him, and found him in his garden, employed in pointing paper cannon at 1,500 pins of wood in different directions, so as to discover how he might pour the greatest quantity of fire upon them, as their position changed. The king paid his general's debts, was delighted with the discovery of his amusement, and augmented the number of pins to 12,000; after which, he and his general had many a keen engagement in the garden, which proved of great service afterwards in the field. —*Old Stat. Account of St. Fergus.*

suburb of Montrose. It formerly was the ferry-port which connected that burgh and the great northern road with the south of Scotland; and suffered considerable temporary declension when the ferry was superseded by the line of spacious bridges higher up the river. The village is now important, partly for supplying hands to the whale-ships and other craft of Montrose, but chiefly for its very extensive and productive fishery. Six-sevenths of a population of about 700 are wholly employed in fishing, and have about 20 boats, each carrying 6 men, besides a number of smaller boats. Women and children, as well as men, work hard to raise the productiveness and the opulence of the place; the females gathering bait in the lagune of Montrose, carrying fish to the market of the burgh, and in general possessing that hardness of character for which their class are so remarkable in the fishing-villages of Newhaven and Fisherrow on the Forth. Fish-cadgers from the adjacent districts, and from Brechin, Forfar, Cupar-Angus, Dundee, and Perth, resort at all seasons of the year to Ferryden for loads of fresh fish. The fishery is richly abundant, and sometimes supplies most of the boats of the village, after 10 or 12 hours' labour, with freights nearly as heavy as they can carry, and simultaneously, or in the same day, brought into the port. Haddocks are very plentiful and good ten months in the year; and salmon is caught in large quantities, and sent, amidst layers of pounded ice, to the markets of Edinburgh and London. So important is the traffic in fresh salmon from Ferryden and other places at the mouth of the South Esk to the capitals of Britain, that in an open winter, when ice of sufficient quantity for packing cannot be obtained at home, the somewhat extraordinary import is sent for to the Baltic. Though Ferryden is situated within a mile of the parish-church, a house is fitted up for its special use as a Sabbath evening and week-day chapel. The inhabitants are a muscular, weather-beaten race, exceedingly different in appearance and manners from the population of the burgh on the opposite shore.

FERRY-PORT-ON-CRAIG,* a parish in Fifeshire, disjoined in 1606 from that of Leuchars. It occupies the north-east portion of the county; and is bounded on the south by the parishes of Forgan and Leuchars; on the east by the German ocean; on the north by the estuary of the Tay; and on the west by the parish of Forgan. It is 4 miles in length from east to west; and varies from $1\frac{1}{2}$ to $\frac{1}{2}$ mile in breadth from north to south. Its superficial extent is about 2,026 Scots acres. The population, in 1755, was 621; in 1801, 920; in 1831, 1,680. There is a large village at the ferry, in which the greater portion of the inhabitants reside: its population, in 1831, being 1,538, while the country part of the parish contained only 142. There is still a ferry here to the opposite coast of Forfarshire, but from the great improvements which have taken place in the ferry of Newport, it is much less frequented than it formerly was; but it is proposed that the great Fifeshire railway, commencing at Kinghorn, shall terminate at or near this ferry. Two piers have been erected, one of which is used by the passage-boats, and the other by vessels which here discharge and load. A fair is held in the village annually, which was at one time well-attended as a market, but now only by a few itinerant hucksters. The nearest market-towns in the county are Cupar and St. Andrews; but the chief intercourse is with Dundee, to which there is easy access either by the steam-boat at

Newport, or by a packet which leaves the ferry for that place in the morning, returning in the evening of every lawful day. West of the village there are two lighthouses on the shore, which, with those on the coast of Forfarshire, serve as guides to vessels entering the Tay during the night.—In the western and south-western part of the parish, the soil is a black loam, on a bottom of whinstone rock, and produces excellent crops of all kinds. Towards the east it is flat and sandy, with light loam in some places on a bottom of sand, which yields good crops of oats and barley. At the east extremity of the parish, there is a considerable extent of links, which afford pasturage for sheep and cattle, and are besides stocked with rabbits. There are altogether about 1,350 acres in regular cultivation. The annual value of real property assessed, in 1815, was £3,386. The real rent is about £2,500. The valued rent is £2,183 Scotch. There is one mill for spinning linen yarn also moved by water; and a number of the inhabitants of the village are employed in the weaving of linen, chiefly for the manufacturers of Dundee. There is an extensive salmon-fishery extending along the whole shore of the parish, which is let for £900 sterling per annum. The net and coble are now alone used; but formerly, when stake-nets were used, the rent was sometimes as high as £2,000 per annum.—The mansion-house and enclosures of Scots-craig, long the residence of the proprietor of that estate, which seems to have included all the lands in the parish, is situated near the west end of the parish. These lands at an early period belonged to the bishops of St. Andrews, by one of whom it was feued during the reign of Alexander II. to Sir Michael Scott of Balwearie, the father of the famed Sir Michael Scott, with whose descendants the lands for some time continued. It was in consequence of this that they came to be denominated Scots-craig. From the family of Scott, Scots-craig came by purchase to Dury of that ilk, from whom it passed to the Ramsays, ancestors of the Earls of Dalhousie. It afterwards became the property of a family of the name of Buchanan, from whom it came to a family named Erskine. During the reign of Charles II. the whole estate became the property of Archbishop Sharp, from whose successors it was purchased by Mr. Alexander Colville, the representative of the Lords Colville of Culross. From this family the lands were afterwards purchased by the Rev. Robert Dagleish, D.D., who was minister and proprietor of the whole parish. The present proprietor is David Dougal, Esq., uncle of the late Miss Dougal, whose father purchased the estate from the representatives of the Rev. Mr. Dagleish.—This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the Crown. Stipend £159 13s. 1d.; glebe £35. The parish-church was erected in 1825, and accommodates from 800 to 900. It is situated in the village.—There is also a chapel connected with the United Associate synod in the village.—Schoolmaster's salary £30, with about £20 fees. The teacher, besides his fees, has a house, garden, and school-house; and an allowance for teaching 5 poor scholars, from a sum of money invested by the late William Dagleish, Esq. of Scots-craig, for that purpose. There is another school in the parish, which is solely supported by the school-fees; and one taught by a female chiefly attended by very young or female children. All the schools are well-attended. A subscription-library was commenced in 1829, which contains a good collection of books in various branches of literature.

FERRY-TOWN-OF-CREE. See CREETOWN.

FESHIE (THE), a river in the district of Badenoch, Inverness-shire, which has its rise near Cairn-

* The name is obviously derived from that of the village, which received its name from its situation, there having been from a very early period a ferry here to Broughty castle in Forfarshire, the port or harbour of which was at one time at a point of the crags or rocks which bound the shore.

cilar in Mar; flows first north-east, and then bends suddenly north-west to the eastern base of Cairn-dearg-mhore, where it strikes north, and pursuing a northerly course falls into the Spey near the church of Alvie. It flows through a picturesque district.

FETLAR, one of the most northerly of the Shetland isles; separated from North Yell by a sound about 3 miles broad at the narrowest part. It is about 7 miles in length, and $3\frac{1}{2}$ in breadth. It contains about 12,000 acres, with a tolerably fertile soil of loam and sand, though, like the rest of the Shetland isles, there is neither tree nor shrub to be seen upon it. There is on this island a considerable quantity of that species of iron-stone called bog-ore, of a very rich quality; there are also some veins of copper ore. It contained, in 1835, 850 inhabitants, who cultivate small patches of ground, and during the summer engage in the halibut or ling fishing, and of late years, in the herring-fishery.—The islands of Fetlar and North Yell form a conjoint ministry, in the presbytery of Burravoe, and synod of Shetland. Patron, the Earl of Zetland. Stipend £180; glebe £9. The minister officiates at the churches of North Yell and Fetlar on alternate Sabbaths. The total population of the parish, in 1835, was 1,693.—Schoolmaster's salary £25 13s. 4d. There were 5 private schools in 1834.—See **NORTH YELL**.

FETTERANGUS, a small village in the parish of Old Deer, Aberdeenshire, but politically belonging to Banffshire, the property of Fergusson of Pitfour. It contains about 200 inhabitants, who are chiefly employed in manufacturing linen yarn.

FETTERCAIRN, a parish in Kincardineshire; bounded on the north by Strachan; on the east and south-east by Marykirk; and on the west by Edzell in Forfarshire, from which it is separated by the North Esk. It lies at the foot of the lower or north-eastern range of the Grampians, and extends considerably into the how or hollow of Mearns, containing, by accurate measurement, 14,359 English acres. Houses 367. Assessed property, in 1815, £6,737. Population, in 1801, 1,794; in 1831, 1,637. There are several rivulets in the parish, but none of any importance. On the bank of one, running past Balnakettle, very fine porcelain clay is quarried. Limestone, red freestone, and slaty rock are also found. The ground on the west is light and sharp, with a small mixture of moss; on the east it becomes deeper, consisting of a fertile clayey loam. The cultivation of the parish is in a highly advanced state, and the district is enclosed with hedge and ditch, or stone fences, and well planted. Annual raw produce valued at £16,000. A romantic bridge, called Gannachy bridge, consisting of one arch, 52 feet in width, was thrown over the North Esk, in 1732, and widened, in 1796, at the private expense of Lord Adam Gordon and Lord Panmure. Its foundations stand on two stupendous rocks, elevated to a great height above the surface of the river.—About a mile west of the village of Fettercairn, is an old ruin called Fenella's castle, where, it is said, Kenneth III., king of Scotland, was murdered. It is situated on an eminence, and surrounded, on three sides, by a morass. The castle is enclosed, within an inner and an outer wall, of an oblong form, occupying about half-an-acre of ground. The inner wall is entirely composed of vitrified matter, as are several parts of the castle; but there are no marks of lime about any part of the building. The remarkable historical event for which Fenella's castle has been celebrated is this:—Kenneth III., who ascended the throne in the year 970, occasionally lived at a castle about a mile east of the village of Fettercairn. He had excited the deadly hatred of the powerful and royal lady Fenella, daughter of

the Earl of Angus, for having justly put to death her son, Crathilinthus. She treacherously invited him to her castle, where she had prepared a singular engine, or 'infernal machine,' in order to put him to death. This engine consisted of a brass statue, which threw out arrows when a golden apple was taken from its hand. The lady Fenella, under pretence of amusing the king with the curiosities of her elegant residence, conducted him to one of its towers, where, in the midst of an upper apartment, and surrounded by splendid drapery, and curious sculptures, stood the infernal machine. Here she courteously invited his majesty to take the apple, and the king, amused with the conceit, put forth his hand and did so, when instantly he was pierced with arrows, and mortally wounded. He was shortly afterwards found by his attendants, who, coming for their royal master, could not gain admittance to the castle, whence the assassin had already fled; and "having brak the dure, fund him bullerand in his blude."—Fasque house was erected, in 1809, by Sir Alexander Ramsay of Balmain. It is built in the castellated style, and is large and commodious, commanding an extensive view, with a lake of 20 acres in its extensive policies.—The only village in this parish is Fettercairn, distant 98 miles from Edinburgh, and 15 from Montrose, the nearest market-town. It is a burgh-of-barony, and has two fairs in the year. The Fettercairn club, for the promotion of agriculture, comprehends the parishes of Fettercairn, Fordoun, Laurencekirk, and Marykirk. Most of the farms here have thrashing mills. At Arnball there is a small establishment for carding and manufacturing wool into coarse cloth; and at Nethermill, near the village of Fettercairn, is a distillery.—The parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend £232 4s. 1d., with glebe valued at £20. Unappropriated teinds £278 11s. 6d. Schoolmaster's salary £34, besides school-fees and other emoluments valued at £45 per annum. There are 5 private schools in the parish.

FETTERESSO, a parish in Kincardineshire, bounded on the north by Banchory-Davenick and Mary-Coulter; on the south-east by the sea; on the south by Dunottar, from which it is separated by the small river Carron; and on the west by Glenbervie. It is about 10 miles in length, and 5 to 6 in breadth; containing 24,914 square acres, 8,000 of which are arable, the rest moor, or moss, upon a hard stony bottom, which is now planted with a variety of thriving trees. Houses 947. Assessed property, in 1815, £12,018. Population, in 1801, 3,687; in 1831, 5,109. Besides the Carron, this parish is watered by the Cowie: near the latter stands the mansion-house of Urie; and on the north side of the former, Fetteresso-house, a residence of the Marischal family previous to their attainder. The Cowie rises in the parish of Glenbervie, and runs from west to east, falling into the sea in Stonehaven bay, which the Carron likewise does. There are several other smaller streams, the principal of which is the Muchal burn. The sea-coast is bold and rocky, possessing only one bay—that of Stonehaven—where fishing-boats can lie in safety. Near Stonehaven, which lies on the immediate border of the parish, a new suburb or part of that town has been built by Mr. Barclay of Urie, consisting of a regular village, with two parallel and cross streets, and a square of two acres in the centre. The houses are neatly built, and slated, while the inhabitants have the advantage of the harbour of Stonehaven for carrying on manufactures. In this parish, are also the fishing-villages of Muchals and Skateraw; in the former of which is an Episcopal chapel, and at each is a small creek

or harbour. In the northern part of the parish, near the shore, is also the village of Seaton. The population of these villages are nearly all Episcopalians. On the hill called Rhi-dikes, or King's-dykes, there are very distinct vestiges of a rectangular encampment, supposed to have been Roman, and occupied by Agricola's troops, previous to his engagement with Galgacus, the Scottish king. On a moor 2 miles east of the camp, there are a great many tumuli, or small cairns, and some very large ones, which are supposed to be sepulchral monuments, raised on the field of battle, to the memory of the dead. The moor is called the Kemp-stane hill, and on each side is a morass. In almost every part of the parish, remains of Druidical temples have been met with, but some of them have been demolished by the farmers. On the coast, about $1\frac{1}{2}$ mile north of Stonehaven, are the remains of a castle, the ancient residence of the Thaness of Cowie, or Mearns; and, on a rising ground, near to the Thane's castle, there has formerly been a place of worship, the gables and part of the walls of which are still standing. Adjoining is a burying-ground, enclosed with stone walls, where many of the people in the northern parts of the parish still continued, on account of its vicinity, to bury their dead, after the destruction of the church. This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend £253 lls., with glebe valued at £16. Unappropriated teinds £322 6s. 7d. Church built in 1812; sittings 1,400. A part of the church belongs to the feuars of Stonehaven, in virtue of their feu-rights; but it chiefly belongs to the landward heritors. After the place of worship in the northern part of the parish had become ruinous, a new church or chapel was erected, in 1818, at Cokeney, at an expense of £334; sittings 421. The only salary paid to the preacher is the sum derived from seat-rents, amounting to about £40 per annum.—The Scottish Episcopalian congregation was established soon after the Revolution. The chapel was built in 1831, at an expense of about £300, partly raised by subscription, but mostly from foreign sources: about £90 came from England; sittings 176. Minister's salary £57 10s., a house, and about $\frac{1}{2}$ an acre of ground.—The United Secession congregation, at Stonehaven, was first established about 30 years ago. Church built in 1803, at a cost of £500; sittings 400. Minister's stipend £85 per annum.—Schoolmasters' salaries—first master £34; second, £17 per annum: fees of former £20; of latter £10. There are 8 private schools in the parish. About 400 children attend the private schools, and 90, the parochial.

FEUGH (THE), a rivulet in the north-western quarter of Kincardineshire, tributary to the Dee. It rises in the forest of Birse, in Aberdeenshire, and, running eastward 8 miles, enters Kincardineshire, where it is joined by the Aven, and soon after by the Dye, when, continuing an easterly course for a few miles more, it turns north, and dashes over a ledge of rocks into the Dee. See **BIRSE**.

FIDDICH (THE), or **FEDDICH**, a river in Banffshire, tributary to the Spey. It rises in a mountainous tract between the parishes of Kirkmichael and Mortlach, flows through the beautiful vale of Glen Fiddich, and unites its waters with those of the Spey, in the parish of Boharm, about a mile below Elchies. "Fiddichside for fertility," is a proverb in the district.

FIDDRIE, a rocky islet in the frith of Forth, opposite to Dirleton, and 4 miles from the Bass rock. On it are the ruins of a small chapel.

FIFE-NESS, the easternmost point of land in Fifeshire, which projects into the German ocean, in North lat. $56^{\circ} 16'$, and West long. $2^{\circ} 34'$. From

it a ridge of rocks, called the Carr-rocks, projects a considerable way into the sea, rendering it very dangerous to mariners: see article **CARR-ROCK**.

FIFESHIRE,* a county forming the eastern portion of the central district of Scotland, being nearly in the middle of the great basin, of which the primitive mountain-ranges of the Lammermuirs on the south, and the Grampians on the north, constitute the boundaries. Its form is peninsular, being enclosed on three sides by sea,—by the German ocean on the east; and by the friths of Tay and Forth on the north and south; on the west it is bounded by the shires of Perth, Clackmannan, and Kinross, the last of which it almost encloses, except on the west and north-west, where it joins Perthshire. The western boundary—the line of which is very irregular—is about 23 miles from its extreme point on the Tay to the corresponding southern point on the Forth. The county gradually contracts to the eastward, and finally terminates in a narrow projecting headland at Fifenish, which runs out into the German ocean, and where a beacon has been erected for the protection of coasting-vessels. The greatest length from east to west, along the shore of the Forth, is 41 miles; about the centre, in the same direction, from St. Andrews to Loch Leven, it is $23\frac{1}{2}$ miles; the northern range, from Ferry-Port-on-Craig to the small stream at Mugdrum which falls into the Tay, is 18 miles. Its breadth across the centre, from Balambreich point on the north, to Leven on the south, is 14 miles. The southern coast is, for the most part, indented by small rocky bays with corresponding projecting headlands; but along the banks of the Tay, the grounds slope gently towards the beach, and are generally cultivated to the river's edge. Along the north-eastern shore, towards St. Andrews, it presents one large plain, terminating in a flat beach of sand containing a considerable number of broken shells. The shore in this direction, and generally onwards to Kingsbarns and Crail, becomes extremely rocky: the outcrop of the sandstone running in the form of long narrow dykes into the sea, and rising into

* The origin of the name of Fife, or its derivation, has never been satisfactorily given. Sibbald says: "The monks write that it was called Fife from Fifus Duffus, a nobleman who did eminent service in war." But he obviously puts no faith in this monkish tradition. The existence of Fifus Duffus is as apocryphal as the tradition of his bestowing his name on his lands. The late Rev. Dr. Adamson, the learned editor of the last edition of Sibbald's 'History of Fife,' seems to think it likely that the name was given to the district "from one of its most striking natural productions." *Fifa*, in the Scandinavian dialects," he says, "is the cotton-grass—*Lanugo palustris*—a plant that must have been very common in a country full of lakes and marshes, and which still abounds in the remaining undrained spots." It is very doubtful, however, if, at the time the name of Fife originated, the cotton-grass was so plentiful a production as it afterwards became. The destruction of the ancient forests with which this district was covered, originated, in a great measure, those mosses and marshes in which this grass is found; but, whatever may be in this, it is certain that the name existed long before any dialect of Scandinavian, or rather of Teutonic origin, prevailed in the country. The name is unquestionably of Celtic origin, and its source is only to be sought for in some of the dialects of that ancient tongue. Chalmers, in discussing the question as to the Gothic or Celtic origin of the Pictish people, says, that this people, who were the descendants of the ancient Caledonians, received their distinctive appellation from their relative position beyond the wall to the more civilized Britons of the Roman province. They dwelt without the Roman wall, and roamed at large, free from the bondage as they were deprived of the advantages which arose from communication with those masters of the civilized world. From these circumstances they were called *Peithi*, which was naturally Latinized into *Picti*, by the peculiarity of Roman pronunciation. *Peithi*, in the ancient British speech, signifies 'those that are out, or exposed,'—'the people of the open country,'—'the people of the waste, or desert';—also 'those who scout, who lay waste.' Those who are aware that *P*, in the ancient Celtic, changes in the oblique cases into *Ph* with the sound of *F*, will not doubt that greater changes in orthography have taken place than the softening of *Peithi* into *Fife*; and that the name of the kingdom of Fife may be nothing more than softening of the name of the ancient kingdom of the *Peithi*, or of the *Picts*.

considerable mural cliffs towards the land.—According to Sir John Sinclair's General Report of Scotland, the number of cultivated acres in this county, about 25 years ago, was 209,226; and of uncultivated, 89,664. Playfair estimates the superficies at 500 square miles, of which about four-fifths are arable. Macculloch, in his 'Statistical Account of the British Empire,' [Vol. I. p. 292,] estimates the total area at 300,800 acres. In the 'Penny Cyclopædia,' the area is stated at 322,560 acres.

The general surface partakes more of the gentle, undulating outline of the middle districts of England, than of those bolder and more striking aspects of Nature which characterize the scenery of Caledonia. The Ochils, which skirt its northern boundary, and the Lomonds, which run nearly parallel to the Ochils, divide the county into three well-defined districts, which—as will be afterwards described—correspond to three equally marked subordinate geognostic formations. These two ranges of hills—which attain their greatest elevation towards the west—are separated by the intervening and finely-wooded valley of Stratheden, in the centre of which the county-town of Cupar is beautifully situated. The ground, on the south of the Lomonds, stretches out in a broad uneven surface towards the Forth; eastwards, there rises an elevated table-land, which forms what is characteristically termed 'the Muirs of Fife,' but which gradually merges in the rich and extensive plains, locally designated 'the East Neuk,' comprising an extent of several parishes.—The Ochils consist of a chain of trap-hills, extending through a course of upwards of 50 miles, gently rising on the south bank of the Tay above Ferry-Port-on-Craig, to about 400 feet, and attaining at the western extremity, in Bencleugh and Dalmoyatt, an elevation of nearly 3,000 feet above the level of the sea. The saddle-shape, the round-back, and the conical peak, are severally developed in the course of this range; but only in a few instances—as Craig-sparrow, Clatchart, and Craig-in-Crune—do the hills present an abrupt, precipitous front; so that, for the most part, they are either cultivated to the summit, or covered with a rich carpeting of excellent pasturage. Towards the south-eastern district, they break up into several parallel ridges, or small mountain-arms—some of them completely detached—which, with extensive tracts of fertile corn-fields intervening, form an extremely pleasing and diversified contour of country. The whole is intersected by innumerable valleys, some of which form lateral passes into the adjacent plains of Stratheden and Strathearn; and one of them, commencing near the eastern shore, traverses the county as far as Newburgh, in a line almost parallel with the principal chain, when, after a contracted course varying from a few hundred yards to half-a-mile in breadth, it opens suddenly upon the extensive basin in which the loch of Lindores is contained. A little to the westward, on the verge of Strathearn, and near to the celebrated cross of Macduff, the poet still thus glowingly describes the prospect:—

—You do gaze—
Strangers are wont to do so—on the prospect.
Yon is the Tay, rolled down from Highland hills,
That rests his waves, after so rude a race,
In the fair plains of Gowrie.—Further westward,
Proud Stirling rises.—Yonder to the east
Dundee, the gift of God, and fair Montrose;
And still more northward, lie the ancient towers
Of Edzell.

Scott's Macduff's Cross.

Besides the Tay and Forth, which traverse the confines of this county, there are three rivers of comparatively small dimensions, but of considerable mer-

cantile importance, which flow through the district. These are the Eden, which takes its rise near the western extremity of the shire, in the parish of Strathmiglo, and, after a course of about 18 miles through the entire extent of the valley, falls into the sea at the Guard-bridge, near the bay of St. Andrews; the Leven, which issues from the loch of the same name, and runs along the southern escarpment of the Lomonds; and the Orr, which rises in the south-west corner of the county, and joins the Leven a few miles to the north of Largo bay, into which they pour their united waters: see articles EDEN, LEVEN, and ORR. The portion of the county traversed by the Orr is neither fertile nor interesting; but the vale that is irrigated by the Leven is extremely picturesque; the windings—which are short, abrupt, and frequent—expose unexpectedly to the traveller's eye scattered cottages along the sides of the river, bleachfields, mansion-houses, villages, and coal-works, giving to the whole an extremely lively and animated outline. In addition to these rivers, there are several streams, which, from the shortness of their course, and the small quantity of water they discharge into the sea, do not seem entitled to any particular notice.—The lochs connected with the county are, Loch Fitty, Loch Gelly, Loch Leven, Loch Mill, the Black Loch, Lindores, and Kilconquhar: all of which are well-stocked with pike and perch, and some of them with excellent trout; and generally they are frequented by various species of wild fowl, while their banks are adorned with innumerable tribes of the flowering aquatic plants. Perhaps, however, the most interesting feature, as connected with the general contour and surface of this county, are the Lomonds, which—though described in a separate article—in giving a description of Fife, it would be improper altogether to omit. The eye of the painter Wilkie has often rested with delight upon their fine outline—"mine own blue Lomonds," he calls them; and seen from every spot and corner of the shire, towering majestically above all the surrounding heights, they unquestionably form a grand and interesting object. This ridge consists of an elevated table-land, about 4 miles in length, completely insulated from the neighbouring hills, and has a gentle and gradual slope towards the south, but on the north the acclivity is precipitous and rocky, and springs immediately from the valley of Stratheden to the height of 800 or 900 feet. Two lofty conical peaks surmount both extremities of the ridge, rising, one of them to the additional height of 666, and the other to about 821 feet—thus making what is termed the East law 1,466, and the West law 1,721 feet above the level of the sea. Overlooking the whole county, and the two noble rivers by which it is almost encompassed, with the German ocean to the east, the towers of Stirling and "the lofty Ben-Lomond" to the west, the rugged, serrated outline of the Grampians to the north, and the extensive plains of the Lothians, begirt by the Pentlands and Lammermuirs to the south—the prospect from either summit of these twin hills may vie with any in the kingdom, presenting at once to the eye whatever is necessary to form the beautiful, the picturesque, or the sublime: see THE LOMONDS. Some of the objects in the immediate vicinity give additional interest to the scene; the palace of Falkland, which lies at the base of the East Peak, is still a place of considerable attraction, and presents no mean specimen of the architectural taste of other days: see FALKLAND. Loch Leven washes the sloping defiles of the other, where, in the middle of the deep blue lake, may still be observed the ruins of the castle in which the unfortunate Mary Stuart was imprisoned by her subjects: see LOCH LEVEN.

The county of Fife, from the one extremity to the other, is exclusively connected with the independent coal-formation of Werner, and, in his view of the science of geology, the associated strata belong, one and all of them, to the floetz class of rocks. According to the more prevailing notions of recent times, and in conformity with which the terms are less connected with theoretic views, they may be characterized by the appellation of the medial or carboniferous order. The rocks connected with the coal-formation in Fife—proceeding in the descending series—are sandstone, slate clay, bituminous shale, clay-iron-stone, coal, limestone, yellow sandstone, limestone, and old red sandstone. Irregularly mixed up with these, the various members of the trap family are also to be found throughout the length and breadth of the district. The old red sandstone rocks of Fifeshire are of comparatively limited extent, and are almost exclusively confined to its northern division. Some very interesting appearances and sections of the yellow sandstone, along with strata of the coal-field, may be observed in Dura-Den,—a beautiful serpentine valley, which intersects the range of hills from south to north, through which a considerable stream flows, joining the Eden at Dairsie church.—Mountain limestone, as it occurs in Fife, forms a kind of crescent around the out-crop of the coal-field, ranging from the south-west extremity of the county at Broomhall, and passing through the parish of Cleish towards the Lomonds, where it attains an elevation of 1,100 feet above the level of the sea. Its course towards the east is by Forther, Cults, Ceres, Ladadda, Mount Melville, and, after a considerable interruption here, it next emerges at Randerston in the parish of Kingsbarns, on the south-east confines of the county. Between the bounding line now traced, and the frith of Forth on the south, this limestone may be considered as occupying much of the intermediate district, although it has only been brought to the surface, and rendered available for practical purposes, in a few localities along the southern shore: these are at Seafeld, Tyrie, Innertiel, Raith, Chapel, and Pittenweem. Besides this bed—which is properly termed the carboniferous—there is another of more limited extent, included among the coal strata, and which, for the sake of distinction, has been termed the upper limestone. From Pettycur to Inverkeithing, the stratified rocks are much intersected and disturbed by those of an igneous origin; and here the student in geology may have boundless scope in which to exercise his imagination as to the ancient condition of things along this interesting coast. The limestone, shale, and sandstone, abound with organic remains, many of which are peculiar to this district.—The coal-metals of Fifeshire are chiefly distinguished by the proportion of bitumen which they yield. Two varieties occur,—the common or caking-coal, which yields about 40 per cent. of bitumen, and emits a considerable quantity of smoke in burning; and the parrot or cannel-coal, which affords about 20 per cent. of bitumen. The former has a splintery, imperfect, conchoidal fracture, and swells in burning; the latter burns with a bright flame, and, generally, during the operation of combustion, decrepitates, and flies into small angular fragments. It is now almost universally employed in the manufacture of gas, and brings, in consequence of its comparative scarceness and the great consumption of that new element of light, much higher prices than any other species of coal. The north out-crop of the coal-measures is towards the Lomonds, Cults, and Drumcarro hills, no portion of this useful mineral having been found beyond this range; but towards the south and west districts of the shire it is most abundantly distributed, sometimes in basins of incon-

siderable extent, and in other localities in outstretching continuous beds of indefinite dimensions. Beginning at the west of Fife, and proceeding eastwards, the following coal-works are at present in operation, viz.:—at Torry, Blair, Elgin, Wellwood, Protis, Hallbeath, Crossgates, Fordel, Donibristle, Dundonald, Keltie, Beath, Rashes, Lochgelly, Kippeldrae, Cluny, Dunnikier, Dysart, Orr-Bridge, Balbirnie, Rothesfield, Wemyss, Drummochoy, Lundin Mill, Grange, Rires, Balcarres, St. Monance, Pittenweem, Kellie, Gilmerton, Largoward, Bungs, Fallfield, Lathockar, Cairlhurlie, Teasess, Ceres, Drumcarro, Kilmux, Carriston, Clatto, and Burnturk. At these different coal-fields there are 62 pits open, and upwards of 2,500 men and boys employed. The extent of surface occupied by the coal metals varies from 6 to about 9 miles in breadth; from Torry to Pittenweem, the south-eastern point of the basin, is 35 miles; and from Blairadam to Drumcarro, along the line of the northern out-crop, is 22 miles. There is thus an area of rather more than 200 square miles included within the coal-field of Fife. Beds of parrot or cannel-coal occur generally in the upper series of the coal-deposits, at Torry, Dysart, Fall-field, Clatto, Teasess, Burnturk, and Kippeldrae. At the latter locality there are two seams, separated by a thin layer of shale, and whose average thickness is about 5 feet. It is the thickest deposit of the kind in the island of Great Britain which has as yet been met with. Besides the parrot, a vertical section of a coal-basin frequently exhibits upwards of twenty different seams of the black or common coal used for domestic purposes. These seams vary from a foot to 20 feet in thickness.—Basalt occupies almost exclusively the southern boundary of the shire, along the shores of the Forth, where, at Queensferry, Pettycur, Orchil near Auchtertool, Kincraig hill, Earls-ferry-point, and several other localities to the eastward, it exhibits beautiful specimens of the columnar structure, consisting of small, sometimes of larger, pentagonal masses jointed into one another with the most perfect symmetry and order. Clinkstone generally forms the cap or highest portion of the Ochil ridge, but by no means uniformly so. The Lomonds are capped with greenstone and amygdaloid. Largo law is composed of a greyish-black compact basaltic clinkstone, likewise Hall-hill-craig, and Craighall rock. Between Kincraig and Earls-ferry-point, in a small bay of not more than a mile in extent, the whole series of trappean rocks may be observed, arranged in no systematic order, and scarcely distinguishable at their lines of junction from each other.—The county is partly intersected on the west by the valley of Glen Farg, which opens into Strathearn; here the prevailing rocks are claystone, highly indurated and of a variegated yellow and brownish-red colour; and amygdaloid, which is extremely vesicular, containing cavities from an inch to a quarter of an inch in diameter, and which are filled with green earth, chalcedony, calcareous spar, analcime, quartz, and zeolites. Veins of carbonate of barytes, and carbonate of lime traverse the hills here in every direction, varying from an inch to several feet in thickness, and exhibiting beautiful specimens of crystallization.—Alluvium is confined almost to the north-west section of the county, and the valley of Stratheden, and at a few places along the banks of the Leven and Orr.—The district intervening between Ferry-port-on-Craig and St. Andrews furnishes the only example, in the county, of sand-drift, which, although considerable in extent, does not attain in any part of the line an elevation of more than 40 to 50 feet. Peat-moss exists in greater abundance, and occupies generally the highest tableland in the district: Brunshiels towards the east,

and Mossmorran situated in the south-western division, are the most extensive. Mossmorran is about 1,200 acres in extent, and in some places about 25 feet in depth. It abounds with adders, some of which are three feet in length.—In Stratheden there are extensive accumulations of diluvium. From the church of Collessie to the river Eden, and through a range of several miles to the east and west, the bottom of the valley is filled to an unknown depth with the debris of the old red sandstone, generally consisting of small gravelly fragments. The high table-land at Mugdrum, near Newburgh, is composed entirely of diluvium, as well as the sloping ground on which the town stands. The valley, which commences at the rock of Clatchart, and stretches eastwards, is filled with the same; and to the combined action of the currents which swept along the northern and southern acclivities of the Ochils—through the valleys of Stratheden, Lindores, and the Tay—we would be disposed to ascribe those vast accumulations of sand and gravel which occur on the western confines of the parishes of Leuchars and Forgan. This county furnishes two interesting examples of sub-marine forests, which are both situated in this deposit, the one at Largo bay, and the other at Flisk. They are placed within the limits of the tide, and are covered at high-water to the depth of nearly 10 feet. They consist of the roots of trees, imbedded in a peat-moss which rests upon a bed of clay of unknown depth.

Anciently this county was of much greater extent than it now is. Under the names of Fife, and Fotherik, or Forthrik,* the whole tract of land lying between the rivers and friths of Forth and Tay appears to have been comprehended; including, besides what now constitutes the county, Monteith, the lordship of Strathern, Clackmannanshire, the shire of Kinross, and that portion of Perthshire which borders on the Forth. From the great extent and value of this district, and from its forming so important a portion of the Pictish dominions, it unquestionably received, at an early period, its popular appellation of 'the Kingdom of Fife,'—a name still fondly cherished by its sons, especially those to whom distance renders still more dear the place of their nativity. At different periods, the extent of 'the kingdom' was diminished; and so early as 1426, the district of Kinross was formed into a distinct county. In the time of Buchanan—who wrote towards the end of the following century—the county seems to have been reduced nearly to its present dimensions. "The rest of the country," says he, speaking of this district, "the ambition of man has divided into several stewartries, as the stewartry of Clackmannan, of Culross, and of Kinross." A farther dismemberment, however, took place in 1685, when the parishes of Portmoak, Cleish, and Tullibole, were disjoined from Fife, and, with some lands separated from Perthshire, incorporated with the shire of Kinross.—The sheriff-depute is judge-ordinary of the county, and has two substitutes; one of whom holds courts at Cupar, the county-town, and the other at Dunfermline. Formerly there was only one sheriff-substitute, and the courts were held at Cupar for the whole county; but the great distance of Dunfermline, and its importance as a manufacturing town, led to the division of the county into two districts, the eastern and western, and the appointment of a substitute for each. By a recent act, the sheriff is authorized to hold circuits through the county for the decision of small debts: for which purpose courts are held on certain fixed days at St. Andrews, Kirkcaldy, Colinsburgh, Auchtermuchty, and Newburgh.

The justices-of-the-peace hold courts of petty sessions at stated intervals, or when business requires it; and quarter-sessions, where appeals are heard from the petty session, four times in the year, in the months of March, May, August, and October. They also hold courts under the small debt act, for the recovery of sums under £5 sterling; and for public convenience, the county is divided into districts, courts being held at Cupar, Auchtermuchty, St. Andrews, Anstruther, and Colinsburgh, Kirkcaldy, and Dunfermline. The commissary of the commissariat of Fife also holds his courts at Cupar; but the jurisdiction of this officer is now exceedingly reduced from what it once was.—The county contains eighteen royal burghs, the magistrates of which possess, within the bounds of their several royalties, a civil jurisdiction much the same as that of the judge-ordinary of the shire. There are besides, several burghs-of-barony, the bailies of which possess a very limited civil jurisdiction, and have the power of punishing assaults, batteries, and such like crimes committed within the barony.—Among the more important of the courts now abolished, were that of the steward of the stewartry of Fife, held heritably by the Duke of Athole, and in compensation for which he claimed and obtained the sum of £1,200 sterling at its abolition; that of the bailie of the regality of Dunfermline, for which the Marquis of Tweeddale received £2,672 7s. sterling; that of the bailie of the regality of St. Andrews, for which the Earl of Crawford received £3,000 sterling; that of the regality of Aberdour, for which the Earl of Morton received £93 2s. sterling; that of the regality of Pittenweem, for which Sir John Anstruther of Anstruther obtained £202 15s. 3d. sterling; that of the regality of Lindores, for which Antonia Barclay of Collerny, and Mr. Harry Barclay, her husband, obtained £215 sterling; and the regality of Balmerinoch, which was not valued, as it was forfeited to the Crown by the accession of Lord Balmerinoch to the rebellion in 1745. It is obvious, therefore, that in ancient times the inhabitants of Fife were well provided with courts of law, whatever they may have been with regard to the administration of justice.—This county is represented in parliament by one member. The constituency, in 1839, was 2,967; in 1840, 3,006. For convenience at elections, the county has been divided into different districts, and the polling-places for these districts are Cupar, St. Andrews, Crail, Auchtermuchty, Kirkcaldy, and Dunfermline. Before the Union, in 1707, this county sent four members to the Scottish parliament. Two sets of royal burghs within this county also send a member each to parliament. By the reform bill, Cupar, St. Andrews, Easter and Wester Anstruther, Pittenweem, Kilrenny, and Crail, elect one member; Kirkcaldy, Dysart, Kinghorn, and Bruntisland, elect another; and Dunfermline and Inverkeithing are conjoined with the Stirling district of burghs in the election of a third. The total constituency of these burghs, independent of that for the county, is about 2,000. This county, therefore, has its fair share in the representation of Scotland in the British parliament.*

* Before the Union, however, Fife had a much larger share in the appointment of the members of the Scottish parliament. The thirteen royal burghs above-named, which are now represented by three members, then sent each a separate commissioner to parliament; so that, including the four knights of the shire, Fife was represented by seventeen members. No other county of Scotland was represented to the same extent. Forfarshire, which had the largest share after Fife, sent nine members to parliament; Dumfriesshire, eight; Lanarkshire, seven; Ayrshire, six; Edinburghshire, six; the county of Caithness only two; and the large county of Sutherland only three members. Besides the royal burghs which returned commissioners, Fife had five other royal burghs, Falkland, Auchtermuchty, Newburgh, Earlsferry, and St. Monance, which never exer-

The county contains sixty-one *quoad civilia* parishes, distributed into four presbyteries, and which together form the provincial synod of Fife, viz:—

Cupar Presbytery.

Cupar	Crail
Kettle	Kingsbarns
Balmerino	Kemback
Dunbog	Denino
Logie	Kilconquhar
Newburgh	Carabee
Abdie	Largo
Strathmiglo	Newburn

Kirkcaldy Presbytery.

Ceres	Kirkcaldy
Cult	Bruntisland
Kilmany	Kennoway
Fliisk	Markinch
Criech	Sconie or Leven
Monimail	Leslie
Colles-ie	Kinglassie
Auchtermuchty	Dysart
Dairsie	Kinghorn
Falkland	Auchtertool

St. Andrews Presbytery.

St. Andrews	Abbotshall
St. Leonards	Wemyss
Leuchars	Ballingray
Cameron	
Ferry-Port-on-Craig	
Forgan or St. Fillans	
Abercromby or St. Mouance	
An-truther, Easter	
Anstruther, Wester	
Pittenweem	
Kilrenny	
Elie	

Dunfermline Presbytery.

Dunfermline
Saline
Dalgetty
Beath
Carnock
Torryburn
Aberdour
Inverkeithing

Besides these sixty-one parishes, a portion of the parish of Abernethy, and part of the parish of Arngask, are in the shire of Fife, though in the presbytery of Perth. The presbytery of Kirkcaldy includes, besides the parishes in Fife, the parish of Portmoak, which is in Kinross-shire. The presbytery of Dunfermline includes three parishes in Kinross-shire—Cleish, Orwell, and Kinross, and the parish of Culross, which is in Perthshire. The several presbyteries meet regularly at their respective seats of Cupar, St. Andrews, Kirkcaldy, and Dunfermline; and the synod meets alternately at Cupar and Kirkcaldy, and occasionally at St. Andrews and Dunfermline. The number of recently erected *quoad sacra* parishes within the synod of Fife, is twelve.—The number of parochial schools, in 1834, was 55, attended by about 4,000 children; of schools not parochial, 223, attended by 10,000 children.

As Fife is remarkable for the number of its royal burghs, its burghs-of-barony, and its populous villages, so is it also for the number of its landed proprietors. This seems to have attracted the notice of Pennant, the tourist, who is quite enthusiastic in his description of the county. "Permit me," says he, "to take a review of the Peninsula of Fife, a county so populous, that, excepting the environs of London, scarcely one in South Britain can vie with it: fertile in soil, abundant in cattle, happy in collieries, in iron-stone, in lime and freestone; blest in manufactures; the property remarkably well divided,—none exceedingly powerful to distress, and often depopulate a county,—most of the fortunes of a useful mediocrity. The number of towns is, perhaps, unparalleled in an equal tract of coast; for the whole shore, from Crail to Culross, about 40 English miles, is one continued chain of towns and villages."* Such is the account given of Fife by a celebrated English tourist 68 years ago; and, so far as regards the number of the landed proprietors, the division of

the property, and the number of the towns and villages, it is still applicable. Besides the large share which Fife possessed in the appointment of the commons portion of the great council of the Scottish nation, no other county was represented to the same extent by the hereditary portion of that body. In the Scottish parliament, before the Union, twenty-four noblemen, more or less connected with this county, were entitled to take their seat in that assembly.

the property, and the number of the towns and villages, it is still applicable. But if Pennant so much admired the agriculture and the manufactures of that period, how much more would his admiration be increased could he perceive the state of improvement to which they have now attained! The valued rent of the county is £363,464 13s. 4d. Scots,* proportioned among the different districts in the following manner:—

Cupar	£ 93,535 13 4 Scots.
St. Andrews	126,013 0 0
Kirkcaldy	87,664 16 8
Dunfermline,	56,250 13 4

The annual value of real property in the county in 1815, according to the last return for the property-tax, was £405,770 sterling. Taking this at twenty years' purchase as the average for the whole, the value of the heritable property in the county at that time would be, according to this return, £8,115,400. In 1811, the land rent was estimated at £335,290.—The population of Fife appears to be upon the increase, though not so rapidly as in some other parts of Scotland. In 1801, the total population was 93,743; in 1811, it was 101,272; in 1821, 114,550; and in 1831, 128,800. The rate of increase during these periods was 8 per cent. for the first, 13 per cent. for the second, and 12 per cent. for the third. If we take a medium between the first and last of these rates, say 10 per cent. as the increase since 1831, we may consider the population at present as amounting to 141,680; but this is probably too much for the general average throughout the county, as although it may have been much greater in some places, in other parishes the population may be considered as almost stationary.

The progress of agriculture in Fife has been very great since the end of the 18th century. About four-fifths of the county is considered as arable land; and it is at present under the management of intelligent, active, and judicious agriculturists. Indeed, the agriculture of the county is behind no other, and far in advance of that of many of the counties of Scotland. Previous to 1790, the farmers generally lived in low smoky houses, badly lighted, and having no other divisions but those made by the large wooden bedsteads, which formed what was called a but and a ben. The offices were then also, as was to be expected, mean and deficient in the extreme. The farmers of that period wanted, in many instances, the capital, as they were deficient in the intelligence and energy, to engage in and effect profitable improvements. All this, however, is now happily altered. The agriculturists of the present day are, with little exception, all capitalists; and, from their more enlarged education and higher intelligence, are enabled to adopt every improvement in the management of their land, and to take advantage of every new market which the general improvement of modern times has opened up to them. The farm-houses are now all of a superior description, and the farm-offices are, many of them, models for convenience. Drainage has been conducted in Fife on a very extensive scale, and the appearance of the county has, in consequence, been greatly improved, while its productions have been increased and benefited in quality. Several pretty extensive lochs and marshes, which were formerly profitless to the proprietor, have been completely drained, and the ground they occupied put under tillage. Furrow-draining, where thought necessary, has been adopted, and is in many instances still extending with great advantage. The old breed of horses, which was small and unsightly, and ill-fitted for either draught or saddle, has almost entirely disappeared; and the breed of horses now

* Tour in Scotland, 1772, Part II. p. 212.

† £30,292 1s. 1½d., sterling.

used for agricultural purposes will vie, either in power or appearance, with those used in any county in Scotland. The Fife breed of cattle has long been celebrated both for feeding and for the dairy; but it is to be regretted, that injudicious crossing has, in many instances, injured instead of improving this excellent breed of cattle.* The evil, however, has been ascertained, and exertions are making to encourage the cultivation of the pure native breed. The increased cultivation of turnips has greatly increased the feeding of sheep, which are generally allowed to eat off the crop, to the advantage of the land, and the profit of the agriculturist.

The cultivation of oats is more extensive in Fife than that of any other sort of grain. Oats are better suited both to the soil and climate; and oatmeal is the principal article of food among the middle and lower classes. The quantity of land annually sown with this kind of grain, cannot be computed at less than 30,000 acres; and, in general, it turns out a very profitable crop. Barley is cultivated in Fife to a very considerable extent, and more so now than at any former period. The vast number of distilleries, both here and in Perthshire and Clackmannanshire, insure a ready market to the grower; and the consequent high price is a strong inducement to the farmer to sow every field with barley that will produce any thing like a crop. The long-eared barley, with two rows, is universally cultivated on all lands which lie low and warm, and are under an improved state of husbandry. It produces larger grain, and of a better quality, than the common bear; and being stronger and harder in the straw, is not so apt to lodge. Wheat appears to have been anciently more generally cultivated in Fifeshire than at a later period. In the statements of the revenues of some of the old monasteries, it appears that wheat was delivered as rent by the farmers,—produced, no doubt, from lands upon which, half-a-century ago, nobody would have attempted to rear a crop of that kind. During the last forty years, however, the cultivation of wheat has been rapidly extending, and has uniformly kept pace with the improvements in agriculture. Many parts of the county are well-adapted for this valuable grain, and crops of wheat are frequently reared here equal to any produced in the richest counties of England. Beans and pease are cultivated to the extent of 6,000 acres annually. Potatoes may be said to constitute one-third part of the food of the common people in Scotland for eight months in the year. On every farm in Fife a considerable quantity is planted, both for family-use and for sale. As this county abounds in small towns and villages, a much greater quantity, in proportion, is raised in their immediate vicinity than upon farms that are more remote. Many farmers, too, are in the habit of letting small portions of land to such villagers as have none of their own. This is a most beneficial practice. The land being let only for one season, and well-manured with ashes and street-soil, or with dung when it can be got, is thus properly cleaned, brings the farmer a good rent, and prepares the soil for a succeeding crop. The quantity of land annually under potatoes cannot be less than 7,000 acres. Turnips are general all over the county, except in the immediate vicinity of villages, where they are exposed to the depredations of juvenile intruders. Few counties in Scotland, at one time,

cultivated more flax than Fife; but the almost universal adoption of cotton-goods has, in a great measure, abolished the practice, excepting a small patch annually to supply family deficiencies. Nay, some proprietors, from an opinion that flax is an impoverishing crop, because it yields no manure for the ground, have introduced clauses into their leases prohibiting no more to be sown than is merely necessary for the farmer's family. On almost every farm, rye grass, and red and white clovers are cultivated; and strong, heavy crops of hay are produced in suitable seasons.

One great advantage possessed by the Fife agriculturists over those of more inland counties, is, that there is not a farm in the county 10 miles distant from a sea-port. They have, therefore, the important benefit of water-carriage, and are enabled, with ease, to send their produce to Edinburgh, Glasgow, or London. The introduction of steam-navigation has also been of great advantage; and the execution of the projected railway from Kinghorn to Ferry-port-on-Craig, with minor branches, will greatly benefit the whole county. The size of the farms ranges from 50 to 500 acres. The lands, with the exception of grass parks within gentlemen's enclosures, are all let on lease, usually for 19 years. The rents, where paid in money, are various, rising from £1 to £5, and in some few localities higher; but in many instances now, a grain-rent is paid, regulated by the fair-prices of the county, which are fixed yearly by the sheriff. It is to be regretted that thorn hedges are not so prevalent for enclosure, as in some other counties: stone walls being more extensively used, and being preferred for this purpose, though neither possessing the beauty nor affording the warmth of the other. Farm-yard dung is an important manure; and a straw-yard is considered as a most valuable appendage to a farm-yard; but bone-dust is coming into general use, and mills for grinding the bones have been erected in different parts of the county. Swine are fed to a considerable extent, not only by the farmers, but by the villagers; of late years they have been purchased by dealers or agents, slaughtered, and sent by steam to the London market. Rabbits are in many places protected, and their skins yield a considerable revenue. The quantity of pigeons is quite unexampled elsewhere. It has been calculated that the county of Fife contains nearly three hundred dovecots. This may be accounted for by the great number of proprietors in the county who have each erected a dovecot near his mansion.—The climate of Fife is accounted unfavourable for the production of the larger fruits. There are, however, within the county, many extensive and elegant gardens where these are reared in great perfection; but few gardens are rented for the purpose of exposing their produce to the public. In the vicinity of Kirkcaldy about 20 acres are occupied in this way. No natural wood is to be found in Fife, excepting some trifling spots unworthy of particular notice. Around the mansion-houses of proprietors some small plantations of ash, elm, fir, lime, and oak are to be seen, particularly on the estates of Rankellor, Craigrobie, and a few others. As the want of shelter is one of the chief inconveniences under which their county labours, and as it is much exposed to winds from the east, north-east, and south-east, the utmost attention ought to be paid to this mode of improvement. Indeed, proprietors, sensible of this, have of late years begun to plant tracts of barren ground, and divide commons; and the most beneficial effects to the county may at no distant period be expected to result from these operations.

The principal manufacture in Fife has long been that of linen, which, from small beginnings, has gradually increased to its present great importance. Many mills have been erected—and these are still in-

* Black is the prevailing colour of the Fifeshire cattle. They are small horned, and easily fattened; and at Smithfield bring a higher price than almost any other kind. In general they weigh from 30 to 50 or 60 Dutch stones when ready for the knife. From 10 to 14 Scotch pints of milk per day, at the best of the season, is the ordinary produce of a good Fife cow. For about twenty-six weeks annually she will produce from 7 to 9 pounds of butter each week. But the dairy is not the chief object with the farmers of this county, excepting in the vicinity of towns.

creasing—for the spinning of tow and flax into different qualities of yarn. The cloths woven are of various kinds: sail-cloth, bed-ticking, brown linen, dowls, duck, checks, shirting, and table-linen. The damask manufacture of Dunfermline is probably unequalled in the world, for the beauty of its design, and the skill with which it is executed. The cotton-manufacture has never been an object of the expenditure of capital in this county; but many workmen are employed in this manufacture for Glasgow houses. Iron-founding and the making of machinery is carried on in different places. Salt is still manufactured in the county, though not to the extent it formerly was. The tanning of leather is also carried on in two or three localities. Bricks and tiles are made for local use; and earthenware and china manufactured to some extent. Coach-building is likewise carried on. There are breweries in almost every village for the manufacture of beer, and at some of these strong ale of good quality is made. There are three pretty extensive distilleries, which afford the farmer a ready market for his barley. Ship-building also forms a part of the trade of the county.

The weights and measures of this county, before the act for the equalization of these, were Tron, reckoning 16 Scots Troy lbs. to the stone, and 20 Troy ozs. to the lb., for wool, butter, cheese, hides, and other home-productions. Dutch for butcher-meat—except in Kirkcaldy presbytery, where Tron was used—meal, foreign flax, and hemp, iron and Dutch goods. Avoirdupois for groceries. The stone of flax was 22 lbs. avoirdupois. The measure for wheat, pease, and beans, was a firlo, containing 2274.888 cubic inches; or 1 fir. 3 mutchkins standard-measure, being 35.29 per cent. better. For oats, barley, and malt, the firlo containing 3308.928 cubic inches; and was 1 firlo 1 pint, or 3.225 per cent. better than the standard. Home-made woollen cloth sold by the ell of 37½ inches.

In concluding this general summary of the county of Fife, we shall lay before our readers the opinion of Mr. Hill, the commissioner for inspecting prisons in Scotland, on the state of crime in this shire. "There is," he says, "but little crime at present in Fifeshire, and much less than formerly. The most common offences at this time are assaults, and other disturbances of the peace, and petty thefts. These offences are committed chiefly by young persons between the age of 12 and 30, most of whom are inhabitants of the county. It is observed, that there are but few regular farm-servants among the offenders. The most serious offences are committed by vagrants and other strangers. Almost all the assaults arise from drunkenness; and this, including the desire to obtain the means of indulgence in drunkenness, is the cause of many of the thefts. Such of the parents of the criminals as are known are most of them of bad character, or are at least neglectful of their children. In the western district it was stated, that many of the young thieves are orphans, and that, as a class, the criminals there are inferior to others in education and intelligence. Among the offences that have become less common than formerly, are housebreaking, forgery, and child-murder. On the other hand, there have been some violent disturbances at the elections lately, which did not occur formerly." The law-commissioners were so much struck with the paucity of crime in Fifeshire, that they applied to the sheriff for information on the subject, and this led to an application to the sheriff-substitute of the eastern division, for an account of the preventive police, which had been organized under his direction. This police was established at the time of the cholera; and, in the first instance, extended to the Cupar district only. Its object was to rid the place of vagrants, in order to

prevent the introduction of the cholera; and it worked so efficiently, that between 300 and 400 vagrants were either removed or prevented from entering in the course of one month. The inhabitants of the other parts of the county, desirous of partaking in the advantages of these arrangements, applied to Mr. Jamieson for his assistance, and, at their request, he organized a preventive police for the whole county, and this has continued in operation ever since. There are in all about 20 men, including the superintendent, and the total cost is rather more than £600 sterling a-year, which sum is paid from the county-rates. Mr. Jamieson considers the present force insufficient for the full development of the plan, but it has been calculated that even on its present footing, the police effects a saving to the county of £10,000 sterling a-year: estimating the cost of each vagrant, in his alternate character of a beggar and a thief, at one shilling a-day only. In confirmation of the general belief that much of the crime is committed by vagrants, it may be stated that, with every diminution of the number of vagrants in Fifeshire, there has been a reduction in the amount of crime.

The aboriginal inhabitants of Fife were Celts; and here, as in other parts of Europe, the names of the more remarkable natural features of the country, as well as of most of the towns, demonstrate the fact. At the period of the Roman invasion, the peninsula between the Forth and the Tay was inhabited by the Horestii, one of those tribes who peopled ancient Caledonia. The district inhabited by this tribe included the modern shires of Fife, Clackmannan, and Kinross, the eastern part of Strathern, and the country lying westward of the Tay as far as the river Brand. It does not appear that the Horestii had any towns within the bounds of what now constitutes Fife. Their chief towns were Alauna, Lindum on the river Allan, and Victoria on the river Earn; and here the Romans afterwards had stations on the great military way which led north-east towards Ptoroton or Burghhead, on the Murray frith. Hill forts, however, were numerous, all over the county, and the remains of several of these are still to be traced. On Duncarn hill there was a British fort of great strength, which soon yielded to the art of the Romans. Upon Carnell hill, near Carnock, the Horestii had another fort, which had in all probability been in possession of the Romans, as in 1774, upon opening some tumuli on the hill, several urns were found containing Roman coins. About 1½ mile north from Carnock there was a fort on a hill called Craigluscar; and 3 miles north-north-west there was one on Saline hill, and another at no great distance below. The situation of several others can also still be traced on the heights in the northern part of the parish of Strathmiglo, as well as on the hills near Newburgh.

In the year 78 of the Christian era, Agricola took the command of the Roman provinces in Britain. The year 79 he appears chiefly to have spent in subduing and endeavouring to civilize portions of the south. In the year 80, he left Mancunium—the Manchester of the present time—with the intention of penetrating into the north by the western coast. Having overrun the whole of this country between the Solway and the friths of Clyde and Forth, he began to turn his attention to the countries lying to the north of the Forth. He ordered his fleet to survey the northern shores of the Forth, and to sound the harbours; and setting out with his army, crossed the frith at its most contracted part now known as Queensferry. He thus in the year 83 entered the country of the Horestii. The Caledonian Britons from the higher regions, aware of the object of the Roman general, began offensive operations by attack-

ing the forts which Agricola left behind him; and in doing so, created considerable terror in their enemies. Agricola being informed that it was the intention of the Caledonians to attack him on all sides, in a country with which he was unacquainted, divided his army into three divisions. It seems probable that with one of these divisions he marched to Carnock, near which are still to be traced the remains of two Roman military stations. From thence he pushed forward the 9th legion to Loch Orr, about 2 miles from Loch Leven. Here the Romans pitched their camp, having two ranges of hills in front, the Cleish range on their left, and Bennarty hill on their right.* In his operations in Fife, and in securing his various stations in that country, Agricola spent the remaining portion of the year 83; the commencement of the succeeding year was occupied in obtaining information of the movements of his enemies, and the nature of the country he was about to invade. During this period, he was supplied with provisions from his fleet upon the Forth; and by means of it had regular communication with his garrisons on the opposite shore. In the summer of the year 84, Agricola left the country of the Horestii, on his proposed expedition to the north, sending his fleet round the coast for the purpose of alarming his enemies. He appears in his march to have followed the course of the Devon, and turning from Glendevon to the right, through the opening in the Ochil hills, to have passed through Gleneagles. Proceeding between Blackford and Auchterarder, he advanced towards the Grampians, which he had seen at a distance as he defiled through the Ochils. Marching onward to the moor of Ardoch, he came upon the Caledonian army within the territory of the Damnii. The Caledonians, who were thus encamped at the foot of the Grampians, amounted to 30,000 men, under the command of Galgacus,—a general who seems well-entitled to all the praise which Tacitus has bestowed upon him. Here an obstinate battle ensued, in which the greatest bravery was displayed on both sides. Night alone put an end to the engagement, but the victory fell to the side of discipline and skill. The Caledonians retired into the distant recesses of their nearly impervious country; and Agricola, unable to make any important use of the victory he had obtained, led his army back to the borders of the country of the Horestii. Taking hostages from them for their future tranquillity, he conducted his troops into winter-quarters on the south of the Forth. His navy he ordered to sail round the island, ostensibly on a voyage of discovery, but no doubt also with the view of intimidation. Having sailed as far as Richborough, the fleet returned to the Forth to winter. Thus ended the campaigns of Agricola in Britain. In the proceedings, in connection with the different Roman invasions of Caledonia, the early inhabitants of Fife bore their part, first under the name of Horestii, and afterwards under that of Vecturiones, a tribe of the people called Picts.

The history of the Picts extends from 446, the period at which the Romans left Britain, till 843, when their government was overthrown by the Scots. The kingdom of the Picts seem to have extended throughout the whole of the eastern coast, and the central portion of Scotland, north of the Roman wall; and in the north to have reached from sea to sea. The county of Fife, and the lower portion of Perthshire and Angus, formed the most important portion of their territory; and here it was more extensively peopled than in the more central or nor-

thern parts. Their capital appears originally to have been at Forteviot in Strathearn; and afterwards at Abernethy on the borders of the county of Fife. The Picts were instructed in the truths of Christianity by Columba, towards the close of the 6th century. Ternan is said to have been the first bishop among the Picts, and to have resided at Abernethy, the Pictish capital. Columba, having instituted a monastery of Culdees in the island of Iona, which he had received for that purpose from the Pictish king, set the example of forming such monastic societies throughout different parts of North Britain. About the year 700, the island in Loch Leven was bestowed on St. Serf, and the Culdees residing there and serving God. Setting aside the fable of St. Regulus having landed at St. Andrews, about the year 365, as a monkish legend, there is absolute certainty that the Culdees had a settlement there in the 9th century; and such was the fame they had attained in the 10th century, that Constantine III. took up his residence among them, and died in 943, a member, or according to Winton, abbot of their monastery. At Dunfermline there was an early Culdee establishment formed, as there was also at Kirkcaldy; and, according to Winton, Bridei, the son of Derili, founded one at Culross, about the year 700. St. Serf, we are informed by Winton, resided here for many years before he went to Loch Leven; and by the same authority we are informed that he afterwards went there, where he died and was buried. Here St. Mungo, the supposed founder of the see of Glasgow, was for some time a disciple, previous to his removing to the West. There was another society of Culdees at Portmoak, near Loch Leven.

The union of the Scots and Picts brought the whole of Pictavia, and of course Fife, under the government of the Scottish kings. In 881 the Danes entered the Forth, and made a descent upon the shores of Fife. There they were bravely encountered by Constantine, who was, however, unfortunately killed near Crail. During the reign of Kenneth III., the Danes entered the Tay with a numerous fleet, their object appearing to be the plunder of Forteviot or Dunkeld. Kenneth, with such chiefs as he could hastily collect together, met them at Luncarty, near Perth, where a furious conflict ensued. The right wing of the Scottish army was commanded by Malcolm, the Tanist, and Prince of Cumberland; the left by Duncan, the Maormor of Athol; while the centre was led by Kenneth himself. The contest was long and doubtful. The two wings of the Scottish army at first gave way before the Danes; but rallying behind the centre, they renewed the fight, and the Danes in their turn were compelled to yield. The result of this well-fought field freed for a time the shores of the Tay and Forth from the formidable foes who had so long infested them. Their incursions were renewed, however, during subsequent reigns. Indeed tradition even yet recollects with horror the various conflicts which the inhabitants of Fife had from time to time to maintain with the Danish rovers; and the Statistical accounts inform us that the skeletons, which have been on various occasions found upon the shore, from the river Leven to the eastern extremity of Largo bay, are regarded by the people as the remains of the heroes who fell in these conflicts. During the reign of Duncan, who had ascended the Scottish throne in 1033, Sueno, king of Norway, is said to have invaded Fife, and a sharp fight attended with considerable slaughter took place, in which the Norwegians obtained the victory. Some auxiliaries, under his brother Knute, are said to have arrived at Kinghorn, where they were vanquished by Banquo,

* The remains of this military station are still to be traced. Its form is nearly square. Portions of it have been levelled and defaced; but on the north and west sides, there still exist three rows of ditches, and a like number of ramparts composed of earth and stone. The circumference of this work is about 2,020 feet.

Thane of Lochaber, many of their leaders slain, and the rest compelled to fly to their ships. These statements, however, are the invention of Boethius, and were unknown to Fordun, who preceded him. The short reign of Duncan is known to have been but little disturbed with foreign invasion, and Banquo, the thane of Lochaber, is a character unknown in real history. He is indebted to Boethius for his existence, and to Shakspeare for the celebrity which he has attained. Duncan was assassinated at Bothgowanan, near Elgin, by Macbeth,* the Maormor of Ross.

After an arduous struggle of two years, Malcolm ascended the throne of his father Duncan; and was for some time occupied in rewarding those who had supported him in his efforts, and in gaining over those who had opposed him. We are told of his bounty to Macduff, who rendered him such signal service; but of its extent we have no direct evidence. It appears certain, however, that in very early times, the Maormors or Earls of Fife were entitled, 1st, to place the king of Scotland on the inaugural stone; 2d, to lead the van of the king's army into battle; and, 3d, to enjoy the privilege of a sanctuary to the clan Macduff. During the reign of Edward the Confessor, Malcolm seems to have cultivated peace with England, while he had yet but a slight hold of the affections of his people; and in 1059 he is said even to have paid Edward a visit. In 1066 Tostig, the brother of Harold, found safety with Malcolm, after flying from Stanford-bridge; and in 1068 Edgar Ætheling with his sister Margaret, sought the same shelter from the cruelty of William the Norman. Shortly after her arrival Malcolm married this lady; and thus formed a connexion with the royal blood of the Saxon kings of England: see article DUNFERMLINE. Malcolm III., who had resided long in England, gave great encouragement to the settlement of Saxons in his dominions. His queen unquestionably brought several of her relations and domestics with her; the cruel policy of William the Conqueror drove many Saxons to seek refuge in Scotland; and Malcolm, during his incursions into Northumberland and Durham, carried away so many

young men and women captive, that we are informed by an English historian, "that for many years they were to be found in every Scottish village, nay, in every Scottish hovel." It must not be supposed, however, that this attempt at Saxon colonization had any great influence among the Celtic people of Scotland; for it appears that, at Malcolm's death, great numbers of these strangers were driven from the country. It was during the subsequent reigns of Malcolm's sons, and their immediate successors, that the Saxons and Normans began effectually to press back the Celtic people; and to introduce new manners and customs, and new laws. There is every reason to believe that during the reign of Malcolm, the east coast of Scotland had begun to enjoy the advantage of some trading intercourse with foreign nations, as he is said to have imported rich dresses for himself and his nobles. Agriculture, however, was yet in a rude state; and, notwithstanding that the forests of Scotland had been extensively destroyed by the Romans, they still covered large tracts in every district. In Fife the principal forests were those of Cardenie, Eweth, and Black-Ironside. From these the proprietors received a considerable source of revenue in the noble timber which they contained, and the deer and other animals of the chase with which they abounded. In many instances, however, large portions of the forests had been cleared, and brought under cultivation; but the savage animals which still infested the country,—the wolf, the bear, the wild boar, and the bison,—must have often proved destructive enemies to the husbandman.

The origin of the division of Scotland into counties or shires is not very distinctly marked; and indeed it appears to have taken place at different periods in the various districts of the country. The title of Earl, which was long associated with the jurisdiction of a county, is of Saxon origin; and could not therefore have been introduced until after the Saxon colonization had been pretty extensive. During Celtic times, the different divisions of the country appear to have been governed by chiefs, under the title of Maormor; and accordingly we have the Maormors of Ross, of Strathearn, of Moray, and of Fife. In subsequent times, these titles gave place to the Saxon title of Earl; and in imitation of the Saxon divisions, the shire was gradually introduced. Macduff, who lent his powerful assistance to Malcolm Canmore, is alleged to have been the 1st Earl of Fife: but it would be absurd to suppose that he, a Celtic chief, was ever designated by this Saxon title. He was Maormor of the district; and must have been a nobleman of great power and influence. The period of Macduff's death is unknown; but he was succeeded, it is said, by his son Dufagan, who flourished in the reign of Alexander I., although many doubt his existence. Constantine succeeded, and has been styled by genealogists 3d Earl. He is said to have died in 1129, about five years after the accession of David I. to the throne. To Constantine succeeded his eldest son, Gillimichel Macduff, of whom Sibbald says, that he has found him witnessing many charters of David. He died in 1139. The next lord of this district is Duncan, who is said to have witnessed charters of David I. and Malcolm IV. In 1152, when Earl Henry died, Malcolm, his eldest son, who was then in his 11th year, was sent by his grandfather, in a solemn progress, under the guardianship of the Earl of Fife. David I. died in 1153, and Earl Duncan in the following year; after he had performed for the youthful Malcolm the ceremony of placing him on the inaugural stone, at his coronation. Duncan was succeeded by his son Duncan II., who is often named in charters of Malcolm IV. and William. He was, in 1175, associated with

* The wonderful fictions of Shakspeare have thrown an interest and a celebrity around this usurper, which time cannot now diminish; and which the real facts of his history, however clearly they had been narrated, could never have produced. Seizing the blood-stained sceptre of the unhappy Duncan, he appears to have been desirous to supply any defect in his title to the throne by a vigorous and useful administration. During his reign, the chieftains who might have disturbed it, were either overawed by his power, or held in subjection by his valour; the commons were attached by abundance of provisions, and the strict and equal distribution of justice; and the clergy rendered favourable by grants of land and other gifts. The crime by which he had acquired his power, however, haunted him amidst all his prosperity, and a constant sense of insecurity at length produced rigour and even tyranny. The injuries which he had inflicted on Macduff, the Maormor of Fife, created in him a powerful enemy; and prompted Malcolm, the son of Duncan, to attempt the redressing of the wrongs of all. With the assistance of his relation, Siward, Earl of Northumberland, a powerful baron, Malcolm entered Scotland with a numerous army in 1054, and penetrated, in all probability, to Dunsinane. In this expedition he was eagerly joined by Macduff and the men of Fife. At Dunsinane they were met by Macbeth, and a furious conflict ensued. In spite of all his bravery the usurper was overcome, and forced to retire to the north, where he had still numerous friends. The Earl of Northumberland, whose son had been killed in the battle at Dunsinane, returned home in 1055, and died the same year at York. Malcolm, however, continued the contest with Macbeth, who was at length killed in 1056 by Macduff, who thus revenged his own wrongs, and rendered an important service to the son of Duncan. This is said to have occurred at Lumphanan, where, about a mile from the church, a cairn about forty yards in circumference is still pointed out, called Macbeth's cairn. There are several smaller cairns in its neighbourhood. Lulach, the son of the lady Gruoch, the wife of Macbeth, by her first husband, Gilcomgain, the Maormor of Moray, ascended the vacant throne of his step-father; but he occupied it only a few months, being slain in a battle which ensued with Malcolm, at Essie in Strathgry, on the 3d April, 1057.

Richard Cumyn, who was invested with the office of Justiciarius Scotiae, and married Ada, the niece of the king; with her he received the lands of Strathmiglo, Falkland, Kettle, and Rathillet in Fife, and of Strathbran in Perthshire. He died about 1203, so that he held the office of justiciary for 28 years. Malcolm, his son, married Matilda, daughter to the Earl of Strathearn, and received with her the lands of Glendevon, Carnbo, Adie, and Fossaway. It is during the reign of William that we first hear of a sheriff of Fife. Sheriffs appear south of the Forth in the reigns of Alexander I. and David I.; but it would appear that sheriffdoms had now begun to extend north of that river, and David de Wemyss is the first sheriff of Fife of whom we have any account.

"In the 17th year of Alexander III.," says Hector Boethius, "there happened a most extraordinary inundation of the sea, especially on the firths of the Forth and Tay, which involved in a common destruction many towns and villages, and the inhabitants and their herds." He is supported in his account of this deluge by Fordun, who mentions that it occurred on the evening of the feast of the 11,000 virgins. "A great wind," he says, "arose from the north, and overwhelmed many houses and villages between the Tay and the Tweed. There never was such a deluge since the times of Noah, as appears from its traces at this day."

Colbanus succeeded, in 1266, to the earldom of Fife, and died in 1270, leaving a son, Duncan, only eight years of age. After the death of Alexander III., who left his kingdom to his grand-daughter, the infant daughter of Eric, King of Norway, a regency was appointed in 1286, to govern the kingdom; and of these Duncan Earl of Fife, the son of Colbanus, now come of age, was named one. He did not long, however, fill his important office, for he was assassinated on the 25th of September, 1288, at a place called Petpollock, by Sir Patrick Abernethy and Sir Walter Percy, who had been instigated to the deed by Sir William Abernethy. At the coronation of Baliol, the Earl of Fife was still a minor, in consequence of which he could not perform the usual ceremony of placing the new king on the regal stone at Scone. He was thus saved the degradation of installing a king who had betrayed his country, and who, for the sake of attaining the Crown, had compromised the independence of an ancient kingdom. During the reign of Baliol, Johannes de Valloniis was sheriff of the county of Fife. In 1298, Edward having returned from Flanders, summoned the Scottish barons to attend a parliament at York,—an order which they had the spirit to refuse to obey. The consequence was the invasion of Scotland, both by sea and land, and the immediate landing of a body of English on the northern coast of Fife. These, however, were attacked by Wallace on the 12th of June, and completely defeated in the forest of Black-Ironside, or Earnside, near Lindores. In this battle Sir Duncan Balfour, Sheriff of Fife, who with the men of the county had joined Wallace, was killed. This Sir Duncan Balfour would appear to have succeeded Johannes de Valloniis, who held the office under Baliol. Immediately after the battle of Falkirk, Edward sent a division of his army across the Forth, into the shires of Clackmannan and Fife, which ravaged the country and burned the villages in the course of its destructive march. Fife, in consequence of the resistance made at Falkirk by Macduff and his vassals, was particularly obnoxious, and was delivered over to military execution. In the words of Hardyne, all was "clene brent." The city of St. Andrews was deserted by its inhabitants, and delivered over to the flames. In 1303, Edward having been freed from those

foreign wars which for several years had divided his attention, again turned his whole energies against Scotland. He marched a powerful army into the north, which the Scots were utterly unable to oppose. On his return, he arrived at Dunfermline on the 11th of December, where he was joined by his queen, and remained, making visits to different places in the country, during the remainder of the winter. "In that place," says Matthew of Westminster, an English historian, "there was an abbey of the Benedictine order, a building so spacious that three sovereigns, with all their retinue, might have been lodged conveniently within its precincts." Edward, with savage ferocity, caused his soldiers utterly to destroy the splendid buildings of this monastery.

A feeble show of resistance had till now been kept up by Comyn the governor; but he also was at length compelled to submit. At Strathore in Fife—obviously some place on the Ore water—he met with the earls of Pembroke and Ulster, and Sir Henry Percy, when a solemn negotiation was entered into. The number of those who joined the standard of Bruce was but few. The bishop of St. Andrews, however, and Robert Wishart, bishop of Glasgow, were among the first to give the example. Bruce proceeded immediately to Scone, where, upon the 27th of March, 1306, he was solemnly crowned by Lamberton. On the second day after the coronation, and before Bruce and his adherents had left Scone, they were surprised by the sudden arrival of Isabella, Countess of Buchan, the sister of the Earl of Fife, who immediately claimed the privilege of placing the king on the inaugural chair. This right, as has been stated, had belonged to the earls of Fife from the time of Malcolm Canmore; but the young Earl, though now of age, was of the English party, and at the court of Edward. His sister, therefore, a romantic and high-spirited woman, leaving her husband, joined Bruce, and claimed the privilege of her family. This ancient solemnity was of too much consequence in the eyes of the people for Bruce to refuse the lady's request; and accordingly, he was a second time installed in the sacred chair, by the hands of the Countess. Duncan, during the memorable year in which his sister maintained the ancient privilege of her race, was married to Mary de Monthermer, niece to Edward. He is styled by Sibbald the 12th earl; but it is obvious that this is a mistake, and that he should, even according to his computation, have only been the 11th. The Duncan whom Sibbald styles the 11th, it has been demonstrated by Lord Hailes, never could have existed. In 1317, Edward fitted out a fleet, and sailing into the frith of Forth, landed his troops at Donnybristle in Fife. The fighting men of the county would appear at this time to have still been with Douglas, who was then ravaging the English borders; for a general panic was created by this invasion, and the sheriff of the county had great difficulty in gathering together a force of 500 cavalry. With these he made an attempt to repel the invasion, but, intimidated by the superior numbers of the enemy, the sheriff's soldiers disgracefully took to flight. A spirited churchman, however, Sinclair, Bishop of Dunkeld, who had, like others of his time, as much of the soldier as the ecclesiastic about him, received notice of this desertion. Putting himself at the head of sixty of his servants, and with nothing ecclesiastical in his dress except a linen frock or rochet cast over his armour, he threw himself on horseback, and rode off to meet the fugitives. "Whither are you flying?" said he, addressing their leaders, when he came among them. "Ye are recreant knights, and ought to have your spurs hacked off!" He then seized a spear from the nearest

soldier, and calling out, "Turn for shame! let all who love Scotland follow me!" he furiously charged the English. Encouraged by his brave example, the Fifemen instantly rallied, and the attack was renewed. The English, who had not yet completed their landing, speedily gave way, and were driven back to their ships with the loss of 500 men, besides many who were drowned by the swamping of one of the vessels. On his return from Ireland, Bruce highly commended the spirit which Sinclair had shown, and declared that he should be his own bishop. Under the appellation of the king's bishop, this brave churchman was long afterwards affectionately remembered by his countrymen.* A son was born to the king at Dunfermline on the 5th of March, 1323, who, after a long minority, succeeded his father as David II. The poets of the time foretold of this prince, that, like his illustrious father, he would prove a man strong in arms, "who would hold his warlike revels amid the gardens of England;" a compliment which, however it might flatter the royal parents at the time, was unfortunately not destined to be prophetic. During the period of the invasion of England in 1327, under Randolph, Earl of Moray, and Sir James Douglas, the Earl of Pembroke landed in Fife, and stormed the castle of Leuchars. In 1329, the great Bruce, now broken down, not so much from age as from the effects of the labours and fatigues he had encountered during the early part of his varied career, died at Cardross; and was buried with great state and solemnity under the pavement of the choir in the Abbey-church of Dunfermline. A rich and splendid marble monument which had been made at Paris was erected over the grave. At the battle of Halidon-hill the Earl of Fife had again changed sides, and with his vassals fought in defence of his country. The carnage among the Scots at this battle was immense; and the probability is that the Earl of Fife was killed here. Sibbald says he was killed in 1332, but this is obviously a mistake, as he was taken prisoner at Dupplin moor, and again at Perth in that year. He was succeeded by his son Duncan, who was the last Earl of Fife, in the male line of their great ancestor Macduff. Notwithstanding the state to which the country was reduced after the defeat at Halidon-hill, several fortresses were still held out for David Bruce, and among these the castle of Loch Leven in Kinross, which was governed by Allan de Vipont. The Scottish regents, the Earl of Moray, and Douglas the knight of Liddisdale, encouraged by the successes they had gained, in 1335 called a parliament to meet at Dairsie in Fife. This strong castle, which was the residence of the bailies of the regality of St. Andrews, and which had been built or greatly strengthened by Lamberton, bishop of that see, was selected by the regents, not only from its security but from its retired situation, for the seat of this parliament, from the deliberations and resolutions of which great expectations were formed. It was attended by many powerful Scottish barons, but the overweening pride and ambition of the Earl of Athol embroiled its deliberations, and kindled animosities among the leaders. The Earl of Athol having made his pacification with Edward, was appointed regent under Baliol; but the few brave men who still maintained their independence, made choice of Sir Andrew Murray of Bothwell, the companion of Wallace, as their leader, and by him the Earl of Athol was attacked and slain. A par-

liament was then held at Dunfermline, at which Sir Andrew was unanimously chosen regent. On learning these events, Edward again invaded Scotland, wasting the country wherever he went; and for the purpose of more effectually keeping down the spirit of resistance, he maintained a powerful fleet in the frith of Forth, as well as on the east and west coasts. Sir Andrew Murray, upon Edward's departure, issued from his fastnesses, and several of the castles in possession of the English were wrested from them; among these were the castle of St. Andrews and the tower of Falkland. Assisted by the earls of Fife and March, the regent made himself master of both the town and castle of St. Andrews, after a siege of three weeks. In 1338, Scotland lost one of her best and truest supporters. The regent, now advanced in years, and worn-out with the fatigues of the constant warfare in which he had been engaged, died, and was buried in the abbey of Dunfermline, where Bruce and Randolph had been already interred. The command of the Scottish army now fell upon the Steward; and shortly afterwards he obtained, by the treachery of its defender, possession of the castle of Cupar, which the late regent had in vain attempted by force. By the exertions of the Steward the English were driven from the country, with the exception of some of the places of strength; and taking advantage of a short peace, he used every endeavour for the re-establishment of order and the distribution of justice. Industry began to revive, and by 1341, Bower says, the kingdom began to breathe anew: the husbandman was again seen at the plough, and the priest at the altar. In 1371, David died in the castle of Edinburgh; and the Steward ascended the throne under the title of Robert II. Betwixt 1353 and 1356, Duncan, Earl of Fife, died. He had been liberated from his imprisonment in England, previous to 1350, in which year, in fulfilment of a vow which he had previously made, he mortified the church of Auchtermuchty, to the monastery of Lindores: He was succeeded in his lands and honours by his daughter Isabella, who first married William Ramsay, who appears as Earl of Fife in 1356, having no doubt been created so on his marriage with the Countess. Her second husband was Walter Stuart, second son of Robert II. by Elizabeth More, daughter of More of Rowallan; and, for a third husband, she had Thomas Bisset, to whom David II. gives a charter in the thirty-fourth year of his reign, 1362, granting to him and his heirs male by Isabella, his Countess, the earldom of Fife, with all its pertinents. The Countess had no children by any of these three husbands, and appears, in consequence, to have been prevailed upon to resign the earldom of Fife to Robert Stuart, brother to her second husband, who was Earl of Menteith in right of his wife, and afterwards Duke of Albany, and regent of the kingdom during the absence of James I. During the early part of the reign of David II. we find John de Balfour, sheriff of Fife; and about 1360 David de Wemyss held that office. Up to this period, and indeed for fifty years afterwards, the sheriff held his courts in the open air, upon what was formerly called the Cam-hill, now the Moot-hill, at Cupar.

Robert II., the first of the family of Stewart who ascended the throne, was crowned king of Scotland in March 1371, with great solemnity, by the archbishop of St. Andrews. The male line of the ancient earls of Fife having, as already mentioned, become extinct; and Robert, the second son of the king, having succeeded to the earldom by agreement with the heiress of the last Earl Duncan, it is probable that the ancient ceremony of placing the king on the inaugural stone, which had arisen from the

* Lord Hailes, on the authority of Barbour, says, that the Earl of Fife commanded the Scots along with the sheriff on this occasion. Bower only mentions the sheriff as being present, and as the Earl of Fife was married to a niece of Edward I. and cousin of Edward II., it is improbable that he served against his relative. Indeed the Earl seems still to have had a regard for the interest of the English party.

privileges granted by Malcolm Canmore to Macduff, was now omitted for the first time. In 1385, France, anxious to attack England on her own ground, sent an expedition to Scotland under John de Vienne, Admiral of France, for the purpose of co-operating with the Scots. This experienced leader arrived in the Forth with 1,000 knights, esquires, and men-at-arms, the flower of the French army, besides a body of cross-bowmen and common soldiers, forming altogether an army of 2,000 men. He carried also with him 1,400 suits of armour for the Scottish knights, and 50,000 francs of gold, to be paid on his arrival to King Robert and his nobles. The Frenchmen were warmly welcomed by the Scottish barons; and every endeavour made to accommodate them with lodgings. This, however, was impossible to be effected in Edinburgh, and many of them were therefore lodged in Dunfermline, and other towns on both sides of the Forth. Loud and grievous outcries arose, in consequence, from the burgesses, farmers, and yeomen of Fife and the Lothians; and this dissatisfaction was increased by the behaviour of the French, who assumed a superiority of demeanour which the Scots could not tolerate. Various methods were adopted by the men of Fife and their neighbours on the other side of the Forth to get quit of their guests. All this is described by Froissart in his usual graphic and pleasant manner. "What evil spirit hath brought you here?" said the Scottish burgesses and peasantry to their unwelcome allies. "Who sent for you? Cannot we maintain our war with England well enough without your help? Pack up your goods and begone, for no good will be done as long as ye are here! We neither understand you, nor you us. We cannot communicate together; and in a short time we shall be completely rifled and eaten up by such troops of locusts. What signifies a war with England? The English never occasioned such mischief as ye do. They burned our houses, it is true; but that was all; and with four or five stakes, and plenty of green boughs to cover them, they were rebuilt almost as soon as they were destroyed." The French, however, were ill-treated by deeds as well as words. The country-people rose upon them, attacked and cut off their foraging parties; and before a month, a hundred of their men were slain, till at length none of them ventured to leave their lodgings. The Earl of Fife, accompanied by the Earl of Douglas, and by Archibald, Lord of Galloway, made an incursion at the head of 30,000 men across the Solway, and plundered the rich district of Cocker-mouth and the adjacent parts of Westmoreland, returning with great booty. King Robert was fifty-five years of age at his coronation; and at that time had lost much of the spirit of enterprise which he had possessed in his younger days. With his age, his indolence and his dislike to business increased, till at length the necessity of appointing a regent became apparent. John, Earl of Carrick, the heir to the Crown, had received a severe injury by a kick from a horse, and from bodily weakness was unable to execute the duties of such an office. The Earl of Fife, the king's second son, was therefore—more of necessity than choice—appointed regent of the kingdom in a parliament which was held at Edinburgh in 1389; and the king most willingly gave up farther interference in public affairs. The regent was an ambitious and designing man; and seems to have possessed a deep selfishness, which, if its objects were attained, scrupled little as to the means used for the purpose of attaining them. Agriculture seems to have been in a very deplorable condition in Scotland during the greater part of Robert's reign; a fact which may be attributed to the frequent interruptions of labour by foreign invasion, and the havoc

which necessarily attended the march of even a Scottish army through the country. The isolated situation of Fife, however, must have caused it to suffer less in this respect than the fertile districts lying on the south side of the Forth, which were on all occasions exposed to both the invading and defending armies. Commerce was on the increase; and the trade from the towns on the east coast with Flanders was conducted with enterprise and activity. A Scottish merchant of this reign, named Mercer, who had occasion for some time to reside in France, was in consequence of his great wealth admitted to the confidence and favour of the French sovereign. The cargo of a Scottish ship taken by the English was valued at 7,000 marks,—a very extraordinary sum when the period is considered. The home-manufactures, we learn from Froissart, who travelled in the country, were at this time in a very low condition; but this was to be expected, from the same causes which depressed agriculture. The principal exports still continued to be wool, hides, skins, and wool fells.

Robert III., who was crowned in August, 1390, and who possessed much of the character of his father, continued to intrust his brother, the Earl of Fife, with the government of the kingdom. A parliament held at Perth in April, 1398, the king created his eldest son David, Earl of Carrick, Duke of Rothsay, and his brother, the Earl of Fife, Duke of Albany.* Rothsay, now past his twentieth year, did not long submit to be governed by, or kept under the control of his uncle, Albany; and, before a year had expired, Albany was removed from the government, by a parliament held at Perth, and the Duke of Rothsay appointed regent in his stead, under the direction of a council of which Albany formed one. For the success which crowned this scheme, the unfortunate Duke of Rothsay was destined soon to pay very dearly; and the county of Fife was to be made the scene of an occurrence which, for barbarous cruelty, was totally unexampled even amid the "great and horrible destructions, herschips, burning, and slaughter," which the acts of parliament that appointed him regent declare to have been so common at this time. This was the plot which ended in the cruel death of that unhappy prince, at FALKLAND: which see. Albany was chosen regent by a parliament which assembled at Perth in 1407,—a declaration having been first made, that the Crown belonged of right to James, Earl of Carrick, then a captive in England, who was their lawful king. Peace with England was an important object with the regent; and although this proceeded from selfish motives, the period of quiet which ensued was extremely beneficial to Scotland.

The intercourse with England which was now going on, led to an attempt to propagate in Scotland the doctrines of Wycliffe the English reformer; and the flames of religious persecution were now to be kindled by the supporters of the Catholic faith. An English priest, named John Resby, appeared in Scotland in 1407, and was very active in propagating the doctrines of the reformer. For some time he remained unnoticed, but at length the truth, the boldness, and the novelty of his opinions roused the fears of the clergy. He was seized by Lawrence, abbot of Lindores, an eminent doctor of theology, and imprisoned at St. Andrews; after which he was brought before a council of the clergy, where this inquisitor was the presiding judge. He was accused of holding forty different heretical opinions; amongst which were,—his denying the Pope to be the vicar of Christ, or the successor of St.

* This is the first creation of dukes of which we have any account in Scotland.

Peter, and that none could claim to be so who led a wicked life,—and a contemptuous opinion of the utility of penances and auricular confession. Resby was considered by the people an excellent preacher, but his eloquence had little effect on his judges. His written opinions, and the arguments with which he supported them, were triumphantly confuted by Lawrence of Lindores; and this brave and good advocate for the truth and simplicity of the doctrines of Christ was condemned to the flames, and delivered over to the secular power for punishment. He was burned at Perth, with all his books and writings, in the year 1408. This is the first example of martyrdom for religious opinions in the history of the Scottish church; and it was followed by the usual effects of such exhibitions—increased zeal on the part of those who had adopted the denounced opinions. The regent had encouraged the persecution of Resby; and it is not unlikely that among the opinions of this reformer, there were some which regarded the origin and nature of the power of the civil magistrate and the rights of the people, which were disagreeable to his ears. In 1411, the university of St. Andrews was founded by the learned and worthy prelate Henry Wardlaw, Bishop of that see. To this good man belongs the immortal honour of having founded the first university in his native country—of being, as it were, the father of the infant literature of Scotland. The lady Doverguil, the wife of John Baliol, had established Baliol college in the University of Oxford, in the 13th century; and a Bishop of Moray had instituted the Scots college at Paris in 1326. It was reserved, however, for the enlightened understanding of Henry Wardlaw to afford the means of education to his youthful countrymen, without their being under the necessity of visiting foreign countries for the purpose of obtaining it. The names of the first professors have been preserved, and are worthy of being here repeated. Lawrence of Lindores—whose zeal for the Catholic faith has so recently been noticed—explained the fourth book of the Sentences of Peter Lombard. Richard Cornel, Archdeacon of Lothian, John Litstar, Canon of St. Andrews, John Sheviz, Official of St. Andrews, and William Stevens, afterwards Bishop of Dunblane, expounded the doctrines of the canon law, from its simplest elements to its most profound speculations. John Gill, William Fowles, and William Crosier, delivered lectures on philosophy and logic. These learned persons began their labours in 1411; but it was not till 1413, that the university received the full sanction and authority of the Pope.

James and his queen were crowned at Scone in 1424; nor was the ancient ceremony of placing him on the inaugural stone omitted. This was performed by the late governor, Murdoch, Duke of Albany, as Earl of Fife. Henry Wardlaw, Bishop of St. Andrews, the faithful prelate to whom his early education had been committed, had the satisfaction of anointing his royal master with the consecrated oil, and of placing the crown upon his head. Soon after this, the Duke of Albany, his second son Alexander, and his father-in-law, the aged Earl of Lennox, were tried, found guilty, and executed on that fatal eminence in front of Stirling castle, popularly called the Heading-hill. The earldom of Fife, with all its manors and castles, were forfeited to the Crown; and the castle of Falkland, which had been so long a principal residence of the ancient race of Macduff, now became a royal palace.—Notwithstanding the martyrdom of Resby, and the laws passed by James, at the instigation of the clergy, against heretics and Lollards, there were still many who secretly held these opinions. This seems to have become known to the citizens of Prague, who had adopted the tenets

of Wickliffe; and they became desirous of opening up an intercourse with their brethren in Scotland. They accordingly sent for this purpose Paul Cwawar, a Bohemian; he was a physician, and came to Scotland with letters which spoke highly of his eminence in his art. Undaunted by the fate of Resby, he seized every opportunity of disseminating the genuine declarations of the Bible, and of attacking the erroneous doctrines of the established church. Lawrence of Lindores, the arch-inquisitor, immediately arraigned him before his court, and entered into a laboured refutation of his doctrines; but in Cwawar he found a courageous and acute opponent. Deeply read in the sacred Scriptures, and having the power of quick and appropriate quotation, he was skilful in debate, and the inquisitor found the discussion no easy task. The Bible, Cwawar maintained, ought to be freely communicated to the people; in a temporal kingdom, he argued, the civil ruler should be above the spiritual power, and magistrates have a right to try and punish delinquent ecclesiastics and prelates. He declared purgatory to be a fable,—the efficacy of pilgrimages an imposition,—the power of the keys, the doctrine of transubstantiation, and the ceremony of absolution,—delusions and inventions of man. In the celebration of the Lord's supper, he and his adherents had departed entirely from the gorgeous and unmeaning ceremonies of the established church, and performed it with greater simplicity. Lawrence of Lindores, although he might be unable to confute, found no difficulty in his way in bringing to trial, and condemning the Bohemian physician; and as he refused to renounce his opinions, he was burned at St. Andrews, giving up his life for the truth with cheerful yet subdued resolution.

Kennedy, Bishop of St. Andrews, who had been the careful guardian, and afterwards the wise counsellor of James II., was intrusted with the chief management of affairs after his death; and certainly the choice could not have fallen on one better fitted for the task, either from probity, talents, or experience. But his death, which had been preceded by that of the queen-mother, left the kingdom again, exposed to turbulence and misrule. This prelate was in every respect a remarkable man; his charity was munificent, active, and discriminating; and his religion as little tinged with bigotry or superstition as the times in which he lived would allow. His zeal for literature was amply made apparent by the noble college (St. Salvator's) which he founded at St. Andrews in 1456, and which he very richly endowed out of his revenues. Patrick Graham, the uterine brother of Kennedy, a worthy man, and a prelate of primitive simplicity, was chosen to succeed him; but this was opposed by the Boyds, and by Sheviz, the archdeacon of St. Andrews, a talented, but unprincipled man, who had obtained great influence over the royal mind by his skill in judicial astrology. Sheviz procured him to be declared insane, and obtained the custody of his person. He was confined first in Inchcolm, and afterwards in the castle of Loch Leven, where he died, whereupon Sheviz received the object of his guilty ambition, in being promoted to the vacant see.—Scotland, during a great part of the reign of James III., enjoyed the advantage of peace with England; but, in 1480, a squadron of English ships appeared in the frith of Forth. These were bravely attacked, and repulsed by Andrew Wood, then of Leith, who was now beginning to rise into eminence. This great naval commander had previously rendered many services to James, both by sea and land, in peace and in war; for on the 18th of March, 1483, he received from the king a charter under the great seal, which on these grounds, and in particular for his eminent services in

the defence of Dunbarton, when the English came to besiege it, granted to him and his heirs in fee, the lands and village of Largo in Fife. This charter was confirmed by James IV. in 1497. Among other barons who rallied round the standard of James III. on the revolt of the nobles, was David, Lord Lindsay of the Byres, a veteran commander of great talent and loyalty, who had served in the French wars. He appeared with a body of 3,000 footmen and 1,000 horse, which he had assembled in Fife and Angus,—the latter forming the principal chivalry of these counties. In the battle which followed, and which was fought on the celebrated field of Bannockburn, in June 1488, these levies, under the Earl of Crawford, formed the centre-division of the army, which was commanded by the king in person. The army of James was much inferior in numbers to that of his opponents, yet they fought with bravery and determination. Their efforts, however, were vain, they were finally defeated, and the unfortunate monarch was obliged to seek safety in flight. Falling from his horse, he was much bruised by the weight of his armour, and was carried into a miller's cottage at a hamlet called Milton, where he was basely murdered, it is said, by a priest in the service of Lord Gray, one of the rebel lords. Wood refused for a time to give in his adherence to James IV. This, however, he at length did; and he ultimately became as loyal a servant and as great a favourite with the son, as he had previously been with the father. In the first parliament which met after the accession of James IV., a new arrangement was made for the preservation of the peace of the country, under which the care of the county of Fife was committed to Lord Lindsay of the Byres, and the sheriff of the county. The reign of James IV. was certainly the most brilliant period in the history of Scotland while a separate kingdom. The king patronised the useful arts and sciences, and in particular, navigation, which had hitherto been rather neglected by the Scottish monarchs. In the latter he was no doubt both assisted and encouraged by his brave commander, the knight of Largo, who had already done much to render the Scottish flag respected, and was destined still farther to increase its fame. England had begun to claim the naval pre-eminence it has now so long held, and its privateers had often made the trade of Scotland feel their power. Indeed the ships of England appear often to have entered the frith of Forth, and even there to have captured and plundered Scottish merchantmen.* The

* In a charter, of date the 14th May, 1491, James, in the consideration of the damage done to his subjects at sea, by the English and Dutch, grants the isle of Inchgarvie, between the Queen's ferries, to build a fortalice thereon, to John Dundas of Dundas; with the constabulary thereof, and the duties on ships passing. Dundas did not build the fort, which was afterwards erected in 1510 by the king; but the terms of this charter show the injury the trade of Scotland had previously sustained. About this period—though the exact date is not very clear—five English ships entered the frith of Forth, and seized and plundered several merchant-ships belonging to Scotland and to some of her allies. James and his council were indignant at the outrage, and eagerly desired to be revenged. Notwithstanding, however, their persuasions and promises of reward, none of the masters of the ships then in the harbours of the Forth would venture to attack the enemy; but Wood, on being applied to, readily undertook the enterprise. Amply furnished with men and artillery, Wood immediately proceeded with his two ships, the Flower and the Yellow Carvel, against the English, who were also well-appointed. He met his opponents opposite to Dunbar, and at once engaged with them, when a sanguinary and obstinate engagement ensued. The skill and courage of Wood at length overcame the superior force of the English; the five ships were taken and carried into Leith, and their commander presented to the king and council. Sir Andrew was well-compensated by James and his nobles for his valour, and to this was added the loud voice of public fame. The king of England (Henry VII.), indignant at the disgrace his flag had sustained, and that from a foe hitherto but little known on the sea, determined that signal punishment should be inflicted on the daring offender. He offered a large annual pension to any of his commanders who should capture the ships of Wood, and take him

success which had uniformly attended the naval enterprises of Wood, appears to have excited in James an ambition for possessing a fleet which should render Scotland more powerful at sea than she had ever been under her previous kings. Yet, although he used every exertion for this purpose, he was not always successful in his endeavours, nor in the means which he employed. Utility was sometimes sacrificed to splendour, and certainly never more evidently than in the building of a ship, called the Great Michael, of such enormous dimensions that Francis I. and Henry VIII. laboured in vain to imitate it.†

prisoner. But the naval skill, the valour, and the uniform success of Wood had now become so well known, that few of the English commanders of ships felt inclined to attempt the deed. At length, however, one Stephen Bull, an English officer, engaged to take Wood, and bring him to Henry, dead or alive. Appointed to three stout ships fully equipped for war, Bull sailed for the Forth, and, entering the frith, cast anchor at the back of the isle of May. Wood, in the belief that peace had been established with England, had, in the mean time, gone to Flanders as convoy to some merchants' vessels. Bull, afraid that any mistake might occur as to what he considered his destined prey, seized some fishing-boats, retaining the fishers on board his ship, that they might point out to him, when they arrived, the ships of the brave Sir Andrew. The English continued to keep a good look-out to sea, and at length one summer morning, immediately after sunrise, they discovered two vessels passing St. Abb's head at the mouth of the frith. The captive fishermen were hereupon sent to the topmast, to give their opinion of the ships in sight. At first, it is said, they hesitated to say whether the approaching vessels were Wood's or not, but on their liberty being promised them, they immediately declared them to be his. The English commander now ordered his men to prepare for engagement, and distributed wine among them. The gallant Sir Andrew meanwhile was entering the Firth, without the least idea of an enemy, till he perceived the three ships of England appearing from the shelter of the isle of May, prepared for combat. He instantly made similar preparations, and gave every encouragement to his men to meet the foe bravely. "These my lads," said he, "are the foes who expect to convey us in bonds to the English king; but by your courage, and the help of God, they shall fail! Set yourselves in order—every man to his station. Charge gunners! let the cross-bows be ready; have the limpets and fire-balls to the tops; and the two-handed swords to the fore-rooms. Bestout—be diligent—for your own sakes, and for the honour of this realm!" Wine was handed round, and the Scottish ships resounded with cheers. The sun having now arisen, fully displayed the strength of the English force; and the Scots saw the necessity of every precaution. By skillful management, Wood got to windward of the foe; and immediately a close and furious combat ensued, which lasted till night. The shores of Fife were, during the whole day, crowded with spectators, who, by their shouts and gesticulations, exhibited their alternate hopes and fears. At the close of the day, the combatants mutually drew off, and the battle remained undecided. The night was spent in refitting, and in preparations for the ensuing day. No sooner had morning dawned, than the trumpets sounded for the fray, and the battle was renewed, and continued with the greatest obstinacy. The ships closely continued together, floated unheeded by the combatants, and, before an ebb-tide and a south wind, drifted round the east coast of Fife till they were opposite the mouth of the Tay. But the seamanship of Wood, and the valour of the Scottish sailors, at length prevailed, and the three English ships were captured, and carried into Dundee, where the wounded of both parties were landed, and every attention paid to them. The unfortunate English commander was afterwards taken to Edinburgh by Wood, who presented him to the king. James had then an opportunity of displaying that nobleness of mind, and royal magnificence, which in him, always conspicuous, was sometimes carried to a fault, but which endeared him to the people of Scotland. He bestowed gifts upon Bull and on his people, and freeing them, from any ransom, sent them home with their ships as a present to the English king.

† This celebrated vessel was larger and stronger than any ship England or France had ever possessed. Large quantities of timber were brought from Norway for the purpose of building her, after the oak forests of Fife, with the exception of that of Falkland, had been exhausted in her construction. Numbers of foreign and Scottish carpenters were employed in the work, under the almost daily inspection of the king himself, and at the end of a year and a day, the Great Michael was ready to be launched. She was 240 feet in length, but disproportionately narrow, being only 36 feet across the beams. Her sides were 10 feet thick, and were obviously meant to defy the power of any artillery which could be brought against her. The expense of the construction of this vessel, exclusive of her furnishings of artillery and ammunition, is estimated at £7,000—a very large sum for the period, and for the limited income of James. The cannon carried by the Great Michael was, very disproportionate to her size, amounting only to 36, with three of a smaller size. Her crew consisted of 300 sailors, 120 gunners, and 1,000 fighting men. The whole was put under the charge of Sir Andrew Wood, and of Robert Barton, another eminent Scottish mariner of the period. Lindsay of Pitcottie

The Scottish kings had always maintained their right to nominate to vacant sees and abbacies, notwithstanding the Papal pretensions to this power. But the minority of James V. seems to have occasioned applications to Leo X., who then occupied the papal chair, with regard to the vacant benefice of St. Andrews. The queen-dowager supported the claim of her own relation, Gawin Douglas, afterwards bishop of Dunkeld, and one of the early ornaments of Scottish literature. His servants had seized possession of the archiepiscopal castle at St. Andrews, and he for a brief period maintained that fortress. The chapter of St. Andrews met, in the mean time, and elected Hepburn, the Prior, to the office, who immediately besieged the castle, and, being favoured by most of the nobility, gained possession of it. The Earl of Angus, who favoured the claim of his kinsman, the excellent Douglas, set off with 200 horse to rescue this important fortress from the archbishop-elect; but he was too late in arriving, and Hepburn for a short time held the castle, and nominally the rank of primate of Scotland. To put an end to this unseemly dispute, the Duke of Albany obtained the dignity to be conferred on Andrew Forman, Bishop of Moray, an artful and avaricious prelate. In 1522 the see of St. Andrews became vacant by the death of Archbishop Forman, and James Beaton, the Bishop of Glasgow, who had been chancellor of the kingdom, received the appointment. In September, 1526, the Douglasses having defeated their opponents at Linlithgow, advanced into Fife, and pillaged the abbey of Dunfermline, and afterwards the castle of St. Andrews; but the Archbishop had fled. "They could not find the Bishop," says Lindsay of Pitscottie, "for he was keeping sheep on Bogrianknowe, with shepherd's clothes upon him, like as he had been a shepherd himself." By gifts, however—which his wealth well-enabled him to bestow—the primate of St. Andrews effected an apparent reconciliation with Angus; and at the festival of Christmas, in 1527, he entertained the king, the queen-dowager, Angus, and others of the Douglas party, at his castle of St. Andrews. There, says Lindsay, he "made them great cheer and merriness, and gave them great gifts of gold and silver, with fair hawkneys and other gifts of tacks and steedings, that they would desire of him, that he might pacify their wrath therewith, and obtain their favours. So the king tarried there a while quiet, and used hawking and hunting upon the water of Eden."—When, in 1538, a second marriage was contracted betwixt James V. and Mary of Guise, daughter of the Duke of Guise, and widow of the Duke of Longueville, conducted by an admiral of France and the Lord Maxwell, this princess left her native shores, and landed at Balcomie, near Fifeness, from which she proceeded on horseback, towards St. Andrews, where the king, with many of his nobles, was then residing. Hearing of her arrival, he immediately rode forth to meet her, accompanied by his nobles, several dignified clergymen, and many barons, lairds, and gentlemen, all magnificently dress-

ed. A splendid pageant had been prepared, after the quaint fashion of the times, by Sir David Lindsay of the Mount, the Lord-lyon, in honour of her. At the abbey gate a triumphal arch was erected, beneath which she had to pass; and above it was a painting representing a cloud. On her approach the cloud opened, "and there appeared," says Lindsay of Pitscottie, "a fair lady most like an angel, having the keys of Scotland in her hands, and delivered them to the queen, in sign and token that all the hearts of Scotland were open to receive her Grace." An oration was then delivered to her by Sir David Lindsay, "instructing her," says the same curious historian, "to love her God, obey her husband, and keep herself chaste, according to God's will and commandments." She then passed on to the palace, which had been prepared for her, and "which was well decorated against her coming." The ceremonies of religion were not wanting on this great occasion. High mass was performed in the church: several bishops, abbots, priors, monks, friars, and canons-regular assisting at the ceremony. The queen dined with the king in the palace where he had been residing, and the remaining part of the day was spent in festivity and mirth. Next morning, the queen made a progress through the city, and examined the cathedral, the monasteries, and the three colleges. The provost and "the honest burghesses" were introduced to her, and she was attended, as on the former day, by the king, the nobles, and the gentry who had come to welcome her. After the marriage-ceremony had been performed with great pomp, the day was again spent in amusement; and the festivities were continued at St. Andrews for forty days. In the mornings the amusements were, jousting in the lists, archery, hunting, and hawking; and in the evenings, dancing, singing, masking, and plays. In little more than a year after this festive occasion, James Beaton, the proud prelate of St. Andrews, and the determined enemy of the Reformation, died. But this proved no respite to the persecution of the reformers; for he was succeeded in his office by his nephew David Beaton, who perished at last by the hands of the avenger of blood, as related in the article ST. ANDREWS.

The length of time which the murderers of Beaton had been enabled to hold out the castle of St. Andrews against the regent, and the armistice which they had secured for themselves, had a very favourable effect on the progress of the Reformation, as it enabled them to afford protection to several of the Protestant preachers. Among these John Rough, originally a monk, had acted as chaplain to the garrison, and was met there by John Knox, the great apostle of the Reformation, when he visited the castle after the conclusion of the armistice. It was here that, on the suggestion of Rough, Knox was first called to the ministry, and first began publicly to deliver his addresses on the antichristian nature of the Papal power. Sir David Lindsay of the Mount, and Henry Balnaves of Halhill, were among the eminent reformers, who, although innocent of any connection with the death of the Cardinal, had been forced to seek refuge in the castle. Sir David's tragedy of Cardinal Beaton is said by Chalmers to have been written in 1546, and the probability is, that it was written in the castle. In 1559 John Knox made a preaching-tour in Fifeshire. He preached at Crail, and, as at Perth, the effect of his discourse was, that the people pulled down the altars, images, and all other monuments of idolatry in the town. At Anstruther his preaching produced the same effect; and he then determined that the cathedral of Saint Andrews should be the next theatre of his exertions. The Archbishop, with 100 men-at-

seems to have had his doubts whether his readers would believe his account of the size of this great ship, which, as he says, "cumbered Scotland to get her afloat." To set all doubts at rest, therefore, he adds, "and if any man believe that this description of the ship be not of verity, as we have written, let him pass to the gate of Tullibardin, and there afore the same, ye will see the length and breadth of her planted with hawthorn by the wright that helped to make her." As evidence of her great strength, he further says, "when this ship past to the sea, and was lying in the road, the king gart shoot a cannon at her, to essay if she was wight; but I heard say, it deaved her not, and did her little skaitin." Notwithstanding the expense incurred in her construction, we do not find that this great ship was ever of much use, or that for some years she had sailed from the frith of Forth. The Great Michael was purchased by Louis XII. on the 2d of April, 1514, for 40,000 livres, from the Duke of Albany, who sold it in name of the Scottish government.

arms, threatened to destroy him if he made the attempt. The Regent with her French troops was at Falkland, a distance of about 18 miles. His friends, therefore, afraid for his safety, endeavoured to persuade him against the attempt; but neither threats, danger, nor friendship could prevail. He declared that he could not in conscience decline preaching, and that he would preach, whatever the result might be. The Archbishop, fearing the result, left the city on the morning of the day on which Knox had determined to preach, and proceeded to Falkland to the Regent, that he might represent to her the necessity of effectually resisting the lawless proceedings of the enemies of the church. Before the evening of that day the fervid eloquence of Knox had its usual effect. All classes of the people, even the very magistrates, were excited; and the most magnificent of cathedrals, already time hallowed, and on which the wealth of provinces had been expended, was laid in ruins. The other churches were also deprived of their ornaments and decorations, and the monasteries of the Franciscans and Dominicans destroyed. The Regent, although not altogether reconciled to the Archbishop, listened with interest to the account he gave of the excesses which had been committed; and the necessity of exertions being made to repress further outrage, produced a reconciliation between them. To anticipate the Congregation—who had not yet called together the force they had so lately dismissed—the Regent immediately issued a mandate for collecting her own troops, and sent messengers to the adherents of the government in Fife, requesting them to assemble with their followers at Cupar. The lords of the Congregation were equally urgent in their measures. Earnest representations were despatched to their friends for assistance; and they instantly marched for Cupar, although only attended by a hundred cavalry, and the same number of infantry. No time was lost by their adherents in flying to their aid, and by the following morning they were joined by an army of three thousand men, many of whom had come from distant counties. Lord Ruthven brought to them all the men he could possibly muster; the Earl of Rothes, hereditary sheriff of Fife, declared in their favour; the towns of St. Andrews and Dundee sent their most effective men; and Cupar poured forth its population to defend itself and aid the general cause. An army had also been collected by the Regent at Falkland, which marching from thence early on the morning of the 13th June, 1559, encamped upon an eminence in the neighbourhood of Cupar, called the Garliebank. The Congregation stationed their troops—the command of which had been assigned to Halyburton, the provost of Dundee—on the high ground called Cupar-muir, to the west of the town; and so posted their ordnance as to command the surrounding country. Their little army was disposed so as to appear to the best advantage, and to consist of a greater force than it really did. Lord Ruthven with the cavalry formed the van; the main body, commanded by the other lords, and consisting of troops collected in Fife, Angus, Mearns, and the Lothians, formed the centre. The rear was composed of the burgesses of Dundee, St. Andrews, and Cupar. Behind them, at some distance, the servants and followers of the camp were so placed as to give them the appearance of an auxiliary band. The army of the Regent consisted of 2,000 Frenchmen, under D'Oysel, and about 1,000 native soldiers, commanded by the Duke of Chatelherault. The small river Eden, winding through the low marshy ground which divided the eminences on which they were respectively stationed, separated the two armies, which for some time during the morning were rendered almost invisible to each other by a thick fog which rose from the river

and marshy ground. The commanders of the royal force, when they left Falkland, had had no idea that they would meet with opposition; and were therefore much astonished when they learned the strength of the army the lords of the Congregation had brought against them, and the skilfully selected position which it occupied. A truce for eight days was after considerable discussion agreed to, on the condition that the French troops—with the exception of a small number who had lain for some time in the towns of Dysart, Kirkealdy, and Kinghorn—should immediately be transported into Lothian; and that, before the expiration of the eight days, the Regent should send certain noblemen to St. Andrews, to adjust finally with the lords of the Congregation the articles of an effectual peace. This truce, made at Garliebank, was subscribed by the Duke of Chatelherault and D'Oysel, for the Regent; and the Regent so far kept her word on this occasion that she sent her French troops and artillery across the Forth; but the reformers waited in vain at St. Andrews for the appearance of the commissioners. During this time the Protestant inhabitants of Perth endured the greatest sufferings from the garrison which had been left there. The Regent was respectfully but earnestly requested to withdraw this garrison, according to her previous agreement to do so, but no attention was paid to the request. It was therefore resolved to expel the garrison by force, and thus to relieve the inhabitants of the fair city. The lords of the Congregation buckled on their armour; and again the men of Fife, Angus, Mearns, and Strathearn, formed an army, and, in the month of June, marched upon Perth. The Earl of Huntly, chancellor of the kingdom, now hastened to entreat the lords to delay besieging the town for a few days; but he was told that it would not be delayed even an hour; and that if one single Protestant should be killed in the assault, the garrison should be put indiscriminately to the sword. The garrison were twice summoned to surrender, but they refused to do so; and the batteries of the Congregation were opened upon the town. At last the garrison offered to surrender within twelve hours, upon condition that they were allowed to retire with military honours. These terms were accepted, and the town was thus restored to its liberties, and the exercise of the reformed religion, without blood being shed. Excited by this success, and learning that the Bishop of Moray, against whom they had a peculiar dislike, on account of his activity in bringing Walter Mill to the stake, was at Scone, a number of the reformers went to that abbey to express by acts of violence their feelings toward him. The leaders used every exertion to preserve the building in which so many of the Scottish kings had been crowned, but in vain. Even the eloquence of Knox, who here exerted himself to preserve the buildings, was unavailing. The palace and abbey were destroyed; and while the flames were ascending, an old woman was heard to exclaim:—"See now, the judgments of God are just! No authority is able to save where He will punish."

A Frenchman, of the name of Chatelard, a gentleman, a soldier, a scholar, and a poet, had visited Scotland in the train of Mons. d'Amville, at the time of Mary's arrival from France. After his return to his own country, he had thought proper again to visit Scotland, where he arrived in November, 1562; and as he had letters from several of her friends and relations, he was well received by the Queen. He continued at court till the 12th of February, 1562-3, when he was discovered concealed in the Queen's bed-chamber, having his sword and dagger with him. The circumstance was concealed from the Queen till the morning, but, on learning it, she commanded him

to leave the court; and immediately afterwards she left Edinburgh for Dunfermline, where she remained all night. On the 14th she went to Bruntisland, where she slept. Chatelard, notwithstanding the commands of the Queen, followed her to Fife, and arrived in Bruntisland the same day. On her retiring to her chamber for the night, Chatelard forced his way in immediately after her, and presented himself before her, for the purpose, as he said, of clearing himself from the imputation made against him for his previous conduct. The Queen instantly called out for help, and the Earl of Murray entered. Mary, in her agitation, desired Murray to put his dagger into him, but he ordered him into confinement, reserving him to be punished in due course of law. The chancellor, the justice-clerk, and other counsellors, were sent for from Edinburgh, and a few days afterwards the wretched man was tried and condemned at St. Andrews. On the 22d of February he was executed there, "reading over on the scaffold," says Brantome, "Ronsard's Hymn on Death, as the only preparation for the fatal stroke." During the time of this trial and execution, Mary resided at St. Andrews. She had left Bruntisland for Falkland the day after the occurrence with Chatelard. On the 16th she dined at Cupar, and the same evening proceeded to St. Andrews, where she remained till the 18th of March. While there she was much grieved at hearing of the assassination of her uncle, the Duke of Guise; and to relieve her melancholy she went to Falkland, where she enjoyed the sports of the field for some days, after which she returned to St. Andrews, dining at Cupar both in going and returning. Leaving St. Andrews she returned to Falkland on the 3d of April, where, as well as at Lochleven, she spent some time in hunting and hawking. On the 15th of April, 1563, she left Lochleven, and dining at Strathhenry, rode to Falkland. Next day she dined at Newark, and in the evening she proceeded to Cupar, where she remained all night. In the afternoon of the 17th, she left Cupar for St. Andrews, where she continued to reside till the 16th of May. A great part of her train then left her, and proceeded to Edinburgh, by Kinghorn. She left St. Andrews the same day, and slept at Cupar, from whence she proceeded next day to the neighbourhood of Markinch, where she dined. She passed the night at Bruntisland, and in the morning crossed to Leith, and from thence came to Edinburgh, after an absence of nearly four months. In January, 1564-5, Mary passed over to Fife, where she amused herself with her usual sports, sometimes at Falkland, and sometimes at St. Andrews. In the month of February she was followed by Randolph to St. Andrews, who again attempted to renew the proposal of the marriage with Leicester. Of her manner of life at this time a very particular account has been preserved in a letter from Randolph to his mistress. "Her Grace lodged," he says, "in a merchant's house; her train were very few; and there was small repair from any part." She invited Randolph to dine and sup at her table while he remained, so that his opportunities of observation were very particular. After he had continued to attend her for some days, he at length broached the subject he had in charge from his mistress; but Mary appears, with much skill and tact, to have evaded the subject. "I sent for you to be merry," said she to the wily diplomatist, "and to see how like a Bourgeois-wife I live, with my little troop; and you will interrupt our pastime with your great and grave matters. I pray you, Sir, if you be weary here, return home to Edinburgh, and keep your gravity and great embassy until the Queen come thither; for, I assure you, you shall not get her here, nor I know

not myself where she is become; you see neither cloth of estate, nor such appearance, that you may think that there is a Queen here; nor, I would not that you should think, that I am she at St. Andrews, that I was at Edinburgh." He farther describes her as passing her time in agreeable and lively conversation; and in riding out after dinner. Finding nothing could be made of his residence at St. Andrews, Randolph returned to Edinburgh, and about this time the young Lord Darnley also arrived there. Mary also left St. Andrews on the 11th of February, and next day came to Lundy, on the south coast of Fife. On the 13th she rode to Wemyss, then the residence of the Earl of Murray; and three days after, Lord Darnley learning where she was, crossed the Forth, and for the first time visited her there. He seems to have been well received by her, and was lodged in the castle. "Her majesty," says Sir James Melville, [*Memoirs*, p. 111,] "took very well with him, and said, that he was the properest and best-proportioned long man that ever she had seen." Darnley remained some days at Wemyss castle.

After Mary's surrender at Carberry she was sent a prisoner to Lochleven castle, the residence of William Douglas, the brother uterine of Murray, and the presumptive heir of Morton. She was conveyed to her place of confinement by the Lords Ruthven and Lindsay of the Byres, under an armed escort, and placed under the surveillance of the brother of Murray, whence she effected her escape on the 2d of May, 1568: see article *LOCH LEVEN*.

James VI. seems to have been suspicious of the attention paid to his Queen by the Earl of Murray, the heir of the late Regent, a young nobleman of great promise, and who was popularly styled "the Bonny Earl of Murray." Under the pretence that he was suspected of having aided Bothwell in his attempt upon the palace, Huntly, who was the enemy of Murray, surrounded his house of Donnibristle in the month of February, 1592, and set it on fire. Some of the followers of Murray were put to death, and others yielded. The unfortunate Earl himself fled toward the shore, intending to cross the Forth in a boat; but he was overtaken by a determined assassin, Gordon of Buckie, who wounded him desperately in the face. The Earl had just strength left to say with a last effort of expiring vanity, "Ye have spoiled a better face than your own!" when he died. Whilst James was employed in diplomatic endeavours to strengthen his right to succeed Elizabeth, and at a time when all parties concurred in promoting his interest, when the church had ceased to interfere with the exercise of his authority, and when the feuds among the nobility were gradually subsiding, an incident occurred, which has never properly been explained, and which had nearly deprived the king of his life, and involved the whole island in civil war. This was what has been called the Gowrie conspiracy, the principal actors in which, were the Earl of Gowrie, and his brother Alexander Ruthven, sons of that Earl of Gowrie who was put to death in 1584 for treason. It has been very generally disputed whether any plot existed against the king. The clergy at the time expressed more than doubts upon the subject; and did not hesitate to charge James with a plot against the Ruthvens. What motive the young men could have to destroy the king, has been a question often asked; and it has been equally often said, that if a plot indeed existed on their part, it was one of the worst constructed upon record. James himself published a narrative of the circumstances which occurred, and the following account is the substance of his statements. On the 5th of August, 1600, he was at his palace of Falkland, enjoying his favourite amusement of hunting. At an early hour in the

morning he had mounted, with his suite, and was proceeding in search of game, when he met Alexander Ruthven, who with great confusion but earnestness of manner informed him that he had seized a suspicious fellow, who had under his cloak a large pot full of money, and that he had detained him for his Majesty's examination. To one so needy as James always was, money was an irresistible bait; besides that he conceived the person to be an agent of the pope or the king of Spain. Though not altogether satisfied, he was persuaded by his informer to ride without attendants to the Earl of Gowrie's house at Perth, where the bearer of the treasure was alleged to be kept in custody. They entered the castle by a private way, and ascended a dark staircase to a small obscure room, where they found a man standing, armed at all points. Ruthven now suddenly altered his behaviour, and told the king that as he had slain his father, he must now die to expiate the offence. James reasoned with him, defended his conduct, and so far staggered his opponent, that he left the room; but he soon returned, denouncing death to the king, and, endeavouring to tie his hands, held a dagger at his breast. The armed man who had been reasoned by the king into an agony of terror, stood trembling by, when James, exerting his utmost strength, overpowered Ruthven, and gained a window, whence he called to his attendants, who forced their way in, relieved the king, and put both the Earl of Gowrie and his brother to death. Such was the tale told by the king, but it met with slow and unwilling belief. The Ruthvens are represented as talented and learned young men, of popular and engaging manners. The Earl was looked upon as rising to be the head of the popular party, and was beloved by all, especially by the clergy, who cordially disliked James for his exertions to curb the unconstitutional power which they had assumed. With great difficulty the clergy were persuaded to publish from their pulpits the king's narrative of the plot; but at length all acquiesced except Robert Bruce, who had been honoured with officiating at the coronation of the queen. That sturdy and implacable demagogue, in spite of all the king's arguments, absolutely refused his assent to the royal tale, and was banished into England for his scepticism. Parliament was more courtly in its powers of belief, and immediately proceeded to attain and forfeit the estates of the Ruthvens; declaring the name to be infamous, and appointing an annual day of thanksgiving to be held for the king's escape.

The accession of James VI. to the crown of England, and the removal of the court to London, by weakening the connection with France, and causing the nobility and gentry to reside much in London, gave a new blow to the prosperity of Scotland, and more especially to Fife, and the rest of the eastern coast. The rebellion against Charles gave rise to a protracted struggle, during the continuance of which, neither trade, manufactures, nor agriculture, could flourish. In the dissensions thus created, the inhabitants of Fife took an active part, and had their own share of the calamities which ensued. The fatal battle of Kilsyth was most injurious to this county. "Three regiments from Fife," says Dr. Adamson, in his notes to Sibbald's History, "perished almost to a man. Most of the principal traders, and shipmasters, with their seamen, besides a multitude of the people of all classes, were engaged in that most disastrous enterprise." The tyranny of Charles II., and James VII., and their attempt to force Episcopacy on the Scottish nation, created an accumulation of misery in Fife, as well as in other counties of Scotland, which must have prevented the possibility of any attempt to improve commerce, or encourage

manufactures. The Revolution of 1688 might have been expected to produce a favourable change, yet it did not do so. A long-continued and severe famine quickly followed, and exhausted almost every resource the country possessed. The imposition of duties ruined the trade with England in malt; and the same cause destroyed the trade which had been carried on in salt. The still existing ruins of malt-barns and steepes, and of salt-pans, show the extent of the injury these impositions here produced. The jealousy of the merchants of England, and the favour shown them by the government of William III., was an additional injury, and an additional preventative to Scotch exertion. At the commencement of the 18th century, this jealousy had a most ruinous effect on an already nearly ruined country; for to its existence must, in a great measure, be attributed the utter failure of the Darien expedition. To this splendid conception of founding a colony at the isthmus of Darien, Scotland looked for a source of wealth, and the means of restoring her ruined fortunes. Every family of respectability in Fife and in the other midland and southern counties of Scotland was involved in this ill-fated adventure, and its total failure spread misery and dismay throughout the land. Such were some of the causes which, after the death of James IV., not only prevented any farther increase in the prosperity Scotland had enjoyed during his reign; but which may be said, until comparatively recent times, by gradual degrees to have almost entirely annihilated the trade and commerce of Fife and the eastern coast; whilst in the west country these causes retarded the commercial efforts of the people, and for a length of time rendered the prospect of success in any branch of industry apparently hopeless.

FIGGETWHINS. See DUDINGTONSTONE.

FILLAN (THE), a rivulet in the extreme west of Perthshire. It rises on the side of Benloy, on the water-shedding mountain-line which forms the boundary with Argyleshire; and, after having flowed $1\frac{1}{2}$ mile eastward, 1 mile northward, describes over a distance of $7\frac{1}{2}$ miles the arc of a circle, with the convexity toward the north, and falls into the west end of Loch Dochart. Its entire course of 10 miles is in the parish of Killin; and most of the course is through a valley to which the stream gives the name of Strathfillan. As Loch Dochart emits at its west end the chief stream by which its superfluent waters are poured into Loch Tay, the Fillan is usually and correctly regarded as the head-water of the magnificent river to which Loch Tay, in discharging eastward its receipt of waters from the west, gives name. On the north bank of the Fillan, near Auchtertyre, stand the ruins of St. Fillan's church.

FILLAN (ST.), a village at the east end of Loch Earn, in the centre of the parish of Comrie, Perthshire. A range of about 50 houses, almost all slated, one story in height, ornamented in front with ivy, honey-suckle, and other parasites, and receding from enclosed plots of laurel, and various shrubbery and flowers, stretches chiefly along the river and partly along the side of the lake. At the west end are some very neat houses with large gardens in front; and in their vicinity are an inn and the St. Fillan's Society hall. The village is probably the most pleasant, as to both appearance and situation, in the Highlands of Scotland. The St. Fillan's Highland society, established in 1819, and possessing at present about 60 members and a capital of about £100, holds an annual prize-exhibition, toward the end of August, for athletic exercises. The scene of manly sport and trials of strength, is a level green fronting the village, at the base of an isolated, grass-clad, terraced eminence; and usually attracting a large concourse of persons—many of whom appear in Celtic

costume—is not a little animated and interesting. St. Fillan filled, in the days of his mortality, the office of prior of Pittenweem, and afterwards was the favourite saint of Robert Bruce; and a relic of him was carried in a shrine by Maurice, abbot of Inchaffray, at the battle of Bannockburn. His well, at the village, was long believed to have miraculous power over disease, and even yet is viewed by the superstitious Highlanders as possessing saintly virtue. In 1818, a poor Highland emigrant carried with him to America, a curious relic, traditionally believed to have been the head of the crosier used in office by the abbot Maurice, who administered the eucharist to King Robert Bruce and his nobles previous to the memorable battle of Bannockburn. It is said to have been preserved in the family of the possessor ever since the death of St. Fillan, which took place in 649, and was confirmed to them by James II., in letters of gift, dated at Edinburgh, the 11th July, 1437; which letters were registered in the books of council and session on the 1st of November, 1734. The relic itself is called in these letters of gift a Quegrich. It is about 12 inches long, in the form of a shepherd's crook, of solid silver, gilt and neatly carved; in front is a large pebble, and the figure of our Saviour on the cross.

FINCASTLE, a district in the shire of Perth, 15 miles distant from Dull, to which parish it formerly belonged; it is now annexed to the parish of Tendamry. It stretches along the northern bank of the Tummel; and is said to take its name from the great number of old castles with which it abounds. It gives the title of Viscount to the Earl of Dunmore.

FINDHAVEN. See **FINHAVEN**.

FINDHORN (THE), a river in the counties of Inverness, Nairn, and Moray. It rises in the Mo-nad-leadh hills, between Strathdearn and Stratherrick, in Inverness-shire; and flows in a north-easterly though not very straight course, through part of Inverness, Nairn, and Moray shires, to a loch, or arm of the sea, called Findhorn harbour, in the Moray frith, at a distance of 60 miles in direct extent from its source, increased, by its windings, to 30 miles more. It runs, to a considerable extent, nearly parallel with the river and the strath of Nairn. Struggling on through many opposing barriers of granite mountains, it rushes through the narrow gorges with boiling and tumultuous current;—now reposing its still waters in some round sweeping dark pool, and now patiently but assiduously wearing its way through the dark red sandstone cliffs, which jut out from its channel, or range, in layer above layer, forming high barriers on its banks, while plants, and shrubs, and lofty trees, crown and encompass the steep heights, and finely contrast their variegated green with the deep red of the cliffs on which they grow. Here, in some overshadowed dells, where the sun with difficulty penetrates, we find the solitary eyries of the eagle, or the falcon, with the dwellings of the congregated heron, thickly perched among the trees, while the ascending salmon rest, by dozens, during the summer's noonday heat, in the deep dark pools beneath. As the stream winds towards the sea, its course becomes less interrupted and boisterous: it now sweeps along fertile meadows, and wooded copses, till, at last, all opposition giving way, it flows out into a broad, still, placid, sheet of water, meeting the tides of the ocean half-way up the smooth and sandy bay of Findhorn. A low and level district surrounds its estuary; and, during the ever-memorable floods of August, 1829, such was the rapid rise of the stream, then swelled into another Amazon, that the whole plain, to the north and west of Forbes, became one sea of waters,

so that a large boat in full sail swept along the fields to within a few yards of that burgh! From its sudden speats, without the slightest warning, rushing in upon the fords, and overflowing all its banks, this river is, perhaps, the most dangerous one in Scotland;—a notoriety to which it is fully entitled from the frequent falls of its bridges, and the injuries done, almost every year, along its banks, as well as on the low grounds near its mouth. It is crossed only by three bridges,—one at Forbes, a second at Dulsie, and a third on the military road from Inverness to Aviemore. The scenery on this river, in its course through Moray, is the finest in the county; and on its romantic banks are situated a succession of gentlemen's seats, among which are Altyre, Logie, Relugas, Dunphail, Kincorth, and Tannachy. There is an excellent fishing of salmon in the Findhorn. "The quantity of salmon, exported from Forbes," observes the author of the *Old Statistical Account of Forbes*, "upon an average of ten years, from 1773 to 1783, was about 300 barrels, annually, besides the home-consumpt, which is not very considerable. Since the year 1783, the quantity of salmon taken is considerably less; but last year, 1792, the fishing of the Findhorn has been much more productive than for several years preceding. The price of salmon is 4d., and for trout 5d. per lb." Since that period the fishing has varied greatly; but the average of 12 years, from 1813 to 1824, was 156 barrels of salmon, and 77 barrels of grises. This river is navigable for boats no farther than the tide flows; "but did the increase of commerce and manufactures require it," observes the writer above quoted, "there is no place where a canal might be more easily made." See article **FORRES**.

FINDHORN, or **FINDHERN**, a small sea-port town, in the parish of Kinloss, Morayshire, situated at the mouth of the river Findhorn, on a point of land which is rendered peninsular by the harbour of Findhorn on the west, and the bay of Burgh-head on the east. It is distant 5 miles north of Forbes, to which, as well as, in some measure, to Elgin, it is considered as a sea-port. It has a tolerable foreign and coasting-trade: exporting salmon, grain, and other goods, and importing coals, groceries, and manufactured goods. It was long celebrated for curing and drying haddocks in a peculiar way, universally known as Findern speldings. The village has changed its site more than once. It formerly stood a mile to the north-west of the present one, but was swallowed up, in one tide, by an inundation of the sea and river, in 1701, and the place where it then stood is now the bottom of the sea. The entrance of the river Findhorn itself to the sea, being formerly two miles to the westward of its present situation, was shifted, and the ancient town of Findhorn said to be swallowed up, by the drifting sands of Culbin:—see article **DYKE**. The present village is still beset with sand-banks, which are continually shifting, with a heavy surge in general beating on them. A piece of land, here called Binsness, has been already destroyed, and fears have been entertained that the village itself must again be deserted.

FINDOCHTIE, a small fishing-village, in the parish of Rathven, Banffshire, west of Cullen. It was made a fishing-station in 1716.

FINDON, or **FINNAN**, a fishing-village and harbour in the parish of Banchory-Davenick, about 6 miles south of Aberdeen. It is celebrated for its dried fish, called Finnan haddocks. These are prepared, by smoking, in a peculiar manner; and the process is said to be so expeditious, that the fish is sometimes presented at table, in Aberdeen, 12 hours after it has been caught. So soon does the Finnan haddock lose its fine and delicate flavour, that they

cannot be exported to any distance. They are much in demand in Aberdeen, and all the surrounding district, but cannot be transported even to Edinburgh without detriment to their excellence.

FINGASK, a fine old mansion in the parish of Kilspindie, Perthshire, the seat of Sir Peter Murray Threipland, Bart. It is situated in a picturesque opening in the Gowrie hills and commands a very fine view. Fingask was remarkable in the last century for the Jacobitism of its proprietors. Sir David Threipland was engaged in the insurrection of 1715, and his lady entertained at this house the unfortunate prince for whose sake the party had taken up arms, while on his progress from Peterhead to Perth. The estate was consequently forfeited, and the family for a time dispossessed of their ancient seat.

FINHAVEN, or **FINDHAVEN**,* a name of various, and in part of obsolete application. Finhaven was anciently the name of the parish of Oathlaw in Forfarshire; and it adheres so firmly to the popular nomenclature of the district, and sits so undisputedly on at least two localities, while the word Oathlaw is almost a stranger in its own territory, that every one wonders at the old name having been superseded, while no one can well assign the reason of the change. The late proprietor and patron of the parish, the Marquis of Huntly, wished, with characteristic good taste, that the ancient name, and the greatly preferable one on account at once of its descriptiveness, its antiquity, and its archæological associations, should be restored. The name, in the meantime, has uncontested possession of a hill, a castle, and a hamlet.—The hill, or rather hilly range, of Finhaven stretches along the whole of the southern boundary of the parish of Oathlaw, and even extends some distance on the east into the conterminous parish of Aberlemno; and lifts its highest summit 1,500 feet above the level of the adjacent country, commanding a rich and extensive view of the great valley of Strathmore. On the summit of the hill is an extensive and remarkable vitrified fort, in the form nearly of a parallelogram, about 450 long, and on the average, 111 feet broad, built apparently without mortar, and so exactly constructed according to the rules of military art as to oversee and command every point of access.—The castle of Finhaven, now in ruins, and exhibiting to the view only two decayed sides of a lofty square tower, stands on the north side of Finhaven-hill, overlooking a beautiful sweep of Lemno-burn, and was anciently the seat of the Earl of Lindsay and Crawford. Finhaven hamlet, or what at present is, without any adjunct, termed simply Finhaven, stands on the right bank of the South Esk, at the confluence with it of Lemno-burn, near the northern limit of the parish of Oathlaw. Though small in itself, a considerable factory, and the immediate vicinity of the residence of the factor or agent of the proprietor of the whole parish, but especially the public spirit and enlightened policy of both the manufacturer and the factor, give it influence and importance, and occasion its name to be pronounced fifty times oftener throughout Forfarshire, than the usurping parochial designation of Oathlaw. The estate of Finhaven is about $5\frac{1}{2}$ miles in length from east to west; and from 1 to 2 miles broad. It is intersected by the South Esk for about 2 miles, and by the Great North road from Edinburgh to Aberdeen for about 5 miles. Its superficies is 4,048 imperial acres, of which 2,217 are arable, 165 in pasture or

uncultivated, 723 under wood, and 104 are occupied by roads and rivers. Game is abundant upon it.

FINK (ST.), a hamlet in the shire of Perth, and parish of Bendothy; $2\frac{3}{4}$ miles east-north-east of Blair-Gowrie. Here was anciently a chapel dedicated to St. Fink; and that part of the parish which lies eastward of the confluence of the Erch and Isla, would seem to have belonged to it. The adjacent houses are called the Chapel-town, and there are also vestiges of the chapel, and of the burying-ground around it.

FINLAGAN (LOCH), a lake in the centre of the island of Isla, about 3 miles in circumference. It abounds with salmon and trout, and discharges itself into the ocean at Lagan bay, by a rivulet of the same name. On an island within the lake are the ruins of an ancient castle, where Macdonald, Lord of the Isles, frequently resided, and which he made the seat of his government.

FINNAN (ST.), a small and beautiful island in Argyleshire, in Loch-Shiel, upon which are the ruins of a church.

FINNAN (THE), or **FINNIN**, a river in Invernessshire, which gives name to Glenfinnan, and falls into the eastern extremity of Loch-Shiel, opposite Island Finnan. The form of Glen-Finnan, at the head of Loch-Shiel, is very uncommon. It opens in four different directions, like four gigantic streets meeting in one centre. A large level space of ground, at the head of the lake, forms the common centre of these glens, which, wild in every part, are in many points of view highly picturesque. Several miles of the lake can be seen from the top. It is here long and sinuous,—bounded by lofty and rugged mountains,—silent, solitary, and deserted,—its quietude seldom disturbed, save by the flight of an eagle, or other bird of prey.—It was in Glen-Finnan that Prince Charles Edward first unfurled his flag, in 1745. On the 25th of July, he landed at Borrodale in Arisaig; where he was visited by Cameron of Lochiel, who advised him strongly to give up the attempt till a more favourable opportunity. The prince, however, refused to follow Lochiel's advice, and insisted that a better opportunity could never occur. "Lochiel," said he, "may stay at home and learn from the newspapers the fate of his prince; but I will erect the royal standard, and proclaim to the people of Britain that Charles Stewart is come over to claim the crown of his ancestors, to win it, or to perish in the attempt." "No," said Lochiel, "I'll share the fate of my prince; and so shall every man over whom nature or fortune has given me any power!" At Kinloch-Moidart, Charles remained to the 18th August, when he sailed up Loch-Shiel as far as Glenalladale, the residence of a chief of the M'Donalds. On the morning of the 19th, he, with his attendants, about 20 or 25 in number, proceeded in three boats to Glen-Finnan, where they landed about mid-day. Here he was again met by Lochiel, with a party of between 700 or 800 of the Clan Cameron. The Marquis of Tullibardine unfurled the standard, and, supported by a man on each side, held the staff till the commission of Regency was read. In an hour after this solemnity, MacDonald of Keppoch arrived with about 200 men; and in the evening of the same day several gentlemen of the name of M'Leod arrived from the islands. They disclaimed their chief, who had refused to join Charles, offered their own services, and agreed to return to the islands and raise all the men they could. Thus, in this distant and lonely glen—at that time, from the want of roads, of very difficult access—was the first act performed of that tragic drama which had nearly overturned the government of a great empire, and which, even ending as it did, brought ruin on many a noble and honourable family,

* This word is very variously spelt in ancient documents, occasionally assuming such grotesque forms as Fynnevin, Fnu-heaven, and Fnuheaven; and seems to have had its origin in the combination of two Gaelic words, signifying 'white' and 'river,' to describe the South Esk, which figures in all the scenes which the word is used to designate.

and entailed a load of misery on a great part of the population of the Highlands. It is remarkable, and shows the high though mistaken sense of duty which led Cameron of Lochiel to join Charles, that at this very time his father, old Lochiel, was living in exile, having been attainted for his share in the rebellion of 1715. The son, young Lochiel, had no hope of success, and he went to Borrodale solely for the purpose of persuading the prince to return to France. His friends advised him strongly not to see the prince at all, "For," said they, "if you once behold him, you will assuredly join him." The result was as his friends anticipated. A monument has been erected by M'Donald of Glenalladale, on the spot where the prince's standard was unfurled, to the memory of those "who fought and bled" in this rebellion. It is a sort of tower, with a small house attached, displaying anything but taste; but even as it is, it has a striking effect, when associated with the wildness which reigns around, and the romantic and unfortunate adventure it commemorates. The inscription is in three languages,—in Gaelic, Latin, and English. The following is a copy of the English one: "On this spot where Prince Charles Edward first raised his standard, on the 19th day of August, 1745, when he made the daring and romantic attempt to recover a throne lost by the imprudence of his ancestors, this column is erected by Alexander M'Donald, Esq. of Glenalladale, to commemorate the generous zeal, the undaunted bravery, and the inviolable fidelity of his forefathers, and the rest of those who fought and bled in that arduous and unfortunate enterprise. This pillar is now, alas! also become the monument of its amiable and accomplished founder, who, before it was finished, died in Edinburgh on the 4th January, 1815, at the early age of 28 years."

FINNIESTON, a district in the Barony parish of Glasgow, with a population, in 1834, of 2,396.

FINTRAY, a parish in Aberdeenshire; bounded on the north-east and east by New Machar; on the south by the river Don, which separates it from the parish of Dyce; and on the west and north-west by Keith-hall. It is of a triangular form, with an apex pointing to the north, and the base extending nearly 6 miles along the northern bank of the Don; its mean breadth is between 3 and 4, and its length from north to south nearly 5 miles; superficial contents about 10,000 acres. Houses 215. Assessed property, in 1815, £2,049. Population, in 1801, 886; in 1831, 1,046; in 1839, 1,012. The surface is not hilly, though it rises considerably from the river: the lands in the northern outskirts of the parish lie low also. The farms have been thoroughly drained, and the land much improved. There is limestone, though not used for manure or other purposes, and abundance of granite, but a scarcity of fuel. On the banks of the Don the soil is rich and fertile. The middle parts of the parish have an inferior soil, consisting partly of peat-moss, and partly of moor, interspersed with patches of arable land, some of which has a strong clay soil. The soil between these parts and the Don is light, and of good quality: so also is the northern district. There are several very good and well-cultivated farms: in all, between 5,000 and 6,000 acres are cultivated, or occasionally in tillage. About 300 acres are waste, and upwards of 600 acres, on Sir John Forbes's estate of Craigievar, and others, are covered with thriving plantations. Numerous cattle are fed, and a few excellent horses reared. The Don has often here overflowed its banks, and done a great deal of damage. Salmon and trout are found in this river. There are several rivulets in the parish, the streams of which are used as powers in working meal and barley mills. At Cothal mills there is a manufactory

of 'Tweed' and woollen cloth, which affords employment to a number of individuals. Fintray house, on the estate of Craigievar, is a spacious and elegant mansion, adorned with fine lawns and pleasure-grounds; and the house of Disblair is a commodious and well-planned residence. Here are vestiges of old religious buildings, said to have belonged to Lindores abbey, Fifeshire, and there are two cairns in the parish. The parishioners appear, according to the New Statistical Account, published in 1840, to have still the fear of resurrectionists before their eyes, as it is stated, that, in the parish burying-ground, "a vault of extraordinary strength was built, a few years ago, by the parishioners, to secure dead bodies from resurrectionists, and from whence, after remaining perhaps three months or more, the bodies are removed and regularly interred." This parish is in the presbytery and synod of Aberdeen. Patron, Sir John Forbes of Craigievar. Stipend £217 9s. 3d., with a glebe valued at £10. Unappropriated tithes £107 2s. 4d. Schoolmaster's salary £28, with fees, &c., £24, besides an interest in the Dick bequest. There is also a private school in the parish.

FINTRY, a parish near the centre of Stirlingshire, irregular in outline, but, with the exception of a rounded apex on the north, and a sharp indentation on the south, nearly triangular. It is bounded on the north-west by Killearn and Balfon; on the north-east by Gargunnoch and St. Ninians; and on the south by Kilsyth and Campsie. From the point where Carron water leaves it on the east, to Earls seat on the west, it measures $7\frac{1}{2}$ miles; and from the extreme point of the boundary on the north to an angle below the Tollbar on the south, it measures $5\frac{1}{2}$ miles. In artificial area, however, it probably does not measure more than about 15 square miles. Its surface consists chiefly of hills, forming part of the range which stretches between Stirling and Dumbarton, and immediately north of the flanking summits called the Campsie fells. The hills are in general small, soft in their outline, finely diversified in form, gaily dressed in verdure, and when dotted over with flocks of sheep, suggesting delightful thoughts of pastoral quiet and enjoyment. Two-thirds of the parish, on the eastern side, and including all the north, consist of three broad hilly ranges, running east and west, with very little intervening plain. The northern range, which is the broadest, and fills up all the northern part of the triangle, is called the Fintry hills. The central range is flanked by various detached hills, which run out to the western angle of the parish, and wear a somewhat rugged and rocky aspect, more in keeping with the Highland features of the Campsie fells, than with the gentle aspect of the characteristic hills of Fintry. The only inhabited parts of the parish are the two intersecting valleys, watered respectively by the Carron and the Endrick, and carpeted, for the most part, with light, quick, and fertile soil. The Carron, rising in the south-west, flows 2 miles eastward, and there receives a tributary rill of $1\frac{1}{2}$ mile of course, which had flowed from its source onward along the boundary; it now, for half-a-mile, forms the southern boundary-line, receives another rill from the south, and then intersects the parish north-eastward and south-eastward over a distance of 3 miles. Along its banks is the commencement of the Carron bog or meadow, probably the largest level of its class in Scotland. Beginning in Fintry, it runs eastward between the parishes of Kilsyth and St. Ninians, to the extent of 4 miles; and being in some places 2 miles in breadth, and in none less than 1 mile, it comprehends an area of about 500 acres. This remarkable meadow, besides its utility in producing hay and affording pasturage,

imparts great loveliness and beauty to the landscape which surrounds it. In the months of July and August, it is thickly and cheerfully dotted over with hay-ricks and very numerous parties of hay-makers; and during winter, the greater part of it being naturally flooded by the Carron, and the rest brought industriously under water to fertilize it for the ensuing crop, it assumes the appearance of a large and beautiful lake. Endrick water comes down upon the parish from the Gargunnoch hills to the north, traces the eastern boundary for $1\frac{1}{2}$ mile, then abruptly bends and flows westward, between the central and the northern range of hills, through the whole breadth of the parish. Over its whole course in this district, it is a rapid, impetuous stream; and a mile after it has proceeded inward from the boundary, it rushes headlong over a precipice of 60 feet in height, and forms a superb cascade called 'The Loup of Fintry.' In rainy weather, and particularly after a thunder-storm or a water-spout, this cascade is one of the grandest objects amidst the vastly varied and opulent scenery of Scotland. The trout, with which the Endrick abounds, are esteemed of superior quality; and as they may be taken in great numbers, even by an unskilful angler, they attract numerous gentlemen of the fishing-rod. The valley through which the stream flows, though narrow at the east end, gradually widens till it becomes a mile broad; and it spreads out before the tourist a delightfully picturesque, though limited prospect. The cultivated fields, interrupted by waving groves, along the banks of the river, the hedge-rows and plantations around Culcruch on the north side of the valley, and some well-arranged clumps of trees on the opposite hills, exhibit a picture not only of beauty, but of well-directed industry. On both sides, the view is pent up by mountain-summits, occasionally broken and precipitous, sometimes wreathed in clouds, and always wearing an aspect of dignity and grandeur; and away westward, in the distant perspective, the towering Benlomond looks up majestically above the neighbouring Grampians. Thus fenced and sequestered, the little hills and valleys of Fintry tranquilize and pleasingly thrill a spectator; nor can any scenic influence be more agreeable than what is felt when the sun, setting by the side of Benlomond in summer, throws a blaze of parting radiance upon their peaceful scenes. Near the village of Fintry, in a hill called the Dun, is a magnificent range or colonnade of gigantic basaltic pillars. In front are 70 columns, some of them separable into loose blocks, and others apparently unjointed and unique from top to bottom. They stand perpendicular to the horizon, and rise to the height of 50 feet,—some of them square, and others pentagonal and hexagonal. At the east end of the range, they are divided by interstices of 3 or 4 inches; but as the range advances, they stand increasingly closer, till nothing between them but a seam is discernible; and they at last become blended in one solid mass of honey-combed rock. The mountain with which the colonnade is connected consists of very extensive beds of red ochre.—Toward the close of last century, this parish, as to its internal condition, underwent a great and almost magic change. The access to it was on all sides so extremely difficult, that it seemed shut out from all improvement, and condemned to perpetual seclusion. An acclivitous hill, over which horses could scarcely move with half a load, intercepted the communication with Campsie and Glasgow, whence only coals could be obtained; and deep moor and moss obstructed the approach on the north and west. In 38 years, from 1755 to 1793, the population of the parish decreased to the amount of 248, dwindling down from 891 to 543. But when almost threatening to consume away to extinction, it was suddenly strengthened and

aroused by the spirited exertions of Mr. Spiers and Mr. Dunmore. A road, on the grand side of communication, was formed with an ascent, at the steepest part, of 1 foot in 20, instead of the former ascent of 1 foot in 7; other roads were opened or repaired; measures were adopted for building a village and an extensive factory; an energetic search was made for coals; and so early as 1801—only 7 years after it had stood, sickly and declining at 543—the population mounted up to 958.—The village of Fintry, the site of the cotton mill, is delightfully situated on a rising ground along the side of the Endrick, and presents an unusually handsome appearance. The houses, built according to a regular plan, stand in one row, and consist of two stories surmounted by garrets; and, ranged on the side of the public road, they overlook, on its other side, their respective gardens sloping down to the margin of the river. Population of the village, 600.—In the parish, over the Endrick, are two bridges; one of which has a beautiful arch 47 feet wide, and a second arch 15 feet wide, while the other has four arches, two of which are each of 26 feet span, and two of 12 feet. Population of the parish, in 1801, 958; in 1831, 1,051. Houses 112. Assessed property, in 1815, £4,126.—Fintry is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Duke of Montrose. Stipend £155 3s. 10d.; glebe £22. Unappropriated tithes £63 6s. 4d. Parochial schoolmaster's salary £34 4s. 4½d., with about £6 10s. fees. There are two undowered schools, attended by a maximum of 118 scholars. An additional school-house, on a handsome scale, and endowed, has recently been built. About three years ago, Mr. John Stewart, Merchant, Fintry, bequeathed the sum of £300 sterling, for the endowment of a school in the parish of Fintry, for the education of poor children in this and the neighbouring parishes, and more particularly of those whose parents are engaged at the Culcruch cotton mill. The branches in which instruction is given, are the same with those taught in parish-schools, and the fees to those connected with the Culcruch mill, and to the children of labourers in the neighbourhood, are so low as 1s. per quarter. Other children are admitted at a higher fee. Mr. Stewart's trustees have recently erected a handsome school-house and dwelling-house for the master, who has also a salary of £60 a-year, in addition to the school-fees. The school was established and teaching commenced in the autumn of 1840.

FIOLAY, a small island of the Hebrides, on the coast of Argyleshire.

FIRDON (THE), a small stream in Ross-shire, which falls into the sea in the parish of Applecross.

FIRMONTH, the highest mountain in the forest of Glentanner, in Aberdeenshire. It is elevated about 2,500 feet above the level of the sea, and commands a prospect of Aberdeen, Montrose, and Arbroath, with the mouth of the Tay.

FIRTH AND STENNESS, a united parish in the island of Pomona, or the Mainland of Orkney, about 17 miles in length, and 8 in greatest breadth. The surface presents moors and hilly ridges covered with heath and peat-moss to the summit. The shores are low and flat. Population, in 1801, 1,272; in 1831, 1,200, of whom about 450 resided in Firth. Houses in Firth, in 1831, 133; in Stenness, 131. Assessed property of Firth, in 1815, £161; of Stenness, £46.—This parish is in the presbytery of Cairnston, and synod of Orkney. Patron, the Earl of Zetland. Stipend £156 14s. 10d.; glebe £23. Here are two parish-churches. That of Firth was built in 1813; that of Stenness, in 1793.—There is a United Secession congregation at Firth.—There are one parochial school, and two private schools, in the parish: salary of

parish-schoolmaster £26, with some other emoluments.—See STENNESS.

FISHERROW, a town in the parish of Inveresk, Edinburghshire, situated on the left bank of the Esk, in the angle or peninsula formed by the embouchure of that river and the frith of Forth, and existing compactly, by an intercommunication of three bridges, with the town of Musselburgh on the right bank of the Esk. Fisherrow consists of one main street, some subordinate streets parallel to it, and several cross streets or alleys, and detached clusters of houses. The Main or High-street is distributed in shops, and in the dwellings of the wealthier inhabitants; and the rest of the town is occupied almost wholly by fishermen, and presents the untidy and repulsive appearance of a place in paramount possession of men of their vocation. Good houses and handsome villas straggle along the coast of the Forth in the vicinity of the town, and also surmount the rising grounds on the south, indicating in both situations the presence, not only of taste, but of competence and wealth. Fisherrow has, at its west end, a small harbour, and a modernly erected stone-pier; and, although disadvantageously situated as to facilities of navigation, is frequently visited by vessels, for the landing of timber and other goods, which wish to escape the heavy harbour-dues of Leith. Small vessels are occasionally built at its port. The Great road from Edinburgh to London passes along the greater part of the High-street, and, near its eastern termination, diverges south-eastward to enter the High-street of Musselburgh by the central thoroughfare of the New bridge,—the Old bridge being farther up the river, and the timber bridge being on a line with the High-street of Fisherrow. A railway comes down upon the town from the west, cuts off, over some distance, a small wing of it on the north, and, over the remaining distance passes along its northern limit, leaving between it and the sea an open area called Fisherrow links. Fisherrow is under the government of the magistrates of Musselburgh; and, in its turn, exercises so powerful a control over the affairs of that burgh, as to return nearly one-half, or 8 of the entire 18, of its town-councillors. In consequence of its virtual identity, or continuous connexion with Musselburgh in the formation of a town, it looks chiefly to the east side of the Esk for its places of worship; yet it possesses, within its own bounds, two chapels situated respectively in a lane leading northward from the High-street, and in the diverging thoroughfare from that street toward the New bridge. The shore of the frith along the northern limits of the town and its links, is extremely flat and sandy; but is entirely relieved, in the dullness and monotony of its appearance, by the rich and exuberant exhibitions of the territory which rises gently upward from the southern limits of the town.

Fisherrow—as its name imports—is, in its main features, a fishing-town; and presents, in fact, the features of a beau-ideal of whatever is at once hardy, weather-beaten, and contemptuous of civilized refinements, in a sea-faring and fish-catching life. Almost constantly it exhibits men in a tawdry and slovenly dress, making their way from a long sleepless excursion at sea to their homes, or from a hastily abandoned repose to their fishing-boats; and groups of females and children in a disgusting condition of filth and indolence. The women, however, both wives and daughters, share largely in the labours of the fishery, and are so industrious, athletic, and in all respects, singular a race, as to have drawn considerable observation and surprise. They gather baits for the use of the men, and fasten baits on the lines used in fishing. But, chief of all their labours,

they carry the produce of the fishery in osier baskets or creels to Edinburgh, and drive hard bargains with the citizens. When the boats arrive late in the forenoon at the harbour, so as to leave them no more than time to reach Edinburgh before dinner, the fishwives have sometimes performed their journey of 5 miles by relays, shifting their burden from one to another every 100 yards; and in this way they have been known to convey their goods to the fishmarket from Fisherrow in less than $\frac{3}{4}$ of an hour. It is even a well-attested fact, that three of their class went from Dunbar to Edinburgh, a distance of 27 miles, in 3 hours, each carrying a load of 200 pounds of herrings! The boatmen of Fisherrow do not always themselves catch the fish which their wives carry to Edinburgh. When haddocks—which are one of the most abundant and favourite sorts of the produce of the fishery—are scarce on the Lothian coast, the Fisherrow boatmen are accustomed to meet boats from the east end of Fife, half-way down the frith, and to purchase their fish; and they thus keep their wives in full employment, even when their own fishing-grounds yield an incompetent produce. From the kind of life these women lead, their manners and character may naturally be expected to have marked peculiarities. Having so great a share in the work of maintaining their families, they wield quite a masculine sway; and when speaking of a young woman reported to be on the point of marriage, they may be heard to say, ‘Hoot! how can she keep a man who can hardly maintain herself?’ As they do the work of men, their manners, and even their amusements, are masculine. On holidays, they used to play at golf; and on Shrove Tuesday, there was a standing match at football, between the married and the unmarried women, in which the former were generally victors. Their mode of life and their business habits whet their faculties, and give them great dexterity in bargaining. They have likewise a species of rude eloquence,—an extreme facility in expressing their feelings by words or gestures,—which is very imposing, and often enables them to carry their point against even the most wary; nor do they feel abashment, or seem to suffer any shame of detection, when an inexperienced purchaser discovers an attempt on their part to extort from him thrice the value of his goods. Yet, though accustomed to ask far more than their fish is worth, and to play the extortioner whenever they can, they possess a sort of savage honesty on which full reliance may be placed. When they have regular customers, who form a sort of acquaintance with them, and express a confidence that they will furnish articles as cheap and good as can be obtained in the market, they seldom or never fail, in such cases, to act honourably; and, in their transactions with the shopkeepers of Edinburgh, whom they sometimes supply with herrings, they practise unimpeachable fairness of dealing. Though, too, they seriously and revoltingly indulge in licentiousness of speech, they are believed to be, as a class, exemplarily chaste in their conduct. There seems to be no employment which conduces more than theirs to health and good spirits. Some of them, within a week after becoming mothers, or bringing additions to their families, have gone to Edinburgh on foot with their baskets.

FISHIE (GLEN). See BRAEMAR.

FISHLIN, a small isle of Shetland; 6 miles south of Yell.

FISH-HOLM, one of the Shetland isles; constituting part of the parish of Delting. It is situate on the north-east of the parish, in Yell sound.

FISHWICK, an ancient parish, now comprehended in the parish of Hutton, in Berwickshire. The church, which stood on the northern bank of

the Tweed, below the village, is now in ruins. It formerly belonged to the monks of Coldingham. It is 6 miles south-west of Berwick. See HUT-TON.

FITFUL-HEAD, on the west of Quendal bay, the most southerly part of Shetland, a bold and extensive headland, consisting of a large assemblage of strata composed of clay slate. It rises 400 feet perpendicularly out of the ocean, and is seen at a great distance by vessels approaching from the south-west. At Gauhsness near Fitful-head, occurs a vein or perhaps bed of iron-pyrites, which was a few years ago unsuccessfully wrought for the purpose of finding copper-ore, whilst many hundred tons of iron-pyrites were thrown into the sea.

FITHIE (LOCH), a beautiful lake, about a mile in circumference, in the parish of Forfar, Angus shire.

FITHIE (THE), a small river in Forfarshire. It rises on the south side of the hill of Bockello, in the parish of Glamis. After flowing, first eastward, and then southward, over a distance of nearly 2 miles, it resumes its original eastward direction, and over a distance of $3\frac{1}{2}$ miles divides the parishes of Strathmartine, Mains, and Murroes on the south, from the parish of Tealing on the north. It now runs 2 miles south-eastward, dividing the detached part of the parish of Dundee on the north from the parish of Murroes on the south, and traversing part of the latter parish; and it then turns suddenly round to the southward, and, after a run of $1\frac{1}{2}$ mile, forms in the parish of Dundee, a confluence with Dighty water, $1\frac{1}{2}$ mile above the disemboguing of the latter stream in the frith of Tay. Its entire course, from its origin to its junction with the Dighty, is about 9 miles. At and near its embouchure, in the parish of Dundee, it makes valuable alluvial deposits, which form rich holm-lands on its banks.

FLADDA, or **FLODDA**, a small island of the Hebrides, about 6 miles distant from the Isle of Sky, and separated by a narrow strait from the north-west point of Rasay. It is 2 miles in length, and half-a-mile in breadth. The strait betwixt it and Rasay is dry at half-tide.

FLADDA, one of the Treishinish isles, near the Isle of Mull. Its surface is flat and monotonous.

FLADDA, a group of isles between Barra and Sanderay.

FLADDAY, a large flat island in the district of Harris, Inverness-shire; at the entrance of Loch Rort.

FLANNAN ISLES (THE), a group situated about 15 miles north-west of Gallan-head in Lewis. They are not inhabited, but are noted for fattening sheep. The following curious passage occurs in Dr. McCulloch's work on the Western Isles: "I have often been entertained with the extraordinary concerts of the sea-fowl, in Ailsa, in the Shiant isles, and elsewhere; but I never heard any orchestra so various and so perfect, as one in the Flannan isles, which seemed to consist of almost all the birds that frequent the seas and rocks of these wild coasts. I should perhaps do injustice to the performers, did I attempt to assign the parts which each seemed to take in this concert; but it was easy to distinguish the short shrill treble of the puffins and auks, the melodious and varied notes of the different gulls, the tenors of the divers and guillemots, and the croaking basses of the cormorants. But the variety of tones was far beyond my powers of analysis, as, I believe, Pennant had found it before me. It may appear ludicrous to call this music melodious, or to speak of the harmony formed by such ingredients; yet it is a combination of sounds to which a musician will listen

with interest and delight, although the separate cries of the different individuals are seldom thought agreeable. Few of the notes in this concert could, perhaps, have been referred to the scale, if separately examined; yet the harmony was often as full and perfect as if it had been the produce of well-tuned instruments, and the effect was infinitely superior to that which is often heard in a spring morning among the singing birds of the forest, while it was so entirely different as not to admit of any comparison. In the sea-birds there are few tones and few notes, but they are decided and steady. The body of sound is also far greater; and however inferior in variety or sweetness the notes of the individuals may be, there is much more variety in the harmonious combinations, and in that which musicians would call the contrivance and design. Very often they reminded me of some of the ancient religious compositions, which consist of a perpetual succession of fugue and imitation on a few simple notes, and sometimes it appeared as if different orchestras were taking up the same phrases. Occasionally the whole of the sounds subsided, like those of the Æolian harp as the breeze dies away, being again renewed on the excitement of some fresh alarm. In other places I have heard similar concerts performed among colonies of gulls alone; and with a variety and effect still more surprising, when the limited tones and powers of this tribe are considered. On one of these occasions, at Noss Head, in Shetland, I could scarcely avoid imagining that I was listening to a portion of Rossini's 'Barbieri di Siviglia,' 'Mi par d'esser colla testa in un orrida cucina,' so exact was the rhythm, as well as the air and the harmony."

FLEET (THE), a river in the western division of Kircudbrightshire. It consists of two main parent-streams, called Big water of Fleet and Little water of Fleet. The Big water, though the greater of the two in name, is the lesser in length; and rises in four small streams of nearly equal claim to be the head-water, two of which issue respectively from the south and from the north side of Cairnsmuir, in the parish of Kirkcubrecht; the third of which, called Mid-Bura, issues from Craig-Ronal, and forms from its source onward the boundary-line between Kirkcubrecht and Girthon; the fourth of which issues from Bengea, near the source of Little Fleet; and all of which unite about $2\frac{1}{2}$ miles from their several sources, and thenceforth pursue their united course, $4\frac{1}{2}$ miles, in a direction east of south, dividing Kirkcubrecht and Anwoth on the west, from Girthon on the east, till a confluence is formed with the Little water of Fleet near Castramont. The Little water of Fleet has justly the reputation of being the parent-stream of the united rivulets, and issues from Loch Fleet, which is about $1\frac{1}{2}$ mile in circumference, situated not far from the northern limit of the parish of Girthon, and fed by two short rills flowing into it from the north. The Little water of Fleet, after pursuing a course of $1\frac{1}{2}$ mile south-eastward, runs almost due south, over a distance of 6 miles, traversing the parish of Girthon, till it unites with the Big water of Fleet. Nearly at their point of junction, the two Fleets receive from the east the tribute of Carstramman burn; and thenceforth Fleet water which they form, pursues a course a little to the east of south, dividing the parishes of Anwoth and Girthon, till it sweeps past the small town of Gatehouse on its left bank; and it then bends round to a direction west of south, and, after traversing a space of $1\frac{1}{2}$ mile, suddenly expands into an estuary $3\frac{1}{2}$ miles in length, and 1 mile in average breadth. The Highlands of Scotland have no scenes of greater beauty than what the vale of the Fleet displays; and they have hardly any wilder than the hills among which

both branches of the river take their rise. The basin of the Fleet, for a good many miles above Gatehouse, is exquisitely fine. Rough, heath-clad hills, indeed, overlook the stream on both sides; but declivities and plains, opulent in soil, ornate in tillage, and plentiful in groves, form its immediate banks. The river, immediately after the confluence of its Big and its Little streams, flows past a handsome hunting-seat of the proprietor of the lands on its left bank; and soon after, it leaves, on its right bank, the tower of Rusco, once a seat of the Viscounts of Kenmore. The river is, at Gatehouse, spanned by a handsome bridge; and is navigable thither by small vessels, and enriches the territory along its banks by a plentiful supply of salmon.

FLEET (Loch), an inlet of the sea on the south-east coast of Sutherlandshire, across the narrow neck of which there was formerly a ferry, on the thoroughfare along the coast northwards from Dornoch; but the public road is now carried across by an embankment or mound of 995 yards in length, which, with the roads of approach to it, cost £12,500. At the east end of the mound are placed 4 arches, with sluices, by which the water of Fleet, and occasional land-floods, pour to the sea at low water. Strath-fleet extends far up the country, and into a district so rugged and mountainous that no other practicable pass could be discovered; that though Strathcarnoc being at such elevation as to be liable to obstruction from snow during the winter months. About 400 acres of land have been reclaimed from the sea by this mound.

FLEURS, or FLOORS CASTLE, the family mansion of the Dukes of Roxburgh, situated on the left bank of the river Tweed, a mile above the town of Kelso. It is a magnificent pile, "combining," says Sir Walter Scott, "the ideas of ancient grandeur with those of modern taste." But Sir Walter Scott saw only the attractions impressed on it, at its erection, in 1718, by the architectural skill of Sir John Vanbrugh; and must have spoken of it with enthusiasm could he have beheld the additional, the new polish which has just been given it, and the additional decorations with which it has been beautified, by Mr. Playfair of Edinburgh. Adjoining it is a handsome conservatory, erected by the late Duke James, and containing a choice collection of rare and valuable plants. The old gardens ran down into the town of Kelso, and occasioned the rasure of a considerable part of one of the principal streets, in order to obtain sufficient space for their expansion. The new gardens lie nearer the castle, stretching along its west side, and are laid out on a grand scale, and in a style of united taste and splendour. The delightfully wooded and picturesque demesne forms, for a considerable distance, the skirting of the joyous waters of the Tweed, and runs away from them inland over undulating grounds, constituting, with the presiding ducal mansion in its centre, so lovely a landscape that a spectator from Kelso bridge, or from the heights on the right bank of the river, feels as if a revelation were before him of some nook of an unfallen world.

FLISK, a parish in Fifeshire, upon the banks of the Tay. Occupying the northern slope of the Ochils, a considerable portion of its surface is hilly and irregular, except near the river, where there is a narrow stripe of level ground along the whole extent of the parish. Flisk is bounded on the south by Creich and Abdie; on the east by Balmerino; on the north by the Tay; and on the west by Dunbog. It is rather more than 4 miles in length, from east to west; but is only about a mile in breadth, except at the western extremity, where its breadth is about 1½ mile. The parish is entirely a rural one, there being

no villages, nor any manufactures carried on within it. Cupar, which is 8 miles distant, is the post-town; and Newburgh, between 2 and 3 miles distant, is the nearest market-town.—The barony of Ballanbreich, or as it is usually pronounced, Bambreich, originally formed part of the great lordship of Abernethy. This extensive barony remained for nearly 500 years in the family of Rothes, and was purchased from them by the late Sir Lawrence Dundas, grandfather of the present proprietor. The castle of Bambreich, which stands near the western extremity of the parish, is a large and very fine ruin, picturesquely situated on a steep bank overhanging the river Tay, surrounded by a number of fine trees; and forms a noble object in the landscape as seen in sailing up or down the Tay.

It appears originally to have been a large parallelogram, 180 feet in length by 70 in breadth, enclosing a court-yard in the centre. Three of the sides were formed by the buildings of the castle, which were four stories high; while the fourth side of the court-yard was formed by a high wall or curtain, connecting the north and south sides of the castle together. The whole of the doors to the different parts of the building opened into the court-yard; and the principal entrance to the whole seems to have been on the north. When inhabited, it was surrounded by a ditch or moat, the traces of which, though pretty distinct some years ago, are now nearly effaced. This once magnificent castle has suffered sad ravages from time, but greater still from the depredations of man; as it long formed a convenient quarry for those who had buildings to erect, either in its own neighbourhood, or on the opposite banks of the Tay. This system of destruction has, however, been put a stop to, and although probably about a third of the structure has been destroyed, there is sufficient remaining of its original height to show what its extent and grandeur once was. The oldest portion appears to be that which forms the western side of the parallelogram, and the southern side, although much dilapidated, to be the most recent. From the beauty of the ashlar work of the walls remaining, it is not likely that any portion is as ancient as the time when the barony was acquired by Sir Andrew de Lesly; yet the oldest portion cannot be much more recent.—Anciently a considerable portion of the parish seems to have been occupied by a forest, called Flisk wood, which no doubt formed a continuation of the forest of Earnside; but of this all vestiges are now removed. The annual value of the real property for which this parish was assessed, in 1815, was £2,820 sterling. The valued rent is £3,233 16s. 8d. Scots. Population, in 1801, 300; in 1831, 286. Houses, in 1831, 60.—This parish is in the presbytery of Cupar, and synod of Fife. Patron, Lord Dundas. Stipend £151 11s.; grass glebe £1 13s. 4d. The church of Flisk was anciently a parsonage, the patronage of which was laic, and pertained to the earldom of Rothes. Besides the parish-church there was also a chapel in the parish, the site of which is now lost; but it was in all likelihood within the castle of Ballanbreich. Indeed the northern portion of the west side of the building has much the appearance as if it had been the chapel. John Waddell, parson of Flisk, was one of the early judges of the Court of session. His name first appears as a judge in the sederunt of court, 8th May, 1534. Little else is known of this clergyman, except that he was, in 1527, rector of the university of St. Andrews, and as such one of the judges who condemned Patrick Hamilton to death. James Balfour, his successor in the parsonage of Flisk, was also a judge of the Court of session, under the title of Lord Pittendreich.—Schoolmaster's salary £34 4s. 4d., with £10 fees.

FLODDA. See **FLADDA.**

FLOTA, one of the Orkney isles. It is 3 miles long, and 2 broad; and is mostly encompassed with high rocks. Its heaths afford excellent sheep-pasture, and abound with moor-fowl. Flota, with the small adjoining islands of Fara, Cava, and Gransey, contained, in 1838, 400 inhabitants. It is united with the parish of **WALLS** in Høy: which see. This island, according to Mr. Jameson, is low in surface, but in several places there are cliffs upon the shore of considerable height. It is entirely composed of sandstone, and sandstone-flag. It was the residence of the historiographer appointed by the crown of Norway to collect information with regard to the north of Scotland. These narrations formed a work called 'Codex Flotticensis:' to which Torfæus is indebted for much of his history of the northern parts of Scotland.

FOCHABERS, a small town, and burgh-of-baronry, in the parish of Bellie, Morayshire, situated 9 miles east of Elgin; 12 south-west of Cullen; and 52 east by north of Inverness; on the eastern bank of the Spey, in a deep and rural valley. Over the river, a few hundred yards from the town, there is a handsome four-arched bridge, 340 feet in length. This bridge was damaged, and indeed partly destroyed, in the great floods of 1829, when the Spey rose nearly 9 feet above its ordinary level here. Formerly, this town stood in the vicinity of Gordon castle, but, like the burgh of Cullen, it was removed to a more respectful distance from the mansion of its superior. It now occupies a site about a mile south of its former locality, on a rising ground in the line of the North road from Edinburgh to Inverness. It has a square in the centre, and streets entering it in a cruciform manner, at right angles. Exteriously, its form is that of a parallelogram, the sides of which consist of thatched cottages. There are other streets, or cross lanes, of good houses; and altogether Fochabers is not only a pretty little town, but a thriving and a rapidly increasing one. It has several good inns, and, on one side of the central square, is the Established church of the parish, a modern edifice, with a portico, and a neat spire. It also contains an Episcopal chapel, and an extremely elegant Roman Catholic one. Fochabers is governed by a bailie, appointed by the Duke of Richmond, as superior, and as successor to the Duke of Gordon. The population, in 1817, was about 1,000; in 1821, about 1,040. Other returns with the parish.* See articles **BELLIE** and **GORDON CASTLE**.

FODDERTY,† a mountainous parish in the counties of Ross and Cromarty; consisting of several districts locally detached from each other. It is chiefly situated in a valley surrounded on the north, west, and south, with high hills, and intersected through its whole length by the small river Peffer, from which it derives the name of Strathpeffer. This valley is nearly 3 miles in length, and half-a-mile

broad; but the total extent of the parish is 9 miles from east to west, by 15 from north to south. It is bounded by Kincardine and Kiltarn on the north; by Dingwall on the east; by Urray on the south; and by Contin and Kinloch-Luichart on the west. A part of **BENWYVIS** [which see] is in this parish; and on the opposite or south side of the valley is the celebrated **KNOCKFARRIL** with its ancient British hill-fort: which see. To the south of Knockfarril is Loch Ussie, which contains several small islands. On the west side of the strath is Castle Leod, an ancient seat of the Earls of Cromarty. It is a strong edifice of red sandstone, five stories in height, and surrounded with fine old trees.—There are three villages in the parish: viz. Maryburgh, with a population, in 1834, of 370; Auchterneed with 160; and Keithtown with 60. There are several chalybeate and sulphureous springs, which are resorted to for stomachic complaints: see **STRATHPEFFER**. Population, in 1801, 1,829; in 1831, 2,232. Houses, in 1831, 481. Assessed property £4,852.—This parish is in the synod of Ross, and presbytery of Dingwall. Patron, Mackenzie of Cromarty. Stipend £255 8s. 9d.; with glebe of 10 acres. Church built in 1807; enlarged in 1835; sittings 640. A catechist was appointed to this parish in 1816.—Schoolmaster's salary £36 7s. 1½d., with about £20 fees. There were 3 private schools in 1834.

FOGO, a parish of an oblong form, stretching from east to west, in the district of Merse, Berwickshire. It is bounded on the north and north-east by Edrom; on the east by Swinton; on the south by Eccles; on the south-west by Greenlaw; and on the north-west by Polwart. Its greatest length, from near Harcarse on the east to near Chesters on the west, is 5 miles; its greatest breadth, from near Banglee on the north to the boundary-line south-east of Winkerstones, on the south, is something less than 2½ miles; and its superficial area is nearly 8 square miles, or about 5,000 acres. The southern division is a plain; and the northern consists of two ridges of inconsiderable heights, the most elevated of which rises probably not more than 100 feet above sea-level. The ridges are separated by Blackadder water; and the southern one slopes gradually away into the plain of the southern division. The entire surface, with the exception of about 300 acres which are under plantation, and about 40 acres of natural pasture, has been turned up by the plough, and is in a state of high cultivation. On the higher grounds the soil is a deep black loam, very fertile; and on the plain it is, though thinner and borne up by a stiff subsoil of till, very far from being unproductive. The Blackadder enters the parish on the south-west; traverses it north-eastward over a distance of 3 miles; and then, for 1½ mile, divides it from Edrom. Though destitute of salmon, it produces eels and excellent trout. Its basin is a sort of huge furrow, seldom closing in upon the river in steepness of banks, yet forming a hollow between parallel ranges of low heights; and, having the church immediately on the margin of the stream, it suggested to the early colonists the name Fog-hou, which is the ancient and legitimate form of the word Fogo, and means the foggage pit, den, or hollow. In the few places where the banks are abrupt are strata of till mixed with clay or marl, and superincumbent on petrifications of moss; and in the channel of the stream, which is in general stony and gravelly, are occasional strata of bastard whinstone and limestone, which are easily quarried, and make excellent covers for drains. At Chesters, near the south-western boundary, are faint yet decisive traces of a Roman encampment. The parish is intersected, near its east end from north to south, by the post-road from

* A legacy of 100,000 dollars was bequeathed to the town of Fochabers by Alexander Milne, a native of this little Highland "city," as it is called in the American law-reports of the case, who died in Louisiana in 1839. An application to the probate court of New Orleans, for payment of the munificent bequest, has been made by the Duke of Richmond, as feudal lord of Fochabers; but the American courts have found that the bequest is not a valid one, on the ground that "the character of the legacy was a bequest of heritable property, within the province of the law of Scotland," and that, "it was clear, that a citizen of Louisiana could not have received a donation of the same kind left to him in Scotland." The validity of this decision is questioned by Scottish lawyers, who seem to hold the bequest as simply that of a sum of money; and that, under all the circumstances, in the converse case, the Scottish courts would have given effect to the legacy in favour of the citizen of Louisiana.

† "The name of this parish is of Gaelic etymology. In that language it consists of two words that are nearly descriptive of its situation: *Foigh-rìudh*, or 'a Meadow along the side of a hill.'"—*Old Statistical Account*.

Dunse to Coldstream; and from north to south-west by that from Dunse to Kelso; and it has altogether about 16 miles of public roads within its limits. The village, or rather hamlet, of Fogo, stands on the Blackadder, and is the site of the parish-church and school-house; but it consists of only 9 or 10 thatched cottages, and has less than 50 inhabitants. Population of the parish, in 1801, 507; in 1831, 433. Houses 87. Assessed property, in 1815, £4,777.—Fogo is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £219 5s. 10d.; glebe £18 10s. Unappropriated tithes £417 3s. 2d. Schoolmaster's salary £26, with about £20 school-fees. This parish is ancient, and, under David I., belonged to the opulent Earls of Dunbar. In 1147, the monks of Kelso obtained a grant of the church, along with some appurtenances, from Earl Gospatrick; and they retained possession of it, and had it served by a vicar, till the Reformation. In 1253 the monks obtained a grant also of a chapel which had been built on the manor of Fogo; and, in consideration of accompanying gifts of property, were bound over to provide for its service either three monks or three secular chaplains. In 1296, the vicar of Fogo swore fealty to Edward of England, and, in return, was reinstated in his vicarage.

FOOTDEE, or FUTTIE, a considerable village at the mouth of the Dee, lying along the river, and now a suburb of New Aberdeen. It is chiefly inhabited by ship-owners, fishermen, and persons otherwise connected with the commerce or shipping of the port. There is a handsome church in the village: see **ABERDEEN**, St. Clement's parish. A sort of parochial school is maintained here at the joint expense of the magistrates and kirk-session. The school-house was rebuilt and enlarged a few years ago, and the plan of education extended. The early site of this village is now covered with streets and warehouses extending along the Waterloo quay, and wharfs have been built along the harbour, on the south-west side of the village.

FORBES. See **TULLYNESSLE**.

FORD, a small village on the road from Edinburgh to Lauder, in Edinburghshire, so curiously situated as, though tiny in dimensions, to occupy a place in the three parishes of Borthwick, Crichton, and Cranston. The village stands near the banks of the Tyne, 10½ miles south-east of Edinburgh. At a former date, it was prosperous and beautiful, quietly and thriftily embosomed in a small valley which secluded it from the bustling and intrusive activities of life; but latterly it has fallen considerably into decay, and rejoices more in the loveliness of the landscape than the prosperity of its condition. Ford is the seat of an United Secession meeting-house, which draws numerous worshippers from five or more parishes in its vicinity. A splendid bridge or viaduct here stretches across the vale of the Tyne. See **CRICHTON**.

FORDOUN, a parish in Kincardineshire; bounded on the north by Strachan; on the east by Glenbervie and Arbuthnot; on the south by Laurencekirk and Marykirk; and on the west by Fettercairn and Strachan. It is of an irregular, oblongated, quadrangular form, extending in length, from east to west, about 10 miles; its greatest breadth near the middle being about 7; square area about 44 miles. Houses 463. Assessed property, in 1815, £9,010. Population, in 1801, 2,203; in 1831, 2,238. This parish forms part of that district, in the valley of Strathmore, styled 'the Howe-o'-the-Mearns.' It extends along the southern side of the Grampians, and the northern side of Strathmore, comprising two divisions, named 'the How district,' and 'the Brae

district;' the latter of which, to the north, consists of a range of glens or valleys, watered by rivulets, fringed, more or less, with picturesque strips of plantation, but possessing a thin soil, far inferior in fertility to the lower, southern, or 'How,' district. The latter is level; the soil consisting either of excellent brown gravelly loam or red ferruginous clay. It is highly cultivated, and presents a rich and fertile aspect. The arable lands amount to nearly 12,000 acres; and indeed no part of the parish can be called waste, except the summits of the mountains; for the Grampians themselves afford pasturage to numerous flocks of sheep, and the subordinate ridges consist of valuable land; of these the hill of Strath Finella is the chief. The only stream of any note is the Luther, or Leuther, into which several small streams empty themselves. The Luther rises amongst the hills, north of Drumtoughy, and runs east, and then southwards, through the romantic vicinity of Drumtoughy castle, and by Auchinblae, and the wooded banks near Fordoun kirk, to the parish of Laurencekirk. The river Bervie also rises, by numerous feeders, from the Grampians, in the northern district of this parish, and running eastwards to the boundary, divides it from the parishes of Glenbervie and Arbuthnot, to the point where Garvock parish meets a point of Fordoun, between Laurencekirk and Arbuthnot.—Fordoun is chiefly remarkable for its ancient remains and the traditions connected with it. In the western part of the parish, and about a mile north-east of Fettercairn, "there is," says Mr. Chambers, in his lively 'Picture of Scotland,' "a small congregation of little tenements, like the out-houses of an old farm,—the miserable remains of the former county-town. This hamlet, which is still called Kincardine, and boasts of having given its name to the county, contains only about 60 or 70 inhabitants. It ceased to be the chief town in the reign of James VI., when Stonehaven, as a more convenient situation for the county-courts, was honoured with that distinction. The situation of Kincardine, though not highly elevated, is yet commanding; for, from its low, mound-like ruins, a view can be obtained of nearly the whole district of the Mearns, as well as a considerable part of Angus."—In the vicinity of the 'town,' on the farm of Castleton, are the ruins of the palace or castle of Kincardine, which was the principal residence of Kenneth III., and that whence he was inveigled to the castle of Finella, where he was murdered, as described under article **FETTERCAIRN**. Here John Balliol is said to have pusillanimously resigned his crown to Edward I., in 1296.—This parish is remarkable in having been, if not the birth-place, at least the temporary residence, and probably the burial-place of John Fordoun, author of the 'Scotichronicon,' one of the most ancient and most authentic histories which have been published of Scotland. He is thought by some to have been a man of property in this parish; by others, with greater probability, to have been a monk who resided here. This parish also gave birth to Lord Monboddo,—a man well known in the literary world by his peculiar writings on ancient metaphysics, and on the origin and progress of the human species and of language. Monboddo house is a respectable old mansion in the parish, surrounded with fine trees. Near the mansion-house of Fordoun there are distinct vestiges of the prætorium of a Roman encampment; and, in Friars' glen, beside Finella hill, are the ruins of a Carmelite religious house. **AUCHINBLAE** is the only village in the parish: see that article.—On the top of a precipitous and wooded eminence, overhanging the sequestered and romantic glen through which the Luther runs, and opposite Auchinblae, stands the kirk-town of For-

doun, which principally consists of the church, the churchyard which occupies the extremity of the cliff, the manse, and the village inn. It is distant $4\frac{1}{2}$ miles north of Laurencekirk, and 15 north of Montrose. It is governed by a baillie, is the seat of a presbytery, and has the privilege of holding a weekly market for cattle and horses from Michaelmas to Christmas, with two annual fairs; one of which is called 'Paldy fair,' from Palladius; for here, according to the monkish tradition, did that holy saint establish his head-quarters, on being sent "in Scotiam." "This parish," says the Rev. Alexander Leslie, father of the present incumbent, and author of the Old Statistical Account of the parish, "is remarkable for having been for some time the residence, and probably the burial-place of St. Palladius, who was sent, by Pope Celestine, into Scotland, some time in the 5th century, to oppose the Pelagian heresy, and by whom it is thought bishops were first appointed in Scotland, having before that time been governed by monks. That Palladius resided, and was probably buried here, appears from several circumstances. There is a house which still remains in the churchyard, called St. Palladius's chapel, where, it is said, the image of the saint was kept, and to which pilgrimages were performed from the most distant parts of Scotland. There is a well at the corner of the minister's garden, which goes by the name of Paldy well." A similar account is given in the 'Beauties of Scotland;' and in the Brev. Aberd. [fol. 25] it is stated of the saint: "Annorum plenus apud Longforgund in Mernis in pace requiescit beata." Mr. Low, in his researches into the early history of Scotland, adopts the same views ['History of Scotland,' 8vo. Edin. 1826, ch. ii.], but, "it is now the general opinion of the more rigorous antiquaries," observes Mr. Chambers, "that Palladius never was in Scotland, and that the claims of Fordoun to have been his resting-place, arose, at first, from a misapprehension, either wilful, or through ignorance, on the part of the monks. Palladius, according to the only proper authority, was sent 'in Scotiam;' that is, to Ireland; for such was the designation of the sister-isle at that period."

The parish of Fordoun is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. The present church is a modern edifice, substituted for one of great antiquity, which occupied the same admirable site. "A ridiculous legend," says Chambers, "similar to that of Melgund castle, is told regarding the foundation of the former structure. It was at first designed to build the church on the top of the Knock-hill, about a mile or more north-east of the village,—a most inconvenient, and the reverse of a central situation; and there the work was actually commenced. As usual, whatever was erected during the day by the masons was destroyed at night by some supernatural beings, who took this method of testifying their aversion to the undertaking. After some time, when both builders and destroyers had perhaps become alike weary of their respective labours, a supernatural voice was heard to cry,—

Gang farther doun
To Fordoun's town.

The hint was taken; and, in order to determine the proper site of the church, a mason was desired to throw his hammer at random. The hammer judiciously alighted on the beautiful mound where Paldy's chapel was already pitched, and there the work was carried into effect without farther interruption. It must certainly be acknowledged to have displayed a better taste than its master, or his employers; for a more admirable situation for a place of worship could nowhere be found; nor is the good sense of

the author of the rhyme less remarkable, in choosing a spot so near the centre of the parish." On the demolition of the old church, a large and singular flat stone, covered over with figures, was discovered under the pulpit. It is described in the 'Transactions of the Society of Antiquaries of Scotland,' vol. ii. Stipend £249 5s. 8d., with glebe of 4 acres.—Schoolmaster's salary £36, with about £25 fees and other emoluments. There are 9 private schools. The celebrated Dr. Beattie, before being removed to Aberdeen, was for several years schoolmaster in this parish.

FORDYCE, or FORDICE, a parish in Banffshire, bounded on the north by the Moray frith; on the east, by the parishes of Boyndie, and Ordiquhill; on the south by Grange; and on the west by Deskford and Cullen. The adjoining parishes of Ordiquhill, Deskford, and Cullen, also originally formed part of Fordyce, but were detached from it after the Reformation. Including the *quoad sacra* parish of Portsoy, Fordyce is nearly triangular in form, with an apex to the south, and its shortest side or base to the north. Along the shore, it extends about 7 miles, and 8 inland; it contains, *quoad civilia*, about 20 square miles. Houses 674. Assessed property, in 1815, £6,920. Population, in 1801, 2,747; in 1831, 3,364. The coast, or shore, has some conspicuous headlands, being high and rocky, with the exception of a few bays, such as those of Portsoy, and Sandend. At Portsoy a species of jasper, called Portsoy marble, is quarried. The hill of Durn seems to be entirely composed of marble, and a kind of quartz, a very white, silicious stone, similar to the pentuse of the Pentlands, and employed in the manufacture of stoneware. The rocks on the sea-shore, at the eastern side of the parish, near Craig of Boyne, have been said to consist entirely of ironstone. The soil varies with the strata on which it is superimposed; in general it is deep and fertile, especially on the limestone; but it is rather wet than dry. A great part of the upper division of the parish, as in the line of the jasper or marble strata of the hilly ground, is bleak and bare. No part of the parish perhaps merits the name of hills, except the Knock-hill, which is the boundary with the parish of Grange, and the two contiguous eminences, called the hills of Durn and Fordyce; the general aspect is a fine flat, though with frequent inequalities, or rising grounds. Most of the fields are enclosed, and agriculture is in an advanced state. The high ground is covered with grass and heath. In a vale, through which flows a small stream, about the middle of the parish, are the church and manse. Farther to the east is the vale through which runs the water of Durn, a river falling into the Moray frith at the town of Portsoy. The eastern outskirts are watered by the Boyne-burn.—The kirk-town of Fordyce was erected into a burgh of barony in 1499, at the request of Bishop Elphinstone of Aberdeen. The superiority of this village was latterly vested in the Earl of Findlater, now in the Earl of Seafield. It is situated about half-a-mile from the sea. The town of PORTSOY,—which see,—is also a burgh-of-barony, vested in the Earl of Seafield. It is a thriving sea-port, situated at the bottom of Portsoy bay. Sandend is a considerable fishing village, at the bay of that name. The fishing, in the Moray frith, of ling, cod, whiting, turbot, &c. employs a number of boats. There are, in this parish, remains of some Druidical temples, with barrows, or tumuli, and cairns, in which stone-coffins, with skeletons and urns, have been found. There is a triple fosse, or rampart, on the sides and top of the hill of Durn. It is said that Archbishop Sharp was a native of Fordyce, and it was also the birth-place of General Abercrombie of Glasshaugh.—The parish is in the presbytery of Fordyce, and synod of Aberdeen. Pa-

tron, the Earl of Seafield. Stipend £251 5s. 5d.; glebe £5. Unappropriated tithes £620 1s. 4d.—Church built in 1804; sittings 1,000 to 1,100. The presbytery had it recently in contemplation to annex a district of the parish, containing 20 or 30 families, and lying near the church of Ordiquhill, *quoad sacra*, to that parish.—Schoolmaster's salary £29 19s. 1d., with about £35 of fees, and other emoluments. In the parish, *quoad civilia*, there are 11 private schools, several of which, including a grammar-school, are at Portsoy:—seven of the private, are Dames' schools.

FORFAR,* a parish nearly in the centre of Forfarshire or Angus; bounded on the north by Torriemuir and Rescobie; on the east by Rescobie, Dunnichen, and Inverarity; on the south by Inverarity; and on the west by Innetles, Glamis, and Kirriemuir. It is of very irregular outline, but convenient and compact in form; and measures, in extreme length from north to south, 5 miles; in extreme breadth from east to west, $4\frac{1}{2}$ miles; and in superficial area, 16 square miles. The surface—as it all lies within the Howe of Angus, or the portion of Strathmore which belongs to Forfarshire—presents a level prospect to the eye. The uniform plain is variegated only by extensive and fine plantations in the northern section; by two lakes respectively on the north-east, and in the west; and by the hill of Balnashinar which rises immediately south of the burgh, stands partly within the royalty, and commands a map-like view of the whole parish and adjacent country. The soil of the district is, in the middle division, a spouty clay; and in the northern and southern divisions, a light and thin loamy earth with a gravel bottom. Lenno-burn, over a distance of $2\frac{1}{2}$ miles, forms the northern boundary-line. Three streams rise in the parish, two flowing westward and one southward, but, as long as they traverse it, they are very inconsiderable rills.—The loch of Forfar, a mile in length and $\frac{1}{2}$ of a mile in breadth, stretches from near the burgh, to the western limit of the parish; and there sends off the parent or head-stream of Dean water. This loch was formerly of larger size; but was drained of about 16 feet perpendicular depth of water, and gave up a very valuable supply of moss and marl. Previous to the draining, an artificial island, composed of large piles of oak and loose stones, covered with a stratum of earth, and planted with aspen and sloe trees, looked out from the waters near the northern shore, and is supposed to have been a place of religious retirement for Queen Margaret,† when Malcolm Canmore made Forfar his place of residence. The quondam island is now a very curious peninsula, and preserves some vestiges of a building which probably was a place of worship.—Loch Fithie is a smaller

lake than the loch of Forfar, similar in form, and situated near the north-eastern angle of the parish. It is surrounded by a beautiful rising bank, richly tufted with plantation; and lying concealed from the view till one approaches its margin, and abounding in pike and perch, while the groves which overhang it are vocal with singing-birds, it is a delightful retreat to the lovers of rural retirement.—From the burgh southward, the parish is intersected by the recently constructed railway to Dundee. The western turnpike between Dundee and Aberdeen, running first northward, and then north-eastward, cuts the parish into two nearly equal parts; and sends off in its progress such numerous branch-roads as offer very abundant facilities of communication. Population, including the burgh, in 1801, 5,167; in 1831, 7,049 Houses 897. Assessed property, in 1815, £8,699.

Forfar gives name to a presbytery, which was disjoined from Dundee in 1717, and is in the synod of Angus and Mearns. The *quoad civilia* parish was divided, in 1836, into the two *quoad sacra* parishes of Forfar and St. James. The *quoad sacra* parish of Forfar contained, in 1836, according to a survey made by the minister, 6,749 persons; of whom 6,382 belonged to the Establishment, 295 belonged to other religious denominations, and 72 were not known to be attached to any religious body. The parish-church was built in 1791, and altered in 1836; sittings 1,781. Stipend £267 17s. 5d.; glebe £20. Unappropriated tithes £549 3s. 10d. Patrons, the Town-council of Forfar.—A Scottish Episcopal congregation has existed in this parish from time immemorial. Their chapel was built in 1824, at a cost of about £1,000; sittings 350. Stipend £130.—An Independent congregation was established in 1836. The chapel was built in 1835, and along with an attached dwelling-house, cost about £650. Sittings 460.—The *quoad sacra* parish of St. James contained, in 1836, according to ecclesiastical survey, 2,120 persons; of whom, 1,772 belonged to the Establishment, 160 belonged to other denominations, and 188 were not known to make any public profession of religion. The parish-church was built in 1836, at the cost of upwards of £1,200. Sittings 1,134. Stipend £80.—The United Secession congregation was established previous to the year 1780. The original cost of the church cannot now be ascertained. Sittings 470. A school-room was built by the congregation in 1810, at the cost of £105. Minister's stipend, at £105 to £110, with a manse and garden.—The Methodist congregation has existed in the parish since 1822, and though dissolved some time after its erection, was reconstituted in 1836. The place of meeting is a rented hall. Sittings 200.—The *quoad civilia* parish of Forfar contains 1 parochial school, and 13 schools non-parochial. Parish schoolmaster's salary £34 4s. $4\frac{1}{2}$ d., with £25 school-fees, and £8 15s. for a dwelling-house and garden.—According to the ecclesiastical survey of 1836, the population of the entire parish and burgh was then 8,869.

FORFAR, a royal burgh, the seat of a presbytery, and the county-town of Forfarshire, is situated nearly in the centre of the parish of Forfar; 5 miles east by north of Glamis; 6 south-east of Kirriemuir; 12 south-west of Brechin; 14 north of Dundee; and 56, by way of Cupar and Dundee, from Edinburgh. The ground on which it stands, as well as that over a considerable way around it, is remarkably uneven, and thrown up into numerous little hillocks. Though the town occupies the bottom of a sort of basin, the immediately circumjacent ground sloping gently toward it on almost every side, it stands high in comparison to the general level of the country. Waters, which rise not far from its vicinity, flow respectively north, south, east, and west, and fall into streams,

* This parish, in all writings concerning the patronage, tithes, &c. is designed the parish of Forfar-Restenet; though the latter part of the name is seldom mentioned in conversation or in common writing. Restenet was perhaps the name given to the priory, expressive of the purpose for which it was built, namely, a safe repository for the charters, &c. of the monastery of Jedburgh; but some take its derivation from a Gaelic word, *Risk*, signifying, as they say, 'a bog or swamp,' which indeed answers to the situation. Forfar is conjectured to be the same with the ancient *Or*, and the Roman *Orrea*, signifying a town situated on a lake, to which description it exactly answers; and the lake on which it stands has for many ages been known by the name of Forfar. It has been conjectured that the name may have been formed of two Gaelic words, *fuar*, 'cold, chilly,' and *bar*, *blair*, or *bar*, 'a point,' 'the cold point.' In common language the name is invariably pronounced *Farfur*. In Welsh, *fair* signifies 'an eminence.'

† "It is no inconsiderable presumption," says Dr. Jamieson, in his Description of the Royal Palaces of Scotland, "in favour of the truth of this traditionary account, that, although my worthy old friends of the burgh of Forfar have never been accused of going to an extreme in religion, there is a hereditary attachment to the memory of this excellent queen. She seems still to live in the affections of all its inhabitants. As she was canonized after her death, and advanced to the dignity of being the Patroness of Scotland, the day of her translation, June 19th, has been, at least occasionally, commemorated by a procession of the young females of Forfar to her Inch."

which respectively run toward the Tay long before it expands into an estuary, and toward the northern part of the eastern sea-board of the county. The town, while overlooked by gentle slopes, commands, through their openings and over their summits, extensive views of the Sidlaw hills, the great valley of Strathmore, and a wide sweep of the shelving ranges of the Grampians. Though forming a singular instance of a town of any note built at a distance from running water, it possesses so great advantages as to facilities of road-communication, as to have capacities of sending down turnpike, railway, or canal, by a very easy descent, westward to the river Tay, southward to the frith of Tay, and eastward and north-eastward to the German ocean.

In one line of street, called West port and High-street, which makes repeated bends and is of very unequal width, Forfar extends from south-west to north-east about 1,200 yards. From the middle of High-street, or rather from the middle of the whole central line, Castle-street goes off and runs northward over a distance of about 400 yards, sending westward a branch-street of about 160 yards, and eastward an alley called Back-wynd, which, at a distance of 400 yards from Castle-street, enters High-street by an acute angle. Subtending most of the main line of street on the south side, are several lanes and short new streets, which, added to the length of Castle-street, give the town an extreme breadth of between 500 and 600 yards. Like most old towns, Forfar was originally without any regular plan, and received peculiarities and varieties of configuration from the caprice or self-accommodation of every man who was able to add to its structures. About a century ago, its sinuous and ill-compacted streets consisted chiefly of old thatched houses, and were redolent of filth; but now the streets, though generally irregular in outline, are well-built, and of modern and comfortable appearance; and in the south wing of the town, they evince the adoption of the movement spirit of civic and architectural reform which has of late years venerated so many beauties upon the rough and repulsive surface of the important burgh of Dundee. In the latter quarter is situated the Forfar academy, for teaching the languages, mathematics, and geography. In Castle-street stands a handsome suite of county-buildings, of recent erection, and highly ornamental to the town. The parish-church, with its steeple, the new church of St. James, and the Episcopal chapel in High street, are all creditable structures, and important features in the burghal landscape. The town has an excellent subscription news-room and library; a mechanics' institute; a large infant-school; and branch-offices of the Royal bank of Scotland, the Arbroath bank, the Dundee Union bank, and the Dundee new bank.

Forfar cannot, as a manufacturing town, bear comparison with Arbroath or Dundee. Its chief trade is the weaving of osnaburghs and coarse linens. Hardly any factory work is done; but, in 1838, 2,569 hand-loomers were employed on various common linen fabrics. The osnaburgh weavers earned, in 1824, from 12 to 14 shillings a-week; but, for 9 years preceding 1838, were able, on the average, to earn in nett wages little or nothing more than 7s. 6d. for the first class of work, and 6s. for the second. Another important manufacture, is the making of a particular kind of shoes, well-adapted for a Highland district. So ancient and famous is this manufacture, that the craft employed in it, "the Sutors of Forfar," are popularly spoken in identification with the whole population, in the same way as, "the Sutors of Selkirk," are made to represent all the burghers of the capital of the Forest. A shoemaker's earnings amount to about 12s. a-week. But, in consequence of the archi-

tectural extension and generally improving condition of the town, day-labourers earn from 10s. to 12s., carpenters from 14s. to 15s., and masons 18s.

The town-council of Forfar consists of a provost, 2 bailies, a treasurer, 11 councillors, and 4 deacons of crafts. Previous to the Reform act, all the council's members, except the deacons of crafts, were elected by itself. There is no separate establishment for lighting, cleansing, watching and paving; the expense of these matters being defrayed out of the common good. The inhabitants subscribed to sink wells, and are usually allowed a small contribution towards the object from the town-funds. There is no guildry incorporation. A company or corporation of merchants was established in 1653, but possesses no exclusive privileges. Three incorporated trades,—the glovers, the shoemakers, and the tailors,—have the exclusive right of exercising their respective callings within the burgh, and claim fees of admission from strangers. The weaver's incorporation formerly possessed the same right, but was denuded of it by an act of parliament for improving the linen trade. The shoemaker's incorporation is the most ancient; and it is the only one which possesses property to a noticeable amount, drawing an annual revenue of about £100, and expending £80 in allowances to decayed and sick members. The magistrates exercise jurisdiction over the whole royalty, which extends about 2½ miles in length, and half-a-mile in breadth, and over some adjacent liberty-lands defined in a charter given to the town by Charles II. The only court held in the burgh, is the baillie court, into which civil causes of a personal nature can be brought to any amount. The magistrates, while in court, are assisted by an assessor, who is the town-clerk. The town-council have no patronage, except the appointment of the municipal officers, and of the parochial minister. The gross value of the property of the town was estimated, in 1832, at £18,867 15s. 7½d. The gross revenue for the same year was £1,616 1s. 6¾d.; and the gross expenditure £2,193 13s. 4d.,—so large a portion of this expenditure, as £1,416 17s. 4d., being casual, and having for its object public improvements. During the years 1827–1831, the average annual revenue was £1,715 5s. 9¾d.,—and the average annual expenditure £1,625 9s. 1¾d. In 1839–40, the revenue amounted to £1,558 13s. 4d. Forfar unites with Arbroath, Montrose, Brechin, and Inverberie, in sending a representative to parliament. Parliamentary constituency in 1840, 260; municipal, 280. Population of the burgh, in 1831, exclusive of the landward part of the parish, 6,899. The number of residents within the burgh, in 1832, whose rents were £10 and upwards, was 150; and of those whose rents were from £5 to £10, was 331. The amount of government-cess levied between 1822 and 1832, ranged between £40 1s. 5d. and £57 10s. 4d. a-year. The town has a weekly market on Saturday, and fairs on the last Wednesday in February; the 2d Wednesday in April; the 1st Wednesday (O. S.) in May; the 1st Tuesday, and two following days, in July; the 1st Wednesday and Thursday in August; the last Wednesday in September; the 3d Wednesday in October; and the 1st Wednesday in November.

There are few places within the royalty in which a quarry of some kind may not be found. Stone and slate quarries have been plentifully worked on the south side of the town, and have greatly aided its trading prosperity and architectural improvement. But Forfar long suffered serious disadvantage, and even was menaced with a destruction of its well-being, by the scarcity and dearth of fuel. Turf or peat, procured in no great abundance, and sought by the draining of Loch Forfar and another small lake now extinct, was, for many years, its chief depen-

dence. Coa. was vainly sought in the vicinity, and could be procured from the coast only at high prices. But, by means of the railway communications which have recently been opened, the town has surmounted nearly all its disadvantages; and, if prosperous before, ought now to career speedily toward consideration and opulence.

Forfar is a town of high but unascertained antiquity. Its nucleus, in the form of a village or hamlet, must have been created under the protection of an ancient castle of great note and importance, all vestiges of which have long ago disappeared. When this castle was built, and what form it originally possessed, are matters lost to history; but it is recorded to have been the scene of the parliament which was held in the year 1037, by Malcolm Canmore, after the recovery of his kingdom from the usurpation of Macbeth, and in which surnames and titles were first conferred on the Scottish nobility. The castle stood on a rising ground to the north of the town, and appears, from traces of it which existed half-a-century ago, and from the amount of its conjectured dilapidation in building the modern town, to have been very extensive. As if it had been a quarry rather than an edifice, it seems to have furnished the materials of the old steeple, the west entry to the old church, and probably a large portion of the houses which, previous to the era of modern improvement, lined the streets. A figure of it, cut in stone, remains upon the old market-cross, and forms the device of the common seal of the burgh. Forfar, in consequence of the attractions of its castle, was, for a considerable period, the occasional residence of royalty, and received a considerable number of royal favours. Queen Margaret, the celebrated consort of Malcolm Canmore, had—as noticed in the article on the parish—a separate and apparently a cherished residence on the loch. Weapons and instruments were, about 70 years ago, found in the vicinity of the town, which are believed to have belonged to the murderers of King Malcolm II. Memorials of royal residence and favour survive in the extensiveness of the burghal territory, and in the names of some localities, such as the King's moor, the Queen's well, the Queen's manor, the palace-dykes, and the court-road. In the vicinity we find the King's burn, the King's seat, and the Wolf law, where the nobles were wont to meet for hunting the wolf. A farm, about half-a-mile distant from Forfar, is called Turfbig, because, as tradition assures us, the peats or turfs used in the palace were biggit or stacked there.* Another place, near this, retains the name of Heather-stacks, where, it is said, the heath required for the royal kitchen was cut down and piled up. A charter of confirmation grant-

ed by Charles II., in 1665, assumes earlier charters and rights to have been conferred on the burgh, and narrates the plundering of the inhabitants, in 1651, for their attachment to the royal family, noticing, in particular, "the faithful testimony and dissent given be Alexander Strang, late provost of Forfar, and commissioner for the said burgh, against passing of the unjust act of the pretendit parliament, the 16th of January, 1647, entitled, Declaration of the Kingdom of Scotland concerning his Majesties Person." In 1684 the market-cross was erected at the expense, it is said, of the Crown; and it stood for a century-and-a-half, an incumbrance in the thoroughfare, and a monument of the loyalty of the town; but was recently removed by the magistrates to the site of the old castle, to mark and commemorate the scene of the royal residence.

A feud, or party animosity, has long subsisted between "the sutors of Forfar" and "the weavers of Kirriemuir;" and, though now prompting only hard words and contemptuous nicknames, expressed itself, during a less civilized period, in acts of violence and deeds of clanship. Drummond of Hawthornden relates a ludicrous instance of how it operated in the 17th century, and of the barbarous ideas with which it was associated. Arriving at Forfar in the summer of 1648, he stood convicted before the burghers of the two works of defending his king and writing poetry,—offences which they deemed in no ordinary degree criminal; and, though intending to spend the night in the town, he found himself spurned from every door, and was obliged to proceed onward to Kirriemuir. The 'weavers' of the latter town were innately just as indignant at his two crimes as their rivals; yet, happy to have an opportunity of showing their contempt for 'the sutors,' by totally differing from them in conduct, they gave Drummond an hospitable reception; and they so far won him over by their kindness, that he praised them in a song of stinging satire upon the sutors of Forfar.—In the steeple of the church is preserved a small circle of iron, called 'the Witches' bridle,' consisting of four parts connected by hinges, and adapted as a collar for the neck. Behind is a short chain; and in front, pointing inwards, is a gag which entered the mouth, and pressed down the tongue. This infamous instrument was fastened upon any poor wretch whom the ancient sages of Forfar condemned to the stake for having acquired, through private malice or popular superstition, the reputation of witchcraft; and was used both as a halter for leading the victim forth to the place of execution, and as a means of preventing speech or cries amidst the torture of the flames; and, when the execution had been completed, it was usually found among the mingled ashes of the body and the faggots. The place of incremation was a small hollow, a little north of the town, called 'the Witches' howe,' and surrounded by several small eminences which were convenient stations for spectators. In the records of the burgh is still preserved the process verbal of a man, who, about the year 1682, suffered the infliction of the horrid 'bridle,' and was burnt to death in 'the Witches' howe,' for the imputed crime of sorcery.—Antiquities of a very different class, are a large bell sent by Robert Strang, a native of Forfar, who settled as a merchant and became wealthy in Stockholm, as a tribute of respect to his native place; and a table of donations to the poor, of which the same individual and his brother were the principal contributors.

Looking at the present prosperity of Forfar, and remembering that not a century has elapsed since the town rose from abasement, and began to wear appearances of modernization, we feel curious to know how its aspect was viewed by an intelligent observer

* However ludicrous this etymon may appear, it has unquestionable confirmation. For, when a new possessor serves himself heir to this part of the estate, he is obliged to promise that he will furnish peats and turfs for the use of the king's kitchen when he resides in Forfar. Although there is no proof that any of the Stuarts resided here, yet, in the year 1391, during the reign of Robert III., the sheriff of Forfar is charged with "the three hundred carts of peats, which are hereditarily supplied within the bailiwick, for sufficient fuel for his majesty's service when he comes to Forfar." This exactly corresponds with a previous deed of Robert II., A. 1372, in which we have these words:—"Whereas John, the son of William, and Christian his spouse, with their heirs, are bound annually to furnish the kings of Scotland, at their manor of Forfar, with three hundred cart loads of peats for the lands of Balnoshenore and Tyrebeg; be-use we in these times do not reside there so often as our predecessors did reside at Forfar, we grant, of our special grace, that the said John, &c. for the said three hundred cartfuls of peats, shall only be bound, as often as we shall happen to come to Forfar, to furnish fuel sufficient for us and our heirs during our stay there." This deed is dated at Glaumys, a few miles distant from Forfar, where the king had resided, perhaps in a royal progress, because of the abundant accommodation to be found in the splendid castle there. We find that twenty pounds and a chaldron of meal were paid to the heirs of William of Forfar, as "the annual due for the farm of the royal manor."

soon after it commenced the race of improvement. The author of the Old Statistical Account of the parish, is, as to character and position, exactly a person to gratify us. Writing in 1793, he says:—"About 50 or 60 years ago there were not above seven tea-kettles, as many hand-bellows, and as many watches in Forfar: now tea-kettles and hand-bellows are the necessary furniture of the poorest house in the parish, and almost the meanest menial servant must have his watch. About the same period a leg of good beef, weighing 4 stone, might have been purchased for 5s. Previous to 1745, there was no meat sold in Forfar by weight, and very seldom was an ox killed till the greater part of the carcase had been bespoken. A little before that, two work oxen, weighing about 30 stone each, were sold in one of the Forfar fairs for 50 merks Scots the head; and both the size of the cattle and the price of them were thought a wonder. An ox worth, at that time, about 40s. supplied the flesh-market of Forfar eight days or a fortnight, except on extraordinary occasions, from Christmas to Lammas. Between Hallowmas and Christmas, when the people laid in their winter provisions, about 24 beeves were killed in a week; the best not exceeding 16 or 20 stone. A man who had bought a shilling's worth of beef or an ounce of tea, would have concealed it from his neighbours like murder. Eggs were bought for a 1d. per dozen, butter from 3d. to 4d. per lb., and a good hen was thought high at a groat. The gradual advancement of population, trade, and agricultural improvement, has produced the gradual rise in the price and consumption of all these articles, which within these last twenty years are some of them doubled, and many of them trebled. The effects of the increase of number, trade, and wealth, appear visibly also in the dress of all ranks, and even in the amusements of the more wealthy citizens. Twelve or twenty years ago it was no uncommon thing to see the wife of a wealthy burgess going to church arrayed in a rich silk gown covered by a homely plaid; now silk mantles and bonnets, and fashionable head-dresses are no rarities; and even the servant-maids begin, in this respect, to ape the dress of their superiors. Formerly a ball or social dance was not thought of above once or twice in a year, and the ladies, in general, appeared at it dressed in close caps like their grandmothers; for several years past there has been, during the winter season, a monthly concert of Italian and Scotch music, performed by the gentlemen of the place, and followed by a dance, well-attended, and presenting a company of ladies and gentlemen dressed in the modern fashion."

FORFARSHIRE, or **ANGUS**, a county on the east coast of Scotland, stretching between the river North Esk and the frith of Tay. It is bounded on the north-west and north by Aberdeenshire; on the north-east by Kincardineshire; on the east and south-east by the German ocean; on the south by the frith of Tay; and on the south-west and west by Perthshire. Its form—with the exception of an indentation on the north-east, another indentation on the south-west, and a projection on the north-west, all about 5 or 6 miles deep—is very nearly circular. The county lies between latitude $56^{\circ} 27'$ and $56^{\circ} 57'$ north, and between longitude $2^{\circ} 25'$ and $3^{\circ} 25'$ west from the meridian of Greenwich. Its medium extent, from north to south, is $28\frac{1}{2}$ miles, and from east to west, 29 miles, of $69\frac{1}{2}$ to a degree; and its superficial area is $831\frac{1}{2}$ square miles, or 532,243 English acres. The county consists of four parallel and very distinctively marked districts,—the Grampian, the Strathmore, the Sidlaw, and the Maritime.

The Grampian district forms the north-western

division, and includes about two-fifths of the superficial area. Like the rest of the range, [see **GRAMPIANS**,] the Grampian mountains here run from south-west to north-east, forming the barrier between the Highlands and the Lowlands of Scotland; and exhibit ridge behind ridge, with many intervening valleys cut out by streams and torrents, till they form, at their water-line or highest ridge, the boundary-line of the county. They are formed of granite, gneiss, mica-slate and clay-slate, flanked by a lower range of old red sandstone associated with trap. The portions of them included in Forfarshire, are called the Binchinnin mountains; and, viewed in the group, are far from possessing either the grandeur of the Alpine districts of the west, or the picturesqueness and beauty of the highlands of the south: see article **BINCINNIN MOUNTAINS**. From the higher summits of the Grampians, a brilliant view is obtained, not only of Forfarshire and part of Perthshire, but of Fife, East Lothian, and the heights of Lammermoor.

The Strathmore district of Forfarshire is part of the great valley of that name, [see **STRATHMORE**,] and stretches from the western boundary of the parish of Kettins, away north-eastward through the whole county, to the lower part of the North Esk. From its northern point south-westward it lies along the foot of the Forfarshire Grampians, till it forms the parish of Airley; and it thenceforth, till the termination of the parish of Kettins, shares the continuation of Strathmore with Perthshire. This district is called the How or Hollow of Angus; and is 33 miles long, and from 4 to 6 miles broad. Its surface is beautifully diversified by gentle eminences, fertile fields, plantations, villages, and gentlemen's seats. Small portions of it are covered with water during wet seasons, and, in other respects, have perhaps not received due attention from the cultivators of the soil. The geological formation of this district is that of old red sandstone; and it is intersected by numerous longitudinal ridges, some of which rise 200 or 300 feet above the adjacent valleys.

The Sidlaw district of Forfarshire derives its distinctive features from the Sidlaw hills. These hills, composed of old red sandstone accompanied by trap, and overspread with an impervious boulder formation, are a continuation or offshoot of a range which runs parallel to Strathmore or the Grampians, from the hill of Kinnoul near Perth, to the north-east extremity of Kincardineshire. Seen from Fifehire, the Sidlaws appear to rise at no great distance from the estuary of the Tay, and shut out from view the scenery of Strathmore and the lower Grampians. They lift several of their summits upwards of 1,400 feet above the level of the sea; and in some places are covered with stunted heath, while, in others, they are cultivated to the top. The Sidlaw district terminates at Red-head, a promontory on the coast, in the parish of Inverkeiler, between Arbroath and Montrose; and measures about 21 miles in length, and from 3 to 6 miles in breadth. From some of the detached hills, respectively on the north-western and the south-eastern sides of the range, brilliant views are obtained, on the one hand, of the whole extent of Strathmore, and, on the other, of the scenery along the frith of Tay and the German ocean.

The maritime district of Forfarshire is, for a brief way, in the parish of Inverkeiler, identified with the Sidlaw district, and extends from the Tay and the limits of Liff and Lundy on the south to near the mouth of the North Esk on the north. In its southern part, it is at first of very considerable breadth; but it gradually narrows as it becomes pent up between the Sidlaw hills and the ocean; and, overleaping the former, it thence stretches northward

parallel to the How of Angus. In extreme length, it measures upwards of 27 miles; in breadth, it varies from about 3 miles to upwards of 8½; and in superficial area, it includes upwards of 222 square miles. This district is, with a few exceptions, fertile, and highly cultivated. Excepting a few rounded jutting hills—some of which are designated by the Gaelic name of Duns—its surface slopes gently to the frith of Tay on the south, and the German ocean on the east. At Broughty ferry, where the frith of Tay is very much contracted, an extensive tract of links or sandy downs commences, and thence sweeps along a great part of the parishes of Monifeith and Barry. Two other sandy tracts of inconsiderable breadth stretch along the coast respectively between Panbride and Arbroath, and between the embouchures of the South Esk and the North Esk. In many places, these downs evince, by their exhibiting extensive beds of marine shells, at heights varying from 20 to 40 feet, that they were at one period covered with the sea. The maritime district is adorned with towns and villages, elegant villas and comfortable farm-steads, numerous plantations, and in general, ample results of successful culture and busy enterprise.

No waters enter Forfarshire from the conterminous counties; and only inconsiderable rills at two points, come down thence upon waters which form its boundary-line. All its waters, with the exception of the Isla and its tributaries which run into Perthshire to join the Tay, have their termination also within its limits, or at its boundaries. The principal streams, in consequence, are not of the class which the usage of Scotland dignifies with the name of rivers, but belong to the more humble class of "waters." The most northerly is the North Esk, whose principal tributaries are West water and Cruick water, both on its right bank, and which forms, for a considerable distance before entering the sea, the north-eastern boundary-line of the county. The next is the South Esk, which traverses the whole breadth of the county from the highest range of the Grampians to the sea at Montrose, and whose principal tributaries are the Prosen on its right bank, and the Neran on its left. The Lunan rises near the centre of the county, and flows eastward to the sea at the point of division between the parishes of Lunan and Inverkeiler. Of a number of other streams which flow toward the German ocean or the frith of Tay, all, with the exception of the Dighty, are very inconsiderable, rarely having a course of more than 8 or 9 miles. The Isla rises, like the two Esks, in the Grampians, but flows in general southward, forms, for a number of miles, the western boundary-line, and through its own immediate tributaries and those of the Dean, which joins it immediately after entering Perthshire, drains the waters of about one-sixth of the county away toward a junction with the Tay 10 miles above Perth.—The lakes of Forfarshire are all small—in no case much upwards of one mile in length—and are chiefly Lochlee, Lentrathen, Rescobie, and Forfar lochs, in the parishes of their respective names, and Balgavies loch in the parish of Aberlemno. These lakes, as well as some smaller ones, abound in pike, perch, and various kinds of trout. Several of them are valuable also for marl; and others, not now in existence, were drained for sake of obtaining easy and profitable access to that substance. The Tay, though it expands into an estuary 12 miles before touching the county, and cannot, while it washes its shores, be considered as a river, is greatly more valuable to Forfarshire than all its interior waters. Sandbanks in various places menace its navigation, but are rendered nearly innocuous by means of light-

houses and other appliances.—From the mouth of the Tay to near Westhaven, the coast on the German ocean is sandy, and thence north-eastward to near Arbroath, it cannot safely be approached on account of low, and, in many cases, sunk rocks. About 10½ miles south-eastward of the centre of this perilous part the Bell-rock lighthouse lifts its fine form above the bosom of the ocean: see BELL-ROCK. A mile north-eastward of Arbroath the coast becomes bold and rocky, breaking down in perpendicular precipices, and, in many places, perforated at the base with long deep caverns, whose floors are boisterously washed by the billows of the sea. The Red-head, a rocky promontory, upwards of 200 feet perpendicular, terminates this bold section of coast, as it does the inland range of the Sidlaws. Lunan bay now, with a small sweep inward, presents for nearly 3 miles a fine sandy shore, and offers a safe anchorage. The coast again becomes rocky and bold as far as to the mouth of the South Esk; and thence to the extremity of the county, it is low and sandy.

Forfarshire is not remarkable for its minerals. Many searches have been made in the south-western district, sometimes with temporarily flattering prospects, but eventually without success, for coal. A thin seam has more than once been found, but nothing sufficiently important to warrant a hope that any part of the coalfield of Scotland lies beneath. Peat long served as a desideratum in the central districts; but now, in every quarter except among the Grampians, may be regarded as exhausted. The manufacturing and most populous parts of the county are hence wholly dependent for their fuel upon the collieries of Fife and Newcastle.—Limestone occurs in the Grampian, the Sidlaw, and the Maritime districts. That, among the Grampians, is what mineralogists call mountain-limestone; and is composed of crystals, or spar of lime, in very small grains. In Glen Esk and Glen Clova it abounds; but owing to the want of appropriate fuel, is very limitedly worked. Several veins of rhomboidal spar of lime intersect the sandstone strata of the Sidlaws; and is wrought, though to only a small extent, in various places in the district. In the neighbourhood of Brechin, the stratum is about 12 feet thick, inclining to the north at an angle of about 45 degrees; and consists of a great congeries of fragments of limestone, of various colours, most of which have been rounded into a globular form, and cemented together by means of a sparry cement crystallized among their interstices. It is mined from between strata of red sandstone, and burned with coal fetched from Montrose. Were blocks of it found sufficiently compact and free of cracks, they could be polished into a remarkable species of marble. Limestone, yielding three bolls of powdered slacked lime from one boll of shells, is worked at Hedderwick north of Montrose, and Budden on the coast 3 miles south of that town, from strata of an aggregate thickness of 25 feet. But though worked in the latter locality since about the year 1696, and though occurring in sufficient plenty in the county, the limestone of Forfarshire, on account of the dearth of fuel, cannot compete, even on its own soil, with lime imported from Sunderland and from Lord Elgin's works on the frith of Forth.—Sandstone abounds in all the districts except the Grampian; but nowhere is so fine a building material as to either grain or colour, as the sandstone of Fife or Mid-Lothian. Much of it is red, incapable of being cut with the chisel, and dressed with the hammer or the pick, is employed in rubble-work. But in several of the Sidlaw parishes it occurs in strata of various thickness, some of them only from half an

inch to an inch, which are cut into plates for roofing, and flags for paving. The strata are coated with scales of mica or talc, of a greyish-blue colour, and, in consequence, are easily separated. The most extensive range is in the parish of Carmylie, and along the south-eastern declivity of the Sidlaw hills, and is worked in various extensive quarries. The strata here are of a very fine grain, white in colour, or with a slight tendency to blue or green, and are quarried or carved into columns, lintels, grave-stones, steps for stairs, and especially paving-flags of from three to six inches in thickness, which are shipped in large quantities at Arbroath, and, under the name of Arbroath paving-stones, find a ready market in London and Edinburgh.—Lead, of the species called galena, black in colour, and metallicallly lustrous, occurs in various localities in micaeous rock; and was for some time wrought in the upper part of the parish of Lochlee, and at Ardoch, near the Mill-den, on the Esk, till the mines got under water.—Copper is supposed to exist in the Sidlaw hills, and in the spurs of the lower Grampians.—An iron mine in the lower part of the parish of Edzel was for some time worked, but has long been abandoned.—A very thick vein of slate occurs in the mouth of Glen Prosen, and in many other places along the declivity of the Grampians, and is of a dark-blue colour, inclining to purple; but it seems not to be appreciated, or is supposed to be less valuable for roofing than the thin plates of sandstone with which the county abounds.—Shell-marl, formed from the exuvæ of several kinds of fresh water shell-fish, and greatly enriching to the country as a manure, abounds in various parts of Strathmore, or in contiguous lakes and swamps; and has been removed in large quantities from the beds of seven lakes, four of which, Kinordie, Lundie, Logie, and Restennet have been wholly drained; and three, Forfar, Rescobie, and Balgavies, partially drained, in order to its removal. Clay-marl, used for consolidating sandy and gravelly soils, occurs in Dunnichen, Kinnettles, Tannadice, Lethnot, and the lower part of West-water. Rock or stone marl, which readily dissolves into clay on exposure to the air, and imparts extraordinary fertility to a superincumbent soil, occurs as a subsoil in the parishes of Craig and Dun, and probably in other localities.—Vast masses of jasper, varying in colour from a bright yellow to a deep red, and capable of being cut and finely polished into ornamental trinkets, are immersed in mica schistose rocks on the property of Burn, at the mouth of Glen Esk, and at the bridge of Cortachie, where the South Esk issues from among the Grampians.—Chalybeate springs, of important medicinal quality, well up in numerous places; but those chiefly resorted to are one near Montrose, three west of Arbroath, and one in the parish of Dunnichen.

The general colour of the soils of Forfarshire is red, of various intensity, inclining often to brown, or dark brown, or black. The moist soils are, in all cases, darker than the dry. On the uplands of the Grampians, a thin stratum of moorish earth generally covers the surface, over a whitish retentive clay, but frequently perforated by jutting rocks. In the glens of the Grampians, the secondary or alluvial soils are generally much mixed with sand, and, in consequence, are loose and friable; and, in many instances, they are unmanageably stony. In the lower part of the country, the primary soils are of various qualities: those on gravel stone rocks are generally thin, mossy, and encumbered with loose stones; those on sandstone rocks are chiefly a tenacious clay, very unfertile, yet capable of being so wrought and manured as to produce excellent wheat; those upon subsoils

of what, in this county, are called mortar, because they serve as a succedaneum for cement in building, consist also of clay, but are more vivid in the redness of their colour than the former class, and decidedly superior in quality; those upon whinstone are, in general, friable clays, and very fertile, though, on the northern declivity, and among the valleys of the Sidlaw hills, they are often too shallow to admit the plough, and are sometimes perforated and displaced by the solid rock. Never, in this county, does whinstone look out from the surface at or near the summit of a hill, without giving intimation that a sheet of alluvial whinstone soil, rich, and very fertile, stretches away from the base of the hill, increasing in depth as it recedes. The alluvial soils, in the lower parts of the county, are often so intermixed with the primary that they can hardly be distinguished; but they prevail in the basins of rivers, and frequently extend to a considerable elevation above the present beds of the streams, in hollows which seem to have originally been the beds of lakes, or of expansions of running waters. In the How of Angus, the soils are all alluvial; but, only in the minority of instances, fertile. In many places, the soil is gravelly, the stones being in general of small size; in some places, it is a dead sand, which scarcely compensates the cost of cultivation, in several places, it consists of sheets of alluvial when stone, or of earth mixed with vegetable mould, which have been deposited by rivulets from the Sidlaw hills, and are very fertile; in other places, it is an alluvial clay, resembling carse-land, deposited by sluggish brooks, and, when rendered dry, is abundantly productive. Part of the strath which these varieties of soil carpet, has grown up into moss; and part of it is so flat as, in rainy weather, to be saturated with moisture and converted into fens. At Little Mill, north of Montrose, and in various other places round Montrose Basin, are stripes and patches of real carse-clay, similar to that of the carses of Gowrie and Falkirk. No very extensive mosses occur in the county. Those among the Grampians are situated in hollows on the summits or the sides of the mountains. The principal one in the low country is Delty moss, on the lands of Carbuddo.

About 130 years ago, a great proportion of Forfarshire was in the hands of a few ancient families; the most conspicuous of whom were the Lyons, Maules, Douglasses, Ogilvies, and Carnegies. But since the introduction of manufactures and trade, property has undergone many changes, and been parcelled out in smaller divisions. Of 40 barons mentioned by Edward in 1676, not one-third are represented by descendants who are proprietors in the county. A portion even of the few ancient families who remain have their principal property in other counties, and do not reside in Angus. So rapidly has landed property passed, in many parishes, from hand to hand, that the average term of possession by one family does not exceed 40 years. The money-value of estates has also, for a long period, fluctuated, and, up to 1815, kept steadily increasing. A great proportion of the landed properties, when the Rev. James Headrick drew up, in 1813, his General View of the Agriculture of Forfarshire, were from £100 to £1,000 a-year in value; some were from £2,000 to £6,000; and one, or perhaps two, were reckoned to exceed £12,000.—The greater number of the estates are freehold, or held by charter from the Crown. Some, but none of large extent, are held in feu, or by charter, from a subject superior; but, as to the practical nature of the tenure, are really occupied, for a trifling rent, upon a perpetual lease. A considerable proportion of the entire property of the county is placed under

deeds of entail, and debarred from the full advantages of improvement.—The farm-houses of all Angus, about 70 or 80 years ago, were miserable hovels; and those of even the present day in the pastoral parts of the Grampian district, are generally wretched, dark, and sordid huts. But throughout the arable sections of every district of the county, most of the present farm-houses are substantial in structure, convenient in situation, and comfortable in aspect; and have usually their attached offices in the form of three sides of a square.—The principal seats of proprietors are Glamis castle, Earl of Strathmore; Cortachy and Airlie castles, Earl of Airlie; Camperdown house, (formerly Lundie,) Lord Viscount Duncan; Lindirtis, Laing Meason; Isla bank, Ogilvy; Gray, Lord Gray; Careston, Earl of Fife; Balnamoon, Carnegie; Brechin castle and Panmure house, Honourable William Ramsay Maule; Kinnaird, Sir James Carnegie, Bart.; Dun, Earl of Cassilis; Rossie, Ross; Ethie, Earl of North Esk; Guthrie, Guthrie; Dunnichen, Hawkins; Isla, Ogilvie; Craigo, Carnegie; and Langley park, Cruickshanks.

Forfarshire, as to its agricultural capabilities, continued long in the state of inertia which, till a comparatively recent date, characterized most other divisions of Scotland; but, except on a small minority of its estates, it is now fully aroused and energetic, and displays an activity and a success of effort little inferior to those of the most flourishing and embellished portions of the Lowlands. The farmers, in general, have been equal in intelligence and practical skill to the cultivators of the soil in the choicest agricultural arenas of Scotland; and have, for the most part, kept pace with them in the adoption or invention of plans of improvement. The earliest agricultural association in the county was the Lunan and Vinney water society, presided over by the late patriotic George Dempster, Esq. of Dunnichen, and composed of proprietors, farmers, and clergymen residing in the basins of the streams mentioned in its title. The Strathmore society, the Angus and Mearns Agricultural society, the Angus and Perthshire Agricultural society, and the Eastern Forfarshire Farming association, followed. At an early period in the era of improvement, some proprietors employed professional men to plan and mark out such drains as were necessary or desirable upon their lands; and set a spirited and successful example, which speedily prompted very extensive and enriching draining operations throughout the county. Vigorous, highly beneficial, and far-spread manuring operations were also from an early period conducted with shell-marl and lime. Of comparatively modern improvements none has been so remarkable in the energy of its prosecution, or the beneficial nature of its results, as the use of bone-dust. The first persons who freely used this manure were the Honourable W. Maule, in the eastern part of the county, and Mr. Watson of Keilor, in the western,—both assiduous and astute agriculturists, and judicious and enterprising improvers. Bone-dust is supplied from large preparing establishments in Dundee and Arbroath, and is generally employed on land appropriated to turnips; and when the crop is not consumed on the ground by sheep, the bone-dust is followed up by an allowance of putrescent manure for the more important crop which is to follow. The mode of cropping, in the lower parts of the county, is similar to that of the more southern parts of Scotland; but, in the upland districts, does not, in general, admit a rotation of wheat. Swedish turnips and mangelwurzel, however, have been very scantily introduced. Since 1815 the quantity of flax raised has been gradually diminishing; and now so fails to supply the mills for dressing it which once

figured so conspicuously in a view of the economics of the county, that most of them have been converted into spinning factories. Fair trials have been made of the recently introduced permanent pasture-grasses. Both the larger and the smaller implements of husbandry, with the exception of the tramp-pick, which seems to be indigenous to the county, are, in all respects, similar to those used in other parts of the kingdom. The tramp-pick is a lever of iron, about four feet long and one inch square, tapering to a sharp prong toward the bottom, where it is bent a little inwards. It is furnished, about 18 inches from the bottom, with a footstep, on which the workman presses with his foot to force the tool into the ground; and it has at the top a cross-handle, by means of which he works the implement with his hands. This very simple and rather curious instrument is used for loosening hard earth or gravel, chiefly at the bottoms of ditches, which cannot be penetrated by the spade, for loosening fast stones in land, and for other similar purposes to which it seems well-adapted. The introduction of the grass-seed sowing machine has greatly aided improvements in the conversion of waste lands into pasture. Broad-rimmed wheels on carts are not nearly so common as in the southern counties.—The improvement in stock has been parallel with the improvement in cultivation. Before the introduction of enclosures, turnips, and sown grasses, the black cattle were diminutive in size, and were yoked to the plough in teams of eight or ten. Among those parts of the uplands which are least improved the breed is still much smaller than in the well-cultivated districts. The grazing and the feeding of cattle are prosecuted, throughout the county, to a much greater extent than the rearing of them. Graziers, in consequence, make large purchases at the fairs of Mearns, Aberdeenshire, and Moray, and even travel to the North Highlands to procure cattle for the stocking of their farms. A distinction between the best feeding and the best milking breeds, which seems founded in nature, and very intimately connected with improvement, is by no means attended to in Angus as in Ayrshire and other districts which are enriched by their dairy produce. About 70 or 80 years ago, sheep were to be found on almost every farm, proportioned in number to the extent of its pasturage; but they have long since been gradually driven by the plough to a banishment among the unreclaimable uplands. The original breed was the small white-faced sheep, or spotted with yellow, which seems to have been the aboriginal breed of the British isles; but it was, 30 years ago, almost wholly superseded by the black-faced sheep, which was annually brought, in considerable numbers of a year old, from Linton in Peebles-shire. Goats were formerly kept in the mountainous districts, but were wholly extirpated half-a-century ago, on account of their hostility to plantations. The red deer or stag, at one period, abounded among the Grampians; but, for many years, have disappeared. The horns of the mouse-deer, which are branched like those of the stag, but are much larger, are sometimes found in mosses.

Large trees, found in mosses and marshy-grounds, seem to indicate that the lower parts of Forfarshire abounded, at one period, in forests. The Grampian glens are, in some instances, overrun with natural birches, or with oak coppice, containing a mixture of hazels and other shrubs; and, in other instances, they are adorned with thriving plantations. In the lowlands of the county, and the Sidlaw hills, plantations, with the exception of the parks and the environs of gentlemen's demesnes, are chiefly confined to places which are inconvenient for the plough, or to thin moorish soils, which rest on clay or gravel, and are re-

mote from the means of improvement. In many parts the public roads wend among plantations, and disclose to the delighted traveller ever-changing prospects of sylvan beauty. Near the shore trees do not thrive, except in ravines or behind banks, where they are sheltered from the sea-spray. During the early part of the era of improvement, Scotch fir was almost the only arboreal species planted, and was believed to be that chiefly, or that alone, which would suit the soil and climate; but it was soon discovered to be, except on particular spots, the least thriving and the most unprofitable; and, in the second period of improvement, it began to be generally substituted by the larch. Hard woods, as they are called, or all sorts of deciduous trees, as oaks, ashes, elms, planes, beeches, poplars, form also numerous plantations, interspersed with spruce and silver firs. To enumerate all the noblemen and gentlemen who have beautified and enriched their estates with extensive and thriving plantations, would be to write a list of most of the great and secondary proprietors of the county. "Owing to the annual extension of plantations," says the Rev. Mr. Headrick, writing in 1813, "it is difficult to assign the proportion of surface planted at present. But from Mr. Ainslie's very accurate map of the county, it appears that, in 1792, there were about 15,764 Scotch acres of plantation. Since that time there cannot be less than 5,000 additional acres planted. This brings the whole plantations of the county to 20,764 acres." As the annual increase, especially on the declivities of the Sidlaws, and along the face of the lower Grampians, and on the extensive poorer soils of Strathmore, has hitherto continued at a ratio not less than during the period for which Mr. Headrick allows an increase of 5,000 acres, the entire extent of plantation, in 1840, cannot be less than 27,870 Scotch acres,—equal to one-sixteenth part of the area of the whole county. The largest forest is that of Monroan moor, distributed among the parishes of Brechin, Farnell, Aberlemno, Guthrie, Kirkden, and Kinnel. The most extensive planters have been Carnegie of Southesk, and the Earl of Airlie; the latter, according to a report of his lordship to the Highland society, in 1830, having, between 1811 and that year, planted upwards of 3,000 acres.

Forfarshire is the chief seat of the coarse linen manufactures of Scotland, and conducts a very extensive commerce in fabrics made up from foreign flax and hemp. In the large towns the spinning of yarn in large mills, and the working of canvass, broad-sheetings, bagging, and other heavy fabrics, in factories, are conducted on a vast scale; and in the smaller towns, and the villages, the manufacture of osnaburghs, dowlas, and common sheetings, employs an enormous number of hand-loomers. Of 4,000 power-loomers employed in Scotland on coarse linen fabrics, greatly the larger proportion are in the towns of Angus. A fair idea of the manufactures of the county will be formed by glancing at those of the towns, Dundee, Arbroath, Forfar, Kirriemuir, Montrose, and Brechin, in which—especially in Dundee—they are concentrated. [See the articles on those towns.] In all the villages and hamlets the principal trade is the weaving of the prepared materials into cloth, and the purifying of them by bleaching.

Excepting roads which run up Glen Isla, Glen Esk, Glen Lethnot, and Glen Mark, the Grampian district is almost wholly unprovided with facilities of communication. But the other districts of the county, for the most part, abound in roads, and, as to either their number or their quality, are not behind any portion of Scotland. One great line of road comes in from the Carse of Gowrie, and runs along the coast through Dundee, Arbroath, and Mon-

trose; another goes off from Dundee, through Monikie, Dunnichen, and Brechin, toward Laurencekirk; another stretches from Dundee, through Forfar, to join the former at Brechin; two others come respectively from Meigle and Blair-Gowrie, and traverse the Howe of Angus; two lines of road radiate inward from Arbroath, and two from Montrose; and connecting lines and branch-roads everywhere ramify the country. Lines of railway run from Dundee north-westward to Newtyle, northward to Forfar, and north-eastward to Arbroath.

Forfarshire contains 5 royal burghs, Dundee, Arbroath, Montrose, Forfar, and Brechin, and the towns of Kirriemuir, Glammis, Coupar-Angus, Broughty Ferry, Letham, and Douglstown. It comprehends 56 *quoad civilia* parishes, and unites with Mearns in giving name to a synod. The number of its parochial schools is 53, conducted by 60 teachers, and attended by a maximum of 3,386 scholars; and of its non-parochial schools, 223, conducted by 255 teachers, and attended by a maximum of 6,936 scholars. The county returns a member to parliament. Constituency, in 1840, 2,056. The assessed property, in 1815, was £361,241. Population, in 1801, 97,127; in 1811, 107,264; in 1821, 113,430; in 1831, 139,606. The population, in 1831, was distributed into 1,089 occupiers of land, employing labourers; 1,099 occupiers of land not employing labourers; 4,466 labourers; 3,721 labourers not agricultural; 8,574 manufacturing operatives; 9,760 persons employed in retail trades and handicrafts; 1,897 capitalists; 382 male servants, and 5,889 female servants. The total number of families, in 1831, was 31,730; and of inhabited houses 19,597.

Remains of vitrified forts are distinctly visible on the Hill of Finhorn, in the parish of Oathlaw, on Drumsturdy moor, in the parish of Monifieth, and on Dundee law, in the vicinity of Dundee. Hill-forts are traceable in what are called the White Cater-thun and the Brown Cater-thun, in the parish of Menmuir; in Denoon castle, 2 miles south-west of Glammis; and on Dunnichen hill, Dunbarrow hill, Carbuddo hill, Lower hill, and several other eminences; but, in various instances, are indicated only by heaps of loose stones. Roman camps exist at Harefauld, in the Moor of Lower, at a place in the Moor of Forfar, a mile north of the town, and at War-dikes or Black-dikes, 2½ miles north of Brechin. The castles of Forfar and Dundee have long been razed. Ruined castles of considerable interest are Broughty castle, in the parish of Monifieth; Red castle, at the head of Lunan bay; Airlie castle, in the parish of Airlie; Finhaven castle, in the parish of Oathlaw; Invermark castle and Edzel castle, in Glen Esk; Kelly castle, near Arbroath; and Affleck castle, in the parish of Monikie. But owing to the lands connected with them having passed into the possession of new proprietors, most of these ruined baronial strengths have fallen greatly into decay. The only Druidical circle in the county is at Pitscanlie, about 2 miles north-east of Forfar. Interesting remains of ancient ecclesiastical edifices occur in the cathedral of Brechin, the monastery of Arbroath, the tower of Dundee, and the priory of Restennet near Forfar. Smaller monastic edifices in Dundee, Montrose, Brechin, and other places, have, in most instances, wholly disappeared.

Christianity was introduced to Angus by the Culdees. But the congregations which they organized, and the edifices which they constructed, were soon seized and remodelled by the emissaries and priests of Rome. A considerable part of the county was annexed to the diocese of St. Andrews, and a part of it to that of Dunkeld. But Brechin was the seat of a bishop, who, though intrusted with only a small

diocese, seems to have been provided with opulent revenues. His property, at the epoch of the Reformation, is said to have yielded, in money and kind, £700 a-year,—a sum which was then equal to £7,000 at the present day. A very large proportion of the lands of the county, besides property beyond its bounds, belonged to the monks of Arbroath. Most of the parish-churches of modern date are neat, commodious, and even elegant. But even Dissenting meeting-houses, built by voluntary subscription, far excel the old parish-churches; and, in several instances in the towns, are architecturally adorned. A larger proportion of the population of Angus, and of the adjacent shire of Mearns, than probably of any other district of Scotland, are Episcopalians; and they render their numbers, or at least their resources, noticeable, by presenting to the tourist a more frequent recurrence of Episcopal chapels than is usual in Scotland.

The civil history of Forfarshire possesses hardly a distinctive feature, and, excepting a few facts which properly belong to the history of its towns, is blended in the general history of the counties north of Forth. At the period of the Anglo-Saxon colonization, when the feudal or baronial system was introduced, the strangers whose descendants continue to figure most conspicuously in the county were the Lyons, the Maules, and the Carnegies. Sir John Lyon, a gentleman of Norman extraction, having married a daughter of King Robert II., obtained, among other grants, the castle and lands of Glamis, “propter laudabili et fidelia servitio, et continuis laboribus;” and was the founder of the noble family of Lords of Glamis and Earls of Strathmore. Guarin de Maule came from Normandy with William the Conqueror. Robert, one of two sons who survived him, followed Earl David, afterwards king, into Scotland. Roger, the second son of this Robert, married the heiress of William de Valoniis, Lord of Panmure, and Chamberlain of Scotland under Alexander II. From this marriage sprang the Maules, who were afterwards Earls of Panmure.

FORGAN, a parish in Fifeshire, anciently called St. Phellan's, from the church having been dedicated to that saint. It lies on the south side of the Tay, between that river and the parishes of Leuchars and Logie. It is of an oblong figure of rather irregular shape, about 5 miles in length from east to west, at its southern boundary; but only $3\frac{1}{2}$ miles on its northern boundary next the Tay. Its breadth, from north to south, is from 1 to 2 miles. On the south the parish is bounded by the parishes of Kilmany, Logie, and Leuchars; on the east by Ferry-port-on-Craig; on the north by the estuary of the Tay; and on the west, by the parish of Balmerino. The surface presents a succession of heights and intervening hollows which give it a pleasing aspect; and in several places, such as St. Fort and Tayfield, where it is ornamented with a great deal of fine wood, it is exceedingly beautiful and picturesque. At St. Fort, and at Newton, are the highest hills in the parish, which rise about 300 feet above the Tay. In general, the coast along the Tay is bold and rocky, rising from 30 to 50 feet above the beach; and along the brow of these rocks, for some way both east and west from Newport, a number of elegant marine villas have been erected, which, with their gardens and shrubberies, add greatly to the interest of this portion of the landscape. The villas have chiefly been erected by merchants and others belonging to Dundee, for the benefit of sea-bathing during the summer. From this rocky coast, and from the summit of the ridge of hills which descend from the south towards the Tay, are fine views of Dundee, and of the opposite shire of Forfar. The soil is generally

fertile. The greater part is black loam and clayey earth; but other portions are light and gravelly. The parish altogether contains about 5,000 acres; of which nearly 4,000 are under regular cultivation, 370 acres in grass, 360 in wood, and 250 unarable. The rent of ground is from £1 to £3 per acre; but some parks near the Tay rent as high as £4 per acre. The valued rent of the parish is £5,145 6s. 8d. Scots. The real rent, in 1794, was £2,873 sterling; and in 1815, the annual value of property assessed, was £6,064 sterling. There are several salmon-fishings in the parish, carried on by the net and coble, which altogether, however, do not rent far above £150 per annum. The salmon are either sold in the neighbourhood or in Dundee, or are packed in ice, and sent by the Dundee ships to London. There is a brewery at Woodhaven; and about 20 individuals are employed in weaving linen for the manufacturers of Dundee. Besides the ferry-harbour,* there are other two harbours in the parish—one at Newport, the property of Mr. Berry of Tayfield, and the other at Woodhaven, the property of Mr. Stewart of St. Fort. They admit vessels of from 100 to 150 tons, and are both used for exporting the produce of the surrounding country, and for importing coals, lime, wood, and other necessary articles. The nearest market-town is Dundee, which is only separated by the Tay; and the market-town of Cupar and St. Andrews are about 11 miles distant from the most distant part of the parish. The coaches between Edinburgh and the north, and from Cupar to Dundee, as well as that from St. Andrews to Dundee, pass through the parish. The population, in 1755, was 751; in 1801, 916; in 1831, 1090. Houses, in 1831, 211.—This parish is in the presbytery, of St. Andrews, and synod of Fife. Patron, the Crown. Stipend £230 19s. 8d.; glebe 9 acres. The church of Forgan, which anciently belonged to the priory of St. Andrews, is beautifully situated at the south-east extremity of the parish. It is an old building, seated for about 350; but it is in contemplation to erect a new building more in accordance with the extent of the population, and in a more central site than the present one. There is a small Independent meeting-house near Newport.—Schoolmaster's salary £34 4s. The parish-school is situated on the farm of Nether-Friarton, and is attended by about 120 pupils. There is also a small school near Woodhaven, at which about 30 children are taught.

* Previous to 1822, there were two ferries across the Tay, one at Newport, and one at Woodhaven, about a mile to the west; and from 1790, when a new turnpike-road was made to the latter place, till 1808, it was the ferry chiefly resorted to. Another turnpike having been constructed in that year to Newport, which rendered it the most convenient point for passengers from the south, that place became in time the principal resort, and the ferry at Woodhaven became much less frequented. Up to this time, the boats used were small and inconvenient, and the ferry was not always accomplished without considerable danger. In 1819, an act of parliament was obtained, by which trustees connected with the two counties of Fife and Forfar were appointed, with authority to erect new piers, and to procure boats better fitted for the passage, and otherwise to improve and regulate the ferry. In 1822, a steam-boat was placed upon the ferry, which at first plied alternately between Woodhaven and Newport; but, in 1822, the passage to Woodhaven was discontinued; after which the intercourse at the ferry began rapidly to increase. A new act of parliament was rendered necessary to entitle the trustees to substitute one landing-place, and erect the necessary piers at Newport and at Dundee. Ferry-harbours were accordingly formed at these places, and new and improved steam-boats have since been placed upon the station; so that this ferry, from being one of the worst and most dangerous, has now become one of the most safe and convenient in the kingdom. The steam-boat, however, only plies through the day; but for the convenience of the public, the trustees maintain a large sail-boat, a pinnace, and a yawl, with proper crews, which may be freighted at hours when the steam-boat does not ply. Since the improvements have been introduced, the number of passengers have been increased by 20,000, and the revenue has doubled. The revenue for the year ending 31st December, 1834, was £4,844 5s. 5d., and it has since considerably increased.

FORGANDENNY, a parish in Perthshire, near the south-eastern boundary of the county. Its form is nearly that of a slender parallelogram, stretching north and south, but sending off a considerable stripe south-westward from its south-west angle. It is bounded on the north by the Earn, which divides it from Aberdalgie and a detached part of Forteviot; on the east by Dunbarny, Drom, and Arngask; on the south by a second detached part of Forteviot and by Kinross-shire; and on the west by Dunning and the main body of Forteviot. Its greatest length is about 8 miles, and its greatest breadth 3 or $3\frac{1}{2}$; but apart from its south-westward stripe, it is only about 5 miles long. The northern division is part of the rich beautiful valley called Strathearn; and though it rises gradually as it recedes southward, it is on the whole level. The southern division runs up among the Ochills, and is hilly and upland, and occasionally incrustated with rocks; yet it cannot be regarded as a rocky or sterile region, most of its hills being, with the exception of patches of heath, furze, and broom, clothed in grass. The Earn, along the northern boundary, describes some of those graceful curves, and forms some of those beautiful peninsulas, for which it has been so much admired; and produces salmon, different sorts of trout, pike, perch, eel, and flounders. May water comes down upon the extremity of the south-western stripe, forms for 2 miles its north-west boundary-line, runs across it to the village of Path-of-Condrie, forms for $\frac{3}{4}$ of a mile its south-east boundary, receives from the east a rill which had flowed $2\frac{1}{2}$ miles along the boundary of the parallelogram, and now intersects the parish for $2\frac{3}{4}$ miles in a direction west of north, and leaves it on the west side at Torrance. Besides containing eels, smelt, and some flounders, it plentifully produces a very finely flavoured trout about the size of a herring. Both the Earn and the May sometimes overflow their banks on the strath; but they amply compensate any damage they inflict, by their richly manurial deposits. Whinstone for building, and iron-stone, abound. A species of limestone occurs on the banks of the May. In the wood of Condrie among the Ochills, copper, lead, and silver ores have been found. In the southern or upland division, the soil consists of reddish clay, black earth, and sand; and is, for the most part, light and better adapted to produce oats than any other sort of grain. In the northern division, much of the surface is carse-ground, and this is continued along Strathearn, through the north-eastward parishes to the carse of Gowrie,—that carse and the carse of Strathearn being interrupted in their continuity only by the channel of the Tay. The grounds immediately on the Earn are sandy meadow-land; but those beyond them have a soil of rich black earth and clay, and carry luxuriant crops of every sort of agricultural produce. On the estate of Lord Ruthven, not far from the mineral springs of Pitcathlie, is a medicinal fountain similar to these springs in its properties. The waters are moderately cathartic, and give relief chiefly in cases of rheumatism and scurvy. On the estate of Mr. Oliphant of Rossie, is another medicinal spring,—a chalybeate. In the west border of the low part of the parish are traces of a fortification which may have been an outpost of the Romans while they were in Strathearn. On a height above the May, at the hamlet of Ardgrie, is a square 270 feet in extent on each side, naturally defended on one side by a deep hollow traversed by a brook, artificially defended on the other sides by trenches 14 feet deep and about 30 feet wide, and called, from time immemorial, ‘the Roman Camp.’ Upwards of a mile south of the village of Forgandenny, on the summit of a lofty conical hill, called Castle-law, are extensive remains of what is supposed

to have been a Danish fortification. Vestiges of a circular stone-wall describe a circumference of about 1,500 feet; and they enclose remains of buildings, and appear to have been defended by several outworks. The site of the fortification commands a view of all Strathearn and the carse of Gowrie to the Grampian mountains on the west, all the country to the north of the Tay or the German ocean on the east, a great part of Forfarshire and Perthshire on the north-east and north, and the tops of the Lo-mond hills on the south. The principal mansions are Newtown, Rossie, Freeland, and Torrance. Besides the village of Forgandenny, are the villages of **PATH-OF-CONDIE** and **ARDARGIE**; which see. Forgandenny, the most considerable village, is situated between the houses of Freeland and Rossie, about a mile from the Earn; and is divided into two parts by the intersecting course of a brook. It is the site of the parish-church, and is inhabited by artisans and labourers, and has a population of 120. The parish, except in the south-eastern part of its main body, is well-provided with roads. Population of that portion in Perthshire, in 1801, 914; in 1831, 917. Houses 162. Assessed property, in 1815, £7,077. The population of that part of the parish which is in Kinross-shire was 32 in 1831. Assessed property £275. Houses 6.—Forgandenny is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend £199 11s. 11d.; glebe £15. According to an ecclesiastical survey in 1838, the population then consisted of 702 churchmen and 181 dissenters,—in all 883. The parish-church is of great but unascertained antiquity, and has recently undergone considerable repairs. Sittings 410.—An United Secession congregation at Path-of-Condrie, was established in 1753, and assembles in a place of worship built in 1758. Sittings 380. Stipend £60, with a house and glebe worth £20.—Parochial schoolmaster’s salary £34 4s. 4½d., with £10 fees, and £2 10s. other emoluments. The parish-school is attended by a maximum of 93 scholars; and a non-parochial school by a maximum of 86.

FORGIE. See **ARNGASK**.

FORGLEN, a parish in Banffshire, bounded on the north by Alvah; on the east and south-east by the Deveron water, which separates it from Aberdeenshire; and on the south-west and west by Marnoch. Its form is rectangular; length from north-west to south-east, $5\frac{1}{2}$ miles; breadth $3\frac{1}{2}$; area about 12 square miles. Houses 164. Assessed property, in 1815, £1,394. Population, in 1801, 605; in 1831, 820. Alvah was, at one time, joined to this parish; but, in the first half of the 17th century, it was erected into a separate parish, and an annexation, *quoad civilia et sacra*, was made to it from the adjoining parish of Marnoch. It is sometimes called St. Eunon’s or Teunan’s parish, from a saint of that name, to whom a chapel, the remains of which still exist, is said to have been dedicated. The surface is beautifully varied with gently rising grounds, having a gradual slope towards the south-west, where the river Deveron forms the boundary. The soil is light and fertile, and the greater part is under a state of high agricultural improvement. It is well-sheltered by woods and hills, which, with the genial nature of the soil, render the climate decidedly mild. Clay-slate is quarried in several places; and there are some mills. Forglen and Carnousie are elegant mansions. Forglen castle, a very old structure, stands on the banks of the Deveron, in a most beautiful and romantic situation. There are here some cairns and the ruins of the castle of Gartly.—This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, Sir R. Abercromby, Bart. Stipend £175 5s. 10d.; glebe £14.—Schoolmaster’s salary, £34 4s.

4½d., with £22 15s. fees and other emoluments, besides a share of the Dick bequest, which, it is supposed, will yield about £30 per annum. There are three private schools.

FORGUE, a parish in Aberdeenshire, bounded on the north and north-east by the Deveron and Banffshire; on the south-east by Auchterless; on the south by Culsamond and Inch; and on the west by Drumblade and Huntly. It extends to about 9 miles in length, from north-west to south-east; and its greatest breadth is about 6 miles. Area about 50 square miles. Houses 480. Assessed property, in 1815, 4,155. Population, in 1801, 1768; in 1831, 2,286; in 1837, about 2,440. The soil, in the lower parts of the parish, is generally a deep rich loam on a clay bottom, producing heavy crops; towards the south, the ground is still partly in a state of nature, and covered with heath; but the proprietors have been sparing neither trouble nor expense in improving their several estates, in which they have been aided by the exertions of industrious and spirited farmers. The waste grounds have been planted, where they are not susceptible of higher improvement. The parish is intersected by two rivulets, the Forgue and the Fren-draught, which meet a little below the church, and flow north-eastwardly with many romantic windings into the Deveron near the church of Inverkeithing; the former is beautifully skirted with wood. Forman, partly in this parish, is a noted hill, 1,000 feet above the Deveron. On its south-eastern declivity, is Cobairdy house, environed with highly cultivated fields and fine plantations. This quarter of the parish is elsewhere ornamented with extensive plantations, and the other sides of the hill are also adorned with wood. There are several Druidical temples and encampments in the parish.—It is in the presbytery of Turriff, and synod of Aberdeen. Patron, Morison of Bognie. Stipend £191 6s. 5d.; glebe £18. Unappropriated teinds £406 13s. 8d. Church built in 1819; sittings 900.—Here is an Episcopalian congregation, with a chapel built in 1795; sittings 230; and a United Secession mission, with a chapel built in 1805; sittings 400.—Schoolmaster's salary £28, with £20 fees and other emoluments, besides a share of the Dick bequest. There are five private schools in the parish.

FORMAN, or **FORMON**, one of the Grampian mountains, in Aberdeenshire, the elevation of which is upwards of 1,000 feet above the Deveron, which runs at its base. It is entirely covered with wood, except on the south-east: see **FORGUE**.

FORMARTINE, an ancient middle district of Aberdeenshire, which gives the title of Viscount to the Earls of Aberdeen. It is bounded by Buchan on the north-east; by a ridge of low hills near Old Meldrum, by which it is separated from Garioch, on the south-west; and by Strathbogie on the north-west. This district includes all the lands along the coast for 10 miles between the Don and Ythan; then crosses the Ythan, and extends to the banks of the Deveron, by Turriff. It consists partly of a stony soil intersected by bogs, and partly of an excellent clay capable of a high degree of improvement. Area 280 square miles. Parishes 16.

FORRES, a parish in Morayshire; bounded on the north by Findhorn bay, a large basin of shallow water, on the Moray frith, formed by the meeting of the tide and the river Findhorn; on the north-east by the parish of Kinloss; on the east, and south, by the parish of Rafford; and on the south-west, and north-west, by the river Findhorn, which divides it from the united parishes of Dyke and Moy. The form is irregular, approaching nearest to a triangle, with a strip of moorish and hill ground about 3 miles in length, stretching from one corner. It is 4 miles

in length, and 2½ in breadth, and contains about 9 square miles. Houses 798. Assessed property of burgh and parish, in 1815, £4,216. Population, in 1801, 3,114; in 1831, 3,895; in 1837, according to a census taken by the minister and session-clerk, 3,680. The parish, even at the date of the Old Statistical Account, was almost all "one continued rich arable well-cultivated field." It is at present in a state of the highest cultivation, yielding crops equal to any in Scotland. "In point of situation and climate," says the Old Statistical Account, "it is inferior to no part of Scotland. The air is dry, serene, and healthy—less rain falls here than in most other parts in the kingdom; the showers being attracted by the Moray frith on the north, and on the south by the hills which divide Moray from Strathspey." The Findhorn, and the burn of Forres, are the only streams in the parish. The latter flows past the west end of the town of Forres, and drives several mills. The fishing, in the river and bay of Findhorn, is of much importance to the district. Salmon, trout, founders, and eels, are caught, and in the frith, abundance of haddocks.—This parish is in the presbytery of Forres, and synod of Moray. Patron, the Earl of Moray. Stipend £274 8s. 2d.; glebe £22. Church built in 1775; sittings 920. Unappropriated teinds £423 13s. 2d.—A United Secession congregation was established in the parish in 1768. Minister's stipend £130, with £10 for communion elements. Chapel built in 1812; sittings 712.—An Independent congregation was established in 1800. Minister's stipend £60. Chapel built in 1802; sittings 500.—Schoolmaster's salary £40, with a house and garden, and £22 fees and other emoluments. There are 19 private schools, attended, in 1834, by 559 scholars. "Of the schools not parochial, (one of which is an academy conducted by four teachers and two assistants, and another a boarding-school, wherein are five teachers,) the instruction consists of reading, writing, arithmetic, book-keeping, mathematics, Latin, Greek, French, Italian, drawing, and music. There are about 160 persons in the parish, above 15 years of age, who cannot read; but nearly all of these are strangers from the Highland districts of the country."

The most interesting antiquities in this parish are the celebrated 'Sweno's stone,' or the Forres pillar, and the witches' stone. The Forres pillar is a magnificent Runic obelisk, of dark grey stone, on the north side of the Findhorn road, about half-a-mile to the east of the burgh of Forres,—the position in which, in all probability, this enormous slab was originally placed. The stone steps around the base were placed as supports to the pillar by a Countess of Moray, Lady Ann Campbell, about a century ago. The stone itself is a hard grey sandstone, 23 feet in height above ground, and at least 3 feet, but said to be 14 feet, additional, in depth, under ground; the breadth, at the base, is 4 feet; the thickness, about 15 inches. On the northern side, as represented in

* The Rev. Mr. John M'Donnel, writer of the Old Statistical Account, has favoured us with the following rather amusing moralization on the progress of civilization and extravagance in this parish, end of last century. "Manners.—About 50 years ago there were only 3 tea-kettles in Forres; at present there are not less than 30! The blue bonnets of Forres were then famous for good credit, and at that period there were only 6 people with hats in the town: now above 400! Happy for our country did we keep pace in virtuous improvement, with the extravagant refinement adopted in dress and manners. About 30 years ago, 30s. would have purchased a complete holiday-suit of clothing for a labouring servant: according to the present mode of dress, it will require at least £5 to equip him." From the virtuous indignation here manifested at the fearful inroad of hats and tea-kettles, it must surely follow, that the worthy minister would condescend to no such new-fangled practices in his own proper person, but continued still to 'doff a blue bonnet,' and 'bend o'er a bicker,' himself, as of old.

the careful and interesting drawings of it presented by Mr. Alexander, in the 'Sketches of Moray,' there is carved a long cross; the branches at the top being within a circle. The cross, and the entire lateral spaces, are most ingeniously and elaborately carved, in intricate and endless convolutions representing the Runic knot. Below are two figures with human heads but grotesque forms, bending over something intermediate, as if in prayer, while a smaller human figure stands behind each. All these figures have broad caps or bonnets on their heads. On the south side are five divisions, each filled up with numerous figures in relief, some of them apparently processional, or representing troops on foot and mounted, with captives, male and female, bound together. The edges are richly carved in Runic knots, and, at the base, on one side, are human forms, some of which appear to be females, grouped in couples. This obelisk is decidedly one of the most remarkable of ancient date in Britain; and it bears every appearance of having owed its origin to a period of remote antiquity. There are various traditions regarding it; but it is supposed either to commemorate a pacification, here concluded between Malcolm II. and Sweno, the Danish invader, about the beginning of the 11th century; or the murder of King Duffus, in the castle of Forres, and the execution of the murderers. The character of the figure seems to favour the latter tradition,—the traditional name of the obelisk, the former.—The 'Witches' stane' was that on which the unfortunate beings accused of witchcraft were wont to suffer. It is also situated to the eastward of the burgh of Forres on the road-side. "Some years ago, when the turnpike-road was in progress," says Mr. Rhind, "the workmen proceeded to break down this mass of stone, when the townspeople, discovering the depredation, and attached to a relic of bygone times, immediately caused it to be clasped with iron, in which state it still remains."—On the south-eastern side of the burgh of Forres, is a small glen, between the Cluny hills and the straggling houses on the Rafford road, which is known by the extraordinary soubriquet of Hell's-hole-valley. The Cluny hills, observe the commissioners on municipal burghs, "have been judiciously planted by the burgh, and walks formed through them by private subscription, open to all the inhabitants; an appropriation of burgh-property which might with advantage be more generally imitated." On one of these eminences is a lofty Pharos, commemorative of Nelson and the battle of Trafalgar. To the site of it an excellent winding road conducts the traveller from the town. The tower is an octagonal fabric, on a diameter of 24 feet including the walls at the base, raised to the height of 70 feet, and completed by a battlement and a flag-staff. "The view from the top of this tower," says Mr. Rhind, "embraces the richly wooded and fertile plains to the west, through which winds the Findhorn, the undulating hills to the south, a large open country to the east, and the blue waters of the ocean flowing upon the north, bounded, in the distance, by the Sutherland and Ross-shire hills, and the two Sutors, which guard the entrance to the bay of Cromarty, forming a combination of rich and varied scenery which few situations can rival." Skrine, approaching Forres from Elgin, thus describes the landscape, after fording the Lossie, and traversing the heath on which Macbeth is supposed to have encountered the weird sisters: "Forres, when we could find room to view it, presented a neat town, pleasantly situated between two little hills, and at a small distance from the great ridge of moors which forms the outwork of the Highlands towards this coast. A country well-wooded, and admirably cul-

tivated, lay between them, and the forest of Tarnaway [Darnaway], with the noble towers of its ancient castle, the seat of the Earl of Murray, stood forward in the landscape, presenting a great contrast to the barren and unornamented districts we had passed. Towards the sea the change was not less observable, the grand display of the northern bay of Scotland became confessed to view, the objects which form the outline of it being scarcely to be matched in any country. The high point called the Pap of Caithness, with the Ord and its adjoining ridge of hills, forms the extreme horn of this bay toward the north, the indented points of the hills of Sutherland follow next, and the entrance of the great frith of Dornoch is visible between them and the low projecting promontory of Tarbat-Ness, which seems to lose itself in the sea. Throughout the interior parts of the country innumerable ridges of hills extend themselves over the horizon between the hollow of this aperture, and forming themselves into a bold amphitheatre round it, close in again at length with the coast, terminating abruptly in the two lofty rocks called the Sutors of Cromarty. Through these noble portals enters a narrow channel, which expands itself in sight into the beautiful inland bay of the frith of Cromarty, capable of containing all the navies of Europe within its sweetly wooded shores, studded with a variety of towns and villages, decked with every possible beauty of cultivation, and ornamented with a profusion of gentlemen's seats. Immediately beneath the rocks which enclose this basin the frith of Murray expands itself to the left till it becomes lost amidst the great mountains of Ross-shire and Inverness towering into the clouds, and rising in an infinite variety of pointed summits.

The royal burgh of FORRES, in the above parish, is delightfully situated on a fertile plain, in a vicinity celebrated as a rich corn-district, with undulating hilly ground to the south, and a sloping valley, extending, by a gentle declivity, to the north, where the river Findhorn, sweeping round from the south-west, forms its estuary with the sea. Forres is 3 miles south of its sea-port, Findhorn; 12 west by south of Elgin; 21 west of Fochabers; 27 north-east of Inverness; 75 north-west of Aberdeen; and 157 north-west of Edinburgh. At the distance of 12 miles westward, it bears a pretty close resemblance to Elgin; and though it contains only about half the population—in 1801, it amounted only to about 2,400, and, in 1831, to 3,424—yet at first sight it appears nearly as large as Elgin. The green elevation which nature presented at its western end, as an admirable situation for a castle, and the excellent land extending every way around it, may, as in the case of Elgin, have determined the situation, long before even the idea of commerce or of its advantages had been formed. The Forres burn, a considerable stream from the hills in the vicinity, embraces half the circumference of the base of the castle-hill, and winds close behind the town, on its northern side, adorned at either end by a neat stone-bridge. The town consists principally of one long high street, extending for nearly 800 yards along the great road to Inverness, which leads hence through Elgin on the east, and Nairn on the west. There are lanes or closes running off on each side; the northern terminating in a crooked back-street, and two or three of the southern uniting by scattered houses in the Rafford road, leading out to the Cluny hills and Hell's-hole valley. Several villas have been erected in the vicinity of the town. The streets are neat and clean, and supplied by pump-wells with water. The houses in general are modern and well-built, mostly of three stories, though several of the lower habitations of a

preceding age yet remain, with their gable ends to the street. There are here, however, none of the fine old piazzad edifices still to be seen in Elgin, and indeed there are fewer remains of antiquity either domestic or ecclesiastical. The Forres pillar, already described, is the principal antiquity near the town—but an interesting and celebrated one it certainly is. Forres is the seat of a presbytery. The church, at the western extremity of the High-street, is a plain edifice. There is a Secession chapel in the north back-street, or road. There are also places of worship for Episcopalians and Independents; and some religious and benevolent, and a number of friendly, societies in this town. Anderson's institution, an excellent academical seminary for the youth of this burgh, and of Rafford and Kinloss, is a neat and commodious structure erected in the south-eastern part of the town, near Forres house, within the last 20 years, from a fund left by Jonathan Anderson, Esq., of Glasgow, a native of the town. The sum annually arising from the foundation is somewhat short of £130. It is in the patronage of the corporation. There is a free class on the foundation. Anderson's institution is the academy conducted by four teachers and two assistants, noticed in the parish returns: which see. The boarding-school there alluded to is also in the town of Forres; together with several other private schools, two ladies' boarding-schools, and another female school. The excellence of its provision for education, as well as the salubrity of its climate, and the cheapness of living, induce many families to reside here. Forres has a literary society, a news-room, a subscription-library, two mason-lodges, and a Trafalgar club.

In the centre of the town is the new jail, a very handsome structure, recently erected. The old jail, which occupied the same position, was built about the year 1700. It is not known when Forres was erected into a royal burgh, as the more ancient charters were lost, or destroyed before the end of the 15th century. There is, however, evidence, from various sources, that it had obtained the privileges of a royal burgh as early as the reign of William the Lion, or Alexander II. Robert I. granted a charter to his nephew, Thomas Ranulph, of the earldom of Moray, but this burgh, as well as Elgin, and Invernairn, though they were to hold of the Earl, were ordained, in other respects, to enjoy their old liberties. In the reign of James IV., Forres obtained a new infeftment, granting to the community the privileges of a free burgh, the exclusive jurisdiction of a sheriffship, and power to hold a weekly market, and yearly fair, with right to dues and customs. A ratification by parliament, in 1607, of the charters of the earldom of Moray, in favour of James, Earl of Moray, particularly excepts the burgh-mails of Elgin and Forres, which had previously been claimed by the Earls, thenceforth to remain with the Crown. The boundary of the royalty—a circuit of about 15 miles—was perambulated in 1840. The town-council is composed of 17 members,—a provost, three bailies, a dean-of-guild, a treasurer, and 11 councillors. Previous to the burgh reform act, there was no provision against the reappointment of the council and magistrates; and, in practice, they were frequently continued in office for many years. The burgh is still possessed of considerable property, although it had alienated, at an early period, and for trifling feu-duties, property in land and fishings which has of late become of very great value. Corporation revenue, in 1832, £619 19s. 9d., of which £388 9s. 9d. were from land rents, £42 from petty customs and market-dues, &c. Debts, £941 10s. 4d. nearly compensated by other debts due to the corporation. Of the debt, £542 12s. 3d. were judiciously expended on public

roads, and on a new bridge across the Findhorn, in the room of that carried away by the floods of 1829. Fixed annual expenditure of the burgh, in 1832, £285 1s. 9d. Incidental expenditure for improvements, charities, &c., £240 17s. 1d. Revenue, in 1838-9, £592; in 1839-40, £1,558. It is not known that the exclusive jurisdiction of sheriffship was at any time exercised. The ordinary jurisdiction of the magistrates, which extends over the royalty, including the whole town, is in practice confined, in civil matters, to actions for debt ranging from £5 to £30, interdicts, poindings, &c. The principal patronage consists of the corporation offices, and the schools. There have been no incorporations of trades in this burgh. The guildry was disconnected from the body of the burghesses. The town is joined with Inverness, Fortrose, and Nairn, in returning a member to parliament: constituency, in 1839, 155; in 1840, 132.

Forres has no manufactures, unless it be, among other unimportant articles, that of straw-plait for ladies' bonnets. It used to export great quantities of linen yarn: in 1784, 70,290 spindles were sent away; but, on the increase of the cotton manufacture, this trade declined. The FINDHORN—which see—is only navigable for boats as far as the tide flows; but did the commerce and manufactures of Forres require it, "there is no place," remarks the writer of the Old Statistical Account of the parish, "where a canal might be more easily made."* The general trade carried on is by no means extensive, however; but weekly markets are held on Tuesday and Friday, and there are several annual fairs. There is a branch of the British Linen Company's bank in the town.

This town must have been a place of some note at a very early period. It is in all probability the Varris of Ptolemy's chart. Boethius, too, so early as the year 535, makes mention of it as a burgh having merchants, who, for some trifling cause, were put to death, and their goods confiscated to the king's use. *Far-ius*, 'near the water,' is probably the Gaelic derivation of the name. During the ninth and tenth centuries, it was frequently visited by the Scottish kings. Donald, the son of Constantine, was slain at Forres. Malcolm frequently resided in the vicinity, and was killed, in 959, at Ullern, which Shaw supposes was Aldern. King Duffus, as already noticed, was murdered in the castle of Forres by Donevald the governor, about the year 966; his body, according to Boethius and Buchanan, being interred under the bridge of Kinloss. This murder is a memorable incident, and the spot on which it was committed is an object of no little interest and curiosity from the certainty that Shakspeare made noble use of it in his dramatic version of the murder of King Duncan by Macbeth. The genius of Shakspeare, indeed, has immortalized the town of Forres. It is the scene of a great part of the tragedy of Macbeth; and it was on a "blasted" heath in the vicinity that that singular hero, along with Banquo—

* "From Forres to the mouth of the bay of Findhorn," he adds, "the distance does not exceed 3 miles; the tide flows in the basin more than half that distance; and the level of the ground, at the foot of the eminence on which the town of Forres stands, does not exceed the level of half-tide by 14 feet; that depth of a canal would carry boats and lighters at high water to the town; and such a canal would have the advantage of the burn of Forres to keep it clear. The basin already mentioned is a triangular piece of low ground, partly of that kind of stiff clay soil called *carse-ground*; and partly of fine compact sand, mixed with light particles of earth washed down by the floods. It is all dry at low water, except the channel of the river, and a little space at the inlet at high-water. Its circumference will be at least 7 miles, and contains more than 2 square miles of ground, all of which might be recovered from the sea, except what is necessary for a channel to the fresh water streams. A bar of sand, which stretches across the mouth of the river, prevents any surge from entering the basin; so that an embankment would have no weight of water to sustain, but the small fetch of the lake itself."

according to all the old historians, whom Shakspeare copied—met the weird sisters who gave him so many fatal “words of promise to the ear:”—see article *DYKE* and *MOV*. In consequence of the atrocious murder of Duffus, Forres castle, which had long been a royal fortress, was demolished; but, at a period much later—that of the civil war—another was founded on the same site, of which second erection the vaulted or lower story still exists, and the few dilapidated walls which remain evince the bold and stately aspect of the ancient structure. In 1346, Randolph, Earl of Moray, dates his charters from this castle. During some subsequent period, the Urquharts of Cromarty were appointed heritable keepers of it. In still later times it became the property of the Dunbars of Westfield, and it has now passed into the possession of the Earl of Seafield. Like the castle on Lady hill, at Elgin, it was, in all probability, a strong square tower, with battlements, and a moat surrounding it, and served as a place of defence and safety during those turbulent periods. From the esplanade surrounding the ruin a fine view of the surrounding country is obtained, with the river Findhorn, crossed by a very handsome bridge, running immediately behind the eminence. After the establishment of the bishopric of Elgin, Forres does not appear to have kept up its ancient consequence so much as Elgin, which then became the centre of the ecclesiastical establishments of the province, and the resort of the country gentry:—see article *ELGIN*. It was the seat of the archdeacon, however, and had a parsonage dedicated to St. Lawrence. There was a chapel also, a mile south of the town, and one at Logie.

FORSA, a small island in Argyshire, adjacent to the island of Easdale. It abounds with slate, and its mineralogy is similar to that island.

FORSE, a considerable river in Caithness, which takes its rise in the parish of Halkirk, nearly in the centre of the county, and running north, discharges itself into the Pentland frith, at a small village to which it gives its name.

FORT (THE). See *EYEMOUTH*.

FORTEVIOT AND MUCKERSIE, an united parish, consisting of three separate and considerably distant sections in the south-east part of Perthshire. The smallest section lies $2\frac{3}{4}$ miles east of the northern part of the largest section or main body; measures $\frac{1}{4}$ mile from west to east, and $1\frac{1}{4}$ mile from north to south; and is bounded on the north by the parish of Perth; on the east by Dunearn; on the south by Dunearn and Forgandenny; and on the west by Aberdalgie. The Earn is the southern boundary-line, and is here profuse in its opulence of fishy produce, of sinuous beauty of movement, and of valuable alluvial deposit. The district may be described in two clauses; it is part of the fine carse of Strathearn, and part of the environs of “the fair city” of Perth. The section of the parish second in extent, lies $1\frac{1}{2}$ mile south-east of the southern extremity of the main body; has an ellipsoidal form of 2 miles by $1\frac{3}{4}$; and is bounded on the north-west and north by Forgandenny, and on all other sides by Kinross-shire. May water traces its boundary $\frac{3}{4}$ of a mile on the north-west, and a rilly tributary of that stream $1\frac{1}{2}$ mile on the north. The district lies wholly among the Ochill hills, but possesses, in general, their distinctive features. The largest section or main body of the parish, has on the north the form of a square $1\frac{1}{2}$ mile deep, attached, over one-half of its southern side to one-half of the base of an isosceles triangle, the other half projecting eastward; and the triangle measures nearly 2 miles at its base, and $3\frac{1}{2}$ miles on its south-eastern and south-western sides, and points its apex to the south. The square part is bounded

on the west by Gask; on the north by Tippermuir; and on the east by Aberdalgie; and the triangular part is bounded on the south-east by Forgandenny, and on the south-west by Dunning. The line of separation between the square and the triangle is the river Earn. That stream here intersects the district eastward, distributing favours the same in kind as in the eastern section of the parish, but probably less in degree. The river May comes down upon the district from the south, forms for half-a-mile the eastern boundary-line; then, making a sudden bend, runs $1\frac{1}{4}$ mile into the interior, and then, making another debouch, runs $1\frac{1}{2}$ mile northward to the Earn, splitting its waters and forming an islet at its point of influx. This little river, gathering its waters among the Ochills, and now rioting at will, and in beautiful meanderings in the rich level of Strathearn, frequently swells to a great size, and comes down in devastating floods. North of the Earn are some fine plantations; and on the left bank of the May is situated the mansion of Invermay, one of the most pleasant and romantic seats in Strathearn. Among the extensive plantations and natural woods which surround it, the birch or birk holds a conspicuous place, and perpetuates the remembrance of the scenery described in the ballad to which it gave rise,—“The Birks of Invermay.” In the vicinity, on the banks and in the water-course of the stream, are natural curiosities and glittering cascades which challenge the attention and delight of strangers: See *MAX. HALLYHILL*, in this parish, was once a royal residence, but the building is now hardly traceable. The roads from Dunning to Perth, and to the Bridge of Earn, and from Auchterarder to Perth, traverse the main body of the parish; and one of them is here carried over the Earn on a stone bridge of 6 arches. Population, in 1801, 786; in 1831, 624. Houses 112. Assessed property, in 1815, £6,662.—Forteviot and Muckersie is in the presbytery of Perth, and synod of Perth and Stirling. Patrons, the University of St. Andrews, and the Belches of Invermay. Two-thirds of the population were estimated by the parish minister, in 1838, to belong to the Establishment, and one-third to belong to other denominations. The parish-church was built about the year 1778, and has not since been materially altered. Stipend £244 9s. 9d.; glebe £6 15s. Unappropriated teinds £45 18s. Schoolmaster’s salary £34 4s. 4½d., with about £16 fees. The minister stated the entire population of the parish, in 1838, to be 600; that of the eastern section 83; that of the southern section 77; and that of the main body 440.

FORTHE (THE), a large and beautiful river intersecting two-thirds of the breadth of Scotland, and flowing eastward from Benlomond to the German-sea. Its head-waters are gathered into two main or parent-streams, which rise respectively in Stirlingshire and Perthshire, from points mutually distant, north-eastward and south-westward, about 3 miles. The southern stream wells up on the northern side of Benlomond, in the parish of Buchanan, $1\frac{1}{2}$ mile east of Scotland’s boasted lake, Lochlomond; and, bearing the name of Duchray water, it bounds away 5 miles south-eastward to the eastern verge of the parish of its nativity, wearing the rough cold dress of a mountain-rill. At this point it is less than a mile distant from the kindred rill with which it is destined to unite; but now it begins for some distance to recede from it, and, for still a greater distance, to run coquetishly between Stirlingshire and Perthshire, before briefly entering the latter county, where the union of the streams takes place. Flowing a mile southward from the point where it first touches Perthshire, it receives from the west the tiny tribute of a stream of $3\frac{1}{4}$ miles in length, which flows direct eastward to its embrace from the

southern side of Benlomond. A mile and three quarters farther on, after a serpentine course south-eastward, it is joined from the south-west by Corriginnoburn, a stream of $4\frac{1}{2}$ miles in length. It now ceases to touch Buchanan parish, and during $3\frac{1}{2}$ miles eastward, divides Drymen on the south from Aberfoyle on the north,—the former in Stirlingshire and the latter in Perthshire. A little beyond the enlivening mansion and demesne of Duchray castle on its right bank, it runs off from Drymen a mile north-eastward into Aberfoyle, and there, after an entire course of $11\frac{1}{4}$ miles from its origin, forms a confluence with the northern main head-water of the Forth. The latter stream, though magnificent in the land of its origin, and picturesque in the landscape of its banks, and romantic and frolicsome in its course, and altogether unspeakably more interesting than the Duchray, and abundantly entitled to the honour of being called the aboriginal Forth, expands the laky mantle of its waters, and leaps along the declivity of its mountain glens, in the strange predicament of an incognito; for—odd though the circumstance may appear—it seems to want a name, or, at all events, is known or denominated, not in its proper character and its entire extent, but only in the localities of its hoarding up its waters, and spreading out their golden and glittering beauties in the form of fascinating lakes. The stream rises in two head-waters near the western verge of the parish of Aberfoyle, at spots half-a-mile and $1\frac{1}{2}$ mile south of the joyously arrayed and joyously sung and celebrated Loch Katrine; and both head-waters, without making a previous confluence, and after the brief courses respectively of $1\frac{1}{4}$ and $1\frac{1}{2}$ mile, become lost in the beautiful expanse of Loch Con. This lake—overshadowed on one side with uplands of stern aspect, protected and adorned on the other by a broad array of plantation, variegated near the efflux of its waters, with an islet which figures like a broach on its glassy bosom, and everywhere rife with eels and pike and trout—extends south-eastward 2 miles, with an average breadth of 3 or $3\frac{1}{2}$ furlongs. Scarcely has the stream of its surplus waters issued from its lower extremity, when it expands in a lochlet, called Dow Loch, which seems playfully imitative of the profuse beauty and fine gracefulness of Loch Con; and issuing thence, the stream runs $1\frac{1}{2}$ mile south-eastward, and then suddenly plunges its diminutive flood into the ample and beautiful waters, richly encinctured with grove and variegated upland, of Loch Ard, extending $2\frac{1}{2}$ miles westward, with an average breadth of $\frac{3}{4}$ of a mile, and rich, like Loch Con, in the multitude of its finned inhabitants. After its repose in the bosom of Loch Ard, the stream comes impetuously forth, and makes a magnificent leap over a rock nearly 30 feet high, tossing up the spray, and at times reflecting the gorgeous tints of at least a second-rate mountain cascade; and less than a mile onward, after an entire though somewhat sinuous course of about $8\frac{1}{2}$ miles, unites with the waters of the Duchray.

The united stream, even in the energy of its combined resources and those of its numerous little tributaries, is not yet strong or honoured enough to assume the name of the queenly Forth; and during 5 miles of its course, when it begins to divide from each other the counties of its respective head-waters, it is known simply as the Avendow or Black river. All the way down to the point where the Avendow is formed, its confluent waters are strictly mountain brooks, moving garrulously along amongst the solitudes and the occasional romance of Highland scenery: and at the point of formation, as well as $2\frac{1}{2}$ miles onwards, where it leaves the parish of Aberfoyle, the Avendow flows softly along a beautiful and fertile valley, called the Laggan, hemmed on both sides

by a fine amphitheatre of hills, with a narrow opening toward the south-east; and through this opening the river, after having passed some woody heights and a beautiful round hill entirely covered with oak, glides away to commence its remarkable and characteristic serpentine evolutions in the champaign country which it henceforth traverses. After leaving Aberfoyle, it flows $2\frac{1}{2}$ miles south-eastward, through the parish of Port-of-Monteath; and there, struck by Kelly water, coming down upon it from the west, it takes a persevering direction, with the exception of its constant and involving and often spacious sinuities, almost due east, and here assumes its proper and proud name of the Forth.

In the peninsula between the Avendow and the Kelly, $1\frac{1}{2}$ mile above their point of confluence where they form what popular usage calls the Forth, stands the mansion of Gartmore, commanding a view of the magnificent plain below, 20 or 30 miles in extent, along which the noble river majestically proceeds. The river, after leaving the grounds of Gartmore, divides, for 3 miles, the parishes of Drymen and Balforn in Stirlingshire from that of Port-of-Monteath in Perthshire; and then enters a southern and territorially awkward projection of the latter county, and, over a distance of $2\frac{1}{4}$ miles geographically, or nearly 4 miles along the channel, divides the Perthshire parishes of Port-of-Monteath on the north and Kippen on the south. In this part of its course, the scenery of the river and the far-off landscape within view, are particularly fine. Its basin or valley is a beautiful and luxuriant carse, richly cultivated and picturesquely enclosed and embellished with numberless neat farm-steads, and smiling or stately proprietorial mansions. Dusky spots which here and there dot and streak the general verdure, delight by contrast, and serve as a fine foil to the exulting loveliness of the scene. The braes of Monteath rise on the northern side like an amphitheatre, and a rugged range of the Grampians, stretching from Benlomond to the Ochills, curtains the wide landscape, and casts down upon it from the horizon along the north a shading of sublimity. Stirling castle, too, and the rocks of Craigforth and Abbey Craig appear away in the east, like islands lifting their heads from a sea of verdure and sylvan luxuriance, and often brilliantly encompassed with the richest tints and the loveliest forms of cloudy drapery, leading on the thoughts of the tasteful and travelled observer to the bright blue inland sea, and the magnificent panorama of Fifeshire and the Lothians which he knows to lie beyond.

Leaving Kippen, or at least the main section of it belonging to Perthshire, [see KIPPIN,] the Forth, over a distance of 9 miles geographically, but probably over double that distance along the bends and windings of its continual evolutions, divides the parishes of Balforn, Gargunnoch, and St. Ninians in Stirlingshire, from those of Kilmadock and Kincardine in Perthshire, receiving, just at the point of its leaving Kilmadock, a tributary from the north-west of about 8 miles length of water-course, and, at the point of leaving Kincardine, the opulent tribute of the beautiful TEITH: which see. So capriciously, though gracefully, does the river move, that when about to receive the Teith, or about $1\frac{1}{2}$ mile above their confluence, it departs from its usual easterly direction, sends its windings away northward, and eventually—as if eager to embrace the sister-stream of beauty which is approaching—turns to the west of north; and, no sooner has it become united with the Teith than, quite characteristically of its style of movement, it suddenly debouches—turns to the west of its prevailing course toward the east. About 300 yards below the confluence the river bounds over ledges of rock, called the Cruives of Craigforth,

which stretch across its channel; and from this point downward, it is stemmed by the tide, and begins to bear aloft on its bosom the small craft of the inland navigator. For $1\frac{1}{2}$ mile onward it intersects a very small wing of Stirlingshire; then receives from the north the important tribute of ALLAN WATER, [which see:] and then proceeds $1\frac{1}{2}$ mile geographically, but about $2\frac{1}{2}$ measuring along its channel, dividing Stirling parish on the south from the Stirlingshire part of Logie on the north, to the point where it is spanned by the bridge on the great north-road from Glasgow, and where it passes, a few hundred yards from its right bank, the romantic town and castle of Stirling. Over the latter part of its course, or from a brief way after it enters the campaign country, and especially after passing the Cruives of Craigforth, it affords indications, in the flatness and composition of its immediate banks, of having, at a former period, expanded into an estuary and opened a path for the ingress of the sea much higher up than at present; and along this space it is dark-coloured in its waters, and solemn and sluggish in its current, bearing—but for the picturesqueness of its background scenery, and the remarkable sinuosities of its channel—a somewhat close resemblance to the dull and half-stagnant rivers of the level districts of England. Up to Stirling bridge, known as a celebrated pass, the river is navigated by sailing vessels of small burden, and by steam-boats plying between this point and Newhaven,—one of the ports of Edinburgh.

From Stirling to Alloa, the Forth divides the parishes of Stirling and St. Ninians in Stirlingshire from the parish of Logie in Perthshire, and that of Alloa in Clackmannanshire. The distance along the channel is 24 miles, but in a direct line is only 6. Along this distance it flows through the lovely plain called the carse of Stirling and Falkirk, carpeted with the most fertile soil, and dressed in the most luxuriant vegetable garb in Scotland; and, while soft and warm in the rich tints of its own nicely-featured picture, so placed in a frame-work of low hills on the south, and Stirling castle in the west, and the majestic Ochills on the north, as to draw down the prolonged and delighted gaze of even a clownish observer. The sinuosities of the river—or 'links,' as they are here called—almost bewilder by their union of excessive capriciousness and uniform beauty; forming sweeps and curves and crescents and nearly complete circles and graceful departures of every sort, from the stern angle and the lank straight line, which forcibly remind spectators, who have read Burke on the Sublime and Beautiful, of that philosopher's theory as to the elements of beauty. Many peninsulæ are embosomed in the watery foldings, vying in their form and adornments with the loveliness of the stream; and on one of them, immediately opposite Stirling, stands the tower of CAMBUSKENNETH, [see that article,] the only remnant of that venerable pile. Fertile fields, elegant mansions, tastefully ornamented demesnes, almost insulated by the turns of the river, the ruinous abbey, the white sails of vessels, on the right hand and the left, in front and in the rear, seeming to glide among lawns and groves,—these, and the brilliant features of the background-scenery lull ennuï to sleep, and lure the powers of taste into sprightly activity while a stranger ascends or descends the stream. Nor is he less delighted with the amusing puzzle in which he finds himself constantly involved to keep a just or even a proximate reckoning of the relative positions of the objects which chiefly challenge his attention; for now he is sailing direct away from Stirling castle, or any other commanding feature of the landscape, and now he is bearing down upon it right in front—he has it

now on his right hand and now on his left—again he recedes from it and again advances—and at length, in utter though charming perplexity, he relinquishes all effort to recognise the points of the compass. "In this sinuous navigation," says Mr. Gilpin, "were the mariner to trust entirely to the sails, he would have to wait for the benefit of every wind round the compass several times over." Half-a-mile above Tulliebody house, or $2\frac{1}{2}$ miles in a direct line above Alloa, the river has become $\frac{1}{4}$ of a mile broad, and receives from the north the large tribute of Devon water [see article THE DEVON]; and, between that point and Alloa, it forms the beautiful islands, each about half-a-mile in length, called Tulliebody and Alloa inches.

At Alloa, situated on its left bank, the Forth relinquishes both its sinuosity of movement and its fresh water character; and, from this point, which is the extremity of its proper or productive navigation, whither vessels come up of 300 tons burden, it partakes the expansion and the other properties of a gradually widening and far-stretching estuary. From Alloa to a point on the same bank or shore opposite the embouchure of the Avon, at the boundary between Stirlingshire and West Lothian, it flows south-east, over a distance of 7 miles, and somewhat uniformly for a while, though more suddenly on the lower part of the distance increases from half-a-mile to $2\frac{3}{4}$ miles in breadth, dividing the parishes of Airth, Bothkennar, and Polmont in Stirlingshire, from those of Alloa and Clackmannan in Clackmannanshire, and Tulliallan and Culross in Perthshire. On its northern shore it passes, $2\frac{1}{2}$ miles below Alloa, the village of Kenet-Pans, and $1\frac{1}{2}$ mile farther on, the small town of Kincardine; and, on its southern shore, it receives, opposite Kincardine, a considerable tributary, and $2\frac{1}{2}$ miles farther down, at the village of Grangemouth, receives the important waters of the Carron, and sends off inland, away to the west coast of Scotland, the Forth and Clyde canal, and again, at 2 miles distance, receives the tribute of the beautiful Avon: See articles AVON and CARRON. At this point, though $2\frac{3}{4}$ miles wide at high-water, it is only 1 mile during the efflux of the tide; and at the mouth of the Carron and commencement of the canal, it varies every 12 hours from $1\frac{1}{2}$ mile to half-a-mile; and all the way down from Alloa to this point and several miles below it presents alternate appearances of a brilliant expansion of water, between wide stretches of verdant landscape pressing close upon its margins, and dreary lugubrious wastes of sands and sleetches, threaded along their centre by an impoverished, naked, and forsaken stream. Nine miles onward from the mouth of the Avon the Forth slightly contracts rather than expands, and has an average breadth of $2\frac{1}{2}$ miles; on its northern shore, consisting for 2 miles of Perthshire, and for the rest of the distance of Fifeshire, it is studded at intervals with the villages of Culross, Newmill, Ferryburn, Charlestown, and Limekilns, and has a beautiful and verdant background; on its southern shore, consisting all the way of Linlithgowshire, it is overlooked by the dingy town of Borrowstonness, and the village of Blackness, and is rich in the sylvan beauties and lovely slopes and undulations of its receding landscape. The Forth now suddenly contracts to the breadth of 1 mile and 3 furlongs, but is compressed to this breadth entirely by the protrusion, on its north side, of a peninsula less than half-a-mile wide at the point; and having embosomed the islet of Beemer, half-a-mile higher up, the estuary, at the narrowest part of its contraction, is overlooked by the Linlithgowshire town of South-Queensferry and the Fifeshire village of North-Queensferry, both pressing close upon its beach; it

and, in its centre, or at equal distances between them, it embosoms the fortified islet of INCHGARVIE: which see.

The Forth now suddenly expands to the breadth of 3 miles, sends off, behind North-Queensferry, a small bay, at the head of which stands the town of Inverkeithing, and henceforth to the sea, a distance of 36 miles, divides Fifeshire on the north from the three Lothians, West, Mid, and East, on the south. Four miles below Inchgarvie are Cramond Isle, $\frac{3}{4}$ of a mile from the southern shore; Inchcolm, with its attendant islets, Haystack and Carraig, $\frac{3}{4}$ of a mile from the northern shore; and the little islet, Stone Wickray, in the middle of the channel; the first overlooked from the coast by the picturesque demesnes of Cramond house and Barnbougle castle, and the second by the church and village of Aberdour: See articles CRAMOND, INCHCOLM, and BARNBOUGLE. The Forth is here 5 miles broad, and altogether gorgeous in the magnificence of its encircling landscape. Six and a half miles farther on, it runs a breast of INCHKEITH, [see that article,] which stretches nearly a mile across the centre of its channel. The Forth has here hung around it a panorama so exquisitely blending the attractions of natural and burghal and agricultural and marine landscape, as to exult in the powerlessness of an artist's quill or pencil to attempt a copy. On the north, pressing upon the beach, and so briefly asunder as almost to be a continuous town, are the villages of Burntisland, Pettycur, and Kinghorn, 'the lang toon o' Kirkcaldy,' and the villages of Path-head, Dysart, and Wemyss, the first somewhat west of Inchkeith, and all within a range of $7\frac{1}{2}$ miles; forming a burghal array, so soft and cheerful in the aspect and grouping of its houses, and interspersed in such fine proportions with fields and trees and rural adornings, as to make a truly picturesque edging to the magnificent expanse of waters; and behind this singular foreground Fifeshire recedes in slow and reluctant ascents, looking down in wooded slopes and undulations upon the attractive frith below, and seeming to reciprocate all the gladness of the scene, till it shoots finally up in three remarkable and far-seeing elevations near the centre of the county. On the south the large village of Newhaven, the towns of North and South-Leith, the beautiful village of Portobello, the hamlet of Joppa, and the towns of Fisherrow and Musselburgh,—the first 2 miles west of Inchkeith, and all within a range of $6\frac{1}{2}$ miles,—press upon the shore, and send out their yawls or ships or steam-vessels to bound on the bosom of the waters, and enliven its landscape by their forms and movements; and behind this crowded and almost continuous phalanx of picturesque building are seen, on the foreground, the magnificent queen city of Scotland spreading out her ascending tiers of streets like the foldings and embroidering of her robes, bearing aloft the edifices on the Castle-rock and the Calton-hill, like the adornings of her regalia, and wearing an aspect of surpassing city grandeur, and even sublimity, amidst the bold elevations and the remarkable outlines of the hills in her environs [see EDINBURGH]; while away in the distance, over a various and undulating landscape, except where the hills of Edinburgh intercept the view, the heathy yet verdant and sylvan heights of the Pentlands, and the dark range of the Lammermoor hills bound the horizon. And while all this magnificence is hung out immediately opposite Inchkeith, the whole coast-line of the far-stretching frith, wends, on both shores, inland and seaward, in front of scenery rich in its loveliness, and exquisitely in keeping with the more powerful attractions of the immediate landscape; and the frith itself—dotted over with the

white sails of sailing-craft or streaked with the foam and the smoke of steam-vessels, and overlooked from the far east by the huge loaf-like form of the Bass [see that article] lying on the surface of its own waters, and by the beautiful cone of North Berwick law standing close upon its southern shore—stretches onward to the sea, glittering in the tints and reflections of the sunbeams playing upon its waters, and, in general, gorgeously shaded with an aerial drapery of clouds.

At Leith the Forth is 6 miles broad; and, at the Bass, opposite the Anstruthers, and somewhat west of Fifeness, or the point where it fairly becomes lost in the ocean, it is 11 miles broad. Four miles east of Wemyss, on the north shore, it receives Leven water; and on the south shore it receives Almond water at Cramond, Leith water at Leith, Esk water at Musselburgh, and Tyne water 4 miles west of Dunbar. Four and a half miles from the Fife coast, a little west of Fifeness, it embosoms May island; and, near the coast of East Lothian, it has, at various intervals, the islets of Eyebroughy, Fiddray, Lamb, Craig-Leith, Scarr, and the Bass. At intervals, on its northern shore, east of West Wemyss, are the villages of East Wemyss, Buckhaven, Muthel, Inverleven, Leven, Largo, Elie, St. Monance, Pittenweem, Anstruther, and Crail; and, on its southern shore, in East Lothian, are Prestonpans, Cockenzie, Port-Seaton, Aberlady, North Berwick, and Dunbar.

The frith of Forth is of vast importance to navigation and commerce. Above Queensferry it is, in every part, one of the safest roadsteads in Britain. Inverkeithing bay, Burntisland roads, Leith roads, Elie roads, and various other localities, are places of safe anchorage. On the south side, the harbours are Grangemouth, Granton, Leith, Fisherrow, and Dunbar,—Granton being the best on the frith, and Leith the most frequented, and the only one of much commercial importance.* On the north side, at most of the multitudinous towns and villages which sit upon the coast, are harbours superior, in general, to those on the south side, but less frequented; the one at Burntisland being the best on the frith except that of Granton. In early times the frith was regarded as of dangerous navigation; but, though shoally in various localities, and heaved up by sandbanks, it is now—with the appliances of light-houses on Inch-Keith and May island, and of accurately drawn and minute charts—so signally safe as to be hardly ever the scene of a shipwreck. The amount of trade on its waters was materially increased by the opening of the Forth and Clyde canal, and has been not a little augmented by the introduction and the progressively improving application of the propelling power of steam. Navigable to Stirling only for vessels of 80 or 100 tons, it might easily, by means of side-locks or of a deep straight cut along the locality of its "links," be made to carry to that town vessels of most of the classes which enter it from the sea.

* On this subject Mr. James Anderson, civil engineer, stated, in evidence before the House of Commons, in 1835, that "the frith of Forth is infinitely the best inlet of the sea on the whole eastern coast of Great Britain, where ships at all times of tide, and almost under every circumstance of wind or weather, are able to obtain shelter, but in the whole of this frith, extending 60 miles inland, there is not a sufficient harbour; the want of which is most severely felt along the whole range of coast from the one extremity of the island to the other. Ships, for instance, overtaken by gales from the north, south, or east, can run with perfect safety into this frith, when they dare not attempt the shore in any other quarter, and consequently every facility which can be afforded to the navigation of this important estuary, either by affording the necessary accommodation to the shipping which frequents it, or shelter to the North sea fleets which often congregate in the frith, and to his Majesty's navy in the event of war, becomes in reality an object of the first national importance."—*Parliamentary Report on Leith and Newhaven Harbours*, 1835, p. 96.

But a project for effecting the necessary measures, concocted by the town-council of Stirling, and ascertained by an engineer's survey to be practicable at a cost of only £10,000, has, for many years, been lulled to sleep by tameness of enterprise, or the jealousies of landed proprietors, or the keen interestlessness of privileged salmon-fishers, or last of all but not least, by the proud and tasteful vigilance of the burghers of Stirling, and the inhabitants of the circumjacent country, over the natural beauties of "the links." On both shores, from Borrowstonness downwards, are numerous salt-works; and along the coasts, as well as inland near the banks of the river, are vast repositories of coal, limestone, and iron-stone; and these, along with extensive and multitudinous fisheries, attract a very numerous resort of vessels. The frith abounds with white fish of all kinds, and is ploughed by fleets of fishing-boats from Newhaven, Fisherrow, and other fishing-villages, procuring supplies for the daily markets of Edinburgh, and for the markets of other towns. At Stirling, Alloa, Kincardine, and numerous other places, are valuable fisheries of salmon. An annual shoal of herrings generally visits the frith, and, in some years, has yielded a prodigious produce; but its fish are esteemed decidedly inferior in quality to those of the western coasts of Scotland. At Cramond and Inchmickery were formerly vast beds of oysters; but, from over-fishing, they have been much exhausted; and they also yield a fish which, in quality and size, is generally inferior to that obtained in many places on the British coasts.

The Forth, it has been calculated, drains a superficies of 574 square miles. Its entire length of course, in a direct line, is upwards of 90 miles; but, including all the sinuosities for which it is so remarkable, it cannot be estimated at less than 170 miles.* The frith is often mentioned in history in connection with invasions, with the landing of troops or warlike muniments from foreign friendly powers, and with the voyages, on errands of state or of matrimony, of the princes and princesses of Scotland.

FORTH AND CLYDE CANAL (THE), a public work of national interest and importance to Scotland, connecting, by a navigable communication, the friths of Forth and Clyde. The very deep indentation of the eastern and the western sides of Scotland by these friths, at points not far from the same line of latitude, and the strictly lowland character of the territory which intervenes between their terminations, combined with the danger and the tediousness of the natural navigation from side to side of the country along the rough marine highway round the Pentland frith, suggested, at a very early period of modern civilization, the desirableness of a Forth and Clyde

canal. In the reign of Charles II., a project was conceived of cutting out so deep and broad a communication as should admit the transit of even transports and small ships-of-war; but it probably shared the odium of the unpopular government which conceived it, and would, if attempted to be put in execution, have starved upon the wretched fragments of a prodigal and ill-directed public expenditure. In 1723, a second and similar project led to the making of a survey by Mr. Gordon, the well-known author of the '*Itinerarium Septentrionale*;' but produced no further result. In 1761, Lord Napier, somewhat varying the previous abortive projects, sustained, at his private cost, a survey and financial estimate, by Mr. Robert M'Kell, for a canal from the mouth of Carron water, in Stirlingshire, to the mouth of Yoker burn, 5 miles below Glasgow; and so deeply did the result excite the interest of the Board of Trustees for the Encouragement of Fisheries and Manufactures of Scotland, that they obtained from the celebrated engineer, Mr. Smeaton, a new survey and estimate, valuing the cost of the projected work at £80,000. The mercantile community of Glasgow and its neighbourhood, either faithless of practical results, or indignant at what they conceived to be a proposed uselessness and utter prodigality of expenditure, and, at the same time, tantalized by delays in the commencement of a work of vast importance to their interests, walked now rather abruptly into the arena, resolved to cut a canal four feet deep at the cost of £30,000, subscribed, in the course of two days, the whole amount of the estimated cost, and authorized a formal application to be made for parliamentary sanction. Aristocracy, national pride, metropolitan vanity, and perhaps a considerable degree of perspicacious insight into the true interests of the country, were shocked at what was thought the mean project of a long ditch in lieu of an artificial river; and they poured down upon it the invasions of a paper war, and enlisted their forces in parliament to give it a vigorous opposition. The nobility and gentry of the country, whether right or wrong in the opinions they entertained, succeeded in getting an ascendancy, and tying up the hands of the merchants; and, in 1777, they began a subscription in London for cutting a canal seven feet deep, at the estimated expense of £150,000. The subscribers obtained the sanction of parliament, and were incorporated by the name of 'The Company of Proprietors of the Forth and Clyde Navigation;' their joint stock to consist of 1,500 shares of £100, with liberty to borrow £50,000; and the holders of five shares to vote personally or by proxy, and to be eligible as managers.

In 1768 the work was begun, at the east end, under the direction of Mr. Smeaton. On the 10th of July, Sir Laurence Dundas of Kerse performed the ceremony of making the first incision of the ground, with a spade which is said to be preserved as a relic in the mansion of his descendants. In July 1775, the canal was fit for navigation to Stockingfield, the point whence a side-branch was designed to lead off to Glasgow; and, in 1777, the side-branch was completed to Hamilton hill, still nearer that city, and accommodated at its terminus with a basin for the reception of vessels, and granaries for the storage of goods. But difficulties had occurred on which the inexperience of the age in canal-making had not calculated, and had occasioned so great a surplus expenditure above the estimated cost, that the finances of the company seemed to be menaced with confusion and ruin. All the original stock, all the amount of a subsequent loan, and all the proceeds of toll-dues hitherto received, were expended; and, at the same time, the annual revenue did not

* Mr. Anderson says, that "the tides in the Forth run variously, both in respect of time and velocity. This is caused partly by the formation of its shores, and partly by the obstruction of islands and shallows, and the meeting of currents; for instance, over the sands of Leith there is an apparent receding tide two hours before it is high water, because the pressure of the current on the outside of the Black rocks, which runs very strong, causes an eddy to exist in the space between Newhaven pier and Leith pier, and running eastwards at $1\frac{1}{2}$ knots an hour, while the actual tide after high water runs at the rate of $2\frac{1}{2}$ miles an hour; therefore, the flowing tide, which runs $1\frac{1}{2}$ knots an hour, appears to flow only for four hours, while the ebbing tide continues for eight hours. On the north shore, and in mid-channel, the tides run equal in respect of duration, and at the rate of from 3 to $3\frac{1}{2}$ knots an hour; the current or flowing tide strikes hard, and runs very close upon the north shore from Kinghornness to the promontory west of Aberdeen at $3\frac{1}{2}$ knots an hour; it again flows through the cut at Queen's ferry at the rate of five knots an hour; about 6 miles above Queen's ferry it flows at the rate of about 2 miles to $2\frac{1}{2}$ miles an hour, and the ebb tide at the same rate. The ebb tide again runs through the strait at Queen's ferry at six knots an hour; this violent current causes the ebb tide again in the bay on the north shore, which is found by the north headland to flow to the west for two hours after the turn of the tide, and at the rate of $1\frac{1}{2}$ knots an hour."—'Report,' p. 91.

much exceed £4,000. Shares now sold at 50 per cent. discount; prospects were gloomy and disastrous; and doubts arose whether the canal would ever be carried to the Clyde. But, in 1784, Government, out of the rents of the forfeited estates in Scotland, granted £50,000 toward the completion of the work, reserving a power of drawing proportional dividends with the proprietors, and allowing them, on the other hand, to add their arrears of interest to their principal sums. In July 1786, the cutting of the canal was resumed under the superintendence of the engineer, Mr. Robert Whitworth; and in July 1790, it was completed from sea to sea. The committee of management, accompanied by the magistrates of Glasgow, were the first voyagers on the completed navigation; and on their arrival at Bowling-bay, they performed, amidst a vast concourse of spectators, the somewhat absurd ceremony of symbolically uniting the eastern and the western monarch-rivers of Scotland by pouring into the Clyde a hogshhead of the water of the Forth. The basin at Hamilton hill having been found incompetent, 8 acres of ground were now purchased close on the vicinity of Glasgow, and disposed in commodious basins and suitable building-grounds for granaries and a village. This locality, curiously overlooking the metropolis of the west, from the face of a considerable rising ground, was in honour of Thomas, Lord Dundas, called **PORT-DUNDAS**: which see. From Port-Dundas, the canal—chiefly for the sake of obtaining supplies from the largely superfluous waters of the sister-work—was afterwards carried eastward to a junction with the Monkland canal, which belongs to a different company, and was formed with a very different design: See **MONKLAND CANAL**.

Though the canal was planned to be no more than seven feet deep, yet, by subsequent additions to the height of its banks, it became, in effect, eight feet. The length of the work, in all its parts, is $38\frac{3}{4}$ miles; of the navigation direct from the Forth to the Clyde, 35 miles; of the side-branch to Port-Dundas, $2\frac{3}{4}$ miles; and of the continuation to the Monkland canal, 1 mile. The number of locks on the eastern side of the island is 20, and on the western 19; the difference being occasioned by the higher level of water in the Clyde at Bowling-bay than in Grange-burn or the Carron at Grangemouth. Each lock is 74 feet long and 20 feet broad, and procures a rise of 8 feet. The greatest height of the canal is 141 feet; its medium breadth, at the surface, 56 feet; and its medium breadth, at the bottom, 27 feet. Its capacities admit vessels of 19 feet beam, 68 feet keel, and 8 feet draft of water. It is crossed by 33 drawbridges, and passes over 10 considerable aqueducts, and upwards of 30 smaller ones or tunnels. The greatest aqueduct is a very magnificent one across the Kelvin at Maryhill, begun in June 1787, and finished in April 1791. It consists of 4 grand arches, is 83 feet high, runs across a dell or valley 400 feet wide, and was completed at a cost of £8,500. The canal has 6 reservoirs, covering about 400 acres, and containing upwards of 12,000 lockfuls of water; and means exist for more than doubling the supply.

The navigation into the canal from the Forth runs half-a-mile up the river Carron, and thence a very brief distance up Grange-burn, and, at low water, is impracticable, leaving sailing craft, of even a small size, aground. The canal, lifted up from the tide at Grangemouth, is carried $2\frac{1}{4}$ miles south-westward on a straight line to Grahamston. Here, and for some way previous, its banks are the scene of bustling enterprise and industry; and at Brainsford, on the opposite bank from Grahamston, it opens laterally into a basin, and receives the vast traffic poured

down upon it by railway communication with the neighbouring Carron iron-works. Thence, for a mile onward to Camelon, it is slightly sinuous in course, but still south-westward in direction; and then, by a considerable aqueduct, it is lifted across the Edinburgh and Glasgow mail-road by way of Falkirk, and begins to make a bend of $\frac{3}{4}$ of a mile toward a westerly direction at Lock 16. Up to this point—as the name of the locality implies—it had been passing locks at frequent intervals, and climbing the face of an inclined plane; and now it has attained an elevation of 128 feet above the level of tide-mark at Grangemouth. Over the latter part, or, in fact, the whole of its progress hither, it commands views of the carses, and water-scenes and magnificent northern back-grounds of the Forth, which are quite exultant in beauty. Few treats to a lover of exquisite landscape, and a man susceptible of a thrilling influence on the mind, and a bracing effect on the body, of the breathing of pure air amidst a wreck or reminiscence of a sinless world, can be richer than to step out at Lock 16, on a fair summer's day, from a canal passage-boat, in which he has been cooped up, and perhaps almost stewed, from Port-Dundas, and to walk leisurely thence along the banks of the canal to its terminus at Grangemouth. Whatever stir or manufacturing offensiveness may on some spots mar his pathway, will be all but unobserved under the spell which he feels from the mingled luxuriousness and brilliance of the landscape around him. At Lock 16, the canal sends off on its east side the comparatively recent and less spacious navigation to Edinburgh: See **UNION CANAL**. For $2\frac{1}{2}$ miles it proceeds in nearly a straight line due west; and, for $2\frac{3}{4}$ miles farther, it runs up south-westward along the right bank of Bonny water to Castlecary. It has now attained its highest elevation; and this it continues to preserve away past Port-Dundas, on the one hand, to the junction of the Monkland canal, and onward, on the other, till near the aqueduct across Kelvin water. At Castlecary it is crossed on a drawbridge by the great northern mail-road from Glasgow; and here passengers and goods from the west are landed for conveyance by a connecting coach-communication with Stirling and Perth. A quarter of a mile onward, the canal is carried over the principal head-stream of Bonny water, and takes leave of the parish of Falkirk, or of Stirlingshire which it had hitherto traversed, and enters Dumbartonshire; yet, for 8 miles farther, it never recedes more than half-a-mile from the flanking continuation of Stirlingshire, and over one-half or more of that distance does not recede a furlong, and even when considerably past Kelvin aqueduct, and within 6 miles of Bowling-bay, has not at any point receded more than $1\frac{1}{2}$ mile. For $9\frac{3}{4}$ miles of its line in Dumbartonshire, it proceeds, with few and unimportant deviations, from a direct course south-westward along the borders of the parishes of Cumbernauld and Kirkintilloch, coming in upon the track of the incipient Kelvin, following that stream along its left bank, passing the village of Kilsyth $\frac{3}{4}$ of a mile to the north, and making a bend and passing along an aqueduct over a considerable tributary of the Kelvin just before terminating the distance at the town of Kirkintilloch. The canal now passes that town immediately to the north, but lying in a hollow, and nearly all invisible; and half-a-mile thence—in consequence of Dumbartonshire being dissevered by an intersecting tongue of Lanarkshire—it enters the latter county. For $1\frac{1}{2}$ mile it proceeds westward, and then resumes its south-westward direction, and, passing Cadder kirk, attains, in 4 miles, the point whence its side-branch goes off to

Port-Dundas. Over nearly the whole distance from Lock 16, the level or course of the canal is overlooked or flanked with confined views: in some places, it carries the eye a short way over cheerless morass and moorland; in others, it discloses limited but not uninteresting hill-scenery on the north; and in a few it ploughs its way between steep and wooded, though not high, banks, which all but cheat a stranger into the conviction that he is sailing along a natural river. The side-branch to Port-Dundas somewhat abounds in sinuosities, and has several rapid and inconvenient turns, but on the whole has a direction due south-east; and at last, coming along the face of a soft hill, and making two rapid bends respectively as it approaches and as it enters the basin, displays a little forest of masts high above the general level of Glasgow, in a position commanding nearly as good a view of the city of spires, and tall chimney-stalks, regular streets, and lumpish edifices, as clouds of smoke and great unfavourableness of site for scenic effect will permit. From the point whence the side-branch diverges, the canal adopts a considerable change of course, and proceeds for $1\frac{1}{2}$ mile in a direction north of west, and with a pleasing landscape on its south side to Mary-hill. Here there is a crowding of interesting objects into a limited space, and a successful struggle of art to combine with nature in producing picturesque and almost romantic effects. The canal is carried along a short but high aqueduct across the Garscube turnpike from Glasgow; immediately beyond, a neat village, with its *quoad sacra* parish-church, stretches away on high ground; in the distance northward, knolls and wooded eminences, and the grounds of Killermont undulate downward to the narrow and curving vale of the Kelvin: in view of the landscape, and close on the street-line of the village, the canal, in a bending course, walks down the brow of a descent by a succession of locks which somewhat resemble the section of a prodigious staircase; and, a few yards onward, in a seclusion nearly as deep as if no village were within a distance of many miles, stretches the superb aqueduct across the Kelvin, overlooking a thickly-wooded and soft-featured but romantic gorge upwards of 80 feet in depth, steep in its acclivities, and almost noiselessly traversed by the limpid river. At this point, the canal re-enters Dumbartonshire at the south-east corner of its parish of East Kilpatrick, and thence it proceeds $2\frac{1}{4}$ miles north-westward, $\frac{2}{3}$ of a mile south-westward, and $\frac{1}{2}$ mile westward to a point a little within the limits of West Kilpatrick. Here it is only about $\frac{1}{2}$ of a mile distant from the Clyde, and is joined by a brief Junction canal opened, in 1839, for the benefit of Paisley, from the Clyde at the influx of the Cart; and hence onward, for $3\frac{3}{4}$ miles, it follows the course of the Clyde in an undeviating direction to the north of west; and, with little harbour-accommodation, or no more than admits a brief line of two or three vessels, is somewhat ceremoniously let down into the Clyde at Bowling-bay.

"Through Carron's channel, now with Kelvin joined,
The wondering barks a ready passage find;
The ships, on swelling billows wont to rise,
On solid mountains climb to scale the skies;
Old ocean sees the fleets forsake his floods,
Sail the firm land, the mountains and the woods;
And safely thus conveyed, they dread no more
Rough northern seas which round the Orkneys roar.
Not thus the wave of Forth was joined to Clyde,
When Rome's broad rampart stretched from tide to tide,
With bulwarks strong, with towers sublimely crowned,
While winding tubes conveyed each martial sound.
To guard the legions from their painted foes,
By vast unwearied toil the rampire rose;
When, fierce in arms, the Scot, by Carron's shore,
Resigned, for war, the chace and mountain boar
As the chafed lion, on his homeward way,
Returns for vengeance, and forgets the prey."

Wilson's Clyde.

The original cost of the canal, including all expenditure up to the January succeeding the date of its completion, was £330,000. The tonnage dues imposed were, from sea to sea, 5s. 10d.; from Grangemouth to Port-Dundas, 3s. 10d.; from Bowling-bay to Port-Dundas, 2s.; and over partial distances, except in favour of lime and some other cargoes, 3d. per mile. When the whole work got its appliances into operation, the gloom which formerly darkened its prospects began speedily to disappear. Ten or twelve years after its completion the shares had risen greatly above their original value, or the price at which they had been actually procured. While the work was in progress, two general meetings, one at London, and one at Edinburgh, governed its affairs; that at London appointing annually the committee of management. Collisions of opinion and conflicting decisions having resulted, a new constitution was sanctioned by act of parliament in 1787, investing the direction in a governor and council at London, and a committee of management at Glasgow; both to be annually elected by a general meeting held in London. Though experiencing some fluctuations, the affairs have, on the whole, steadily prospered, and, notwithstanding a recent great reduction in the tonnage-dues, continue to be remunerating, and to embrace a rapidly extending traffic. The revenue for the year 1839 consisted of

Tolls on vessels passing through the canal.	£68,535	4	3
Fares in passage boats.	14,032	4	6
Shore, harbour, and other dues and rents.	6,460	5	6
Feu-dues, and other property sold.			
	£89,027	14	3
	6,447	14	4
Total revenue.	£95,475	8	7

The expenditure for 1839 consisted of ordinary expenses (£7,279 13s. 3d.) contingent do. (£2,105 17s. 1d.), extraordinary do. (£5,032 9s. 6d.) salaries, wages, interest on borrowed money, and other miscellaneous expenses, amounting in all to	£32,575	1	2
Borrowed money repaid.	10,000	0	0
Annual dividend.	38,910	0	0
	£81,485	1	2

Excess of revenue after paying the dividends, . . £13,990 7 5

From a list of the articles from which the tolls arose during the preceding ten years, we extract the following items belonging to the year 1839. They show from what sources the revenue of the Company is chiefly drawn, and the prevailing character of the trade to which the canal is subservient:—

Tolls from grain.	£22,144	7	3
— — iron.	11,999	8	3
— — coal.	5,764	15	0

It will be seen, by casting up the amount of these three items, that the tolls raised from grain, iron, and coal alone, amount to more than the dividends of the company. The increase of the iron trade, in particular, has greatly swelled the revenue, as it enables vessels which occasionally returned in ballast to carry a cargo both going and coming. The items next in amount are:—

Timber.	£3,182	12	4
Onaburghs and linens.	2,631	1	11
Herrings and salt.	1,633	3	7
Stones.	1,495	6	3
Porter and ale.	1,464	7	4

From the abstract given above of the revenue and expenditure for 1839, the outlays and charges on the passage-boats fall to be deducted, which will diminish the apparent amount both of revenue and expenditure. The nett proceeds of the passage-boats for

1839 is £5,145 9s. This sum exceeds that drawn from the same source for any previous year; the only year approaching it being that of 1834, when the nett proceeds from passengers were £5,046 15s.

Improvements as to the powers and the rates of motion on the canal, seem nearly to keep pace with the rapid increase of facility in land-communication by the construction of railways. Horse-power, as yet, has alone been in practice along the banks, and long was applied in a manner which would now be esteemed loutish and clumsy. Sailing vessels were dragged along at a snail's pace; and even the boats for the conveyance of passengers were dragged with a speed of little more than 4 miles an hour. About eight or ten years ago, long, narrow, shallow iron-boats, so confined as to admit of only a sitting posture to passengers, and so constructed as to take very slender hold of the water, were substituted for the heavy and cumbrous, though internally commodious and agreeable boats which preceded them; and, in consequence of their lightness, and of the adoption of very short stages for the horses, they have currently hurried along at nearly or altogether the double of the old speed. All that horses can do, however, will not suit the taste for rapid careering which has been created by rail-road locomotion. So early as November, 1789, the canal was the proud scene of experiment for the first steam-boat which was ever constructed above the size of a model; and some years later, it was the arena of experiments in steam-boat navigation, from which Fulton learned the lesson which he afterwards successfully practised in America. At various subsequent dates, particularly about ten or twelve years ago, strenuous exertions and astutely directed experiments were made to adapt propulsion by steam to the fragile structure and precarious embankments of the canal; but all were attended by some degree of failure; and, even had they been successful, they would have achieved a rate of speed far below what the fidgety and flighty and swift-winged spirit of the age has come to demand. A total new set of experiments, tending to a great and wonderful revolution in canal navigation, was commenced some time ago, and, in September, 1839, were brought to a decisively favourable termination. A light railway having been formed alongside of the towing-path of a part of the canal, near Lock 16, a locomotive engine of moderate power was set on it, and applied, as a substitute for horses, in towing, at various rates of speed, vessels of all the different classes which frequent the canal. By experiments conducted with scrupulous accuracy, and often repeated, it was ascertained that, even with the imperfect preparations which had been made, the passage-boats may, without injury to the banks, be towed at rates varying from 19.1 to 19.25 miles per hour, and that heavy sea-going vessels may, with great ease, be conveyed at the utmost speed consistent with the conservation of the slopes. On the 11th September, 1839, grand and final experiments were made under the eye of the governor, the manager, and part of the committee of the canal company, and several professional and scientific gentlemen, and were conducted, as the precurrent experiments had been, under the superintendence of Mr. M'Neil, civil engineer. The locomotive engine was attached successively to passenger-boats, lightly and heavily laden,—to sloops, single and in pairs,—and to a string of nine miscellaneous sailing-vessels. The passenger-boats almost instantly shot along at the rate of 16 and 17 miles per hour, and were maintained at that velocity with a very small expenditure of steam. The waves which they produced—very unlike what had been produced by other modes or

applications of power, or what theory and dogmatism and mistaken investigation had predicted—did not undulate, or rush along the banks, but proceeded direct to the shore, quite or nearly at right angles with the sides of the boats, and, so far from being increased in volume proportionately to the increase of velocity, were at all times smaller than those which the boats plough up when they are drawn by horses. The sloops, dragged singly, and two on a line, varied from 70 to 90 tons, and were so laden as to have 8 feet draught of water; and they were carried along at the maximum allowed velocity of $3\frac{1}{2}$ miles per hour, and but for prudential reasons imposing restrictions, they could easily have been made to feel a much higher speed. The chain of 9 vessels consisted of 7 sea-going schooners and sloops, and 2 heavy-laden scows; and they were borne steadily along at the rate of $2\frac{1}{2}$ miles per hour. While the expense of towing them separately from the sea-lock to Port-Dundas, would be about £27, that of dragging them with the locomotive engine, exclusive of allowance for the use of the railway, would not exceed 25 shillings. In every case, the results of the experiments were perfectly satisfactory. They left no doubt that velocities suitable to all vessels were attainable,—that these might now range from $2\frac{1}{2}$ to 20 miles per hour,—and that, when the machinery and the management should be matured, and become familiar by experience, they might probably be increased, with ease and safety, to 25 or even 30 miles per hour. The decided success of the experiments, necessarily made under the disadvantageous circumstances attending a first essay, drew from the Forth and Clyde canal company a resolution that the principle of towing by the locomotive steam-engine should be carried immediately into practice. The line of the canal, therefore, seems about to become the scene of a striking and highly-useful novelty,—the combination of the bulky and ponderous transit peculiar to a canal, or a river, with the lightness of motion and the celerity of speed peculiar to a railway.

FORTINGAL, a very large and important parish, occupying the chief part of the north-western division of Perthshire. *Quoad sacra*, the parish is of moderate dimensions; but *quoad civilia*, it measures, in extreme length, about 40 miles; in extreme breadth, upwards of 30 miles; in circumference, along the sinuosities of its boundary-line, probably 130 miles or upwards; and in superficial area, nearly 450,000 imperial acres. It is bounded on the north by the district of Badenoch in Inverness-shire; on the north-east by the parish of Blair-Athole; on the east by the parish of Dull; on the south by the parishes of Kenmore and Killin and a detached portion of the parish of Weem; and on the west by the parishes of Glenorchy and Appin in Argyleshire, and the district of Lochaber in Inverness-shire. The parish is in every respect compact, with two remarkable exceptions: it embosoms, nearly in its centre, a detached part of Logierait, $4\frac{1}{2}$ miles by 4; and it, at the same time, has a detached part of its own, called Bolfracks, $4\frac{1}{2}$ miles by 2, lying $3\frac{1}{2}$ miles east of the south-eastern extremity of the main body. The whole parish lies among the Grampians, and is exceedingly mountainous; and, in general, broadly marked with the characteristic features of the Highlands,—savage grandeur relieved by varying scenes of romance and beauty,—towering elevations cleft into ridges by torrents and ravines,—bleak alpine wastes of heath alternated with sylvan braes and far-stretching lakes,—scenes now sublime and now subsiding into softness, enlivened by bounding streams and roaring cataracts. The extensive district, however, which constitutes the main body of the parish,

is naturally and comprehensively divided into three portions, Rannoch, Glenlyon, and Fortingal proper. RANNOCH and GLENLYON will be described in separate articles; and need not be further noticed here than to say, that the former constitutes the northern part of the parish, and the latter, jointly with Fortingal proper, a considerable portion of the southern part. But these districts are separated or surrounded by very broad or high mountain-belts. Both on the north and on the south large portions of the parish, from the boundaries inwards, are entirely mountainous. Another belt, about 7 miles broad, stretches along the whole length of the parish from east to west, separating it into two great divisions, with Rannoch on the north, and Glenlyon and Fortingal on the south, and lifting many of its summits 3,000 feet or upwards above the level of the sea. Minor ridges, isolated mountains, and divergent spurs also lift their heads almost everywhere in other localities, rendering the entire parish eminently Highland. The most remarkable of the isolated heights is SCHI-CHALLION, on the southern boundary: which see. The parish has, at its centre, along the base of the intersecting broad belt of mountains, one magnificent lake, 12 miles long, and upwards of 1 mile in average breadth, overlooked by grand and magnificent scenery: See LOCH RANNOCH. It has also, at its northern limit, 7 miles of a lake which stretches away into Inverness-shire, and is in all 16 miles long; the scenery of which has gems of beauty, but is, in general, savage and wild: See LOCH ERICHT. It possesses parts likewise of a beautiful and romantic lake, 3 miles in length, on the south-west,—an islet-studded and sylvan mountain-lake, 6 miles long, on the west,—and a lake, 4 miles long and half-a-mile broad, on the north-east: See LOCH LYON, LOCH LYDOCH, and LOCH GARRY. There are also in the parish numerous smaller lakes, or lochlets, all of which, with one exception, as well as the larger lakes, are well-stored with fish. In Loch Rannoch trout are caught from 1lb. to 24lb. in weight. Nor is the district less rich in rivers, brooks, and rills. One roaring and impetuously careering stream, bounding along in rapids and cataracts, and sometimes sending its hoary voice for several miles among the mountains, runs eastward from Loch Lydoch to Loch Rannoch: See the GAUER. Another river, at first smooth and gentle, but afterwards impetuous, runs from Loch Rannoch to the eastern boundary: See the TUMMEL. These streams, with the lakes whence they issue, form a belt of waters, along the base of the central belt of mountains, from end to end of the parish. Another river, sluggish and mustering for the onset for a short distance, but afterwards furious and wild in its career, comes down southward from Loch Ericht, to near the western extremity of Loch Rannoch: See the ERICHT. Another river of great variety of aspect, but generally overlooked by scenes of romance or picturesqueness or beauty, issues from Loch Lyon, and thence intersects the parish, through Glenlyon and Fortingal proper, on the eastern boundary: See the LYON. Numerous other streams, for the most part of inconsiderable length of course, and possessing the character of mountain-forrents, run along ravines, or leap over precipitous rocks, or spread out little dells and mimic glens, gay in the adornings of Highland loveliness, and pour their waters into either the lakes or the rivers. Among the most noticeable are the Mirran, Auld Madrum-beagh, and the Moulin, tributaries of the Lyon and Black water; Auld Bagh, Auld Killyhounan, and the Sassen, tributaries of the central stripe of waters. Fortingal proper occupies the lower part of the course of the Lyon, and is a sublimely yet softly picturesque vale, about 6 miles in length, and upwards of

half-a-mile in breadth, adorned with groves and demesnes and gentlemen's seats, with mountains coming slowly down upon its gentle beauties, yet sending away their summits to such a height, and environing it in such alpine phalanx that, gazing round from its centre, a stranger might conclude ingress or egress to be impracticable. The village or kirk-town of Fortingal—a few huts clustered around the parish-church—presents a fine foil to the numerous beauties of the vale. Caverns and deep recesses beneath the overhanging cliffs or between the projecting shelves of rocks, are numerous, and, in some instances, remarkable; and are, for the most part, associated either with tales of ancient feuds and warfare, or with the gross legends of credulity and superstition. The Grampian bed of limestone, ranging from Dumbartonshire to Aberdeenshire, passes along the east end of the parish. Veins of marble of various hues, and variously clouded, occur in several localities. A very rich vein of lead-ore in Glenlyon was wrought for several years toward the close of last century; but, owing to some unexplained reason, it did not compensate the working, and was abandoned. Brilliant pebbles, spars, and rock-crystals, are occasionally found among the mountains. In the very small area of the parish which is arable—yet small only as compared with the vast aggregate of impracticable surface—agricultural improvement has been singularly rapid, and achieved surprising results. Neat, snug farm-steeds, well-enclosed fields, and the luxuriant results of skilful and assiduous husbandry, cheer and surprise the Lowland tourist who penetrates among the Highland wastes and wilds. The soil, in the level stripes of the valleys, is, in general, gravelly and dry; and up the sides, though seldom toward the summits, of the mountains, it affords excellent pasturage for black cattle and sheep. A considerable forest of native fir, and an extensive one of birch, range along the district of Rannoch, and appear to be remnants of that great Caledonian forest which anciently covered northern Perthshire and the county of Inverness, over mountain, glen, and morass, to the extent of more than 2,000 square miles. Plantations of the various sorts of hard wood, and of spruce and larch, though not aggregately extensive, are so disposed through the parish as to impart a feature to very many of its landscapes. The celebrated yew-tree in Fortingal churchyard, described by Pennant, and noticed by various tourists and topographers, as probably the largest in the kingdom, still lifts its venerable branches to the breeze; but though somewhat increased in its enormous circumference—so often recorded—of 52 feet, has lost much of its stateliness, and now appears as two distinct trees. “At the commencement of my incumbency, 32 years ago,” says the Rev. Robert Macdonald, the minister of the parish, in his report in the New Statistical Account, “there lived in the village of Kirkton, a man of the name of Donald Robertson, then upwards of 80 years of age, who declared that when a boy going to school, he could hardly enter between the two parts, now a coach-and-four might pass between them.” This tree is probably the only remnant of those little groves of yew-trees which a very ancient act of parliament ordered to be planted in the burying-grounds of the kingdom, to furnish material for bows. At the west end of the vale of Fortingal are remains of what has been currently called a Roman camp. Far inland though the position be, and lying beyond mountain-barriers and narrow defiles and very difficult passes, several writers have thought that Agricola penetrated hither, and fought here a battle with the Caledonians. Some persons trace to this epoch the etymology of the name Fortingal, and suppose that it was originally *Fear-t-*

inn-Geal, 'the Stronghold of the Gael' or Caledonian; while others connect that etymology in a general way with the fortification, and suppose the name to have originally been *Fear-ningal*, 'the Works or exploits of strangers.' The spot where Agricola's tent is supposed to have stood is surrounded by a deep fosse. The rampart of the camp is, in many places, broken down and the ditch filled up by the plough; but the pretorium is still complete; and the camp comprehends an area of about 80 acres. A search, upwards of half-a-century ago, for antiquities on the spot, produced only three urns. Roman coins, however, have been found in various adjacent localities. Numerous circular forts appear in the parish from 30 to 50 feet in diameter, built of vast blocks of stone which one cannot easily conceive to have been moved without machines, but of inconsiderable height of wall; and as they are in many instances within view of one another, they may probably have been part of a chain of watch towers which extended from Dunkeld through Fortingal into Argyleshire. Two of the forts are much more extensive than the others, and had outworks. At the east end of the parish are vestiges of a castle, impregnable before the invention of gunpowder, built on a precipitous rocky promontory cut off by converging deep chasms with brawling brooks, and anciently defended on the accessible side by a ditch and drawbridge. This castle was the residence of "the fierce wolfe," the brother of the Earl of Buchan, and the ancestor of very many of the Stewarts of Athole. At the foot of Glenlyon, on a high declivitous bank, and anciently defended by a drawbridge, are the ruins of a castle, the last occupant of which was Duncan Campbell of Glenlyon, usually called Hospitable Red Duncan.—Fortingal was anciently the scene of many feuds, and even of some considerable onslaughts and battles. During the wars of the succession, a party of Edward of England's followers came down to the district along an opening, which still bears the name of Glen Sassen, "the Englishman's glen;" and, according to tradition, were confronted by a force led on by Robert Bruce in person. The ground where the collision of the antagonist little armies took place, is called *Innerchadden*, 'the point where the battle began,' and the spot where Robert achieved victory, is called *Dalchoisnie*, 'the Field of victory.' On another occasion, as tradition reports, Robert was less successful; and having sustained defeat near the boundary with Argyleshire, he concealed himself in a romantic spot—still called the King's house—in a wood two miles east of the field of his former and victorious contest. His retreat being near the Tummel, there was but one ford by which it could be reached, and this still bears the name of the King's ford; while an eminence overlooking his hiding-place continues to be called the King's watch-tower. During, or soon after, the reign of Robert, M'Dougal of Lorn and his followers penetrated as far as the Enoch, in subordination, it is said, to the operations of the English. But confronted by Donnacha or Duncan Reauar, the ancestor of the Robertsons of Strowan, they suffered defeat and carnage, and the chief of Lorn himself was captured, and for a time confined on the artificial islet of Loch Rannoch. In the 13th century, a clan called *Clan Eoin Bhuidhe*, 'the Descendants of John of the yellow hair,' who, at that period, possessed the upper part of Rannoch, and who by some act of rapine had incurred the wrath of the Stewarts of Appin, were sought out, on their own territory, by the chief of Appin and his clan, and drawing up in battle-array to confront the invaders near the side of the river Gauer, were nearly all hewn down on the spot; while a few fugitives with difficulty escaped by swimming the river, and fled in dispersion to their districts. A little rill, oc-

asionally called to the present day 'the rill of blood,' commemorates the fearful slaughter, and indicates its scene. A feud of several centuries in duration between the clan Cameron and the Macintoshes occasioned Fortingal to become repeatedly the arena of skirmishes and vengeful conflicts.—Fortingal has, in a very striking degree, undergone the ameliorating changes which have been generally experienced in the Highlands. Less than a century ago, or up to the year 1745, it was in an utterly barbarous condition, under no legal restraint, and signalized, even among the lawless regions around it, for its foul dishonesty and its deeds of violence. One of the chief proprietors was then the Rob Roy of his day, but without the amenities of Rob's character; and while his property was a nest of thieves, he laid the whole country, from Stirling on the one hand and Cupar Angus on the other, under contribution for "black mail." Fortingal, in fact, was the centre of this sort of traffic. "In the months of September and October," says the reporter in the Old Statistical Account, "they gathered to the number of about 300, built temporary huts, drank whisky all the time, settled accounts for stolen cattle, and received balances. Every man then bore arms. It would have required a regiment to have brought a thief from the country. But government having sent a party of soldiers to reside among them, and a thief having been hung at their doors, they soon felt the necessity of reformation, and they are now as honest, and as strict a set of people, in these matters, as any in the kingdom. In the year 1754, the country was almost impassable. There were no roads nor bridges. Now, by the statute-labour, we have got excellent roads, and 12 bridges. In a few years we shall have other two, which is all that could be desired. The people contribute cheerfully and liberally to build them, and this preserves many lives. At the above period, the bulk of the tenants in Rannoch had no such thing as beds. They lay on the ground, with a little heather or fern under them, one single blanket was all their bed-clothes, excepting their body-clothes. Now they have standing-up beds, and abundance of blankets. At that time, the houses in Rannoch were huts of, what they called, 'Stake and Rise.' One could not enter but on all fours: and after entering, it was impossible to stand upright. Now there are comfortable houses built of stone. Then the people were miserably dirty, and foul-skinned. Now they are cleanly, and are clothed as well as their circumstances will admit of. The rents of the parish, at that period, were not much above £1,500, and the people were starving. Now they pay £4,660 per annum, and upwards, and the people have fulness of bread." Nor are the changes much less striking which have taken place since the year 1794, when this report was written. At that date, says the writer in the New Statistical Account, "most of the tenantry in the parish removed, for the benefit of grazing, with their cattle to their shealings, sometimes to the distance of 20 miles. There they remained several months during the summer season." But "the milk cows are now generally housed every night, summer and winter." "At that time, the women, when they went abroad, dressed in linsey-woolsey, or other homespun apparel, their finest attire; and it was exceedingly rare to meet a woman at church or market, with a straw bonnet or umbrella. Now, the meanest servant-maid cannot appear at either, without being provided with both. Excepting in families of independent circumstances, tea was then unknown: now, it is almost incredible how much is expended on this article by our peasantry. There was then little if any clover or turnip sown in the parish: now, even the crofter who rents a few

acres, must have his little plot allotted and enclosed for the former, and a ridge or two for the latter. Very great changes for the better have also taken place in the management of funerals, late-wakes, and weddings. Instead of the unseemly scenes and riots which frequently took place on such occasions, the strictest propriety and decorum now prevail." Three fairs are held annually at the hamlet of Fortingal; one chiefly for seeds, about the end of April; one for lambs, in August; and one of several days, for sheep, goats, and cattle, in the beginning of December. Three fairs are held also at Kinloch-Rannoch; one in April, and one in October, for cattle; and one in August, for lambs. A fair is held likewise at Inverwick in Glenlyon. Population, in 1801, 3,875; in 1831, 3,067. Houses 615. Assessed property, in 1815, £11,134.—Fortingal is in the presbytery of Weem, and synod of Perth and Stirling. Patron, the Crown. Stipend £255 8s.; glebe £10. The parish *quoad civilia* consists of the united parishes of Fortingal and Killachonan. But, two large districts, provided with government churches, were in 1829 disjoined from it by the General Assembly, and erected into *quoad sacra* parishes: See GLENLYON and RANNOCH. The *quoad sacra* parish of Fortingal is only about 8 miles long, and about 8 broad; and consists of the vale of Fortingal, a small part of Glenlyon, and the detached district of Bolfracks. The parish-church is of unknown date, but was repaired in 1820. Sittings 376. According to ecclesiastical survey in 1836, the population of the *quoad sacra* parish consisted of 1,228 churchmen and 27 dissenters,—in all 1,255; of whom 932 resided in the district of Fortingal, 166 in that of Glenlyon, and 157 in that of Bolfracks. In the parish *quoad civilia*, are 12 schools. Only one of them is parochial, and it is attended by a maximum of 115 scholars. Schoolmaster's salary £34 4s. 4½d., with £21 6s. 8d. fees and £2 2s. 1½d. other emoluments. The 11 non-parochial schools are attended by a maximum of 373 scholars. Seven of them are supported wholly by fees, two by the committee of the General Assembly, and two by the Society in Scotland for propagating Christian Knowledge.

FORTROSE, a royal burgh in the county of Ross, and parish of Rosemarkie. It is situated at the eastern extremity of the Black Isle road, on the north side of the Moray frith, and nearly opposite to Fort-George, from which it is distant 2½ miles; 10½ miles north-east of Inverness; 10¼ miles south-west of Cromarty; and 8¼ miles south of Invergordon ferry. It is composed of two towns, viz. Rosemarkie, and Chanonry or Fortrose, which are about half-a-mile distant from each other, but have been politically united in one burgh by royal charter. The former of these is of considerable antiquity, having been erected into a royal burgh by Alexander II. Chanonry is so called from its having been the canonry of Ross, where the bishop had his residence; it is now the presbytery seat. It is finely situated on an elevated plain commanding an extensive prospect of the Moray frith. The two towns were united by a charter granted by James II. in 1444, under the common name of Fortross—that is, 'the Fort of the Peninsula,'—now softened into Fortrose; which charter was ratified by James VI. in 1592, and confirmed, with greater immunities, by the same monarch in 1612. These charters all bear, that the burgh is to be "entitled to the privileges, liberties, and immunities heretofore granted to the town of Inverness." Fortrose was, at that time, spoken of as a town flourishing in the arts and sciences, the seat of divinity, law, and physic, in this corner of the kingdom. For many years past, the greater part of the inhabitants of Chanonry or Fortrose have been

shoemakers, and those of Rosemarkie, weavers. Two small parts of the ancient cathedral of Chanonry still remain, one of which is used as a burial-place by the Mackenzie family, and the other as a court-house, with vaulted prisons below.* There is a good harbour at Fortrose, which was formed by the parliamentary commissioners on the Highland roads in 1817, at an expense of about £4,000. The inside of the harbour is about 30 yards square, and three sides of it form an extensive wharf. Spring-tides rise 14 feet within it. There is a regular ferry to Fort-George from the extremity of a tongue of land called Chanonry-ness, or Fortrose point, which runs out between the two towns into the frith; but it is not much frequented. It is usually known as Ardersier ferry; taking its name from the Inverness side. Dr. George Mackenzie, the laborious compiler of the 'Lives of the most eminent Writers of the Scots nation,' is said to have been born in this town. It is certain he resided here, in an old castle belonging to the Earl of Seaforth; and he lies interred in the cathedral. The brave and wise Sir Andrew Murray, regent of Scotland, was buried at Rosemarkie, in 1338. Fortrose contains about 740 inhabitants. It joins with the northern district of burghs in sending a member to parliament. See article ROSEMARKIE.

FOSS, a district in the parish of Dull, in Perthshire. It is situated on the south side of the river Tummel, near the western extremity of the lake of that name. Population, in 1831, 573. There is a Government church here.

FOSSAWAY AND TULLIEBOLE, an united parish, chiefly in Perthshire, but partly in Kinrossshire, compact in form, and lying respectively at the south-eastern and at the western verge of the counties. It is bounded on the north by Dunning; on the east by Orwell and Kinross; on the south by Cleish and Saline; on the west by Clackmannanshire; and on the north-west by Muckhart. Its greatest length is about 11 miles; its greatest breadth about 10 miles; but, its outline being very irregular, its superficial area is not more than about 50 square miles. The united parish consists of three districts of Fossaway in Perthshire,—one 6½ miles by 2½ on the south,—one 3½ by 1½, lying 1½ mile north of the former,—and one a narrow stripe of half-a-mile by 2½, lying a mile eastward of the second, and running parallel to it, all consolidated by the insertion amongst them of Tulliebole belonging to Kinrossshire. The northern parts of Fossaway, and the part of Tulliebole which connects them, constituting jointly the entire northern section of the united parish, are a continued congeries of hills running up to the centre of the Ochill range, and lifting their tops from 600 to 1,100 feet above the level of the sea. Some of the hills are covered or patched with moss or heath; but most are verdant to their very summits, and afford prime pasturage for both sheep and black cattle. The central and the southern sections, consisting of the main body of Tulliebole and the southern part of Fossaway, though they are considerably upland from sea-level, and have some little hills, are, over most of their area, arable, and carpeted with a various and

* "It is highly probable that this cathedral, at the Reformation, suffered the fate of many others; though it be a current tradition in the place, that the greater part of it, together with the bishop's palace, already mentioned, was pulled down in the time of Oliver Cromwell. By his order, the stones were carried by sea to Inverness, about the distance of 8 miles, for erecting a fort there, called Cromwell's fort, whereof the ditch and ramparts are still discernible. No chartulary belonging to the bishopric has been found in Scotland. It is probable that Lesley, the last Popish bishop of Ross, and the zealous advocate for the unfortunate Queen Mary, when he was forced to go abroad, carried all the writs of the diocese with him, either to France, or to Brussels, where he died; and where these parchments may still be mouldering in dust and solitude."—*Old Statistical Account*.

very improveable soil of gravel, clay, till, and loam. Tulliebole, while appearing between the Ochill hills on the one side and the Cleish hills on the other, to be a champaign country, sends up the highest ground or water-shedding line in the plain which stretches between Stirling and Kinross, and despatches its indigenous rills in the opposite directions of west and east. Owing the attraction of the hills on either side, the district has more cloudy weather, and later seasons, and more frequent falls of rain than the districts in its vicinity. Dark and pregnant clouds are sometimes seen advancing simultaneously along the Ochill hills and the Cleish hills; and when they come opposite to Tulliebole, they have been observed to send off detachments which form a *mêlée* above the district, and discharge upon it their united waters. The river Devon comes down upon Upper Fossaway from the west, and runs south-eastward $3\frac{1}{2}$ miles, tracing the boundary-line between that district and Tulliebole on its left bank, and the parish of Muckersie on its right bank; and making a sudden bend or crook at the place appropriately called the Crook-of-Devon, flows $4\frac{1}{4}$ miles south-eastward along the boundary between Tulliebole and lower Fossaway on the one side, and the parish of Muckersie on the other; and during its long course of contact with the united parishes, it attracts both the angler by its store of the finny tribes, and especially the tasteful tourist by a profusion of remarkable natural curiosities: See the DEVON. Lower Queigh water rises on the northern limit of the northward stripe of Tulliebole, forms for a mile south-westward from its source the boundary with Dunning in Perthshire, and debouching to the south-east, so intersects for $3\frac{1}{2}$ miles the united parish, as to trace the boundary between the Perthshire and the Kinross-shire sections. Two rivulets, both called Gairney, but distinguished by the prefixes East and West, which designate the direction of their course, both rise in the parish, and meander among copsewood banks. Some plantations in upper Fossaway, others in Tulliebole, and still more extensive ones in lower Fossaway, arranged in stripes or in mimic forests, shelter the country, and enrich its landscape. The principal minerals are limestone, coal, and freestone. The villages are BLAIRINGONE and CROOK-OF-DEVON: which see. There are two fortalices or strengths with gun-holes and turrets,—the castle of Tulliebole, built in the year 1608, and now belonging to Lord Moncrieff of Tulliebole,—and the castle of Aldie, built in the 16th century, and belonging to the Baroness of Keith. The Murrays of Tulliebardine, the ancestors of the Duke of Athole, were the ancient proprietors of the parish, and of many lands in its vicinity; and they had at Blairingone a mansion, the site of which is still called Palace-brae.—On the summit of a rising ground, called Carleith, on the lands of Aldie, are the ruins of an old building, perfectly circular, and nearly 24 feet in diameter, from the area of which were dug up, half-a-century ago, two stone-coffins containing human bones.—On the barony of Col-drain is an oblong square mound, 3 roods and 36 falls, Scottish measure, of area, and surrounded by a ditch of from 15 to 20 feet in width; it is traditionally reported to have been the site of a strength belonging to the Earls of Athole, and bears the name of the Hall-yard.—A spot, lying between the lands of Gartwhinzean and those of Pitvar, and called the Monk's grave, commemorates the sanguinary mis-carriage of one of those tricks of priestcraft, those finesses of monkery, which, for centuries, enthralled all honesty in Scotland. A dispute existing concerning the proprietorship of the lands, a monk from Culross appeared upon them, made oath, in behalf of his monastery—who really possessed no claim—

that the land on which he stood was theirs, and was instantly run through the body by an indignant member of the Tulliebardine family, the real proprietors. But he proved, on an examination of his boots, to have literally stood on some ounces of soil which he had brought with him from Culross; and he was buried on the scene of his equivocation and its bloody award, conferring on posterity a lesson of vastly deeper import than is legible on most objects of antiquarian curiosity.—A small rising ground at the east end of the village of Crook-of-Devon, called the Gallow-knowe, was the scene of a capital punishment judicially inflicted in the 17th century by the proprietor of Tulliebole on one of his vassals for the crime of murder, and reminds posterity of the high jurisdiction formerly exercised by the Scottish barons.—In ancient times, when the kings of Scotland passed between their palaces of Stirling and Falkland, and when one of the Jameses, on his way, dined and caroused at Tulliebole, a drinking match or trial of Bacchanalian strength was got up between one of the king's troopers and one of the laird of Tulliebole's vassals, of the name of Keltie. The trooper having swilled and drank till he became prostrate, Keltie quaffed another draught to proclaim his revolting victory, and fell headlong beside the vanquished; but when he awoke he found that both he and the trooper had been struggling with Death, and that the latter had been overcome by the grim foe. His additional draught, after the other's fall, is commemorated in the current phrase of 'Keltie's Mends,' applied by drunkards to a rejected or hurtful intoxicating draught; and the death of his Bacchanalian antagonist, with its deeply solemn lessons, is commemorated in the name of a little pool, 'the Trooper's Dubb,' near which he was buried. Some persons, half-a-century ago, were so scared with the superstitious fear of seeing the trooper's apparition, that they would rather have gone a mile out of their way than pass near his grave. But probably the present generation of the parishioners have taken the legitimate and the wiser course of moralizing on the warnings given them by the commemoration of his folly.—Population, in 1801, 1,312; in 1831, 1,576, of whom 962 were in Perthshire. Houses in Perthshire, in 1831, 167. Assessed property, in Perthshire, in 1815, £4,251.—The parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, Graham of Kinross. Stipend £164 0s. 3d.; glebe £8 13s. 4d. The parish-church was built in 1806. Sittings 525. A place of worship connected with the Establishment was recently erected by private subscription, at the village of Blairingone. Sittings about 250. According to an ecclesiastical survey in 1838, the population then consisted of 1,302 churchmen, and 382 dissenters,—in all 1,684. The dissenters are connected with congregations in Dollar, Orwell, and Kinross. Both Fossaway and Tulliebole were anciently in the diocese of Dumblane; and they seem to have been consolidated into one parish about the year 1614. For a considerable period after they were united, the churches of both were used, the minister officiating two Sabbaths in that of Fossaway, and one Sabbath in that of Tulliebole. But in 1729, both were thrown down, and a new church built for the united parish. The parochial school is attended by a maximum of 72 scholars. Schoolmaster's salary £34 4s. 4½d., with £27 5s. 8d. fees, and a dwelling-house, garden, and ground, worth about £12. There are three non-parochial schools, attended by a maximum of 161 scholars.

FOULDEN, a parish in the eastern part of the district of Merse, Berwickshire. It is of nearly a square form, $2\frac{1}{4}$ miles deep; and is bounded on the north by Ayton; on the east by Mordington; on the

south by Hutton; and on the west by Chirnside. The surface rises in a gently inclined plane from south to north, and terminates in a ridge of considerable heights. The soil, in the south, is a strong clay; towards the middle of the parish it becomes more loamy; and in the north is light and moorish. Excepting about 260 acres, chiefly in the centre of the district, which are under plantation, and about 330 in the northern division, which are under natural pasture, all the area, comprising about 3,000 acres, has been turned up by the plough, and is in prime cultivation. The uplands of the parish command a magnificent prospect to the south and west. Along its whole southern boundary runs the Whittadder water, between remarkably acclivitous banks, which climb from 120 to 150 feet above the level of the stream, and which, on the Foulden side, are repeatedly cloven by deep and wild ravines, bringing down rills and drainings from the central or northern districts. Near the upper end of two of these ravines or 'dens,' which deepen as they approach the Whittadder, stands the parish-church. The nature of this site may probably have originated the name Foulden, which was anciently written *Fulden*, and means, in the Saxon language, 'the dirty hollow.' An old ruin, bearing the name of the parish, appears to have been a stronghold in the period of the Border contests. On a property called Nunlands was anciently an establishment of nuns. Two roads intersect the parish from east to west, and send off several ramifications. The village of Foulden was formerly of considerable size, and a burgh-of-barony; but has gone utterly to decay. Of two annual fairs which were wont to be held in it, one is defunct, and the other is in the last stage of consumption. Population of the parish, in 1801, 393; in 1831, 424. Houses 78. Assessed property, in 1815, £4,907.—Foulden is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, Wilkie of Foulden. Stipend £152 18s. 1d.; glebe £24. Unappropriated tithes £152 18s. 1d. Schoolmaster's salary £34, with £10 fees, and £10 other emoluments. This parish was anciently a rectory in the deanery of the Merse. On the 25th of March, 1587, the church of Foulden was the meeting-place of commissions sent from Elizabeth to vindicate her treatment and execution of Mary of Scotland, and of commissioners sent by James VI. to hear their tale, his own mind revolting—as was pretended—from the terrible communication to be made, and averse to let the bearers of it pass much within the limit of the Scottish boundary.

FOUR TOWNS (THE), four contiguous villages, and circumjacent lands, in the southern part of the parish of Lochmaben, in the district of Annandale, Dumfries-shire. The villages are Hightae, with 400 inhabitants,—Greenhill, with 80,—and Heck and Smallholm, with each about 70. The lands are a large and remarkably fertile tract of holm or haugh, stretching along the west side of the river Annan, from the vicinity of Lochmaben castle, the original seat of the royal family of Bruce, to the southern extremity of the parish. The inhabitants of the villages are proprietors of the lands, and hold them by a species of tenure, nowhere else known in Scotland except in the Orkney islands; and they have, from time immemorial, been called "the King's kindly tenants," and occasionally the "rentallers" of the Crown. The lands originally belonged to the kings of Scotland, or formed part of their proper patrimony, and were granted, as is generally believed, by Bruce, the Lord of Annandale, on his inheriting the throne, to his domestic servants, or to the garrison of the castle. The rentallers were bound to provision the royal fortress,

and probably to carry arms in its defence. They have no charter or seisin, and hold their title by mere possession, and can alienate their property by a deed of conveyance, and procuring for the purchaser enrolment in the rental-book of Lord Stormont. The new possessor pays no fee, takes up his succession without service, and in his turn is proprietor simply by actual possession. The tenants were, in former times, so annoyed by the constables of the castle, that they twice made appeals to the Crown; and on both occasions—in the reigns respectively of James VI. and Charles II.—they obtained orders, under the royal sign-manual, to be allowed undisturbed and full possession of their singular rights. In more recent times, at three several dates, these rights were formally recognised by the Scottish court of session and the British house of peers. A chief part of the lands existed till the latter half of last century in the form of a commonry; but, it was then, by mutual agreement, divided; and being provided, in its several parcels, with neat substantial farm-houses, and brought fully into cultivation, it soon became more valuable than the original allotments immediately adjacent to the villages. More than a moiety of the lands, however, has been purchased piecemeal by the proprietor of Rammerscales, whose mansion-house is in the vicinity, within the limits of the parish of Dalton. But such portions as remain unalienated exhibit, in the persons of their owners, a specimen of rustic and Lilliputian aristocracy unparalleled in the kingdom. If the possession of landed property in a regular line of ancestry for several generations is what confers the dignity of gentlemen, that title may be justly claimed by a community whose fathers owned and occupied their ridges and acres from the 13th century. Their names run so in clusters, that soubriquets are very generally in use. Richardson is the most frequent, and Rae, Kennedy, Nicholson, and Wright are prominent. These names and others were borne by some companions of Wallace and Bruce, in their patriotic struggles against the usurping Edward.—In Hightae, is a Reformed Presbyterian meeting-house, built about the year 1798 by the Relief body, and purchased by its present owners for £70. Sittings 325. Stipend £60. In the same village are a school and a library, supported on the interest of £200, mortgaged on their behalf by the late James Richardson, merchant, Reading, a native of the village.

FOVERAN, a parish in Aberdeenshire, bounded on the north by Logie-Buchan, from which it is separated by a stream falling into the river Ythan; on the east by the southern point of Slains parish, including the ancient parish of Forvie, now destroyed by sand, on the opposite side of the Ythan, and by the North sea; on the south by Belhelvie parish, from which it is separated by a small stream; and on the west by Udny parish, from which also it is partly separated by the stream already noticed as falling into the Ythan. Foveran extends 4 miles in length from east to west, and about 2 in breadth. Houses 346. Assessed property, in 1815, £4,066. Population, in 1801, 1,391; in 1831, 1,609. The general appearance of the parish is level, but the ground rises by a gradual ascent from the sea, though not to any considerable height. The soil varies from a sandy loam to a rich loam, and strong clay, the whole of which is arable, fertile, and quickly promotive of vegetation. Grass crops are generally early and luxuriant: there are now several fine plantations in the parish. The Ythan is navigable for small craft for nearly 3 miles; but vessels of 100 or 150 tons can sail about a mile up the river. Salmon trout and flounders abound in the Ythan, and there are numerous beds of mussels, which are gathered in

large quantities, and sold for food and bait at Aberdeen. Pearls are found in the bed of the river, and have been pretty successfully searched for 3 or 4 miles up the river. At the mouth of the Ythan, but on a small stream which rises in the western part of the parish, and flows eastwardly past the kirk and manse, stands the village of Newburgh, in a pleasant and commodious situation. Near Newburgh are the ruins of an old chapel called the Red chapel of Buchan. About half-a-mile from the village are the ruins of the old castle of Knockhall, one of the seats of the family of Udny. Some remains of another castle belonging to a family of the name of Fiddes, now extinct, are still to be seen, and there are several tumuli or cairns.—The parish is in the presbytery of Ellen and synod of Aberdeen. Patron, the Crown. Stipend £192 14s. 7d.; glebe £11 5s. Unappropriated tinds £56 5s.—Schoolmaster's salary £28, with £33 19s. 4d. fees and other emoluments. There are three private schools in the parish.

FOWLA, or **FOULA**, one of the Shetland isles, in N. lat. 60° 8'; about 2 miles in length, and 1½ mile in breadth. It is nearly 18 miles to the west of the Shetland group, and 35 from Orkney, and is supposed to be the Ultima Thule of the ancients, not only from the analogy of the name, but also from more undoubted testimony; for Tacitus, speaking of the Roman general, Agricola's victories, and the distance to which he penetrated northward, thus expresses himself: "Invenit domitique insulas quas vocant Orcades, despectaque Thule." Now Fowla, which is high ground, is easily seen in a clear day from the northern parts of the Orkneys. It is very bold and steep towards the west; its cliffs, according to Edmonstone, literally losing themselves in the clouds, or appearing to pierce the belt of clouds which frequently hangs around them. The only landing-place, called Ham, is on the east side, and is much resorted to as a fishing-station. The east side, which is much lower than the west, is composed of granite, micaceous schist, and quartz; the south, west, and north sides are composed of sandstone and sandstone-flag. The account which Pontopidan has given of the fowlers in Norway, is realized, according to Mr. Jamieson, and even exceeded by the inhabitants of this secluded island. It is not many years since it was a common observation, that few of them died a natural death, being either drowned or dashed to pieces among the terrible precipices on the west side; but they are now more cautious, and comparatively few are thus destroyed. This is the principal breeding-place of the skua-gull, or *Larus cataractes*, called the *bonzie* by the Shetlanders. It affords excellent pasturage for sheep, and in 1837, had 202 inhabitants, who, although the island cannot supply them with provisions, are so attached to the place, that they are seldom known to leave it, choosing rather to submit to many inconveniences than emigrate. This island is in the parish of Walls, and is visited only once a-year by the parish-minister.

FOWLIS EASTER, a parish in the extreme east of Perthshire, annexed to Lundie, in Forfarshire. See **LUNDIE**.

FOWLIS WESTER, a parish near the centre of Perthshire, consisting of two very slenderly united divisions. The southern division is nearly a rectangle, stretching east and west on the south side of Almond water, and connected, near its north-east angle, with the northern division, over a distance of only half-a-mile. It is 5½ miles of average length from east to west, and 3¼ miles of average breadth from north to south; and is bounded on the north by Monzie; on the east by Methven; on the south by Maderty; and on the west by Crieff and Monzie. The northern division suddenly swells out from its

narrow breadth of half-a-mile at the connecting line with the southern division, to an average breadth of 1¾ mile, and stretches away 5¾ miles to the north. It is bounded on the north by Little Dunkeld; on the east by Little Dunkeld and a detached part of Monzie; and on the west by the main body of Monzie and by Dell.—The river Almond, coming down from the north-west, and bending eastward at the point of its touching the parish, forms, for 3 miles, the northern boundary of the southern division, and, in the lower part of its course, runs along the line of connection between the two divisions. This stream here abounds in a small kind of trout; and a few yards above the bridge of Buchandy, forms a curious and attractive cascade. Running beneath a wall of rock 6 feet high, it tumbles over a rocky breast-work 7 feet in height, into a very deep and tumultuously boiling pool; and, in dry weather, when its volume is diminished, it sheds its waters round a rocky projection, from which a basket was often, at one period, suspended by a chain, and received numerous salmon-trout in their attempt to overleap the cascade. Breaking away from the pool, it runs in a profound rocky canal, amid rocky fragments and clusters of stones, overhung by trees and copsewood, and canopied with mimic clouds of many-coloured spray, and passes below the single arch of Buchandy bridge, 15 feet in span, and rising on a level with the adjacent ground,—the surface of the water 32 feet below the summit of the arch.—The Pow, or Powaffray water, a mossy and sluggish stream, rises on the western limit of the southern division of the parish, and, over a course of 7¼ miles, uniformly traces its western and its southern boundary, except for a brief way before leaving it, during which it runs slightly into the interior. This stream, having formerly covered with its waters much of the ground in its vicinity, flows in an artificial channel, cut for it by authority of an act of the Scottish parliament,—remarkable for being the last act passed before the Union.—Braan water, celebrated for its scenery and cascades, comes down from the west, and forms the northern boundary with Little Dunkeld. Meltown burn, coming down from the north-east, and falling into the Almond, traces the boundary with the detached part of Monzie. Shellegan burn, a beautiful limpid stream, flowing parallel with the former, forms the boundary with the main body of Monzie. The ravines and romantic dells through which these streams flow are graced with numerous tiny cascades and little cataracts, which please by the frequency of their recurrence and the variety of their aspect.—The northern division of the parish consists of ragged spurs of the Grampians, divides Logiealmond from Strathbraan, and is nearly all wild or pastoral. Its surface rises gradually, for a brief way, from Braan water on the north, and consists of mountainous elevations till very near the Almond, when it descends with a rapid declivity and terminates in a stripe of arable land. The southern division is remarkably varied, and, in general, exceedingly unequal in surface. On the banks of the Almond it sends down hills dotted and freckled with trees and copsewood. On the north-east is the estate of Keiller, undulating and hilly, but beautified with the trees of an ancient lawn, and containing much fertile soil, well-cultivated and enclosed. Along the banks of the Pow, over the whole extent of the southern boundary, is an opulent and finely sheltered and cultivated valley. All the rest of the southern division consists of dells and hilly ranges, remarkably various in form. The hills are so distinctively featured and naturally classified, as to be arranged under the different names of the braes of Fowlis, the braes of Durn, the braes of Gorthy, and the braes of Keiller; and they have all a southern exposure, and are so chequered

and adorned with stripes and clumps of plantation, with little fields of copsewood, with rich enclosures, with winding and romantic ravines, and with rills, now purling and limpid, and now noisy and foaming, as to wear an imposing and highly picturesque appearance.—In the south-west angle are the numerous fenced-fields, gardens, and plantations around the superb Gothic modern house of Abercainrey. The approach to that mansion passes, for 500 yards, through forest, along the side of a deep, sinuous, rocky dell, densely crowded with shrubs and trees, and traversed by a brawling and often invisible stream; and, then, retiring obliquely, 300 yards farther through the forest, presents, in succession to the view, a profusion of scenic beauties,—wide sloping lawns, rich meadows, gay garden-grounds, pleasing acclivities, tiny cascades, and artificial lakes and islands.—Nearly two miles north-west, and on the western limit, around the house of Cultokey, is a luxuriant wood, straggling in clumps and detachments over gravelly hillocks, so various and strange in form, and thrown together in so remarkable a congeries, as to attract the notice and occasionally excite the wonder of the tourist. From the site of the manse, on the declivity of the high rising grounds east of Cultokey, a magnificent prospect is obtained of Strathearn and Strathmore, terminated by the grand and distant outline of the Ochill and the Lomond hills.—The soil, in the valley of the Pow, consists of alluvial deposit; and, in other arable parts of the parish, is very various—gravelly, sandy, clayey, and loamy; and, where it rests on rock, is, in general, fertile, but where it has a clayey subsoil, is cold and wet and unproductive. Slate is found in the hills of the northern division; a species of limestone occurs at Buchandy; and sandstone is, in general, plentiful. On the farm of Castleton, in the estate of Fowlis, on the east side of a den or ravine, is a grassy mound, heaved up by the last ruins of the castle and seat of the Earls of Strathearn. Malise, the 1st Earl, acted a distinguished part, in 1138, at the battle of the standard. Gilbert, his grandson, founded, in 1200, the monastery of Inchaffray, near the Scottish border. Malise, the 7th Earl, acted an energetic part in the wars of the succession, signed the celebrated letter to the Pope, and during the minority of David Bruce, made strenuous opposition to Edward Baliol; but, proving to be on the losing side of the contest, he suffered a forfeiture of his earldom, and left no issue to claim a resumption of his rights. Mary, his only sister, however, having been married to Sir John Moray of Drumsgard, the lenial heir of Sir Andrew Moray of Bothwell, the earldom was afterwards restored by King David, to her son, Sir Maurice Moray; and, he being killed, in 1346, at the battle of Durham, and leaving no issue, it reverted to the crown. The family of Abercainrey, descended from Maurice, the last Earl's brother, are now the lineal representatives of both the Earls of Strathearn and the Lords of Bothwell.—On a hill north of the village of Fowlis is a double concentric Druidical circle, the exterior range consisting of 40 stones, and measuring 36 feet in circumference. The southern division of the parish is traversed, to the extent of 7 miles, by the mail-road between Glasgow and Perth, and is, in other respects, well provided with facilities of communication. The northern division, however, seems so exclusively a sheep-walk as to offer no invitation to the ingress of bipeds and their vehicles. The villages are Fowlis and Gilmerton. See GILMERTON. Fowlis stands nearly in the centre of the southern division on the old road between Perth and Glasgow. It is a place of considerable antiquity, and continues to wear, to some extent, the humble and unimportant and almost

mean appearance which seems to have characterized it for centuries. Poor, low thatched cottages constitute its chief bulk. Slate, however, has in a few instances superseded thatch; and with the aid of a neat school-house and a recently re-edified inn, redeems the place from being entirely poor in aspect. In the village is an ancient and curiously sculptured cross. On one side are figures of hunters and a hound chasing a wolf, which carries in its mouth a human head; and on the other side are some nearly obliterated sculpturing, and gyses for the chaining of offenders, and fixing them up to popular derision. A fair for black cattle and for the hiring of servants is held annually at Fowlis, on the 6th of November. In the vicinity of the village are the lands of Lacock, which exult in the dignity of being a burgh-of-barony, and legal seat of a weekly market and two annual fairs, but, owing probably to the necessity of the case, have modestly allowed their baronial and marketing importance to become visible only on paper. The construction of sieves is a species of manufacture nearly peculiar to the parish; and, while of some antiquity, continues to yield ample support to a limited population. The weaving of cotton cloth for manufacturers in Glasgow likewise employs some persons. Population, in 1801, 1,614; in 1831, 1,681. Houses 305. Assessed property, in 1815, £9,853.—Fowlis Wester is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, Moray of Abercainrey. Stipend £224 17s. 3d.; glebe £20. Unappropriated teinds £357 9s. 8d. The church has about 800 sittings. Small sections of the parish belong *quoad sacra* to the parish of Monzie and the chapel at Amulrie. Schoolmaster's salary £34 4s. 4½d., with £30 fees. There are two non-parochial schools; and one of them at Buchandy is endowed to the amount of £5 a-year.

FOYERS (THE), or FYERS, a small river in Inverness-shire, noted for the stupendous waterfall of the same name. The river takes its rise amongst the lofty mountains in the parish of Boleskine and Abertarff, and, pouring through the vale of Foyers, precipitates itself over the ridge bordering Loch-Ness on the south-east, in two distinct falls, at a point about a mile above the General's hut. The vale of the Foyers, or Feachlin—as it is sometimes named—is as romantic as can well be conceived. “From its form,” says Stoddart, “there can be little doubt that it was once floated by a lake, until the waters forcing their way through the mountain-side, formed the awful fall which soon presented itself to our view.” The falls are situated about half-way between Fort-Augustus and the end of the lake. They are nearly 2 miles from the eastern shore; and may be approached either by the road from Fort-Augustus to Inverness on that side, or by landing from the steam-boat, which waits regularly that passengers may have an opportunity of visiting them. These falls can also be visited by the road from Fort-Augustus to Inverness, on the north side of the lake; but this course, since the introduction of steam-boats, is seldom taken by travellers, and is likely to be more and more disused, except by the inhabitants of the district. On landing from the steam-boats, or from the opposite shore, excellent footpaths lead through the grounds of Frazer of Foyers, to the falls. The lower fall—which is first approached in this way—is by much the higher, and more striking of the two. After ascending to a considerable height the hills which form the east boundary of Loch-Ness, the tourist descends towards the bank of the river by a well-constructed footway, and at length finds himself on a narrow but lofty ridge of rock covered with green turf, which rises from the bed of the river, and is nearly surrounded

by its waters. Here the fall meets his astonished view immediately in front of where he stands. The spectator is surrounded on all sides with rocks of enormous height, fringed with tangled masses of shrubs and small plants, which are nourished by the constant spray which ascends from the boiling waters beneath. Oak and pine trees of fantastic shape grow from every rent and crevice of these rocky walls,—adding a wild grace and beauty to what would otherwise be a scene of horror. Clouds of vapour for ever ascend; and the roar and din of the falling waters is never hushed. “Through the ‘shapeless breach’ bursts a torrent, which, confined by the narrow channel above, shoots in one unbroken column, white as snow, into a deep caldron formed by the black rocks below. By the vast height, and the large body of the water, a quantity of spray is created, which forms a perpetual shower, glittering like dew on the verdure around, casting a transparent mist over the gloomy caverned rocks, and rising like the smoke of a furnace into the air. This appearance, seen at a considerable distance, has occasioned the country people to give it the picturesque name of *Eass na Smudh*, by which, as I before-mentioned, they also characterize the falls above Kinloch-Leven. No spot, however, which I have seen, is at all comparable to this, in the strong and sudden impression which it produces. The falls of Clyde are, indeed, more beautiful, more varied, and have a larger quantity of water; but the openness of the view renders them much less sublime. There is something in the darkness and imprisonment of wild overhanging crags, inexpressibly awful; and in this instance their grandeur is heightened by the kindred impulses around, by the ceaseless toil of the struggling river, by the thundering sound of a thousand echoes, and, where the jutting barriers do not exclude the view, by the mighty summit of *Meal Fourvouny* rising beyond the lake.” [Stoddart’s ‘Remarks,’ Vol. II. pp. 76, 77.] Altogether the lower fall of the Foyers is a scene of the utmost sublimity and awe; and even the boldest cannot stand on the ledge of rock we have mentioned, and behold the mass of waters tumbling from above into the dark chasm beneath, without his feelings being excited in the highest degree. Dr. E. D. Clarke has pronounced it to be a finer cascade than that of *Tivoli*, and inferior only to the falls of *Terni*. Many varied opinions as to the height of this fall have been given, but we believe we are correct when we say, that it is about 90 feet high.*

The upper fall is about a quarter of a mile from the lower. The height of it is only about 40 feet; but it also exhibits great grandeur, and, were it not for the neighbourhood of the other, would be more admired than it is. Here the river sweeps its dark brown waters through a smooth meadow, until, reaching the edge of the rock over which they are precipitated, they break into white foam, and disappear in the abyss beneath. Lofty rocks and varied wood also lend their aid to this scene; and a picturesque and airy bridge, which here spans the ravine, immediately below the fall, and at a height of about 200 feet above the surface of the stream beneath, renders it more pleasing to the eye, and better adapted for the pencil of the artist, than the lower fall. Before the erection of the bridge, about the year 1786, two or three rough planks carelessly thrown across the chasm formed the only means of passage from the one bank to the other. A story is told of a gentleman having passed along these planks, on horseback,

one snowy winter’s night, on his return from a convivial meeting with his friends. In the morning he had only a vague recollection of how he had got home; but, on walking to the bridge, he saw the marks of the horse’s hoofs on the snow, and some of them half over the edge of the outermost plank of the bridge. Terrified at the risk he had run, a fever was the consequence of his agitation, which ended in his death. The best view of this fall and its surrounding scenery is to be obtained from the channel of the stream below the bridge. A narrow path descends the rock on the eastern side of the channel of the river; but it is not every visitor who has nerve sufficient to enable him to descend. The grandeur of the scenery, however, cannot be fully enjoyed, without making this descent. The rapid between the two falls has a declivity of 30 feet, through a channel fretted in rock; so that the total height, from the top of the upper to the bottom of the lower fall, is 160 feet.

“The fall of Foyers,” says Professor Wilson, “is the most magnificent cataract, out of all sight and hearing, in Britain. The din is quite loud enough in ordinary weather—and it is only in ordinary weather that you can approach the place, from which you have a full view of all its grandeur. When the fall is in flood—to say nothing of being drenched to the skin—you are so blinded by the sharp spray smoke, and so deafened by the dashing and clashing and tumbling and rumbling thunder, that your condition is far from enviable, as you cling, ‘lonely lover of nature,’ to a shelf by no means eminent for safety, above the horrid gulf. Nor in former times was there any likelihood of your being comforted by the accommodations of the General’s hut. In ordinary Highland weather—meaning thereby weather neither very wet nor very dry—it is worth walking a thousand miles for one hour to behold the fall of Foyers. The spacious cavity is enclosed by ‘complicated cliffs and perpendicular precipices’ of immense height, and though for a while it wears to the eye a savage aspect, yet Beauty fears not to dwell even there, and the horror is softened by what appear to be masses of tall shrubs or single shrubs almost like trees. And they are trees, which on the level plain would look even stately; but as they ascend, ledge above ledge, the walls of that awful chasm, it takes the eye time to see them as they really are, while on our first discernment of their character, serenely standing among the tumult, they are felt on such sites to be sublime. ‘Between the falls and the strath of Stratherrik,’ say the Messrs. Anderson, ‘a space of three or four miles, the river Foyers flows through a series of low rocky hills clothed with birch. They present various quiet glades and open spaces, where little patches of cultivated ground are encircled by wooded hillocks, whose surface is pleasingly diversified by nodding trees, bare rocks, empurpled heath, and bracken bearing herbage.’ It was the excessive loveliness of some of the scenery there that suggested to us the thought of going to look what kind of a stream the Foyers was above the fall. We went, and in the quiet of a summer evening, found it

‘Was even the gentlest of all gentle things.’”

FRASERBURGH, formerly called **PHILORTH**, a parish in the district of Buchan, Aberdeenshire; bounded on the north and east by the North sea, on the south by Rathen and Strichen; and on the west by Tyrie, Aberdour, and Pitsligo. It occupies the north-eastern corner of the county; and extends about $3\frac{1}{2}$ miles in breadth, and 8 miles in length, including a part of the parish divided from the rest by Rathen. Square area, about 10,000 acres. Houses 508. Assessed property, in 1815, £6,320. Popu-

* Garnett makes it 212 feet. The quantity of water is also very variously represented; but this will fluctuate greatly with the season and state of the atmosphere. A few hours’ rain swells it considerably.

lation, in 1801, 2,215; in 1831, 2,954; in 1835, according to a census taken by the minister and elders, 3,060. The sea-coast extends about 4 miles, and is partly sand and partly rocky. Kinnaird's-head, in N. lat. $57^{\circ} 42'$, and W. long. $2^{\circ} 1'$, is a high promontory, projecting into the sea. It is generally believed to be the 'Promontorium Taixalium' of Ptolemy, being the turning-point into the 'Æstuarium Vararie,' or Moray frith. There is an old tower on this promontory called the Wine tower, with a cave under it, and at one time probably connected with the adjoining house, now the lighthouse. On the west of Kinnaird's-head is the beautiful bay of Fraserburgh, 3 miles in length. The water of Pilorth separates this parish from Rathven for several miles. Along the shore the soil is in general good, but the interior parts are gravelly. Except the hill of Mormond, which is elevated 800 feet above sea-level, the whole surface is nearly level and flat, gradually rising, however, from the coast to its most distant and elevated district. The sea has receded from the land in some places, and encroached on it in others. The land, except about 80 acres, is all arable: there are some mosses and moors. The parish, at one time, abounded with wood, and there are some fine old trees at Pilorth house, the seat of Lord Saltoun, to which several beautiful and extensive plantations have been added. The parish contains great quantities of granite, limestone, and ironstone, and there are chalybeate springs in different places. Besides the old 'college,' at which some of the monks of Deer abbey resided, there are remains of several ancient towers and religious structures.—The parish is in the presbytery of Old Deer, and synod of Aberdeen. Patron, Lord Saltoun. Stipend, £219 2s. 8d.; glebe £9. Unappropriated teinds £46 15s. 6d. Church built in 1803; in good repair; sittings 1,014.—An Episcopalian congregation has existed in the parish since the Reformation: no fixed stipend: chapel built in 1793; sittings 288. Previous to 1829, the Right Reverend Dr. Jolly, the bishop of the diocese of Moray, officiated in this chapel.—An Independent congregation was established in 1800. Minister's salary £100. Chapel rebuilt in 1819; sittings 539.—Schoolmaster's salary £29 18s. 10d., with £56 fees, and other emoluments, besides a share of the Dick bequest, amounting to between £20 and £30. There are nine private, five of which are female, schools.

FRASERBURGH, a sea-port town in the above parish, and a burgh of regality, is situated 151 miles north of Edinburgh; 42 north of Aberdeen; 22 east of Banff, by the old road, and 26 by the new; and $17\frac{1}{2}$ north of Peterhead. It was erected in the middle of the 16th century, on the south side of Kinnaird's-head, upon the estate of Sir Alexander Fraser of Pilorth; from the name of the superior it was called Fraserburgh, and it ultimately gave its name to the parish. The town is neatly built, of a square form, with most of the streets, which are spacious, crossing each other at right angles. Numerous improvements have been made in recent times: elegant and comfortable houses have been erected, and new streets laid out on a symmetrical plan. All the house-proprietors are feuders under Lord Saltoun, as their superior. They are bound to maintain the public works of the town, for which they are entitled to the market-customs, and they have various privileges over commonable land, to the value of about £60 per annum. The town is plentifully supplied with water, and the streets are kept clean and in good condition. The cross, erected by Sir Alexander Fraser, is a fine structure, of a hexagonal figure, with three equidistant hexagonal abutments: the ground area is about 500 feet, and

the whole is surmounted by a stone pillar 12 feet high, ornamented by the British arms surmounting the arms of Fraser of Pilorth. The parish-church stands near the cross, and the Episcopal chapel, noticed in the parish returns, [which see above] is situated in the town. At the west end of the town is an old quadrangular tower, of three stories, being a small part of a large edifice intended to have been erected as a college, by Sir Alexander Fraser, who obtained a charter, in 1592, for the institution of an university here, but the design was never carried into effect. The parochial school is situated in the town: it is a very superior educational establishment wherein all branches, from the lowest to the highest, are taught. Some of the private schools are also in the town. The jail, now a ruinous edifice, and the town-house, were erected by Sir Alexander Fraser. The town was erected into a burgh-of-regality in 1613. The government is vested in Lord Saltoun, who has the authority of provost, and appoints the new magistrates and council, consisting of two bailies, a dean-of-guild, treasurer, and seven councillors, annually, with consent of the old—a system of government about the worst that could be devised for the full advancement of the town and port. Nevertheless, Fraserburgh may be considered, on the whole, a thriving town, and, as a sea-port, it has been rapidly rising in importance ever since the last war, when its spacious harbour was constructed, partly at the expense of Government, as a place of retreat for British ships of war, suffering from stress of weather in the North sea,—this being the nearest point of land which can be reached. The works, which are of a most substantial character, cost about £50,000, part of which was defrayed by private subscriptions, part, as observed, by Government, and the rest by Lord Saltoun. The area of this harbour is six Scotch acres; and there are commodious piers and jetties. It is of very easy access: the depth of water at the extremity of the pier, in spring tides, is 20 feet, and at the ebb 6 feet; so that vessels of considerable tonnage can be accommodated. When all the contemplated works are completed, this will perhaps be the best tide-harbour on the north-east coast; though the situation of the town, with the sea stretching in three directions round the land, thus left to occupy only the remaining quadrant of the circle, may preclude the prospect of its ever becoming a great port. Contiguous to the harbour is a tolerable road for shipping, with good anchorage in Fraserburgh bay. There are numerous vessels belonging to Fraserburgh, and upwards of 220 herring-boats, and 200 persons are employed in the fishery. All sorts of grain, pease, beans, potatoes, and dried and pickled cod, besides herrings, are exported, and the imports are coals, timber, lime, tiles, bricks, salt, and general merchandise. The shore dues, in 1808, were only £35; in 1822, they exceeded £1,200; and, in 1840, had increased still further to £2,000. Kelp, ropes, and sails, are manufactured, and there is some employment in linen yarn, of which, to the amount of £3,000 to £4,000, have been annually exported. There is a branch of the Aberdeen bank in the town, and a savings' bank has been established. Adjoining to the west end of Fraserburgh is the small fishing village of Broadsea. Population of the town, in 1801, upwards of 1,000; in 1837, according to a census taken by the minister and elders of the parish, 2,236, including Broadsea. The minister states, that, during the season of the herring-fishery, from July to September, the population of the town is increased to the extent of 1,200.

FRESWICK (THE), a small river in Caithness, which runs into the German ocean near the town of Wick. See CANISBAY

FREUCH (THE). See **BANCHORY-TERNAN.**

FREUCHIE, a manufacturing village in the parish of Falkland, in Fifeshire; about 2 miles east of that town, and nearly the same distance west of Kettle, containing about 500 inhabitants. There is a United Secession church here; sittings 450. The congregation was established in 1794. Stipend £90, with manse and garden. See **FALKLAND.**

FREUCHIE (LOCH), a small lake in the parish of Dull, Perthshire, from which the river Bran has its source.

FRIAR'S CARSE. See **DUNSCORE.**

FRIOCKHAIM, a *quoad sacra* parish about 2½ miles in length, lying nearly in the centre of the maritime division of Forfarshire. It consists of a district, containing, in 1836, 606 inhabitants, detached from the parish of Kirkden, and a contiguous district containing, in 1836, 249 inhabitants, detached from the parish of Inverkeilor. Of its total population of 909, only about 44 belonged to other denominations than the Establishment. The church was built in 1835 at a cost of £432. Sittings 416.

FRUID (THE), a tributary of the Tweed in the parish of Tweedsmuir, Peebles-shire. It rises between Saddle-crag and Falcon-crag on the boundary-line with Dumfries-shire; flows northward ¾ of a mile; next flows in a direction west of north ¾, receiving on its left bank Carterhope-burn; and then flows northward 2 miles, and falls into the Tweed 1½ mile above Tweedsmuir-church. The narrow vale which forms its basin, hemmed in by ridges of grassy hills, partakes of the beautiful and romantic character for which Peebles-shire is so remarkable.

FUDIA, a small fertile island of the Hebrides, 2½ miles north of Barra. It exhibits a number of granite veins, some of which contain oxidulous iron.

FULLARTON, a burgh-of barony within the parliamentary boundaries of Irvine, lying compactly with that town, and situated on the left bank of Irvine water. See **IRVINE.**

FULTON, a village in the shire of Roxburgh, and parish of Bedrule, near the river Rule; 4 miles south-west of Jedburgh. There are now scarcely any vestiges of its ancient consequence, except some remains of its tower.

FURA, a small island on the west coast of Ross-shire, 4½ miles west of Udrigile point.

FYNE (LOCH), an extensive lake or arm of the sea, in Argyleshire. It extends from the frith of Clyde, between the isles of Bute and Arran, in a north-westerly direction; forming the boundary between the districts of Cowal and Kintyre. It is about 32 miles in length; the breadth varies from 12 to 3, but its average breadth is about 4 or 5 miles. Half-way upon the west side, it sends out a small arm called Loch-Gilp, whence is cut the Crinan canal to the sound of Jura:—see article **CRINAN CANAL.** Its depth is from 60 to 70 fathoms. It receives numerous small streams, and the Aoreidh or Aray at its northern extremity: see **ARAY.** Within 5 miles of its head, it spreads out into a noble bay before Inverary, forming an irregular circle of about 12 or 14 miles in circumference, beautifully indented with a variety of peninsulas, and surrounded by mountains: see article **INVERARY.** Gilpin says, "Its skreens are every where equal to the expanse of its waters. They are indeed chiefly naked, and want some such munificent hand as we had just left, [at Inverary] to spread a little sylvan drapery upon their bare, enormous sides. But what they lose in beauty, they gain in grandeur. Their situation also upon the lake operated as another cause, to impress the idea of grandeur. Nothing exalts the dignity of a mountain so much, as its rising from the water's edge. In measuring it, as it appears connected with the ground, the eye knows not where to

begin, but continues creeping up in quest of a base, till half the mountain is lost. But a water-line prevents this ambiguity; and to the height of the mountain even adds the edging at the bottom, which naturally belongs not to it. Thus the mountain of Doniquaich, [Dunyoich] seen from the new inn at Inverary, appears as if it rose from the water's edge, though in fact the duke of Argyle's lawn intervenes, all which the mountain appropriates: and though it measures only 835 feet, [or 740 feet according to some] it has a more respectable appearance than many mountains of twice its height unconnected with water. But these skreens, though the grand idea is principally impressed upon them, are not totally devoid of beauty. Two circumstances in a lake-skeen produce this quality; the line, which its summits form; and the water-line, which is formed by projections into the lake. Of these modes of beauty we had great profusion; and might have filled volumes with sketches: but unless there is something in a scene besides these beautiful lines, something which is striking and characteristic, it has little effect, we have seen, in artificial landscape. Uncharacterized scenery is still less adapted to uncoloured drawing, the beauty of which depends chiefly on composition, and the distribution of light. In painting, indeed, colouring may give it some value; but in this kind of simple drawing, something more interesting is required to fix the eye; some consequential part, to which the other parts of the composition are appendages. In our whole ride round this extensive bay of Loch-Fyne, we met only one object of any consequence to mark the scenery. It was a ruined castle upon a low peninsula. The lake spread in a bay before it, and behind it hung a grand curtain of distant mountains; one of which is marked with a peculiar feature—that of a vast ridge sloping towards the eye. We now approach the end of the lake, where, in the seaman's phrase, we raked a long reach of it. When we view in this direction, and conceive ourselves at the head of a bay of salt water, sixty or seventy fathoms deep, four miles in breadth, and at least fifty from the sea, we have a grand idea of the immense cavern, which is scooped out between these ranges of mountains, as the receptacle of this bed of waters. If we could have seen it immediately after the Diluvian crash, or whatever convulsion of nature occasioned it, before the waters gushed in, what a horrid chasm must it have appeared!

So high as heaved the tumid hills, so low
Down sunk a hollow bottom, broad, and deep
Capacious bed of waters!"

The ruined castle noticed by Gilpin, in the above extract, is that of Dunderawe, a very ancient fortress of the Ardkinlass family. The present building bears the date 1596. Loch Fyne has been, from time immemorial, noted for its herrings, which are of a superior quality to any found in the Western seas. The fishery commonly begins in July or August, and continues till the 1st of January, during which time the lake is frequented by vast shoals. At one period there were annually caught and cured in this arm of the sea upwards of 20,000 barrels of herrings, valued at 25s. per barrel. But the take of herrings has greatly declined in this loch of recent years.

FYVIE, a parish in Aberdeenshire, bounded on the north by Montquhitter; on the east by Methlick; on the south by Old Meldrum, Daviot, and Rayne; and on the west by Auchterless. It is one of the largest parishes in the county; being 13 miles in length, from north-east to south-west, and 8 in breadth, containing about 20,000 acres. Houses 669. Assessed property, in 1815, £4,085. Population, in 1801, 2,391; in 1831, 3,252. It is intersected by the small river Ythan, abounding with trout and pearls,

and running from west to east, in a very devious course, first southwards, and then northwards, through the parish, but dividing the district into nearly two equal parts. It is also intersected by the high road between Banff and Aberdeen, being about half-way between these two places. The surface of this parish is uneven, with a pleasing variety, but the hills are of small elevation. Eastertown hill, in the southern extremity of the parish, is the principal elevation. There is a small ridge, termed 'the Windy hills.' The soil is various, but, in general, fertile, especially along the banks of the Ythan, in 'the Howe of Fyvie,' where are situated the church and Fyvie castle, the eminences surrounding which are covered with wood: An extensive and valuable plantation, chiefly of firs, also runs in the Den of Rothie, west from the Howe of Fyvie, for nearly 3 miles. There are, in all, between 1,700 and 1,800 acres of wood in the parish. In the northern district, there are large tracts of moss, and a poor soil; but much of the land here has been improved by draining. The heath and moss may be estimated at nearly 7,000 acres: the remainder, exclusive of that which is covered with wood, is chiefly arable: but there are about 2,500 acres of pasture land. The total yearly value of produce has been estimated at £43,784. Whinstone is the chief mineral: it is of excellent quality, and may be obtained in immense slabs.—Fyvie castle is the principal mansion: it is an extensive and venerable Gothic edifice,—one of the first, even in the county. It stands on the north-eastern bank of the Ythan, in a beautiful park, within which there is an extensive lake, well-stocked with fish. Rothie, about 3 miles west of the church, is a pleasant modern mansion, adorned with tasteful plantations, as is Kinbroom, about a mile west from Rothie. Gight castle is a fine old ruin, on the north bank of the river, in

the near vicinity of natural and planted woods, of varied foliage, constituting, altogether, a combination of the most picturesque and beautiful scenery. There are also ruins of a priory of the Tyronenses, on the banks of this fine river, said to have been founded by Fergus, Earl of Buchan, about the year 1179. It was afterwards dependent on the abbey of Aberbrothock.—There is no market-town or village; though a "burgh of Fyvie" is said to be alluded to in certain charters preserved in Fyvie castle: there is a hamlet called Lesses-of-Fyvie.—The parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, Gordon of Fyvie. Stipend £223 19s. 11d.; glebe £17 10s. Unappropriated teinds £122 14s. 2d. Church built in 1808; sittings 1,114. The bounds of the parish, *quoad sacra* and *quoad civilia*, are not now the same. A district in the southern part of the parish, containing a population of about 75, is annexed *quoad sacra* to the parish of Daviot; and another on the west, containing a population of 25, is annexed to the parish of Rayne. There is also a district of the parish under the charge of a missionary, who officiates in the chapel, built in 1833, at Millbren, in the north-eastern quarter of the parish. This chapel was enlarged in 1836; sittings about 500. It accommodates a part of the adjoining parish of Montquhitter. Missionary's salary £40 from seat-rents, and £20 from the Royal bounty. The missionary has a free house and a glebe, value £4 per annum, from the Earl of Aberdeen, who was the principal subscriber for the chapel.—A Scotch Episcopalian congregation, at present about 200 in number, has been established at Woodhead, since the Revolution; chapel built about 1795, and enlarged in 1821; sittings 180.—Schoolmaster's salary £34 4s. 4½d. per annum, with £37 school-fees, &c., and a house and garden. There are 5 private schools.

CROSS AT SCONE.

G

GAASKEIR, one of the Hebrides, about 4 leagues north-west of Taransay. It is frequented by prodigious flocks of wild geese.

GADIE (THE), a small river in Aberdeenshire, which rises in the parish of Leslie, on the borders of the Garioch district, and discharges itself into the Ury, near its junction with the Don. The Gadie was the native stream of the poet, Arthur Johnstone of Caskieben, who has celebrated its beauties in several of his elegant Latin poems.

GAIRDEN (THE), a branch of the Dee. It enters Glengairden from Braemar, receives numerous small tributaries, and pours a considerable body of water into the Dee, about $1\frac{1}{2}$ mile above the bridge of Ballater. A little above its mouth, the road to Castleton of Braemar, from the east, is carried across the bridge of Gairden. This stream is sometimes called the Gairn.

GAIRIE (THE), a rivulet of Forfarshire. It rises about a furlong north-west of the town of Kiriemuir; flows round the town, at that distance, on three sides; and, after a serpentine course of 2 miles from its origin, assumes a southerly direction. Two miles farther on, it receives a small tributary on its left bank; then runs half-a-mile due east; then resumes its southerly direction, receives $\frac{3}{4}$ of a mile onward a considerable tributary from the west, and, at the point of confluence, passes into the parish of Glammis; and finally, after a further run of about a mile, falls into Dean water, on the boundary of the parish of Kinnettles.

GAIRLOCH, a parish in Ross-shire, on the west coast of that county; bounded by Lochbroom parish on the north, from which it is separated by the river Grunard; and on the south by Loch Torridon, which separates it from the parish of Applecross. It has about 90 miles of sea-coast; and extends inland to the chain of mountains which divide the waters flowing to the eastern sea from those flowing to the west. It extends about 40 miles in length, and is nearly 30 miles in extreme breadth. The surface resembles the other parts of the Highlands; abounding with hills which afford a scanty pasture for sheep, and interspersed with valleys which are tolerably fertile in favourable seasons. There are above 5,000 acres under wood. In this parish lies **LOCH MAREE**, a large fresh water lake: see that article. Besides the Gair-loch, which gives name to the parish, there is another arm of the sea in this district called **LOCH EWE**: which see. Population, in 1801, 1,437; in 1831, 4,445. Houses 791. Assessed property, in 1815, £650.—This parish, formerly a vicarage, is in the presbytery of Loch-Carron, and synod of Glenelg. Patron, the Crown. Stipend £240; glebe £30. Unappropriated teinds £52 5s. 7d. Church built in 1791; repaired in 1834; sittings 500.—There is a Government church at Polewe, to which a *quoad sacra* parish has recently been annexed: see **POLEWE**.—Parochial schoolmaster's salary £30. There are two private schools.

GAIRLOCH (THE), an arm of the sea, on the west coast of Ross-shire, extending about 3 miles inland. Its name is supposed to be derived from the Gaelic *Gairr*, 'short,' and *loch*, and to signify 'the Short loch.' It gives name to the parish in

which it is situated. Near its head is an island or the same name.

GAIRLOCH (THE), or **GARELOCH**, a very beautiful branch of the frith of Clyde, extending between the parishes of Roseneath and Row, in Dumbartonshire. The frith coming down from the east, and expanding its waters to the breadth of $3\frac{3}{4}$ or 4 miles, is cloven, 2 miles below the longitude of Greenock, by the peninsula of Roseneath, and sends away the Gareloch north-westward, over a distance of $7\frac{1}{2}$ miles. The loch commences between the richly wooded Castle-point of Roseneath on the south, and the smiling village of Helensburgh stretching along the beach of Row parish on the north; and is there $1\frac{3}{4}$ mile broad. A mile up, it is overlooked, on its south side, by the tower of Roseneath castle, peering out from an expanse of forest; on its north-east side, nearly opposite, but a little higher, it is beautified by the turrets and plantation of Ardincaple. Here, having been gradually narrowed to less than $\frac{3}{4}$ of a mile, it suddenly expands to a breadth of more than $1\frac{1}{4}$ mile. Three-fourths of a mile onward, it is indented on the north side, over nearly half its breadth by a point, or, in Gaelic, a *Rhue*, which gives name to the parish along its shore. Here, 100 yards or so respectively from its beach, stand on the one side the church of Roseneath, and on the other the church of Row, both nestled, but especially the former, in spots of luscious beauty, and alluring tourists either to their sites or to vantage-ground in their immediate vicinity for the survey of scenery rich and brilliant in the combined attractions of highland and lowland landscape. Near the Row, or indenting point, a long-established ferry maintains easy and frequent communication across the loch; and hither, during summer, the steamers—five or six in number—which ply between Glasgow, Helensburgh, the Row, and Gairloch-head, career their way, curling the blue water with their rough motion, and streaking the canopy of usually fine-tinted clouds with their dusky smoke. Upward, from this point till within a mile of its termination, it has a nearly uniform breadth of about $\frac{3}{4}$ of a mile; and then it contracts to three furlongs, and ends in a slightly rounded angle. Though it receives altogether the flux of about twenty rills, it has on the south side so inconsiderable a breadth of land, and, on the north side, is overlooked so closely upon its beach by mountainous elevations, and, at its termination, makes so close an approach to Loch-Long, that the streams do not average more than 1 mile in length of course—the longest being $2\frac{1}{2}$ miles, and about a moiety of them from $\frac{1}{2}$ a mile to $\frac{3}{4}$. At its termination it is geographically distant from Loch-Long only $1\frac{1}{2}$ mile; and both there and two-thirds way down its north side, it is pent up by elevations dressed, during the winter months, in snowy white, and, during the rest of the year, in heathy brown. But the hills, as they approach Helensburgh, sink in their loftiness, and, coming more slopingly toward the shore, admit a freer space for the adornings of culture and plantation. On both sides of the loch, picture is, all the way, an enchanting one of mingled beauty and romance; and both sides are studded with a succession of handsome cottages and villas, which, on the east or Helensburgh side are thickly

strewn almost to the head of the loch. Eastward, too, or looking out from the loch, from many commanding points of observation on its beach, the sylvan and fairy-looking headland of Ardmore, and the gentle and lovely forms of the Renfrewshire hills, with the watery expanse of the frith of Clyde glittering between, add luxuriantly to the attractions of the landscape. At the head of the loch, a neat smiling village has now assumed the place of a few wretched Highland cabins which formerly stood here, and an excellent inn offers its accommodations to the stranger-visitant. There is a neat chapel in connexion with the Established church here. For a better appreciation of the scenery of the loch, see the articles *ROSENEATH* and *ROW*. The water of Gareloch is generally clear, varies in depth along the centre from 10 to 30 fathoms, and is little affected in its saltness by the influx of rills, or the mixture of the river-waters of the Clyde. The current of the tide is strong, running from 3 to 4 miles in the hour; and, owing to the projection of Row point, and of some minor horns or headlands, is various in its direction.

GAIRNEY (THE), a stream in Kinross-shire, which rises in two small tarns amongst the Cleish hills; one of them about a mile north-west of the ruins of the old castle of Cleish; the other in a moss called the Crook of Devon moss. These two rivulets unite at Thratemuir, and then run in an eastern direction by the foot of the Cleish hills, and crossing the Great northern road at the Bridge of Gairney, fall into Loch-Leven, at a point about 2 miles distant from Kinross, after a beautiful meandering course through the rich meadow-grounds on the south-western shore of that lake.

GAIRNEY (THE), another small river of Kinross-shire, which rises in the Saline-hills, and, after a course of a few miles, falls into the Devon, immediately below the Caldron linn.

GAIRNEY-BRIDGE, a small hamlet in the parish of Cleish, in Kinross-shire, on the Great north road from Edinburgh to Perth, 23 miles distant from Edinburgh, and 21 from Perth. Here one of the earliest presbytery meetings of the Secession church was held; and here the young poet Michael Bruce taught a small school. "I never look on Bruce's dwelling," observes Lord Craig,—"a small thatched house distinguished from those of the other inhabitants only by a sashed window at the end, instead of a lattice, fringed with a honey-suckle plant, which the poor youth had trained around it,—I never find myself on the spot, but I stop my horse involuntarily; and looking on the window, which the honey-suckle has now almost covered, in the dream of the moment, I picture out a figure for the gentle tenant of the mansion; I wish—and my heart swells while I do so—that he were alive, and that I were a great man to have the luxury of visiting him there, and bidding him be happy." The cottage of the amiable bard has long since been removed, and his honey-suckle uprooted; but his name and memory are still honoured in the hamlet.

GAIRSA, one of the Orkneys, constituting part of the parish of Rendal, from which it is separated by a strait about $1\frac{1}{2}$ mile broad. This island is about 2 miles long, and 1 broad; the greater part of it consists of a conical hill of considerable altitude. The whole of its west side is steep; but towards the east, it is both plain and fertile; and in that quarter, as well as on the south, the lands are well-cultivated. It contained 69 inhabitants in 1838. Close by the south shore stand the remains of an old house which seems formerly to have possessed some degree of elegance and strength, and was the residence of Sir William Craigie, and others

of that name and family. Here is a small harbour, called the Mill-burn, perfectly secured on all sides by the island itself; and a small holm, which covers the entrance to the south, leaving a passage on each side of it to the anchoring-ground.

GALA WATER, an interesting little river of Mid-Lothian and Roxburghshire. It rises among the Moorfoot hills, in the former county, between Rutherford-law and Hunt-law on the northern boundary of the parish of Heriot, and, after flowing 2 miles due east, receives from the north a tributary equal in importance to itself, and suddenly bends round to the south. At the point where the two rills unite, the great road from Edinburgh to Newcastle, by way of Jedburgh—identical as far as Galashiels with the mail-road from Edinburgh to Carlisle and the west of England—comes down upon the Gala, and thenceforth, till the fine pastoral stream loses itself in the Tweed, keeps closely along its left bank, and even follows it round all its more remarkable sinuosities. The vale of the Gala, in fact, is the only practicable thoroughfare southward to Selkirkshire, to western and central Roxburghshire, and to the parts of England which lie beyond them in a line from Edinburgh. So long as the river and the road traverse Mid-Lothian, their direction, excepting windings, is to the east of south; and from their entrance into Roxburghshire to the Tweed, it is directly south-east. At the point of their joining company, and for $1\frac{1}{2}$ mile onward, the surrounding country is moorish upland, considerably reclaimed and cultivated, but bleak and cheerless in aspect. But now Heriot water is coming down from the west, making so coquetish an approach as to run $\frac{3}{4}$ of a mile nearly alongside of the Gala before consenting to a union; and it opens so distant a view among the hills, and comes flaunting onward in so pleasing a valley-dress, as very delightfully to diversify the scenery. The Gala, having already for about a mile touched or bounded Stow parish, now enters it, and begins to traverse its whole length over a distance of 11 miles. Throughout this long part of its course, it is pastoral, romantic, and by turns, wild, enchanting, and picturesque. Hills of considerable height, and endlessly diversified in appearance,—now stony and menacing, now heathy and sad, and now verdant and joyous,—occasionally bold and precipitous, but generally sloping and of soft outline,—close in its vale on both sides, seldom allowing haughs broader than $\frac{1}{4}$ of a mile for the deposit of its alluvial wealth and the indulgence of its meandering frolics, and in one or two places forcing it into detours within nearly the narrow limits of a gorge. On leaving Stow parish or Edinburghshire, the river altogether relaxes its severer features, and wears—especially round an exquisite bend $1\frac{1}{2}$ mile above Galashiels, and where it sweeps past that town, and onward to the Tweed—a dress of joyousness and of holiday smiles and adornings finely befitting its approach to the queen-like river which receives, amid the most classic scenes of Scotland, a few hundred yards below Abbotsford, the crystal tribute of its waters. From the point of its exit out of Mid-Lothian onward, it, with one trivial exception, divides Roxburghshire on its left bank from Selkirkshire on its right; and from its source to its embouchure, it traverses altogether a distance of about 21 miles. While passing along the parish of Stow, it receives from the west the important tribute of Luggate water, and from the east the considerable tribute of Armet water, Cockum water, and Stow burn.

GALASHIELS,* a parish consisting of the an-

* The name Galashiels means simply 'the Shepherds' huts on the Gala,'—the word Gala or *Gwala* itself meaning 'a full

cient and suppressed parishes of Bowside and Lindean, the former in Selkirkshire, and the latter in Roxburghshire. Bowside, or the Selkirkshire part of the modern parish, is nearly pentagonal: having one side formed by Gala water, two by the Tweed, one by the Tweed and Cadon water, and the fifth, except for $1\frac{1}{2}$ furlong in the middle, by two small lakes and two rills which they send off respectively to the Gala and the Cadon. It is thus very nearly an island; and is bounded on the north-east by Melrose; on the south-east by Melrose and Lindean; on the south by Selkirk; on the west by Selkirk and Stow; and on the north-west by Stow. Measured in any direction from side to side, it extends about 3 miles, and from angle to angle about $3\frac{3}{4}$. Lindean, or the Roxburghshire part of the modern parish, marches over one-half of its north-west boundary with the Selkirkshire part, and is there divided from it by the Tweed; and over the other half of that boundary it stretches along, and at one brief point overleaps Ettrick water, and is continuous with Ettrick parish. On other sides it is bounded by Selkirk, Bowden, and Melrose. In general form, it is a parallelogram $2\frac{3}{4}$ miles by $1\frac{1}{2}$, stretching north-westward and south-eastward; but it sends off south-westward from its south-west angle a stripe $1\frac{1}{2}$ mile long, and 3 furlongs broad. The whole parish of Galashiels is hilly, and may even be called mountainous; one of its heights, called Meikle, which overlooks the town, rising 1,480 feet above the level of the sea, or 1,200 feet above the level of the Tweed, at its junction with the Gala. But the hills expand on wide bases, and have in general rounded tops and a soft outline, and are separated from one another by winding, narrow, and beautiful vales; and altogether present, both to the eye of taste and to the hand of culture, gentle and enchanting properties. Though patches of heath and spots of rock occasionally variegates the surface, the hills are green, and, to a considerable extent arable; and even in one or two instances in which their forms are conical, plantation and verdure wreath and adorn them up to the very summit. The vale of the Gala, which forms the north-east side of the pentagon of Bowside, is in itself a mere ribbony stripe; but it has a beautiful and very broad edging of gentle acclivity up the side of Meikle and other hills, and besides being itself adorned with rows and tufts of plantation, is confronted behind Galashiels with a phalanx of trees $1\frac{1}{2}$ mile long, and upwards of $\frac{3}{4}$ of a mile deep. The vale of the Tweed, which forms half of the western side, and the whole of the southern and south-eastern sides of the pentagon of Bowside, is all the way along very richly wooded, and absolutely gorgeous in beauty. Nothing more needs be said to hint how fascinating its landscape is than to state that its Galashiels side, and the sylvan and variegated slopes which come gracefully down upon it from the heights behind, were the scene chosen as the view from the front of his temple of taste by the most graphic and the most chastely imaginative and the most nicely sensitive to scenic beauty of all Scotland's poets or literary painters,—Sir Walter Scott. Abbotsford house, indeed, is not within the limits even of Lindean, but it looks across the Tweed to the south-eastern slopes of Bowside, from a delightfully picturesque site $\frac{3}{4}$ of a mile above the confluence of the Gala and the Tweed; and, with its rich and very broad cincturing of plantation—part of which stretches into Lindean—flings over the landscape of the parish enchanting influences of no common power. The rivers abound in salmon, in trout of very large size, and in sea-trout, bull-trout, par, and eels. At the northern verge of Lindean is a small lake named Cauldshiels, about $1\frac{1}{2}$ mile in circumference, opulently planted on one side, and bleak and wild on the other, and deep, bedded with marl, and abounding in pike and perch. The soil, while very various throughout the parish, is, in the aggregate, surprisingly different on the two sides of the Tweed. In Bowside it is in general deep, heavy, cold, and wet, on a bottom of clay or of rock: in some places it is perfectly red, and occasionally interrupted with ironstone; in other places it is very porous, yet not sandy, or superincumbent on gravel; and, in various instances, it gives place to morasses and lochlets which are productive of peat and marl. In Lindean the soil is, in general, dry and shallow, lying partly on gravel, extensively on till, and occasionally on rock; and it is almost everywhere sprinkled and mixed with a remarkably large proportion of small stones; and is believed to derive, in some degree, from their power of reflecting heat and aiding it to retain moisture, a fertility in excellent and luxuriant crops, which, considering its small depth, is truly astonishing. Nearly one-third of the entire area of the parish is arable; nearly two-thirds are unsuited to the plough, and chiefly covered with pasturage; and about 500 acres are under plantation. The chief mansions are Gala house, overlooking the Gala from a bow of groves, and Faldonside delightfully situated on the right bank of the Tweed, a little above Abbotsford. Traces of two ancient camps and a stretch of Roman road are visible. The old post-road from Edinburgh to Selkirk, Hawick, and Carlisle, runs along the west margin of Bowside; a road recently used runs along the north-east and the south-east margins; and a still newer road intersects the district from north to south. The road between Selkirk and Melrose runs along the west margin of Lindean. The interior parts of the entire parish are ill-supplied with roads; and, indeed, scarcely need them. Population, in 1801, 844; in 1831, 1,534. Houses 226. Assessed property, in 1815, £5,873.—Galashiels is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, Scott of Gala. Stipend £211 11s. 7d.; glebe £28. Unappropriated tithes £543 13s. 1d. Besides the parochial school, attended by a maximum of 125 scholars, there are 4 schools attended by a maximum of 229 scholars. Parish-schoolmaster's salary £30, with £40 fees, £10 other emoluments, and a house and garden. Two of the non-parochial schools are endowed; one in Lindean, with £8 18s. a-year, and a house and garden; and the other at Fernier, with £8 a-year, and a house and garden the fees of the former amount to £19, and of the latter to £20. The ecclesiastical statistics of the parish are so blended with those of the town—which contains the parochial places of worship, and at the same time sends half its bulk, including other places of worship, into the continuous parish of Melrose on the opposite bank of the Gala—that they will find a better place in the next article than in the present.—The two parishes of which Galashiels consists were for a long period perfectly distinct. The church of Bowside anciently stood in a hamlet of that name, about half-a-mile below the junction of the Ettrick and the Tweed. Lindean derived its name from the British *Lyn*, signifying, secondarily, 'a river-pool,' and the Anglo-Saxon *Dene*, 'a valley'; and seems to have been a very ancient parish. The body of William Douglas, the knight of Liddesdale, lay in Lindean church the first night after his assassination in 1353. The monks of Dryburgh probably obtained possession of this church, and had it served

mon power. The rivers abound in salmon, in trout of very large size, and in sea-trout, bull-trout, par, and eels. At the northern verge of Lindean is a small lake named Cauldshiels, about $1\frac{1}{2}$ mile in circumference, opulently planted on one side, and bleak and wild on the other, and deep, bedded with marl, and abounding in pike and perch. The soil, while very various throughout the parish, is, in the aggregate, surprisingly different on the two sides of the Tweed. In Bowside it is in general deep, heavy, cold, and wet, on a bottom of clay or of rock: in some places it is perfectly red, and occasionally interrupted with ironstone; in other places it is very porous, yet not sandy, or superincumbent on gravel; and, in various instances, it gives place to morasses and lochlets which are productive of peat and marl. In Lindean the soil is, in general, dry and shallow, lying partly on gravel, extensively on till, and occasionally on rock; and it is almost everywhere sprinkled and mixed with a remarkably large proportion of small stones; and is believed to derive, in some degree, from their power of reflecting heat and aiding it to retain moisture, a fertility in excellent and luxuriant crops, which, considering its small depth, is truly astonishing. Nearly one-third of the entire area of the parish is arable; nearly two-thirds are unsuited to the plough, and chiefly covered with pasturage; and about 500 acres are under plantation. The chief mansions are Gala house, overlooking the Gala from a bow of groves, and Faldonside delightfully situated on the right bank of the Tweed, a little above Abbotsford. Traces of two ancient camps and a stretch of Roman road are visible. The old post-road from Edinburgh to Selkirk, Hawick, and Carlisle, runs along the west margin of Bowside; a road recently used runs along the north-east and the south-east margins; and a still newer road intersects the district from north to south. The road between Selkirk and Melrose runs along the west margin of Lindean. The interior parts of the entire parish are ill-supplied with roads; and, indeed, scarcely need them. Population, in 1801, 844; in 1831, 1,534. Houses 226. Assessed property, in 1815, £5,873.—Galashiels is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, Scott of Gala. Stipend £211 11s. 7d.; glebe £28. Unappropriated tithes £543 13s. 1d. Besides the parochial school, attended by a maximum of 125 scholars, there are 4 schools attended by a maximum of 229 scholars. Parish-schoolmaster's salary £30, with £40 fees, £10 other emoluments, and a house and garden. Two of the non-parochial schools are endowed; one in Lindean, with £8 18s. a-year, and a house and garden; and the other at Fernier, with £8 a-year, and a house and garden the fees of the former amount to £19, and of the latter to £20. The ecclesiastical statistics of the parish are so blended with those of the town—which contains the parochial places of worship, and at the same time sends half its bulk, including other places of worship, into the continuous parish of Melrose on the opposite bank of the Gala—that they will find a better place in the next article than in the present.—The two parishes of which Galashiels consists were for a long period perfectly distinct. The church of Bowside anciently stood in a hamlet of that name, about half-a-mile below the junction of the Ettrick and the Tweed. Lindean derived its name from the British *Lyn*, signifying, secondarily, 'a river-pool,' and the Anglo-Saxon *Dene*, 'a valley'; and seems to have been a very ancient parish. The body of William Douglas, the knight of Liddesdale, lay in Lindean church the first night after his assassination in 1353. The monks of Dryburgh probably obtained possession of this church, and had it served

by a vicar; and, in Bagimont's roll, it figures as the vicarage of Lindean, in the deanery of Teviotdale, and diocese of Glasgow. But before the year 1640 it had ceased to be the parish-church, and become supplanted by that of Galashiels.

The town of GALASHIELS stands on Gala water, 5 miles north-west of Melrose; 6 north-east of Selkirk; 18 east of Peebles; and 28 south of Edinburgh. The original village occupied a site on the acclivity south of the Gala, and was simply an appendage of the baronial seat of Gala; but, though still partially standing, and even slightly renovated with new buildings, it has, for a considerable period, been sinking gradually into decay. The present town originated about 60 years ago, when the spirit of manufactures alighted on the villagers, and brought them down to the margin of the stream to avail themselves of its water-power; and it stands in nearly equal parts in Roxburghshire and Selkirkshire,—the former part being the more ancient, and the latter the more modern. The town, on the south side of the river, comprising all Galashiels Proper, and a considerable portion of the Roxburghshire section, consists of one long bent street, and two shorter and new streets, the whole dotted round with detached buildings, winged with drying and bleaching grounds, and stretching along a narrow stripe of plain between the river and the neighbouring heights. On the north side the town is both more irregular in form and less advantageous in site, ascending in straggling clusters or lines of building, from the margin of the river to the transit of the Edinburgh and Newcastle road, a little distance up the face of the acclivity. The two districts are united by a stone-bridge for vehicles, and an iron suspension-bridge and an ingeniously constructed timber-bridge, both for foot-passengers. All the houses are built of blue whinstone and slated. Though quite a manufacturing-place, the town partakes not a jot of the dinginess, and the confusion, and the concentration of character upon mere labour and gain, which so generally belong to places of its class; but is lively and mirthful in its appearance, heedful of the adornings of taste and beauty, and seems to reciprocate smiles of gladness with the charming scenery amid which it is embosomed. The spirit of manufacture is no doubt here, and walks abroad in an energy which contrasts strongly with the sickness of its nature, and the feebleness of its movements in many other localities; but it breathes a mountain air, and has the dress and the habits far more of rural than of city life. The factories being worked by water and not by steam-power,—the grounds attached to them being painted over with the many-coloured fabrics which are hung out to complete the process for the market,—the dispersedness of the seats of stir and activity at considerable intervals along the banks of a pastoral stream,—the beauty and lightness of the materials with which the town is constructed,—and the picturesqueness and pastoral features of the rich landscape which sweeps around,—all contribute to protect Galashiels from being defiled with the sootiness, or wasted down into the cadaverousness of most other seats of manufacture. In 1832 there were here ten large cloth factories, some of them of considerable date, and two of them quite new.—There are two parochial churches, one *quoad civilia*, in the Galashiels division, and one *quoad sacra*, in the Melrose division. The former, built in 1813, and fitted up with between 800 and 900 sittings, is in the semi-gothic style, and rises, in the front end, into a square tower. The *quoad sacra* church, built in 1837, is a small but neat structure, so situated as to overlook most of the town. A United Secession place of worship, nearly as old as

the modern town, and of considerable capacity, though of plain exterior, stands on the Galashiels side. A Relief congregation was established in 1837, and have since erected a small neat meeting-house. There are also small chapels belonging to the Glassites and the Baptists.—Galashiels, in all other respects, is destitute of public buildings. Even its shops are few and tiny compared with either its population, its relative position in the country, or its manufacturing importance. Its streets, in fact,—during the hours of labour in the factories—have the silence and timidity and wealthless aspect almost of a hamlet in the Highlands. Its markets also are defunct, and its fairs—held on 8th July and 8th October—feverish and wasted. Manufacture, in its most athletic form, alike heedless of the luxuries and unhurt by the malign influences of what passes for refinement, is almost the sole tenant of the place. The town has branch-offices of the National bank of Scotland, and the Leith bank; a savings' bank, a friendly society, a public reading-room, two subscription libraries, a small printing-office, a Bible and Missionary society, and an excellent grammar and boarding-school, besides other schools. The town has no police establishment, though it is watched under night by a constable paid by the county of Roxburgh. Attempts to light and clean it by voluntary assessment have hitherto had but partial success. The Edinburgh and Carlisle mail, and stage-coaches between Newcastle, Jedburgh, and Hawick, respectively, and Edinburgh, pass through Galashiels; and numerous carriers continually travel between it and all the towns and important localities intervening from the Forth to the central part of the Border.

Galashiels, for some period after its erection, was subject to such fearful inundations of the Gala, that occasionally a boat was brought from 2 miles distant on the Tweed for the rescue of its people; and even yet, it at times is exposed to considerable risk, or even sustains actual damage. The Gala sweeps past it with a rapidity of current and an amount of descent which render its power of vast worth in driving the machinery of the factories, but which, if due means of resistance were not provided, would occasion, in a flood, the sapping and possibly the total destruction of the town. But the bed of the stream has of late been quarried and excavated for building-materials, and has, in consequence, received greatly enlarged capacity for conveying along a swollen volume of water. Strong bulwarks called 'puts,' have also been constructed along the banks of the stream, and serve to repress its riotousness when in a surfeited and turbulent mood. Yet strong as the bulwarks are, the river is in hazard of becoming energetic enough to toss them from its path; and whenever it makes an impression on them, it so violently menaces the mills and other buildings on its margin, that all hands are at work to prevent if possible its eruption. But if all efforts be unsuccessful and the work of destruction have begun, the persevering and hardy townsmen brave the invading and impetuous foe on its own territories, and in groups or bands of several scores strong, drag branching full-grown fir-trees into the more quiescent waters on the exterior of the flooded ground, make fast the trunks at points where the stream is comparatively gentle, and toss the branches upon the margin of the central and careering current. By a sufficiently frequent repetition of this process so as to form a bushy wall or rampart of tree upon tree, they now invariably succeed in averting danger even though the regular bulwarks should be broken down; but in 1829—the year so memorable for Scotland's asserting its character as 'the land of the mountain and the flood,' when Morayshire, in particular,

was so fearfully devastated by inundations,—Galashiels might have been all but utterly destroyed had not an astute spectator, amid general looks of despair, suggested for the first time, the trial which was immediately effective, of encountering the torrent with an array of felled trees.

Galashiels has a brewery and establishments for the tanning of leather, the dressing of skins, and the construction of machinery for woollen manufacture. It also conducts considerable trade in the production and sale of hosiery. But its grand staple is the manufacture of woollen cloth. "With the exception of Hawick," say the commissioners on Municipal corporations, "Galashiels is the most important manufacturing town in the south of Scotland. The manufacture is of woollen cloth. There are 9 manufactories, each employing about 40 persons. Although on a scale comparatively limited, the manufactures have of late years made rapid advances, and, from the activity and industry of the inhabitants, united to its advantageous situation, it is probable that the town will continue to increase." But though inferior in population or in amount of produce to Hawick, it is second to no town in Scotland in the excellence of its woollen fabrics, or in the ingenuity and success of effort to improve the quality and extend the range of its staple. For a considerable series of years, it was known for the production of woollen cloths of only the coarser kinds, fabricated from home-grown woollen; but, for several years past, it has run an increasingly successful course of effort to produce, from foreign wool—chiefly that of Van Diemen's Land—cloth of the finer qualities, and has even commenced a rivalry, infantile as yet but bold and promising, with the choice broad-cloth manufactories of England. By the mixation of home and foreign wool, it also produces flannels which the Board of Trustees have pronounced finer than any made elsewhere in Scotland, and equal if not superior to the best made in Wales. A large proportion of the home-grown wool is smeared, in order to be fabricated into an improved coarse cloth. Yarns, blankets, shawls, plaids, narrow cloths, grey or mixed coloured crumb-cloths, and blanket-shawls of many hues and changeful patterns, are the forms into which home-grown wool alone, or in mixture more or less with foreign wool, is made to assume. In 1833, according to the statement in the New Statistical Account, the annual consumption of wool amounted to 21,500 stones at 24 lbs. imperial to the stone; of which 21,000 were home-grown, and 500 were foreign. But since that period, not only has the aggregate consumption considerably increased, but, in consequence chiefly of the success of the broad-cloth manufacture, the proportion between foreign and home wool is exceedingly changed in favour of the foreign. We need come no farther down than 1833, however, in order to see the prosperous condition of the manufacture of the town; for instead of the 21,500 stones of wool which were then consumed, there were, in 1792—when the Old Statistical Account was published—only 2,916 stones; and in 1744, the still more paltry amount of 722 stones. Yet in 1792, the Rev. Mr. Douglas, the minister of the town and parish, reported, "The manufacture of coarse woollen cloth is here carried on to great extent. It has rapidly increased within these few years, and is now brought to great perfection." The Messrs. Cochrane and Gill, and Syme & Co., are the chief cloth-manufacturers. All the weaving, with trivial exceptions, was, till lately, done in factories, but is now performed chiefly in shops built in their immediate vicinity. The spinning of the yarn is done in the factories by water-power. Average wages for coarse cloths vary much, according to the pattern, from 14 shillings to

20 shillings. The weekly clear wage for blankets and white plaiding, is 12 shillings; for checks, 15s.; for shawls at 42 ells a-week, 16s.; and for twill-cloth and tartans, about 16s. 6d. The condition of the weavers—especially as compared with that of persons of their vocation employed in other localities upon cotton fabrics—is, of course, exceeding good. When in full employment, their clear weekly wages averaged 14s. 3d. in 1839. The total number of looms in 1828, was 175; and in 1838, it was 265.

Though Galashiels as a whole is quite unique in position and interests, it consists of three legally distinct portions. The first is the town of Galashiels Proper, situated in Selkirkshire, the tenure of which is leasehold, in leases of 99 years, renewable *in perpetuum*. The second, situated in Roxburghshire, but on the south side of the Gala, and compact or contiguous with the former, consists of feus, holding, with few exceptions, of the same superior as Galashiels Proper. The third, also situated in Roxburghshire, but on the north side of the Gala, is a suburb called Buckholmside, and consists of feus which are held of a different superior, Mr. Pringle of Torwoodlee. A burgh-of-barony, which includes part of the town of Galashiels and a considerable agricultural district, was erected by a charter, dated 9th June, 1630. There is no property, revenue, expenditure, debt, or taxation. The jurisdiction within the barony is of the ordinary kind, the baillie holding his commission during the pleasure of the superior. No courts have been held for upwards of a century; and there is neither court-house nor gaol. Those parts of the town which are not within the barony, are subject only to the jurisdiction of the county. The weavers were incorporated by a seal of cause from the superior, but enjoy no exclusive privileges. The manufacturers also are called a corporation; but they do not possess a seal of cause. Trade and manufactures are in all respects free. Population of the whole town, in 1831, 2,100. Of 2,209, which the writer in the New Statistical Account reports as the population in 1832, 1,130 are stated by him to have belonged to the Selkirkshire portion of the town, and 1,079 to the Roxburghshire portion.

The earliest notice of Galashiels—which, like every other, till a very modern date, refers, of course, not to the present town but to the extinct aboriginal village—occurs in Lord Hales' Annals, and is wholly confirmed and partly amplified by tradition. In 1337, during the reign of David II. a party of English invaders halted at Galashiels in the course of a retreat from a vain effort to raise the siege of Edinburgh. The season being autumn, and the little army not thinking itself pressed to make a hurried passage across the Tweed, the soldiers began to straggle about the neighbourhood in search of wild plumbs with which it then abounded. A party of Scotch now came up, and learning the position of the foe, rushed down upon them in contemptuous feeling for their employment, took them by surprise, drove them headlong to a spot on the Tweed, still called "the Englishmen's syke," nearly opposite Abbotsford, and there hewed them down with the sword almost to a man. The people of the village, in self-gratulation of an exploit which had been a sorer fruit to the invaders than any they went in search of, called themselves "the Sour Plumbs o' Galashiels," and transferred the soubriquet to their successors, and are celebrated by it in a Scottish song of high antiquity, and even bequeathed it as the quaint and sarcastic motto of the armorial bearings of the burgh. So early as 1622, the old village must have been a place of considerable note; for the report by the Lords of Commission for the Plantation of Kirks, dated in that year, says, "that there lived about 1,400 people in

Galashiels." A tradition prevails in the district that the village was anciently a royal hunting-station. An old rudely-built square tower, two stories high, called "the Peel," and supposed to have been the lodge in which Royalty found an occasional temporary abode, was pulled down less than a quarter of a century ago, to make way for an enlargement of the parish school-house.

GALDRY. See BALMERINO.

GALLATOWN (EASTER and WESTER), two united villages in the parish of Dysart in Fifeshire, through which the Great north road to Dundee, &c., passes. Population, in 1811, 769; in 1831, 1,053.

GALLOWAY, an extensive district, forming the south-western corner of Scotland. Originally, and for a considerable period, it included parts of Ayrshire and Dumfries-shire; but, during many ages past, it has been identified simply and strictly with the shire of Wigton and the stewartry of Kirkcudbright. The name, though thoroughly interwoven with history, and incurably familiar to literary and oral usage, designates no political jurisdiction, and is unsanctioned by the strict or civil nomenclature of the country. The district is bounded on the north by Ayrshire and Dumfries-shire; on the east by Dumfries-shire; on the south by the Solway frith and the Irish sea; and on the west by the Irish channel and the frith of Clyde. Its greatest length from east to west is 63½ miles, and its greatest breadth from north to south is 43 miles. Its two civil divisions, Wigtonshire and Kirkcudbrightshire, are separated, from north-west to south-east, by the river Cree and Wigton-bay. Its geographical distribution is into three parts,—Upper Galloway, which includes the northern or mountainous sections of Wigtonshire and Kirkcudbrightshire,—Lower Galloway, which includes the southern or more champion sections of both civil divisions, east of Luce-bay,—and the Rinn of Galloway, consisting of the peninsula south-west of Luce-bay and Loch Ryan. Galloway has long been distinguished as an excellent pastoral district; and celebrated for the superiority of its wool, and especially for its breeds of horses and of polled black cattle. For further particulars, and for topographical and other details, see the articles KIRKCUDBRIGHTSHIRE and WIGTONSHIRE.

During the 5th century, the district afterwards called Galloway was inhabited by the immediate posterity of the British tribes, the Selgovæ, the Novantes, and the Damnii, a feeble and a divided people. The Anglo-Saxons rather overran than colonized the territory; yet, during the 6th and 7th centuries, they sufficiently mixed with the British tribes to maintain a rude ascendancy. When the Northumbrian dynasty became extinct at the close of the 8th century, the Saxon settlers, while they retained their possessions, were denuded of their power. Colonists from the Irish coast could, in such circumstances, make an easy descent upon the country, and effectually overawe its inhabitants. Whatever may have been the defeats of earlier adventurers, the Irish Cruithne, at the end of the 8th century, made a successful settlement within the Rinn. Fresh swarms followed from the Irish hive, during the 9th and 10th centuries; and were strengthened by settlements of the kindred Scots of Kintyre, who passed the frith of Clyde in their currachs to the Rinn and Carrick and Kyle; while the Scandinavian Sea-kings domineered over the seas and shores of the neighbouring regions. These Gaelic settlers, in their progress of colonization and promptitude of contest, acquired, in the low Latinity of the times, the appellation of Galli, which was thought to be a fair representative of their proper name Gael. Hence, as we may learn from

Malmsbury, "*Galli veteribus Gallwalia, non Franci dicti.*" As Scotland and England took their names respectively from the Scots and the Angles, so the territory of the Gael or Galli, came speedily to be called, by chroniclers, Gallwalia, Gallawidia, Gallowagia, Gallwadia, Gallwegia, Gallway, Galloway. In the efflux of three centuries, the name came to be applied loosely to the entire peninsula between the Solway and the Clyde, including Annandale in the south-east, and most of Ayrshire in the north-west. The Gael, or Galli, or Irish settlers, in the meanwhile, completely occupied the ample extent of the country; mingling everywhere with the enfeebled Britons, whose speech they understood, and amalgamating with the still fewer and feeblér Saxons, whose language, as it was unknown to them, they constantly rejected; and they hence imposed upon the district a topographical nomenclature which corresponds much more closely with that of Ireland, than with that of other districts of Scotland. Notwithstanding the naval enterprises of the northmen, the incursions of the Northumbrian Danes, and not a few internal distractions among conflicting tribes, the settlers retained, in their new possessions, the various rights of a distinct people, and preserved the agreeable independence of their own customs and laws.

During the earlier parts of the obscure history of the district, we hear seldom, and in uncertain terms, of the rulers or "lords of Galloway," who claimed and exercised power within the invidious limits of a contested jurisdiction. But, in 973, Jacob, lord of Galloway, was one of the eight reguli who met Edgar at Chester. Fergus, another lord of Galloway, and the most potent feudatory subject of the Scottish crown in the 12th century, was a frequent witness to the charters of David I., and, supposing Malcolm IV. to be a pusillanimous character, denied his authority and appropriated his revenues. Malcolm, enraged by Fergus' infidelity and daring, marched into his territory, and, though twice repulsed and discomfited by him, eventually, in 1160, overpowered him, obliging him to resign his lordship and possessions to his sons, and to retire to the abbey of Holyrood, far gone in the disease of corroding humiliation and a broken heart. Fergus was son-in-law to Henry I., and, dying next year, left behind him a family who afterwards ranked high among the nobles of Scotland and of England. His two sons, Uchtred and Gilbert, who, like the lords of other Gaelic districts, owed obedience to the Scottish kings, followed William the Lion, in 1174, into England; but they no sooner saw him taken captive, than, at the head of their naked, nimble, impatient, and rapacious clans, they returned to their native wilds, broke out into insurrection, attacked and demolished the royal castles, and murdered the Anglo-Normans who had settled among their mountains. No sooner had they established their independence of the Scottish government, than they began to dispute about pre-eminence and possessions. Gilbert, on the 22d of September, 1174, attacked Uchtred, while residing in his father's house in Loch-Fergus, and, having overpowered him, ordered the infliction upon him of a barbarous death. William the Lion having, in 1175, made submission to the English king, and regained his liberty, invaded Galloway, subdued Gilbert, and purchased his subsequent peacefulness of conduct by giving him full possession of Carrick in Ayrshire. From this Gilbert sprang, in the third generation, Marjory, Countess of Carrick, in her own right, the wife, in 1271, of Robert de Bruce, and the mother, in 1274, of the royal Bruce, the restorer of the Scottish monarchy. Gilbert dying the 1st of January, 1184-5, Roland, the

son of the murdered Uchtred, seized the favourable moment of his uncle's death, to attack and disperse his faction, and to claim possession of all Galloway as his own inheritance; and he, at the same time, overcame Gilcolm, a potent freebooter who had settled in the district, and carried his depredations into Lothian. Making successful resistance to Henry II. of England, who claimed to be superior of Scotland, he was at last, on the condition of surrendering Carrick to his nephew Duncan, the son of Gilbert, confirmed in the lordship of all Galloway. On the restoration of the national independence, Roland obtained the office of constable of Scotland, and was witness of many royal charters. In December, 1200, Alan, his eldest son, succeeded him in his lordship, and afterwards excelled him in power and fame; but, in 1234, he died without a legitimate male heir, and left his prerogatives and possessions to become objects of division and feud. Alexander II. wishing to invest Elena, the eldest daughter of Alan, with the lordship, the Gallowegians tumultuously demanded it to be conferred on Thomas, his illegitimate son; but, though they writhed under the chains imposed on them, and twice became insurgent, they were compelled to receive as their superior, Roger de Quincey, the husband of Elena. Alexander II.'s enforcing the rights of Alan's daughters, and, at the head of an army, breaking down the spirit of insurrection, was the introduction to the epoch of granting charters for the holding of lands, and of landholders giving leases to tenants, and of the security of property and the cultivation of the arts of husbandry. In 1254, Alexander Comyn, Earl of Buchan, in right of his wife, succeeded De Quincey, and laid the foundation of his family's extensive connexion with Galloway, till they were overthrown and expatriated by Bruce, and of their introducing to the district the important office of justiciary, which in some measure changed the very nature of its jurisprudence.

The Gallowegians, during the wars of the succession, naturally sided with the Comyns and the Baliols, and speedily shared in their disasters. When John Baliol was obliged to resign his dependent crown, Edward I. considered Galloway as his own; and he immediately appointed over it a governor and a justiciary, disposed of its ecclesiastical benefices, and obliged the sheriffs and bailiffs to account for the rents and profits of their bailiwicks in his exchequer at Berwick. In 1298, Wallace is said to have marched into the west "to chastise the men of Galloway, who had espoused the party of the Comyns, and supported the pretensions of the English;" and a field in the farm of Borland, above the village of Minigaff, still bears the name of Wallace's camp. During his campaign of 1300, Edward I. marched from Carlisle through Dumfries-shire into Galloway; and though opposed first by the remonstrances, and next by the warlike demonstrations of the people, he overran the whole of the low country from the Nith to the Cree, pushed forward a detachment to Wigton, and compelled the inhabitants to submit to his yoke. In 1306, Sir Christopher Seton, the brother-in-law of Bruce, being captured in the castle of Loch Urr, was carried to Dumfries, and put to death on the gallows-hill of the town. In 1307, Robert I. marched into Galloway, and wasted the country, the people having refused to repair to his standard; but he was obliged speedily to retire. In the following year, Edward Bruce, the King's brother, invaded the district, defeated the chiefs in a pitched battle near the Dee, overpowered the English commander, reduced the several fortlets, and at length subdued the entire territory. Galloway was immediately conferred on him by the King, as a re-

ward of his gallantry; and when he was slain in the battle of Dundalk, in 1318, it reverted to the Crown. When Edward Baliol entered Scotland to renew the pretensions of his father, Galloway became again the wretched theatre of domestic war. In 1334, assisted and accompanied by Edward III., he made his way through this district into the territories north of it, and laid them waste as far as Glasgow. In 1346, in consequence of the defeat and capture of David II. at the battle of Durham, he regained possession of his patrimonial estates, and resided in Buittle castle, the ancient seat of his family. In 1347, heading a levy of Gallowegians, and aided by an English force, he invaded Lanarkshire and Lothian, and made Scotland feel that the power which had become enthroned in Galloway was a scourge and a curse, rather than an instrument of protection. In 1353, Sir William Douglas overran Baliol's territories, and compelled M'Dowal, the hereditary enemy of the Bruces, to change sides in politics.

After the restoration of David II. and the expulsion of Baliol, Archibald Douglas, the Grim, obtained, in 1369, Eastern and Middle Galloway, or Kirkcudbrightshire, in a grant from the Crown, and, less than two years after, Western Galloway, or Wigtonshire, by negotiation from Thomas Fleming, Earl of Wigton. This illegitimate but most ambitious son of the celebrated Sir James Douglas obtained, at the death of his father, in 1388, on the field of Otterburn, the high honours and the original estates of the house of Douglas; and now, while holding in addition the superiority of all Galloway, became the most powerful as well as the most oppressive subject of Scotland. On an islet in the Dee, surmounting the site of an ancient fortlet, the residence of former lords of Galloway, rose at his bidding a castle called the Thrieve, whence the radiations of his own and his successors' tyranny shot, with a blighting and a withering influence, athwart the surface of the whole country. His usurpation seems to have struck with indignation all who contemplated its magnitude and effects. The power of the Douglasses was so enormous, and so exorbitantly plied as to grind into powder the resistance and the influence of the subordinate chiefs. About the middle of the 15th century, William, one of the line of Earls, upon some occasion of pique with Sir Patrick M'Lellan of Bombe, the sheriff of Galloway, besieged and captured him in his stronghold of Raeberry, carried him off to Thrieve castle, and there ignominiously hanged him as though he had been a common felon. The Douglasses experienced some reverses, and were more than once sharply chastised in their own persons, yet seemed unable to learn, no matter how thoroughly inculcated, a single lesson of moderation; and they continued to oppress the Gallowegians, to disturb the whole country, and even to overawe and defy the Crown, till their turbulence and treasons ended in their forfeiture. James the ninth and last Earl, and all his numerous relations, ran, in 1453, into rebellion; and, two years afterwards, were adjudged by parliament, and stripped of their immense possessions.

Galloway now awoke from the haggard dreams of a nightmare which had been thrown from its breast, and found itself in a state of annexation to the Crown. James II. immediately marched into the district, and was everywhere received with acclamations of welcome; and he garrisoned the castle of Thrieve with his own troops, and, from a seat of insufferable oppression, converted it into a source of energizing influence upon the law. In 1461, Margaret, the strenuous queen of Henry VI., came with four vessels to Kirkcudbright, and was honourably received. For some time after the fall of the Doug-

lases, Galloway was occasionally distracted by the feuds of petty chiefs, familiarly known by the odd name of "Neighbour Weir." Early in the 16th century, a deadly feud between Gordon of Lochinvar and Dunbar of Mochrum, led to the slaughter of Sir John Dunbar, who was then steward of Kirkcudbright. During the minority of James IV., Patrick Lord Hailes, created Earl of Bothwell, ruled both the stewardry of Kirkcudbright and the shire of Wigton. During the turbulent minority of James V., another feud between Gordon of Lochinvar and Maclellan of Bombie, led to the slaughter of the latter at the door of St. Giles' church in Edinburgh. In 1547, under the reign of Mary, the English arms overran eastern Galloway, and compelled the submission of the principal inhabitants to the English government. After the defeat of Langside, Mary sought shelter in Dundrennan abbey, near Kirkcudbright, previous to her flight into England across the Solway. The regent Murray immediately, in June, 1568, traced her steps into the district to punish her friends; and he enforced the submission of some, and demolished the houses of others. In 1570, when Elizabeth wished to overawe and punish the friends of Mary, her troops, under the Earl of Murray and Lord Scrope, overran and wasted Annandale, and part of Galloway. As the men of Annandale, for the most part, stood between the Gallowegians and harm, they expected to receive compensation from their western neighbours for their service; and when they were refused it, they repaid themselves by plundering the district. In a happier age, the bay of Kirkcudbright sheltered William III.'s fleet on his voyage to Ireland.

Galloway gives the title of Earl, in the peerage of Scotland, to the family of Stewart and Garlies. In 1607, Sir Alexander Stewart of Garlies was created Lord Garlies; and, in 1623, he was raised to the dignity of Earl of Galloway. In 1796, John, the 7th Earl, was created Baron Stewart of Garlies in the peerage of Great Britain. The Earls of Galloway have very extensive possessions in the district.

GALLOWAY-HOUSE, the family-seat of the Earls of Galloway on the coast of Sorbie parish, in Wigtonshire. It was built about 80 years ago; and though not remarkable for architectural magnificence, "forms part of a landscape truly beautiful and grand. Garlieston bay is on the north; and Rigg, or Hunter's bay, is on the south of it. From its windows are seen the richest fields; an indented coast, adorned with growing improvements; a cluster of isles, and the lofty mountains of Cumberland and Man, appearing at a proper distance. The principal rooms are spacious, and the library is stored with many thousand valuable volumes."

GALLOWAY (MULL OF), a remarkable and well-known promontory, forming the southern point of the Rinn of Galloway, in the parish of Kirkmaiden, Wigtonshire. It is an exceedingly bold rocky headland, $1\frac{1}{2}$ mile long, and $\frac{1}{4}$ of a mile broad, stretching from west to east nearly at right angles with the eastern coast of the mainland, and connected with the country behind it by a long isthmus, the sides of which are indented with small bays called respectively East and West Tarbet. The south and south-west fronts of the promontory break down almost precipitously into the sea, and are perforated with caverns in which the billows, during a southerly wind and a flowing tide, roll and tumultuate with a reverberating sound resembling thunder. On the promontory, in North lat. $54^{\circ} 38'$, and West long. $4^{\circ} 52'$ from Greenwich, a lighthouse, erected in 1830, displays an intermittent light, which alternately blazes on the view during $2\frac{1}{2}$ minutes, and suffers eclipse during $\frac{1}{2}$ a minute, and is seen at the distance

of 21 nautical miles. It is 21 miles north-north-west from Point-of-Ayre lighthouse in the isle of Man; and the same distance, south-east by east, from Copeland lighthouse on the Irish coast. From the balcony of the lighthouse are seen the Alpine summits of the southern Highlands of Scotland, the towering Paps of Jura, a far expanse of the Irish sea, 90 miles of the coast of Ireland, the whole of the isle of Man, and the shrowded and far-away mountain-peaks of Cumberland,—forming altogether one of the most magnificent scenes which Scotland, rich and prodigal in the brilliance and variety of her landscapes, spreads out for tutoring the taste, and sublimating the feelings, and inciting or aiding the heavenward aspirations of her children.

GALLOWAY (NEW), a royal burgh, and the capital of the district of Glenkens, is delightfully situated on the right bank of the Ken, in the parish of Kells, Kirkcudbrightshire. Its site is at the intersection of the roads going northward from Kirkcudbright to Ayrshire, and westward from Dumfries to Newton-Stewart. It is 19 miles north by west of Kirkcudbright; $17\frac{1}{2}$ north-east of Newton-Stewart; 25 west of Dumfries; and 38 south-east of Ayr. It rises at the foot of an irregular ridge of ground, in the vicinity of Kenmure castle, surrounded by as charming scenery as fancy can conceive to exist in a wild country. But, though a place of municipal dignity and relative importance, it is of very inconsiderable size; and, strictly viewed, is nothing more than a mere village, or even a hamlet. Its entire bulk consists of a cross-street running 70 yards from east to west, a main-street running 150 yards from north to south, and a scanty sprinkling of detached houses, partly in a line with these streets, and partly on their wings. At the centre or cross of the burgh, is a building which serves as a court-house and jail, surmounted by a spire. Half-a-mile north, but not within the royalty, the parish-church of Kells, built in 1822, lifts a neat stone front and tower into view. Across the river, half-a-mile east, a stone bridge, erected in the same year as the church, spans out in elegant arches. The houses of the town are, in general, low, ill-built, thatched with straw, and uncomfortable in the interior. A sashed window, 50 or 60 years ago, was a curiosity which the burghers had to travel beyond their own limits to see. A few slated houses, however, $2\frac{1}{2}$ or 2 stories high, are interspersed with the humbler edifices, and relieve the dullness and poverty of their appearance. The main-street is decently paved, and kept tolerably clean. Little gardens stretch out behind the houses, and are divided by hedges, dotted occasionally with trees. Most of the inhabitants possess also a small croft on which a cow or two are fed, and a few bolls of potatoes and corn are raised; and a small patch of meadow on the bank of the Ken, which affords winter fodder for their cattle. A sort of suburb of the burgh, in the form of detached cottages, and called the Mains of Kenmure, lies scattered to the east between the town and the bridge. Tiny and rustic as New Galloway is, its houses and gardens and feathery tree-tops and curlings of blue smoke, as seen either from the vale of the river, or from elevations above, present a decidedly pleasing picture to the eye.

New Galloway, say the commissioners on municipal corporations, "is very inconsiderable in its extent and population, and has no funds or property of any description. It was erected into a royal burgh by a charter from King Charles I., dated 15th January, 1629. By the charter it was declared that the inhabitants should have power to elect a council, consisting of one provost, four bailies, one dean-of-guild, one treasurer, and twelve ordinary councillors. But

by the sett, as reported to, and sanctioned by, the convention of royal burghs, on 15th July, 1708, the council was then declared to consist of one provost, two bailies, one treasurer, and fifteen councillors. From the records of council, for twenty years prior to 1831, it appears that only eighteen members of council have been chosen, including the provost and two bailies. The whole parliamentary constituency, as enrolled in 1832, consisted of 14 electors; and, consequently, it is impossible to supply from them a council of the present number. The whole revenue of the burgh, derived from customs and small dues, consists of £3 8s. 2d., and the average expenditure appears to be £1 13s. 1d. There are only two houses in the village which pay the inhabited house-duty. The chief office-bearers of the burgh are non-resident. The provost lives in London, and the town-clerk resides at Kirkcudbright." When Charles I., in the course of a conciliatory visit to Scotland, lavished upon his principal Scottish subjects such honours and bounties as he could bestow, he attached Sir John Gordon of Lochinvair to him, by giving him a peerage with the title of Viscount of Kenmure, and by creating the royal burgh on his estate. But no houses had then been built, and no population settled down, on the site of New Gallo-way. The spot, exulting in burgh-privileges, and specially favoured by its lords, seems to have soon attracted a few inhabitants. But as the burgh has, for upwards of a century, experienced little or no increase, and is so situated as to afford hardly any promise of ever bounding beyond its hamlet-limits, it probably was almost or altogether as populous a short time after it was founded as it is at the present day. The place has no trade or manufactures. The inhabitants are mechanics, agricultural labourers, a few alehouse-keepers, and two or three shop-keepers. A justice-of-peace court is held here on the first Monday of every month. There are annual fairs on the first Wednesday of April, and the first Wednesday of August, both Old Style. New Gal-loway is reported to be the only royal burgh in Scotland which, in 1819, petitioned parliament against burgh reform; and it is alleged to have adopted its singular and solitary course, from the circumstance of its provost and bailies being the domestics or employées of its noble proprietor. The burgh unites with Wigton, Stranraer, and Whithorn in returning a member to parliament. Parliamentary constituency, in 1839, 17. Population, in 1821, 450; in 1831, 1,128. Houses 190.

GALSTON, a parish in the north-east corner of the district of Kyle, Ayrshire. It is bounded on the north by Irvine water, which divides it from the parishes of Kilmarnock and Loudon in the district of Cunningham; on the east by Avon water, which divides it from the parish of Avondale in Lanarkshire; on the south by the parishes of Sorn and Mauchline; and on the west by Cessnock water, which divides it from the parishes of Riccarton and Craigie. In extreme length, from east to west, it measures from 12 to 13 miles; and in extreme breadth, from north to south, $4\frac{1}{2}$ miles; but it is extremely irregular in outline, and contains scarcely 23 square miles of superficial area. The surface differs widely in the several districts; but, on the whole, is a level variegated with considerable hills. The most upland portion is the eastern and south-eastern; and there it is, for the most part, dingily carpeted with heath, moorland, and moss. Along the banks of the Irvine, over nearly the whole length of the parish, is a stripe of plain, covered with rich alluvium, and delightfully fertile and well-cultivated. South of this plain, over a distance of $2\frac{1}{2}$ miles, a very wide belt of forest stretches east and west,

and, along with lesser belts and clusters in other localities, occupies about 1,000 acres. About two-thirds of the whole parish are arable, and about four-tenths are pastoral or mossy. There are few places in the county in which improvement has made such rapid progress as Galston moor. About 30 years ago, the whole presented a bleak and sterile appearance; but by the judicious and enterprising spirit of the late Nicol Brown, Esq. of Lanfine, the aspect of the whole is changed: well-constructed farm-steadings, regular hedge-rows, and healthful plantations now give beauty and life to the scene; and the ground that was once unproductive is now bringing forth abundantly. Bruntwood-loch, in the south-west extremity, formerly the resort of wild ducks and swans, has recently been rifled of its ornithological wealth by agricultural improvement, and made to contribute its bed for the growth of the fruits of the earth. Loch Gait, at the eastern extremity, once a sheet of deep water, abounding in trouts and very large eels, and the chief source of the Water of Avon, which gives name to the district of Avondale in Lanarkshire, has now, by some strange process, become transmuted into a pitiful marsh. A considerable proportion of the hills and rising grounds of the parish terminate in whinstone summits. The highest elevations are Distinct-Horn and Molmont-hill, both in the eastern division, which rise respectively 1,100 and 1,000 feet above the level of the sea. Molmont-hill is arable to the top, and commands an extensive and delightful prospect. A spectator, standing on its summit, looks immediately down on the windings of the Irvine, the thriving town of Galston, and the ancient seats of Cessnock tower and Loudon castle, with their extensive woods and ornamented demesnes; he surveys, in the distinct tints and perfect shadings and perspective of Nature's own painting, all Cunningham, most of Kyle, and a great part of Carrick; he sees, right before him, across the glittering frith of Clyde, the huge barometer of Ayrshire, the mystic-looking island of Arran, shrouded at times, and at times gorgeous and brilliant in its cloudy drapery; and he even obtains, on a clear day, a far-off and almost mysterious view of the apparently sinking coast of Ireland. The climate of the parish, though moist, is not unhealthy; a frequent prevalence of high winds, operating, it is believed, to prevent insalubrious effects from very frequent falls of rain. About 90 years ago all the fuel used in the parish was peats from Galston moor, excepting a few coals, brought, in sacks on horses' backs, along almost impassable roads, from Caprington near Kilmarnock. But now, though the operations are greatly hindered by the prevalence of "dikes," coal-mines are extensively worked in the western district from the coal-field of Ayrshire, the dip of whose strata here is north-west. On Molmont-hill agate and chalcedony frequently occur, though seldom of a character to be cut into gems; and at its west base, in the channel of Burn-Anne, is found the beautiful stone called the Galston pebble. On the summit of the same hill are remains of a Druidical circle, great part of which has been destroyed, originally about 60 feet in diameter. At Claymore, half-a-century ago, an urn was dug up containing several ancient coins; at Waterhaughs twenty-two silver coins were discovered; and, in 1831, in the eastern part of the parish, a coin was found of Cæsar Augustus. At a place called Beg above Allanton are rude traces of an extensive Roman camp, where the patriot Wallace, with only fifty followers, obtained a complete victory over an English officer of the name of Fenwick at the head of 200 men. Wallace had several places of retirement in the uplands on the eastern verge of the parish, and in those of the conterminous parish

of Loudon; and has bequeathed to a hill in the former, and a hollow glen in the latter, the names respectively of Wallace-hill and Wallace-gill. Excellent turnpikes and good parish roads traverse Galston in various directions to the aggregate extent of about 30 miles. Its western division, in particular, is cut from north to south by the turnpike between Glasgow and Dumfries. Population, in 1801, 2,139; in 1831, 3,655. Houses 417. Assessed property, in 1815, £9,638.—Galston is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Duke of Portland. Stipend £178 16s.; glebe £15. Unappropriated teinds £178 16s. The parish-church was built in 1808. Sittings 1,028. A United Secession congregation, established about the year 1786, has a place of worship which was built in 1797. Sittings 547. Stipend £104, with a manse and garden. Salary of the parochial-schoolmaster £34 4s. 4d., with about £45 fees and £10 other emoluments. Maximum attendance at the parish-school 131. There are four schools non-parochial attended by a maximum of 316 scholars. In three of them Latin is taught, besides more ordinary departments. The late Charles Blair, Esq., left the whole of his property for the establishment of a free school in Galston: to be brought into operation so soon as the property should realize £200 per annum. Such being now the annual rental of the property, the trustees erected a structure at once massive and elegant. The dwelling of the teacher is in the lower flat, the school-room above. The salary of the teacher is, according to the will, £40 per annum; but the trustees are enabled, without any violation of either the letter or spirit of the will, to make it £60 per annum.—The church of Galston was anciently dedicated to St. Peter; and, in 1252, it was granted to the convent of Red friars at Faile, and continued in their possession till the Reformation. Before 1471, a chapel was founded in Galston, and dedicated to the Virgin Mary; and it was upheld by an endowment for the support of a chaplain. In 1578, the property of the chapel belonged, in right of its patronage, to Campbell of Cessnock.

The town of GALSTON stands on the left bank of the Irvine, at the point where it receives the waters of Burn-Anne; 5 miles from Kilmarnock; 14 from Cumnock; 16 from Ayr; and 22 from Glasgow. It occupies a low and sheltered site, surrounded on all sides by gentle rising grounds, is overhung on the north by the wooded "banks and braes" of Loudon, and altogether has a very pleasing appearance, and exerts a considerable local influence in the midst of an opulent and productive district. A fine stone-bridge of three arches communicates between it and the northern bank of the Irvine. Loudon castle lifts its magnificent castellated pile into view, from amidst a rich embowering of woods, about a mile to the north. In the town are the parish-church and the United Secession meeting-house, the former ornamented with a spire and clock; 4 corn-mills, 1 lint-mill, 1 paper-mill, and 2 saw-mills. But the chief occupation of the inhabitants is cotton-weaving. The principal manufacture, during the years of the hamlet-history of the place, was shoes for the merchants of Kilmarnock or for exportation. But when, in dependency on Paisley and Glasgow, the weaving of lawn and gauze was introduced, it somewhat suddenly expanded the bulk of the hamlet, gradually swelled it into a small town, and, for a long period, gave it a healthy and athletic aspect. The first loom for light work was set up in 1787; but so early as 1792 the number of looms was about 40, and in 1828 it had increased to 460. In 1799 the population was 455; in 1792 it was 573; and in 1831 it had increased to 1,891. But though, sub-

sequently to the last date, population continued to increase, weaving had begun to receive such a check that, between 1828 and 1838, the number of looms was reduced from 460 to 423. Galston has four annual fairs; only two of which are of any importance, held respectively on the third Thursday of April, and the first Thursday of December. A stage-coach passes through, and affords opportunities of easy communication with Ayr, Edinburgh, and places intermediate. Another stage-coach, which traverses the parish not far from the town, maintains communication with Glasgow and Dumfries, and, through the latter, with Carlisle and London. One carrier travels six days a-week to Kilmarnock; and two travel twice a-week to Glasgow. Near the town is the 'Patie's mill' of song; and 3 miles distant, farther up the Irvine, is the large village or little town of Newmills, partly in Galston parish, but chiefly in that of Loudon: See NEWMILLS.—"The number of persons," say the commissioners on municipal corporations, "who reside in the village of Galston, whose rents in property or tenantry amount to £10 and upwards, is 43; of those whose rents are above £5 and under £10, the number is 113.—The inhabitants, feeling the want of a magistracy in the village, made application, a few years ago, to the baron-bailie appointed by his Grace the Duke of Portland, the superior of the village, to delegate his powers to two persons in the village. The application was granted, and two persons named out of a list fixed upon by the inhabitants. In addition to the two bailies there are 12 councillors, one-half of whom retire annually; their places are supplied by the election of the householders, who meet and vote by signed lists. There are no customs or assessments levied. The bailies impose small fines for assaults or disorderly conduct tending to a breach of the peace, and, failing payment, cause the delinquents to be imprisoned for a short time in a place of confinement which they have. The bailies represent that they are destitute of any real authority, and are in doubt as to the extent to which they are entitled to carry the little they possess."

GAMRIE, a parish in the district of Buchan, Banffshire; bounded on the north by the Moray frith; on the east by Aberdour; on the south by King Edward and Monwhiter; and on the west by the river Deveron, dividing it from Banff. It is about 4 miles in breadth, and extends about 9½ miles along the sea-coast, which is very bold, consisting of an almost continued front of stupendous rocks, in many places 200 or 300 feet perpendicular to the sea. In some parts there are small creeks, which have been converted into harbours, particularly at the town of Macduff, and the village of Gardenston. Houses 851. Assessed property, in 1815, £4,880. Population, in 1801, 3,052; in 1831, 4,095. The surface is uneven, and the soil varies from a fertile loam to a barren benty heath; but the whole parish is now in an advanced state of cultivation. Part has been planted with trees, and part affords very good pasturage. The only important stream connected with the parish is the Deveron, on which there is a valuable salmon-fishery. MACDUFF—which see—is a populous and thriving fishing-town, near the Deveron, and opposite Banff. It is of modern erection, and stands on property belonging to the Earl of Fife, on whose estate here there is a good slate-quarry, nearly similar in quality and colour to the Easdale slate. Near the town of Macduff is a mineral spring, called the Fairlair well, which is strongly impregnated with neutral salts. The other villages in the parish are Corvie and Gardenston, in the immediate vicinity of the latter of which, and near the eastern extremity of the parish, is Troup-

house, and the conspicuous promontory of Troup-head. "Not far from the House of Troup," says the author of the *Old Statistical Account of Gamrie*, "are three great natural curiosities. 1. A perpendicular rock of very great extent, full of shelves, and possessed by thousands of birds called Kitty-weaks. Some people are fond of eating the young Kittys: the shooting of them is a favourite diversion every year. The season for this is commonly the last week of July. 2. A cave, or rather den, about 50 feet deep, 60 long, and 40 broad, from which there is a subterraneous passage to the sea, about 80 yards long, through which the waves are driven with great violence in a northerly storm, and occasion a smoke to ascend from the den. Hence it has got the name of Hell's lumb, *i. e.* Hell's chimney. 3. Another subterraneous passage, through a peninsula of about 150 yards long from sea to sea, through which a man can with difficulty creep. At the north end of this narrow passage is a cave about 20 feet high, 30 broad, and 150 long, containing not less than 90,000 cubic feet. The whole is supported by immense columns of rock, is exceedingly grand, and has a wonderfully fine effect, after a person has crept through the narrow passage. This place has got the name of the Needle's eye. There are in the parish several tumuli."—This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, the Crown. Minister's stipend £224 13s. 1d.; glebe £10. Unappropriated tithes £452 9s. 7d. Church built in 1830; sittings 1,000. A portion of the parish, containing the town of Macduff, was annexed, upwards of 60 years ago, by authority of the presbytery, to the church of Macduff; but it has not yet been erected into a parish, *quoad sacra*. Chapel built in 1805; sittings 858. Stipend £90. There is a preaching-station in the village of Gardenston, supplied, conjunctly, by the Independents and the United Secession: a house has been recently built for this station. There are two parochial schools: the salaries of the masters, conjointly, are £51 6s. 6d.; school-fees £61: other emoluments, including two shares of the Dick bequest, £53. There are 10 private schools in the parish.—The sea-coast along the parish of Gamrie in Aberdeenshire, is one of the boldest and most interesting to be found in the kingdom: and to the mineralogist, in particular, it affords examples of the leading truths of his science in the most diversified manner, and on the most gigantic scale. The rocks, which at intervals arise in rugged majesty along the shore, are of great height, and of a most formidable appearance, and stand perpendicularly from the ocean as striking monuments of those tremendous convulsions which at different times have agitated the world which forms our present abode. Nor is their interest confined merely to the student of mineralogy; for to the ornithologist, likewise, they are attractive in no ordinary degree. They are annually resorted to by immense numbers of those birds which are properly denominated sea-fowl; and it is remarkable that the various tribes of which the general body is composed are most punctual with regard to the particular period at which they respectively and yearly return from the cold regions of the north, for the important and pleasing purposes of incubation. The varieties which appear in greatest numbers are the Kittiwake (provincially *Kitty*), the Razor-bill Auk (provincially *Coulter*), the Guillemot (provincially *Queet*), and, lastly, the Puffin (provincially *Tammy norie*). To a stranger who visits, for the first time, the scene of their vernal abode, the spectacle presented is striking and interesting in no ordinary degree. On the various portions of the immense rocks, which rise in sublime magnificence before him, sit thou-

sands and tens of thousands of the birds to which we are now directing our attention. And it is curious to observe the regularity with which the different species attach themselves to the places most suited to their various wants and capacities. The kittiwakes and guillemots inhabit the firmest and most precipitous of the rocks, on the ledges of which they form their nests. These ledges, when viewed from below, appear to the spectator as scarcely presenting an inch's breadth of surface, and yet the birds contrive to form their nests, which, in case of the kittiwake, is done with grass, and to hatch their young in this seemingly impracticable situation; although it sometimes indeed happens, that, on being suddenly startled, their eggs tumble down into the sea. Although associated together, however, no actual intermixture takes place between the two species; for they have each their own particular ledges on which they sit, drawn up like regiments of soldiers, in the most imperturbable manner, and if startled by a more than ordinary alarm from their nests, they nevertheless return after a single evolution of the air, to the important duties from which they had been with difficulty aroused. The two species are easily distinguishable. The kittiwake is at once conspicuous by its snow-white head and breast, its yellowish bill, and its pearly blue mantle; while the guillemot is recognised by its upright figure, the legs being placed very far back, as is the case with most sea-fowl, and by the great portion of brownish sleek black with which its plumage is diversified. The peculiar nature, indeed, of the configuration of this latter bird, by which, when sitting or attempting to walk, its whole leg appears as if it were its foot, has given rise to the popular but erroneous idea that it hatches its eggs by means of covering it with the part of its body in question. On a promontory immediately adjoining, and composed of softer materials, are assembled the puffins, or, in the language of this part of the country, the Tammy nories, who, laying their eggs in holes burrowed in the earth, cannot, of course, take up their abode on the hard ledges occupied by the birds whose position we have already described. In the same manner the Razor-bills, although occasionally associating with the guillemot, occupy, in general, a separate and somewhat soft and perforated part of those enormous precipices, which, in the busy season of spring, teem with life in all directions. These birds (the razor-bills) very much resemble the guillemots in appearance, especially when seen at a distance on wing. They may, however, on a nearer approach, be distinguished from the latter by the broad form of their bills, and by the superior length of their wings, which are, moreover, marked by a conspicuous streak of white along their outward extremity. Some of this enormous body of sea-fowl (probably males) are constantly in motion, either gracefully and lightly swimming about in detached groups on the sea, or, by their circular evolutions in the air, indicating to the yet distant visiter the particular rock where he may hope to encounter them in congregated thousands. And on a fine day, and under the mild influence of a vernal and unclouded sun, the scene is particularly beautiful. The ocean lies tranquil, and stretched out before the spectator like an immense sheet of glass, smiling in its soft and azure beauty, while over its surface the kittiwake, the guillemot, the razor-bill, and the puffin, conspicuous by the brilliant orange and scarlet of its bill and legs, are beheld wheeling with rapid wing in endless and varying directions. On firing a gun, the effect is even startling. The air is immediately darkened with the multitudes which are aroused by the report; the ear is stunned by the varied and dis-

cordant sounds which arise; the piercing note of the kittiwake (from which its name has been derived); the shrill cry of the tammy norie; and the hoarse burst of the guillemot, resembling, as it were, the laugh of some demon, in mockery of the intrusion of man amid these majestic scenes of nature; all these combined, and mingled occasionally with the harsh scream of the cormorant, are heard high above the roar of the ocean which breaks at the foot of these tremendous and gigantic precipices.

GANNACHY BRIDGE. See **FETTERCAIRN**.

GARAN, a small island on the north coast of Sutherlandshire; $3\frac{1}{2}$ miles east-north-east of Cape Wrath.

GARAN, or **GARANHILL**, the name originally and for some years given to the village of Muirkirk in Ayrshire, and borrowed from the rising ground or eminence on the face of which it stands, but long since entirely discontinued in popular usage. See **MUIRKIRK**.

GARDENSTON, a small fishing-village and seaport, in the parish of Gamrie, Banffshire, situated 14 miles west of Fraserburgh and 8 east of Banff. It possesses a tolerable harbour for the accommodation of small vessels and fishing-boats.

GARGUNNOCK, a parish in the north of Stirlingshire; bounded on the north by the river Forth, which divides it from Perthshire; on the east by St. Ninians; on the south by Fintry; and on the west by Balfon, a small detached part of Perthshire and Kippen. In figure it approaches the rectangle; but on the north-west extremity it considerably expands,—at the south-west extremity it has its angle much rounded off,—and along its northern boundary it follows the remarkable and characteristic sinuosities of the Forth. In extreme length, from a link in the Forth at Nether Kerse on the north to the point where Burnfoot-burn leaves it on the south, it measures $5\frac{3}{4}$ miles; and in extreme breadth—at its north and broader end—from an angle near Redhall on the east to Glenterran mill on the west, it measures 4 miles. The surface is naturally distributed into compact districts of moorland, dry field, and carse. The moorland, comprising rather more than one-third of the entire area, is part of the hilly range which extends from Stirling to Dumbarton, and, down to about half-a-century ago, was esteemed of no value except for its turf, and abandoned to sterility and solitude, with only two miserable huts or shielings to shelter human beings among its wastes. But it was almost suddenly discovered to be improveable as a prime sheep-walk, and has passed through a series of georgic operations which have wholly changed its aspect and made it a moor only in name. From its various uplands and northern slopes, magnificent views are obtained of the luxuriant carse-lands below studded with mansions and fretted over with demesnes, of the singular scenes spread over the moss of Kincardine by the noted improvements of Mr. Drummond, of the foldings and windings of the Forth as far as the eye can reach along its level but luxurious bed, and of the range of varied and blue mountain-land which wends round the distant horizon. Several rills, flowing from different parts of the moor, and concentrating their waters into brooks, fall over craggy precipices, and form cascades which, after heavy rains, are seen and heard at a great distance. A fine view of the slope of the uplands, gemmed with the tinted froth and spray of the cascades, is obtained at the west end of the village of Gargunnoch. The dry field district slopes gently from the moorland to the carse, and is carpeted with a light sandy soil which quickly absorbs rain. Till toward the end of last century, the dry fields, for the most part, lay waste and wild,

overrun with furze and broom, with scarcely a tree to break the dull uniformity of their surface. But headed by the proprietor of the estate of Boquhan, and stimulated by his energetic and skilful example, all the heritors united or rather vied in such efforts of draining, ditching, hedging, planting, and other improving operations, as speedily achieved a complete and delightful change of both their aspect and their character. About a mile to the eastward of Leckie, where the road from Stirling to Dumbarton passes over a rising ground, the dry fields spread out before the spectator in a sheet of rich green beauty. The tufted hill-slopes on the back-ground,—the glens coming down in dresses of copsewood and of regular plantation,—the village, the church and manse,—the chimney-tops of Gargunnoch house, just discerned above the wood,—the well-dressed fields, some for pasture, and others for various sorts of cropping, and all enclosed with dikes and hedges in excellent repair,—form altogether a very fine landscape. The carse-lands form a level stripe along the Forth, and are believed to have all been originally under water; and they have exhibited, in various places, beds of shells such as those which are now in the frith of Forth. In later times they seem to have been covered with part of what has been called the Caledonian forest; and, at all events, they afforded refuge, when the Romans were in the neighbourhood, to the fugitive natives, and occasioned the invaders no little trouble in denuding them of large trees. After the forest was cut down, part of them—like the whole of those of Blair-Drummond on which the celebrated improvements were made—seem to have become moss; and toward the close of last century, about two acres on the property of Boquhan remained in the mossy condition. Less than a century ago, they lay almost in a state of nature, unprofitable to the landlord, and repulsive to the agricultural operator: bad roads, the want of enclosures, the stiffness of the soil, and ignorance of that species of farming which was suitable to the district, seemed to place insurmountable obstacles in the way of improvement. But long before the 18th century closed, the lands assumed an appearance quite surprising to any one imperfectly acquainted with the results of skilful experiments in husbandry; and now they everywhere bear aloft those luxuriant crops of prime grain for which the carses of Scotland, particularly those of the Forth and the Tay, are famous. The glen of Boquhan, as seen from a road along its east side, exhibits, on a limited scale, a most romantic view; and as seen from the bottom, at and near the field of Oldhall, displays, says a writer who describes it, “a scene perfectly wild, as though nature were in ruins.” Gargunnoch house mingles the refined and ornamental architecture of modern times with the massive masonry of the age of intestine feuds; presenting a fine front of recent construction in combination with an east wing of considerable antiquity, in which there is a sort of tower, originally fortified by a high wall and strong gate. On a spot still pointed out on the bank of the Forth, stood ‘the Peel of Gargownno,’ or Gargunnoch, which Sir William Wallace, with a few followers, took by stratagem from an English party stationed there to watch the passage of the Frew in its vicinity; and about $\frac{1}{4}$ of a mile westward are the remains of the bridge of Offers by which Wallace crossed the Forth, on his way to the moss of Kincardine. A little south of the village of Gargunnoch is an artificial conical mound called the Kier-hill, around which are traces of a circular ditch and rampart, and which, whatever was the date of its origin, seems to have been the camp or post of Wallace on the night of his exploit at the peel. A great quantity of human

bones, and some pieces of brass armour and points of spears, were dug up 50 or 60 years ago on the lands of Boquhan,—the relics probably of the battle of Ballochleam, which was fought on the adjacent fields. The turnpike-road from Stirling to Dumbarton runs right across the parish, over $3\frac{1}{2}$ miles, in a direction due west, and at an average distance of $1\frac{1}{4}$ or $1\frac{1}{2}$ mile from the Forth. On this road, $1\frac{1}{2}$ mile from the eastern boundary, stands the neat village of Gargunnoch, with the parish-church, pleasantly situated on the side of a rising ground, and adorned with little gardens. A 'Gargunnoch Farmer's club' was instituted by General F. Campbell in 1796, and enriched, in 1807, by a bequest from him of £500; and it extends its benefits to 11 parishes, including those of Stirling and St. Ninians, and three in Perthshire. Population of the parish, in 1801, 954; in 1831, 1,006. Houses 165. Assessed property, in 1815, £7,811.—Gargunnoch is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, Sir F. Walker Drummond. Stipend £155 1s. 9d.; glebe £15 10s. Unappropriated teinds £129 10s. 2d. Parochial schoolmaster's salary £25 13s. 3d., with £11 fees and £2 2s. other emoluments. The parish-school is attended by a maximum of 41 scholars, and two unendowed schools by a maximum of 95.

GARIOCH, an inland district of Aberdeenshire; bounded on the north-east and east by Formartin; on the south and west by Marr; and on the west and north-west by Strathbogie. It contains 150 square miles and 15 parishes. On account of its fertility it used to be called the Granary of Aberdeenshire. The surface is rather mountainous and cold—the district being at all events bounded on every side by a range of hills, beginning near Old Meldrum, and extending westward about 20 miles;—but the valleys are warm and well-sheltered, and from the salubrity of the air, it has long been famed as a summer-resort for the valetudinarian. This district gives name to the presbytery holding its seat at **CHAPEL-OF-GARIOCH**: which see. The Inverury canal, described under article **ABERDEEN**, has brought this district into more convenient and ready intercourse with the coast. Population, in 1811, 12,522; in 1831, 15,787. Houses, in 1831, 3,143.

GARLETON HILLS, a ridge of hills of inconsiderable height, but somewhat conspicuous appearance, in East-Lothian. They rise in the western extremity of the parish of Haddington, between the town and the frith of Forth, and continue their elevation for a few miles eastward. To a spectator from Edinburgh, they close up the view of the delightful vale of Haddingtonshire. Down their southern declivity run a few belts of regular plantation. On one of their principal summits stands a monument to the memory of John, Earl of Hopetoun. The Garleton hills are of the porphyry series. The stone, as it occurs here, has in general a basis of a largely foliated clinkstone, enclosing crystals of felspar. In the line of the ridge, at the Abbey toll, about a mile to the eastward of Haddington, there occurs a large bed of felspar tufa.

GARLESTON, a small town and sea-port in the parish of Sorbie, on the east coast of Wigtonshire. The main body of it bends in the form of a crescent round the head of the bay of Garlieston. The houses are built of whinstone, and have a neat, substantial, and cheerful appearance. The town was founded by John, 7th Earl of Galloway, when Lord Garlies, and in ten years had an accession of 34 houses. Skirting it on the south are the fine plantations of the Galloway demesne, overlooked at $\frac{1}{4}$ of a mile's distance by the fine form of **GALLOWAY**

HOUSE: which see. From nearly the date of its origin, the town has had a rope and sail manufactory which employs about ten hands, and sends its produce chiefly to sea, and partly to inland markets. Ship-building is, to a small extent, carried on; one vessel, on the average, being built in the year. Fishing has for several years been a busy but somewhat doubtful employment: but the town derives its chief, if not even its whole importance, from its bay and its harbour. From the headland of **EAGERNESSE**—which see—Garlieston bay runs westward to the land about $1\frac{1}{2}$ mile; but from the opposite headland, which is very near the town, it extends not much more than half-a-mile; and it is about half-a-mile of average length. A considerable stripe at the head is dry at low water. The small streams, Broughton and Pontinburn—one of them coming down from **DOWALTON LOCH**, which see—empty themselves into the bay; and just before doing so, are spanned by convenient bridges. The bed of the bay is a deep soft clay, on which vessels lie in the greatest safety, and have the best anchorage. The shore is sandy and flat; but at Eagerness point it is rocky though not high, and on the north, is overlooked by some rising grounds. The bay opens out on the Irish sea in the same direction as the gulf called Wigton bay, pointing right forward to the centre of the channel between the Isle of Man and the coast of England; but it forms in reality a small wing or indentation of Wigton bay, and, along with Fleet bay on the opposite shore, serves to expand Wigton bay from an average width of $4\frac{1}{2}$ miles, to a subsequent average width of 9 or 10. The water is of a bright green colour, remarkably pellucid; and is from twenty to thirty feet deep. The tide flows direct out from Wigton bay six hours, and takes the same time to return; but in Garlieston bay it flows five hours from the south and ebbs seven. Vessels, in a fair wind, go hence to Whitehaven in four hours, to the Isle of Man in three, to Liverpool in twenty-four, to Dublin in twenty-four, and to Greenock in thirty. The bay is admirably adapted to accommodate, in particular, the trade between Dublin and Whitehaven, to which one tide is of great consequence; and, in general, all the trade of the West of England from Carlisle to Liverpool, of the east coast of Ireland and the Isle of Man, and of the west coast of Scotland to England and Wales. The harbour, naturally good, was, several years ago, greatly improved and somewhat enlarged, and now contains berth-room for thirty vessels. At high tides its depth of water is about 18 or 20 feet. Belonging to the port are 15 vessels; only four of which, however, carry so much as 100 tons. Nearly the whole exports consist of fish and agricultural produce; the chief import is coal from Cumberland. Population, in 1792, about 450; in 1840, about 600. Garlieston is the site of an Independent chapel, whose minister has about £60 of stipend; and of a school which has long been celebrated for the tuition it affords in navigation and practical mathematics.

GARMOUTH, or **GARMACH**, a village, and burgh-of-barony, in the parish of Speymouth, county of Moray; 4 miles north of Fochabers; at the mouth of the river Spey, which here forms a good harbour. The immense quantities of wood annually floated down the Spey, from the forests of Strathspey and Badenoch, have rendered Garmouth a place of some consequence. A great many vessels have been built here, entirely of native timber, and altogether this is a place of considerable trade. It has also the advantage of a valuable salmon-fishery in the Spey. The town is chiefly of modern growth, and is neatly laid out in regular streets, though some of the houses are by no means of a first-rate order:

indeed some years ago most of them were built of clay. The Duke of Richmond is superior. Population, in 1821, about 600; in 1831, 750.

GARNKIRK AND GLASGOW RAILWAY.—

This was the first railway formed in Scotland for the purpose of conveying both goods and passengers by locomotive engine power; and it especially deserves notice on account of the important changes and improvements it has aided in effecting, on the valuable but previously almost inaccessible district of country near its eastern termination; besides the benefit it conferred on Glasgow, by raising a keen competition, both in the mode of conveyance, and in the source of supply of coal to the city, and the consequent reduction of price of that indispensable article. The act of parliament incorporating the company of proprietors, and authorizing the formation of the railway, was passed in 1826, the line having been then planned to start from the Monkland and Kirkintilloch railway—at that time in the course of formation—at a point near to Red Bedlay in the parish of Calder. This starting point was, however, altered in consequence of the unfavourable gradients it involved, and also as being too far north of the great mineral fields. A second act was obtained in 1827, to enable the proprietors to alter the line to its present course. Two subsequent acts have been granted to the company, relating chiefly to matters of finance—one in 1830, and the other in 1838. The railway commences at, or runs into the Monkland and Kirkintilloch line, on the estate of Gartsherrie, parish of Old Monkland, belonging to Mr Colt, the principal part of the minerals in which estate are held in lease by Messrs. William Baird & Co., whose very extensive and well-arranged iron-works are erected upon a feu on this estate. From Old Monkland, which is both rich in soil and in minerals, where intersected by the railway, it enters Calder parish, near to Kingshill. The fire-brick manufactory at Heathfield, the property of Dr. Jeffray of Glasgow college, of which Mr. Ferguson is tenant, and another work of the same kind, though of greater extent, upon the estate of Mr. Sprot of Garnkirk, are touched upon by the line.* There is also a large railway traffic in line from this estate. The land in this district is generally damp and stiff, excepting the reclaimed parts of the mosses, belonging to the two proprietors last named. The next parish intersected, is the Barony of Glasgow, commencing at the estates of Robroyston and Milton. Here the ground is of superior quality. The remainder of the railway, including the chief part of the depot, the engine-house, the work-shops, and the office, are situated in the Inner High Church parish of Glasgow, near to the stupendous chemical works of Messrs. Tennant of St. Rollox. A branch from the depot reaches the Forth and Clyde junction canal, into the vessels on which goods can be easily loaded from the railway waggons. The length of the railway is $8\frac{1}{2}$ miles of double line. Taking the railways with which the Garnkirk line communicates, viz. the Monkland and Kirkintilloch, formed prior to it,—

* The Garnkirk fire-clay has, as appears from the following analysis by Professor Thomson, been found superior to the celebrated Stourbridge clay:—

	Stourbridge clay.	Garnkirk clay.
Silica	72.516	53.4
Alumina	20.264	43.6
Lime	0.891	0.6
Peroxide of Iron	3.308	1.8
Protoxide of Manganese	1.483	0.6
Phosphate of Lime	1.533	—
	100.000	100.0

From different experiments, the Garnkirk clay has been found to stand a much higher heat than any hitherto known in this country. The colour resembles light stone.

and the Ballochney, the Wishaw and Coltness, and the Slamannan, subsequently made,—an extent of railway communication of about 50 miles is opened up to Glasgow, and prolongations are yearly forming, and still further developing the agricultural and mineral resources of an immense extent of country, in the shires of Lanark, Stirling, and Linlithgow. The execution of this line was attended with some very extensive and difficult operations in cutting and embanking. The greatest cutting is to the east of Provan mill, 3 miles from Glasgow. It is in some parts 42 feet deep, and is a mile in length. One part of it consisted of very hard and tough material, while the other was an almost fluid moss. The excavations in the latter were repeatedly filled up by the closing in of the moss, which being as often removed, the sides of the cutting became so much depressed to a considerable distance from the line of railway, that it now appears more like a natural valley through the moss than an artificial cutting. The largest embankment is at Germiston, a mile east of Glasgow. It was till lately the largest work of the kind in the kingdom. The length of this bank is three quarters of a mile; the height for a considerable way upwards of 40 feet, and the breadth at the top 30 feet. There are two substantial and handsome bridges over the railway at Provan mill and at Gartcosh. Near the latter place, there is also a flat cast-iron bridge for the railway over the public road. There are also several substantial stone viaducts and aqueducts passing under the different embankments. There are no tunnels.

The gradients consist of an ascent of 37 feet per mile, or 1 in 142 for two-and-a-half miles, and the rest of the line is level with the summit level of the Monkland and Kirkintilloch railway. The gauge, or width between the rails, is $4\frac{1}{2}$ feet, being an inch less than that of the Liverpool and Manchester railway, which was executed a short time previous to this line, and its plan generally followed. The original estimate for this railway was £50,000; the actual cost of the railway and its contingencies was about £80,000; and the whole expense of the stock of the company, including the railway, with additions and improvements, and the depots, buildings, and machinery, is about £140,000. The shareholders amount to nearly 100.

The railway was fully opened for traffic on 27th September, 1831; and being the first undertaking of the kind at Glasgow, the ceremony of opening formed a grand public spectacle, and was regarded as a matter of great importance and interest. This railway affords a remarkable instance of the effect of such improvements in creating business. In the original estimate of revenue, the expected yearly proceeds from minerals and other traffic, excluding passengers, was £4,360; and the result in each of the first two years, (1832 and 1833,) did not much exceed that sum; but it gradually and steadily increased, and is now more than £12,000. And, with regard to the conveyance of passengers, the original estimate of revenue was £500; yet the very first year yielded upwards of £1,700; and in the last year, 1840, the sum drawn for passengers' fares was above £3,700. The total original estimate of gross revenue was £4,800 per annum; the actual result, in 1840, is above £15,700. The original estimate of the current expense is also curious when compared with the results. The estimate was £660 per annum; the reality is above £7,000. This undertaking pays its proprietors a profit of 6 per cent. at present; and its prospects are rapidly improving. The following table will show the amount of traffic from its commencement to the end of 1840:—

COMPARATIVE TABLE

Of the Garnkirk and Glasgow Railway Traffic and Revenue, for the Nine years preceding 1st January, 1841:—

Years.	No. of Tons.	Revenue, exclusive of Passengers' Fares.	No. of Passengers.	Revenue from Passengers.	Gross Revenue.
1832	114,144	£4,758	62,605	£1,717	£6,476
1833	112,471	4,794	96,003	2,440	7,234
1834	132,657	5,428	117,743	2,985	8,413
1835	143,520	5,872	136,724	3,438	9,311
1836	137,867	6,473	145,703	3,850	10,324
1837	146,851	8,036	119,490	3,803	11,839
1838	181,615	9,523	126,810	4,119	13,643
1839	206,275	10,065	97,746	3,397	13,463
1840	254,010	12,001	116,187	3,712	15,713

Six locomotive engines are maintained by the company in working order; and nearly 20 coaches for passengers, and several hundreds of waggons are also in use upon the line. The engines and trains for goods run at various hours daily, the number of trips varying according to the trade. There are always two heavy goods engines at work, and sometimes three. These can draw a gross load on the level of from 200 to 300 tons, at a rate of speed of 8 miles an hour. The regular load is from 120 to 160 tons. The passenger trains run twelve times daily. Eight of these are between Glasgow, Coatbridge, and Airdrie, by the company's own trains; and four are by the Slamannan railway company's trains, which ply on this and the intervening railways between Glasgow and the Edinburgh Union canal. The rates levied by the Garnkirk and Glasgow company are less than one penny per mile for passengers. For coal, one penny per ton per mile; and for haulage by the engines, one penny per ton per mile. For grain, manufactured goods, and certain other articles, higher rates of tonnage are charged, but not exceeding on the average twopence per ton per mile.

GARROCK. See GARVALD, Dumfries-shire.

GARNOCK (THE), a small river in the district of Cunningham, Ayrshire. It rises at the foot of a very high hill in the moor called the Misty-law, at the boundary between Cunningham, or the parish of Kilbirnie, and Renfrewshire. During 5 miles it flows south-eastward; and then, during 2½ miles it flows due south; intersecting, over nearly the whole distance, the parish of Kilbirnie, and, at the middle point of its southerly course, sweeping past Kilbirnie village. Having now entered the parish of Dalry, it flows 3½ miles, including two considerable sinuosities, in a south-westerly direction; and it then resumes its southerly course, and flows 8 or 9 miles through the parish of Kilwinning and between the parishes of Irvine on the east, and Stevenston on the west, to the sea at Irvine harbour, contributing with Irvine water to form the small estuary above Irvine mouth, and performing some remarkably frolicsome and serpentine evolutions before debouching from the plain. Immediately after its origin, it runs clear, dimpling, and beautiful down the hills; and, before reaching Kilbirnie village, tumbles noisily over a rocky and declivitous bed of porphyry, forming a wild and lonely cataract, known as 'the Spout of Garnock.' In Dalry parish, it moves slowly, with an average breadth of 60 feet, through a fertile plain, upon a gravelly bed; and receives on its right bank the important tributaries of the Rye and the Gaaf. Further on, it is joined on the left by Dusk water; and thence to the sea, it flows through a level and richly wooded country, sweeping past the town of Kilwinning, and making a confluence with the opulent stream of Lugton water. During all the lower part of its course, it, on the one hand, enriches the district with an abundant supply of salmon and various kinds of trouts, and, on the other, menaces it with an occasional devastating freshet. On the 19th of Septem-

ber, 1790, this river—though always subject to overflows—rose 4 feet higher than it was known ever to have done before; and prostrated and destroyed the standing corn in many fields, and careered away to the sea with heavy freights of crops which had been cut. Its entire length of course is about 20 miles.

GARROCH-HEAD, a headland on the south point of Bute, consisting of a collection of steep and narrow ridges, running parallel to each other, and separated by deep and solitary valleys: the whole being divided from the main land by a low, marshy, sandy flat.

GARRY (LOCH), a small lake in that wild and mountainous region in the north-western part of Perthshire, which borders upon Badenoch, and forms a portion of what is called the Forest of Athole. It is situated about 10 or 12 miles north-west of the inn of Dalnacardoch, and between it and the lonely Loch-Ericht. A number of small mountain-streams flow into it, among which a rivulet that issues from the base of Benvoirlich, and the Shallain water are the largest. It discharges its waters, at its north-eastern extremity, by the river Garry, which, after pursuing a south-easterly direction for some miles, falls into the Tummel, near the pass of Killiecrankie. Surrounded on all sides by lofty, rugged mountains, with scarce an opening outwards, but what has been worn by the course of some mountain-torrent, or by the river, few more lonely or deserted scenes can be conceived than Loch-Garry. No signs of life are here to be met with, excepting sometimes a flock of sheep, or a herd of cattle, or, at rare intervals, a solitary shepherd and his dog. No trees wave their graceful branches around this wild lake; nor is there much appearance of vegetation on the mountains, for their huge slopes, bared of soil by the winter's storms, present little else to the view than great masses of naked rock. In a few places, a small portion of level ground may be described on its shores; but for the greater part of its extent the mountains descend sheer down to the water, with scarcely a perceptible footing at their base. On the banks of the Shallain, near its entrance into the lake, a number of little knolls are seen, which have much the appearance of artificial tumuli erected over the remains of long-forgotten warriors.

GARRY (LOCH), a beautiful mountain-lake in Inverness-shire, about 7 miles in length, occupying the lowest part of Glenlarry. It discharges its waters by the Garry into Loch-Oich.

GARRY (THE), a river giving name to Glenlarry, in the district of Athole, Perthshire. Like most of the Perthshire streams it has a lake bearing its own name, [see preceding article,] and is popularly said to have thence its origin. Its real head-water, however, rises on the side of Manbane mountain on the northern boundary-line of the parish of Fortingal, and flows through the parish, first 3½ miles southward, next 2½ miles eastward, and next ¾ of-a-mile northward, receiving, on both banks, considerable tributary torrents from the ravines and gorges of the wild mountain-region through which it has its course. On the boundary between Fortingal and Blair-Athole it expands into Loch-Garry, and is identified for 3 miles northward with that lake. At the point of its efflux from the farther end, it receives from the north-west the tribute of Auld-Corry-Roan, which had flowed 5 miles from the north-west extremity of Blair-Athole, and, making a sudden bend, directs its course towards the south-east. Nearly 5 miles lower down it receives, on its left bank, the large tribute of Edendon water, which had flowed 9½ miles from the northern boundary of Perthshire. A little way farther on it sweeps past the stage-inn of Dalnacardoch; and 2½ miles below the influx of

Edendon water it receives from the north the tribute of Ender water, a stream of 7 miles in length of course: see **ENDER**. Two miles onward, while still flowing in a mountainous region, it begins to be adorned with wooded banks, to riot in a profusion of cataracts and cascades, and to wear an aspect of mingled wildness and beauty. Four miles below its confluence with the Ender it is joined, on its right bank, by the **FEACHORY**, [which see,] and a mile farther on it receives, on its left bank, the tribute of the romantic **BRUAR**: which see. Over the last mile it had flowed nearly due east, and it maintains this direction over a farther distance of $2\frac{3}{4}$ miles, till, sweeping past the demesne and mansion of Blair castle, the church and hamlet of Blair-Athole, it is joined by the bulky and playful waters of the **TILT**. It now, slowly resuming its south-easterly direction, traces for $1\frac{1}{2}$ mile the boundary-line between Blair-Athole and Dull, traverses for 2 miles a corner of the parish of Moulin, bends southward, and, for 1 mile, divides Moulin from Dull, and then loses its name and its waters in the river Tummel. Its entire length of course is 30 miles. From the point of its leaving Loch-Garry, onward to its termination, it brings down, close on its left bank, the Great Highland road from Inverness to Edinburgh. The Garry is probably one of the most impetuous or rather furious rivers of Scotland; and, when flooded by falls of rain or the melting of snow among the mountains, it comes down with a roaring tumultuousness and a terrific burst of accumulated waters which only the banks of solid rock which resist it can confine within harmless limits. But even, on its rocky or gravelly bed, it tears up heavy fragments, and carries them lightly along in the energy of its Highland prowess; and, in various parts of its course, it forms cascades which, in its gentle moods, are romantic, and in its seasons of swollen wrath, inspire a Lowland spectator with awe.

GARSCUBE, a hamlet $4\frac{1}{2}$ miles west of Glasgow. There is here a very fine freestone quarry, of a warm cream or buff tint. It is within 400 yards of the Forth and Clyde canal, and is extensively used by the Glasgow builders.

GARTLY, a parish in the district of Strathbogie, partly in Aberdeenshire, and partly in Banffshire; bounded on the north by Huntly and Drumblair; on the east by Insch and Kinnethmont; on the south by Rhynie; and on the west by Huntly and Cabrach. It is divided nearly into two equal parts by the water of Bogie: the Banffshire moiety is named the Barony, and the Aberdeenshire the Braes. The form of the parish is an irregular oval, extending about 12 miles in length from east to west, and 6 in breadth from south to north across the middle of the district. Square area about 33 miles. Houses 215. Assessed property in Aberdeenshire £2,820. Population, in 1801, 958; in 1831, 584 in Aberdeenshire, and 543 in Banffshire; total, in 1836, 1,136. The hills, which lie on the borders of the parish, are mostly covered with heath, and afford plenty of grouse, &c., as well as a supply of moss for fuel to the neighbouring parishes, and the town of Huntly. From these hills several brooks run into the Bogie, and the valleys watered by them as well as the lands on the banks of the Bogie, are exceedingly fertile. Agriculture is in an advanced state upon upwards of 4,000 acres under cultivation: the remaining 10,300 acres are in pasture, moor, or moss and wood; but there is rather a defect of the last. The Corskie slate-quarries in this parish are very extensive and valuable, producing on an average 340,000 slates per annum, of three qualities,—first and second blue, and green. Several of the glens, however, are exceedingly pic-

turesque,—especially Tillyminnet, a favourite resort of the tourist. The castle of Gartly is an ancient ruin here, in which Queen Mary spent a night on her return from Inverness.—There is no town or village in the parish, which is in the presbytery of Strathbogie and synod of Moray. Patron, the Duke of Richmond. Stipend £191 6s. 5d., with glebe valued at £16. Unappropriated teinds £83 18s. 11d. Schoolmaster's salary £32 per annum: fees, &c. £26. There are no other permanent schools in the parish.

GARTMORE, a village and a *quoad sacra* parish on the southern verge of Perthshire. The village is situated in the peninsula of the rivers Asendow and Kelty, $1\frac{3}{4}$ mile above the point where they unite to form the Forth, in the *quoad civilia* parish of Port-of-Monteith, $\frac{1}{4}$ of a mile from its boundary-line with Stirlingshire. Population, in 1838, 266. The *quoad sacra* parish comprehends the village, and a landward district belonging *quoad civilia* to Port-of-Monteith. Its greatest length is $2\frac{1}{2}$ miles, and its greatest breadth $1\frac{1}{2}$ mile. The church was built in 1790 as a chapel-of-ease, at the cost of £400. Sittings 415. Stipend £70. The minister has a manse. According to an ecclesiastical survey in 1838, the population then consisted of 348 churchmen, and 3 dissenters—in all 351 persons. The parish was erected in 1834.

GARULINGAY, a small island, lying between Barra and South Uist.

GARVALD (THE), a small but interesting stream in the parish of Eskdalemuir, Dumfries-shire. It rises on the boundary-line of the county, between Ettrick-pen and Windfell; pursues a south-easterly course of $5\frac{1}{2}$ miles, including windings; and then flows, for nearly a mile, to the north of east, and falls into the White Esk, half-a-mile above Johnston. From third to half way on its course, it receives, on its right bank, two tributaries, each of nearly equal bulk to its own volume. Ascending the stream from its mouth, a tourist's attention is arrested by a view of the rockiness of its channel and the romantic character of its banks; but these appearances soon subsiding, he looks abroad on the general landscape, or converses listlessly with his own thoughts. In this mood, he is suddenly aroused to admiration by a foaming cataract of the stream, called Garvald linn, which comes impetuously down, clothed in foam and glittering in spray, over a declivitous, and at intervals, a precipitous channel, pent up between banks of enormous rock which, generally chill and naked, are at intervals covered with the mountain ash and the wild honeysuckle. In the long course of the cataract, the stream, even when most tumultuous and wayward, constantly surprises and delights by the beautiful variety of its capricious frolics; now forming a crystal and arched cascade over a perpendicular breastwork eight feet deep,—and now sweeping out of view among huge masses of stone,—and then, as if glad to be emancipated from its rocky imprisonment, careering away, in the riotousness of new-found liberty, over the rough slopes of its declivitous path.

GARVALD—popularly pronounced and frequently written **GARREI**—an ancient but suppressed parish, now incorporated with Kirkmichael, Dumfries-shire. The church was originally a menial church of the see of Glasgow. But in 1506, Robert Blackadder, the archbishop, assigned it to Glasgow college. At the Reformation, the patronage appears to have belonged to the convent of Red friars at Failford in Ayrshire; and, afterwards, it was vested in the Crown. The subsequent annexation of the parish to Kirkmichael, was vigorously resisted by the parishioners. The church was rebuilt in 1617, but soon after was abandoned. Its

ruins, surrounded by its cemetery, may still be seen on a rising ground on the bank of the small stream whence the parish had its name. After Kirkmichael church was appointed as the Sabbath resort of the parishioners, nothing short of the authority of the court-of-session was found competent to enforce such an enlargement of it as afforded them accommodation.—Garvald had its name from a rivulet or brook which, in common with the stream described in the preceding article, and with various other streams running along a rocky channel, was designated from the Scoto-Irish language, *Garv-ald*, or *Garw-ald*, 'a rough rivulet.' The name of the parish is commemorated also in that of two farms called Upper and Nether Garrel, and in that of the principal elevation of the district, called Garrel-craig. From the base of Garrel-craig, situated on the north-eastern verge of the present parish of Kirkmichael, the brook Garrel or Garvald flows southward $5\frac{1}{2}$ miles to the Ae, nearly opposite Trailflat, intersecting over its whole length the quondam parish. Though small in its volume of waters, it contributes largely to beautify the landscape, forming several tiny cascades and cataracts, and in one place falling over a perpendicular rock 18 feet in depth.

GARVALD AND BARA, a united parish in Haddingtonshire, stretching in a somewhat oblong form, from near the centre of the county southward to its boundary with Berwickshire. Though generally oblong, it sends off two projections westward, one at its northern extremity, and another and much larger one at its southern extremity. It is bounded on the north, east, and south-east by Whittinghame; on the south by Berwickshire; on the west by Gifford or Yester; and on the north-west by Morham. Its length is $7\frac{1}{2}$ miles; and its greatest breadth, 4 miles. The northern division, comprising about one-fourth of the whole area, is arable, well-cultivated, delightfully shaded with plantation, and rich in the agricultural capacities and beauties of the great vale of East Lothian; but the other divisions climb away up the Lammermoor hills, till they gain the highest ridge, and over their whole progress wear the heathy garb, variegated with occasional patches of verdure, which distinguishes that pastoral region. The soil in these two districts of so very opposite character, corresponds with the respective appearances of the surface; in the one, a deep rich clayey loam, and, in the other, a thin gravel, or a swampish and marshy moss. Three streams come down from the southern uplands, intersecting the parish over a great part of its length, and flows past the village of Garvald; and this stream, as to both its nature and its name, is "the rough rivulet," (see preceding article,) whence the parish has its designation. Its course is over a very stony or rocky bed. Yet should we not deem,

—"because it wants the crowslipped knolls,
The white swans grazing the flower-bordered knolls,
The lily beds which scent the naked soles
Of pilgrims, with the scallop-shell and rood,
That it is desolate utterly and rude:
The bracken dells, the music of the rills,
The skipping lambs—e'en the wild solitude—
The crystal tarn where herons droop their bills,
The mute unchanging glory of the eternal hills,—

Mute, save for music of the many bees,
And dead, save for the plover and the snipe,"

belong eminently to this small stream, on whose banks we have oft loitered down many a summer-day. Yet the stream—true to its genealogy in "the land of the mountain and the flood,"—sometimes comes down with such a volume and impetuosity of inundation, as to deposit on fields adjoining its channel stones of

a great weight and size. In 1755, it rose to so great a height that some of the houses in the village of Garvald had 3 feet depth of water; and the stream rioting over the adjacent country with the expansion of a small estuary, and careering along the central space with the speed of a race-horse, would have certainly swept away the village, had not its impetuosity ploughed up a new channel for the discharging of its superabundant waters. In the vicinity of the village are some quarries of excellent freestone.—The mansion of Hopes is pleasantly situated near the bottom of a glen, overlooked by a finely wooded spur of the Lammermoor hills.—Nunraw, on the eastern verge of the northern division, was anciently, as its name implies, a nunnery, and though modernized into the form of a mansion, bears traces of its original character.—A mile and-a-half south of Nunraw, and close on the eastern boundary, is a circular camp or fortification, crowning the summit of a rising ground.—A mile south of this, and also on the eastern verge, and among the Lammermoors, are the ruins of White castle,—a strength of considerable importance during the age of violence and hostility, as it guarded a pass between the Merse and the Lothians.—On a peninsula formed by the confluence of the brooks at the western boundary, stands the ancient castle of Yester. Sir David Dalrymple relates, in his annals, that "Hugh Gifford de Yester died in 1267, and that in his castle there was a spacious cavern formed by magical art, and called in the country Bo'hall, i. e., Hobgoblin hall." This apartment, which is very spacious, and has an arched roof, is reached by a descent of 24 steps; and though it has stood for so many centuries, and been exposed to the external air for about 100 years, it is still in a state of good preservation. From the floor, another stair of 36 steps leads down to a pit, which communicates with one of the neighbouring rivulets. A great part of the walls superincumbent on the cavernous apartment are still standing. Tradition reports that the castle of Yester was the last fortification in this country which surrendered to General Gray, sent into Scotland by Protector Somerset.—The village of Garvald is pleasantly situated in the plain which forms the northern division of the parish; $5\frac{1}{2}$ miles from Haddington; $8\frac{1}{2}$ from Dunbar; and 22 from Edinburgh. The village of Bara—never more than a hamlet—is now extinct. Population of the parish, in 1801, 749; in 1831, 914. Houses 171. Assessed property, in 1815, £7,038.—This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patrons, the Crown and the Marquis of Tweeddale. Stipend £189 6s. 3d.; glebe £25. Unappropriated tithes £189 6s. 3d. Schoolmaster's salary £34 4s. 4½d., with £16 fees. There is a non-parochial school. A convent of Cistercian nuns, established near Haddington during the reign of Malcolm IV., obtained possession of the church of Garvald, with its pertinents, and a carrucate of adjacent land; and they formed a branch community near it, and built a village, which, as well as the protecting convent, was called Nunraw. They acquired also the lands of Slade and Snowdon, comprising jointly almost all the parish; and they kept possession of the whole till the Reformation. But so exposed were the inmates of the Garvald convent to spoliation and oppression, that they obtained leave to protect themselves by a fortalice.—The suppressed parish of Bara was rated in the ancient Taxatio at 25 merks, while the original parish of Garvald was rated at only 15; and it seems, therefore, to have been the more populous of the two. The old church stands, at the site of the extinct village, on the summit of a ridge which slopes south and north. From the beginning of the 14th century till the Re-

formation, the church, with its pertinents, belonged to the monks of Holyrood; in 1633, it was attached to the newly erected bishopric of Edinburgh; and afterwards it passed to the Hays of Yester and Tweeddale.—The two parishes were united in 1702.

GARVIE (THE), a considerable river in Ross-shire. It has its source in the neighbourhood of Loch-Broom, on the west coast of the county, and, traversing it in a south-east direction, joins the Conon [see that article], several miles before it falls into the Cromarty frith.

GARVIEMORE, a noted stage on the road from Stirling to Fort-Augustus; 146 miles north of Edinburgh; 13 north of Dalwhinnie; and 18 south of Fort-Augustus.

GARVOCK, a parish in Kincardineshire, bounded on the north-east by Arbutnot; on the south-east by St. Cyrus and Benholme; on the south-west by Marykirk; and on the north-west by Laurencekirk. It is of an irregular figure, extending from north-east to south-west 7 miles, and from north-west to south-east 4 miles: square area about 8,006 acres. Houses 90. Assessed property £2,466. Population, in 1801, 468; in 1831, 428. The central district of this parish consists of a large basin, or howe, extending to between 3,000 and 4,000 imperial acres, and surrounded by hills or rising grounds on every side, except a narrow pass to the south-east, through the romantic ravine of Finnelden, to which the Lady Finella is said to have retreated after the murder of Kenneth II. The rest of the parish is gently undulated, and beautiful views are commanded from the eminences, especially from the hill of Garvock, which rises, for more than a mile, in a pretty steep ascent from the Howe of the Mearns. Bervie water, forming the north-eastern boundary, is the principal stream connected with the parish. According to tradition, Garvock was once a hunting-park, belonging to Earl Marischal; and the remains of a dyke which surrounded the parish, and was called the Deer dyke, seem to countenance the tradition. The present wood consists entirely of plantations; wherein, it is said, the wild roe may now again be found. About two-thirds of the parish are cultivated, or capable of improvement, and the peat-mosses, and other high grounds formerly covered with heath, whins, and broom, have been gradually reclaimed, so that the mosses are now nearly exhausted; and the work of invasion and advancement is still in progress. The annual raw produce is valued at upwards of £13,000. Garvock has long had a local repute for the production of butter. The nearest market-town is Montrose, distant 11 miles from the middle district of this parish, but a grain-market is held at Bervie, 6 miles distant. There is no village in this parish.—On the summit of Garvock hill there are two large Druidical cairns or high places, where the fires of their Druidical god, Beil, or Baal, the Sun, were lighted.—It was in this parish, at a place called Brownie's-legs, that, about the year 1420, an impatient, and probably unmeaning, ejaculating aspiration of King James I.,—"Sorrow gin that sheriff were soddan and supped in brie!" was literally and jesuitically responded to, and fulfilled on the body of Melville, laird of Glenbervie, and sheriff of the Mearns, by five savage Highland lairds, with whom the unfortunate man was at enmity, and who actually boiled him in a great cauldron in the forest of Garvock, whither they had decoyed the unsuspecting sheriff to a deer hunt. After the body had for some time boiled or 'sodden' in the cauldron, the ferocious cannibals are said to have helped each himself to a spoonful of the soup or 'brie!'—The parish is in the presbytery of Fordoun, and synod

of Angus and Mearns. Patron, the Crown. Stipend £177 11s. 9d.; glebe £12. Schoolmaster's salary £31; fees £22. There is a private school in the parish.

GASK, a parish in the centre of the south-east division of Perthshire; bounded on the north by Methven; on the east by Tippermuir and Forteviot; on the south by Dunning and Auchterarder; on the west by Trinity-Gask; and on the north-west by Maderty. Except for its having the north-west corner cut away, it is nearly a parallelogram, measuring $3\frac{3}{4}$ miles from north to south, and $2\frac{1}{2}$ miles from east to west. Along its southern boundary, in a serpentine course of 3 miles or upwards, runs the Earn, offering the fishy produce of white and yellow trout, perch, pike, eels, and flounders. Except on the west side—where a considerable patch of moss has resisted the reclaiming efforts of the farmers, and continues to supply the parishioners with peat rather than enrich them with grain—the surface spreads away in corn fields and pastures, sheltered and beautified with extensive plantations from the Earn, till, by a gentle rise, it attains about the middle of the parish a slight ridgy elevation, and thence it slopes softly down toward the northern boundary, richly ornamented by considerable groves. Upwards of 1,200 acres are under plantation; and, with the exception of the moss in the south-west corner, all the rest of the area is enclosed and under culture. The soil is partly clayey, and partly a fine loam. Marl occurs in various localities; and freestone and grey slate abound. The only mansion is Gask, the residence of the chief proprietor, situated on the southern slope.—Along the summit of the ridge or highest ground of the parish, runs a Roman causeway, cutting it into two equal parts. The causeway is 20 feet broad, consists of compactly-placed rough stones, and forms a communication between Roman camps in the parishes respectively of Scone and Muthil. Along its side are traceable small Roman stations, fortified with ditches, and each containing a sufficient area for from 12 to 18 or 19 men. One of these stations has from time immemorial been designated the Witch-knowe, and is traditionally reported to have been the scene of the burning of unhappy individuals for the imputed crime of sorcery.—Four roads run through the parish from east to west, and one intersects it from north to south. Near the centre, a little north of the line of the Roman causeway, stands the village of Clathey, with a population of nearly 100. Population of the parish, in 1801, 601; in 1831, 428. Houses 89. Assessed property, in 1815, £4,254.—Gask is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown. Stipend £155 4s. 7d.; glebe £15. Unappropriated teinds £93 6s. 11d. Sittings in the parish-church, nearly 400. Schoolmaster's salary £34 4s. $4\frac{1}{2}$ d., with fees.

GASKIER. See **GAASKIER**.

GATEHOUSE-OR-FLEET, a small town, chiefly in the parish of Girthon, and partly in the parish of Anwoth, Kirkcudbrightshire. It stands on the river Fleet, $1\frac{1}{2}$ mile above the head of Fleet-bay, 7 miles from Kirkcudbright, 50 from Port-Patrick, 33 from Dumfries, and 105 from Edinburgh. The scenery around it is magnificent. Spread out from the river is an opulent, beautifully carpeted, and romantic vale; rising up on three sides, are congeries of hills, variously clad with heath and verdure, or circinctured and crowned with plantation, and climbing away in the distance till they raise bald and frowning summits to the sky, and look down upon the lowlands with the savage aspect of defiance to cultivation; and, on the south-west, through a broad and softened

cleft in the mountain-screen, the pellucid bosom of Fleet-bay glitters in the reflected rays of the sun, or exults beneath a gorgeous drapery of clouds. Nor does the situation contribute less to health, and to the purposes of traffic and manufacture, than to the soothing of the imagination and the tutoring of taste. Yet, though lying on a navigable river near its influx to the sea, and though traversed by everything passing along the great thoroughfare between Dumfries and Port-Patrick, and, though exerting a command as to facilities of intercommunication over an extensive range of country, and though confessed to be a position of paramount advantageousness by being made the scene of a considerable fortnightly market, it possessed, about a century ago, only a single house, or, as a village, was still to be called into existence. Gatehouse was then nothing more than "a house" at "the gate" of the avenue leading up to the mansion of Mr. Murray of Broughton, the proprietor of the soil. But when, in consequence of that gentleman offering very advantageous terms of feu, and exhibiting well-digested plans for drawing an influx of prosperity, the village was fairly commenced, it made, for a series of years, very rapid progress toward importance, and even gave promise of becoming an influential seat of manufacture. So early as about 1790, it had three factories, and a considerable number of detached or private mules and jennies for spinning cotton, a fair proportion of handlooms for cotton-weaving, a brass-foundry, a tannery, and workshops for nearly every class of artisans; and, though possessing a population of only about 1,200, it had so diffused the spirit of manufacture and enterprise among the rural inhabitants of an extensive circumjacent region, as to hold many of them in a state of subserviency to its aims of social achievement. Improvements were made to facilitate the navigation of the Fleet to the sea; a canal or aqueduct was cut from a lake several miles distant to bring down a sufficient water-power for the driving of the factories; a public library, a mason-lodge, and various other institutions or associations indicated transition to something resembling burghal life; and appearances, in general, seemed to menace the Glasgow of the west with the energetic rivalry of a Glasgow of the south. But Gatehouse—like many a dashing upstart in trade—was unable, at the day of reckoning, to withdraw all the bills of promise it had endorsed; and, from the date we have mentioned, up to 1840, it has made such slow progress as to count now little if any more than 2,000 inhabitants, and, with the exception of the recent erection of a large factory, has not apparently been distinguished by a single event in keeping with the facts of its early history.—Gatehouse, as to the aspect of its streets, the neatness and beauty of its buildings, and the entire grouping of its burghal landscape, is decidedly the most handsome town or village in Galloway, and is equalled by very few in Scotland. The larger part of it on the left bank of the Fleet, has, as to its main body, the form of a regular parallelogram, a sort of miniature imitation of the original New town of Edinburgh. The street which stands on the highway between Dumfries and Port-Patrick, and forms the principal thoroughfare, is particularly neat and uniform. Most of the houses of the town are two stories high, and covered with slates. A handsome stone-bridge spans the Fleet, and connects the Girthon district with its Anwoth suburb. A neat parish-church, built in 1817, and containing 714 sittings, adorns the parallelogram. A canal, cut in a straight line along the river, at an expenditure of £3,000, by Mr. Murray, supersedes some defects in the natural navigable capacities of the Fleet.

But the river itself is stemmed by the tide up to the town, and brings up on its bosom vessels of 60 tons burden. The exports are principally grain, and the imports coals and lime. The town has now, in addition to its earlier acquisitions, a branch banking office; a public news-room; a soap-work; a brewery; a second tannery; several friendly societies; a small Independent chapel; a fortnightly burgh-court for the recovery of small debts; a fortnightly justice-of-peace court; a weekly town-market on Saturday; a weekly cattle-market, in November and December, on Friday; and a fair on the first Monday of June, Old Style.—Gatehouse was erected into a burgh-of-barony by a royal charter, dated 30th June, 1795.—Its magistracy and council consist of a provost, two bailies, and four councillors, annually elected by the resident feuars or proprietors of houses within the burgh. There is also a town-clerk, who is annually elected in like manner. There are no other office-bearers.—The jurisdiction exercised by the magistrates is chiefly confined to civil causes; and the average number of cases since 1820 does not exceed 20 per annum. The magistrates also take cognizance of the smaller police offences, and punish offenders by fines, which are wholly appropriated towards remunerating the officer for his trouble.—The burgh has no property, debts, or revenue,—and, of course, no accounts, annual or otherwise.—There are no local taxes; nor have the magistrates and council power to impose assessments of any kind.

GATESIDE, a modern village in the parish of Neilston, Renfrewshire, on the left bank of the Levern, 4 miles south-east of Paisley. Population of Gateside and an adjacent place called Chapel, in 1811, 394; in 1835-6, as given in the New Statistical Account, 748.

GATESIDE, a small village in the parish of Wamphray, Dumfries-shire. It stands near the left bank of the river Annan, on the mail-road between Glasgow and Carlisle. Though containing a population of only about 90, it has a Relief meeting-house, built about the year 1790.

GATTONSIDE, a beautifully situated village in the vale of the Tweed, on the left bank of the river, about a mile north of the town of Melrose, Roxburghshire. Seen from a distance, it seems a little town luxuriating in an isolated grove, in the centre of one of the most brilliant landscapes in Scotland. But when entered, it is an aspersation of trees, and detached houses, and patches of luxuriant orchard-ground, sprinkled in such capricious confusion on the plain, that the idea of a village—in the modern and methodical sense of the word—cannot easily be associated with the spot. In all respects, the place is incomparably more attractive as seen from without, than as seen from within. Gattonside is celebrated for its orchards; and sends more fruit to market than any other place in the vale of Tweed, or perhaps any place of its size in Scotland. Population, 300.

GAUR (THE), or GAUER, or GAMHAIR, a river of Argyshire and Perthshire. It rises in the deer forest of the Marquis of Breadalbane, some miles east of Loch-Etive in Argyshire, and in general pursues an easterly direction. Receiving, in the early part of its course, numerous tributary torrents from among the mountains, it soon becomes a considerable stream, and spreads itself out at intervals into romantic lochlets or lakes, and, among others, the isleted and sylvan-studded Loch-Batha. After a course of about 12 miles, it expands into the large and beautiful lake, LOCH-LYDOCH [which see], and, while lost in it, is carried out of Argyshire into Perthshire. Issuing from the east side of that lake, $\frac{2}{3}$ of a mile from its north-eastern termination, it flows $\frac{3}{4}$ miles due east to LOCH-RANNOCH [which see], en-

ters it by two channels enclosing a fine verdant islet, and there loses its waters and its name. Near the central part of its course, between Loch-Lydoch and its embouchure, it expands, during a season of rain, into a temporary lake of several miles in circumference, called Loch-Eathach; but, when its waters become diminished, it retires within river-limits, and lets the bed of the lake wear the character of a meadow. Like most of the streams in the region to which it belongs, it has cascades and cataracts; and when tumbling over these in the swollen waters of several days' rain, it sends away hoarse sounds through the mountain-wilderness, which are heard at some miles' distance.

GAVIN, a small island on the coast of Argyshire.

GAVINTON, a modern village in the eastern division of the parish of Langton, Berwickshire. It stands on the road between Dunse and Greenlaw, $1\frac{1}{2}$ mile from the former, and $5\frac{1}{2}$ miles from the latter. Its predecessor, the ancient village of Langton, standing in the way of some improvements projected by Mr. Gavin the proprietor, Gavinton was built in 1760, and, on terms advantageous to the inhabitants, offered to them as a substitute. At its west end stands the parish-church. The village of Langton stood $\frac{3}{4}$ of a mile to the west. Population of Gavinton, 250.

GEORGE (FORT), a strong and regular fortress, in the parish of Ardersier, in Inverness-shire; 12 miles north of Inverness; 8 west of Nairn; and 165 from Edinburgh. It is situated on a peninsula running into the Moray frith, and completely commanding the entrance of the harbour of Inverness. Government once proposed to build a fort at Inverness, at a place called the Citadel, or Cromwell's fort; but the magistrates of Inverness demanded such a price for the ground, that the Duke of Cumberland was offended, and having ordered an inspection of the ground upon which Fort-George now stands, the engineers reported that it would answer equally well with that of Inverness. Accordingly, Government purchased the ground, and a large farm in the neighbourhood of it, from Campbell of Calder; and the works were commenced in 1747, under the direction of General Skinner. The estimate given in was £120,000; but it is said to have cost upwards of £160,000. It is a regular fortification, and covers 10 Scots acres. It commands a fine view of the Moray frith, which expands beyond the fort, and is bounded by lofty hills; and this prospect is terminated by the picturesque town of Inverness, with huge mountains rising on both sides of it.

GEORGETOWN, a locality at the west end of Loch Rannoch, in the parish of Fortingal, Perthshire, where formerly there were military barracks.

GIFFORD (THE),—called also the Hope, the Bolton, and the Coalston—a beautiful rivulet in Haddingtonshire. It rises immediately beneath the highest ridge of the Lammermoor hills, at the southern boundary of the parish of Garvald; and, under the name of the Hope, runs first north-eastward, and then northward, $5\frac{1}{2}$ miles near the western verge of Garvald parish. It now receives two considerable tributaries, one on each bank, and for 2 miles north-westward intersects the parish of Yester, passing, in its course, the beautiful village of Gifford. For nearly half-a-mile further it divides Yester from Haddington, and then receives a considerable tributary from the south, assumes the name of the Bolton, flows past the village of that name, and for $1\frac{1}{4}$ mile north-westward, $1\frac{1}{2}$ mile northward, and $\frac{1}{2}$ a mile westward, divides Haddington from Bolton. About a furlong farther on, it falls into the Tyne $1\frac{1}{2}$ mile above the town of Haddington. Its entire course is about 12 miles. Over the greater part of its

course, it flows between delightfully sylvan banks; and, in various stages of its progress, it meanders and luxuriates among pleasure-grounds, the beautiful demesnes of six mansions,—Yester, Eaglescarnie, Dalgourie, Bolton, Coalston, and Lennoxlove. Its waters abound in trout.

GIFFORD, a beautiful village in the northern part of the parish of Yester, Haddingtonshire; and also the name by which that parish is popularly, though not legally, known: See YESTER. The village is delightfully situated on the right bank of the rivulet described in the preceding article, in the centre of a well-wooded and picturesque strath, 400 feet above the level of the sea, and environed, at a mile-and-a-half distance, by an amphitheatre of ridgy, arable, well-cultivated heights. Its distance from Haddington is 4 miles, from Tranent 9, and from Edinburgh 19. It consists principally of two streets of unequal length, composed of well-built houses, generally two stories high, and of neat appearance. One of the streets commences within the long and beautiful avenue leading up to Yester-house, and runs north-westward till it is closed up by the parish school-house and its surmounting spire. The second street runs parallel to the former, and is terminated by the parish-church. In the vicinity are brick-works, a saw-mill, and a woollen manufactory and bleachfield. A body of about 20 weavers, who once carried on a small trade in this village, have dwindled away in number to 2 or 3. Most of the inhabitants hold in feu or fief of the Marquis of Tweeddale; and they meet biennially to choose 2 bailies and 5 councillors to manage the public affairs of the village. Besides the parochial school, there are two unendowed schools. Annual fairs are held on the last Tuesday of March, the 3d Tuesday of June, and the 1st Tuesday of October; and they are of considerable importance, and draw purchasers from a distance. At one of them the agricultural society of East Lothian holds a meeting for directing and encouraging improvements in the breed of sheep. A weekly hiring-market is held on Monday mornings during harvest for bringing shearers within the range of employment.—The village, though of later date than the close of Charles I.'s reign, derives its name from the ancient family of Gifford, whose ancestors came from England and obtained extensive estates in Mid-Lothian during the reign of David I. Hugh de Gifford, the younger, rose to distinction under William the Lion, and was rewarded by him with the lands of Yester. In the 15th century, through a failure of male heirs, a daughter of the family carried the property of the Giffords, by matrimonial alliance, into the family of Hay of Borthwick. In 1488, the proprietors obtained the title of Lords Hay of Yester; in 1646, they were created Earls of Tweeddale; and, in 1694, they were raised to the dignity of Marquises of Tweeddale.—Gifford contests with Gifford-gate, a small street in the Nun-gate, one of the suburbs of Haddington, the honour of having been the birth-place of John Knox. Modern writers and private debaters have expended much labour in advocating the conflicting claims of the two localities. Dr. McCrie, the distinguished biographer of Knox, will probably be regarded as a judge of the question quite as cool and as competent as most; and he says, "I am inclined to prefer the opinion of the oldest and most credible writers that he—John Knox—was born in the village of Gifford." Dr. John Witherspoon, president of the college of New Jersey, in America, was another eminent native of this village. Population 550.

GIGAY, a small inhabited island of the Hebrides, on the east coast of Barra.

GIGHA, one of the Hebrides, annexed to that

district of Argyleshire named Kintyre, from which it is separated by a channel $3\frac{1}{2}$ miles broad. It is of a regular oblong figure; 7 miles in length, and $2\frac{1}{2}$ in greatest breadth, containing about 5,000 Scots acres, of which 1,500 are arable. The coast on the west side is bold and rocky; on the east side there are several points jutting out, and a few sunk rocks, which render the navigation dangerous to strangers. Between these points are several bays or creeks, where small vessels can be safely moored. One of the bays, called Ardmearish, near the church, has good anchorage in 6 or 7 fathom water. The small island of CARA [which see] lies at 1 mile distance on the south; and in the middle of the sound between them is the small uninhabited island of Gigulum, near which is good anchoring-ground for the largest vessels. The general appearance of Gigha is low and flat: except towards the west side, where the ground rises into hills of considerable elevation. Except in this quarter, the whole island is arable, and the soil a light loam, with a mixture in some places of sand, moss, or clay. Trap veins traverse the island in different directions. In Gigha are the ruins of an old chapel. Martin, who visited it in the beginning of last century, says: "It has an altar in the east end, and upon it a font of stone which is very large, and hath a small hole in the middle which goes quite through it. There are several tomb-stones in and about this church; the family of the Mac-neils, the principal possessors of this isle, are buried under the tomb-stones on the east side of the church, where there is a plat of ground set apart for them. Most of all the tombs have a two-handed sword engraven on them, and there is one that has the representation of a man upon it. Near the west side of the church there is a stone of about 16 feet high, and 4 broad, erected upon the eminence. About 60 yards' distance from the chapel there is a square stone erected about 10 feet high; at this the ancient inhabitants bowed, because it was there where they had the first view of the church. There is a cross 4 feet high at a little distance, and a cavern of stone on each side of it. This isle affords no wood of any kind, but a few bushes of juniper on the little hills. The stones, upon which the scurf corkir grows, which dyes a crimson colour, are found here; as also those that produce the crottill, which dyes a philamot colour. Some of the natives told me that they used to chew nettles, and hold them to their nostrils to stanch bleeding at the nose; and that nettles being applied to the place, would also stop bleeding at a vein, or otherwise. There is a well in the north end of this isle called Toubir-more, that is, 'a great well,' because of its effects, for which it is famous among the islanders; who, together with the inhabitants, use it as a catholicon for diseases. It is covered with stone and clay, because the natives fancy that the stream that flows from it might overflow the isle; and it is always opened by a Diroch, that is, 'an inmate,' else they think it would not exert its virtues. They ascribe one very extraordinary effect to it, and it is this; that when any foreign boats are wind-bound here—which often happens—the master of the boat ordinarily gives the native that lets the water run, a piece of money; and they say, that immediately afterwards the wind changes in favour of those that are thus detained by contrary winds. Every stranger that goes to drink of the water of this well, is accustomed to leave on its stone cover a piece of money, a needle, pin, or one of the prettiest variegated stones they can find." There are no trees at present on the island, but many large roots of oak have been found in the mosses, indicative of the former existence of wood.

The island is well-supplied with springs, which afford water sufficient to turn two corn-mills. The sand-banks abound with excellent fish; and much seaweed is thrown ashore, which is partly employed as a manure, and partly burned into kelp. The principal occupations of the inhabitants are agriculture and fishing. Between Gigha and the opposite coast of Kintyre there is a regular ferry.—The islands of Gigha and Cara form a parish, the population of which, in 1801, was 556; in 1831, 534; and, in 1834, only 468. Houses, in 1831, 91. Assessed property, in 1815, £1,597.—The united parish is in the presbytery of Kintyre, and synod of Argyle. Patron, the Duke of Argyle. Stipend £266 9s. 3d.; glebe £10. Schoolmaster's salary £25 13s. 3½d.

GILCOMSTON. See OLD ABERDEEN.

GILLISAY, one of the smaller Hebrides, in the district of Harris.

GILMERTON, a village partly in the parish of Fowls-Wester, and partly in that of Monzie, in Perthshire. It stands on the mail-road between Glasgow and Perth, amidst a beautiful landscape, and is neat, well-built, and of modern erection. Extending from the village on the east, is a congeries or ridge of gravelly mounds, some of them covered with thriving plantation, and almost all so curiously formed and grotesquely grouped as to form an interesting and remarkable variety of natural scenery. There is a private school in the village. Population 240.

GILMERTON. See ATHELSTANEFORD.

GILMERTON, a *quoad sacra* parish in Edinburghshire, recently detached from the parish of Libberton, and bounded by Libberton, Newton, Dalkeith, and Lasswade. Its population is about 1,100. The parish-church, situated in the village of Gilmerton, was built in 1837, and has about 300 sittings: See LIBBERTON.—The village of Gilmerton stands on the brow of a rising ground, 4 miles south of Edinburgh, on the post-road to Roxburghshire and the west of England. Its main body is a rectangle, resting the back of one of its shorter sides on the west margin of the public road, and running westward up the gentle slope of the rising ground. A subordinate part of it is a straggling street or line of houses southward from the main body along the public road; but this has recently been abandoned, and presents to the eye of the passing traveller the unsightly and doleful appearance of unroofed and mouldering cottages,—not unlike what may be supposed to have been the appearance of a similar array of humble dwellings devastated during the freebooting or warlike incursions of a former age. Gilmerton was long characterized as simply a village of colliers, and as a place whence Edinburgh was largely supplied with fuel. Its coal—which is of prime quality—was vigorously worked in 1627, and possibly was known and carried to market a century earlier. Persons employed about its coal-pits, and carters who conveyed the produce to Edinburgh, were long the only inhabitants, and latterly amounted to 800 in number. But, owing partly to the successful competition of the sources of supply along the Dalkeith railway, the mines—though not exhausted, and though likely to come again into requisition—have been abandoned. A lime-work of vast extent in the vicinity, and presenting appearances highly interesting to the curious and the lovers of remarkable scenery, was probably the oldest in Scotland, at all events was worked from time immemorial. At first, it was worked from the surface, and afterwards it was mined; and the produce was brought up respectively, in successive epochs, by women, by asses, and by a steam-engine. Even the aid of machinery not preventing it from being unremunerating, it was

abandoned, again worked during the years 1825, 1826, and 1827, and again abandoned. The mine or quarry is nearly a mile in length, and everywhere open to the light of day. The stratum of limestone dips at an angle of about 45° . On descending, a spectator finds himself on a shelving declivity, and, walking along, is encaverned beneath a roof of solid rocks, which is supported by a vast series of rocky pillars, chiselled out and left as props in the process of mining. As the enormous piazza or open-sided temple is very spacious, the roof being high, and the opening along the extended entrance large, the light is, for a considerable way, abundant; but, as the spectator explores onward, and descends the declivity toward a stripe or elongated pool of water at the extremity, it gradually so far fails him as to let a sepulchral obscurity hang its veil of mystery over the objects of his vision. The vast colonnaded cavern, instead of proceeding far inwards, where the rapid dip of the stratum carried the miner at every yard increasingly downward from the surface, advances obliquely up the side of a long ridge or hill; and affords the curious visitant an opportunity of making a lengthened excursion under ground, without losing the light of day.—At Gilmerton is a remarkable cave, cut, at the expense of five years' labour, out of the solid rock, by a blacksmith of the name of George Paterson, and finished in 1724. Several apartments, several beds, a large table bearing aloft a punch-bowl, are all nicely chiselled from the rock, and render the cave at once dwelling-house and furniture. Several apertures on the roof were designed as windows to let in the light from above. The constructor of this extraordinary subterranean abode had it fitted up with a well, a washing-house, and a forge, and lived in it with his family, prosecuting his avocation, till his death about the year 1735. His cave was, for many years, esteemed an object of great curiosity, and even yet is the resort of not a few inquisitive visitors. Pennecuik, in his works, has left the following inscription for the cave:

"Upon the earth thrives villany and woe;
But happiness and I do dwell below.
My hand hewed out this rock into a cell,
Wherein from din of life I safely dwell.
On Jacob's pillow nightly lies my head;
My house when living, and my grave when dead.
Inscribe upon it when I'm dead and gone,
'I lived and died within my mother's womb.'"

Gilmerton, though bereft of its resources in other mines, may probably recover its importance in connexion with the recent discovery of excellent black-band ironstone, 14 inches thick.—Its inhabitants have long had an unenviable celebrity for rudeness and almost brutality of character. They are, in general, exceedingly ignorant, averse to instruction, improvident, and reckless; but, in fact, they have, till very lately, been little, and at times scarcely at all, plied with those humanizing and enlightening and Christian methods of operating on character which their circumstances demanded as essential to their well-being. Having—no matter with what degree of justice—acquired the name of being savages in part, they were, in a great measure, quietly let alone to become, if they thought proper, savages in whole. During many years the terror of their name made timid persons shrink from travelling after dusk on any road in their vicinity. But the execution, in 1831, of two of their number for a murder, and the delightfully contrasted event of a successful commencement of systematic efforts to bring them under the restraining influences of evangelical truth, as well as the establishment among them of libraries, and the various appliances of secular instruction, have already begun to soften the harsh moral features of their village.

GILNOCKIE, a small promontory, washed on the three sides by the river Esk, in the parish of Canoby, Dumfries-shire; supposed to have been the spot whence the famous freebooter, 'Johnie Armstrong, Laird of Gilnockie,' had his title. Being steep and rocky, it is scarcely accessible except on the land side; and there it was protected by a deep ditch. Holehouse or Hollows, the residence of Armstrong, is still a considerable ruin. The building is oblong, 60 feet long, 46 wide, and about 70 high; and at the angles it has round loop-holed turrets. Armstrong flourished during the reign of James V.; and, having levied 'black mail' from Cumberland, Westmoreland, and a great part of Northumberland, he was the terror of the west marches of England. His power becoming, at last, so great as to hazard a defiance of the Crown, the king raised an army for the express purpose of confronting and overpowering him, and marched, at its head, to the parish of Ewes. Armstrong was summoned to attend the king there on a promise of security; and, yielding a ready obedience, he, along with those of his followers who accompanied him, was, in violation of the royal pledge, hanged at Carlenrig, 2 miles north of Moss-paul, on the road between Hawick and Langholm.

GILP (LOCH), a small arm of the sea in Argyle-shire, running off from Loch-Fyne in a north-west direction, across the neck of the peninsula of Kintyre. It is the point from which the Crinan canal goes off to join the Atlantic at the bay of Crinan: See articles **CRINAN CANAL** and **LOCHGILPHEAD**.

GIRDLENESS, a promontory, on the coast of Kincardineshire, being the southern point of the mouth of the river Dee in Nigg parish, and remarkable as the eastern extremity of the Grampian mountains. It lies 2 miles south from Aberdeen, and 15 north-north-east of Stonehaven; in N. lat. $57^{\circ} 8'$, and W. long. $2^{\circ} 3'$. Here is a lighthouse, erected in 1833, with two fixed lights, one above the other, seen at a distance of 16 and 19 nautical miles, in clear weather. See **ABERDEEN**.

GIRNIGOE CASTLE. See **WICK**.

GIRTHON, a parish in Kirkcudbrightshire, stretching southward in a long stripe of territory, from the latitude of the centre of the stewartry, to the coast of Wigton bay. Its greatest length is 18 miles, and its greatest breadth 7; though, over 8 miles from its southern extremity, it is nowhere more than $2\frac{1}{2}$ miles broad; and its superficial area is about 24 square miles. It is bounded on the north by Kells; on the east by Balmaghie and Twineham; on the south-east by Borgue; and on the west by Fleet bay and Fleet water, which divide it from Anwoth; and by Kilmagree and Minigaff. All the northern and broader division, 9 or 10 miles in length from the northern boundary, and also a stripe along the whole of its eastern verge, are bleak, hilly, and clothed in heath. But a slope toward the Fleet, and a stripe of plain along the banks of the stream, in the southern division of the parish, are arable, finely cultivated, and softly beautiful in aspect. Around Cully, immediately south of Gatehouse, and at Castramont, $3\frac{1}{2}$ miles above the town, are delightful and somewhat extensive plantations, imbosoming, in the former case, the domestic mansion, and, in the latter case, a hunting-seat of Mr. Murray, the baronial superior of the town of Gatehouse, and the proprietor of the whole district. The air and climate are in the uplands cold and unpleasant, but in the plain, mild and agreeable. In the northern division are three lakes;—Loch Fleet, 5 furlongs long and 3 furlongs broad, abounding in trouts, and disgorging one of the two parent-streams of the **FLEET** [which see]; Loch Skerrow, $\frac{3}{4}$ of a mile long and half-a-mile broad, abounding in pike; and Loch

Grannoch, about 3 miles long and half-a-mile broad, remarkable for its char, a species of fish rare in Scotland: See **LOCH GRANNOCH**. On the eastern boundary, 3 miles north-east of Gatehouse, is another lake, Loch Whimyan, of a circular form, and $\frac{3}{4}$ of a mile in diameter, whence the cotton-mills of the town are supplied, along an artificial canal, with a copious propelling stream of water: See **GATEHOUSE**. The mansion of Cully, overlooking the Fleet, on one of the most beautiful parts of its joyous progress, is a large modern edifice, among the most princely in the south of Scotland. Four-fifths of the population of the parish, and nearly all its trade, manufacture, and importance, are concentrated in **GATEHOUSE**: which see. The southern division is amply supplied with facilities of communication, a canal and the navigable river to Fleet bay, and the Dumfries and Portpatrick mail-road, besides divergent roads in every direction; but the northern division is left alone in its mountain-solitude, and annoyed with scarcely a path to allow intrusion on its pastoral seclusion. Population, in 1801, 1,727; in 1831, 1,751. Houses 240. Assessed property, in 1815, £6,778.—The parish is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, the Crown. Stipend £158 6s. 8d.; glebe £20. The parish-school is attended by a maximum of 133 scholars. Salary £45, with £80 fees and £16 other emoluments; but subject to allowance for an assistant. Four unendowed schools, conducted by five teachers, are attended by a maximum of 160 scholars. According to an ecclesiastical survey in 1836, out of an entire population of 2,000, there were above 12 years of age 1,428; of whom 1,346 belonged to the Establishment, and 82 belonged to other denominations. The dissenters were distributed into Roman Catholics, Reformed Presbyterians, members of the United Secession body, and the Holy Apostolic church, and 14 Independents. The parish-church was built in 1817. Sittings 714. The church of Girthon belonged to the bishops of Galloway till the Reformation, was restored to them during the brief period of protestant prelacy, and was afterwards annexed to the Crown. At the passage of the Fleet, there were in early times a village and probably a sanctuary. Hence the name *Girthon-avon*, of which Girthon is an abbreviation, signifying, 'the Sanctuary on the river.' Edward I. resided here several days during his Galloway campaign in 1300.

GIRVAN (THE), a river of Carrick, Ayrshire. It rises in the small lakes, Loch-Brecbowie and Loch-Breelon, in the parish of Straiton, $3\frac{1}{2}$ miles west of Loch-Doon. After issuing from the latter of the two lochlets, it flows 2 miles northward, and $2\frac{1}{2}$ miles westward, receiving in its progress, the tributaries of Tairlour-burn from the south, nearly equal in volume to itself, and a smaller brook from the north. Resuming its northerly course, it receives two tributaries from the west, and flows 2 miles onward to Straiton, making a graceful bend opposite the village. Hitherto, its collateral scenery is wild and cheerless: but now it careers away toward wooded, undulating, and delightfully varied banks, and, all the way onward to the sea, smiles and exults amidst the beauties of landscape. Leaving Straiton, it pursues a sinuous course 3 miles north-westward to the village of Kirk-michael, frolicking along the fine demesne of Blairquhan, the seat of Sir David Hunter Blair, and at one place wheeling round upon its path so as to form a considerable islet. From Kirk-michael to a point opposite the farmstead of Barklai, it achieves a distance of $1\frac{1}{2}$ mile westward, over a south-westward, westward, north-eastward and north-westward course of picturesqueness and loveliness of scenery. From

this point to the sea at the town of Girvan, over a sinuous course of 13 miles, it runs, in general, toward the southwest, performing many a beautiful evolution, seeming to run mirthfully round peninsulas and rising grounds, to enjoy the richest adornings of bank, and nowhere receiving larger tributaries than the waters of little brooks. A mile below Barklai, it flows past the neat and cheerful village of Crosshill; and while passing along the fine vale of Dailly parish, it enlivens the aspect of the mansions and demesnes of Drumburl, Dalquharran, Balgany, and Kellockan. Dalquharran castle, in particular, receives from it much enrichment of landscape, and repays with interest all it receives. This elegant pile, castellated at the angles, and buttressed all the way up, and finally surmounted by a capacious circular tower, was built about the year 1790, and is one of the handsomest mansions in the west of Scotland. The Girvan's entire length of course, including windings, is about 25 miles.

GIRVAN, a parish on the sea-coast of the district of Carrick, Ayrshire. It is bounded on the north by Kirkoswald; on the east by Dailly and Barr; on the south by Colmonell; and on the west by the frith of Clyde. It measures in extreme length, from north to south, 9 miles; in extreme breadth, 6 miles; in minimum breadth 2 miles; and in superficial area, 19,000 acres. A ridge of almost mountainous hills runs, from the sea not far from the southern extremity, north-eastward through the parish, and sends off spurs, or has parallel elevations on its south-east side. The southern district is, in consequence, chiefly pastoral; yet its hills are for the most part covered with verdure, and, even in instances where they are heathy, they have patches and intermixtures of grass. The diagonal hill-range, as seen from the town of Girvan, presents an imposing and almost magnificent aspect, and sends up its summits seldom less than 900 feet above the level of the sea, and, in one instance, 1,200 feet. The northern division has a considerable proportion of flat ground, but is undulated and beautified with elevations, and, on the whole, wears a tumulated appearance; yet it is finely cultivated, and rich in the properties of agricultural worth. The soil, though very various, is, in general, a dry light mould, on a sandy or gravelly bottom. The coast-line, upwards of 8 miles in length, is over one-third of the distance bold and rocky, and over two-thirds of it flat; and in the latter and larger part, the beach is strewn with large whinstones, and, at the recess of the tide, is extensively carpeted with sea-weed. Several indigenous brooks rise in the central and southern uplands, and flow respectively to Girvan water, and the sea; the most considerable being Lendal-burn, which joins the sea at Carlton-bay. Another somewhat bulky indigenous brook, called the Assel, flows along the eastern margin, to fall into Stinchar water in the conterminous parish of Colmonell. The climate of the parish is much more moist than that of the inland or eastern parts of Scotland, and moister still in the upland division of it than in the plain. Coal, though abundant in the neighbouring parish of Dailly, does not seem to stretch within the limits of Girvan. Limestone is plentiful in the eastern division, and has for a quarter of a century been somewhat extensively worked. Excellent copper-ore has been found, and is supposed to exist in considerable quantity. Puddingstone is the most plentiful mineral, and, in remarkable congeries, stretches for a considerable distance along the beach. Whinstone, both grey and blue, occurs with sufficient frequency to furnish materials for all the local buildings. A small quantity of gypsum and a valuable bed of shell-marl were at one period discovered. Only a small number of acres

is under plantation; and nowhere, excepting a few patches of brushwood, is there any natural forest. Vestiges of five camps are traceable, all near the sea, and one of them distinguished by an encincturing of two parallel ditches. The parish is traversed, along the shore, by the mail-road between Glasgow and Portpatrick, and, along its eastern verge, by a road between Old Dailly and Ballantrae; and it has, in addition, four branch or cross-roads. Population, in 1801, 2,260; in 1831, 6,430. Houses 903. Assessed property, in 1815, £9,796.—Girvan is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £269 12s. 2d.; glebe £12. Unappropriated teinds £347 8s. 4d. Four places of worship in the parish, three of them dissenting, are all situated in the town. The parish-church was built about the year 1770, and was extended by the addition of an aisle about 30 years later. Sittings 850.—The United Secession congregation was established in 1815; and their place of worship was built in the preceding year. Sittings 549. Stipend £100.—The Roman Catholic congregation consists of a fluctuating population, all Irish; and has for its place of meeting, a school-house rented at £6. The minister or priest resides in Ayr, and officiates here from seven to nine Sabbaths in the year. The Wesleyan Methodist congregation had 20 members 24 years ago; and meets in a Sabbath school-house of its own, built in 1823, at a cost of about £120. Sittings about 200.—According to a survey made by the parochial minister and one of his elders in 1836, the population was then 6,500; of whom about 5,000 belonged to the Establishment, about 1,000 belonged to other denominations, and 500 were not known to be connected with any religious body.—The parochial schoolmaster has £34 4s. 4d. of salary, with £80 fees, £28 10s. other emoluments; and is attended by a maximum of 155 scholars,—40 of whom are poor children taught free. Five unendowed schools are attended by a maximum of 295 scholars; and 3 of them afford a wide range of tuition, including practical mathematics and Latin and Greek.—The church of Girvan, like several other churches in Ayrshire, was dedicated to St. Cuthbert,—peculiarly a Saxon saint; and seems therefore not to have been older than the end of the 11th century, when Ayrshire, after the change of the Scottish government, was brought completely under the influence of the Anglo-Saxon settlers. The church was granted to the monks of Crossraguel, and remained in their possession till the Reformation; and it was served by a vicar, under the surveillance of the bishop of Glasgow. In the ancient parish of Girvan—which was much larger than the present—were several chapels. In the south of it, on an eminence overlooking the Stinchar, about 2 miles west-south-west from the present church of Barr, stood the chapel of Kirkdomine, dedicated to the Holy Trinity. The ruins still remain, and commemorate the name; and they serve also to give a rallying-point and a designation to a great annual fair, called Kirkdomine fair, held on the last Saturday of May. In the north of the parish, on the lands of Cragach, near the coast, upward of 1½ mile north-north-east of the town of Girvan, stood Chapel-Donan, dedicated to a Scottish saint, called Donan, of the 9th century. Both this chapel and the former one were, like the parish-church, in the hands of the Crossraguel monks. In 1617, the patronage of Girvan, with other property of Crossraguel, was annexed to the see of Dunblane; but, on the abolition of episcopacy in 1689, it was vested in the Crown. In 1653, the south-east part of the ancient parish, lying on the river Stinchar, was detached and made a part of the new parish of Barr; but, at the same

date, Girvan received some accessions of territory, both on the north and on the south.

The town of GIRVAN, originally called Invergarvan, from its being situated at the influx of the Garvan or Girvan to the sea, is delightfully situated on the left bank of the river; 13 miles north by east of Ballantrae; 41 north-north-east of Portpatrick; 12 south-south-west of Maybole; 21 south by west of Ayr; 54 from Glasgow; and 93 from Edinburgh. It runs along the sea-side directly opposite Ailsa Craig, and commands a magnificent view of the frith of Clyde, and its gorgeous encincturing scenery: See articles AILSA CRAIG and CLYDE. But as to its interior landscape, or the appearance and grouping of its houses and streets, it is utterly unworthy of its splendid site. Heron, in the narrative of his Scottish tour, in 1793, though sufficiently prompt and liberal in his praises whenever an object not positively displeasing met his eye, describes the town as then in so miserable a plight that he was obliged to move onward to Kirkoswald to find a night's lodging; and he says respecting Girvan: "The houses are huts more miserable than those of Ballantrae. They are so low as to seem, at the south end of the village, rather caves dug in the earth, than houses built upon it. On the north-west side, and close upon the banks of the river, are, indeed, some more decent and commodious houses." The place is exceedingly improved since the period when Heron wrote. Still it is far inferior in neatness and dignity to many Scottish towns of its size; and, with a small aggregate proportion of exceptions, consists of cottages one story high, distributed into a workshop and a dwelling-room,—the latter, in many instances, being occupied by two or even three families. Even the recently built erections are, in a large proportion of instances, small houses, occupied by the lowest order of immigrant Irish, who come hither in search of employment in cotton-weaving. The whole population, with inconsiderable exceptions, are cotton-weavers and their families. The number of hand-loom, including a few in the vicinity, was, in 1838, no fewer than 1,800. The fabrics woven are almost all coarse cottons for the manufacturers of Glasgow.—Girvan harbour, till very recently, with from 9 to 11 feet of water at the mouth of the river, admitted only vessels of snail burden; but it is now so far improved as to admit of a steamer of from 90 to 100 feet keel, and to afford some facility for the exportation of coals and agricultural produce. The small bay at the embouchure of the river is an excellent fishing-station; but though capable of yielding an abundant produce, of great variety and of prime quality, it has been very lazily and limitedly phed.—The town has a small subscription-library, two circulating libraries, a considerable number of friendly societies, a savings' bank, a branch office of the Royal bank of Scotland, a branch-office of the Ayr bank, a weekly market, and two annual fairs.—Girvan was erected into a burgh-of-barony by royal charter, in 1696, granted in favour of Sir Archibald Muir of Thornton, provost of Edinburgh; but it now holds of Hamilton of Bargany. The burgh property consists of houses, and has suffered no alienations within these forty-six years. In 1832 the revenue was £148 14s. 6d., and the expenditure £73 12s. 9d. The debt of the burgh amounts to £1,500, and is heritably secured over houses. The jurisdiction of the magistrates extends over the burgh and the barony of Ballochmoul. A baillie court is held weekly on Wednesday in the town-hall. Civil causes to the amount of £2 in value are tried there; and prosecutions are entertained for petty delinquencies within burgh, for which fines, not exceeding £1, are im-

posed; and if the fine imposed is not paid imprisonment follows. The magistrates have no assessor; yet are sometimes assisted in their judicial deliberations by professional advice. The magistrates and council have the patronage of the offices of town-clerk, treasurer, billet-master, and town officers. The treasurer has no salary. All the office-bearers are chosen annually. All persons wishing to trade or manufacture within the burgh must enter as freemen, and pay £2 to the common good. There are no incorporated trades enjoying exclusive privileges. The sett of the burgh was altered from what it had previously been by the late Sir Hew Dalrymple Hamilton, Bart., the superior. He increased the number of the council from 12 to 14, including two bailies. He provided that four of the council should retire annually by ballot, without prejudice to their being re-elected, and that the vacancies should be filled up by the votes of the resident burghesses from the members of their incorporation; that the senior bailie should, in virtue of his office, remain a councillor, and the junior bailie fill the office of senior magistrate for the ensuing year, his place being supplied by a new election; and that in the event of the death, or retiring, of any of the bailies during the period of their holding office, the person last in office should become junior bailie till next annual election. There are 74 householders, whose rents amount to £10; of whom 52 are burghesses. The number of those whose rents amount to £5, but not to £10, is 40; of whom 18 are burghesses. The police of the burgh is not regulated by special statute; it is under charge of the magistrates. There is no special establishment for watching and cleaning. Persons are employed for these purposes when "need requires," who are paid from the general fund. Sixty of the inhabitants are appointed constables annually by the magistrates, who act, when required, for the preservation of the peace, and are paid either from the general fund, or from fines imposed upon delinquents. Population, in 1836, 5,300.

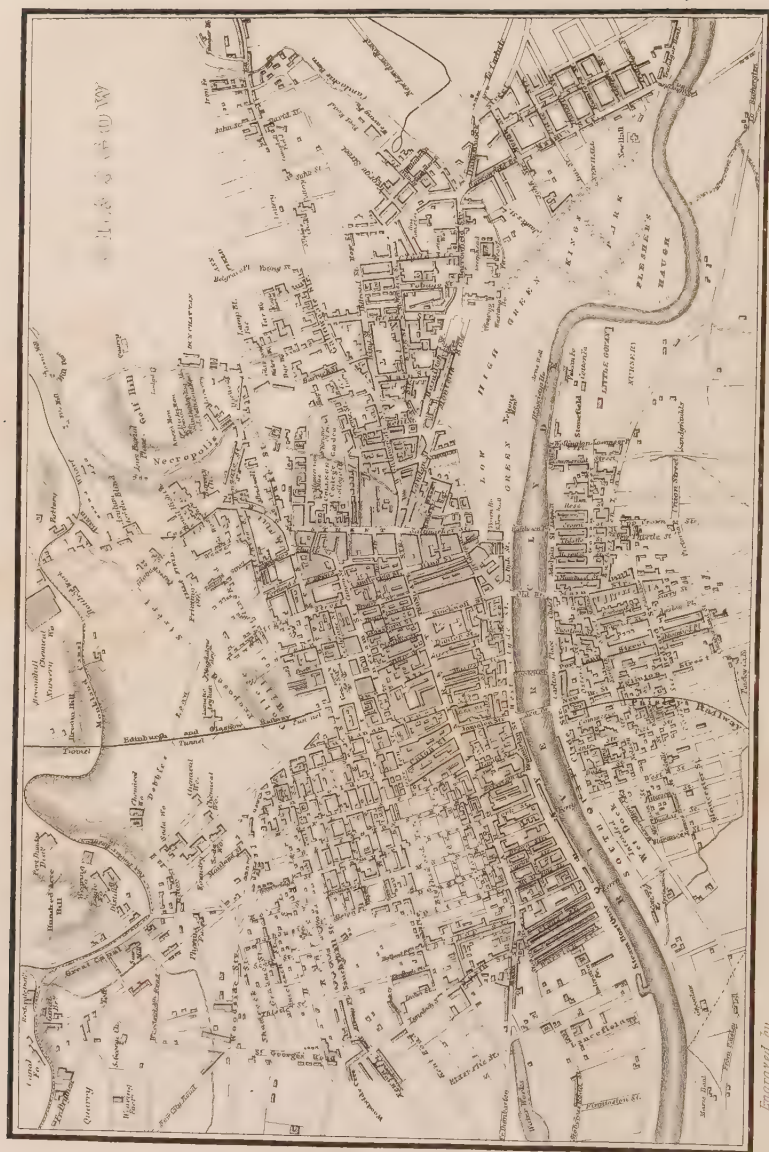

GLADSMUIR, a parish in Haddingtonshire, bounded on the north-west by the frith of Forth and Aberlady; on the north-east by Aberlady; on the east by Haddington; on the south by Salton and Pencaitland; and on the west by Pencaitland and Tranent. It would have been nearly a pentagon, but for being, on its east side, indented to the depth of 2 miles and the average breadth of $1\frac{1}{2}$, by a projecting part of Haddington. From Silver-hill on the east, to the boundary near Blind-wall on the west, it measures $4\frac{1}{2}$ miles; and, from the most northerly bend of a brook which bounds it on the north-east and north-west, to the boundary near Bogg's distillery on the south, it measures $4\frac{1}{4}$ miles; yet, in consequence chiefly of the deep intrusion of Haddington, it does not contain more than about 10 square miles. From the frith of Forth, on the north-west, and from the boundary-line on the south-east, the surface gently rises to a central ridge of inconsiderable height. The top of this ridge is ploughed by the great mail-road between Edinburgh and London; and, being originally an open muir, was for ages incessantly pared of its turf, and robbed of its soil by the neighbouring inhabitants. The soil, in this central part, is, in consequence, clayey and shallow, yet has recently been so improved as to be brought into a state of good cultivation; and, in other districts, especially a stripe running eastward about $1\frac{1}{2}$ mile from the coast, it is very fertile, and, at an early period, produced rich crops, and bore a high value. A continuous fir-plantation of nearly 200 acres stretches south of the great road; and belts and clusters of oak, beech, elm, ash, birch, chestnut, and other species, adorn and shelter, at judicious

intervals, nearly the whole surface. The coast—only about a mile in length—is rocky, and sends into the sea terminating strata which vex the waters in a breeze, and look out from their surface at the efflux of the tide. The Tyne, which forms the southern boundary-line for about $1\frac{1}{2}$ mile, is here a pleasing stream of inconsiderable volume, but of value in giving water-power to grain-mills. Marshes—though formerly such as to give almost a distinctive feature to the district—have quite disappeared, and left in their stead smiling and luxuriant fields. The air is pure, dry, and very healthy. Coal is very abundant, and, in the vicinity of the village of Penston, in the southern division, seems to have been worked for five centuries. The seam, in some places, is from four to five feet thick, and of prime quality. Limestone occurs in various parts, and, in one place, is worked. The working of iron, though for a short while carried on, has been relinquished. Freestone, suitable for building, is everywhere abundant. Among vestiges of old mansions—which are the chief antiquities of the parish—a circular mound a few feet high, in the vicinity of objects still called the Laird's dyke and the Laird's garden, indicates the site of the residence of the Douglasses of Longniddry, who acted so distinguished a part in the Reformation, and invited John Knox to their mansion when he was driven away from St. Andrews. The modern mansions are Redcoll, Southfield, and Elvingston. There are three villages; one of which has nearly 400 inhabitants, and each of the others about 200: See **PENSTON**, **SAMELSTON**, and **LONGNIDDY**.—George Heriot, the celebrated founder of the hospital which bears his name in Edinburgh, is thought by some to have been a native of Gladsmuir, and, at all events, was the descendant of a family of some antiquity who resided at Traboun within its limits. Dr. Robertson, the historian, commenced his ministry in Gladsmuir, and, while incumbent of the parish, wrote the greater part of his History of Scotland. Population, in 1801, 1,460; in 1831, 1,658. Houses 343. Assessed property, in 1815, £12,400.—Gladsmuir is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, the Crown and the Earl of Hopetown. Stipend £316 17s. 3d.; glebe £8. Unappropriated tithes £302 13s. 7d. Parochial schoolmaster's salary £34 4s. $4\frac{1}{2}$ d., with £32 7s. $1\frac{1}{2}$ d. fees, and £30 other emoluments. Maximum number of scholars 105. At four schools, not parochial, the maximum aggregate attendance is 214. According to ecclesiastical survey, in 1835, the population then was 1,653; of whom 1,513 belonged to the Establishment, 120 belonged to other religious denominations, and 20 were not known to make any profession of religion. The parish-church, situated on the summit of the central ridge of the parish, and at the side of the great mail-road, was built in 1695, and altered but not enlarged in 1797 or 1798. It has been recently rebuilt in a very handsome style. Sittings 535. The parish was formed, in 1695, by abstractions from the neighbouring parishes of Haddington, Aberlady, and Tranent. A church built, in 1650, at Thriplaw near the southern verge of the parish, and abandoned on the erection of the late church and parish, has entirely disappeared. A little east of the village of Longniddry are the ruins of an old chapel called John Knox's kirk, he having occasionally preached therein.

GLAMMIS, a parish in the southern part of the Strathmore and Sidlaw districts of Forfarshire. Its form is, in general, ellipsoidal, the greater diameter extending south and north; but it makes projections on the south and south-west, and sends off a considerable stripe north-eastward from its northern extremity. The parish is bounded on

the north by Kirriemuir; on the east by Forfar, Kennettles, and Inverarity; on the south-east by Fealing; on the south-west by Auchterhouse and Newtyle; and on the west and north-west by Essay and Nevay and by Airlie. From Parkplanes on the north to the hill of Bockello on the south, it measures $7\frac{1}{2}$ miles; and from the eastern base of Kimpennie hill on the west to the boundary-line between Lumley and Whinny-hills on the east, it measures $5\frac{1}{2}$ miles; but, in superficial area, it contains something less than 15,000 imperial acres. The northern division, consisting mainly of the eastward projecting stripe, and measuring $4\frac{1}{2}$ miles east and west by an average of one mile north and south, is a gentle undulated surface, all whose little softly featured summits are of nearly equal elevation. From this division, which is marked off along its southern limit by the river Dean, the surface, commencing at the bank of that stream, rises by a smooth and gentle ascent southward till, near the middle of the parish, it heaves up in the lower or flanking ridge of the Sidlaws, running south-westward and north-eastward over a length of 4 miles, having an average breadth of one mile, and lifting its summits from 500 to 700 feet above the level of the sea. South of this softly hilly ridge, three parallel ranges of hill stretch away to the boundary enclosing two plains called Denoon glen and Glen-Ogilvie, and terminating in the highest summits of the Sidlaws, from 1,000 to 1,500 above sea-level. In the northern division the soil is, in general, light sandy or gravelly loam, occasionally interspersed with clay and moss, but is somewhat unfertile; along the Dean southward, it is a deep alluvial brown loam, of very productive quality; toward the central ridge it is a brown and a black loam upon an unretentive subsoil, partly fertile and partly not very productive; in the glens of Denoon and Ogilvie, it is somewhat extensively a good, sharp, gravelly loam; but, on the hills, it generally gives place to moorland clothed in heath. More than one-half of the entire parish is arable; more than one-fourth is in pasture; and about 1,600 acres are under plantation. The western end of the Loch of Forfar, which here is now an inconsiderable stripe of water, extends, for a brief space, along the southern limit of the northern projection; and previous to its being drained [see FORFAR] it covered twice the extent of its present bed. Issuing from this loch, Dean water, for 2 miles, continues the boundary, and then for 2 miles more intersects the body of the parish; and all the way is a deep and sluggish brook. Glammis burn rises in the hill of Auchterhouse at the extreme southern boundary, traverses the whole length of Glen-Ogilvie, cuts its way through the central hilly ridge, and joins the Dean on the demesne of Glammis castle, thus intersecting the parish over nearly 6 miles of its length, and cutting it lengthways into two not very unequal parts. Kerbet or Essay burn rises on the west side of the hill of Auchterhouse, within the parish of the same name, enters Glammis $\frac{3}{4}$ of a mile from its source, traverses Denoon glen, forms, for about a mile, the boundary-line with Essay, and then passes into that parish to pay its tiny tribute to the Dean. Both this brook and the Glammis abound with fine red trout. The climate, formerly moist and not very healthy, is now, in consequence of extensive draining in the course of agricultural improvement, dry and salubrious. Sandstone of close granulation and in thin and easily separable strata, producing the slabs which are locally used as a succedaneum for slates, and also the admired paving-stone known under the name of the Arbroath stone, is very abundant, and extensively quarried. About sixty years ago a small lead mine

on the banks of a rivulet near Glammis was discovered, but the quantity of ore obtained did not repay the expense of working. Shell marl, of great value in agriculture, has been taken up in large quantities from some mosses in the northern division, and especially from the Loch of Forfar.—Within a few yards of the manse stands an obelisk, of rude design, erected, as is generally supposed, in memory of the murder of Malcolm II., king of Scotland. On one side of it are figures of two men, who, by their attitude, seem to be forming the bloody conspiracy. A lion and a centaur, on the upper part, represent the barbarity of the crime. On the reverse, fishes of several sorts appear: a symbol of Loch-Forfar, in which, by missing their way, the assassins were drowned. In a neighbouring field is another small obelisk or stone on which are delineated various symbolical characters similar to those of the larger obelisk, and supposed to be intended as representations of the same facts. At a mile's distance from the village of Glammis, near a place called Cossans, is a third obelisk, vulgarly styled St. Orland's stone, still more curious than the others, and possibly akin to them in object. On one side is a cross rudely flowered and chequered; on the other, four men on horseback appear to be pursuing their way with the utmost possible speed, while the horse of one of them is trampling under foot a wild boar; and on the lower part of the stone is the figure of an animal somewhat like a dragon. Though no probable decipherment has been made of these symbols, they have been conjectured to represent the officers of justice in pursuit of Malcolm's murderers.—Two miles south-west from Glammis, in Denoon glen, on the summit of a solitary basaltic hill, overlooking the extensive vale of Strathmore, is a fortification, called Denoon castle, supposed to have been designed as a place of retreat in seasons of danger. A circular wall, believed to have been 27 feet high and 30 broad, and perforated with two entries, one on the south-east, and the other on the north-west, is carried round a circumference of about 340 English yards; and encloses faint though evident traces of interior buildings.—But the chief work of antiquity in the parish is the venerable and majestic pile, called Glammis castle, the property of the Earl of Strathmore, and his principal seat in Scotland. The edifice is very ancient, but has at various periods undergone important alterations. The central part of it is a tower, upwards of 100 feet high. At one of its angles is another tower, with a spiral staircase; and on its top are numerous small turrets with conical roofs. The wings are either altogether or chiefly of modern erection. They are four in number, and project towards different points of the compass. The principal avenue stretches from the castle to the village, a distance of more than a mile, and was anciently conducted under three several gateways. It must have been a noble specimen of our ancient architecture, before the wings were taken down, with the view of rebuilding them in another form. Pennant—who has given a drawing of it as it formerly stood—says: "The whole consisted of two long courts, divided by buildings. In each was a square tower, and gateway beneath; and in the third, another tower, which constitutes the present house, the rest being totally destroyed." It is commonly related, that the son of James VII., when he visited Scotland, A. D. 1715, to reclaim the throne which his father had thrown away "for a mass," having lodged here, declared that he had seen no castle on the continent which might be compared with it. This castle seems to have been the residence of Malcolm II. Here, at least, our chroniclers

James Mitchell & Co

Engraved by

say he was slain, about the year 1031. Pinkerton contends that he died a natural death.* But both Boece and Fordun assert that he was murdered.† According to good old Wyntoun, the reason of the insurrection was, that

——— he had rewyist † a fayre May †
Of the land thare lyand by
Krongkil, B. v. c. 10, v. 190.

Whatever was the cause, tradition still pretends to point out a passage in the castle where the bloody act was perpetrated. Nor is it less positive in affirming that his murderers, as the ground was covered with frost and snow, having unconsciously, in their flight, entered on the Loch of Forfar, all perished in it. That good antiquary, Sir James Dalrymple, evidently viewed this as one of the palaces of our kings. For, speaking of the pretended laws of this same Malcolm, he says: "Albeit it be said that the king gave all away, yet it is not to be thought but that he retained, with his royal dignity, his castles and other places of residence, as at Fort-teviot (*sic*), *Glames*, and Kincardin." [Collections, p. 139.]—The parish is intersected lengthways by the post-road between Dundee and Kirriemuir; diagonally by that between Perth and Aberdeen; and along Glen Ogilvie, along Denoon glen, and in various other directions by subordinate roads. Population, in 1801,

1,931; in 1831, 2,150. Houses 346. Assessed property, in 1815, £12,856.—Glamis is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, the Earl of Strathmore. Stipend £255 15s.; glebe £16 10s. Unappropriated teinds £328 8s. 5d. Parochial schoolmaster's salary £34 4s. 2d., with a house and £2 2s. 9d. for a garden, £24 or £25 school-fees, and £10 other emoluments. Besides the parish-school, there are schools in Glen-Ogilvie, and at Newton and Thornton. The second and third are unendowed; and the first gives, in addition to the fees, £5 of salary. The parish-church was rebuilt about 8 years ago, and is an elegant edifice. Sittings about 640.

The village of GLAMIS consists of two parts, an old and a new town, a little way apart: and is aggregately of considerable size. It stands at the intersection of the two principal roads through the parish, about half-a-mile south of Dean water, 12 miles north of Dundee. Here, and in other parts of the parish, about 12,000 pieces of brown linen are annually produced for the Dundee market. Two-thirds of this produce are manufactured in private shops, and one-third in a factory on Glamis burn. The village has a handsome parish-church, a subscription library of about 700 volumes, a capacious parochial-school, and an infant-school. So far back as 24 years ago, it had about 650 inhabitants; and it has since advanced considerably in prosperity.

GLASGOW.

The manufacturing and commercial metropolis of Scotland, and the third city of the united kingdom in point of population, and perhaps of wealth also, is situated in the Lower ward of the county of Lanark, on both banks of the Clyde, but chiefly on the north side of that river, in N. lat. 55° 51', and W. long. 4° 17'.|| It is 43 miles west of Edinburgh; 23 miles east of Greenock; 34 north-north-east of Ayr; 79 miles north-north-west of Dumfries, by way of New-Cumnock and Sanquhar; and 396 north-west by north of London.

Name.—The origin of the name is doubtful. Some conjecture that it is compounded of the two Gaelic words, *glass*, signifying 'grey,' and *gow*, 'a smith;' and infer that some son of Vulcan, who had obtained repute in his profession long before the establishment of a bishopric here, had the felicity of conferring his own distinguishing appellation on the infant city. There is no historical or even traditionary evidence of the existence of this 'Grey smith;' yet some antiquaries hesitate not to tell us that his smithy stood on or near the spot of ground where the Bishop's castle was afterwards erected. Others trace the etymology of the name to two ancient British words which might signify 'a Dark glen;' and conjecture that a deep ravine, a little to the east of the cathedral, gave name to a few cots planted in that neighbourhood, by the earliest settlers, in which this great city had its humble origin. Others again have conjectured that the name originally signified 'the Grey hound ferry.' Were the point even of more importance than it actually is, it would still be impossible now to settle it with any degree of certainty.

|| Mr. Cross determined the position of the Observatory in the College green to be N. lat. 55° 52' 10"; and W. long. 4° 15' 51". Dr. Wilson's observations fixed the same spot in N. lat. 55° 51' 32", and W. long. 4° 17' 54".

History.—The Romans had a station on the river Clyde at this spot. The wall of Antoninus, extending between the friths of Forth and Clyde, a few miles north of the city, embraced the province of Valentia in which Glasgow is situated. Though often harassed by the inroads of the Caledonians, the Romans did not abandon this station till sometime about the year 426, when they took their final leave of this island, to defend the 'Eternal city,' which was then assailed by the barbarous tribes which eventually overthrew the Roman empire. History tells us little more of this locality till about the year 560, when the see of Glasgow was founded by Kentigern or St. Mungo. Upon this fact all historians are at one. Spottiswood further informs us that this Kentigern was the son of Thametis, daughter of Loth, King of the Picts; but it was never certainly known who was his father; that his mother endeavouring, in 516, to fly into the country of the Britons, in order to conceal her shame, was delivered of him near Culross: see that article. The care of his education was intrusted to Servanus, bishop of Orkney, and he very early gave tokens of extraordinary piety. Upon the death of Servanus he passed into Wales, where, living a solitary and abstemious life, he founded a monastery between the rivers Elwide and Edway. Having sojourned there a few years, he resigned his office, and returning to Scotland, made his abode at Glasgow, where he laid the foundation of "a stately church," in which he was buried at his death, on 13th Jan., 601. We are not informed by what prince the see of Glasgow was endowed in favour of Kentigern; all that is known is that Baldred and Conwall were his disciples, the former of whom succeeded him in his bishopric, and founded a religious house at Inchinnan. For more than 500 years after this period, there is no record of the see; and to account for the blank, it has been supposed that the church was destroyed by the Danes, who either slew or drove away the religious community who had settled in Glasgow.

About the year 1115, the see was refounded by David, Prince of Cumberland; and from this period downwards, the history of Glasgow, civil and ecclesiastical, is generally distinct and authentic. Despite of this, however, the olden historic associations connected with Glasgow give place in interest and importance to those of many towns in Scotland, whose present condition sinks into insignificance when contrasted with the commercial and manufacturing status of the capital of the west. In 1124, David succeeded his brother Alexander I. as king of Scotland, and promoted his chaplain, John Achaius, to the bishopric in 1129. The new bishop rebuilt and adorned a part of the cathedral church, which he solemnly consecrated upon the 9th of July, 1136, at which solemnity the king was present, and gave to the church the lands of Perdeyc, now Partick. This prelate divided the diocese into the two archdeaconries of Glasgow and Teviotdale, and established the offices of dean, sub-dean, chancellor, treasurer, sacrist, cantor, and successor, and settled a prebendary upon each of them out of the donatives he had received from the king. He died on the 28th of May, 1147, and was buried at Jedburgh. Joceline, the abbot of Melrose, was bishop in 1174; and rebuilt the cathedral, or rather made an addition to the church that was built by John Achaius. This prelate appears to have interested himself much in the prosperity of the small community of Glasgow; for it was by his interest that William the Lion, King of Scots, erected the town in 1190 into a royal burgh, and granted a charter "for holding a fair every year, from the 8th of the apostle Peter (29th June), and for the space of eight days complete." This fair commenced on the second Monday of July, in each year, and continued during the week; it still continues, but, with the exception of the horse-market on Wednesday, it is more regarded as a *gaudeamus* or holiday-time for the humbler classes of the citizens, than a civic institution for the transaction of business. In 1272, Robert Wiseheart, archdeacon of St. Andrews in Lothian, was consecrated bishop of this see, at Aberdeen. He was appointed one of the Lords of the regency upon the death of Alexander III. in 1286, which office he discharged with great integrity. When the national contest between Bruce and Baliol broke out, and King Edward, as umpire, had ordered the competitors to meet him at Norham, the bishop of Glasgow also attended. On this occasion Edward told the assembled prelates and nobles that although he might justly claim the superiority of the kingdom of Scotland, as his by right, yet as a friend and arbiter elected by themselves, he would labour to compose the present controversy in the best manner he could; for the right, said he, although there are different pretenders, belongeth only to one, and for myself I determine to wrong no man; but to do that which is just, assuring myself you will all acquiesce, and take him for king who shall be pronounced so to be. The king having concluded his oration, Robert, Bishop of Glasgow, arose and gave him hearty thanks, in the name of the rest, for the good affection he bore to their country, and the pains he had taken to come and remove their debates; assuring him at the same time, that it was from the good opinion they entertained of his wisdom and equity, that they had submitted to him, as sole arbiter, the judgment and decision of this weighty affair; but when it had pleased him to speak of a right of superiority over the kingdom, it was sufficiently known that Scotland, from the foundation of the state, had been a free and independent kingdom, and not subject to any other power whatsoever: that their ancestors had defended themselves against the Romans, Picts, Britons, Saxons, and Danes, and all others who sought to

usurp upon them; and although, said he, the present occasion hath bred some distraction in men's minds, all true-hearted Scotsmen will stand for the liberty of their country to their deaths. When the war afterwards broke out on account of Edward's encroachments upon the independence of the kingdom, no one more vigorously withstood his tyrannic aggressions than Robert, Bishop of Glasgow: for which he was thrown into prison by the usurper, and only released after the battle of Bannockburn, when he was exchanged by the English for another person of quality. He died in 1316, after seeing Robert the Bruce firmly seated on the throne. This excellent old prelate entirely lost his sight during his captivity; he was allowed only 6d. per day for his own table; 3d. for his upper servant, one penny for his boy, and three halfpence for his chaplain, who celebrated mass for him during his confinement.

In 1300, Glasgow was the scene of a desperate conflict between the English and Scots, and this battle is the more interesting that the latter were led on by Sir William Wallace. Edward, it appears, had appointed one of his creatures, named Anthony Beck, to the see of Glasgow, during the captivity of Bishop Wiseheart. At this time Earl Percy governed in the western district, and it is probable resided generally at Glasgow. "Sir William Wallace, being in possession of the town of Ayr, left the town and fortress to the care of the townsmen; and being joined by the laird of Auchinleck, and his uncle, Adam Wallace of Richardtown, and Boyd, they borrowed English horses after it was dark, forming a squadron of 300 cavalry. They left Ayr at 10 o'clock, P.M., and arrived at Glasgow at 9 o'clock next morning, and having crossed the bridge, which was then of wood, drew up their men—where the Bridgegate is now built—in two columns, one under the command of his uncle and the laird of Auchinleck, who knew the road by St. Mungo's lane to the north-east quarter of Drygate, to attack Lord Percy in flank; while the main body, commanded by Sir William Wallace and Boyd, marched up the High-street to meet Earl Percy and his army, which consisted of 1,000 men in armour. The scene of action seems to have been between the Bell of the Brae and where the college now stands. Adam Wallace and Auchinleck, with 140 men, who had made a running march round the east side of the town, when the battle was doubtful, came rushing in, from the road where the Drygate now stands, upon the English column, and divided it in two. At the same instant, on hearing the cheers of his friends, Sir William stepped into the front, and with one stroke of his long sword cleft Percy's head in two. The route of the English now became general. The gallant Aymer Vallance led off Bishop Beck, and 400 of their men, by the Rottenrow port, being all that remained of the thousand men in armour brought out to oppose Wallace at the head of 300 cavalry. He, however, availed himself of his situation. In what might be then termed a street, Percy could not bring his men to act upon this small squadron. Notwithstanding of this victory, obtained by stratagem, surprise, and valour, it was not safe for Wallace and his followers to stay here, nor yet in the old Druidical groves about the Blackfriar's church, nor in the forest beyond the Molendinar burn. They marched straight to Bothwell, where they arrived at one o'clock, P.M., having performed a march of 36 miles in 11 hours, fought a battle with three to one of the men of Northumberland, the best soldiers in England, gained a victory, and marched 10 miles to safe quarters at Bothwell, in 15 hours. It was Aymer Vallance that planned and conducted the captivity of Wallace. It was in this forest the tryst

was set by Sir John Monteath, for his capture, which was brought to bear at Robroystown. The word, at the battle of Glasgow, was '*Bear up the Bishop's tail*,' spoken jeeringly by Sir William to his uncle, when their men were drawn up at the end of the bridge." [History of Glasgow by Andrew Brown, 1797.]—A portion of the above narrative has been disputed by some historians; in so far as it is averred by them that Earl Percy was not present at the engagement, but was absent at the time in the east of Scotland, or in Northumberland, and, of course, could not have fallen as is here alleged. That a battle took place, however, between Wallace and the English, there can be no doubt, and the circumstances attending it long remained a most interesting subject in Glasgow oral tradition.

In 1387, when Matthew Glendinning was bishop, the spire of the cathedral was destroyed by lightning. In 1408, his successor, William Lawder, rebuilt the great tower of stone as far as the first battlement. In 1484, Robert Blackadder, the son of Sir Patrick Blackadder of Tullieallan, was translated to the see of Glasgow from that of Aberdeen. He was a liberal prelate, and expended vast sums on the church and alterations. During his incumbency the see of Glasgow was erected into an archbishopric. He was frequently employed in the public transactions with the English, particularly in the year 1505, when he, in conjunction with the Earl of Bothwell and Andrew Forman, prior of Pittenweem, negotiated the marriage between James IV. of Scotland, and Margaret, eldest daughter of Henry VII. of England, which subsequently led to the union of the two kingdoms in the person of James VI.

About the year 1392, in the time of John Stuart, Earl of Carrick, afterwards Robert III., a mint was erected in Drygate-street, at which coins were struck. On one side was represented the King's crest crowned; but without a sceptre, with the motto, *Robertus Dei Gratia Rex Scottorum*; and on the other, on an inner circle, *Villa de Glasgow*; and on the outer circle, *Dominus Protector*. In 1420, there was a convent for Grey friars in the neighbourhood of Greyfriars' wynd. They were patronized by the unfortunate Isabella, Duchess of Albany, cousin to James I. of Scotland. In 1431, she mortified the lands of Balagan to the convent of the Grey friars at Glasgow, for "the salvation of our souls, and that of Murdoch, Duke of Albany, of worthy memory, our dear husband; and also of Duncan, Earl of Lennox, our father, and of Walter, James, and Alexander, our sons." It is a painful feature in the history of those times that this excellent lady received from the King her cousin, as a present, the heads of her husband, her father, and two of her sons,—James having escaped by flight into Ireland.

In 1508, James Beaton, son of John Beaton of Balfour in Fife, was appointed archbishop of Glasgow. He enclosed the palace with a magnificent wall of ashler-work, and built a bastion and tower at a proper distance. This prelate was succeeded in 1522, by Gavin Dunbar, tutor to James V., and lord-chancellor. It was about this time that the doctrines of the Reformation began to be universally studied, and to take that hold on the minds of the people which eventually resulted in the complete overthrow of the Roman Catholic religion in Scotland. It is said that the progress of the Reformation in the west of Scotland was vastly aided by those very means which were intended to crush it, viz., the martyrdom of Russell and Kennedy. For the purpose of banishing those doctrines which caused the established clergy to tremble in their strongholds, many pious persons suffered death at St. Andrews and Edinburgh; but it was deemed ex-

pedient to make an example in Glasgow in order to intimidate the heretics of the West. Archbishop Dunbar, however, was regarded as a man who had such a thing as the heart of humanity about him; and John Lawder, Andrew Oliphant, and Friar Maltman were sent from Edinburgh, to assist and steel his feelings for the work. The men devoted to destruction were Jeremiah Russell, one of the Grey friars in Glasgow, a man well-learned for the age in which he lived, and John Kennedy, a youth from Ayrshire, not more than 18 years of age. Upon being brought before their accusers, Kennedy evinced symptoms of trepidation, and seemed inclined to save his life by retracting his professions of attachment to the doctrines of the Reformation; but he was reassured by the gentle chiding of Russell, and remained firm to the last. After a mock trial they were handed over—much against the will of Archbishop Dunbar—to the secular power for execution, and suffered martyrdom at a stake which had been erected at the east end of the cathedral. These were the only persons who suffered at Glasgow during the progress of the Reformation; and though their death intimidated the people for the moment it roused a spirit scarcely less ferocious than that of the persecution which evoked it, and which nothing could allay but the tearing up by the roots the whole establishment of the papacy. Dunbar, however, though gentle in spirit, appears to have been deeply tinctured by the bigotry of his order; for, upon the occasion of Lord Maxwell bringing a bill into parliament, in 1542, to provide for liberty to read the Bible in the vulgar tongue, this prelate is found protesting most vehemently against it, both for himself, and in name of all the prelates in the kingdom. The measure passed into a law notwithstanding. James Beaton, the nephew of Beaton, archbishop of St. Andrews, succeeded Dunbar in the archiepiscopal see; but he found the minds of men so much agitated upon religious topics, and his whole diocese split into factions so furious and uncompromising, that, after many efforts to maintain his position, he at length came to the conclusion, when churches and monasteries were crumbling in every direction before the fury of the reformers, to retire from the kingdom. He accordingly passed into France in 1560, escorted by a party of the troops of that kingdom, and taking with him all the relics, writings, documents, and plate which belonged to the see, and indeed everything valuable. In the eyes of a member of the mother-church these must have been highly prized, for we learn that when the bull of the Pope, which erected Glasgow into an archbishopric, in 1488, was promulgated, all the relics were exhibited in the cathedral before the Pope's nuncio, and among others there were—"the image of our Saviour in gold,—the images of the twelve apostles in silver,—a silver cross adorned with precious stones, and a small piece of the wood of the cross of our Saviour,—a silver casket, containing some of the hairs of the blessed Virgin,—in a square silver coffer, part of the scourges of St. Kentigern, our patron,—in a crystal case, a bone of some unknown saint, and of St. Magdalene,—in a small phial of crystal, part of the milk of the blessed Virgin Mary, and part of the manger of our Lord!" Beaton was afterwards appointed the ambassador of Queen Mary at the court of France, and he was continued in the same office by her son, who, in 1588, restored to him the temporalities of the see of Glasgow. He died at Paris, in August 1603, and left all he had taken from Glasgow to the Scots college at Paris, and to the monastery of the Carthusians, on the condition that they should be returned to Glasgow so soon as its people returned to the bosom of the mother

church. The greater part of the documents thus taken away in 1560 were brought back to Scotland so late as last year (1839), and are now in the Roman Catholic college of St. Mary, at Blairs, in the parish of Maryculter, Kincardineshire, near Aberdeen.

The see of Glasgow was one of the most opulent in the kingdom; and its prelates lived in a style of splendour and exercised a sway scarcely inferior to that of the most potent nobles of the land. In the time of Bishop Cameron especially, it is recorded that "the great resort of his vassals and tenants, being noblemen and barons of the highest figure in the kingdom, waiting upon this spiritual prince, in the common course of business, together with the ecclesiastics that depended upon him, made his court to be very splendid—next to majesty itself." After Bishop Cameron had built his palace adjacent to the high church, he caused each of the thirty-two rectors to build a manse near it; and ordained them to reside there, and cause curates to officiate in their respective parishes. He created commissaries, clerks, and fiscals, and established the two commissary courts of Glasgow, Hamilton, and Campsie, to be held three times a-week in the consistorial house at the west end of the cathedral. Their jurisdiction extended over parts of the counties of Dumbarton, Renfrew, Stirling, Lanark, and Ayr. In reference to one of the thirty-two dignitaries of the cathedral, Ure mentions a circumstance which is not devoid of historical interest. He says: "The parson of Campsie, chancellor of the chapter, whose office it was to keep the seal and append it to all acts and deeds of the archbishop and his council, had his manse in the Drygate, in that place called the Limmerfield. Henry, Lord Darnley, lodged in his house when he came to meet his father, the Earl of Lennox, from Stirling." The bishops, and latterly the archbishops, were lords of the lordships of the royalty and baronies of Glasgow; in addition to this there were 18 baronies of land which pertained to them in the sheriffdoms of Lanark, Dumbarton, Ayr, Renfrew, Peebles, Selkirk, Roxburgh, Dumfries, and the then Stewartry of Annandale, including 240 parishes. Besides, there was a large estate in Cumberland, subject to their jurisdiction, which was termed "the Spiritual Dukedom." From this period—1560—till the revolution of 1688, there is a succession of the translation, death, demission, and expulsion of 14 protestant archbishops, who seem to have been mere minions of the party in power, and placed there to alienate to their patrons the princely domains of the Glasgow see; or, in other words, to act the part of "Tulchans"—a term in vogue in these days; that is, they were set up as the calves, while the great men of the state *milked* the benefices. In connection with the papal rule in Glasgow, there were many religious and charitable institutions which space will not allow us to notice at length.

Previous to the reign of James I. of Scotland, the town was governed by bailies nominated by the bishop, who about this time appointed a provost in the person of Sir John Stewart of Minto; and this gentleman found the charge of so much importance that he removed to Glasgow with his family. The successors of Sir John continued in office till after the Reformation, when they suddenly fell from dignity and opulence to obscurity and poverty; and the last of the family went out an adventurer to the Darien settlement, in 1699, where, from the jealousy and inhospitality of the English and Dutch, he perished with some thousands of his countrymen. Though the share was so low as one hundred pounds, he was not a partner. The tomb of this ancient family—which was the only one spared

at the Reformation,—stands on the west side of the door on the south side of the choir of the cathedral.

In 1450, Bishop Turnbull obtained from the King—James II.—a charter, erecting the town and patrimonies of the bishopric into a regality. This spirited prelate also procured a bull from Pope Nicholas V., for the founding of a university, which he endowed. Before this period the town was so contemptible as not to contain more than 1,500 inhabitants; but the establishment of the university subsequently contributed more than any thing which had hitherto been done to the extension of the city and the general well-being of the inhabitants. The immunities and prerogatives granted to the university, however, had the effect of depriving the citizens temporarily of a portion of their political privileges; for the bishops, being now invested with vast political powers, assumed the distribution of those franchises which formerly belonged to the townsmen, and for the purpose of securing the obedience of their inferiors they appointed powerful noblemen as bailies of the regality. These offices remained long in the family of Lennox, but eventually they resigned them to the Crown, and, at the Revolution, the right of election was placed in the hands of the magistrates and council; on which footing it remained till transferred to the £10 electors by the recent burgh reform bill. Subsequently to the foundation of the university the population began to creep slowly down the hill upon which the cathedral stands, and having reached the position of the present cross, it branched slightly east and west, forming portions of the streets now called Gallowgate and Trongate, and as the craft of fishermen had sprung up among the people, Saltmarket-street was laid out for the means of easy access to the river. Withal, however, Glasgow was yet presented scarcely the skeleton of a city, for the royal burghs of Scotland having been taxed by order of Queen Mary, it appears that Glasgow only rated as the eleventh in point of population and importance. It is somewhat remarkable, however, to find that, even thus early, Glasgow began to possess the germs of commercial eminence, in so far as it was not destitute of shipping, for there is an order of the privy-council to the effect that vessels belonging to Glasgow should not annoy those belonging to Henry VIII., the Queen's uncle. During the minority of Mary, James Hamilton, Earl of Arran, the then heir to the throne, and the ancestor of the ducal house of Hamilton, was appointed regent. His appointment was opposed by the Earl of Lennox and the Queen-dowager; and, finally, the hostile feeling became so potent that both parties flew to arms. The regent having gathered together a numerous army at Stirling, marched to Glasgow, and stormed the castle, which was held for Lennox with brass guns. After the siege had been maintained for ten days, the garrison agreed to surrender on condition of receiving quarter; but no sooner had they laid down their arms than the regent's troops fell upon them, and only two escaped alive. Lennox determined to revenge this treachery and loss by striking a desperate blow, and having associated with himself the Earl of Glencairn, they intended to have marched into Clydesdale, and laid waste the lands of the Hamiltons. The regent heard of their intentions, however, and determined to counteract it by seizing Glasgow. Glencairn, on the approach of the regent, drew out his forces, amounting to 800 men, partly composed of his own vassals, and partly of the citizens of Glasgow; and, at a place called "the Butts," near the site of the infantry barracks, and where the "weaponschaw" used to be held of old, he boldly attacked Arran. The onset of Glencairn was so furious that he beat back the first rank upon the se-

cond, and took the brass ordnance they had opposed to him; but in the heat of battle, and while victory yet wavered, Robert Boyd of the Kilmarnock family, arrived with a small party of horse, and at once dashed into the thickest of the fray. His charge decided the engagement, for the little band of Glencairn, conceiving that a new army had come against them, fled with precipitation. Considering the numbers engaged, the battle was a very sanguinary one, and 300 men were slain on both sides, including two gallant sons of Glencairn. The regent immediately entered the town, and being deeply incensed against the citizens for the part they had taken, he gave it up to plunder, which his soldiery did so effectually, that they harried every thing moveable, and even pulled down the doors and windows of the dwelling-houses; in fact, they only spared the city in so far as they did not burn it.

The circumstances connected with the murder of Lord Darnley, the marriage of the Queen with Bothwell, her discomfiture by the confederated Lords, and subsequent imprisonment in Lochleven castle, are matters of too much historical prominence to need recapitulation here, even were they not touched upon in other articles: See CARBERRY, CROOKSTON, and LOCH-LEVEN. In 1568 Mary effected her escape from Loch-Leven, and forthwith repaired to Hamilton, where she was joined by the Earls of Argyle, Eglinton, Cassilis, Rothes, and others. The Regent Murray happened at the time to be holding a court of justice at Glasgow, and, though taken by surprise, his usual fortitude and presence of mind did not forsake him. He was soon joined by the Earls of Glencairn, Montrose, Mar, and Monteith, with Lords Temple, Home, and Lindsay, and he speedily encamped on the lands of Barrowfield, in order to await the approach of the enemy. Meantime the party who had joined the Queen resolved to place her in safety in the strong fortress of Dumbarton, which was held by one of their friends, till they had time to try the merits of the quarrel with the Regent by force of arms. To avoid meeting Murray on the Gallow-muir, the royal army came down by Rutherglen, intending to cross the Clyde at Renfrew; but when he saw them from the opposite side, he caused his cavalry to ford the river, which left the bridge open to his infantry. The possession of Langside hill, about a mile-and-a-half to the south of the city, was seen to be a point of much importance to either party in the fate of a battle, and the regent obtained it, as much almost by accident as by ability. The Earl of Argyle having been suddenly seized with a fit of epilepsy, the march of the Queen's troops was delayed for a time, which was improved to the best advantage by the Regent. The battle soon began, and was continued for nearly an hour with the most determined bravery on both sides; so eager were they, indeed, that each party threw their broken spears, daggers, and stones in the faces of their adversaries. At a critical moment the Regent's second battalion joined the first, and this decided the fate of the day, and blasted the hopes of the unfortunate Queen, who stood upon a hill at some little distance, gazing upon the progress of the fight with an agony of anxiety. The queen immediately took horse for Dundrennan abbey, in the stewardry of Kirkcudbright, from which she fled into Cumberland, seeking succour from her crafty cousin, Elizabeth. Nineteen years afterwards the sufferings of Mary Stuart were closed by her murder on the hill of Fotheringay. In the battle of Langside, the Regent killed 300 of the Queen's party, and took 400 prisoners. For his victory Murray was much indebted to the citizens of Glasgow, who had not forgotten the miserable sacking of their town by the Hamiltons after

the 'Battle of the Butts,' and from their position on the Regent's left wing they did cruel execution upon the Queen's right. The Regent having returned to Glasgow, and offered up thanks for his victory, was sumptuously entertained by the magistrates. He expressed his deep obligations to the citizens, and especially to the heads of the corporation, for the timely aid they had afforded him, and inquired if in any way he could be serviceable to them. Matthew Fawside, the deacon of the incorporation of bakers, replied, that as the mills at Partick belonged to the Crown, and the tacksman exacted such exorbitant multures that it affected injuriously the price of bread to the community, a grant of these mills to the corporation would be regarded as a public benefit; and perhaps the bakers were not altogether undeserving of favour in another respect, as they had liberally supplied the army with bread while it remained in the neighbourhood of Glasgow. Fawside's address had the desired effect, and the splendid flour-mills at Partick, about 2 miles below the city, on the banks of the Kelvin, are possessed by the bakers till this day. Seeing the success of this corporation, the magistrates also put in their claim, which the Regent evaded by a promise, that when the King came of age they should have all they asked for.

By the year 1579, the zeal or rather fury of the Reformers had waxed so intense that it was considered sinful to permit one stone to stand above another upon those edifices which had formerly belonged to the Catholics, however serviceable they might be as Protestant places of worship, or beautiful as architectural triumphs. The cathedral of Glasgow had, up till this period, withstood the storm of the Reformation, and had been even left untouched by the besiegers of the bishop's castle. An act had passed encouraging this wholesale demolition, and Spottiswood thus describes its consequences:—"Thereupon ensued a pitiful vasion of churches and church-buildings, throughout all the parts of the realm; for every one made bold to put to their hands, the meaner sort imitating the example of the greater, and those who were in authority; no difference was made, but all the churches either defaced or pulled to the ground; the holy vessels, and whatsoever else men could make gain of, as timber, lead, and bells, were put to sale; the very sepulchres of the dead were not spared; the registers of the church and bibliothecs cast into the fire; in a word, all was ruined; and what had escaped in the time of the first tumult, did now undergo the common calamity; and the preachers animated the people to follow these barbarous proceedings by crying out, that the places where idols had been worshipped ought, by the law of God, to be destroyed, and that the sparing of them was the reserving of things execrable." The execution of this act for the west was committed to the Earls of Arran, Argyle, and Glencairn;* but they, at the intercession of the citizens, had hitherto spared the cathedral. Mr. Andrew Melville, the Principal of the college, had, however, long importuned the

* The following is the copy of the original order issued to all magistrates and people in power at the Reformation, for the first dismantling of the Catholic churches:—

"To our traist friendis:

"Traist friendis, after maist hartly commendacion, we pray you fail not to pass incontinent to the Kirk, (of Glasgow,) and tak down the hail images thereof, and bring forth to the Kirk-zyard, and burn thaym openly. And sicklyk cast down the altaris, and purge the Kirk of all kynd of monuments of idolatrye. And this ze fail not to do, as ze will do us singular empleur; and so committis you to the protection of God.

"From Edinburgh the xii. of August, 1560.

(Signed)

"AR. ARGYLL

"JAMES STEWART.

"RUTHVEN."

"Fail not, bot ze tak guid heyd that neither the dasks, win-docks, nor durris, be ony ways hurt or broken, either glassis wark or iron wark."

magistrates to allow it to be pulled down, and they at length consented. The reasons urged for its demolition—which read rather curiously at this time of day—were somewhat to the following effect:—That they might build with its materials various little churches in other parts, for the ease of the citizens,—that it was the resort of superstitious people who went there to perform their devotions,—that the church was too large, and the voice of the preacher could with difficulty be heard by the congregation,—and above all, the propriety of removing an idolatrous monument, which was the only one of all the cathedrals in the country left undestroyed, and in a condition to be repaired. A number of quarriers, masons, and other workmen were accordingly engaged by a special day to pull down this beautiful edifice; but while they were assembling, by beat of drum, the craftsmen of Glasgow, who justly regarded the cathedral as the architectural pride of their city, flew to arms, and informed Mr. Melville that if any one dared to pull down a single stone of the building, he should that instant be buried under it. So much incensed were they at the attempt to demolish this ancient building, that if the magistrates had not succeeded in appeasing them, they would have put Melville to death with all his adherents. Upon this a complaint was made by the ministers, and the leaders of the insurrection cited to appear before the king, who was not yet thirteen years of age; but his majesty took the craftsmen under his protection, approved of the opposition they had made, and prohibited the ministers from following the work of demolition farther,—saying, that “too many churches had been already destroyed, and that he would not tolerate more abuses of that kind.” And thus was saved from religious frenzy and mistaken zeal the venerable cathedral of Glasgow. It would appear that shortly after this period the university was nearly in equal danger of destruction; for amongst a list of grievances presented to the king after the ‘Raid of Ruthven,’ the magistrates are complained against for invading the college with a mob, and shedding the blood of many of the students, who prevented them from burning the university. The bailies, who acted the part of ring-leaders, are even named, viz., Colin Campbell, William Heygate, and Archibald Heygate.

In 1581, the Confession of Faith was subscribed by 2,250 persons in Glasgow, women as well as men signing it, and it appears to have been carried about from house to house. Towards the close of the 16th and about the beginning of the 17th centuries, church-discipline amongst the Presbyterian burghers of Glasgow appears to have been of a somewhat stringent description. In August 1587, it was decreed that harlots should be carted through the town, ducked in Clyde, and put into the jugs at the cross on a market-day. Adultery was punished, by causing the culprit to appear six Sabbaths on the cockstool at the pillar, barefooted and barelegged, in sackcloth; and thereafter to be carted through the town, and ducked in the Clyde from a pulley fixed on the bridge. It would appear, however, that the presbyters of old could be gentle with those of gentle blood, when it suited their liking; for we find that, in March 1608, the session agreed to pass the laird of Minto, a late provost, who was accused of a breach of chastity, with a reprimand, on account of his age and the station he held in the town. Those who were released from excommunication were required to pass through the following ordeal:—“A man excommunicated for relapse in adultery, was to pass from his dwelling to ‘the Hie kirk,’ six Sundays, at six in the morning at the first bell, conveyed by two of the elders or deacons, or any other two honest men, and to stand at the kirk-door barefooted,

and barelegged, in sackcloth, with a white wand in his hand, bareheaded till after the reading of the text; in the same manner, to repair to the pillar till the sermon was ended, and then to go out to the door again, and stand there till the congregation pass from the kirk, and then he is released.” The presbytery enjoined their ministers to be of sedate deportment, and not vain with long ruffles and gaudy toys in their clothes. The session ordered that the drum should go through the town, to intimate that there must be no bickerings or plays on the Sabbath; and games, golfs, bowls, &c. were prohibited on the same day. It was strictly enjoined that no person go out to Ruglen to see plays acted on the Sabbath; and in 1595 the bailies of that burgh were reprimanded by the presbytery for sanctioning and encouraging profane stage-plays on the Lord’s day. In 1588 the kirk-session of Glasgow ordered a number of ash trees in the Hie kirk-yard to be cut down to make forms for the folk to sit on in the kirk; women were not permitted to sit upon these forms, but were directed to bring stools with them. It was also intimated, that “no woman, married or unmarried, should come within the kirk-door to preachings or prayers with their plaids about their heads, neither to lie down in the kirk on their face in time of prayer; with certification that their plaids be drawn down, or they be raised by the beadle. The beadies were to have staffs for keeping quietness in the kirk, and comely order; for each marriage they were to get 4d., and 2d. for each baptism.” On their part the magistrates appear to have been equally potent in those days, and equally ready to exercise their authority. Their jurisdiction seems to have extended to both civil and criminal cases, and they acted alike in a legislative and executive capacity. One of the most remarkable illustrations of the extent of their authority, is a composition for the slaughter of one of the burgesses, which is entered on the burgh-books as having the “strenth of ane decret of the provest and baillies.” It would appear that about the year 1575, Ninian Syare murdered Ninian M’Litster; and the composition in question is a contract betwixt the widow and representatives of the murdered man, and David Syare, the son of the murderer, as taking burden for his father, by which the first party agrees, upon the performance of certain conditions, to pass from “any action, criminal or otherwise, that they may have against him for the crime.” The contract goes on to mention these conditions in manner following: “For the quhilkis premiss to be done, and done in manner fairsaid respective, the said David takand the burden on him for his father, sall cause the said Niniane, his father, to comper in the Hie kirk of Glasgow, the xi. daye of December nixt to cum, and thair mak the homage and repentance for the said slaughter, with sick circumstances and cerymoneis as sall be ordanit and devysit be Coline Campbell and Robert Stewart, burgessis of Glasgow, chosin and admittit be baitht the parties for that effect. And farther, the said David, &c., (we omit a tedious list of names,) oblist them, their airis, executoris, and assignayis, to content and paye to the said Margaret and William M’Litster, for themselves and in their name of the said umquhile Niniane, M’Litster’s barnes, the sowme of three hundredth merkis money, in name of Kynbute,” (or reparation,) &c. But instances of what would now be considered an extraordinary stretch of power were by no means uncommon in these olden times; and the character of the population and state of the kingdom may be learned from the many strict orders to the citizens to provide themselves with arms, and be prepared for every contingency. In 1547, the bailies and council

ordained "everilk buythbalder to have in reddines within the buytht, ane halbert, jak, and steelbonet, for eschewing of sick inconvenients that may happen." And again, in 1577-8, we have the following, "Qubilk daye it is condescendit be the prouest, bailies, counsall, and dekyne, that the act maid anent the hagbuttis be renewit, that every ane, substantiall and habill man sall have ane hagbutt, with graitht, halder, and bullet effeiring thairto, and that every wheris, nocht beand habill thairfor, sall have ane lang speir, by (besides) jakkis, steilbonetis, sword, and bukler," &c. In 1638, the council authorized the master of works, then in Flanders, to purchase for the town's use fifty muskets, with "stalfis and bandeleiris," and fifty pikes. Subsequently, in the same year, they ordered "three score young men to be elected and trained to handle arms, the driller to have for his pains 40 shillings each day for his coming out of Edinburgh, aye until he be discharged, with his horse hire, hame and afield."

The town appears in these times to have been sadly afflicted with a class of diseased unfortunates, called "lepers," and so early as 1350, Lady Lochow, daughter of Robert, duke of Albany, and mother of Colin, 1st Earl of Argyle, erected and endowed a leprosy hospital on the south side of the bridge near the river. It is recorded that on 7th October, 1589, there were six lepers in the Lepers' house at the Gorbals end of the bridge, viz. Andrew Lawson, merchant; Steven Gilmour, cordiner; Robert Bogle, son of Patrick Bogle; Patrick Brittal, tailor; John Thomson, tailor; and Daniel Cunningham, tinker. In 1610, the council ordained that the lepers of the hospital should go only upon the causewayside, near the gutter, and should have "clapperis" in their hands to warn the people to keep away, and a cloth upon their mouth and face, and should stand afar off while they receive alms, under the penalty of being banished from the town and hospital. In 1635, the magistrates purchased from the Earl of Glencairn the manse of the prebendary of Cambuslang—which had been gifted to him after the Reformation—which they fitted up as a house of correction for dissolute women, and the authority and vigilance of the kirk session proceeded so far as to order them to be "whipped every day during pleasure!"

Glasgow was occasionally honoured by being the seat of the ecclesiastical synods of the church; and from the character of the age for a long period subsequent to the Reformation, these were regarded as of more importance than the visits of royalty itself. The most remarkable of all these was that held in 1638, in the reign of Charles I., in which they fairly overturned the Episcopal system of the king, and asserted the perfect independence of the kirk. The magistrates looked upon this great convocation with some anxiety, and amongst others they made the very wholesome regulation that "no inhabitant expect more rent for their houses, chambers, beds, and stables, than shall be appointed by the provost, bailies, and council, and ordains the same to be intimated through the town by sound of drum, that no person may plead ignorance." In the prospect of the great number of persons who were expected to attend this assembly, the town-council statuted and ordained, that there should be a guard of men kept through the day, and a watch at night under the orders of the provost and bailies. The treasurer was directed to purchase for the town's use 100 muskets with "stalfis and bandeleiris," 30 pikes, 4 cwt. of powder, and 4 cwt. of match. This assembly—so much celebrated in the annals of the Church of Scotland—commenced its sittings on the 21st November, 1638, the well-known Marquis of Hamilton officiating as his majesty's commissioner. In

the course of the preceding year, Laud, Archbishop of Canterbury, had introduced a service-book to be read in the Scottish churches, which the people regarded with abhorrence as smacking of the mass. Both on this account, and for the purpose of overturning the system of episcopacy, the Presbyterian party made extraordinary exertions, and according to the narrative of Dr. Robert Bailie, afterwards Principal of the University of Glasgow, they succeeded in gathering together the most celebrated and influential nobles and gentlemen in the kingdom. On Wednesday the 28th November, during the seventh session or sederunt, when the Assembly were about to vote upon the question, whether they were the bishop's judges, the commissioner produced the king's instructions and warrant to dissolve the Assembly, which he accordingly did. But after "a sad, grave, and sorrowful discourse," the Assembly resolved to proceed, notwithstanding their dissolution by the King, and the departure of his representative. The Presbyterian party, having once passed the Rubicon, carried every thing according to their own liking, and with a spirit of independence which evinced the sincerity of their attachment to a covenanted kirk. They decreed the abjuration of Episcopacy; the abolition of the service-books and the high commission; they pronounced the proceedings of the preceding six assemblies null and void; the bishops and sundry ministers were tried, and deposed for professing the doctrines of Arminianism, Popery, and Atheism,—for urging the use of the liturgy, bowing to the altar, and wearing the cope and rotchet,—for declining the assembly,—and for being guilty of simony, avarice, profanity, adultery, drunkenness, and other infamous crimes. Amongst those deposed were the Bishops of Galloway, St. Andrews, Brechin, Edinburgh, Aberdeen, Ross, Glasgow, Argyle, and Dunblane, who were at the same time excommunicated. The covenant being approved of, was ordered to be signed by all classes of the people, under pain of excommunication; and churchmen were incapacitated from holding any place in parliament. "Thus," to use the words of the historian Hume, "Episcopacy, the high commission, the articles of Perth, the canons, and the liturgy were abolished, and declared unlawful; and the whole fabric which James and Charles, in a long course of years, had been rearing with so much care and policy, fell at once to the ground." In these proceedings the Assembly was much countenanced and assisted by the Earl of Argyle, whose conduct in remaining amongst them, says Dr. Bailie, "went much against the stomach both of the commissioner and king," the latter of whom never forgave him. The Assembly continued its sittings till the 26th of December inclusive, having in all 26 sessions, or 18 after the commissioner's departure. The last day of the Assembly is stated to have been a "blythe day to all." At the opening the venerable Mr. John Bell, minister of the Tron church of Glasgow, preached, and Mr. Alexander Henderson was elected moderator, and officiated in this capacity during the sederunt.

Shortly thereafter the civil wars of Charles I. broke out and desolated the kingdom from the one end to the other. The Marquis of Montrose, who carried the standard of the king, raised an army in the north, and proceeding south gave battle, at Kilsyth, to General Bailie, at the head of 7,000 Covenanters, on 15th August, 1645. The Covenanters were entirely routed, and nearly 6,000 of them put to the sword, while of the remaining thousand a vast proportion were suffocated in Dullater-bog. The city of Glasgow having heard of Montrose's success, sent Sir Robert Douglas of Blackerston, and Mr. Archd.

Fleming, commissary, to congratulate him upon his victory, and invite him and his army to spend some days at Glasgow. He accordingly marched next day to the city, where he was entertained with great cost and solemnity; but he only remained one night on account of the plague, which was then raging, though before he left it he made the inhabitants pay pretty smartly for his visit. Subsequently, as is well known, Montrose fell into reverses from the desertion of his army, which was little better than an undisciplined rabble, and was surprised and defeated by Lesley, at Philiphaugh, on 13th Sept., 1645. Three of the prisoners taken there, viz. Sir William Rollock, Sir Philip Nisbet, and Alexander Ogilvy of Inverquharie, were executed at Glasgow—the first on the 28th, and the others on the 29th of October. Upon occasion of these executions, the Rev. Mr. David Dickson, then Professor of Divinity in Glasgow, was heard to exclaim, "The guid work goes bonnily on!" which passed into a proverb. Lesley, the victorious general, treated the citizens with great civility, though he jeeringly borrowed from them the sum of £20,000 Scots, as the interest, according to his phrase, of the £50,000 which, it was alleged, they had lent to Montrose. Charles I., as is well known, threw himself, in the days of his adversity, upon the protection of the Scots covenanting army, by whom he was, nine months afterwards, basely sold to the English parliament. Scotland, after having given the King's cause the first fatal blow, began to see that Presbytery would be in danger from the overthrow of the king, and the triumph of the Independent party in England; and they resolved, therefore, when too late, to arm in his defence, and invade England. Levies were ordered throughout the various districts of the kingdom, but the clergy opposed them in many instances from their dread of the restoration of monarchy; and Glasgow was found to be amongst the number of those contumacious burghs which declined to furnish its quota. The magistrates and council were in consequence summoned before parliament, imprisoned for several days, and deprived of their offices. In addition to this, some regiments of horse and foot were sent to the town with orders to quarter on no other but the magistrates, council, session, and their friends. Some of the citizens were burdened with 10, 20, and 30 soldiers, who, in addition to meat, drink, and wine, exacted their daily pay; altogether, says Principal Bailie, "our loss and danger was not so great by James Graham." The army, however, was completed, being one of the most numerous which had ever left Scotland for the invasion of England. The division under the command of the Marquis of Hamilton was attacked by Cromwell, near Preston, in Lancashire, his forces completely routed, and himself taken prisoner. He was afterwards brought to the scaffold, and 10,000 of his soldiers were sold to the plantations at two shillings per head. On the 3d September, 1650, Cromwell defeated the Scotch army at Dunbar—a battle which was forfeited by the ill-timed exhortations of the Scotch clergymen, who induced their countrymen to leave an unsailable position, where they fell an easy prey to the troops of Cromwell: See article DUNBAR. In the course of the winter the Protector visited Glasgow, and took up his residence and held his levees in Silvercraig's house, on the east side of the Saltmarket, nearly opposite the Bridgegate. While in this city, Cromwell acted the character of austere sanctity so well that some of the Scottish clergy, who had been honoured by him with an interview, averred that he must surely be one of the elect. Having learned that Mr. Patrick Gillespie, minister of the Outer High church, had the chief

sway in ecclesiastical matters, the Protector sent for him, and after a long conference, gave him a prayer. On the following Sunday he went in state to the cathedral church. Here it so happened that the celebrated Zacharias Boyd preached in the forenoon, and railed so bitterly against Cromwell that his secretary, Thurloe, asked leave, in a whisper, "to pistol the scoundrel." "No, no," said the general, "we will manage him in another way!" In the evening he asked the clergy to sup with him, and concluded the entertainment with a prayer, which is said to have lasted till three o'clock in the morning. Cromwell's stay in Scotland was in the main extremely beneficial to the country, and to Glasgow in particular. Great part of his troops consisted of tradesmen, who had been spirited away from their peaceful callings by the frenzy and enthusiasm of the times. A number of these settled in Glasgow, and contributed to foster the spirit of trade, and bring the arts to a degree of perfection to which our rude forefathers had been formerly strangers. English judges were appointed to determine causes in the Scottish courts; justice was strictly administered;* and the whole country was brought to a degree of perfect subordination under General Monk.

In its previous history, Glasgow had been frequently severely tried in the crucible of affliction by fire and pestilence; but about this time, on 17th June, 1652, a conflagration broke out, which exceeded all former visitations of the kind in its extent and in its temporarily painful effects upon the citizens. The greatest part of Saltmarket, Trongate, and High-street, was destroyed. Contributions were made for the sufferers from all parts of the country. In the representation drawn up at the time by the magistrates, the following passages occur, descriptive of the appalling extremities to which the citizens had been reduced: "This fire, by the hand of God, was carried so from the one side of the street to the other, that it was totally consumed on both sides, and in it the faire, best, and most considerable buildings in the town, with all the shops and warehouses of the merchants which were therein. This sad dispensation from the hand of an angry God continued near 18 hours before the great violence of the fire began to abate; in this space of time many of those who were wealthy before were extremely impoverished; many merchants and others almost ruined; a considerable number of widowers, orphans, and honest families were brought to extreme misery; the dwellings of almost a thousand families were utterly consumed, and many of those who had a large patrimony, and oftentimes had been a shelter to others in their straits, had not themselves a place to cover their heads, or knew wherewith to provide bread for them and their families." The wretched inhabitants were for many days and nights compelled to encamp in the open fields, and altogether this calamity was regarded as the severest visitation which had afflicted Glasgow since the foundation of her cathedral. The loss was computed at £100,000,—no inconsiderable sum in those days. But like London, in a similar affliction, Glasgow rose purified and beautified from her ashes. The majority of the houses had been built or faced with wood, and these gave place to substantial stone erections, which were constructed in that open and commodious manner which is now so generally characteristic of the city.

* It is matter of traditionary fact that the decisions of the English judges were more agreeable to the spirit and principles of the law of Scotland, than the previous decisions of the judges of the country. A young lawyer having made an observation to this effect to a Scots judge, who died in the early part of the 18th century,—"*Deil mean (hinder) them!*" replied the judge, "*they had neither kith nor kin in this country. Take that out of the way, and I think I could make a good judge myself.*"

Subsequently, in 1677, another great conflagration took place in Glasgow, when 180 houses were burned. It originated at the head of the Saltmarket, near the cross; and was kindled by a smith's apprentice, who had been beaten by his master, and who set fire to his smithy during the night in revenge. Law, in his 'Memorials,' says: "The heat was so great that it fyled the horologe of the tolbooth, there being some prisoners in it at the tyme, amongst whom was the laird of Caraldone. The people brake open the tolbooth doors, and set them free." Though this fire was painfully disastrous in its effects, yet the inhabitants were now in a position much better fitted to stand the infliction, and accordingly there was not experienced the tithe of the suffering which marked the former conflagration.

The Restoration took place in 1660; but it only brought an increase of suffering and disaster to the people of Scotland. It soon became apparent that the policy of Charles II. would be similar to that of his father in his efforts to force Episcopacy upon a reclaiming people; and as Glasgow was the headquarters of the Covenanters of the west, where the people were resolved to "suffer unto the death for conscience' sake," the city shared in all the pains and persecutions of that iron time. The king having appointed Mr. James Sharp, minister of Crail, to be archbishop of St. Andrews, and Mr. Andrew Fairfoul, minister of Dunse, to be archbishop of Glasgow, they arrived in Edinburgh in April 1662, having been previously ordained in London. Despite the efforts of the new archbishops, and the regal power with which they were armed, the clergy and laity of Glasgow, with trifling exceptions, refused to conform to the new order of things; and the Earl of Middleton, with a committee of the Privy council, came to Glasgow on 26th September, 1662, to enforce compliance with the new order of things. The council met in the forehall of the college, and it was long afterwards remembered as "the drunken meeting of Glasgow;" for with the exception of Sir James Lockhart of Lee, one of the senators of the college of justice, it was affirmed that every person present was flustered with liquor.* Lord Middleton informed the committee that the Archbishop requested the royal mandate for uniformity to be enforced, which was acquiesced in by all, save Lord Lee, who assured them that it would not only desolate the country, but increase the popular dislike to the bishops. It was enforced notwithstanding, and consequent upon these proceedings, 400 ministers were ejected from their parishes, and took leave of their flocks in a single day. Wodrow says—"It was a day not only of weeping, but howling, like the weeping of Jazer, as when a besieged city is sacked." Amongst those who were ejected, we find Principal Gillespie, Messrs. Robert M'Hard, John Carstairs, and Ralph Rogers of Glasgow, and Donald Cargill of the Barony parish, besides nine others, all in the presbytery of Glasgow. Then commenced the wild work of persecution, and the resistance of the covenanters, which has made their deeds and cause famous in all that is associated with heroic human endurance. Early in 1678, the committee of council returned to Glasgow, and had a sederunt of ten days. They sat on Sunday, during divine service, for the purpose of administering a bond which should prevent all intercourse with the

* This commission was an ambulatory one, and having disposed of Glasgow, visited many of the other towns of Scotland, with the view of curbing the spirit of the non-conformists. Its members appeared to have been disgraced by the grossest debauchery; for it is affirmed by the historians of the time that those who entertained the commissioners best, had besides their dining-room, drinking-room, and vomiting-room, sleeping-rooms for the company who had lost their senses. In one of their debauches at Ayr, the devil's health was drunk at the cross about midnight!

exiled ministers; and such was the terror which their proceedings had inspired, that the provost, bailies, and others of the citizens, to the number of 153 persons, signed the bond, although their consciences shuddered at its contents. The better to aid their proceedings, the council brought down upon the Lowlands, in the time of peace, an army of nearly 10,000 Highlanders, who seared the face of the country like a cloud of locusts, and after a stay departed from Glasgow, loaded with plunder. This body was known afterwards by the name of 'the Highland host.' They marched into Ayrshire, plundering in all directions, and the loss sustained by the inhabitants from this new inroad of the Huns, was computed at the time to amount in that county alone to £137,499 6s. Scots. Upon their return, loaded with baggage, they continued to take free quarters; but the students at the college of Glasgow, and other youths in the town, stopped the bridge, the river being high, against 2,000 of them. They permitted the Celts to pass only in numbers of forty at a time, and so soon as they had eased them of their plunder, they showed these rapacious mountaineers the way to the Highlands by the Westport, without allowing any of them to enter the city.—After the victory of the Covenanters at Drumclog, a party of them marched to Glasgow, and attempted to take it from the king's troops; but though they fought with determined bravery on the streets, they were repulsed, and their dead bodies left exposed for many days to be devoured by the butchers' dogs. The battle of Bothwell brig followed, in which 400 of the Covenanters were killed, and 1,200 taken prisoners, and this was also followed by the most fearful pains and penalties—torturing of the person, and alienation of the property of those who either did favour or were suspected to favour, doctrines in opposition to those of 'Black Prelacy.' But it is not intended here to follow out this subject, deeply and painfully interesting though it may be, into minute details. Suffice it to say that many of the devoted 'Hill folk' were hanged at Glasgow, their heads stuck on pikes on the east side of the jail, and their bodies buried on the north side of the cathedral church.† The death of Charles II. brought little or no mitigation of the sufferings of the Scottish people; or if it did, it was only the prospect of persecution for Popery being substituted for persecution for Episcopacy. Vast numbers of the people had emigrated to Holland, and amongst all classes, a liberal change of government was "a consummation most devoutly to be wished for."‡ It is true that during his vice-

† In more peaceful time, a stone was erected to the memory of the martyrs, the inscription on which concludes as follows:—

"These nine, with others in this yard
Whose heads and bodies were not spared,
Their testimonies foes to bury,
Caus'd beat the drums then in great fury,
They'll know at resurrection day,
To murder saints was no sweet play."

‡ With the view of instructing as to the form of procedure, it may not be amiss to give a summary of the sufferings and captivity of a citizen of Glasgow, who endured for conscience' sake.—We select the case of Mr. John Spreull, apothecary. His father, who had been a merchant in Paisley, was fined by Middleton, and obliged to flee; and the son was apprehended because he would not discover where his father was. After many trials he was released, and left the country, though he returned about the time of the battle of Bothwell brig, on account of which he had again to go forth the kingdom. During his absence his wife and family were turned out of house and shop, and all his moveables secured. He returned to this country about the end of the year 1680, intending to carry his wife and family to Rotterdam. He was apprehended at Edinburgh, November 12th, and next day carried before the Duke and Council, when the usual insinuating questions were put to him,—"Was the killing of Archbishop Sharp murder? Were the risings at Drumclog and Bothwell rebellious?" Having denied all connection with the affairs of Drumclog and Bothwell, and declined to pronounce them rebellious, or give any opinion with regard to the killing of the archbishop, his foot was put into the instrument called the *boot*. The following queries were proposed to him, and at every query the hangman gave

royalty in Scotland, James VII. when Duke of York, had occasionally visited Glasgow, with all the accompaniments of outward splendour, and resided in the house of Provost Bell; but the measures of persecution of which he had been long the active agent, and the horror entertained by the people generally against the institution of 'Black Prelacy' and Popery, caused the landing of the Prince of Orange in Torbay, on November 5th, to be regarded as a national blessing, and by no class in the kingdom was this great political event hailed with more heartfelt joy and sincerity than by the citizens of Glasgow. As a proof of it, the city levied and armed, in the following year (1689), a battalion of men, who were placed under the command of the Earl of Argyle and Lord Newbattle. These were immediately marched to Edinburgh, to assist in guarding the convention of estates, then deliberating upon the settlement of the Crown in favour of William and Mary. It is still matter of traditionary fact in Glasgow that this regiment was raised in a single day.

The blessings of peace, which had been so long denied to the kingdom, now gave the Scots an opportunity of developing their taste for industry and enterprise; and the scheme of the colonization of Darien was entered into by them with enthusiasm. Glasgow contributed its full share of men and means to that unfortunate expedition; and it is recorded that the last reinforcement to that devoted colony sailed from Rothesay, on September 14th, 1699, consisting of four ships, with 1,200 emigrants, and amongst them—as has been already stated—the last of the Stewarts of Minto. The fate of this most unfortunate enterprise is well-known; the jealousy of the Dutch East India company, as well as of the English, prevailed on the government of William to interpose such obstacles, that after waiting several months for supplies, the wretched colonists either died from starvation or escaped beggared from the shores of Darien. The money and credit of Scotland were both embarked in this scheme; and suffered so much, that years elapsed before the shock was recovered; amongst others, the inhabitants of Glasgow had hazarded such a deep stake, that we find them without shipping of their own from this period till the year 1716. This treatment of the first attempt of the Scots to plant a colony, coupled with the massacre of Glencoe, were doubtless circumstances which for long afterwards gave the inhabitants of the northern portion of the kingdom, reason to look upon the government of the Prince of Orange with feelings of abhorrence, scarcely less intense than those with which they had previously regarded the rulers who planned, and the soldiery who conducted, the persecution.

The act of union of 1707, which at that time was generally regarded as the death-blow of Scotland's independence, was most bitterly opposed by the citizens of Glasgow, and the magistrates found it necessary to order, that not more than three persons should assemble together on the streets after sunset. Being distant from the seat of government, however, the opposition expended itself in murmur and threatened

tumult; and a very short period elapsed before the citizens saw the advantages which had been conferred upon them by the opening of the American trade, which they embraced with a degree of ardour which justifies us in regarding this as the epoch from which must be dated the rise of Glasgow, as the great seat of commerce and manufactures in Scotland. In the year 1715, when the Rebellion broke out under the Earl of Marr, the city at once evinced the sincerity of its attachment to the principles of the Revolution of 1688, by raising a regiment of 600 men, at its own expense, which marched to Stirling, under the command of Mr. Aird, the late provost, and joined the royal army under the Duke of Argyle. Meanwhile, the citizens prepared for their defence at home, by fortifying the town and drawing a trench round it twelve feet in width by six in depth. These were subsequently inspected and approved of by the Duke, who, during his brief stay in the city, lodged in the house of Mr. Campbell of Shawfield. On this occasion Glasgow fortunately escaped the horrors of civil war by the subsequent defeat of the rebel host at Preston, in Lancashire.

Within a few years after the Rebellion, however, viz. 1725, a riot broke out in the city, which was so painful and fatal in its consequences, that long afterwards it was regarded as one of the plague-spots in the local annals. Daniel Campbell, Esq. of Shawfield, who was at that period the member for the city, had rendered himself extremely obnoxious to the lower orders of the citizens at least, by his having voted for the extension of the malt-tax to Scotland. On the 23d of June, the day on which the tax should have been gathered, the mob rose, obstructed the excisemen, and assumed such a threatening attitude, that next day, Captain Bushell was brought into the town with two companies of Lord Delorain's regiment of foot. This did not prevent the crowd, however, from assailing the house of Mr. Campbell, which they completely gutted. The magistrates, not dreading that the mob would proceed to such acts of violence, had retired to a tavern to spend the evening; and about 11 o'clock, P. M., news was brought to them of the demolition which was in progress. Bushell despatched a sergeant to inquire if he would beat to arms, but the provost—who appears to have been a man averse to proceeding to extremities—declined the offer. Next day, the mob was still in an excited state, and having irritated the soldiers by throwing stones at them, Bushell, without any authority from the civil power, ordered his men to fire, when two persons were killed. The inhabitants, now thirsting for revenge and vengeance, assailed the town-house magazine, carried forth the arms, and rang the fire-bell to rouse the city. The provost being alarmed at the probable results of a collision between the military and the people, craved the former to depart, which they accordingly did in the direction of Dumbarton castle. The citizens came up with them in great force during their retreat, and commencing to act on the offensive, the Captain again ordered his men to fire, when several persons fell; and in all there were 9 killed and 17 wounded in this most unfortunate affair. The military reached the castle in safety. This matter being represented at head-quarters, General Wade took possession of the city with a large body of troops, consisting of horse and foot, with artillery and ammunition. He was accompanied by the Lord-advocate, Duncan Forbes, who immediately proceeded to make an investigation into the case, the result of which was, that 19 persons were apprehended, and were delivered over bound to Captain Bushell—who had come up from Dumbarton castle—to be conducted by him to Edinburgh. The magistrates were imprisoned at first in

five strokes upon the wedges, "Whether he knew any thing of a plot to blow up the abbey and the Duke of York? Who was in the plot? Where Mr. Cargill was? And whether he would subscribe his confession?" Having answered these queries in a manner unsatisfactory to the council, they ordered the *old boot* to be brought, alleging that the new one which had been used was not so good. Mr. Spreull, accordingly, underwent the torture a second time, and was then carried to prison upon a soldier's back, and refused the benefit of a surgeon to attend to his mangled limbs. After being several times before the council he was found guilty, though without the slightest particle of genuine proof. Indeed he had previously been found not guilty by a jury. Mr. Spreull was fined in the sum of £500 sterling, and sent to imprisonment on the Bass rock. Here he remained for nearly six years, and the length of his confinement afterwards acquired for him amongst his citizens, the name of *Bass John*.

their own tolbooth, but subsequently they were committed to the castle, and then to the jail of Edinburgh. After the detention of a few days, the magistrates were liberated on bail, and on their return to Glasgow, were met six miles from the city by a large body of their townsmen, who conducted them home with every demonstration of attachment, the ringing of bells, &c. * The magistrates were afterwards freely absolved; but it fared worse with the 19 inferior persons sent to Edinburgh, some of whom were whipped through the streets of Glasgow, some banished, and others liberated. Captain Bushell was tried for the murder of nine of the inhabitants, convicted and condemned to death; but instead of suffering the penalty of the law, he was not only pardoned, but promoted in the service. To aggravate this sufficiently distressing case, Mr. Campbell, upon his application to parliament, was allowed indemnity for his loss, and the community were taxed by it to the amount of £9,000 sterling.* The house, the demolition of which by the Shawfield mob led to those unfortunate results, stood in the neighbourhood of Glassford-street.

The Shawfield slaughter, the imprisonment of the magistrates, and the exactions from the city, were long spoken of with peculiar bitterness by the people; but the recollection of it did not prevent them from coming forward with alacrity in defence of the reigning family in the rebellion of 1745. On this occasion they raised two battalions of 600 men each, for the service of government, and one of them was in action and behaved gallantly at the battle of Falkirk. It is recorded that the ardent loyalty of the inhabitants so much exasperated the rebels, that but for the friendly interposition of the devoted Cameron of Lochiel, the city would have been razed to the ground. Charles Edward wrote to the magistrates, demanding from them, as the representatives of the corporation, the sum of £15,000 sterling in money, all the arms in the city, and the arrears of taxes which might be due to the government. The magistrates having hopes of relief from the troops of Sir John Cope, did not comply; and the demand of the prince was then enforced by a party of horse, under Mr. John Hay, who had been a writer to the signet in Edinburgh, and who was accompanied by Glen-gyle, the chief of the M'Gregors. The magistrates now saw the necessity of exerting themselves, and compromised the demand by the advance of £5,000 in money, and £500 in goods. Upon the return of the rebel troops, from their romantic but ill-fated expedition into England, Mr. Hay again made his appearance in Glasgow with a body of troops; and as on this occasion their fortunes were desperate, and their necessities more urgent, the corporation was glad to secure their absence, by furnishing them with 12,000 linen shirts, 6,000 cloth coats, 6,000 pairs of shoes, 6,000 pairs of hose, and 6,000 bonnets. The levies of the Highlanders in money and goods, and the expenses of the two regiments, cost the town £15,000 sterling, for which the magistrates, in 1749, were voted £10,000 as a partial indemnification.

The next important public affair in which we find the citizens of Glasgow engaged, is the cordial assistance which they granted to the Government at the outbreak of the American war of independence, or the "revolt of the colonists," as it was then termed. At the present time, however, these exertions are rather to be attributed to a feeling of self-interest

than pure patriotism; for Glasgow had long enjoyed a lion's share in the tobacco-trade, by which her citizens were enriched, and the very existence of this lucrative traffic was threatened by the war which then broke out. Upon the news of the defeat of the British by the Americans at Lexington, in 1775, reaching Glasgow, the magistrates convened a meeting of the inhabitants, when it was cordially resolved to support Government in her efforts to break the spirit of the colonists. Accordingly a body of 1,000 men was raised at an expense of more than £10,000, and placed at the disposal of his majesty. It is curious to know that the determination to smite the Americans took so strong a hold of the Glasgow citizens, that many of the principal people formed themselves into a recruiting corps for the purpose of completing the numbers of the Glasgow regiment. Mr. James Finlay, father of Mr. K. Finlay of Castle-Toward, played the Irish bagpipe in the service; Mr. John Wardrop, a Virginia merchant, beat a drum; and other wealthy and reputable citizens officiated as fifers, standard-bearers, and broadsword-men. Mr. Spiers of Elderslie, Mr. Cunningham of Lainshaw, and other merchants, hired their ships as transports; but Mr. Glassford of Dugaldston, who did not approve of the coercive measures that were in progress, laid up his vessels in the harbour of Port-Glasgow.

In the year 1779-80, while the removal of the Catholic disabilities was under discussion in parliament, the citizens of Glasgow resolved to give the bill the most determined opposition. Eighty-five societies, embracing 12,000 persons, were leagued together for this object, and kept up a close correspondence with Lord George Gordon in London. At length their enthusiasm broke into open fury, and upon a day set apart as a royal fast in February, 1780, a large mob of the citizens assailed, and demolished the shop of a Mr. Bagnall, a potter in King-street, for no other reason than that he belonged to the Roman Catholic persuasion. Subsequently, they destroyed his manufactory in Tureen-street; and for a time the city, despite the exertions of the authorities, remained in a state of perfect anarchy and confusion. Upon the termination of this effervescence, Bagnall of course instituted an action, and obtained indemnification from the community for the amount of damage he had suffered.—In 1787, the manufacturers of the city proposed a reduced scale of wages to their weavers, upon which they struck work. The workmen proceeded to acts of annoyance and violence against those who like themselves had not "turned out"—cut their webs from their looms, and burned them on the streets of the suburbs. At length the rioters proceeded to such extreme acts of lawlessness, that on the 3d September, the magistrates called in the aid of the 39th regiment of foot under Col. Kellit. The military were assailed by the mob in the Drygate with stones, brickbats, and other missiles, and after the riot act had been read, they fired, and three persons were killed, and a number severely wounded. This measure, however painful, had the effect of quelling the riot, though no less than 6,000 persons assembled at the interment of the three men in the Calton burying-grounds. Subsequent to this unfortunate occasion, a number of the weavers left Glasgow, and several of them enlisted into the very regiment which had fired amongst them.

In the course of the long war which broke out during the French Revolution, and was terminated by the overthrow of Napoleon in 1815, Glasgow evinced almost an exuberant degree of loyalty, in the number of its corps of royal volunteers, which were clothed and equipped at the expense of the members, who served without pay. Fortunately the

* A historian of Glasgow—Mr. Andrew Brown—in detailing the unfortunate Shawfield affair, says:—"This gentleman [Mr. Campbell] had formerly farmed the outcome of the whole Irish of Clyde, by which he acquired a large fortune, and now chimed in with the Newcastle administration, who once thought of exterminating the Highlanders, and planting their mountains with cabbages."

tide of invasion rolled not to our shores; and as the efforts of these worthy men are only remembered by their holiday-parades and patriotic intentions, it is unnecessary that we should here enlarge upon the subject.

In the *Radical* time of 1819-20, the peace of the city was much endangered from the feeling of discontent which pervaded the minds of large masses of the working classes, who in many cases had arrayed and armed themselves with the intention of openly resisting the Government. Opinion is still divided regarding the proceedings of this unhappy period,—the causes which led to it,—and the means which were taken for its suppression; and it is not the object of this work to reconcile sentiments which differ so widely. The execution of James Wilson—a poor thoughtless creature—was certainly an act of unnecessary severity.* Since then the history of the city is happily unmarked by either tumult, warlike preparations, or disaster, if we except the visitation of cholera in 1832, which severely afflicted this locality, in common with many others of the kingdom, and between February and November of that year cut off 3,005 persons. Its annals, however, are not the less interesting that they belong to the piping times of peace; for they mark the almost railroad speed with which the capital of the West has progressed in population, in intelligence, and in commercial and manufacturing wealth.

Commerce, Manufactures, &c.

So early as 1420, a William Elphinston is made mention of as a promoter of trade in Glasgow—the traffic which he managed being, in all likelihood, the curing and exporting of salmon. But the first authentic document respecting Glasgow as a place of trade, is to be referred to the year 1546. Complaints having been made to Henry VIII., that several English ships had been taken and plundered by vessels belonging to Scotland, there is an order of the Privy-council of Scotland in that year, discharging such captures for the future, and, among other places made mention of in that order, is Glasgow. The commerce which at this time it carried on could not be great. It probably consisted of little more than a few small vessels with pickled salmon for the French market: as this fishery was at that time carried on to a considerable extent by Glasgow, Renfrew, and Dumbarton. Between the years 1630 and 1660, a great degree of attention seems to have been paid to inland traffic by the inhabitants of Glasgow. Principal Baile informs us that the increase of the town, arising from this source of employment, was great. The exportation of salmon and of herrings also increased. In 1651, Commissioner Tucker having been directed by the Government to report on the revenue of the excise and customs of Scotland, speaks of Glasgow as follows:—"With the exception," says he, "of the colliginors, all the inhabitants are traders: some to Ireland with small smiddy-coals, in open boats, from 4 to 10 tons, from whence they bring hoops, rungs, barrel-staves, meal, oats, and butter; some to France, with plaiding, coals, and herrings, from which the return is salt, pepper, raisins, and prunes; some to Norway for timber. There hath likewise been some who ventured as far as Barbadoes: but the loss which they sustained by being obliged to come home late in the year, has made them discontinue going thither any more. The mer-

cantile genius of the people is strong, if they were not checked and kept under by the shallowness of their river, every day more and more increasing and filling up, so that no vessel of any burden can come up nearer the town than 14 miles, where they must unlade and send up their timber on rafts, and all other commodities by 3 or 4 tons of goods at a time, in small cobbles or boats, of 3, 4, or 5, and none above 6 tons a-boat. There is in this place a collector, a cheque, and 4 writers. There are 12 vessels belonging to the merchants of this port: viz., 3 of 150 tons each; 1 of 140; 2 of 100; 1 of 50; 3 of 30; 1 of 15; and 1 of 12; none of which come up to the town.—Total, 957 tons." In the war between Britain and Holland, during the reign of Charles II. a privateer was fitted out in the Clyde to cruise against the Dutch. She was called the *Lion of Glasgow*, Robert M'Allan, commander; was declared to be 60 tons burden or thereby, and to have on board 5 pieces of ordnance, 32 muskets, 12 half-pikes, 18 poleaxes, 30 swords, and 3 barrels of gunpowder; with provisions for 6 months, and 60 hands. In 1699, the merchants of Glasgow owned 15 vessels of an aggregate burden of 1,180 tons. The foreign trade at that period was valued at £20,500 Scots, but was considered to have partially decayed. The citizens who seem to have most distinguished themselves during this period, in the pursuit of a foreign commercial trade, were Walter Gibson and John Anderson. Gibson cured and packed in one year, 300 lasts of herrings, which he sent to St. Martin's in France, on board of a Dutch vessel called the *St. Agathe*, of 450 tons burden; his returns being brandy and salt. He was the first who imported iron into the Clyde. Anderson is said to have been the first who imported white wines. Whatever the trade of Glasgow was at this time, it could not have been very considerable: for the ports with which its citizens traded lay all to the eastward, and the circumnavigation of the island would prove an almost insurmountable barrier to the commerce of Glasgow. The people of the east coast, from their situation, must have been in possession of nearly the whole commerce of Scotland.

The union with England, although opposed at the time with all the effort of blind prejudice and the remembrance of national hate, opened a field for which the situation of Glasgow was highly advantageous; and while the commerce of the east coast, after that period, rapidly declined, that of the west increased to an amazing degree. Notwithstanding the opposition which they had offered to this most wise and judicious of all national measures, the advantages which had been conferred on them by the Union were soon apparent to the citizens of Glasgow, who began immediately to prosecute the trade to Virginia and Maryland. For this purpose they chartered fitting vessels from Whitehaven; and sent out cargoes of goods, and brought back tobacco in return. The method in which they managed this trade was certainly a prudent one, and well-fitted for the time. A supercargo went out with every vessel, and bartered his goods for tobacco, until such time as he had either sold all, or procured as much of the "Virginian leaf" as was sufficient to load his vessel. He then returned immediately, and if any of his goods remained unsold, they were brought home with him. The trade, as has been stated, was at first conducted in vessels chartered from English ports; but commerce having prospered with them, the merchants of Glasgow began to build ships for themselves, and, in 1718, the first vessel, the property of Glasgow owners, crossed the Atlantic. She was launched at Crawford's-dyke, a suburb of Greenock, and only registered 60 tons. The imports of tobacco were

* Even when on the gibbet, his mind was so little affected by the awful position in which he stood, that he coolly remarked to the town's hangman, "Tam, did ye ever see sic a crowd?" He was hanged on 20th August, 1820, and afterwards beheaded—the last occasion, it is to be hoped, in which the axe and block are destined to be noticed in the annals of Glasgow.

now considerable, and the merchants of Glasgow began to undersell the English even in their own ports. In 1717, the merchants of Bristol presented remonstrances to the commissioners of customs in London against the fairness of the Glasgow trade. To the allegations contained in these remonstrances, the merchants of Glasgow sent such answers as convinced the commissioners that the complaints of the Bristol merchants had been dictated by mere jealousy. They still, however, continued to undersell the English traders, and, in 1721, a formidable conspiracy was entered into by almost all the tobacco merchants in South Britain, against the traffic of Glasgow. They were accused of practising frauds upon the revenue in conducting their business; bills of equity were exhibited against them in the court of exchequer, for no less than 33 ships' cargoes, by which they were commanded to declare upon oath, whether or not they had imported in these ships any, and how much more tobacco than had been exported, or had paid the King's duty; vexatious lawsuits of every kind were stirred up against them, and every species of persecution, which jealousy aided by wealth could invent, to destroy the trade of Glasgow, was put in practice. The matter underwent an examination before the lords of the treasury during the same year, and after they had duly considered the case, it was dismissed in the following terms:—"That the complaints of the merchants of London, Bristol, Liverpool, Whitehaven, &c., are groundless, and proceed from a spirit of envy, and not from a regard to the interests of trade, or to the King's revenue." But the Southern persecutors of the trade of Glasgow were not thus to be balked; for they speedily thereafter made a complaint to parliament, and, in 1722, commissioners were sent to Glasgow, who imposed such a number of stringent and vexatious regulations on the trade, that its operations were severely cramped, and for some years it almost struggled for existence. In fact, it was not till 1735 that it began to get up its head, and evince symptoms of vigorous life. In that year, however, it began to be itself again, and the number of ships, brigantines, and sloops belonging to the port now amounted to 67. These vessels traded with Virginia, Jamaica, Antigua, St. Kitts, Barbadoes, Gibraltar, Holland, Stockholm, and Ireland, besides maintaining a considerable coasting-trade. From 1735 to 1750, the commerce of Glasgow advanced slowly; but soon after 1740, a new mode of trading was adopted in the place of the old method of barter; factors were now established in the country, who received the goods, and remitted tobacco; and for these goods they gave credit to the planters, on condition that they should receive their crops of tobacco, when ready for the market. For several years this method succeeded extremely well, and the payments were generally made in a reasonable time; but the trade after 1750 having vastly increased, and factors being established in every corner of the country, a spirit of keen rivalry began to develop itself; they lent to the planters large sums of money, in order to secure their trade, and gave them unlimited credits—thus rendering the commerce with America rather a speculative than a solid branch of business. The trade had now become one of vast magnitude, and almost the whole capital of the city was embarked in it, creating something like a monopoly in favour of the Glasgow merchants. Denholm, in his History of Glasgow, mentions as a fact, that, "in the year 1772, out of 90,000 hhds. of tobacco imported into Britain, Glasgow alone imported 49,000 of these." And it is also stated that, in the French war, which immediately preceded the contest with America, one merchant in the city, viz.,

John Glassford, Esq., possessed at one time 25 ships with their cargoes, and is said to have traded to the amount of more than half-a-million sterling yearly. The year immediately before the American war of independence, the imports into the Clyde were 57,143 hhds., the property of 42 merchants; and of this only a very small portion—not more than 1,600 hhds.—was retained for local consumption. The importance of this traffic, therefore, to the commercial capital of the West, will explain more readily than any thing else, the alacrity and seeming loyalty displayed by the Glaswegians in raising troops to smite the rebellious colonists of North America.

The temporary disruption of the American trade proved a "heavy blow, and great discouragement" to the citizens of Glasgow, to whom it had long been the source of profit and wealth. But, after recovering from the crash which it occasioned, the circumstance only served to call forth their enterprise by seeking out new channels for their trade. And they were not unsuccessful. Soon after the Union, some attempts had been made to open a trade with the West India islands; but for many years it was perfectly trifling in amount, and consisted of only sending out an occasional ship with herrings—for the use of the Negroes—and a few bale goods, and in bringing back rum and sugar in return. The merchants of Glasgow, however, ultimately directed their energies to this branch of commerce with untiring assiduity, and with such success that the loss sustained by the breaking up of the tobacco-traffic was soon unfelt. They have now, it may be said, extended their commerce to the "utmost parts of the sea;" but, however interesting a detail of the gradual rise and progress of the commerce of Glasgow might be, it would be much too lengthy for the limits of the present work. Some idea may be formed of the rapid strides which it has made during the last 30 years, and of its present magnitude, from the annexed table of the receipts at the custom-house of Glasgow down to the end of 1840:—

Amount of Custom-duties collected at Glasgow.

Years.	Revenue.	Years.	Revenue.
1812, . .	£3,124 2 4½	1827, . .	£71,922 8 0½
1813, . .	7,511 6 5½	1828, . .	74,255 0 1½

The bonding-system in Glasgow commenced in 1817, but was not in full operation till 1820. The bonding of tobacco took place in 1833, and tea in 1834; but they also required some time before the duties were greatly increased.—Perhaps there is no port in the kingdom which can exhibit such a rapid advancement within the same number of years; but, to prevent misconception, it is necessary to state that, independently of the *bona fide* increase of trade, much of the above rise must be attributed to the great improvements in the river, which of late years has enabled ships of large burden to come up to the Broomielaw, and pay those dues into the Glasgow custom-house, which formerly were received at Greenock.

In 1816, Messrs. James Finlay and Co. despatched a ship of 600 tons burden to Calcutta, being the first merchants in Scotland who cleared out a vessel direct for India. Other merchants followed the example which had been so well set them, and the trade has now become a most extensive one. It is rarely

that one or more ships are not lying on the berth at the Broomielaw, for Calcutta, Bombay, Madras, Singapore, Manila, or other ports in the East. Glasgow, in conjunction with Greenock, too, has of late entered extensively into the emigration-trade; and, during the last five years, a large number of emigrant-ships have been despatched to Sydney, New South Wales, and Adelaide in South Australia; and it is also a creditable fact that the Clyde is the only river in Scotland from which emigrant-ships have been despatched for the rising colony of New Zealand—the Bengal Merchant having sailed in November, 1839, and the Blenheim in September, 1840, with well-equipped bodies of emigrants for that infant-settlement. The timber trade is one of great magnitude, and well worthy of notice were it only to state the extensive operations of a single house in Glasgow, viz., Pollock, Gilmour, and Company, who are “chiefly engaged in the North American timber trade, and have eight different establishments that ship annually upwards of 6,000,000 cubic feet of timber; to cut and to collect which, and to prepare it for shipment, requires upwards of 15,000 men, and 600 horses and oxen in constant employment. For the accommodation of their trade, they are owners of 21 large ships, the register tonnage of which is 12,005 tons, navigated by 502 seamen, carrying each trip upwards of 20,000 tons of timber, at 40 cubic feet per ton. All of which ships make two, and several of them three, trips annually.” The number and tonnage of sailing-vessels registered at Glasgow, on December 31st, 1841, was as follows: Under 50 tons, 58 vessels; total tonnage, 1,994 tons. Above 50 tons, 307 vessels; total tonnage, 81,999 tons. At the same date the steam-vessels belonging to the port were as follows: Under 50 tons, 12 vessels; total tonnage, 518 tons. Above 50 tons, 51 vessels; total tonnage, 9,780 tons.

Whether or not Glasgow possessed any manufactures in the olden time, is a question which it would now be difficult to determine; that the inhabitants, by means of the spinning-wheel and loom, made linens and woollens for their own use is certain, but up till a period subsequent to the Union, there is little reason to believe that their manufactures extended further. Glasgow plaids—which were sold into Edinburgh about the close of the 17th century—were in high repute, but it does not appear that the trade had ever been any thing but an inconsiderable one. There is little doubt, however, that the commerce with America first suggested the introduction of manufactures into the city; and that they were established on a small scale about 1725, is not matter of doubt. Their progress at the outset was slow indeed, and it was not until the Legislature had granted great encouragement to the manufacturing of linen in Scotland, that the manufactures of Glasgow began to assume some degree of importance. The act of parliament, in 1748, prohibiting the importing or wearing of French cambrics, under severe penalties; and the act of 1751, allowing weavers in flax or hemp to settle and exercise their trades in any part of Scotland, free from all corporation-dues, conjoined with the bounty of 1½d. per yard on all linens exported at and under 18d. per yard, were doubtless the principal causes of the success of the linen-manufacture. Success in one branch encourages a trial in others, and accordingly we find, that between 1725 and 1750, manufactures of various kinds obtained a firm footing in the city: since which time, up till the present moment, they have, with occasional periods of depression, continued to extend and prosper.—Glasgow was the first place in Great Britain in which inkle-wares were manufactured. Previous to 1732,

the engine-loom had been in use, but these were so clumsy, inconvenient, and altogether produced so little work in proportion to the labour expended, that the trade may be said to have been entirely monopolized by the Dutch, who were in possession of the large inkle looms. Mr. Alexander Harvey, who commenced this branch in Glasgow, was so sensible of the disadvantages under which it laboured, that he proceeded to Holland, and despite the care and jealousy which the Dutch evinced to keep the secret of the manufactory to themselves, he contrived to bring over with him from Haarlem, two of their looms and one of their workmen, and thus firmly established the trade in the city under the most favourable circumstances. The Dutchman remained some years in Glasgow; but considering himself slighted from some cause, he removed to Manchester, and soon made the manufacturers there as skilful as their brethren benorth the Sark.

The vast improvements which had been made in the production of cotton-yarn by spinning it with machinery soon found their way to Glasgow; and the successive inventions of Wyatt of Birmingham, Hargrave of Lancashire, with the *Magnum opus* of Sir Richard Arkwright, were soon called into operation in North Britain by the capital and enterprise of the Glasgow manufacturers. In the infancy of the cotton-trade, the spinning-works were erected at a distance from the city, and on the most convenient spots for procuring falls of water sufficiently powerful to propel the machinery. Amongst those so erected were the Ballindalloch and Doune mills in Stirlingshire; the Catrine mills in Ayrshire; the Lanark mills, and the Rothesay mills in Bute—all of them distant from Glasgow certainly, but all of them called into existence by its money-power. Something, however, was still wanting to place the trade on that footing of pre-eminence in Glasgow which it has now long enjoyed, and to bring its exhaustless coal-fields into profitable operation. And this was supplied by the genius of James Watt; who, instead of sending the workmen to the motive power, devised the admirable mode of raising up the motive power among the workmen. In 1792, the first steam-engine for spinning cotton was put up in Glasgow, for Messrs. Scott, Stevenson, and Company, opposite that locality now known as the Steam-boat quay.

A few sentences regarding this most mighty of all mighty inventions may not be out of place here, especially as Glasgow is so proudly connected with the early gropings of the mind of Watt towards that mechanical perfection which the world has long conceded as his due. The life of Watt is, of course, inseparable from a vidimus of the earliest indications of steam-power, when in the 9th century Silvester II. made the organ of Rheim's cathedral resound by the application of vapour, down to his own great work, the steam-engine, which, without tiring or abatement, “can engrave a seal, and cut masses of obdurate metal like wax before it,—draw out, without breaking, a thread as fine as gossamer,—and lift a ship of war like a bauble in the air,—which can embroider muslin and forge anchors,—cut steel into ribands, and impel loaded vessels against the fury of the winds and waves.” It is well-known that the Greeks and Romans were perfectly well-acquainted with the fact that steam was capable of attaining a prodigious mechanical power; and it is related that Athemius, the architect of Justinian, who owed a grudge to Zeno the orator, and lived contiguous to him, annoyed his enemy by placing great caldrons in the ground-floor of his own house, from which he conducted flexible tubes to the ceiling of Zeno's mansion, and that these ceilings shook, as

if from the effects of an earthquake, when the caldrons were filled with water, and a fire lit under them. But to come to the fabrication of the modern steam-engine, it is necessary to pass over many names connected with the invention of steam-power, including that of the Marquis of Worcester—who was no doubt an ingenious man, and, as his "Century of Inventions" proves, wrote much and experimented little—and come down to about the beginning of the last century, when many important steps were gained by Papin, a Frenchman; but his experiments, though of great value in the infancy of the engine, were entirely confined to models. In 1705 Newcomen and Cawley—the former an ironmonger and the latter a glazier in Dartmouth—still further improved the engine, in discovering a method of cooling the steam by the introduction, at the proper time, of a shower of cold water, instead of the former mode of external refrigeration. This machine was meant to raise water from mines and great depths, but the expense of working, and the clumsiness and imperfection of its motions, would for ever have prevented its application to machines; and it might at this moment have been shown in the museums as a curiosity—like many which had preceded it—but for the genius of Watt, who conferred upon it a perfection which was destined to enrich the world. Watt, who had settled in Glasgow, and was patronized by the University as its mathematical instrument-maker, was required by Dr. Anderson, the professor of natural philosophy, to repair a small model of Newcomen's steam-engine,* which could not be made to work satisfactorily, and this circumstance, in all probability, turned his attention to a department of mechanical science which was destined to render his name immortal. To be brief, Watt's first great invention was the condenser, which not only accelerated the speed but reduced the expense of working to a tithe of its former amount; and by intense study he finally varied and economized the power of this mighty agent to an extent of which its former most sanguine improvers had never dreamed. For years, however, Watt's invention was sneered at, and remained inoperative, till his connection with Mr. Boulton of Soho, near Birmingham, in 1774, gave a renewed stimulus to exertion, and finally the new engines spread over all the mining-districts, entirely superseding those of Newcomen. Boulton and Watt received, as their remuneration, the third part of the value of the coal which was saved by the use of their machines; "and we may judge of the commercial importance of the invention by the fact, that in the single mine of Chasewater, where three pumps were employed, the proprietors thought it worth their while to purchase the rights of the inventors at the price of £2,500 per annum for each engine. Thus, in a single establishment, the substitution of the condenser effected, in fuel alone, a reduction in expense of more than £7,500 per annum." [Arago's Life of Watt, 1839.] Watt's machines, like Newcomen's, were at first nothing but mere pumps, or instruments for raising water; but by degrees, as has been hinted, he brought the engine to that perfection which rendered it capable of the most exact operations in mechanical science, and of indefinite power. This great man died in 1819, at the age of 83.

* At the meeting of the British Association, held in Glasgow in September, 1840, the original model of the steam-engine, belonging to the University of Glasgow, upon which Watt experimented, was exhibited in the model-rooms, and attracted the deepest attention. It is a little, clumsy looking thing, with a boiler not much larger than a tea-kettle; but still it is a relic of vast interest, when it is known that it first gave Watt's mind the bent to this peculiar study; and though in appearance it is wide as the poles asunder from the machinery which directs the motions of the Great Western, Acadia, and other Transatlantic steamers, it was nevertheless impossible to gaze on it without acknowledging that it was their progenitor.

To return to the cotton-trade. The power-loom was introduced to Glasgow, in 1773, by Mr. James Louis Robertson of Dunblane. These machines had been, for some time, put up in the hulks for the use of the convicts; and this gentleman succeeded in obtaining two of them, which he set up in Argyle-street, where, having removed the driving-bar, he set the looms in motion by means of a large Newfoundland dog walking in a drum or cylinder. The fame of the new loom, however, soon got wind, and in a very short period hundreds of them were at work in the city and its neighbourhood. Since then the increase in the trade has been so rapid and extensive as almost to defy belief. Several of the most important secondary improvements in weaving have originated in Glasgow, and in no city have the manufacturers held out greater encouragement for originality and invention, come from what quarter it may. Lawns were the principal manufacture till they were superseded by muslins. The first muslin web in Scotland was warped by Mr. James Monteith, father of Mr. Henry Monteith of Carstairs; and although, as has been stated, there were no steam spinning mills in Scotland till 1792, this gentleman had, long previous to this period, purchased bird-nest India yarn, and for the weaving of a 6-4th 1200 book, with a hand-shuttle, he paid 1s. 9d. per ell. The same kind of web is now woven for 2½d. per ell. When the first web was finished—a task both of labour and triumph in those days—Mr. Monteith caused a dress of it to be embroidered with gold, and presented to her majesty, Queen Charlotte.—It is almost impossible to attain, with any degree of accuracy, the money value of the cotton or muslin trade of Glasgow; but those acquainted with these matters will be enabled to form an opinion on the subject from the following statement, presented to parliament, in 1834, by Mr. Leonard Horner, one of the factory-commissioners, premising that it has, in all likelihood, increased one-fourth or fifth since that date. The commission reports, "That in Scotland there are 134 cotton-mills,—that with the exception of some large establishments at Aberdeen, and one at Stanley near Perth, the cotton-manufacture is almost confined to Glasgow, and country adjoining, to a distance of about 25 miles radius; and all these cotton-mills, even including the great house at Stanley, are connected with Glasgow houses, or in the Glasgow trade. In Lanarkshire, in which Glasgow is situated, there are 74 cotton-factories; in Renfrewshire 41; Dumbartonshire 4; Buteshire 2; Argyleshire 1; Perthshire 1. In these six counties there are 123 cotton-mills, nearly 100 of which belong to Glasgow." In another view of the case the factory-commissioners state: "In Lanarkshire there are 74 cotton-mills, 2 woollen, and 2 silk-factories; 78 steam engines and 5 water-wheels, total horse-power 2,914; of which, steam, 2,394; water, 520. Total persons employed in factories, 17,969." As has been stated, it is scarcely possible to ascertain from official data the value of the cotton-trade of Glasgow. A gentleman connected with it, however, who has inquired minutely into its statistics, gives it as his opinion that 40,000 hand-loom weavers are employed by the manufacturers of Glasgow, the produce of whose labour, before it can be brought to market, has been estimated at three millions sterling. Assuming 6d. per yard as the average value of the material produced by the power-looms, this branch of the cotton manufacture cannot be less than two and a-half millions. There are more than 17,000 looms set in motion by Glasgow capital. The produce of the spinning of cotton-yarn has been estimated at nearly four millions.

Commensurate with the growth of the cotton-

trade has been that of every kind of manufacture connected with the production of soft goods, with the exception perhaps of broad-cloth and hosiery, for neither of which is Glasgow yet distinguished. An establishment for the manufactory of Bandana handkerchiefs was commenced in 1802, by the firm now known as Henry Monteith & Co., who at the same time carry on the business of cotton-spinning and calico-printing. Their establishment at Blantyre is an extensive one, while that at Barrowfield, in the immediate vicinity of the city, is probably unrivalled in the kingdom. Government having offered a premium of £300 per annum to the first person who should form an establishment for the spinning of Cashmere wool in this country, upon the French principle, Captain Stuart Cochrane, R.N., succeeded, while in Paris, in discovering the peculiar secret, and took out a patent for the three kingdoms. In 1831 these patents were purchased by Messrs. Houldsworth of Glasgow, and, after much exertion and difficulty, they have succeeded in making better yarn than the French, and accordingly they have received the premium so justly due to their enterprise. This trade, however, has not yet extended to any great magnitude.

Mr. Charles Macintosh has been long celebrated, in connection with Glasgow, for his successful discoveries in the chemical science as applicable to manufactures. In 1786 he introduced, from Holland, the manufacture of sugar-of-lead. This article had been previously imported from that country; but in a very short period the tables were turned, by Mr. Macintosh exporting considerable quantities of the article to Rotterdam, the place from which the knowledge of the art was first obtained. By chemical improvements in that portion of the article which is used for calico-printing, the price was reduced by the exertions of this gentleman from 3s. per gallon to 6d. In 1799 this gentleman made the first preparation of chloride-of-lime in the dry state, which has since been so extensively used and prized as bleaching-powder. But perhaps Mr. Macintosh is better known to the world by his process which renders almost every kind of fabric impervious to water. His manufactory of 'waterproofs' was for some time carried on in Glasgow, but some years ago the business was removed to Manchester. The chemical works of Messrs. Tennant & Co., at St. Rollox—of which Mr. Macintosh was one of the original partners—are perhaps the most extensive in the world, and may be said to comprise a little town of themselves. This immense establishment, situated at the north-eastern division of the city, manufactures sulphuric acid, chloride-of-lime, soda, soap, &c. It covers ten acres of ground, and within the walls there are buildings which extend over 27,340 square yards of ground. There are upwards of 100 furnaces, retorts, or fire-places in the establishment; and in one apartment there are platina vessels worth £7,000. The main chimney is 436 feet high.

The soft goods trade is carried to an immense extent in Glasgow; where the merchant often joins the retail to the wholesale trade, imports goods largely from England and foreign parts, and in turn sends them out wholesale to smaller traders situated in almost every town and village in Scotland; and notwithstanding the magnitude of such establishments, the poorest customer may be supplied as readily and courteously with a yard of tape as the richest with an order of £100 in amount. The most extensive of these establishments—and there are several of them—is that of Messrs. James and William Campbell, situated in Candleriggs-street. Their warehouses and sale-rooms extend over an imperial acre of flooring, and the business is conducted by

about 140 persons. In addition to these about 2,500 females are employed by the house in sewing, chiefly in the country. It will afford an instructive vidimus of the rise and progress of Glasgow, as well as of the advancement of the firm, to take the sales of a few progressive years, from the commencement till the present time. The sales were,

	£	s.	d.
In 1818,	41,022	6	4
— 1827,	183,385	6	10
— 1832,	312,207	5	8
— 1837,	500,515	6	1
— 1838,	559,245	17	10
— 1839,	626,982	3	4

This immense sum for the transactions of a single establishment, during one year, contrasts strangely with the fact, that the total value of the articles manufactured in Glasgow, as ascertained by correct data, amounted, in the year 1771, to £452,557.

Originally the manufacture of linen, and then of cotton goods, have been the staple productions of Glasgow; but her merchants have not by any means confined their energies to these. So early as 1674 a firm was established for carrying on the whale-fishery, and the manufacture of soap. The soapery was situated at the head of Candleriggs, and in addition to their business here, the partners had large premises in Greenock for boiling blubber. The locality in which it was situated was called the Royal cross, on account of Charles II. having granted certain privileges to the company. It is now a considerable time since the Glasgow merchants ceased to send ships in pursuit of the giant of the deep, for, as is well-known, the trade of late years has been both precarious and losing, but the other departments of business followed by this early company are yet pursued with renewed vigour and extension. In 1696 a company was formed for the manufacture of cordage and ropes, in which many influential gentlemen were partners; but though the original firm has long passed away, the manufacture has grown to be a most extensive one; and this is the less surprising, as Glasgow, at the same time, has grown to be a sea-port of no secondary importance. In 1715 the first Glasgow tan-work was begun; and in 1748 the first delph-work was erected at the Broomielaw. Earthenware is now manufactured in Glasgow equal to any from Staffordshire; and the house of R. A. Kidston, in Anderston, which has for many years conducted the leading pottery business, has recently added the china or porcelain department to its business. Specimens of their manufacture were shown in the model-rooms of the British association, and pronounced, by those competent to judge, as not inferior to any of the same kind in South Britain, where the trade has been in existence for a lifetime. Bottle-making is an old trade in Glasgow, and at present there are several establishments of that kind in the city or its suburbs,—the oldest established—that of Stevenson, Price, & Co., (late Geddes,) situated in Anderston, turns out an immense aggregate, which are not only disposed of for home-use, but exported in mats to every part of the world. The manufacture of glass and crystal is also conducted on a most extensive scale, both for home-use and exportation, and the growing demand proves that the quality of the article is not inferior to any manufactured in the empire.

The Iron trade.

Situated as Glasgow is, in the very heart of an exhaustless coal and ironstone district, it is not surprising that the possession of these minerals may be taken as the main-spoke in the wheel of its prosperity. The cotton-trade, doubtless, is the more extensive, in so far as it is the staple of the city; but still the manufacture of iron has of late years

been prosecuted to an amazing extent; and, from the progress of improvement over the whole country, with the never-ceasing demand for this mineral for railway and other purposes, it is reasonable to suppose that this trade is yet very far from its zenith. As a proof of the importance of the Glasgow iron-trade, it may be mentioned that the iron-masters of Clydesdale, independent of the vast quantities retained for local use, exported last year more than 50,000 tons. The mineral field is in every instance easily accessible by railroad or canal, and this is one of the growing resources of Glasgow which will soon enable her to rival if not outstrip the most highly favoured iron-districts in England. It may be interesting to state that the proprietors of the Monkland, Calder, Gartsherrie, Dundyvan, and Summerlee iron-works have recently contracted with Sir William Alexander, the owner of the Airdrie estate, for a 21 years' lease of the ironstone which may be found on about 300 acres of his land, at an annual rent which can never be less than £12,050, though it may be considerably more. The ironstone is of the kind called black-band, 2 feet thick; and should it extend over the 300 acres, the proprietor may receive for his ironstone alone about £200,000. The quality of the stone is so superior, that 200 tons, after being calcined, will produce 120 tons of pig-iron; and it is so well combined with parrot-coal, that it can be calcined without the addition of any other fuel. For agricultural purposes the value of the soil which covers this mine of wealth is not more than from £600 to £700 per annum. The introduction of the hot air blast—the merits of which belong to Mr. James B. Neilson, a citizen of Glasgow—has proved such a saving both in fuel and time, that it may be stated to have produced quite a new era in the iron-trade.* It is perhaps impossible to give a correct account of the value of the iron-trade of Glasgow, but a pretty accurate notion of it may be formed from the following table of the iron-works in Scotland, and the statements which accompany. So far as our data go, there are in North Britain 55 furnaces in blast, 5 out, 7 building, and 24 contemplated. They are exhibited as follows:

Erected in or about	Name of Works.	Owners.	In Blast.	Out of Blast.	Building.	Contemplated.

* By means of this invention, in which raw coal is used instead of coke, the iron-master, with three-sevenths of the fuel which he formerly employed in the cold air process of blasting, is now enabled to make one-third more iron, of a superior quality. Nor are the advantages of this invention solely confined to iron-masters. By its use the founder can cast into goods an equal quantity of iron, in greatly less time, and with a saving of nearly half the fuel employed in the cold air process; and the blacksmith can produce in the same time one-third more work with much less fuel than he formerly required. In all the processes of metallurgical science, it will be found of the

On the supposition that all these furnaces will be in operation at the beginning of 1843, producing weekly 100 tons to each furnace, Scotland will thus produce 468,000 tons of foundry cast-iron per annum, an amount equal to that made in the United Kingdom twenty years ago.† Sixty out of the ninety furnaces mentioned are situated within from 7 to 10 miles of the city; and one of them—that of Govan—even within its very precincts. Some of the most extensive iron-masters in Scotland are directing their attention to the manufacture of bar-iron; and the Monkland company are erecting mills and forges capable of making 230 tons of malleable-iron per week. Mr. Wilson of Dundyvan is also making the necessary preparations for enabling him, when his works are in full operation, to make 300 tons of bars weekly, and they are now partially in operation. Mr. Dixon of Govan iron-works will also speedily be enabled to manufacture 200 tons of the same metal per week. The Muirkirk iron company some time since commenced operations. Speaking of this subject, in the 8th part of his Statistical Dictionary, Mr. McCulloch says: "Glasgow is also becoming, or, rather, has already become, the centre of a most extensive iron trade. In fact, the production of iron in the neighbourhood of this city already exceeds that of either Monmouthshire or Glamorganshire, and promises very speedily to be equal or superior to that of the whole of South Wales. It has increased with unparalleled rapidity. In 1806 the produce of iron in this county did not exceed 9,000 tons; in 1834 it was estimated at about 48,000 tons; and we have ascertained, from returns drawn up with the greatest care, that in June, 1840, there were at work in Lanarkshire fifty furnaces, producing at the rate of about 210,000 tons a-year! And several additional furnaces were then also in the course of being constructed."

In connection with this subject it may be proper here to allude to the engineering trade of Glasgow, which has of late years become one of considerable extent and importance. There are various foundries situated in Glasgow, all of them extensive; but that which is best known is the Vulcan foundry, belonging to Mr. Robert Napier, situated on the Broomielaw, near the bottom of the steam-boat quay. This gentleman has long been known as one of the most celebrated and successful marine engine-makers in Europe. He supplied the engines of the British Queen, and in the course of one year, ending in October 1840, he supplied six first-rate steamships with their engines, viz. two frigates, and four Transatlantic liners. The first two were the Vesuvius and Stromboli, which took up a worthy position at the siege and capture of St. Jean d'Acres, on 4th Nov., 1840; and the latter four were the Britannia, Acadia, Caledonia, and Columbia, now employed in carrying the mails between Liverpool, and Halifax and Boston, North America. These liners were all built in the Clyde, are each of 1,200 tons burthen, and propelled by engines of 440 horses' power. It is satisfactory to state that one of them, the Britannia, has made the passage between the two continents in ten days, the shortest period in which it has yet been accomplished. In the beginning of

utmost importance in reducing the ores to a metallic state. The charge for leave to use the hot blast is at the rate of one shilling for every ton of iron made from it. Mr. Neilson has taken out patents which apply both to Great Britain and France.

† In 1838, from returns laid before the House of Commons, it appears that the total manufacture of iron throughout the kingdom was 690,000 tons, of which only 36,500 tons were made in Scotland. Mr. Johnson of Liverpool estimated the total manufacture of iron throughout the kingdom, in 1839, at 1,008,280 tons; Mr. Hyde Clark at 1,512,000 tons; and Mr. Mushet at 1,248,731 tons.

1840, Messrs. Todd & Macgregor, engineers, built an iron ship of beautiful mould, of about 400 tons. She was named 'the Iron Duke,' and is now engaged in the East India trade. In the autumn of the same year, an iron steamer was built by Mr. Craig (late Claud Girdwood & Co.), which has been despatched to the West for the conveyance of goods and passengers on the rivers of Demerara. But the above are only specimens of what is daily being accomplished by the capital and enterprise of the Glasgow practical engineers.

The amount of coal brought into Glasgow from the adjacent pits, has been computed on pretty correct data at about 750,000 tons per ann., of which probably 150,000 tons are exported, and the remaining and larger portion consumed by the inhabitants, the public works, and the steam-vessels. The average price is about 8s. 6d. per ton; but from the expenses of cartage the price is somewhat higher, and when sold in retail by sack-loads to the humbler orders the price is enhanced very considerably. It is presumed that by the increased facilities of transit which the railways will speedily offer, coal may be laid down to the public works at from 3s. 6d. to 4s. per ton.

Letter-press Printing.

In 1638 the art of Letter-press printing was introduced into Glasgow by George Anderson, who had been invited from Edinburgh by the magistrates; and it appears from the council-records that he was to be allowed £100 for the liquidation of his expenses, "in transporting of his gear to this burgh," and in full of his bygone salaries from Whitsunday 1638 till Martinmas 1639. He was succeeded by his son Andrew, who afterwards removed to Edinburgh, and was made King's printer for Scotland in 1671. For many years after this period, the art of printing remained in the very lowest state in Scotland, probably owing to the exclusive nature of the royal grant to Anderson. The University seems to have been fully aware of this, and in 1713 a paper was presented to the Faculty, containing "proposals for erecting a bookseller's shop and printing press within the University of Glasgow;" and one of the reasons assigned for these proposals was, "that they were obliged to go to Edinburgh in order to get one sheet right printed." Thomas Harvie, a student in divinity, who engaged to furnish printing materials, was accordingly appointed printer and bookseller to the University, and various privileges were secured to him. He was succeeded by others; but it does not appear that the Glasgow press obtained any celebrity till about 1741, when the business was begun by Robert Foulis, who was afterwards joined by his brother Andrew. Robert had been in early life a barber, but the thirst of letters prevailed over his attachment to his tonsorial duties, and accompanied by his brother Andrew—who had received a more regular education—he proceeded to the Continent, and by every possible means the brethren stored their minds with literary lore. They are spoken of as being men of refined intellect and perfect erudition. The books printed by them, both for correctness and beauty of typography, formed a new era in the art of printing in Scotland, and from their exertions may be dated the commencement of those improvements which now distinguish this most useful profession. Foulis' celebrated edition of Horace, the proof-sheets of which were hung up in the walls of the college, and a reward offered to him who should discover an error, appeared in 1744. Notwithstanding all the vigilance with which the work must have been prepared, however, subsequent correctors of the press have discovered that this edition, which had been termed "the immaculate," con-

tains at least six typographical errors. Many splendid editions of the classics, both in Greek and Latin, issued from the Foulis' press, and they do not sink into the shade even when compared with the beautiful typography of our own day. Encouraged by their success in the printing line, the elder brother, in 1753, instituted an academy for painting, engraving, moulding, modelling, and drawing in the city; and for this purpose brought a painter, an engraver, and a copperplate printer from the Continent. Although some of the more influential of the citizens became partners in this undertaking, it did not succeed, and heavy loss was sustained by all connected with it. Glasgow, at this period, did not present a favourable soil for the growth of the fine arts; and indeed its citizens have not attained any celebrity for their attachment to them yet. Speaking of the undertaking Foulis says, "There seemed to be a pretty general emulation who should run it most down." Since the days of the Foulis the progress of printing, in all its branches, including stereotyping and type-founding, has fully kept pace with the advancement of the city.* There are various large printing establishments, and within the last 25 years the business of publishing has been carried on to a large extent; and the most critical in these matters have admitted that whether for beauty of typography, or pictorial embellishment, the work of Glasgow is not inferior to that produced in the English metropolis. Including bookbinders, engravers, lithographers, sewers, and newspaper printers, there cannot be fewer than 1,500 persons connected with the typographic art in the city.†

Although magazine-literature has never thriven in Glasgow, notwithstanding the many vigorous and able efforts made to establish it, the case is otherwise with newspapers, which in this city are not

* The late Mr. Andrew Duncan raised the Glasgow University press to high and deserved eminence. Besides numerous neat and accurate school-editions of the Classics, he brought out a beautiful edition of Bentley's *Lucretius*, with various readings, in 4 vols. 8vo.; Bos on the *Greek Ellipse*; the works of *Xenophon*; a superb edition of the plays of *Euripides*, in 9 vols. 8vo., with scholia and notes, by a host of learned commentators, collated in the establishment; *Bythner's Lyra Prophetica*; a splendid edition of *Newton's Principia*, with a commentary on that work, in 4 vols. 8vo.; a beautiful edition of *Homæ*, with Latin translation and notes, in 5 vols. 8vo.; *Synopula's Lexicon*; and *Dami's Greek and Latin Lexicon*, in 4to. and 8vo. The latter work was edited by his son, Mr. John M. Duncan, a gentleman known alike for his talents, learning, and piety. Mr. D. continued bringing out classic and English works, till the fatal year 1825, when, having suffered the loss of several thousand pounds by the failure of a London publisher, and losing also by Mr. Constable, he resigned business as a printer, and retired into private life. Mr. Duncan presided over the Baptist church in George-street for nearly half a century, with great consistency of conduct, and zeal for the cause he had espoused.

† One of the noblest triumphs of the noble art of printing has recently been achieved in Glasgow, in the completion of a full version of the Scriptures for the use of the blind. The Old Testament is in 15 volumes, super-royal quarto, double pica. The New Testament is complete in 4 volumes, super-royal quarto, in great primer. The total edition of the Old Testament consisted of 9 volumes of 200 copies each, and 6 volumes of 250 copies each; in all, 3,300 volumes. There are in the Old Testament 2,470 pages, each page containing 37 lines in the work; and the quantity of paper consumed for the edition was 1,160 reams of paper, weighing 84 lbs. each ream, or 9,860 lbs. In the New Testament there are 623 pages, 42 lines in each page; and the quantity of paper consumed for 250 copies was 450 reams, weighing 3,825 lbs. The paper was made on purpose, and strongly sized to retain the impression. In order to account for the great bulk of the work, it must be borne in mind that it can only be printed on one side of the paper, and that the letters require to be of a considerable size in order to suit the touch. The printing is effected by a copper-plate printing-press. The types—which are of the common form—being strongly relieved and liable to give way under the heavy pressure required, it has been necessary to have them recast no less than four times during the progress of the work. There are in the operative-department one man and one boy as compositors, who were taught in the Blind asylum, and one pressman; the ordinary teacher acts as corrector of the press. There have been published altogether by the Glasgow asylum press, under the direction of its indefatigable Treasurer, Mr. John Alston, 10,850 volumes, printed for the use of the blind.

only numerous, but almost all of them boast of highly respectable circulations. Before the year 1715, there was no paper printed in the West of Scotland. On the 14th November of that year the Glasgow Courant made its appearance.* The Glasgow Journal—which is still in existence—was first published in 1729, by Andrew Stalker.† Several other papers were afterwards started, but they were speedily numbered with the things that were. In 1783, John Mennons published the first number of the Advertiser, which contained the preliminaries of peace between Great Britain and America. In 1801 an alteration in its management took place, when the title was changed to the Advertiser and Herald; and in 1804—when it fell into the hands of the late well-known Samuel Hunter—the name was again changed to the simple Herald, under which title the paper enjoys a lusty and flourishing existence. In 1791, the Courier was first published by William Reid & Co., and it still exists as a most respectable journal. During the last thirty years, however, newspapers have been got up and knocked down like nine pins; and amongst the defunct we find the names of the Courant, Mercury, Clyde Commercial Advertiser, Caledonia, Sentinel, Scotchman, Western Star, Packet, Free Press, Liberator, &c. Several of these have departed more than once by the same name. The journals at present in existence are the Courier and Chronicle, three times a-week; the Herald, Argus, Constitutional, and Scottish Guardian, twice a-week; and the Scots Reformers' Gazette, Evening Post, Mail, Journal, Scots Times, and Patriot, once a-week. The circulation of these papers varies from 400 to 3,000; only two or three are so low as the first figure, and only one so high as the last, viz. the Herald, the circulation of which averages 3,200, and the advertisements in each number nearly 200; occasionally they are so high as 260. With one exception all these newspapers are printed by hand-machines, which are capable of throwing off an impression of more than 1,000 per hour.

The Clyde commercially considered.

Perhaps there is no instance of a similar kind, in which art has done so much to improve natural deficiencies, as has been exemplified by the operations on the river Clyde during the last 30 or 40 years. In a state of nature the river below Glas-

* It was printed on a small quarto size, and consisted of 12 columns. The following are portions of the title and prospectus:—"The Glasgow Courant, containing the Occurrences both at home and abroad, from Friday 11th Novr. to Monday 14th Novr. 1715.—Glasgow, Printed for R. T. and are to be sold at the Printing House and at the Post Office, 1715. Price three halfpence. N. B.—Regular Customers to be charged only one penny. PROSPECTUS. This Paper is to be printed three times every week, for the use of the country round; any Gentleman or Minister, or any other who wants them, may have them at the University's Printing House, or at the Post Office. It is hoped that this Paper will give satisfaction to the readers, and that they will encourage it, by sending subscriptions for one year, half-year, or quarterly, to the after-mentioned places, where they shall be served at a most easy rate. Advertisements are to be taken in at either the Printing House in the College or Post Office." The second number of the Courant contains a letter from Mr. Aird, the late provost, and colonel of the Glasgow volunteers, dated "Stirling Bridge, 13th Nov., at 9 at night, 1715," addressed to the Lord-provost of Glasgow. It details the movements of the rebels in that quarter, and states that they "expect another hit at them if they stand." Soon afterwards the title of the Courant was changed to "The West Country Intelligence," but it did not long exist.

† It may be amusing to give one or two of the marriage-notifications from the early numbers of this antique print. "March 24th, 1746.—On Monday, James Dennistoun, jun., of Coly Vine, Esq., was married to Miss Jenny Baird, a beautiful young lady." May 4th, 1747.—"On Monday last, Dr. Robert Hamilton, Professor of Anatomy and Botany, in the University of Glasgow, was married to Miss Mally Baird, a beautiful young lady with a handsome fortune." August 3d, 1747.—"On Monday last, Mr. James Johnstone, merchant in this place, was married to Miss Peggy Newell, an agreeable young lady, with £1,000."

gow was so much impeded by fords, shoals, and banks, as to be scarcely navigable for any craft above the burden of an open boat; and being sensible of these disadvantages, we find that in 1556 the inhabitants of Glasgow, Renfrew, and Dumbarton agreed to labour on the river six weeks alternately with the view of opening up a communication between these places for small craft. In 1653 the merchants of Glasgow had their shipping-port at Cunningham in Ayrshire; but the harbour being distant, and land-carriage alike inconvenient and expensive, they entered into a negotiation with the magistrates of Dumbarton for the purchase of a section of ground on which to construct a harbour and docks. The overture was rejected, however, on the plea, on the part of the Dumbarton burgesses, that the influx of seamen would raise the price of provisions to the inhabitants! Foiled at Dumbarton, the merchants of Glasgow turned their eyes to the harbour of Troon in Ayrshire, but here they were repulsed for reasons somewhat similar to those urged in the case of Dumbarton, viz. that it would occasion a rise in the price of butter and eggs! Having failed at both these places, the magistrates purchased 13 acres of ground from Sir Robert Maxwell of Newark, in 1662, on which they founded the town of Port-Glasgow with its harbour, and constructed the first dry or graving-dock in Scotland. At the same time they made such improvements on the river as the funds of the corporation would admit of. Previous to 1688 there had only been a landing-shore in Glasgow; but in that year a small quay was constructed at the Broomielaw at an expense of £1,666 13s. 4d. sterling. Between 1755 and 1758, the river was surveyed by Mr. Smeaton, the engineer; and, in consequence of the reports given in by him, an act of parliament was obtained for rendering the river navigable by means of locks. This plan, however, was ridiculed by many of the citizens, and the river having been surveyed, by Mr. John Golbourn of Chester, he recommended its improvement by the erection of jetties or dykes. Having obtained an act of parliament in 1770, by which the members of the corporation were appointed trustees, and authorized to levy dues, they appointed Mr. Golbourn to deepen the river, so that vessels drawing 6 feet water might come up to the Broomielaw. By 1775, he had erected 117 jetties, by means of which the river was confined, and the rapidity of the tidal flow and stream scoured the bottom, and secured the requisite depth. ‡ In 1792 an addition of 360 feet was made to the harbour, and in 1811 it was further increased by an addition of 900 feet. In 1825 the trustees or corporation obtained another act of parliament, granting them increased powers, and authorizing an addition to some of the dues; and at the same time it was provided that five merchants, not members of the corporation, should be added to the trust.

About forty-five years ago only gabberts, or small craft of from 35 to 45 tons, could approach the Broomielaw; and there are hundreds now living, or at least very recently deceased, who recollect that weeks elapsed without a single keel being seen at the Broomielaw. By 1821, however, the harbour had been so much improved that vessels drawing 13 feet 6 inches of water could come up to the Broomielaw; and at the present date (1841), ships of 600 tons burthen, and from every part of the world, crowd the harbour even to a degree of inconvenience from overcrowding perhaps nowhere else experienced. This is a state of things, however, which the trustees have now ample power to remedy, and they are already setting about the work in earnest. From various additions the harbour now ex-

‡ See Note to our article CLYDE, p. 253.

tends 3,340 feet on the north side, and 1,200 feet on the south. A talented civil engineer is constantly employed on the river at a salary of £500 per annum, with necessary assistants; and it may be truly said that here the hand of improvement is never idle. There are four powerful dredging-machines, two diving-bells, a steam-tug, and a host of labourers constantly at work; and it is probable that ere the lapse of many years ships of the largest burthen may be enabled to come up abreast of the city. For a long period the trustees have conceived that the bill of 1825 was insufficient for the proper improvement of the river, and various attempts were made to carry an official bill through parliament; but from the vast private and conflicting interest which was arrayed against it—both from the proposed constitution of the new trust, and the rights of private property—the bill was defeated after a vast expenditure of money. Eventually, however, it was carried into law in the session 1839-40, after perhaps a more determined opposition than any private bill had ever met with, and at an expenditure to the trust of nearly £13,000, exclusive of the sums which had been disbursed in former fruitless attempts. According to the old constitution, the trust was composed of the 32 members of council, in addition to 5 merchants chosen by the council. The new bill of 1840 has made up the constitution as follows:—The provost and five bailies of Glasgow; fifteen members from the council, or, in other words, three from each of the five wards; the dean-of-guild, the deacon-convenor, three members from the merchants' house, two from the trades' house, one from the chamber of commerce, two from the magistrates and burghers of the suburb of Gorbals, one from Calton, and one from Anderston. Various important powers have been conferred by the bill; such as that of extending the limits of the harbour, both above and below,—widening the river at various parts,—constructing a spacious wet-dock on the lands of Windmillcroft, which have been already acquired,—and deepening the river to the extent of 17 feet throughout, &c. It is estimated that these works will not be completed at less than £800,000, and by a series of operations extended over a period of 15 years. The trust has already £150,000 in loan, but the bill authorizes them to borrow an additional sum of £300,000. Looking, however, to the vast progressive increase in the dues of the river and harbour, the trustees have no apprehension as to the expenditure and ultimate liquidation of this vast sum; for it is conceived that the increased accommodation of the harbour, and the general advancement of the trade of Glasgow, will, in the course of a few years, increase the funds to such an amount as to place the trust out of all pecuniary difficulty. The following statement of the progressive improvement of the river-dues, from their first imposition in 1770 till the present time, will be alike interesting and instructive,—evinced, during the last few years in particular, a start which is unprecedented in the annals of commerce:

The Tonnage and Harbour Duties for the Year		
1771 were	£1,071	0 0
1791	2,145	0 0
1804	4,760	0 0
1815	5,960	0 0
1825	8,480	0 0
1826 (when 33 per cent. were added to the rates)	16,200	0 0
1828	17,669	0 0
1830	20,296	0 0
1832	22,496	0 0
1834	22,859	0 0
1835	31,900	0 0
1836	35,612	0 0
1837	35,595	0 0
1838	37,028	0 0
1839	45,826	0 0
1840	46,446	1 9

This sum is made up as follows (exclusive of the expense of collection):

Tonnage, Quay, Crane, and Weighing dues, on Goods and Vessels arriving at the Harbour from 8th July, 1839, till 8th July, 1840,	£42,453	2 10
Shed-dues, Do.	2,793	15 5
Ferry-dues at Broomielaw, Do.	1,199	3 6
	46,446	1 9

These funds are entirely laid out in the improvement of the river, in defraying expenses connected with it, and in paying interest of loans. The following is a statement of the arrivals, coastwise and foreign, at Glasgow, with the amount of tonnage, and departures, foreign, for the year 1840:—

		Vessels.	Tons regist.
Number of Vessels arrived Coastwise, Do.	do. Foreign,	5,869 263	305,785 49,028
Total,		6,132	354,793
Number of Vessels sailed, foreign, during the same period,		408	76,565

Steam-Vessels.

To Glasgow truly belongs the merit of being designated the cradle of British steam-navigation. It is not the province of this work to inquire into the claims urged in favour of Mr. Miller of Dalswinton, Mr. Symington of Falkirk, or Lord Stanhope. Suffice it to say, that Mr. Henry Bell was the first person who successfully applied steam to the propelling of vessels against wind or tide. In 1811, the *Comet* was built by Messrs. John Wood and Company, Port-Glasgow—the same gentlemen who recently built the Transatlantic steamship the *Acadia*—according to the directions of Mr. Bell; and on the 18th January, 1812, the vessel which had been named the *Comet*, plied from Glasgow to Greenock, making 5 miles an hour against a head-wind.* The engine was only of three horse power; yet the experiment was sufficient to prove the vast results which might be obtained by it, and as Mr. Bell either had not the means, or was too simple-minded, to take out a patent, the invention was speedily copied on a most extensive scale, and others reaped the golden harvest—blamelessly we admit—which Mr. Bell had sown. In fact, it will be remembered to the lasting-shame of our country and the age, that while Fulton in America was loaded with wealth and honours, Bell was compelled to drag out a life of penury, upon a pittance of £50 per annum, granted by the generosity of the river-trustees. At first it was supposed that steam-vessels were only capable of navigating the smooth waters of lakes or rivers, and for two or three years the trade of carrying passengers was confined to the Clyde. The matter was put to the test, however, by Mr. David Napier, now of London, who was the first to employ his vessel, the *Rob Roy*, in carrying goods and passengers on the open sea; and the trial was so successful, that its result may be found not only in every creek and arm of the sea on our coasts, but in the waters of the Mediterranean, and the Indian and Atlantic oceans. The steam-boat-quay at Glasgow, especially during the summer months, presents one of the most animated scenes which it is possible to conceive. River-boats of beautiful construction leave the Broomielaw every hour from morning till night, and some of them possess such power of steam that they career along the Clyde at the rate of from 12 to 14 miles an hour.

* The *Comet* was lost on the *Doors of Dorrismore*, and her engine was fished up, and placed as a most interesting relic in the establishment of Claud Girdwood and Company—now Mr. Craig—where it still remains. This prototype of those engineering triumphs which we now see in every harbour, was placed in the model-room during the sitting of the British Association, adjacent to the tiny engine upon which Watt experimented, and attracted the greatest attention. It will be looked upon with reverence in future ages.

The larger boats—especially those plying between Liverpool and Glasgow—are in reality floating-palaces, having cabins fitted up at vast expense, and with every regard to grace and architectural beauty. All of them are powerful boats, some having 400 horses' power; and no accident has ever yet befallen any of them.—The number of steam-vessels registered at the port of Glasgow on 31st Dec. 1843, was 15 under 50 tons, total tonnage 677 tons; and 46 above 50 tons, total tonnage 9,665 tons; being a full half of the steam tonnage of all Scotland.

Burghal system.

Glasgow was first erected into a burgh-of-regality by charter from William the Lion, of date 1180; but many alterations and extensions of the *set* have taken place since that remote period. It was not till 1611 that it was made a royal burgh. In 1691, William and Mary by charter, conferred the power on the magistrates and council of electing their provost, and all other officers, "as fully and freely as the city of Edinburgh, or any other royal burgh." The form and manner of this election have varied at various dates, according to the different constitutions adopted at later periods. Up till 1604, severe contentions existed amongst the merchants' and trades' ranks for precedence in the city—the former being accused of looking down upon and being disposed to trample on the rights of the latter. Eventually the matter was submitted by both parties to the arbitration of Sir George Elphinstone of Blythswood, knight, provost, who pronounced a decreet-arbital, commonly called the Letter of Guildry. By this decreet, he denied the right of precedence to either party, and gave to both a share in the magistracy. This letter of guildry was afterwards confirmed by act of parliament. Up till 1801, the executive in the city consisted of the lord-provost—the title of lord, or honourable, having been long assigned to the chief magistrate by courtesy—three bailies, the dean-of-guild, deacon-convener, and treasurer; but at this period two additional bailies, one from the merchants' and the other from the trades' ranks were added—making five bailies, and these numbers have remained unchanged up till the present date. The magistrates and council enjoy a considerable extent of patronage, having, of course, the appointment of their own officers—and, in addition, the nomination to nine out of the ten city churches: they are also the patrons of various bursaries in the University, and appoint the teachers of the high or public grammar-school of Glasgow. By a charter from King James, in 1450, the bishop of Glasgow and his successors held the city as a burgh-of-regality, by paying yearly upon St. John's day a red rose, if it should be asked. Subsequent to the Revolution, and the long burghal sway of the Stewarts of Minto, the elections were conducted with a considerable regard to fairness and the principle of rotation. Up till the passing of the municipal reform bill, the council was filled respectively by the merchants' and trades' classes, according to the old close mode of self-election; but, since that period the councillors have been elected by the parliamentary constituency divided into five wards. The council is composed of 32 members, but two of them sit, *ex officio*, viz., the dean-of-guild, elected by the merchants' house, and the deacon-convener, elected by the trades' house. According to the custom of all other burghs, the council elect their own magistrates, the duration of office being three years. Glasgow was considered a place of such insignificance at the period of the Union, in 1707, that it was only assigned the fourth share of a member of parliament,—the representative of this district of burghs being returned jointly

by Renfrew, Rutherglen, Dumbarton and Glasgow. In 1832, the reform bill granted two members to the city and suburbs, which were then included in the parliamentary bounds. The merchants' house, which returns a member to the council, has long been a most influential body in the city of Glasgow, and is entirely an open corporation; any person paying £10 of entry-money, which gives a right to participate in the property and privileges of the house, being admissible. The present number of the members is about 1,200, and their funds, which are extensive, and chiefly expended in charity, are managed by a large board of directors. The trades' house, which also returns a member to the council, is, if possible, a still more important corporation, being composed of 3,500 of the tradesmen, manufacturers, and artisans of the city. The entrance-fees to the 14 incorporated trades, which constitute the house, are various; the funds very considerable, and chiefly devoted to charity.

The property of the corporation of Glasgow is now very extensive, and even in the worst of the close or self-election times, it was the boast of the city that economy ruled all its transactions, and that the expenditure rarely exceeded the income. As a proof of their economizing spirit, it may be mentioned, that while the lord-provost of Edinburgh received £800 per annum to support his dignity, the chief magistrate of Glasgow was content to accept of £40; and where upwards of £20,000 would be expended in the eastern capital to build and decorate a church, the council of the western expended only £7,000 on an edifice which answered the purpose equally well. These habits of economy may have been forced upon the city from the stringent nature of its pecuniary circumstances in the olden time; for we learn that at a meeting held on 9th April, 1609, "the provost informed the council that the magistrates had been charged the sum of 100 pounds by the clerk-register, for the book called the *Regium Magistatem*—that they were in danger of horning for the same, and that, as the town was not stented, and as the council could not advance the money—£8 6s. 8d. sterling—he had borrowed it from William Burn, merchant-burgess!" As the town advanced in wealth and population, the funds of the corporation improved also. An official, called the treasurer, is periodically elected from the council, and forms one of the magistracy, but he has little or nothing to do with the burgh-monies, the whole being managed by the chamberlain, who is paid a fixed salary, and is not now a member of council. At the last winding up of the burgh-funds on 30th September, 1840, the revenue was stated at £14,613 9s. 8d., and the expenditure at £16,405 1s. 11d. The revenue for that year was made up as follows:—

Fen-dues and ground-annuals,	£5,610 18 11
Feudal casualties,	313 19 9
Rents of seats in the Established churches,	3,978 8 7
— of lands,	333 14 0
— of houses, shops, and warehouses,	498 19 8
— of mills and lands annexed,	609 12 0
— of quarries and minerals in Easter and Wester common,	187 10 0
— of salmon-fishing,	4 0 0
— and dues of market and slaughter-house,	509 3 4
— of washing-house,	57 0 0
Dues for pasturage in the Green, &c., £268 12s. 6d. — Show stations at the fair, &c., £246,	514 12 6
— for shore at Port-Glasgow, commuted at	20 0 0
— of rates and maltures, collection suspended	0 0 0
Bazaar rents and dues,	1,382 1 11
Proportion of burgess entries,	81 18 0
Dividends on stock in the Forth and Clyde navigation, ten shares,	300 0 0
Dividends on stock in the Glasgow water company, twenty-eight shares,	78 8 0
Dividends on stock in the Carlisle road,	3 4 0
Total revenue,	£14,613 9 8

The revenue for the preceding year had been £15,457 12s. 10d.; and it is only fair to state in reference to 1840, that the income was depressed and the expenditure increased from causes purely accidental, and which cannot occur again. The impost on ale and beer which latterly had been farmed out at a rent of £1,262, and which had been enjoyed by the council for more than 100 years, ceased this year from the expiry of the act, and to make the account still worse, upwards of £1,600 were expended upon matters purely incidental. The average revenue, therefore, cannot be taken at less than £15,500, and present appearances would lead to the belief that it will soon be much greater. The total stock of the city amounts to £263,802 10s. 9d.; and the debts to £149,661 8s. 7d. The expenditure of the city for the last year consisted of £4,669 5s. 9d. for the ecclesiastical department—that is, the payment of ministers' stipend, &c.; £5,905 0s. 6d. for the civil department; £659 19s. 1d. for public education; £35 for military department; £2,604 11s. 0d. for criminal department; and £2,531 5s. 7d. for the finance department.

The Suburbs.

There are three suburbs connected with Glasgow, of vast extent, and which, at the present date—1840—are computed to contain a population of 97,000. For all the purposes of commerce and manufacture, and so far as community of interest is concerned, they and the city of Glasgow are one and indivisible. Gorbals, which is the most extensive, lies on the south bank, and is separated from the city proper by the Clyde; but Calton and Anderston, the former on the east, and the latter on the west, are so intermingled with the city that few beyond the local tax-gatherer, either know, or trouble themselves about the exact boundaries. All of them, however, have a distinct magistracy, and separate and independent police jurisdiction.

The Gorbals.—The suburb of Gorbals—which has not unaptly been designated the Southwark of Glasgow, and the population of which has been estimated at 65,000—was formerly a village to which those afflicted with leprosy were sent in ancient times, and was probably in existence before the building of the first bridge in 1345. The superiority or right of barony and regality, was, in 1607, disposed by the Archbishop of Glasgow to Sir George Elphinstone. A charter of confirmation was granted by King James VI. in 1611; and in 1647 the disponee of Sir George Elphinstone conveyed the superiority to the magistrates and town-council of Glasgow, who, since then, have enjoyed and exercised the whole rights, privileges, jurisdictions, and powers of baron and superior. In this capacity the magistrates and town-council of Glasgow appoint the bailies of the barony, the clerks, procurator-fiscal, and officers of court. By the police act, passed in 1823, it is enacted that, in addition to the chief magistrate, there shall be "four resident bailies in the said barony, appointed annually in the month of October, by the lord-provost, magistrates, and town-council of Glasgow, as baron and superior thereof." The council of Glasgow exercised this right until the passing of the municipal reform bill, and generally appointed one of their own number to the office of chief magistrate, who may be non-resident. Subsequent to the passing of that measure, however, the £10 householders on the parliamentary roll, were permitted to elect their own magistrates, in the same manner as done in Glasgow, and those who had the highest number of votes were afterwards officially appointed by the Glasgow town-council—the people of Gorbals thus possessing the reality without the name. Notice

however, has been given of a new police bill for Glasgow, intended to be introduced into the session of parliament 1841–42, by a clause in which it is provided that Gorbals shall be independent of Glasgow in this respect. At the same election four birleymen are appointed, who constitute the dean-of-guild court for the burgh. The territory of the burgh includes the parish of Old Gorbals, and part of the parish of Govan; and by the police statute the territory of the barony has been divided into five districts, viz., Hutchesontown, the parish of Gorbals Proper, Laurieston, Tradeston, and Kingston. The burgh possesses no corporate rights or exclusive privileges, and there are no burgesses. It has no real property, and never appears to have had any. The only public property is the police-buildings, which include a spacious court-house, court-hall, superintendent's house, &c., but these are vested in the commissioners appointed under the police statute, of whom the magistrates form only a part. The only revenue of the burgh arises from fines and penalties imposed in the police court. There are two separate assessments for the poor in the parish. The part of the barony situated in the parish of Govan, is assessed along with the remainder of that parish; and the other part of the barony, being Gorbals Proper, and comprising the centre and ancient part of the town, is assessed by itself. There are some spacious streets in the barony of recent erection, particularly Portland-street, and Abbotsford-place, chiefly occupied by gentlemen whose places of business are situated in Glasgow, and these erections impart to this portion of the suburbs an air of gentility and affluence which is surpassed by very few localities on the other side of the river. The erection of the Govanhill iron-works immediately upon the south-eastern boundary of the barony is understood to have sadly marred its extension on that quarter, from the broad glare which they emit night and day. From the upper portions of the city of Glasgow, the flames of these huge furnaces may be seen reflected against the sky like the fitful flittings of the aurora borealis, and however pleasing they may be at a distance, their close proximity to the burgh is found to be alike inconvenient and disagreeable.

Calton.—The villages of Old and New Calton were formerly parts of the barony of Barrowfield, but were erected into a burgh-of-barony by crown-charter, 30th August, 1817. At the commencement of the last century, this locality went by the name of Blackfauld, from the ground on the east of Glasgow, upon which it was built, having been formerly occupied as a fold for black cattle. This property was purchased in 1705, from the community of Glasgow by Walkinshaw of Barrowfield, who first projected the village. It was chiefly completed, however, by Mr. Orr, who acquired the Barrowfield estate. It contains several respectable streets, but its general aspect is undignified, forming almost exclusively the residence of the working-orders. It forms the eastern suburb of Glasgow, and is built so closely into it, that there is no visible line of demarcation. The town-council consists of a provost, three bailies, a treasurer, and eleven councillors. The councillors act as birleymen within the burgh. The dean-of-guild is recognised as one of the magistrates by the police statute. The council is elected by the burgesses, whose fees of admission are £2 2s., and they are entitled to vote whether resident or not. The burgh has neither property, debt, nor revenue. The police is managed by a separate board, of which the magistrates are members, *ex officio*. The large village or suburb of Bridgeton extends fully half-a-mile in length, between Calton and the Clyde. It has been so named from its vicinity to the bridge

thrown over the river in 1777, leading to the ancient burgh of Rutherglen. The inhabitants are almost entirely operatives, and the want of a regular magistracy and police has been severely felt of late years. Camlachie, another large suburb of Glasgow, extends to the east of the city on the Edinburgh and Hamilton road, and is chiefly inhabited by weavers.—The population of Calton is estimated to be 28,000.

Anderston.—This suburb commences about a mile west from the cross of Glasgow, and adjoins the city as closely as Calton. It lies along the banks of Clyde. The locality derives its name from Anderston of Stobeross, who, so early as 1725, formed the design of erecting a village here. This village was erected into a burgh-of-barony, by crown-charter, sealed November 1824; and the town-council consists of a provost, three bailies, a treasurer, and eleven councillors, who are elected by the burgesses. They also manage the police business by a separate statute. By the act obtained in 1826 for regulating the police of the burgh, and of the lands of Lancefield and others adjoining, it is enacted that no burgess shall be entitled to vote unless he be proprietor or life-renter of heritable subjects within the police bounds, or tenant or occupier of heritable property of the fixed yearly rent of £20 at least. The burgh has neither property nor debts. Immediately adjoining is the large village of Finnieston, which was laid out by the proprietor of Stobeross in 1770, and christened in honour of his chaplain, whose name was Finnie. The locality of Anderston is one alike bustling and business-like. Here are situated some of the largest cotton-mills connected with the city, including those of Messrs. Houldsworth, and Alexander Graham & Company—the large bottle-work of Stevenson and Price (late Geddes)—the pottery and china-works of Mr. R. A. Kidston—and the immense engineering works of Mr. David Napier, with those of Todd and Macgregor, Mitchell, and Neilson, &c. These three suburbs are included within the parliamentary bounds of the city of Glasgow.

Port-Dundas.—This may be considered one of the Glasgow suburban villages. It is situated nearly due north from the centre of the city, and is reached by a very considerable ascent. There are, however, very few dwelling-houses in it, the erections being generally warehouses, or such as are devoted to the purposes of trade. It gains its importance from being the principal basin of the Forth and Clyde canal, and is altogether a place of much commercial bustle and activity. It is situated literally on the top of a hill, and the appearance of ships and ships' masts rising far above the tops of the houses in the city has often been the subject of wonder and surprise to strangers. See FORTH AND CLYDE CANAL.

Appearance and Social condition.

Unlike Edinburgh, and many other towns in the kingdom, Glasgow appears very disadvantageously from a distance. In the majority of its approaches, the first intimation which a stranger has of his vicinity to a great city, is the innumerable cluster of tall brick chimney-stalks, vomiting volume on volume of dark smoke, and imparting to the suburbs an air of dinginess. Anon, as he enters the outskirts, his ear is dinned by the whirring of spindles, the noisy motion of power-loom machinery, or the brattling of hammers; and everything assures him that he is approaching one of the busiest haunts of mankind, and in a locality of which it may be truly said :

"Here Industry and Gain their vigils keep,
Command the winds and tame the unwilling deep."

The ground on which Glasgow and the suburbs are built consists, generally, of a long level tract on both banks of the Clyde, rising to the north, however, to a considerable altitude. On this ridge is situated the Cathedral, which may be considered the nucleus of the city, and from it the streets have branched southwards towards the river. The houses in this part of the city are generally of an indifferent description in point of appearance, and a glance suffices to tell that many of them belong to a period far anterior to the present day, and that in fact they have completely outlived their former respectability or splendour. The High-street leads from the Cathedral, and terminates at the Cross, where the Tron-gate extends to the west, and the Gallowgate to the east. The Tron-gate—which a little farther west takes the name of Argyle-street—is one of the most spacious street in Europe; it is in general fully 60 feet in width; the houses are high, substantially built, and stately, and many of them boast of considerable antiquity; while the torrent of population which is ever hurrying along the pavements morning, noon, and night, with the coaches, cabs, waggons, and carts which stream along its centre, present an air of business-activity which bears a very close resemblance to what is daily seen on the long line of street leading from Ludgate-hill, along Fleet-street and the Strand, to Charing-cross in London. Gallowgate, Tron-gate, and Argyle-street, extend more than 2 miles, in an almost uninterrupted line, and on every side are lined with spacious shops, extensive warerooms, and dwelling-houses above. From the centre portion of this long line some of the finest business-streets in the city extend to the northward, including the offices of the majority of the banking-companies, the counting-houses of the foreign merchants, the warerooms of the manufacturers, and the offices of the gentlemen connected with the law. Amongst these may be named Miller-street, Virginia-street, (containing the stately domiciles of the old Virginia traders, which are now universally transformed into places of business,) Queen-street, and Buchanan-street. These two last-named streets comprise part of the recent additions to the city; and though they now contain some of the finest shops in the kingdom, and are redolent of business-activity, there are persons still alive who remember when they were entirely in the outskirts of the city, and when Queen-street went by the name of the Cow-loan, from this being the route by which the town's-herd conducted the cows of the citizens home from their pastures in the Cowcaddens, now a thriving and populous suburb. Parallel with Argyle-street, and extending to the westward, are some spacious streets, chiefly occupied with the dwelling-houses of the more respectable classes of the citizens. Of these George-street, Regent-street, and Bath-street may be named. They lead to the patrician locality of the Blythswood-grounds, where are situated Blythswood-square, Elmbank-crescent, Woodside-crescent, &c., which are built and laid out with a degree of magnificence worthy of the merchant-princes of the West. This is called the new part of the town; and with the exception of Moray-place in Edinburgh, and, some of the squares in London, the crescents and square we have named are unequalled in architectural beauty and unity by the buildings in any part of the kingdom. The houses are built of a durable white freestone, and so substantially constructed withal, that, unlike the brick tenements of the great metropolis with their facings of Roman cement, they are destined to endure for ages. Here is congregated all that is most refined, elevated, and opulent, in a mercantile and manufacturing aristocracy; and the contrast between the streets and buildings in the western portion of Glasgow with those in the eastern, not ex-

cluding the character of their occupants, is wide as the poles asunder.

Returning to the Cross, at the eastern extremity of the Trongate, the street immediately opposite the foot of High-street is called the Saltmarket, and it leads to the Green on the north bank of the river, and to the uppermost bridge which crosses the Clyde, named Hutcheson's bridge. This street, although the residence of the best in the city in the olden times, is now principally occupied by brokers, old clothes' dealers, and those who minister to the wants of the humbler classes of the population. The Bridgegate is approached from the Saltmarket at the eastern end, and is terminated by Stockwell-street on the west. This is a fine old street, and in several parts of it of great width. Seventy years ago it was quite a patrician portion of the city, and contained the merchants' hall, and the assembly-rooms in which the Duchess of Douglas used to lead off the Glasgow civic balls, about the commencement of the last century. But alas, for the fickleness of all things mundane, its glory has completely departed. The merchant's-house has long been removed, though the handsome old spire remains; and the houses and shops of the merchants of the former age are now occupied by spirit-dealers, tripe-sellers, and provision-dealers, whose business it is to supply the wants of the very canaille of the city who are thickly congregated in the numerous lanes and wynds which lead into this locality. King-street is parallel with Saltmarket to the west, and contains the flesh, fish, and green markets,—buildings which must have been regarded as alike handsome and spacious at the time of their erection; but as the wealth of the city has migrated westward, these markets are now much neglected, and entirely divested of their former public importance. No new markets have been erected in their stead, but the fleshers, fish-merchants, and fruiterers have followed their customers by taking shops in the western locality, where the demand is briskest and the payment surest. Westward from King-street is Stockwell-street, a place of considerable business, which forms the approach to Stockwell-bridge. Maxwell-street forms the principal, though not the lineally direct pathway to the Wooden or Accommodation-bridge; and Jamaica-street, still farther west, constitutes the approach to the lowest bridge on the Clyde, that of most recent erection, and which is designated *par excellence*, "the Glasgow bridge." Jamaica-street forms the *vena cava* of two-thirds of the traffic from the Broomielaw, and is constantly crowded by carts, waggons, noddies, and omnibuses, which take this route on their way from the harbour to their different destinations in the city and suburbs, or vice versa. The Broomielaw or harbour extends to the west from the foot of Jamaica-street, and ships of large tonnage are brought up to within a few yards of the Glasgow bridge. The peep down the river from the centre of this noble bridge is one of the most animating which can possibly be conceived. A forest of masts spreads before the gaze of the spectator as far as the eye can reach,—the wharfs are covered with men of all nations, and the produce of every clime,—a stream of passengers hastening to and from the steam-boats and the city rolls unintermittingly along the line of quays,—while the air thickens with the dense volumes of smoke from the steam-boat quay, situated at the lower portion of the harbour,—and a thousand ever-shifting sights and sounds complete the picture of never-ceasing bustle and activity here presented. Glasgow possesses one very pleasing feature, which has been often and much admired by strangers. Instead of the warehouses, &c. being built right on the banks of the river, as is

the case with the Thames, it has been so arranged that all the streets and lanes terminate at a considerable distance from the Clyde, thus affording a most ample pathway between the streets and the river. From the Glasgow bridge, upwards to Stockwell, the banks of the river on each side are laid out in green sward, on which, "when summer days are prime," the adjacent lieges bleach their linen, and sheep are allowed to browse,—a novel feature, imparting altogether an air of rural lightness to the very heart of a crowded city. From all the streets which have been named tributaries branch-off in every direction; but it is unnecessary to enter into this part of the subject minutely, as the reader will learn more from consulting the plan of the city inserted in the present work than from any description on our part. It is enough to say, that however the stranger may have been prepossessed against the amenity of Glasgow from its suburban appearance, he is no sooner within the spacious and splendid amplitude of its business-streets, than he finds that he is in the very centre of one of the busiest and most intelligent of the many commercial and manufacturing hives which minister to the national greatness; and its numerous lofty spires, churches, and educational institutions, tell him that Christian and secular instruction are not forgotten in the midst of other active pursuits.

Having spoken thus briefly of the external appearance of the city, it may not be amiss to touch on the state of society, both in the present and former times. Up till the period of the Reformation, and indeed for long after it, the major part of the inhabitants may be said to have existed in a state of ignorance, poverty, and barbarism; intestine feuds were frequent; the people went constantly armed; and it was no unusual thing for the ministers of religion to ascend the pulpit with dagger, sword, or pistol on their persons! Crimes which are now thought of with horror were of frequent occurrence, and such was the state of society that private revenge as frequently inflicted the punishment of aggression as the arm of the law. The Reformation undoubtedly laid the foundation of improvement, but the civil troubles and contests by which it was followed sadly marred the civilizing effects which might otherwise have flowed from it. It would appear that even the better class of citizens were not free from the ignorance and superstition which oppressed their humbler fellow-citizens: for we find that, so late as 1698, "the magistrates of Glasgow granted an allowance to the jailer for keeping warlocks and witches imprisoned in the tolbooth, by order of the Lords commissioners of justiciary." Neither does the civic economy of the city appear to have been of a higher standard: for we find an order issued by the town-council, in 1610, to the effect, "that in future there should be no dung-hills on the principal streets, nor in the flesh-market, meal or other market, under a penalty of 13s. 4d.; and that no timber or peat-stacks lie on the High-street, above a year and a day; nor lint be dried on the High-street." In its ignorance, barbarity, poverty, and filth, it is not to be presumed that Glasgow was in a worse position than any other town of Scotland, with the exception of the capital, which, from being the seat of the legislature and the residence of the aristocracy, had pretensions to refinement which were wanting elsewhere. The Union, in 1707, which opened up the English colonies to the Scots, was the first event which materially contributed to an alteration for the better in the character and disposition of the inhabitants of Glasgow; and we find that shortly after this period they adopted manners only equalled in the intensity of their austerity by the latitude of their former dis-

soluteness. Regarding the state of society at this early period, some very interesting statements have found their way into the Scrap-book of the venerated Mr. Dugald Bannatyne, a few of which, evincing that frugality and industry were, in these infant-days of Glasgow commerce, the guiding stars of her merchants, we may here quote: "At the commencement of the 18th century, and during the greater part of the first half of it, the habits and style of living of the citizens of Glasgow were of a moderate and frugal cast. The dwelling-houses of the highest class of citizens, in general, contained only one public room, a dining-room; and even that was used only when they had company,—the family at other times usually eating in a bed-room. The great-grandfathers and great-grandmothers of many of the present luxurious aristocracy of Glasgow—and who were themselves descendants of a preceding line of burgher-patricians—lived in this simple manner. They had occasionally their relations dining with them, and gave them a few plain dishes, all put on the table at once: holding in derision the attention which they said their neighbours the English bestowed on what they ate. After dinner, the husband went to his place of business, and, in the evening, to a club in a public-house, where, with little expense, he enjoyed himself till nine o'clock, at which hour the party uniformly broke up, and the husbands went home to their families. The wife gave tea at home in her own bed-room, receiving there the visits of her 'cummers,' and a great deal of intercourse of this kind was kept up,—the gentlemen seldom making their appearance at these parties. This meal was termed 'the four-hours.' Families occasionally supped with one another, and the form of the invitation, and which was used to a late period, will give some idea of the unpretending nature of these repasts. The party asked was invited to eat an egg with the entertainer; and when it was wished to say that such a one was not of their society, the expression used was, that he had never cracked a hen's egg in his house.

"The wealth introduced into the community after the Union, opening the British colonies to the Scots, gradually led to a change of the habits and style of living of the citizens. About the year 1735 several individuals built houses, to be occupied solely by themselves, in place of dwelling on a floor entering from a common stair, as they hitherto had done. This change, however, proceeded very slowly, and up to the year 1755 to 1760, very few of these single houses had been built,—the greater part of the most wealthy inhabitants continuing, to a much later period, to occupy floors in very many cases containing only one public room. After the year 1740 the intercourse of society was, by evening-parties, never exceeding twelve or fourteen persons, invited to tea and supper. They met at four, and after tea played cards till nine, when they supped. Their games were whist and quadrille. The gentlemen attended these parties, and did not go away with the ladies after supper, but continued to sit with the landlord, drinking punch, to a very late hour. The gentlemen frequently had dinner-parties in their own houses, but it was not till a much later period that the great business of visiting was attempted to be carried on by dinner-parties. The guests at these earlier dinner-parties were generally asked by the entertainer, upon 'Change, from which they accompanied him, at the same time sending a message to their own houses that they were not to dine at home. The late Mr. Cuninghame of Lainshaw meeting the Earl of Glencairn at the Cross in this way, asked him to take *pot-luck* with him, and having sent immediate notice to his wife of the guest invited, enter-

tained him with a most ample dinner. Some conversation taking place about the difference between dinners in Glasgow and Edinburgh, Lord Glencairn observed, that the only difference he knew of was, that in Glasgow the dinner was at sight while in Edinburgh it was at fourteen days' date. These dinner-parties usually terminated with hard drinking, and gentlemen in a state of intoxication were, in consequence, to be met with at most evening-parties, and in all public places. The dinner-hour, about the year 1770, was ten o'clock; immediately after that, it came to three o'clock; and gradually became later and later, till about 1818 it reached six o'clock. The first instance of a dinner of two courses in the neighbourhood of Glasgow was about the year 1786. Mrs. Andrew Stirling of Drumpellier, who made this change in the economy of the table, justified herself against the charge of introducing a more extravagant style of living, by saying, that she had put no more dishes on her table than before, but had merely divided her dinner, in place of introducing her additional dishes in removes.

"Influenced by a regard for the Sabbath, the magistrates employed persons termed 'compurgators' to perambulate the city on the Saturday nights; and when at the approach of twelve o'clock, these inquisitors happened to hear any noisy conviviality going on, even in a private dwelling-house, they entered it and dismissed the company. Another office of these compurgators was to perambulate the streets and public walks during the time of divine service on Sunday, and to order every person they met abroad, not on necessary duty, to go home, and if they refused to obey, to take them into custody. The employment of these compurgators was continued till about the middle of the century, when, taking Mr. Peter Blackburn—father of Mr. Blackburn of Kilmearn—into custody for walking on Sunday in the Green, he prosecuted the magistrates for an unwarranted exercise of authority, and prevailing in his suit in the Court of Session, the attempt to compel this observance was abandoned."

Up till 1750, the severity of the ancient manners prevailed in full vigour; people, as has been stated, were prevented from walking on the Lord's day; no lamps were lighted on that evening, because it was presumed that no man had any business to be out of his own house after sunset; the indulgences or innocent amusements of life were either unknown or little practised. But by this time commerce and manufactures had produced wealth; and the establishment of banks had increased the supply of money, and enlarged the ideas of the people both as regarded their manner of living and their schemes of improvement. A new and expensive style was now introduced into building, living, dress, and furniture,—the conveniences and elegances of life began to be studied,—wheel-carriages were set up,—places of entertainment were frequented,—and at once to get rid of the austerity and stern restrictions of former times, a theatre and assembly-room were built by subscription. Not only Glasgow, but the west of Scotland generally, had been enriched by the colonial trade; and as a consequence of it, new streets were laid out in the city, the old wooden tenements with thatched roofs were displaced for commodious stone mansions, and the progress of refinement, and it may be said, of luxury, has advanced to the present time. It is curious to note, however, the state of thralldom in which the majority of the citizens were held by the Virginian merchants, previous to the breaking out of the American war. These gentlemen were regarded as the civic aristocracy, and were accustomed to promenade the Trongate in the vicinity of the cross, in long scarlet cloaks and bushy wigs,

and if any decent tradesman wished to have a word with them, he was required to take up his station on the opposite side, and wait patiently till he could be fortunate enough to catch the eye of the tobacco-lord, for it would have been resented as a most unwarrantable liberty had the craftsman dared to accost him off-hand. Amongst those who thus stood upon their dignity, were the Cuninghames, the Spiers, the Glassfords, the Dunmores, the Stirlings, Spreulls, and others; but the increasing intercourse of the citizens with the world, and above all, the establishment of the public coffee-room in 1781, did much to number this servile reverence for mere wealth among the things that were, and now-a-days, there is no place in her Majesty's dominions, where merit, good conduct, and ability, even unaccompanied by wealth, more readily form the passport to public favour, respect, and confidence. In all the elements of good living and refinement, the better class of the citizens of Glasgow have improved mightily since the beginning of the present century, and it may be truly stated that the wealthy population of the localities which have been named in the west end, lead a life in which "ne'er a want may be ungratified," and are in possession of luxuries which were unknown to the majority of the Scottish nobles even fifty years ago. The introduction of steam-navigation has brought the fairy nooks, bays, and crooks of the western coast within a few hours' sail of the city, and there are few of the merchants, manufacturers, or professional gentlemen who have not a summer *cottage ornée*, perched upon the water's edge at Gourrock, Dunoon, Kilmun, the Gareloch, Rothesay, or Largs. These are laid out with every regard to taste, with blooming parterres without and elegance within, and it is scarcely possible for a humble citizen to pass them either on foot or in steamers without aspiring,

"Oh that for me some home like this would smile!"

While thus much has been stated of the sunny portion of Glasgow society, it is only fair to present the dark side of the picture. This city, like Dublin, embraces to a remarkable extent the very extremes of wealth and misery; and the most painful feature in the case is, that in proportion as the one class appears to be advancing in opulence, the other appears to be receding towards a state of abject and helpless wretchedness. The clothes leading from the High-street, and the wynds are known to contain an aggregate of misery, disease, and vice, which is perhaps unequalled, certainly not exceeded, by that of any other city of the empire. The district in which the wynds are situated lies in the very heart of the city, and here fever is ever present,—at times breaking out with frightful virulence and permeating all classes of society. The population of these places is not usually Glasgow-born, but the locality affords a shelter and nestling-place for all that is low and squalid, come from what quarter it may. The great majority of the tenants of these dens are Irish, who, from the facilities now afforded by steam-navigation, are induced to fly from wretchedness in their own country to a state of things little better in the land of the stranger. The locality of the wynds is bounded by the wealthy street of Tronagate on the north, Bridgegate on the south, King-street on the east, and Stockwell-street on the west. A short time since it was visited officially by Mr. Jellinger C. Symons, one of the assistant-commissioners for inquiring into the condition of the hand-loom weavers in the United Kingdom, and his report is of the most painful and startling description. Though perhaps slightly coloured, it will generally be admitted that his statements are based on a foundation of truth. Mr. Symons says—"The wynds of Glasgow comprise a fluctuating population

of from 15,000 to 20,000 persons. This quarter consists of a labyrinth of lanes, out of which numberless entrances lead into small courts, each with a dunghill reeking in the centre. Revolting as was the outside of these places, I was little prepared for the filth and destitution within. In some of these lodging-rooms (visited at night), we found a whole lair of human beings littered along the floor,—sometimes fifteen and twenty,—some clothed, and some naked,—men, women, and children huddled promiscuously together. Their bed consisted of a lair of musty straw intermixed with rags. There was generally no furniture in these places. The sole article of comfort was a fire. Thieving and prostitution constituted the main source of the revenue of this population. No pains seems to be taken to purge this Augean pandemonium,—this nucleus of crime, filth, and pestilence,—existing in the centre of the second city of the empire. These wynds constitute the St. Giles of Glasgow, but I owe an apology to the Metropolitan pandemonium for the comparison. A very extensive inspection of the lowest districts of other places, both here and on the continent, never presented any thing half so bad, either in intensity of pestilence, physical and moral, or in extent proportioned to the population."

For the amelioration of this frightful moral incubus, various plans have been proposed, but it would appear that all of them are beyond the reach of private benevolence or private effort. It is hoped that the extension of the poor-law to Ireland may have its beneficial effects; but hitherto these have not been apparent. A poor-law for Scotland on a more liberal scale than the present,—education which will elevate the moral status of the more debased of the population,—and an extensive system of emigration,—have in their turn been proposed; but it is presumed that whatever measure cures this disease must be a national one, and at all events it is the opinion of the best-informed gentlemen in Glasgow on these subjects, both medical, magisterial, and clerical, that the subject will ere long force itself upon the community in a manner not to be trifled with.

Population, &c.

The advance of population and property in Glasgow is unparalleled in any city in the kingdom, and perhaps in the world, if some of the cities in the United States are excepted, which appear to rise up in the heart of the forest with railroad speed. It is recorded by one of the historians of New South Wales, that part of the ground upon which Sydney now stands, was disposed of by the original holders for a keg of rum or a roll of tobacco, which, within 15 years thereafter, brought £20,000; and the same kind of rapid increase and value appears to hold true with regard to Glasgow. The city has steadily advanced to the west until it has almost covered the lands of Blythswood. This property, about 40 years ago, brought the proprietor £223 1s. 3d., while, at the present moment, it is understood that the unredeemable feus, secured on substantial buildings, amount to more than £13,000 per annum; and there is still a portion to feu. Previous to 1610, there was no census of the population of Glasgow upon which dependence can be placed; but it is believed that, about the period of the Reformation, in 1560, the numbers of the citizens did not amount to more than 4,560. When the Confession of Faith was signed, in 1581, the numbers above 12 years of age were 2,250; and, when the population was taken in 1610, by order of Archbishop Spottiswood, it was found to amount to 7,644. In 1660, it had increased to 14,678; but consequent upon the civil wars it fell off, amounting only to 11,948 in 1688,

and indeed it did not recover itself for half a century afterwards. The following table of the numbers taken at different periods subsequent to this date, either by individuals of trust and veracity, the magistrates, or by Government authority, will show the progressive rise of the city :—

In 1560,	4,500	In 1785,	45,889
— 1709,	12,766	— 1791,	65,587
— 1712,	13,832	— 1801,	83,769
— 1740,	17,034	— 1811,	100,749
— 1755,	23,546	— 1821,	147,043
— 1763,	28,300	— 1831,	202,426
— 1780,	42,832	— 1841,	280,676

In the census of 1831, the males were ascertained to be 93,724; the females, 108,702; in that of 1841, the males were 133,306; the females, 147,370. In 1831, there were 19,200 inhabited houses; in 1841, 22,751; had the houses increased in the same ratio as the population, the number in 1841 would have been 25,463. This striking fact indicates a sensible falling-off in the domestic comfort of the great mass of the population. The population of the suburbs was first added to the enumeration in 1780. Up till 1776, there were no foot-pavements; but, at the present time, they extend considerably more than 120 miles in length, and they must have been constructed at an expense of nearly £200,000. In 1790, the first common-sewer was constructed in Glasgow, and it is calculated that they now extend fully nine miles. It affords a curious and rather flattering insight into the state of Glasgow in the end of last century to state, that at the autumn-circuits of 1779, 1782, and 1796, there was no criminal business before the court. But of late years crime has so much increased with the population, that it has become necessary to hold three criminal diets in the city, instead of two as formerly, when generally from 100 to 140 persons are arraigned at each, and the court occasionally sits from seven to eight days. This, of course, is quite irrespective of the vast number of minor offences, tried by the sheriff, the justices, and the magistrates of the city.

Bridges.

The Clyde at Glasgow is spanned by four bridges, communicating with the suburban district of Gorbals. The first, or uppermost, is termed Hutchesons' bridge; the second, Stockwell bridge; the third, the Wooden, or Accommodation bridge; and the fourth, the Glasgow, or Jamaica-street bridge.—Stockwell-street bridge was built by Bishop Rae, about the year 1345, the pious Lady Lochore, who had property on both sides of the river, defraying the expense of the centre arch. It was originally 12 feet wide, and had eight arches. On the week of the Glasgow fair, in 1671, the south arch came down; and it is a circumstance not only providential, but remarkable, that no one suffered any fatal injury. In 1777, an addition of 10 feet was made to the breadth of this bridge, and two of the arches built up, for the purpose of confining the river within narrower space. In 1821, it was further improved by the introduction of ornamental iron footpaths, suspended by substantial framings. These were executed after plans by the celebrated Thomas Telford, the engineer of the Menai bridge. The Stockwell bridge was the principal channel of intercourse between Glasgow and the south-west parts of Scotland for 400 years. It is 415 feet long, and 34 feet in width within the parapets.—The foundation-stone of the original Jamaica-street bridge was laid in September, 1768, by Mr. George Murdoch, then lord-provost of the city, who had procured a splendid chain and seals of office for the occasion, and was the first magistrate of Glasgow

who wore such a badge of distinction. Although this bridge was quite spacious enough for the time in which it was built, it contained a very inconvenient ascent, and was found to be quite unsuited to the accommodation of the growing trade of Glasgow and the suburbs. It was resolved accordingly to take it down, and on 3d September, 1833, the foundation-stone of the present magnificent structure was laid by James Ewing, Esq. of Levenside, then lord-provost, and one of the members for the city in parliament. The masonic procession on the occasion was one of the most splendid ever seen in Glasgow. Independently of the grand lodge of Scotland, there were present 33 other lodges, all the civic officials of the city, and the magistrates of 12 burghs, from the shire of Lanark, Renfrew, and Ayr. The procession numbered 4,000 persons, and the ceremony was witnessed by an assemblage amounting to 150,000 individuals. This noble bridge is 560 feet in length; and 60 feet in width over the parapets, viz., roadway, 34 feet in width; and 2 side pathways, each 12 feet wide. The bridge is faced with Aberdeen granite, and while it is the widest, it is at the same time one of the most beautiful erections of the kind in the country. It is now the great line of communication between the north and south sides of the river, connecting the city with the suburbs. The design is by Telford.—The foundation-stone of the original Hutchesons' bridge was laid in 1794, by Mr. Gilbert Hamilton, lord-provost. It was, however, swept away on 18th November, 1795, by a furious flood in the Clyde, just when the erection had been all but completed. It was succeeded, in 1803, by a handsome timber bridge for the accommodation of foot passengers. It stood for many years, but was removed when the present Hutchesons' bridge was built. The foundation-stone of this structure was laid on 18th August, 1829, by Mr. Robert Dalglish, preceptor of Hutchesons' hospital, and was executed from designs by Mr. Robert Stevenson, civil engineer. It has 5 arches, is 406 feet in length, and 36 feet in width within the parapets. This bridge connects the eastern part of the city with the suburb of Gorbals, called Hutchesontown.—Before the removal of the old Jamaica-street bridge, a handsome timber bridge was built, a little above it, and on a line with Portland-street, Gorbals, to accommodate the public until the completion of the larger structure. When the Glasgow bridge was finished, the inhabitants residing in the neighbourhood had found the Accommodation bridge so convenient, that they earnestly petitioned it might be allowed to remain, which request was acquiesced in. It is now, however, only used for foot-passengers. A very handsome revenue is exacted from the traffic along the Glasgow bridges, the funds of which are managed by one trust.

Supply of Water.

Until the formation of water-companies in Glasgow in the commencement of the present century, the inhabitants were very poorly supplied with this first necessary from 29 public and a few private wells. So far back as 70 years ago, the magistrates procured plans for conveying water to the city in pipes from Whitehill, but the attempt proved abortive. Again, in 1794, an effort was made by the inhabitants to procure a more copious supply of water, and a civil engineer was employed to prepare the plans, but these being both expensive and unsatisfactory, the scheme was again abandoned. The first incentive to follow out a proper plan was at length given by a private individual. In 1804, Mr. William Harley, who had feued the lands of Willowbank, constructed a reservoir in Upper Nile-street, which

he supplied with spring-water by pipes from the lands he had feued, and dispensed it to the inhabitants by means of huge cisterns placed on carriages, and which were moved from street to street. The enterprise of a single individual induced a number of the inhabitants to form themselves into a company for supplying the city with filtered water from the Clyde. In 1806, they procured an act of parliament, erecting them into an incorporation by the name of the 'Glasgow Water company,' and shortly thereafter their works were erected at Dalmarnock, upon the Clyde, two miles above the city, and Glasgow was, for the first time, supplied with water by these means. In 1808, another company was formed under the name of the 'Cranstonhill Water company,' and similar parliamentary powers were also granted to them. For a number of years these companies went on independently; but they have recently been joined by act of parliament,—though it is not understood that the citizens have gained by the junction either in the abundance of the supply, or the purity of the stream. Up till Whitsunday 1836, these companies had expended £350,000 in conveying water to the city and suburbs, and by this time the sum must have been vastly increased. The revenue was then upwards of £25,000 per annum, and the number of water-renters about 45,000. These must also have been greatly augmented. In fact, the company's pipes are now laid into every household, with the exception of the very poorest. The quantity furnished per diem is upwards of 8,000,000 imperial gallons.

Gas.

The Gas company was incorporated in 1817; and on 5th September, 1818, the street-lamps were lighted with it for the first time. The works are situated on the high grounds in the north-eastern part of the city, and occupy an area of 14,831 square yards. In the works there are upwards of 150 retorts employed, each capable of producing 5,000 cubic feet of gas in 24 hours. The pipes are generally laid under the foot pavements, and extend to more than 120 miles in length; and the new light is used extensively not only in dwelling-houses, but even in the meanest shop and cabaret of the city and suburbs. About 10,000 tons of cannel coal are annually consumed in producing a supply adequate to the demand; and the company are at every little interval called upon to make additions to their already very extensive works. Glasgow is not celebrated either for the purity or plentifulness of its gas; and it has been generally considered, that if the lighting of this immense city had been intrusted to two or three companies instead of one, there would have been sufficient work for all, and the inhabitants would not be the worse served from the competition which would ensue. The present charge, when used by metre, is 9s. per 1,000 cubic feet, subject to a discount varying from 5 to 30 per cent., according to the amount consumed. Several of the more extensive public works, such as spinning-mills, &c., manufacture their own gas.

Means of Communication.

It would be difficult to point out any city in her Majesty's dominion which possesses better means of communicating with the world around her than Glasgow. By means of powerful steam-vessels, the distance between the capital of the West, and the great commercial and manufacturing county of Lancashire, including Liverpool and Manchester, is reduced to an average of less than twenty hours' sailing; Dublin and Belfast are still nearer at hand; and the whole of the Western Isles, and western portions of the Highlands, are constantly

visited by the steamers of the Clyde, carrying passengers and manufactures, and returning with stock and agricultural produce. The communication between Glasgow and England and Ireland is, in the summer-season at least, almost daily; and spacious as may be the accommodation of these floating palaces, they are often in the travelling season crowded to inconvenience by tourists and men of business. With Edinburgh and the eastern portion of the island, the communication is also of a first-rate description,—by the mails, and numerous stage-coaches for passengers, and the Edinburgh and Glasgow canal for heavy goods and passengers. But by the month of August in the present year (1841), these conveyances, superior as they may be, will be thrown into the shade by the opening of the Edinburgh and Glasgow railway, which is now in an advanced state of forwardness. The railway from Glasgow to Paisley was opened on 13th July, 1840, and the whole line to Ayr was opened 11th August in the same year. The Greenock railway, which, with the Glasgow and Ayr company, shares the joint line to Paisley, is now in such a state of forwardness that it will in all likelihood be opened by the time this sheet meets the public eye, and Glasgow will thus possess another and speedier means of communication with Greenock, independent of the splendid pathway afforded by the waters of the Clyde. [See separate articles on these different railways.] Glasgow, in fact, is now considered the starting-point from which almost the entire population of the west of Scotland, and not a few in the east, commence their journeys to distant parts of the kingdom, or beyond it.

It may be amusing to compare the means of communication in a former age, with the vast facilities afforded in our own day. The first stage-coach between Edinburgh and Glasgow was established in 1678, when Provost Campbell, and the other magistrates of Glasgow, entered into an agreement with William Hume, a merchant in the former city, to run a coach between Edinburgh and Glasgow, under certain conditions. The indenture between the parties, which is rather unique of its kind, runs as follows:—"At Glasgow, the saturday day of August, 1678; the foresaid parties finally agree that the said William Hume, a merchant in Edinbro, with all diligence, have in readiness and sufficient strong coach to run betwixt Edinbro and Glasgow, to be drawn by sax able horses, to leave Edinbro ilk Monday morning, and return again (God willing) ilk Saturday night; the passengers to have the liberty of taking a cloak-bag, for receiving their clothes, linens, and sic like, the burgeses of Glasgow always to have a preference to the coach; the fare from the first of March till the first of September, which is considered simmer weather, is to be £4 16s. Scots (8s. sterling); during the other months, considered winter months, the fare is to be £5 8s. Scots (9s. sterling)." As the undertaking is arduous, and cannot be accomplished without assistance, the said magistrates agree to give the said William Hume two hundred merks a-year for 5 years, the latter agreeing to run the coach for that period, whether passengers apply or not, in consideration of his having actually received two years' premium in advance (£22 4s. 5d. sterling)." There is no data to inform us how long Hume kept the road; but that his "sufficient strong coach" was ultimately abandoned is certain, for in 1713 there was only one stage in Scotland—with the exception of two between Edinburgh and Leith—which set out once a month from Edinburgh to London, and was from 12 to 16 days on the road. Some time after this period, one or more stage-coaches were placed on the road between Edinburgh and Glasgow. These vehicles were drawn by 4 horses in summer when the roads were

light, and 6 in winter when they were heavy. The drivers of those days had no idea of keeping time, and the journey was generally performed in from 10 to 13 hours according to circumstances. The passengers were compelled to dismount and walk up all the ascents, and during the journey they dined and took tea at their ease. In 1790 these clumsy conveyances were superseded by two-horse chaises, which frequently changed horses, and performed the journey in 7 hours; and those again were beaten by a new class of four-horse coaches, which reduced the journey to 6 hours. Since that period vast improvements have been made, both in the roads and the vehicles which use them, and for many years the journey has been performed on an average of from 4 to 4½ hours. From 12 to 14 coaches daily are usually upon the road between Edinburgh and Glasgow; and by taking the earliest conveyance, it has long been perfectly practicable to go and return the same day. It is more than probable that the present mode of travelling between the two capitals, with the opening of the railway, will cease to be. Two or three years ago, there were upwards of 60 stage-coaches which left and returned to Glasgow every day,—a vast number of them being employed in conveying passengers to and from the populous villages within a radius of a dozen miles of the city; but the progress of railways has considerably thinned their numbers, and it is likely to be still further reduced. Within the last year, the numerous coaches to Paisley, and those towns and villages adjacent to or connected with the Glasgow and Ayr railway, have all been laid aside. In connection with this subject it may be stated, by way of hint to those interested in supplying such wants, that Glasgow is supplied with hackney-coaches, cabs, or noddies, on a shabbier scale than any city in the kingdom. For the purpose of applying a remedy, it has been resolved by the town-council and Clyde trustees to offer valuable money-premiums to the coach-keeper who shall keep the best article for a period of three years under certain conditions.

Post-Office.

In 1806, when the respected Mr. Dugald Bannatyne assumed the office of postmaster, the establishment, besides himself, consisted of 3 clerks, a stamper, and 6 letter-carriers, there were also a few penny-post offices for the receipt and transmission of letters addressed to persons in the neighbourhood. The establishment now consists of a postmaster, 17 clerks, 2 newspaper-sorters, 3 stampers; 36 letter-carriers, and 1 superintendent; 4 bag-carriers; 2 steam-boat and railroad messengers; 4 out-runners, and 17 receiving-houses. There is now a morning and evening English mail, and four deliveries are made in the course of the day. On 7th July, 1788, the first mail-coach from London reached the Saracen's Head inn, in the Gallowgate; and so vast was the interest excited by the novelty that a number of horsemen went a few miles along the road to meet the new vehicle and escort her in triumph into the city. At that period the mail was considered to perform the journey expeditiously in 63 hours. It is now performed in less than 30 hours, and it is expected that the time will be still farther reduced. Before the introduction of mail-coaches, the course of post from London to Glasgow was five days: the Glasgow letters being brought round to Edinburgh, and detained there 12 hours till the usual transmission of the post-bags from Edinburgh to Glasgow in the evening. Previous to the last removal of the post-office at Whitsunday, 1840, it was situated in a dingy huckster's shop in Nelson-street, and was for many years a disgrace to the city. It

has now been removed to a more respectable building in Glassford-street, which has been fitted up, though not built, for the purpose. But it is somewhat remarkable that the Glasgow establishment, notwithstanding the vast amount of its revenue and the magnitude of the city, is only regarded at headquarters as a provincial office, and treated as such. There is not even a porter or a clock allowed in the lobby for the convenience of the public, and the treatment of this establishment by the Government has all along been of a very scurvy description. The following table will show the progressive rise of the revenue:

REVENUE FROM 1781 TILL 1841.					
Years.	Revenue.			Years.	Revenue.
1781	£	4,341	4 9	1833	£36,481 0 0½
1810	•	27,598	6 0	1834	• 37,483 3 4
1815	•	34,784	16 0	1835	• 39,954 4 6
1820	•	31,533	2 3	1836	• 42,370 0 11½
1825	•	34,190	1 7	1837	• 43,029 6 8½
1830	•	34,978	9 0½	1838	• 44,393 0 4½
1831	•	35,642	19 5	1839	• 47,527 7 7
1832	•	36,053	0 0	1840	•

The postage act, passed in 1839, establishing a uniform scale of charge of one penny for letters not exceeding half-an-ounce in weight has occasioned a considerable falling off in the last year's revenue, which it is to be hoped is only temporary. On 5th Dec., 1839, the postage was reduced to an uniform charge of 4d., and on 10th Jan., 1840, to one penny.

The Green.

With the exception of "the Parks" of London, which have been aptly designated the *lungs* of the mighty Babel, there are few cities in the empire which can boast of such a fine arena for pleasure, health, and recreation, as the Green of Glasgow. It embraces 140 imperial acres of fine grass land, extending along the north bank of the Clyde, and situated in the south-eastern portion of the city. So early as 1450, the Laigh Green was included in the grant which James II. of Scotland made in favour of Bishop Turnbull, for the benefit of the community; at that time, it was of limited extent, but by various purchases made by the corporation from time to time, it has been increased to its present extent. However willing the authorities may have been to purchase additions to the Green at one time, they have been no less anxious to sell at another, particularly in 1744; but propositions of the latter kind were so violently opposed by the almost unanimous voice of the inhabitants, that they have always been abandoned, and are not likely to be resumed in these our days. About twenty years ago the Green was levelled and improved at a very considerable expense, under the auspices of the late Dr. Cleland, and a gravel-walk or carriage-drive formed to the extent of 2½ miles. It is a beautiful spot—level in the lower part as a bowling-green,—dotted in the upper by fine clumps of old timber,—and containing several springs of delicious water. From the migration of the wealthier classes to the west end, the Green is not now the resort of the gay, the opulent, and the lovely, as it used to be in times that have passed away; but it is still a centre of great attraction, especially in the heyday of summer; and here may yet be seen many blithesome groups, and many which are serious—the convalescent wooing the healthy zephyr,—the idle dissipating time which returns no more,—the contemplative courting wisdom,—the gay alike amused and amusing their compeers,—and childhood and youth participating in the pleasures of happiness and joy. It is the field of the reviews of the military; and in those stirring times when every man was a volunteer, or enrolled in the local militia, the Green used

to be the scene of all their grand operations. The public washing-house for the city was here situated, and "lasses lifting o'er the pail" might be seen and heard by the hundred; but the introduction of water into the city by means of pipes, has banished in a great measure these fair operatives of the tub from this locality, and the washing-house, which used to be rated at £600 per annum, soon fell to a pitiful trifle. The scene, previous to the change which has been noted must, however, have been a very lightsome one; for it is noticed, in tolerable verse, by one of the Glasgow poets, who has erst sung of the beauties of the Clyde:

"Here barefoot beauties lightly trip along;
Their snowy labours all the verdure through;
The linen some, with rosy fingers, rub,
And the white foam o'erflows the smoking tub.
Their bright approach impurity refines;
At every touch the linen brighter shines,
Whether they bathe it in the crystal wave,
Or on the stream the whiteening surges lave,
Or from the painted can the fountain pour,
Softly descending in a shining shower;
Till, as its lies, its fair transparent hue
Shows like a lily dipt in morning dew."

It has been ascertained that a valuable seam of coal exists on the Green, but it would be a pity to cut up this beautiful promenade for the operations of a coal-pit, even though the gain might be great. It is to be hoped the corporation-funds may never need assistance from such a quarter.

Burying-grounds, the Necropolis, &c.

There are twenty burying-grounds situated in Glasgow and the suburbs,—some of them set down in the very heart of the city, and in localities so crowded, that were it not for that Scottish feeling which repels any attempt to disturb the bones of the departed, their removal would be an act alike consonant to public taste and beneficial to public health. The oldest cemetery is that attached to the Cathedral or High church, and is no doubt coeval with the institution of the see itself. In the olden part repose the ashes of many generations of the rude forefathers of the city; but new grounds have been taken in adjacent to the old, and laid out with every regard to modern taste. These grounds are most extensively used; many of the citizens possessing lairs here in which their kindred repose for several generations. One of the most pleasing institutions connected with Glasgow, however, is the Necropolis,—a burying-ground of recent institution, and laid out according to the plan of the celebrated Père la Chaise in Paris. Previous to the opening of this cemetery in May 1833, it was known as the Fir park,—a property belonging to the Merchants' house,—and though almost valueless for any other purpose, it is scarcely possible to conceive a locality better fitted for the solemn and sacred purpose to which it is now devoted. It rises to a height of 300 feet above the adjacent level; and is only separated from the Cathedral and its olden cemetery by the Molendinar-burn. The view from the summit is picturesque, interesting, and beautiful. To the south-west the city extends in all its mighty proportions, with its many spires rising far above the roofs of the dwellings; while to the east the eye is refreshed by a long vista of hill and dale, with agricultural and woodland scenery. Mr. John Strang, the present city-chamberlain, in urging upon the citizens in 1831 the adoption of the Fir park as a place of sepulture for the city, says: "In point of situation the ground belonging to the Merchants' house of Glasgow, bears, in fact, no small resemblance to that of Mount Louis (Père la Chaise). Its surface like it is broken and varied, its form is picturesque and romantic, and its position appropriate and commanding. It is already beautified

with venerable trees and young shrubbery, it is possessed of several winding walks, and affords from almost every point the most splendid views of the city and neighbourhood. The singular diversity, too, of its soil and substrata, proclaims it to be of all other spots the most eligible for a cemetery; calculated, as that should be, for every species of sepulture, and suitable as it is for every sort of sepulchral ornament. The individual, for example, who might wish for the burial of patriarchal times, could there obtain a last resting-place in the hollow of the rock, or could sleep in the security of a sandstone sepulchre, while he who is anxious to mix immediately with his kindred clay could have his grave either in a grassy glade, or his tomb beneath the shadow of some flowering shrub. The crypt and catacomb too, might be there judiciously constructed on the steep face of the hill, while the heights might be appropriately set apart for the cenotaphs and monuments of those who gain a public testimonial of respect or admiration from their grateful countrymen." It is enough to say that the anticipations of Mr. Strang have been realized to the letter; and places of sepulture of every kind and construction have been adopted within the ample range of the Necropolis. Here too the rank grass is completely eschewed, and the visiter moves through a long line of walks cut on the hill side and summit, surrounded on every side by shrubbery and flower-beds,—memorials of affection which are sweet, comely, and abiding, and which call back with a chastened glow of pleasing sadness, the friends whom we have loved and lost. The greater portion of the graves are enclosed either by a low stone erection, or a delicate iron-railing, and each is a little flower-garden of itself, while the grounds are sprinkled over with monuments of every style of architecture, all of them graceful, and many of them gorgeous. The most prominent public monuments are those of John Knox, and of William M'Gavin, the author of the well-known work entitled 'The Protestant.' Both are situated on the summit of the hill. The statue of "the Reformer," 12 feet in height, and placed on the summit of a massive column, is seen from many miles to the eastward of the city. He is represented in a Geneva gown, with a Bible in his right hand, and looks terrible even in stone. A small portion of the Necropolis, at its northern extremity, immediately above the waters of the Molendinar, has been purchased and used by the Jews as a place of sepulture. It is enclosed, having a beautiful facade; and on the left is an ornamented column, after Absalom's tomb in the King's dale at Jerusalem. On the shaft of the column are some appropriate quotations from Scripture; and the following beautiful lines from the Hebrew Melodies of Byron:

"Oh weep for those who wept by Babel's stream,
Whose shrines are desolate, whose land a dream!
Weep for the harp of Judah's broken shell—
Mourn, where their God hath dwelt the goddess dwell.
Oh where shall Israel lave her bleeding feet,
And where shall Judah's songs again seem sweet,
And Judah's melody once more rejoice
The hearts that leapt before its heavenly voice?
Tribes of the wandering foot and weary breast!
When shall ye flee away and be at rest?
The wild dove hath her nest, the fox her cave—
Mankind their country—Israel but the grave."

The Necropolis is approached by a noble bridge of a single arch, which spans the Molendinar burn, and from its proximity to the Cathedral burying-grounds, may be said to connect the dead of many bygone generations with the resting-places prepared for generations yet unborn. Altogether, in the words of an eloquent writer on the subject, the Necropolis is a locality "where each grave is a flower-garden, an each tomb a shrine; and where leaning on a monu-

ment, amid the beauty of nature and the refinement of art, Memory may echo back the long-lost accents of departed worth.—Imagination may paint with the tints of vitality the buried form of early affection.—Reason may preach her consolatory lesson of immortality, and Religion may point to the mercy-seat on high!"—Another new and extensive cemetery has recently been formed in the neighbourhood of Glasgow, and a joint-stock-company formed under the designation of the "City Burial-ground Institution, and Père la Chaise of Sighthill." Sighthill is about $1\frac{1}{4}$ mile from the Cross, on the road leading to Kirkintilloch; and every facility has been granted here to the humbler classes for the purchase of separate lairs.—The Gorbals cemetery has also been instituted within the year, on similar principles, of moderate charge, which is taken in small instalments. It is situated on the lands of Little Govan, at a short distance from the banks of Clyde.*

From this extensive formation of burying-grounds beyond the bounds of the city, it is extremely probable that those unsightly mounds of mortality which are situated in the centre of a crowded population will soon cease to be used.

State of Crime.

In a large manufacturing and commercial community such as Glasgow, the state of crime must at all times be a subject of vast importance; and it is fortunate that our report in this case will be a favourable one as contrasted with many of the large towns in the empire. At the meeting of the British Association, held in Glasgow in September, 1840, elaborate statistical papers on this subject were read by the superintendent of the Glasgow police, the superintendent of Gorbals, one of the magistrates of Calton, and the superintendent of Anderston. These go to prove that, though the population is rapidly on the increase, crime has decreased,—and that thefts, when committed, are generally in articles of the most trumpery value; while robbery, thefts by housebreaking, and other offences of a grave nature, are now of rare occurrence. This satisfactory result can only be traced to the admirable organization and superintendence of the police, in which respect Glasgow contrasts favourably with every other city in the kingdom. The following table and extracts regarding the royalty of Glasgow will be interesting:—

TABLE showing the number of cases brought before the Police court, Glasgow, and the amount of fines recovered each year, from 1826 to 1839, both inclusive:—

YEAR.	Number of Cases.	Amount of Fines.		
		£	s.	d.
1826,	6,971	828	4	9
1827,	6,495	1,417	5	1
1828,	7,123	1,544	13	10
1829,	7,587	1,606	2	9
1830,	7,376	1,376	1	8
1831,	7,591	1,108	10	4
1832,	7,631	1,037	4	11
1833,	6,118	813	12	6
1834,	5,126	651	14	4
1835,	4,627	604	0	10
1836,	4,247	576	4	11
1837,	3,689	367	18	7
1838,	5,010	559	19	10
1839,	5,047	762	0	3

* When the purchase of the original seven acres for the Gorbals or Southern Necropolis was being made, it was mentioned to Mr. Gilmour, the proprietor, that three additional acres would likely be required; upon which that gentleman said, he had long been thinking of building a school, and, therefore, should ten acres in all be taken—that is, three in addition to the seven already purchased—he would at once make over to the committee £2,000 in money, and £500 in ground, in all £2,500, for the purpose of building a school and sinking a fund for the payment of the teacher's salary. The school to be for the free education of the orphan children of the subscribers, and to be, in like manner with the Necropolis, under their management. Mr. Gilmour's liberal offer has been accepted.

The number of persons sent to the Glasgow bridewell from the Justice-of-peace court, for offences of every kind, in the year 1836, was 224; in 1837, 412; in 1838, 401; in 1839, 498; and for the period ending on 18th August, 1840, 535. Of these offenders, during the two years ending 18th August, 1840, 137 were sent to bridewell for periods of from 5 to 60 days, for the non-payment of fines varying from 5s. to £5. The number of persons sentenced to be executed in Glasgow from the year 1820 to 1840, both inclusive, was 66; of whom 45 were hanged, and 21 had their sentences commuted to transportation for life. Of the persons executed, 3 were females. There have been only four executions in Glasgow since 1833: viz. three for murder, and one for throwing vitriol with intent to murder. The estimated value of property stolen within the police-bounds, and reported at the office during the year 1839, including watches and money taken from the persons of individuals in a state of intoxication, was £7,653 10s.; the estimated value of property recovered, £1,260 10s.; the number of attempts at housebreaking discovered by the police, 84; the average number of disorderly women found on the streets at night, and brought to the office, 50; the number of criminal informations lodged in the course of the year, 3,725; and the number of cases actually brought into court, 5,047.

The existence of crime in Glasgow may be traced in a great measure to intemperance, and the encouragement to it presented by no fewer than 2,300 licensed public-houses, or other places for the sale of excisable liquors, which exist in the city and suburbs. A vast number of these are tipping-dens of the lowest description; and it is presumed that they might be greatly thinned with infinite advantage to the community.—There are within the city 33 licensed pawnbrokers, and 400 small unlicensed brokers, in addition to nearly 300 of the latter class in the suburbs. These 'wee pawns,' as they are termed, carry on business on a most ruinous system; they exact an exorbitant rate of interest, and in very many instances they become the owners of the goods unpledged, if the trifle advanced upon them is not punctually paid. Occasionally, too, they act in the still more discreditable capacity of resettlers. A remedy, to a certain extent, has been applied to this system of plundering the poor in Calton, by the introduction of a wholesome police-regulation, rendering it imperative upon brokers, before commencing business, to register in the office of police, and procure a certificate from a magistrate, as well as keep a book in which they must enter the name and address of the party selling, the price paid, and description of every article purchased by them in their business. These small brokers are also registered in Gorbals. The amalgamation of all the police-establishments in Glasgow and the suburbs under one separate head or board has frequently engaged public attention,—that is, of Glasgow proper with a supposed population of 175,000, and the three suburbs with a presumed population of 97,000; but it is not the province of this work to give an opinion on the subject. At all events, the sufficiency of the city-establishment has long been amply acknowledged, particularly by the Lords-of-justiciary, and it is not hinted that the suburban management is less so. Notice has, however, been given of a new police bill for Glasgow, to be introduced in session 1842, by which the criminal department of the city and suburbs is proposed to be placed under the management of a board separate and independent of the present commissioners. The police-system of Glasgow, under its present management, contrasts most favourably with the amount of force requisite for the protection of other large cities of the kingdom.

In London the police-force is supposed to be 4,500, being as one man to 355 of the inhabitants; in Liverpool the police-force is 600, being as 1 to 442 of the inhabitants; in Dublin it is 1,170, being as 1 to 256 of the inhabitants; and in Glasgow the city police-force is 223, being as 1 to 784 of the inhabitants.

The following very minute and circumstantial table—which is novel of the kind—with the accompanying remarks, has been kindly prepared for this work, by the superintendent of the Glasgow police:

From the foregoing table it will be seen that the total number of persons brought before the magistrates of the city, charged with the offences specified in the first column, during the eleven months from January to November, is 2,952,—the males being 1,801, and the females 1,151, and giving an average of 268 a-month. Fifty-three of the offenders were under 10 years of age, 280 from 10 to 15, 888 from 15 to 20, 1,066 from 20 to 30, 398 from 30 to 40, 183 from 40 to 50, and 84 from 50 upwards. Thirteen of the offenders belonged to foreign countries, 74 to England, 711 to Ireland, and 2,154 to Scotland, of whom 1,080 belonged to Glasgow. Of the persons charged with offences 1,301 were admonished and discharged, 684 were fined, 489 were sent to bridewell, 114 were sent to jail, and 364 were transmitted to other courts for prosecution and punishment. Of the 1,301 persons discharged, many were charged with being drunk and abusing their families, but were released at the pressing solicitation of their wives or friends; others of them were charged with petty thefts and minor offences, with regard to which the confinement undergone in the office was deemed a sufficient punishment; and some were dismissed for want of evidence.

No materials exist for forming an accurate comparison between the period embraced in the above table and former years: though it has been ascertained that the number of cases per month, including those for contravention of the police-act during the years from 1825 to 1830, averaged from 650 to 700, while in late years the number has averaged only from 350 to 400 a-month, and the cases generally are now of a much less serious nature than formerly. The decrease will be farther apparent when it is mentioned that, till within a few years back, the extensive lands of Blythswood were not included in the Glasgow police-jurisdiction.

Many causes have no doubt operated to produce the decrease in the amount of crime and disorderly conduct in Glasgow. The institution of a House of refuge for persons, especially young persons, who are not in a state of punishment, but who either from having recently quitted prison, or from the death or neglect of their parents, or from any other circumstances, are in a position in which, for a time at least, it is beyond their power to procure a situation in which they can earn an honest livelihood, and who show their sincere desire to keep out of crime, and to establish a good character, by their willingness to enter an institution, the rules of which require that they should work hard, live on coarse food, and submit to various restrictions necessary for their moral welfare, has produced a marked effect in the decrease of juvenile offenders in Glasgow, while a most salutary influence has been exercised upon the labouring part of the people by Temperance and Total Abstinence societies. There are nearly 36,000 persons in Glasgow and the suburbs connected with such societies, 10,000 of whom are Catholics; and there can be no doubt that they have done and are calculated to do immense good to the community. Intemperance is notoriously the fruitful source of crime and other irregular conduct, as well as of disease and pauperism; and the well-disposed and influential part of the community cannot do a better service to their fellow-men and to society than by promoting the cause of temperance by every means in their power.

It may here be noticed, that from the conflicting nature of the several police-jurisdictions connected with Glasgow, many delinquents, it is believed, are allowed to escape, in consequence of the difficulty of identifying and detecting them. Were a description-book kept—as in the city—in the whole

of the suburban establishments, showing the nature of each offence, with the age, nativity, character, and personal appearance of each offender; and were sheets made up from these books and interchanged at short intervals among the different establishments, much good would be done. But it is doubted how far any measure will be effectual to place the criminal and disorderly part of the population under police-surveillance, until the city and suburbs are formed into one united police-jurisdiction.

Public Buildings, Institutions, Charities, &c.

The Cathedral, or High church.—This erection is perhaps the most complete specimen of our olden ecclesiastical architecture that is to be found in Scotland; and it is interesting not only in itself, but from the fact that Glasgow owes to it its origin; and from it derived all its importance for several hundred years. According to Ure, it was erected by John Achais, bishop of Glasgow, in 1136, in the reign of the pious David I., and was dedicated to St. Mungo, or St. Kentigern. This venerable pile is placed on the west bank of the Molendinar-burn, on an elevated position in the north-west section of the city, and may be seen from a very considerable distance, the floor of the choir being more than 100 feet above the level of the river at low water-mark. It is not known with certainty who was the architect of this beautiful erection, but the honour is generally ascribed to John Murdo. The first streets of Glasgow, and the residences of all the western aristocracy, were—as has been already noticed—clustered round this edifice; and even yet some of the antique domiciles in the vicinity are pointed out as those which belonged to the prebendaries and other ecclesiastics connected with the Cathedral. The greatest internal length of the pile, from east to west, is 319 feet; the breadth, 63 feet; the height of the choir, 90 feet; and of the nave, 85 feet. It is 1,090 feet in circumference, round the walls and abutments; is supported by 147 pillars, and is lighted by 157 windows, of various dimensions, several of them being of exquisite workmanship, and some 40 feet high by 20 feet in breadth. It is supposed that the building was intended to assume the form of a cross, from the south transept having been founded; but for causes which it would now be vain to inquire into, this portion of the Cathedral has never been completed. A beautiful tower and spire rise from the centre of the roof, to the altitude of 225 feet above the floor of the choir, the whole terminating in a ball and weathercock. Another square detached tower rises at the west end of the Cathedral to a level with the first battlement of the eastern tower, and contains the bell and clock. This, however, is not at all in keeping with the harmony of the rest of the building; and as it is known that alterations and additions were made in the erection up till the period of the Reformation, it is extremely probable that this tower has been subsequently erected without any reference to the original design. The roof of the church was covered with lead by Archbishop Spottiswood, who held the see previous to his removal to St. Andrews, in 1615; and it is no doubt much owing to this circumstance, coupled with the affection which the citizens bear to this beautiful pile, that it has so long resisted the destroying hand of Time, and now appears in such excellent preservation. The parts left unfinished—as has been stated—were the transepts or side-projections. One of these has been long used as a place of sepulture, and bears the singularly picturesque name of the Dripping aisle, from the constant oozing of water from the roof without any apparent cause. Subsequent to the Reformation, the choir, or eastern

division, was used as a place of Protestant worship; but to meet the increase of religious culture, the western division was also fitted up as a church, under the name of the Outer High church, to distinguish it from the eastern division, or Inner High church; and this portion of the Cathedral was used up till a comparatively recent period, when the congregation was accommodated by the erection of St. Paul's in another quarter of the city.

About 1560, the landward district was disjoined from Glasgow, and erected into a separate parish, under the name of the Barony parish, and the crypt under the chancel, or Inner church, was fitted up as a place of worship for the parishioners, and retained by the heritors till 1801. This is really a remarkable feature in the Cathedral. The crypt consists of a dense colonnade of short pillars which support low arches; and it is scarcely possible to conceive how the voice of the preacher, however stentorian it might be, could be heard throughout this curious place of meeting.* It appears to have been one of the most unique places in which a band of worshippers ever assembled. Pennant says that, in his opinion, the church was only fit for the singing of the "*De Profundis clamavi*."—Ure, the olden historian of Glasgow, speaks of it as follows: "The Barony kirk—which is exactly under the inner kirk—in the time of Popery was only a burial-place in which it is said St. Mungo the founder is buried. It is of length 108 feet, and 72 feet wide; it is supported by 65 pillars, some of which are 18 feet in circumference, the height of which 18 feet; it is illuminated with 41 windows." Since the erection of the present Barony church, the crypt has been again transformed into a burying-ground,—a circumstance much to be regretted. Mr. Strang, in deploring this mutation of a church into a graveyard, most justly says—"We cannot sufficiently deprecate the taste of the individuals who re-converted the lower portion of the Cathedral into a burial-place. The splendid architecture, for which this part of the venerable pile was so remarkable, has, under the Vandal hands of these mutators, been entirely spoiled. The lower shafts of the columns have been buried 5 or 6 feet in earth, while the walls have been daubed over with the most disgusting emblems of grief. We should like to know by what authority the Barony heritors have taken possession of a Government cathedral." There is now, of course, only one place of worship in the Cathedral, in place of three as formerly. The outer or western portion is now perfectly open. Its walls are decorated with monuments to the memory of illustrious citizens. This portion of the noble building is, however, sadly out of repair and order; but it is satisfactory to know that the whole fabric, interior and exterior, is about to be renovated in a manner becoming its ancient splendour. Government, it is understood, are willing to contribute £10,000 for this purpose, so soon as a like sum has been contributed by the citizens. The corporation, and various of the public bodies, have

already subscribed liberally; but for some time the subscription has stood still, though it is expected it will be immediately prosecuted with vigour.—A castle for the residence of the bishop was attached to the Cathedral, and was several times taken and retaken during the troubles in Scotland. Its remains were finally taken down at the close of last century to make way for the present infirmary. For other matters connected with the Cathedral we refer to the historical chapter at the beginning of this article. We subjoin an outline of Mr. Kemp's proposed restoration of the western front of the Cathedral.

The University.—The University of Glasgow is a corporate body, consisting of a chancellor, rector, dean, principal, professors, and students. It was established in 1450, by William Turnbull, bishop of the diocese, who, at the request of James II., obtained from Pope Nicholas V.—a man distinguished in that age for his talents and erudition—a bull, erecting in Glasgow a *Studium generale* in theology, canon and civil law, the liberal arts, and every other lawful faculty, with the power of granting degrees, which should be valid throughout Christendom. The situation of the city is described in the bull as being, by the salubrity of the climate, and abundance of the necessities of life, peculiarly adapted for such an institution. Consequent upon this a body of statutes was prepared, and the University opened in 1451. The establishment at this period was a very limited one. The constitution of Bologne was imitated in it as far as possible; and by royal charter, the members were exempted from all taxes, watchings, wardings, &c. The only property possessed by the institution at this period, was the "University purse," which consisted of some small perquisites payable on conferring degrees, and the patronage of a few chaplains. At first there were no buildings connected with the University, but, as it advanced in importance, the bishop and chapter granted the use of a building near the Cathedral. James, Lord Hamilton—an ancestor of the present noble house of that name—appears to have been the first liberal patron of the University; for, in 1459–60, he conveyed to the principal, and other regents or teachers of the faculty of arts, a tenement with its pertinents, in the High-street of Glasgow to the north of the Blackfriars, in

* The Barony church, it will be recollected, is alluded to by Sir Walter Scott, in Rob Roy, as follows:—"Conceive an extensive range of low-browed, dark, and twilight vaults, such as are used for sepulchres in other countries, and had long been dedicated to the same purpose in this, a portion of which was seated with pews, and used as a church. The part of the vaults thus occupied, though capable of containing a congregation of many hundreds, bore a small proportion to the darker and more extensive caverns which yawned around what may be termed the inhabited space. In those waste regions of oblivion, dusty banners and tattered escutcheons indicated the graves of those who were once, doubtless, 'Princes in Israel.' Inscriptions which could only be read by the painful antiquary, in language as obsolete as the act of devotional charity which they implored, invited the passengers to pray for the souls of those whose bodies rested beneath."

addition to four acres of land in the Dowhill, adjoining the Molendinar-burn, which long afterwards bore the designation of the land of Pedagogy. In the body of the conveyance, the noble donor exacted certain oaths and obligations to be taken by the principal and regents, on their first admission to the regency of Lord Hamilton's college, and ordained that he himself, and Lady Euphemia, his spouse, should be commemorated as the founders of the college. The buildings were situated on the site of the present University, and this gift soon received many additions. The faculties of theology and civil and canon law were not in possession of property, like the faculty of arts; but this was compensated by the rich livings held by the regents in every part of the kingdom.

From the members of the University being of the Catholic persuasion, and the institution receiving its chief support from the church, it met with an almost fatal blow by the Reformation. The chancellor, James Beaton, fled to the continent, and carried with him the plate of the Cathedral, with the bulls, charter, and deeds both of the see and the University. It is true that the college of arts survived the shock, but in such a shattered state that, in a charter of Queen Mary, it is stated that "it appearit rather to be the decay of ane university, nor any ways to be reckonit ane established foundation." By this charter, dated 13th July, 1560, 5 bursaries were founded for poor youths, and the manse and church of the friars predicators, 13 acres of land adjoining, and several rents and annuities which had belonged to the friars, were granted to the masters of the University for their sustentation. The institution, however, rather languished than lived for many subsequent years, till in 1577 James VI., when in his minority, by advice of the regent, Morton, framed a new constitution, and made a very considerable grant to the revenues, consisting of the rectory and vicarage of the parish of Govan. The charter granted at this period has been generally designated the *nova erectio*, and its fundamental articles constitute the basis of the present constitution. Private individuals also increased the emoluments of the University, and it continued to prosper till the period of the Restoration, at which time it had, besides a principal, eight professors, a librarian, a good library, many bursaries, and the number of students of all ranks was vastly increased. The buildings, which had become ruinous, were in progress of being rebuilt, when the University received a second severe shock by the forcible establishment of Episcopacy subsequent to the restoration of Charles II., which at once deprived it of the fairest portion of its revenue—the bishopric of Galloway. From this reverse a large debt was contracted, and it was found necessary to reduce three out of the eight professorships, and considerably abridge the emoluments of those who remained. The University continued to receive considerable benefactions during this period, but these were principally confined to the foundation of new bursaries, or grants for carrying on the buildings; and it was not till 1693, when all the Scottish universities received a grant of £300 per annum out of the Bishops' rents, that it began to revive from the depression in which it had so long remained. In 1702 the students in theology, Greek, and philosophy, had increased to 402; and from that period till the present day the University has not sustained a single reverse. Many liberal donations have been received, and are periodically being received from the Crown and private individuals; various new professorships have been founded; and the University has now reached a degree of educational excellence which

is not surpassed by any similar institution in the kingdom, or in Europe. Various new regulations have from time to time been introduced by royal commissions or visitations, and it is understood that all of them have been ultimately beneficial.

Properly speaking, the institution consists of the University and the College. The first is an incorporation vested with the power of granting degrees in the four great branches into which all human learning was divided by the see of Rome; the second is an incorporation within the University, endowed for educating young men; and each have courts with independent rights. The academic body of the University consists of a lord-chancellor, a lord-rector, a dean, a principal, the professors, and lecturers. The lord-chancellor is the officer of highest dignity in the university, and is elected by the *Senatus academicus* for life; at least this has been the practice since 1692. He has the sole privilege, either by himself or the vice-chancellor—who is generally the principal—of conferring degrees upon persons found qualified by the senate; but otherwise he has no connection with the affairs of the college, excepting that of presiding at the election of principal. The office, which is therefore almost entirely an honorary one, is now, and has been long, held by the head of the ducal house of Montrose.—The next officer is the lord-rector, who is invested with very considerable powers, and is the guardian of the statutes, privileges, and discipline of the University. The lord-rector is annually elected in the common hall of the University on the 15th December in each year, by the dean, principal professors, and matriculated students. The students are divided into four nations, viz., *Natio Glottiana sive Clydesdalie*, which comprehends the natives of Lanarkshire, Renfrew, and Dumbarton; from Errickstane, the source of the Clyde, to Dumbarton;—*Natio Albanie, sive Transforthana*, containing all the country north of the Forth, and all foreigners;—*Natio Loudoniana, sive Thevidalie*, including the Lothians, Stirling, the towns east of the water of Urr, and the members from England and the British colonies; and *Natio Rothseiana*, including Ayrshire, Galloway, Argyle, the Western Isles, Lennox, and Ireland. The majority of the members of each nation constitutes one vote; and, in case of equality, the former rector has the casting vote. He may be considered indeed the chief magistrate of the University. Though the rectorial court is still possessed of great powers, it, at one period, was possessed of more ample jurisdiction, and there is even an instance of a capital trial before the rector's court so late as 1670. In that year Robert Bartoune, a student, was indicted for murder before the rector's court, but was acquitted by a jury. The election of this officer produces much excitement in the University, and is generally a trial of political strength between the respective parties. It is usual to re-elect the rector for the second year. This office has of late been filled by some of the most distinguished men of the kingdom, and, since 1820, the following have filled the chair:—Francis (now Lord) Jeffrey, Sir James Macintosh, Henry (now Lord) Brougham, Thomas Campbell, Lord Lansdowne, Henry (now Lord) Cockburn, Lord Stanley, Sir Robert Peel, Sir James Graham; and, in November, 1840, the Marquis of Breadalbane was elected.—The dean-of-faculties is elected by the senate on the 1st May. His duties, as originally constituted, were to give directions as to the course of study, and to judge with the other principal officers of the University, of the qualifications of applicants for degrees.—The office of principal is almost coeval with that of the University, and the appointment is vested in the Crown. He must be a minister

of the church of Scotland, and is required to superintend the deportment of all the members of the University. He is also *primarius* professor of divinity; but none of the principals have taught divinity since the beginning of the 18th century, excepting when the ordinary professor may have been temporarily incapacitated.—The professors are classed according to the respective departments of knowledge over which they preside, into four faculties, viz.,—arts, theology, law, and medicine. They are further divided into *college* professors and *regius* professors—the chairs of the former having been endowed at or subsequent to the *nova erectio*, and which constitutes them members of the faculty; the chairs of the latter have been recently founded and endowed by the Crown, and they are members of senate only.—The principal presides in the meeting of faculty, and has a casting, but not a deliberative vote; and the members have the administration of the entire property of the college, with the exception of some bequests in which the rector and other officers of the University are concerned. They present to the parish of Govan, elect eight of the college professors, and have the gift of several of the bursaries. In the election of professors, however, the rector and dean-of-faculty have a vote.—The senate consists of the rector, dean, and all the professors; and the business of this court is to manage every kind of business connected with the University, which does not peculiarly belong to the faculty.—The general congregation of the university is called the *Comitia*, and consists of the rector, dean, the principal, the professors, and the matriculated students. In this court the rector is elected and admitted to his office; the laws of the University promulgated, prizes for merit distributed annually, inaugural discourses delivered, &c.

The salaries of the principal and professors are thus stated in the Report of the Royal commissioners for visiting the Scottish universities, printed in 1837:—

Chair established.	Salary.	Chair established.	Salary.
1451—Principal, . . .	£450	1709—Oriental Lan- guages, . . .	£300
1577—Logic and Rhetoric, . . .	289	1713—Physic, . . .	270
1577—Moral Philosophy, . . .	286	1713—Civil Law and Law of Scotland, . . .	310
1577—Natural Philosophy, . . .	291	1718—Anatomy, . . .	250
1581—Greek, . . .	289	1720—Ecclesiastical History, . . .	322
1630—Divinity, . . .	425	1760— . . .	270
1637—Humanity, . . .	289		
1691—Mathematics, . . .	291		

The above are the college professors. The following are those recently endowed, and termed *regius* professors:—

Chair established.	Salary.	Chair established.	Salary.
1807—Natural History, . . .	£100	1831—Materia Medica, . . .	£100
1815—Surgery, . . .	50	1839—In titunes of Medicine, . . .	75
1815—Midwifery, . . .	50	1839—Forensic Medicine, . . .	75
1817—Chemistry, . . .	50	1840—Civil Engineering, . . .	275
1818—Botany, . . .	50		

The above, however, is far from comprising the total emoluments of the professors. Here, as everywhere else, fees are exacted from the students, varying from £2 2s. to £5 5s. for attendance on each class; and in proportion to the number of students the professorship is a valuable one or the reverse. The system of partly defraying the emoluments of the professors from fees is one which is understood to have greatly enhanced their zeal, and promoted the best interests of the University.—The students are divided into *togati* and *non-togati*; the former wear a scarlet gown, and belong to the Latin, Greek, Logic, Ethics, and Natural Philosophy classes. All of these must attend the college chapel on Sundays, unless leave of absence be specially granted. The remainder of the students, or the *non-togati*, are

restricted neither in their attendance on worship, nor in their dress. Glasgow college, as is well known, can boast of having numbered amongst its professors some of the most illustrious men of their respective ages. Amongst these may be mentioned Melville, Baillie, Leechman, Burnet, Simpson, Hutchison, Black, Cullen, Adam Smith, Reid, Miller, Richardson, Young, and Sir Daniel Sandford. A few years ago, the number of students amounted to more than 1,300; but of late years these have considerably declined, more from the growing taste for a commercial in preference to an academic education, than to any lack of ability or zeal on the part of the professors. The number, however, is seldom less than 950.

There are 29 foundation-bursaries connected with the University, held by 65 students from four to six years. One of them amounts to £50 per annum; but the emoluments generally vary from £5 10s. to £41. In addition to these there are some valuable exhibitions. In 1688, Mr. John Snell, with a view to support Episcopacy in Scotland, devised to trustees the estate of Uffton, near Leamington in Warwickshire, for educating Scots students, from the University of Glasgow, at Baliol college, Oxford. This fund now affords £132 per annum to each of ten exhibitions. Another foundation, by Warner, bishop of Rochester, of £15 annually to each of four students from the same college, is generally given to the Snell exhibitors, so that four of them have nearly £150 per annum each. Both of the exhibitions are held for ten years; but are vacated by marriage, or upon receiving a certain degree of preferment. The principal and professors of the college are the patrons of Snell's exhibition, and the archbishop of Canterbury, and the bishop of Rochester, of Warner's.—In addition to these bursaries and exhibitions there are various valuable prizes granted annually or biennially from funds which have been mortified for the purpose.

The University library was founded in the 15th century. It now contains upwards of 60,000 volumes, and is constantly on the increase. It contains many beautiful old editions of the classics, and some valuable literary curiosities. Among the latter is the manuscript paraphrase of the Bible by the celebrated Mr. Zachary Boyd, who was a great benefactor of the university, and whose bust adorns one of the gateways in the inner court of the college. The fee for the library is 7s. for the winter-session, and 3s. 6d. for the summer.—A small botanical garden, for the use of the lecturer in botany, was prepared in 1753; but having become inadequate, a more extensive garden was formed in the north-western suburbs in 1818. It consists of eight acres, and as the University subscribed £2,000 towards the institution, the privilege has been accorded to the professor of botany to lecture in the garden and hall. £2,000 were also subscribed by Government. This garden is now being removed still further to the north-west.—The Hunterian museum was founded by the well-known Dr. William Hunter, a native of East Kilbride, in the neighbourhood of Glasgow. By his will of 1781, he bequeathed to the college his splendid collection of books, coins, paintings, anatomical preparations, &c., in addition to £8,000 for the purpose of building an erection for their reception. The collection was then valued at £65,000, and the whole is now supposed to be worth £130,000. The building is a handsome modern one, situated immediately behind the University, and the public are admitted to the collection on the payment of one shilling.—A fine park, interspersed with trees, stretches away behind the college towards the Gallowgate, and is admirably fitted for the recreation of the students. In summer it forms a most delightful promenade. An observatory is situated in the park, but as this has been

found insufficient for astronomical purposes, a fine new erection has been built on an eminence in the western suburbs of the city, and will be stocked with the college instruments. The situation is one of the finest near Glasgow. With a perfectly uninterrupted horizon towards the south, it commands Arran and all the Cowal hills on the west, and its view towards the north reaches to the Trosachs. The building now erected, and nearly finished, is very interesting. It is divided into two parts—the dwelling-house for the professor lying on the right of the entrance gate, and the observatory on the left. The observatory consists of the following apartments:—First, a large room destined for the custody of all the minor instruments when not in use, and the conducting of computations, and which is also fitted to serve the purposes of a class or lecture-room. From this room we enter the great transit room, where a very fine instrument from Munich is about to be placed on the two pillars now erected in its centre. Ascending by a side stair, we reach the top of the circular tower, on which a dome will soon be placed, and which is set apart for a large equatorial. If a commanding view of the heavens can at all be got near Glasgow, it must be from this room. The large reflectors will be placed outside in the grounds; and the magnetic observatory, for which the preparations are completed, will be towards the extreme west of the space within which the other erections are placed.

The University buildings are situated on the east side of the High-street, on the site of the house and lands bequeathed to the faculty of arts by James, Lord Hamilton. They are very extensive, and cover a large space of ground. They consist of five quadrangles or courts,—two where the hall and classrooms are situated,—one in which are the museum and library,—and two in which are the houses of the principal and college professors, amounting in all to 13, which are kept up for the friends of the college. The front towards the street is of great length, and has an appearance of sombre grandeur. The great entrance is surmounted by the royal arms of the time of Charles II.; but the entire range has been erected at various periods antecedent and subsequent, and a great part of the cost was defrayed from the funds of private individuals. In the outer court is situated the college steeple of 148½ feet in height. It is rather wanting in architectural beauty, but derives some interest from its thunder-rod, which was erected in 1792 under the auspices of the celebrated Dr. Franklin.

Anderson's Institution, or the Andersonian University.—This institution was founded by the will of Mr. John Anderson, professor of natural philosophy in the University of Glasgow, dated 7th May, 1795. Professor Anderson was the eldest son of the Rev. James Anderson, minister of the parish of Roseneath in Dumbartonshire; and was born in 1726. After receiving a liberal academical education, he was appointed professor of Oriental languages in the University of Glasgow in 1756, and was transferred to the chair of physics or natural philosophy in 1760. He died 12th January, 1796. The institution was endowed by this benevolent man, with a valuable philosophical apparatus, museum, and library; and it was incorporated by seal of cause from the magistrates and council of Glasgow on 9th June, 1796. By the will of the testator, the university is placed under the inspection of the Lord-provost and other officials, as ordinary visitors, but it is more immediately superintended by eighty-one trustees, who are elected by ballot, and remain in office for life, unless disqualified by non-attendance. The trustees are taken from nine classes of citizens, viz. tradesmen, agriculturists, artists, manufacturers, physicians and surgeons, law-

yers, divines, philosophers, and kinsmen or namesakes. Nine of their number are annually elected by the trustees as managers of the establishment for the year; and they in turn elect from their number, by ballot, the president, secretary, and treasurer. The plans of the benevolent testator embraced at the outset a full course of liberal or popular education; but the managers wisely made small beginnings, from which the institution has gradually grown in influence and importance till it has now entirely gained the confidence of the public.

The first teacher was Dr. Thomas Garnet, professor of natural philosophy, who commenced on 21st September, 1796, by reading in the Trades' hall, popular and scientific lectures on natural philosophy and chemistry, illustrated by experiments. These were addressed to persons of both sexes. Gratified by the success of Dr. Garnet's lectures in attracting students, the friends of the institution resolved that it should be permanently established; and with this view the trustees purchased, in 1798, extensive buildings in John-street. After a successful period of tuition of four years, Dr. Garnet was appointed in October, 1800, the first professor of the Royal institution of Great Britain, in London. He was succeeded by the celebrated Dr. George Birkbeck, who, in addition to what had formerly been taught, introduced a familiar system of instruction, which he conducted gratis, chiefly for the benefit of operatives. One of the great benefits of this institution from the commencement, indeed, has been that instruction is communicated to students of all classes, divested of those technicalities by which it is frequently overlaid and obscured by educational institutions of greater name and fame. Dr. Birkbeck resigned in August, 1804, and was succeeded in the following month by Dr. Andrew Ure, now the well-known chemist. Dr. Ure continued to discharge the duties of his office with great success for the long period of twenty-five years, when he removed to London.

In the meantime, the institution had grown vastly in public estimation, and several other professors had been appointed. The original buildings too had become insufficient, and the trustees finally purchased from the city the Grammar-school buildings, situated in George-street, which, with extensive additions and alterations, were rendered fit for a complete college establishment, containing halls for the professors, the museum, library, &c. The new buildings were opened in November, 1828, and continue to be used with marked success. The library and museum have considerably increased; and the winter soirées of the Andersonian are frequently attended by from 300 to 500 persons. The subjects taught at the present time are natural philosophy, chemistry, natural history, logic and ethics, mathematics and geography, Oriental languages, drawing and painting, anatomy, theory and practice of medicine, surgery, materia medica, medical jurisprudence, veterinary medicine, and German and modern literature. The professors are all men of ability, and the popular system of their prelections, with the moderate nature of the fees, attracts a numerous band of students.

The High-school.—The High-school, or Grammar-school as it used formerly to be termed, is one of the most ancient educational institutions in the city, dating its foundation anterior, it is believed, to the institution of the University. The course of tuition now embraces Latin, Greek, English grammar, composition, elocution, French, Italian, German, writing, arithmetic, geography, &c. The school is under the management of a committee of the town-council, aided by the advice of the clergy for the city and the professors of the University. About sixty years ago, the classes were taught in a dingy alley

called Greyfriars wynd; from which it was removed to the north side of George's-street, and latterly to a commodious new erection, with play-ground, situated in Montrose-street. The institution still supports its high character, and the class-rooms are generally crowded; but even the numerous body of children taught here bear but a small proportion to those who are taught in private schools, situated in every quarter of the city, and many of them conducted by men of great ability and industry. In all, it has been computed that there are more than 300 schools in the city and suburbs.

Mechanics' institute.—This "working man's college" was founded in 1823, by the mechanics of Glasgow, for the purpose of disseminating knowledge on scientific and other subjects. Lectures have been given on natural philosophy, chemistry, popular anatomy, physiology, phrenology, &c.—the terms for the course seldom exceeding 10s. The institution has been productive of a vast amount of good; but considering the thousands on thousands of operatives congregated in Glasgow and its suburbs, the institution has not been supported as it deserved to be; and the students have seldom averaged 500 yearly. In 1831, commodious premises were built for the institution in Hanover-street, to be paid by a subscription of one shilling from each student in successive years, and it is known that the debt is far from being liquidated. A colossal statue of James Watt is placed on the pediment of the building; and the institution contains ample accommodation for the students, models, and apparatus, and the library, which consists of a large collection of works on science and general literature.

Normal seminary.—This institution was erected in 1837, by the Glasgow Educational society for preparing teachers to practise the system of moral, intellectual, and physical training pursued by the society. The seminary is situated at Dundas vale, and forms a prominent and graceful object in the north-west approach to the city. The plans were prepared by the Messrs. Hamilton. Attached to the buildings are spacious play-grounds; and the interior of the seminary is divided into a series of large and commodious class-rooms, for carrying on the various departments of the educational system followed in the institution. The model-schools are accessible to the children of all religious denominations, at a very moderate fee; and the Normal seminary is equally open to students of every religious sect. The institution has received the countenance and support of the Government, who not only granted a considerable sum to aid in the erection of the edifice, but have had the system of education which it exhibits introduced into the English Poor-law unions, by male and female teachers trained in the seminary. The teachers sent out to the West India islands, by Government, on the Mico charity, have also been trained in this seminary. The celebrated Norwood schools in London, established as models of the educational committee of the Privy-council, are conducted on the training system, the head-master having been trained in the Glasgow institution. The projector of the system, David Stow, Esq., with an enlightened benevolence which does him great credit, has laboured assiduously, and almost exclusively, during the last twenty years, in working it out, and consolidating it upon a permanent basis. The institution is much frequented by strangers.

The Royal infirmary.—This noble charity was projected in 1790, principally by the exertions of the late Professor Jardine, and a few of his friends. After a sufficient sum had been raised by private subscription, the foundation-stone was laid in 1792, and the institution was opened for the reception of patients

on 8th December, 1794. It is situated immediately adjoining the Cathedral, on part of the site of the old Archbishop's palace, and is not more than ten minutes' walk from the University. The designs of this beautiful structure were by the Messrs. Adam; and although it is situated in the vicinity of a poor neighbourhood, it is justly considered one of the fairest ornaments of the ancient part of the city. It is wholly supported by voluntary contribution. It is regularly attended by a great number of the medical students of the University, and the internal arrangements are admirable. It contains 12 wards, six medical and six surgical, with 19 beds in each, or accommodation in all for 228 patients. There are two physicians, and two surgeons with a clerk each. Ten dressers are appointed from the students every quarter to assist the surgeons. Attached to the original erection is the fever-hospital, which was commenced in 1825, and finished in 1832. It contains eight wards, or accommodation for 220 patients. There are one physician and two clerks for this hospital. Since the institution of the charity in 1794, 84,477 patients have been treated in the Infirmary; and at the period of the last published statement (1st Jan., 1840), there remained in the house 348 patients. During that year—which may be taken as near an average, excepting in times of severe pestilence—4,168 patients were treated in the Infirmary, viz. 2,639 in the medical and surgical wards, and 1,529 in the fever wards. The total deaths were 496, viz. 243 medical and surgical, and 253 fever. During the same year the total income was £5,781 11s., and the expenditure £8,166 1s. 3d. This painful state of matters was mainly to be attributed to the unexpected, and it is believed temporary, diminution in the extraordinary receipts to the amount of £4,165 0s. 11d. The funded property of the institution yields only £700 per annum. The cost of the maintenance and treatment of each patient, taking the annual average during the term of four decades and a half, is—1795—1804, £2 13s. 5.4d.; 1805—1814, £3 1s. 5.4d.; 1815—1824, £2 9s. 10.0d.; 1825—1834, £1 18s. 4.5d.; 1835—1839, £1 8s. 8.0d.

In addition to the Infirmary, there are several other institutions in the city of a similarly charitable nature, such as the Sick hospital, which was established in 1805, for the treatment of unfortunate females; the Magdalene asylum, the Asylum for the Deaf and Dumb, the Infirmary for diseases of the Eye, the Lying-in-hospital, &c., all of which are supported, with trifling exceptions, by voluntary contributions.

The Poor.

Town's hospital.—The head-quarters of the Glasgow poor is in the Town's hospital, a sombre-looking building, situated in Clyde-street on the banks of the river. It was built by subscription, and opened on 15th November, 1733, under the designation of "the Charity workhouse," but in the following year, the designation was changed to "the Town's hospital." The cost was £1,335, exclusive of the ground, which was given by the council. One of the chief promoters of the institution was the well-known John Gordon, M.D., of whom Smollett says in his *Humphrey Clinker*, that "he deserves a statue erected to his memory." Originally it was used as an asylum both for the aged and infirm, and for children who had been left destitute on the parish; and at the time of its institution was considered to be extremely well-adapted for the purpose. The magistrates and council, in setting forth the merits of the institution in 1742, state, that "there are six vaulted cells for mad people, the first of that kind built in North Britain." It is long, however, since the institution was disused as an asylum for orphan children,—it be-

ing now entirely appropriated to the aged and infirm of both sexes, who are well and carefully attended by the overseer, called a Peceptor, and those under him. The children are nursed, educated, and put out to trades in healthy situations in the country. The assessment for the year ending 31st August, 1840, was £11,830, including £450 granted by the Town-council, Merchants' house, and Trades' house. Of this only £3,113 was devoted to the indoor expenditure; and the remaining and by far the larger sum, was expended in occasional relief to the out-door poor, and in the maintenance of orphans. It is proper to mention that no one is taken into the hospital unless they have a valid claim upon the parish. From its commencement the assessment was levied on what is called "means and substance," that is, upon the stock in trade, or capital employed in business, when it amounted to £300 or upwards; but this system was considered injurious and inquisitorial, by driving the wealthiest of the merchants from Glasgow proper to the Barony parish, where a different system prevailed. Accordingly, in session 1839-40, a bill was carried through parliament abolishing the former mode of assessment, and in future levying it upon the rental—one-half to be paid by the tenant and the other by the landlord. When the hospital was instituted in 1733, the sum assessed upon the inhabitants was only £250; in 1763, £400; in 1773, £336; in 1793, £1,610; in 1803, £3,940; and it has gone on gradually to increase, varying, however, in amount, according to the exigencies of the times. The present building being regarded as quite inadequate to the purpose, the Directors resolved in November, 1840, to purchase the building and part of the grounds of the Lunatic asylum, situated on the high ground north of the city. This was afterwards confirmed by the council, and the purchase made for £15,000,—the buildings of the asylum, although as good as new, being valued as old material. Entry to be had at Whitsunday, 1843.—The total sum raised by assessment for the poor in the Barony parish in the year ending 4th August, 1840, was £8,615. The total sum raised in the year ending 4th August, 1840, for Govan parish, (which includes the greater portion of Gorbals,) was £2,573, and the sum for old Gorbals £800.

Hutchesons' hospital, &c.—The most magnificent charity established by private benevolence in Glasgow, and similar to Heriot's hospital in Edinburgh, is that founded by two brothers, George and Thomas Hutcheson, in 1639, 1640, and 1641. The original sum bequeathed was a tenement of land, barn, and yard, and ground whereon to build an hospital, with 68,700 merks, or £3,816 13s. 4d. sterling. The sum mortified was originally intended only for the support of 12 old men and 12 boys; but by judicious purchase of land, which has vastly increased in value, and the addition of other mortifications, such as Blair's, Baxter's, &c., the sum to be annually dispensed by the patrons amounts now to nearly £3,000 per annum, which is appropriated towards the support of a number of old men and women, and to the clothing and educating of the sons of decayed citizens. The hospital is a fine hall or building in Ingram-street, erected in 1803, with an elegant spire, and a school adjoining. No person is boarded within the house, which is generally used for meetings of the patrons or other public bodies. George Hutcheson, the elder of these venerable brothers, was a public notary and writer in Glasgow; and it is recorded that he was so moderate in his charges as to refuse more than sixteen pennies Scots, for writing an ordinary bond, be the sum ever so large. Thomas, his brother, was also a writer, and keeper of and clerk to the Register of sasines in the regality of

Glasgow and its district. Well-executed busts of the brethren are placed in niches in the front of the hospital.—The Highland society of Glasgow was established in 1727, by a few Highland gentlemen, for the purpose of clothing, educating, and putting to trades, a certain number of boys, whose parents belonged to the Highlands, and are in indigent circumstances. This institution dispensed a few years ago £800 per annum, and the sum is now understood to be vastly increased.—Besides these, there are a number of other mortifications, which dispense from £50 to £500 per annum, of which may be named Buchanan's society, Mitchell's mortification, Tennant's mortification, Wilson's charity, Coulter's mortification, Miller's charity, Watson's society, &c.—A great number of the Scottish counties have now charitable societies in the city, composed of gentlemen from these respective districts or connected with them, and intended for the relief of countymen who may be in Glasgow in indigent circumstances. These dispense from £50 to £150 each.—To enumerate all the charities of Glasgow, however, would be exceedingly tedious. It may be enough to say, that many years ago it was calculated by Dr. Cleland, upon minute data, that £104,360 were dispensed in public and private charities throughout the city, independently of the suburbs; and recent inquiries would lead to the belief that this sum may be nearly doubled; but generous and extensive though it may be, all is too little for the mass of indigence and misery which oppresses such a vast population.

The Lunatic asylum is situated on a commanding position to the north of the city; the foundation-stone was laid in 1810, and the building carried up at an expense of nearly £20,000 exclusive of the surrounding grounds. It consists of an octagonal centre, from which diverge four wings of three stories each, and from the centre rises a majestic dome. It is fitted up and managed according to the modern and humane system adopted for the cure of mental disease, and in its operations has been singularly successful. There is accommodation for 136 patients. It is altogether a most prominent feature in the landscape, and is seen from a distance of many miles in the northern direction of the city. The approach of the city, with all its hum and bustle, towards the asylum has somewhat marred that quiet and privacy which is necessary for the cure of the insane. The directors, accordingly, in December, 1840, disposed of the buildings and part of the grounds to the directors of the Town's hospital, for the accommodation of the inmates of that institution; and they have purchased for the site of a new asylum between 60 and 70 acres of ground, forming part of the property of Gartnaud, about 3 miles to the west of Glasgow, to which access will be procured by the Great western road. The price is understood to be £150 per acre; and it is expected that the new buildings will be ready in 1843, when the asylum will be handed over to the uses of the hospital.

Asylum for the Blind.—This is an institution pre-eminently deserving of notice. It was founded by John Leitch, Esq., a citizen of Glasgow, who had suffered under a partial infirmity of sight, and upon his death bequeathed the sum of £5,000 towards opening and maintaining the institution. The buildings were, however, erected by voluntary subscription in 1827, and opened in 1828. They are situated to the north of, but immediately adjoining, the Royal infirmary, are built of brick, have a modest but graceful appearance, and constitute a seminary for the young and a workshop for the old. The benevolent John Alston, Esq. of Rosemount, has watched over the asylum since its institution with almost more than a father's care, and was the first person who succeeded in

printing for the blind with the usual Roman capital letters, by which the learners are taught to read with a facility little if any thing inferior to those who possess the blessing of sight. By the same ingenious means of receiving knowledge by the touch, the children are taught arithmetic, geography, astronomy, geometry, &c. In fact, the attainments of the inmates of this institution will bear comparison with those of any class of similar age and of similar period in tuition. After immense labour and perseverance, Mr. Alston was enabled, at the annual examination of the inmates of the asylum on 25th Oct., 1836, to present to a numerous assembly the first specimens of printing from the Roman alphabet for the use of the blind. Since then he has produced the whole of the New Testament, and various other works of an educational nature, amounting in all to 11,000 volumes. But the greatest triumph of this benevolent man was reserved for Tuesday, the 22d December, 1840, when he was enabled to produce before an admiring audience the whole of the Bible, printed in 15 volumes, and which may be truly said to form a new era in the history of the blind. [See details respecting this curious work in a previous section of this article.] In September, 1839, Mr. Alston received £400 from her Majesty to forward this great work, and various benevolent societies have also assisted in the labour of love. This institution differs from all others, in being a self-supporting one. It solicits no annual subscriptions, but depends for its maintenance entirely upon its own exertions, and the contributions and legacies of the benevolent. The blind are taught various branches of industry at one time, so that when business is dull in one department they may turn their hand to another. Since the opening of the institution in 1828, up till the close of 1839, manufactures had been sold from the institution to the amount of £18,998 11s. 7d. From this there were wages paid to blind people amounting to £6,459 17s. 4d. Premiums for industry, £270 15s. 3d. The nature of the products of the institution, however, will be best understood by the following table of the

SALES FOR THE YEAR 1839.

Twine,	£610 10 9
Baskets,	619 2 6
Mattresses,	115 2 2
Baked hair,	85 12 10

£3,207 7 10

At the present time there are 70 blind people in the manufactory, and 12 not blind who are chargeable with the different departments of the work. The males are on piece-work, and employed 10 hours-per day. The females work 7 hours in summer, and 6 in winter. There have been 130 persons admitted into the asylum since its commencement.

The Jail, Justiciary court-house, Council-chamber, and Town clerk's offices, are comprised in one large square building, situated at the west end of the Green, immediately at the bottom of the Saltmarket, containing a small open space in the centre. It was built in 1810, at an expense of £35,000, and is in the Grecian style. The facade and portico are an exact copy of the Pantheon at Athens, and admitted to be beautiful specimens of architecture; but unfortunately within every thing is inconvenient and inadequate: The Court-house is much too small; there is not sufficient accommodation for witnesses; and the jail is not constructed according to the improved plans of prison-discipline. Accordingly, an act was passed

some years since for building new public offices; but it was not acted upon till 1840, when commissioners were appointed by the city and county, for raising, by assessment to be distributed over a series of years, the sum of £40,000. It is intended by this measure to remove the Council-chamber and Town-clerk's, and chamberlain's offices to a more central part of the city, and throw the whole of the front of the present building into an extended Court-house, with ample accommodation for witnesses. The sheriff, sheriff-substitute, and their officers will also be accommodated in the new public establishment, which is forthwith to be built. Glasgow jail is not only a prison for criminals, but for debtors; but the commissioners under the new Scots prisons act have resolved to disuse it for the former purpose as much as possible: at all events it will not be used in the case of culprits who have been sentenced to imprisonment for long periods, as it is impossible by any alteration to impart to it all the attributes of a re-forming penitentiary.

Bridewell.—Previous to 1798, the only place in Glasgow for the confinement of delinquents sentenced to short imprisonments, was an old building in the south side of the Drygate, which had formerly been the manse of the prebend of Cumbuslang. Afterwards a temporary bridewell was fitted up in College-street, by way of experiment. The increasing population, however, induced the magistrates to erect more suitable premises, and accordingly, the oldest or original portion of the present range of buildings situated in Duke-street—now used solely for females—was finished and taken possession of in 1798. It consists of six stories, containing 115 cells. It was built by the corporation, and solely supported by them for upwards of 26 years. In 1822–23–24, acts of parliament were obtained for building and maintaining a county and city bridewell, and arrangements having been entered into for enlarging the existing bridewell, it was given up by the council on condition of having the right to use 50 of the cells for the confinement of jail prisoners. The foundation-stone of the additional building was laid in April, 1824; it was partially opened in December following, and completely finished in 1826. The original plan was a rotunda and four radiating wings, (exclusive of the old bridewell,) but only two of the wings were completed at that time. The rotunda contains governor's dwelling-house, offices, chapel, &c.; and two radiating wings of four stories high, containing 160 cells, with water-closets, baths, &c. Subsequently a mill-house was taken in, giving 14 work-rooms, and 29 sleeping apartments; and though there were now 304 available cells, it was still found insufficient. The commissioners, therefore, in 1836, obtained an act to raise £6,500 for additional accommodation. An additional wing, in conformity with the original plan, was commenced on 5th July, 1839, and was finished and partially occupied in December, 1840. It contains 111 cells. The new wing is from a plan by Mr. Brebner. It is open in the interior from the roof to the ground-floor, as well as at both extremities, and contains a succession of galleries, along which are placed the cells. By this means a constant current of air passes through the building, and greatly improves its healthfulness. The total sum expended on the buildings up till this date, has been £41,000.

Under the management of Mr. Brebner, Glasgow bridewell has confessedly become the model institution of the kind in the kingdom. The great principles at work here are separation and industry; and the aspect of the institution altogether, instead of being sickening and repulsive, is lightsome and cheering. The rattling of the shuttle, the creaking of the stook.

ing-loom, the hammer of the nail-maker, the planing of the carpenter, and the birring of the winder's wheel, are heard in constant motion; and in addition to these trades, there are tailoring, shoemaking, cabinet-making, teasing oakum, &c.; and many who go in absolutely ignorant of any handicraft, come out sufficiently instructed to earn their bread. Each person on entering the precincts is weighed, put into the bath, provided with a prison-dress, and immediately put to work if in health. The food is abundant, but homely; and it is a curious fact that many who have been in indifferent health before, come out of bridewell hale and vigorous, and 99 out of every 100 are heavier at the termination of their sentence than at its commencement. In case of refractory prisoners, they are deprived of some portion of their food, or the materials of their work are taken out of their cell, and they are left morning, noon, and night in absolute solitude. Punishment of this kind avails much more than stripes and fetters, and in the course of a day or two the most hardened criminal becomes meek as a child, and implores that some work may be furnished him to while away the dreadful loneliness. Moral and religious instruction is duly attended to. A chaplain is attached to the institution, as well as several male and female teachers, who ply their vocation from morning till night, giving lessons in one cell after another. There is every encouragement, compatible with the rules, afforded to those who are penitent and industrious; and where a boy is inclined for the fine arts, the rude elements of drawing are supplied to him to fill up his allotted period of leisure, and some specimens have been produced by them which would do no discredit to the advanced pupils of a practised drawing-master. The annual expense of each prisoner is about £5 per annum; but in years of plenty and cheapness, it has been so low as £2. When the earnings of a prisoner exceed his maintenance, he may receive the surplus on his dismissal, provided his conduct has been orderly and discreet. The principal charge to the public, therefore, is for the maintenance and extension of the building, the cost of management, &c. The latest table before us is for 1839, when the average number of prisoners for the year amounted to 344, viz. 203 males, and 141 females. The greatest number was 402, viz. 237 males, and 165 females. The cost during the same year was £4,526 16s. 8d. of which £981 15s. were for repairs or extension in the buildings, or for apparatus which does not form a permanent charge; and the year moreover was a dear one. Of this charge £2,169 17s. 8d. was defrayed from prisoners' work, or board of prisoners not chargeable against the institution; and the sum charged upon the public was £2,416 19s. which sum includes salaries, bed and body clothes, furniture, working utensils, &c. Including the governor, teachers and those under them, there are in all 24 persons connected with the management. Prisoners are sent to bridewell from all the criminal courts in Glasgow and the suburbs, and from the county of Lanark. It has recently been resolved to permit the other counties in the Glasgow circuit—namely Renfrew and Dumbarton—to send prisoners to bridewell on payment of £10 for each cell used. Bridewell is now under the charge of the prisons-board, and is likely to be much more used and extended than it has been as a reformatory prison.—The whole building is lighted with gas.

Police-establishment.—Up till 1800 the inhabitants of Glasgow were protected by the "watch and ward" system, or, in other words, the citizens took upon themselves in turn the office of watchmen by duly patrolling the streets at night. It was called the civic guard, and the force consisted of 30 householders or upwards. Various efforts had previously

been made to establish a regular police, but these were defeated by the inhabitants, who objected to the provisions of the act brought into parliament for the purpose of assessing them. In the year named, however, the first bill was obtained, and a force organized, which, by various improvements, is now superior to many, and second to none, in the united kingdom. Glasgow now boasts of the finest police-buildings north of London. These were built at an expense of £14,000, and finished in January 1826. The erection contains a fine square in the centre; one side is occupied as a court-hall; another as the hall of the commissioners; and the remainder is taken up with prisoners' rooms, cells, and the other apartments necessary for the officers of the establishment. The cells are only meant as temporary places of confinement, varying from 24 to 48 hours in duration; but since the passing of the Scots prisons act, it is intended to fit up a number of the cells to subserve the purpose of places of confinement for prisoners sentenced to limited periods for trifling offences. The affairs are managed by a board, elected from each of 35 wards into which the city is divided, and of which the magistrates are members *ex officio*. Up till last year the assessment was at the rate of 1s. 3d. per pound, and the total sum raised was £20,000. The statute-labour department, or cleaning and paving of the streets, is also managed by this board, and the assessment amounts to £4,000 per annum. The executive is performed by a superintendent at £430 per annum—including £30 as city-marshal; a commissioner's clerk at £230; a superintendent of the fire department at £130 and house; 3 police-lieutants at £100; a superintendent's clerk at £100; a superintendent of streets at £120; 6 criminal officers, 70 day-officers; 145 night-watchmen; besides a large number of firemen, lamplighters, coal-weighers, scavengers, &c.

The House of Refuge.—This is a valuable institution, and almost a novelty of its kind in the kingdom. It is open for the reception of juvenile thieves, who may be willing to abandon their course of life, and accept of the blessings of an honest education. The design originated in a conviction—by no means confined to Glasgow—that by sending young rogues to jail, the most infallible mode is taken to make old rogues of them. The object having been made known, the citizens of Glasgow evinced their high appreciation of it by subscribing the handsome sum of £10,000 for carrying it into effect. With this sum the directors proceeded to work, and having purchased a piece of ground about a mile from town, on a line with the street in which Bridewell is built, they constructed an edifice whose only fault is that its exterior is too gaudy for the purpose for which it is intended. It is, however, situated on an elevated and healthy spot, and was first opened for the reception of inmates in February 1838; and, from that period up till December 1840, about 250 boys have been received, several of whom are now supporting themselves out of the house by the trades they have acquired, and exhibiting by their good behaviour the benefits of the institution. On entering the house, a boy generally becomes bound an apprentice for three years to one of four trades taught within the walls, viz., weaving and winding, tailoring, shoemaking, and nail-making; and the day is divided between education and labour. There is ample scope within the grounds for recreation; and the inmates are not on any account permitted to have the most distant intercourse with their old associates. The number of boys at present in the house is about 175. Of this number about one-half had been in Bridewell, and nearly the whole

frequently in the police-office; and it is the opinion of Mr. Brebner, the governor of Bridewell, that if these boys had not been reclaimed by the House of refuge, there would have been constantly in Bridewell, at least 50 of their number, and that about 40 would have been annually transported. Deducting the produce of the labour of the inmates, more than £13,000 has been spent upon the institution by voluntary subscription; but the funds are now in such a low state, that it has been resolved to apply to parliament for an assessment for its support, and to secure its existence.—A House of refuge for girls has recently been opened, but it is yet too early to speak of its operations.

Monuments and Statues.—There are several imposing monuments and statues in the city; but none of them exhibit any great degree of sculptural excellence. The most conspicuous is that of William III. It is equestrian, formed of metal, and placed on a pedestal in front of the Tontine buildings, near the Cross. It was presented to the town in 1735 by James Macrae, a citizen of Glasgow, and late Governor of the Presidency of Madras.—In 1806, an obelisk of freestone was erected on the Green to the memory of Lord Nelson. It is 144 feet in height, and was erected by subscription at an expense of £2,075. On 5th August, 1810, the upper part of the structure was completely shattered during a storm of thunder and lightning; but the damage was soon repaired.—In 1812, a marble statue of Pitt, by Flaxman, was erected in the town-hall.—In 1819, a bronze statue of Sir John Moore was erected by subscription at an expense of £4,000. It is situated in George's-square. Sir John was born in a house called Donald's Land, in the Trongate, a little east from Candleriggs.—In 1832, a bronze statue, in a sitting attitude, by Chantry, was erected in George's-square, to the memory of the great James Watt.—In 1837, a Doric column, surmounted by a colossal statue, was erected in the same square to the memory of Sir Walter Scott. The plaid which the minstrel is represented to have worn is unfortunately placed on the wrong shoulder of the statue. In the beginning of 1840, a public meeting was held for the purpose of organizing a subscription for an equestrian statue to the Duke of Wellington, and the sum of £10,000 collected in three months. It has not yet been resolved upon who shall be the artist, nor has the site been pointed out.

Banks.—The Bank of Scotland was established by royal charter in 1695, and in 1696, a branch was established in Glasgow; but the trade of the city was so insignificant that it was recalled for want of support in 1697. It again made a trial in 1731, but was recalled from the same cause.—The Ship bank, the first which originated in the city, was established in 1749. Since that period numerous banks and branches have sprung up, or been established; and in the large commercial and manufacturing community in which they are situated, it is not surprising that they should thrive. The banks or branches now in Glasgow are as follows:—Bank of Scotland, British Linen company, City of Glasgow, Commercial Bank of Scotland, Royal Bank, Clydesdale Banking company, Glasgow and Ship Bank, Glasgow Union Bank, Western Bank, Greenock Bank, National Bank of Scotland, Renfrewshire Bank.—A Provident or Savings' bank was opened in Glasgow on 3d July, 1815, in which deposits of 1s. and upwards are received. In June, 1840, the number of depositors amounted to 3,454, and the amount of deposits to £53,906 19s. 3d. The institution has been admirably managed since its commencement, and the funds are secured by loan to the Trustees of the River Clyde, the Water Company, or in the Royal

Bank.—The National Security Savings' bank of Glasgow commenced its operations on the 31st of July, 1836. At its last annual balance, up to 20th November, 1840, the sum at the credit of depositors amounted to £154,690 5s. 6d., due to between thirteen and fourteen thousand individuals, almost all of the very class for whom the institution was intended. The accounts opened since the bank's commencement had been upwards of twenty thousand. Its momentum of progress may be partly understood from the following simple statistics:—

In the year ending 20th Nov. 1837, there were 18,893 transactions.			
1838,	28,358	ditto.	
1839,	38,330	ditto.	
1840,	45,574	ditto.	

This institution is managed by a committee of merchants.—The buildings in which the business of some of the ordinary banks is carried on, are built in a style of great magnificence; and it may only be mentioned that the cost of the British Linen Company's bank, now in the course of erection, has been estimated at £38,000, including the ground charge.

Chamber of Commerce.—The Chamber of Commerce was first projected by Patrick Colquhoun, Esq., then Lord-provost of the city, and subsequently well known for his writings on the Political Economy of the Capital, and of the River Thames. The principal objects of the institution are the protection and encouragement of trade, and to keep a watchful eye on whatever may be supposed to affect the commercial interests of Glasgow and its neighbourhood. It is incorporated by royal charter, and the business is managed by a board of directors 30 in number. Members are admitted on payment of an admission fee; and the institution is one of considerable weight in Glasgow. There are also East and West India associations in Glasgow for the encouragement and protection of these trades.

Theatre.—The first theatre in Glasgow was a temporary booth, fitted up in 1752, in the vicinity of the wall of the archbishop's palace, in which Digges, Love, Stampier, and Mrs. Ward performed. A regular theatre was built in the Grahamston suburb in 1764, by Mrs. Bellamy and others, but, on the first night of the performance, the machinery and dresses and scenery were set on fire. It was again fitted up, and kept open with very indifferent success till April, 1782, when it was burnt to the ground. The Dunlop-street theatre was built in 1785 by Mr. Jackson, and opened by Mrs. Siddons, Mrs. Jordan, and other distinguished performers. The taste for theatricals increased, and a subscription having been set on foot, the most magnificent provincial theatre in the empire was opened in Queen-street at an expense of £18,500. It was, however, much too large for the wants of the play-going community, and was, from first to last, a most luckless speculation. It was burnt to the ground on 10th January, 1829—a gas-light having come in contact with the ceiling of one of the lobbies leading to the upper gallery. The old theatre in Dunlop-street was in consequence enlarged, and constantly employed as a place of amusement till 1839, when it was pulled down, and a more commodious and handsome structure erected in its stead, which was opened in February, 1840. The patent for a new theatre has, however, been obtained for 21 years from 1840. It is granted in favour of the Duke of Hamilton, the lord-lieutenant of the county; the member for the county; the lord-provost of the city; and the two city members, or any two of their number. The Duke of Hamilton and the two members for the city have agreed to act; but no progress has yet been made with the building.

Barracks for infantry were erected by Govern-

ment in 1795, at the east end of the Gallowgate, and though the building may be a commodious one, it is far from being ornamental. Horse-barracks were erected at a later period, on the south-west extremity of Gorbals.

Reading-Rooms, Clubs, &c.—About 1770, a coffee-room was opened in Glasgow for the perusal of the newspapers and other periodicals; but its benefits were only confined to a few. In 1781, however, a subscription by the Tontine plan was entered into, for building a coffee-room and hotel, in 107 shares of £50 each. This building was opened shortly thereafter, near the Cross, the front of the hotel being supported by piazzas; and for half-a-century it formed the great resort of the merchants and citizens of Glasgow. The city having, however, rapidly grown in wealth, and business being on the move westward, the Royal Exchange, in Queen-street, was erected and opened on 3d September, 1829. It was built by subscription at an expense of £60,000, and is not only a lasting monument of the wealth of the Glasgow merchants, but is at the same time, the noblest institution of the kind in the kingdom. This splendid structure is built in the Grecian style of architecture, from designs by Mr. David Hamilton. The Exchange is entered by a majestic portico, surmounted by a beautiful lantern tower. The great room is 130 feet in length, and 60 in breadth; the roof, which is supported by Corinthian pillars, is 30 feet in height. Newspapers and periodicals are received here from every part of the kingdom, the Continent, and America, and the hall is constantly crowded by the merchants and others. There are two clubs in the London style: viz., the Western and Union clubs. The former has nearly completed a new building, which will be one of the finest in the city. In addition to these there are various reading-rooms throughout Glasgow of minor note, and there is not a tavern without its assortment of local and frequently London papers. The following table will give the statistical details of the four principal establishments above-named:—

Public Coffee-Rooms and Clubs.	Opened.	Number of Subscribers on 31st Dec., 1839.	Entry Money.	Annual Subscription.	Amount of Subscriptions.
			£ s. d.	£ s. d.	£ s. d.
1. Tontine Coffee-Room at the Cross, . .	1781	798		1 5 0	997 10 0
2. Royal Exchange Coffee-Room, . .	1829	1,455		2 2 0	3,055 10 0
3. Western Club, . .	1825	414	31 10 0	5 5 0	2,173 10 0
4. Union Club, . .	1838	263	20 0 0	5 0 0	1,315 10 0
		2,930			7,541 10 0

Mortality Bills.

The mortality bills for Glasgow have long been considered of peculiar importance, from the interesting information they contain, and the accurate manner in which they have been drawn up. They were first put upon a correct footing by Dr. Cleland, who was succeeded by Mr. Henry Paul, and now they are in the able hands of Mr. Watt. The limits of this paper do not admit of entering into the subject at length; but the following three tables will convey much information on the subject, and instruct clearly as to the fact that years of depression, such as 1837, were those in which marriages were fewest and deaths most numerous. In 1825, which was a prosperous year, the reverse was the case. It is proper to state

that in the following tables the register of still-born children is necessarily very imperfect, and many are known to have been omitted.

Table of the Proclamations of Marriages in Glasgow, and their annual ratio to the Population, during eighteen years, from 1822 to 1839.

Years.	Marriages.	Population.	Ratio of Marriages to Population.	Years.	Marriages.	Population.	Ratio of Marriages to Population.
1822	1,470	151,440	1 to 103.08	1831	1,867	202,420	1 to 108.42
1823	1,650	156,170	— 94.64	1832	1,979	209,230	— 105.72
1824	1,732	161,120	— 93.02	1833	2,335	216,450	— 92.69
1825	1,982	166,280	— 83.98	1834	2,359	223,940	— 94.93
1826	1,576	171,660	— 108.92	1835	2,297	235,000	— 102.50
1827	1,635	177,280	— 108.42	1836	2,370	244,000	— 102.95
1828	1,866	183,150	98.15	1837	2,005	253,000	— 120.76
1829	1,829	189,270	— 103.48	1838	2,406	263,000	— 109.31
1830	1,919	195,650	— 101.95	1839	2,413	272,000	— 112.72

Table of the Registered Baptisms and of the Still-born, distinguishing the sexes, in each year from 1822 to 1839.

Years.	Registered baptisms.		Still-born.		Years.	Registered baptisms.		Still-born.	
	Males.	Fem.	Males.	Fem.		Males.	Fem.	Males.	Fem.
1822	1,573	1,399	157	125	1832	1,840	1,548	332	292
1823	1,462	1,489	183	158	1833	1,750	1,715	306	276
1824	1,565	1,537	180	136	1834	1,826	1,523	313	248
1825	1,689	1,420	179	148	1835	1,651	1,633	368	283
1826	1,599	1,401	183	135	1836	1,795	1,530	415	287
1827	1,523	1,297	180	169	1837	1,620	1,462	371	245
1828	1,630	1,483	213	195	1838	1,641	1,518	336	247
1829	1,608	1,514	228	233	1839	1,580	1,432	318	287
1830	1,678	1,547	246	225					
1831	1,830	1,608	277	289	Total	29,860	27,056	4,785	3,978

The following table, exhibiting the amount of the estimated population and the rate of the mortality in Glasgow during the last eighteen years, is extracted from the mortality bills. It will be observed that the rate of mortality is calculated from the deaths, and not from the burials. The burials of still-born, which are excluded, amounted, during the eighteen years, to 8,763.

Years.	Population.	Deaths.	Rate of Mortality.	Years.	Population.	Deaths.	Rate of Mortality.
1822	151,440	3,408	1 in 44.436	1831	202,420	5,981	1 in 33.845
1823	156,170	4,286	— 36.437	1832	209,230	9,654	— 21.672
1824	161,120	4,354	— 37.005	1833	216,450	6,050	— 35.776
1825	166,280	4,571	— 36.374	1834	223,940	6,167	— 36.312
1826	171,660	4,220	— 40.677	1835	235,000	7,198	— 32.647
1827	177,280	4,787	— 37.033	1836	244,000	8,441	— 28.906
1828	183,150	5,534	— 33.093	1837	253,000	10,270	— 24.634
1829	189,270	6,391	— 37.922	1838	263,000	6,932	— 37.939
1830	195,650	4,714	— 41.504	1839	272,000	7,525	— 36.146

“In this table the population from 1822 to 1830, and from 1832 to 1834, both inclusive, was obtained by interpolating a series based on the government enumerations of 1801, 1811, 1821, and 1831; that for 1835, 1836, and 1837, has been rated a little higher than the series warranted, as being in all likelihood near the truth.”

Ecclesiastical affairs, and Statistics.

Glasgow is the seat of a numerous presbytery, and is a constituent of the synod of Glasgow and Ayr. Until about the year 1600 the district now comprehending the ten parishes of the royalty of Glasgow and the Barony, formed only one parish. Previously to this (in 1595) a minister had been appointed to the landward or Barony parish; but the district connected with it was not then formally erected into a parish. The presbytery, in 1599, applied to the town-council to disjoin the parish, which had then become unwieldy; and after due consideration had been given to the application by the corporate body, the following answer was returned:—“They thocht gud that the township should be divided into twa parishes, provyding that the town be not burdenit with seatin or bigging of kirks, nor furnishing nae mae ministers nor they hae already.” This act was approved of by the incorporated trades, and the township was formally divided into two parishes in 1602. “The portion of the

original parish which remained under the charge of the minister of Glasgow, and is still sometimes called the parish of Glasgow, as it embraced the royalty of the city, fell under the management of its magistrates and town-council, and was by them divided, at successive intervals, as its population increased, into ten districts, which were erected into separate parishes, with the consent of the presbytery, and by authority of the court of teinds. The parish of Barony, on the other hand, remained a single parish under the superintendence of one minister, till the year 1834, when the act of the General Assembly having been passed, authorized the erection of parishes *quoad sacra* or *spiritualia*, its limits, *quoad sacra*, were abridged by the annexation of certain of its districts as ecclesiastical parishes to various chapels-of-ease connected with the Establishment, which had been erected within its bounds, and whose ministers then obtained the ecclesiastical status of ministers of parochial churches. As similar chapels had been built within the royalty of Glasgow, the operation of the same act altered the boundaries, and increased the number of the city parishes *quoad sacra*. At the date of examination the parishes within the royalty and the Barony had come to be 24 in number, of which 11 were parishes both *quoad sacra* and *quoad civilia*, 10 were parishes only *quoad sacra*, having a distinct territory, and 3, viz., St. Columba, Duke-street Gaelic, and the West Gaelic, were parishes *quoad sacra*, having no territorial limits, but comprehending the Highland population residing within the royalty and suburbs of Glasgow. The parish of Gorbals consisted, at first, of a small district disjoined from the neighbouring parish of Govan, and erected into a separate parish by the court of teinds in 1771. To this district a much larger portion of Govan, comprehending what is now the most populous portion of Gorbals, was at a subsequent period erected *quoad sacra*, by the presbytery of Glasgow." [Report by the Commissioners of Religious Instruction, 1836.]

The date of the disjunction of the endowed city churches from the original parish was, as has been stated, gradual. In 1622 three parishes were formed by the erection of the Blackfriars' church; in 1648 four parishes were formed by the appointment of a minister to the Outer High church; at the revolution of 1688 the Wynd church, (now St. George's,) which had previously existed, was erected into a parish-church, and a fifth territorial allocation made. In 1720 an additional parish was formed by the erection of the Ramshorn, now St. David's. The number was increased to seven in 1765, shortly after St. Andrew's was built. It was increased to eight in 1782, when St. Enoch's was built,—to nine upon the building of St. John's,—and to ten, its present number *quoad civilia*, when St. James's was added. During the last twenty years, but the last ten in particular, a large number of churches—which will be enumerated afterwards—have been built in connection with the Establishment on the voluntary principle, endowed by or supported from the seat-rents, and the minister chosen on the popular principle, that is, either by the Church-building society, the subscribers, or the communicants or sitters. By far the greater portion of these are situated in the Barony parish, which overlaps Glasgow proper on every side saving the river, and is by far the most populous parish *quoad civilia* in the kingdom.

The place of worship of the Inner High church is the Cathedral, which is Crown property, and of which the Crown is patron. The Crown is also patron of the Barony parish, and both ministers are endowed from the teinds of the original parish of Glasgow, the amount of which is known to be not less than

£500 per annum. The minister of Gorbals receives, along with a grant of £100 per annum from the Exchequer, a stipend from the heritors, which they pay, not out of their teinds, (these being all liable to the minister of Govan, to which Gorbals originally belonged,) but out of seat-rents and other public funds. The total amount of stipend is set down in the report of the religious commissioners at £300 per annum. The parish-churches, comprehending the whole proper city churches, exclusive of the Inner High church, and being nine in number, were built and are kept in repair by the corporation-funds of the city. Their ministers are endowed, in so far as each acquires by induction a right to stipend from the patrons, the magistrates, and the town-council; and it is understood that the main source from which the patrons derive the sums necessary for these stipends, and the other expenses of public worship, is the revenue arising from the seat-rents, which they levy in all the churches, including the Inner High church. The stipend to the ministers of these nine parishes has been increased from time to time, and is now fixed at £425 per annum, exclusive of manse. The following are the periods and rates at which the stipends of the city ministers have been progressively advanced. They are given in sterling money, but used to be calculated in Scots money till 1778:—

Year.	Stipend.	Year.	Stipend.
1588, 2d charge,	£16 13 4	1778,	£165 0 0
1598, 1st charge,	27 15 6	1796,	200 0 0
1638,	58 16 11½	1801,	250 0 0
1642,	66 13 4	1808,	300 0 0
1643,	78 16 8	1814,	400 0 0
1723,	111 2 2½	1830,	425 0 0
1762,	138 17 8		

The stipend, as has been stated, is understood to be paid from the seat-rents, which are fixed, set, and uplifted by the corporation. From the falling-off in the number of seats let, however, the corporation has of late been a loser instead of a gainer. In 1836 the amount thus received was £5,038 19s. 10d.; and in 1840 it was only £3,978 8s. 7d., thus showing a falling-off in five years to the extent of £1,060 11s. 3d. The expenditure on the city-churches, in 1840, was £4,669 5s. 9d., leaving the corporation-funds minus £690 17s. 2d. This falling-off in the attendance on the city places of worship is not attributed, by any one, either to inefficiency or lack of zeal on the part of their pastors, but rather to the new churches which, within a few years, have sprung up to more than outnumber the old, and which being planted in districts formerly unprovided, have drained off a considerable part of their congregations, and with them their seat-rents.

In the unendowed established churches, the great majority of which have been erected since 1834, the stipend is, with one or two trifling exceptions, entirely paid from the seat-rents. The General Assembly, by a recent enactment, admits of ordination upon a bond of £80 per annum being granted; and the stipends accordingly vary from this sum, in the lowest instance, to £310 in the highest. Few of the ministers, however, receive less than £150, and a great many of them considerably above it.

Zealous as the members of the Established church may be in the work of propagating the gospel throughout the bounds of Glasgow, the Dissenters have kept pace with them in this laudable work; and there is no town in the kingdom where the general body is more respectable or influential. Indeed, for many years previous to 1830, the principal part of the work of church-extension was in the hands of Dissenters. One hundred years ago dissent was unknown in Glasgow, if we except the Society of Friends, who had a meeting-house in Glasgow in 1716, and their numbers have not much increased even to the present day.

The first meeting-house of the Associate Burghers—who were the first to secede from the Church of Scotland—was built in Shuttle-street in 1740; the Associate Antiburghers built their first house in Havannah-street in 1752; the Reformed Presbyterians founded a church in Calton in 1756; the Relief body began in the Anderston meeting-house in 1770; the Methodists rented a hall in Stockwell-street in 1779, where the celebrated John Wesley frequently preached; the Circus, in Jamaica-street, was opened in 1779 by the well-known Rowland Hill of London; and from these periods the progress of Protestant dissent has waxed great, and the members of the different communions have been of incalculable benefit in arresting the onward march of demoralization in the rapidly growing masses of Glasgow. The English Episcopal chapel was founded in 1750; and though, from the illiberality of the times, the Roman Catholic body were compelled to meet in a clandestine manner in the room of a dwelling-house behind Blackstock's land in the Saltmarket, they were enabled eventually in 1797, to build openly a chapel near the barracks, which has now been long disused as a place of worship, and the present splendid edifice in Great Clyde-street was erected in its stead. From the extensive immigration of the Irish population to the west within the last thirty years, no sect has increased of late in the same proportion as the Roman Catholics.

In 1840 there were 85 places of worship in Glasgow and suburbs, made up as follows:—viz., Established church, 40; United Secession, 11; Original Burghers, 1; Relief, 9; Reformed Presbyterians, 2; Original Seceders, 1; Independents, 4; Old Independents, 1; Baptists, 6; Episcopalians, 4; Wesleyan Methodists, 2; United Methodists, 1; Roman Catholics, 2; Unitarian, 1. In addition to these there is a small Jewish synagogue, and small congregations of Bereans and Glassites. The stipends of the Dissenting ministers are entirely made up from the seat-rents and the voluntary contributions of the members. In the United Secession, according to the report of the Religious Instruction Commissioners, one minister has £480 per annum; two £400; one £350; one £335; one £300; one £225; one £220; and one £200. The Episcopalians are rated from £226 to £280; the Relief, from £140, in only one instance, to £300, the majority being above £200; the Independents, respectively £165, £300, and £400; the Baptist stipend is not explicitly given; the Methodists from £70 to £120; the Original Burghers £210 and £250; Christian Unitarian £230; Reformed Presbyterians £150; Roman Catholic priests £100 each; and the other sects, small sums from £30 to £53. This return, it will be remembered, applies to 1836, the only recent authentic data to be obtained, since which there have been many additions and many changes. It is scarcely necessary to add that in all the dissenting congregations the patronage is in the hands of the members.

The seat-rents exigible vary according to circumstances in every church both in the established and the dissenting bodies; the lowest sum being 2s., and the highest 27s. per sitting. The average for all will be from 5s. 6d. to 7s. 6d.

The churches of the establishment are in general tasteful and ornamental, without being costly, and the spires of several of them are not surpassed in grace and beauty by those of any other city where the same moderate sum has been expended upon their construction. This particularly applies to St. Andrews, St. Enoch's, St. George's, and the Gorbals church. The dissenting churches, though uninspired, are nevertheless, in many instances, splendid fabrics. The churches of the United Secession have cost from £2,100 to £9,000; and upon the majority of them

upwards of £4,000 have been expended. One of the Independent churches cost £10,700. The most splendid specimen of architecture, and at the same time the most costly, is the Roman Catholic chapel in Great Clyde-street, which was erected in 1816 at an expense of nearly £14,000, and is capable of accommodating 2,200 sitters.

The following table drawn up by Mr. Collins, and showing the number of sittings in all the churches of Glasgow, whether established or dissenting, cannot fail to be interesting; and as it is understood that the data upon which it is prepared is not objected to by any party, but was furnished alike by churchmen and dissenters, it may be assumed as presenting the exact truth, as exhibited at the close of 1839. The document accompanies the report of the society for erecting additional parochial churches in Glasgow and suburbs, read at a meeting of members on 15th July, 1840:—

STATE OF CHURCH ACCOMMODATION IN 1839.

Sittings in churches of all denominations, 95,357

It must be remembered, however, that out of this total of 95,357 sittings, a vast number are unlet, amounting, it is understood, to one-third.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—The company for executing this railway was incorporated by the act of 1^o Vict. cap. cxvi. after a lengthened passage through both houses of parliament. The royal assent was obtained on 15th July, 1837. Like the majority of railway-companies, the Glasgow and Greenock encountered severe opposition from various quarters, but the most formidable and protracted was that offered by the trustees of Lord Blantyre, then a minor, who succeeded in securing important protective clauses which are understood to have impeded the execution of the works. Immediately after the bill passed, the commercial panic of 1837 occurred, which, by paralyzing the monied interests of the country, prevented for a time the commencement of the operations. It was not until the autumn of that year that active steps were taken to carry out the scheme; but at that time, an engineer and secretary having been appointed, the formation of the railway was proceeded with. The contracts having been let, the first stone of a viaduct was laid in Greenock, with masonic honours, on 15th June, 1838. The works have since proceeded with great vigour, and although unexpected hinderances arose, from the extremely hard nature of the material on some parts of the line, the whole was eventually completed, and opened to the public on the 30th of March, 1841.

This railway commences at the general station at the south end of Glasgow bridge, from which it is distant only 80 yards. After passing Cook-street, in Tradeston, it takes a curve westward so suddenly that on any other part of the line it might be considered inconvenient if not dangerous; but being close to the station, the engines are always moving slowly at this point, and the inconvenience is not felt. It approaches the Glasgow, Paisley, and Johnstone canal at the aqueduct, a few yards west of which, the distance between them is only the breadth of the towing-path. After running nearly parallel with the canal, and on a level of 8 or 10 feet lower, for about a mile, they separate, and the railway keeps a perfectly straight course till within half-a-mile of Arkleston tunnel. It then curves gently to the south, and by means of the tunnel, which is 60 feet below the highest part of the surface, passes beneath Arkleston-hill. A gentle curve brings the railway to the Greenlaw policies, where an extensive view of the eastern parts of Paisley is opened up, and continued till the arrival at the station-house adjoining the county-buildings in Paisley. At Arkleston, the cutting extends to about three quarters of a mile, gradually diminishing from between 50 and 60 feet at the east end of the tunnel, towards each end. The only other cutting on this part of the line worth notice, is at Ibrox, where it extends to a rather greater length than that at Arkleston, but it is not so deep. In the space between Glasgow and Paisley, the line is crossed by ten bridges, besides which, in addition to the arches and bridges at the terminus, four roadways are formed beneath it. From Glasgow, up till this point, the Greenock line

is common to that of the Ayrshire company also: See **GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.** After crossing Moss-street in Paisley, the Glasgow and Greenock line curves away to the west. A handsome viaduct of 28 arches of 20 feet span, and a skew bridge over Underwood-street, carries the line clear of Paisley. The retaining walls are, however, continued for some distance, when the line proceeds on a light embankment past Blackstone-house, which it leaves on the left. The river Cart is here crossed by a wooden-bridge, the nature of the foundations rendering that material necessary. After passing the river Gryfe on a similar erection, the railway proceeds over a deep moss for the distance of a mile and quarter; and going through two cuttings of the depth of 43 feet and 30 feet respectively, and over a heavy intervening embankment, enters the Bishopston ridge. This is the greatest work on the line and is perhaps unparalleled in the kingdom. The ridge is composed of solid whinstone rock; and the railway passes through it for a distance of 2,300 yards: See **BISHOPTON.** In blasting this obdurate ridge of rock, 320 tons of gunpowder have been expended, costing more than £12,000. Leaving this cutting, the river Clyde, with Dumbarton rock and castle, the classic Benlomond, and the entire range of the Argyleshire hills, burst on the view with panoramic effect; and from this point till it reaches Port-Glasgow the railway skirts the river. The beautiful scenery of the noble stream and estuary is seen to striking advantage from various portions of the line. Port-Glasgow is approached by a viaduct of 14 stone arches of 30 feet span, which crosses a small bay, now used as a timber-depot. The railway nearly divides the town. The station for Port-Glasgow is at the head of Prince's-street, and from this it is intended that a branch shall be carried to the harbour. The streets are spanned by arches as in Paisley. There is nothing worthy of particular notice, till the line approaches Greenock, where, passing through a heavy cutting of 44 feet deep, it enters the town. The railway divides a large engineering work at this point; and all the streets, except Bogle-street, are spanned by bridges. The Greenock station is in Cathcart-street, nearly facing East Quay lane, and close to the steam-boat quay. Behind it is an extensive space of ground for the repairing shops, sheds, &c., belonging to the company. A branch line for goods diverges at Dellingburn-street, and is intended to be prolonged to the East India quay.

The length of the line from Glasgow to Greenock, is 22½ miles; and it passes through the parishes of Govan, Abbey, and Middle or North, in Paisley, Kilbarchan, Inchinnan, Erskine, Kilmacoll, Port-Glasgow, and East parish of Greenock. The greatest amount of rock-cutting in one spot is 244,000 yards, and the heaviest embankment contains 146,508 yards of this debris. The gradients are favourable. Between Glasgow and Paisley the line is nearly level, and until it approaches Bishopston, on either side the inclinations are favourable. To gain the summit-level of this ridge, the road rises 1 in 330, and descends at the same rate. The quantity of masonry on the line is unusually great, owing to the circumstance of four towns being traversed in so short a distance. The retaining walls extend to several miles, and there are nearly 400 arches on the line, exclusive of culverts. Many of the bridges are very elegant in their design, particularly the Cart bridge at Paisley, and the arch over the deep cutting at Cartburn-hill near Greenock. The Underwood-street bridge, and South Croft-street bridge in Paisley, the former in stone at an angle of 28°, and the latter in iron at an angle of 17°, are specimens of engineering skill and boldness rarely to be met with. The station-buildings are highly

ornamental, and do great credit to the taste of the architect.

The capital of the company is £400,000 in 16,000 shares of £25 each, with power to borrow £133,333. This was considered sufficient for every purpose, but by an expansion of the scheme, and other causes, this sum has fallen short of the outlay that will be necessary. The company is now (March 1841) in parliament for additional capital, and it appears likely that the entire cost of the railway, including what is technically called the "Plant" or stock, will not fall far short of £600,000. Rather more than one-third of the stock was originally held in Greenock, and the rest in Glasgow, London, Liverpool, Dublin, &c., but as the line proceeded attention has been drawn to it, and much of it has been absorbed by distant capitalists. The Glasgow and Edinburgh interest especially has greatly increased. There are between 500 and 600 shareholders. The gauge of the rails is 4 feet 8½ inches; the rails are heavy, being 75 pounds to the yard, and there is a four-foot bearing, which being less than many others by a foot, renders the road peculiarly firm. The line is laid on wooden sleepers, where there are high embankments; in all other parts—excepting the moss, where wood is also used—stone blocks are employed with very strong iron chains. There are 12 locomotives at present on the line, which have cost about £1,650 each. The line, which is a double one, and in some places has four lines of rails, is calculated for a very extensive business in passengers and goods. The fares between Glasgow and Greenock are 2s 6d. and 1s. 6d., and no third class. The time of transit between the two termini, will be about an hour or rather less. Arrangements will be made for conveying passengers to the different watering-places on the Clyde, on the arrival of the trains; and there will be about 8 or 10 departures from each terminus daily. The company have power in their last bill to erect a pier and wharf opposite Dumbarton, and to engage steamers for the ferry there. This line, as well as the Ayrshire one, will in course of time be highly ornamental, the slopes and embankments being well-drained, and planting will go rapidly forward. There is a degree of rural sweetness already gathering round some of the older English railways which is exceedingly pleasing to the eye, and the same features will not be long absent in the Scottish lines. In the southern railways, the sloping banks have in numerous instances been tastefully and profitably converted into beautiful parterres or smiling little gardens, and the rail itself is being enclosed by hedge-rows, which are thriving apace, and impart that air of rusticity which has been so much wanting.*

The engineer of this line is the well-known Mr. Locke, with Mr. J. Errington, assistant-engineer. Throughout the arduous labours of bringing this stupendous work to a close, these gentlemen have been ably supported by the committee of management, of which Mr. Robert Dow Ker is chairman, and by the secretary, Captain M'Huish.†

* The orders for thorn, and other plants for decorating the English railway lines have been so great of late years, that the price may be said to have permanently advanced in the market, and there will yet be a demand for millions upon millions of this plant.

† As this is the first Scots railway that has fallen under the new act for the inspection of railways, it may be fair to add, that the Government officer named for that purpose has made his report, in which he states, that he "considers the line of a very satisfactory character." He also adds, "I cannot conclude this report without observing that I have seen a copy of the code of regulations drawn up by Mr. Errington, about to be established for working this line, and it appears to me to be drawn up in so able a manner, that I am disposed to think that with such modifications only as local circumstances may render imperative, it might be taken as the general form for the guidance of the companies in this part of the country, where I find very discordant systems in operation."

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.—The original prospectus of this stupendous work, which is associated with such mighty considerations to the commerce, convenience, and best interests of the west of Scotland, was issued in April, 1836. Application was made to parliament for a bill in the end of the same year, and an act embodying the company was passed on 15th July, 1837. The undertaking was opposed by the road-trustees along the line, and by the Ardrossan canal company; but the opposition was never of such a kind as to endanger the measure, and it was more than counterbalanced by the facilities and encouragement granted by other parties, of whom the Earl of Glasgow, the Earl of Eglinton, the burgh of Irvine, and Col. Hunter Blair, of Blair, deserve especial mention. The latter gentleman—through whose estate the railway runs for upwards of two miles—came forward in the most handsome manner and agreed to present the company with the land necessary for the line, without any compensation whatever. In many respects this railway differs favourably from others, in the rapidity of its construction, and in its moderate cost, not less than in the important consequences that may be expected to flow from it. Immediately on the passing of the act, most of the contracts were entered into, and some of them commenced in Feb., 1838. A portion of the line—from Ayr to Irvine—was opened for public traffic on the 5th of August, 1839; other portions quickly followed—that to Kilwinning was ready on the 23d March, 1840—from Glasgow to Paisley, on the 13th,—and from Kilwinning to Beith on the 21st July, 1840; and upon the 12th August in the same year—not two years and a half from the time the first shovelful of earth was removed—the whole line was opened for public conveyance. It opens up a country of vast capabilities, rich in mineral, manufacturing, and commercial wealth, and brings the towns and sea-ports of Ayr Irvine, Kilwinning, Saltcoats, Ardrossan, Dalry, Beith, Johnstone, and Paisley, into the closest proximity with the city-capital of the west of Scotland. In a short period, when the branch to Kilmarnock shall have been completed, that thriving town will also be added to the number; and in the autumn of 1841, when the Edinburgh and Glasgow railway shall have linked the east with the west of Scotland, the most wealthy and populous section of North Britain will be connected through all its bounds by a three or four hours' drive.

This fine line of railway, which is 40 miles in length, commences within a few yards of the south end of Glasgow bridge, where a splendid and costly station-house, built of white freestone, with a handsome portico, and stately columns, has been erected. It passes through Tradeston, by a curve, on a series of brick arches, and soon touches the bank of the Glasgow, Paisley, and Johnstone canal, where it crosses the Pollok and Govan railway, which it also spans by a flat iron-bridge of three divisions. Thence proceeding in nearly a straight line to Paisley, it passes under the turnpike road by a short tunnel, and after a succession of light cuttings and embankments, enters the great excavation at Arklestone. There is also at this spot, a tunnel of 200 yards in length, through whinstone rock. On emerging from it the town of Paisley becomes visible, and the railway enters on a high level, crossing all the streets on lofty bridges, till it reaches the river Cart, which it also passes by a noble arch of 85 feet span. The station-houses, both of the Ayr and Greenock companies, are situated in the large open space fronting the county-buildings, which they resemble in the character of their architecture, and they are not distant more than two

minutes' walk from the very centre of the town. The line from Glasgow to Paisley, short as it is, being only 7 miles in length, is a very pleasing and attractive one; the Campsie and Kirkpatrick hills are seen in the distance, with the "Braes o' Gleniffer," which Tannahill has wedded to song; and still nearer the line is observed the Stratford-upon-Avon-like steeple of Govan church, with all the charming alternations in the landscape, of wood, hill, dale, and streamlet. It is true that the traveller only gets a glimpse of these for a moment as he is whisked along; but the motion is not so rapid as to render him unconscious that he is passing through a most interesting and luxuriant district of country. The railway from Glasgow to Paisley is joint with the Glasgow and Greenock company, and is managed for their mutual interest by a committee of four Directors from each board. After crossing Moss-street in Paisley, the two railways diverge—the Greenock line curving away to the west, and the Ayr line proceeding to the south. From Glasgow to this point the line is generally level, or at least the gradients are not more than 1 in 1,200; in one place under the turn-pike road near Ibrox, they are 1 in 2,000. Leaving Paisley the line proceeds, by Ferguslie and Elderslie, to the Johnstone station, a distance of 3 miles, in which there are some very heavy embankments. From Johnstone the line proceeds by Howood, Kilbarchan, and Castle-semble to Lochwinnoch, a distance of 5 miles, in which there are considerable cuttings. Here the gradients are respectively 1 in 600 at Howood; 1 in 1,200 at Castle-semble, and level at Lochwinnoch. A peep of the beautiful loch, the property of Colonel Harvie, is obtained, and the adjacent country, which is the seat of a busy manufacturing hive, is rich in minerals. From Lochwinnoch to Beith, the distance is 4 miles, with an ascending gradient of 1 in 1,200 for 1 mile, and 1 in 2,000 for 3 miles. In this part of the line is situated the Muirburn meadow or celebrated "sinking bog," which for so long baffled all the efforts of the contractors and the company to find a solid foundation for the blocks. The soft or boggy part of the ground extended to a depth of 45 feet, and for a length of time the embankment subsided as rapidly as it was formed; the quantity of soil which it swallowed up is almost incredible, but at length the difficulty was overcome, and the blocks and rails laid upon a strong and firm foundation of piles. From the Beith station to Kilbirnie is one mile upon a level—the line running for a considerable space along the side of Kilbirnie loch, which, however, is rather a tame and uninteresting sheet of water; but at this point is situated the greatest rise upon the railroad, the ascent having been 70 feet in 20 miles, and from this centre station, the descent continues gradually to the terminus at Ayr. From Kilbirnie station to Dalry the distance is 3 miles, the gradient for 2 miles being 1 in 1,200, the other level; and the country is rich in mineral wealth, containing both coal and ironstone. From Dalry to Kilwinning the line extends 6 miles, at an average gradient of 1 in 440, passing through a very beautiful country, a considerable portion of which is the property of Colonel Blair; the line crosses the Garnock water twice, and the town of Kilwinning, with the ruins of its old abbey, is seen to the left. Near Dalry, at the end of the 23d mile from Glasgow, the line to Kilmarnock branches off. It is 10½ miles in length, and was opened in March 1843. The gradient from Dalry to Kilmarnock is, for 8 miles, 1 in 880; the 2 miles next Kilmarnock are level. There are twelve viaducts over roads and streams on this branch-line; the largest of which is across the river Garnock. From Kilwinning to Irvine, the main line proceeds upon a level;

the latter town is 30 miles distant from Glasgow, and with its sea-port, ship-building yards, and minerals, forms a very important link in this railway chain. Near Kilwinning a branch leaves the main line for Ardrossan; the Ardrossan railway belongs to a different company, but the proprietors have wisely made every effort to bring their minor duct into communication with the principal artery; and considering the advantages which Ardrossan possesses in its sea-port, its wet-docks, and its summer-bathing quarters, it is certain to be materially benefited by the increased communication. From Irvine onward to the terminus at Ayr, the line runs close upon the sea-shore, the gradients being frequently level, and never more than 1 in 1,000; the view is a very cheering one, embracing the eastern shores of the is. and of Arran, and the intervening course of the steam and sailing vessels from Liverpool and Ireland to Greenock and Glasgow. As has been stated, the portion of the line from Ayr to Irvine was the first opened, and the least expensive, from its passing through a generally level and a light or sandy soil. At the Troon station, which is 3 miles distant from Irvine, and 33 from Glasgow, a branch proceeds to the sea-port and wet-docks of Troon, the property of the Duke of Portland, and it is calculated with certainty that the line will materially improve the growing trade of that sea-port. From Troon the railroad proceeds by an easy descending gradation, by the stations of Monkton, Prestwick, and Newton to the terminus at Ayr, which resembles that of Glasgow by being close to the harbour and to the bridge over the river, which connects the different parts of the town, and leads to the centre of business.

Although a very excellent case for the traffic upon this line was made out when the bill was before parliament, additional sources of profit, and general aggrandizement, have been daily developing themselves since the opening of the line. Several extensive coal-fields have been already opened in the immediate neighbourhood of the line in Ayrshire, and one of the iron-fields near Dalry has been let at a fixed rent of £1,000 per annum, for the supply of blast furnaces, the erection of which is now nearly completed at the depot adjoining the town. The gentleman who has become the tenant of these works contemplates sending at least 80 tons per day by the railway. It is also intended that blast-furnaces shall be erected in the neighbourhood of Kilbirnie, and several new coal-fields are in the course of being opened along the line. Hitherto passengers and parcels alone have been conveyed by the railway, but in May, 1841, it will be ready for the carriage of heavy goods of every kind. Immediately upon the opening of the entire line, a company, in connection with the railway, purchased the Fire King steam-vessel, at an expense of £22,800, and placed her on the station between Liverpool and Ardrossan, where there is ample water-room, at all times of the tide, the passengers to and from Glasgow being conveyed by the railway. By this means the tedious navigation of the frith of Clyde was avoided, and the passage between Liverpool and Glasgow shortened by from 3 to 5 hours. The Fire King has been since sold; but the proprietors have made arrangements for resuming and continuing the communication between Ardrossan and England, by sea, and onward to Glasgow by the railway. Another company is proposed for establishing a similar vessel between Ardrossan and Belfast; and some of the influential proprietors in the Western isles have intimated their intention of building a steam-vessel for the purpose of bringing passengers, with cattle and agricultural produce, from the isles of Skye, Mull, and the mainland opposite

to Troon and Ardrossan, to be thence conveyed by the railway to the markets in Glasgow, Paisley, and Kilmarnock, and eventually to Edinburgh. The trade, too, between Dublin, Belfast, and the north of Ireland, with the sea-ports within the scope of the railway, is also likely to be materially improved.

The capital of the company is £833,300, made up as follows, viz., £625,000, in 12,500 shares of £50 per share, which are held by 371 shareholders, and £208,300 borrowed as authorized by the act. The width of the rails is 4 feet 8½ inches,—a standard which has been adopted with a view to insure the connection by some of the projected great lines with the manufacturing districts in the north of England. Part is laid with rails 56 pounds weight to the yard, part with 68 pounds to the yard, and part with 75 pounds to the yard. There are 19 locomotive engines belonging to the company, provided at the cost of £25,000; and another engine is still to be delivered. Since its opening the line has been pre-eminently successful. During the period that the line was opened partially between Ayr and Irvine, and afterwards to Kilwinning and Beith, embracing the period from 5th August, 1839, to 12th August, 1840, when the line was opened throughout, the number of passengers conveyed was 127,102; and the receipts £5,323 14s. 9d. The number of passengers travelling along the joint line from Glasgow to Paisley, since the opening of this portion on 14th July, 1840, till 30th January, 1841, has been 291,306; the receipts, £9,963 16s. 7d. The number of passengers conveyed along the Ayr line, beyond Paisley, from 12th August, 1840, to 30th January, 1841, has been 193,698; receipts, £16,807 7s. 9d.; and it is most pleasing to record that these immense aggregates, amounting to more than 600,000 persons, have been carried along without the occurrence of a single accident. The entire distance from Glasgow to Ayr is performed in two hours or less. The fare from Glasgow to Paisley is 1s. first class; 9d. second; and 6d. third. From Glasgow to Ayr the fare is 6s. 8d. first class; 5s. second; and 3s. 4d. third.

This line was constructed by Mr. J. Miller, engineer, Edinburgh, with the very able aid of the committee, of which Mr. McCall of Daldowie has all along been chairman, and of Captain Humfrey, the secretary of the company.

GLASS,* a parish situated on both sides of the Deveron, and hence partly in the county of Aberdeen, and partly in that of Banff. It is bounded on the north by Cairnie parish; on the east by Huntly and Gartly; on the south by Cabrach; and on the west by Botriphnie and Keith. Its extent, from north-east to south-west, is about 5 miles; and from north-west to south-east somewhat more than 4. Houses in 1831, in Aberdeenshire, 105; in Banffshire, 74. Assessed property, in 1815, £1,310. Population, in 1801, 793; in 1831, 932. The surface is varied with fine green hilly swards, which afford pasture to sheep and black cattle: the parish is upland, and chiefly pastoral. The soil is in general a deep loam, tolerably early on the river-side; but in those parts which lie at a distance from it, the harvest is very precarious, especially in cold wet seasons.—Glass is in the presbytery of Strathbogie and synod of Moray. Patron, the Duke of Richmond. Stipend £197 17s. 2d.; glebe £10. Unappropriated teinds £225 8s. 6d. Schoolmaster's salary £35 6s. 11½d.: fees £7, besides a share of the Dick bequest. There is a private school in the parish.

GLASS (LOCH), a lake in the parish of Kiltearn,

* The term 'Glass' is said to be Irish, and to signify 'green,' being applicable to this parish from the greenness of its hills, on which there is very little heath.

Ross-shire, about 5 miles in length, and 1 in breadth. It discharges itself by the AULTGRAAD [which see] into the frith of Cromarty.

GLASS. See SCALPAY.

GLASS (THE). See THE BEAULY.

GLASSARY,† or KIRKMICHAEL-GLASSARY, a parish in Argyleshire; bounded by Glenaray and Loch-Fyne upon the east; by Dalavich and Loch Awe upon the north; by Kilmartin and North-Knapdale on the west; and by South-Knapdale and Loch-Fyne on the south. It extends 22 miles in length, and 10 in breadth; and contains 75,000 Scots acres. The valued rent of the parish is £2,532 Scots. The real rental, in 1793, was £5,700; in 1815, £11,189. Population, in 1801, 3,293; in 1831, 4,054. Houses, in 1831, 842. Its form is nearly rectangular; rising gently from both sides to the middle, which is occupied by a considerable extent of moor land covered with heath. On the banks of the river Ad, the soil is a deep rich loam; and on the shore of Loch-Fyne it is generally a black loam on limestone rock. There are the remains of three watch-towers on the tops of the highest hills, and several cairns and upright stones which probably mark the places of interment of the heroes of former ages. The canal from Loch-Gilp to Loch-Crinan intersects the southern boundary of this parish. This parish is in the presbytery of Inverary, and synod of Argyle. Patron, Campbell of Auchinellan. Stipend £266 3s. 3d.; glebe £28. Unappropriated teinds £25 11s. 1d. Church built in 1827; sittings 1,500. A portion of this parish was attached *quoad sacra*, in 1828, to LOCHGILPHEAD: which see. There are three preaching-stations in the parish, which are supplied by missionaries from the committee for managing the royal bounty: viz., at Cumlodden, and at Loch-Gair on Loch-Fyne; and at the Ford on Loch-Awe.—There are two parochial and several private schools, within the parish. The salaries of the parish-schoolmasters are £25 7s. 10½d. each, with about £10 fees.

GLASSERT (THE), a small river in the parish of Campsie, which has its rise in the Campsie fells; and after a course of 6 or 7 miles, falls into the Kelvin above Kirkintilloch. Kincaid and Lennoxmill printfields are on this river. See CAMPSIE.

GLASSERTON, a parish on the south coast of Wigtonshire, near the eastern extremity of Luce bay, occupying part of the peninsula formed by that bay and Wigton bay. It has the form of a half-moon, but is slightly squared at the ends, and indented on the inner side. It is bounded on the north by Dowalton-loch, which divides it from Kirkinner; on the north-east by Sorbie; on the east and south-east by Whitehorn; on the south-west by Luce bay; and on the north-west by Mochrum and Kirkinner. Its greatest length, from Dowalton-loch on the north to an angle below Port-Castle on the south-east, is 7½ miles; and its greatest breadth, from Lay Point on the west to Appleby-loch on the east, 3¾ miles. The coast, about 6¼ miles in extent, is a chain of hills, various in height, verdant towards the top, and rocky, bold, and beetling in their descent to the sea. Many of them, on their seaward side, are abrupt and precipitous; some projectingly overhang the waters; some descend gently into the tide, and afterwards look up from its surface; and all have a dark and weather-beaten aspect. The bases of several are perforated, but not deeply, by caverns. All the beach and the sea-bottom within watermark, are covered with loose fragments of rock, some of

† "Glassary seems evidently to be derived from the Gaelic *Glastra*, which signifies 'a Grayish strath'; and this is particularly descriptive of the lower end of the parish, when the erop is separated from the ground, which, for the distance of 3 miles, is a level country, exhibiting a grayish white surface." —*Old Statistical Account*.

them rounded by the attrition of the waves, and others shapeless masses clothed with marine plants and shells. The coast line, with the exception of the small headland of Lay Point, and a tiny bay beside it, called Monreith bay, both in the north, is nearly quite straight. Though there are two or three places where small vessels may discharge or take in cargo in fine weather, there is no port and no place of safe anchorage. The surface of all the interior of the parish is unequal, rugged, and knolly; yet nowhere, except slightly in the north, rises into strictly hilly elevations. The eminences or knolls are rocky, and for the most part covered with furze, or coarse grass. The intervening hollows are, in some instances, marshy, but, in general, are carpeted with fine arable soil, or excellent pasture. The influence of spring is usually felt here—as in the adjacent districts—somewhat earlier than in the other parts of Scotland. Frost is seldom intense, or of long continuance; and snow rarely accumulates, or lies long upon the ground. A rill rises in two sources in the parish, one of them less than a mile from the coast, and after a circuitous course of 4 miles, begins, for 2 miles more, to form the boundary-line with Mochrum, and then falls into Monreith bay. There are 4 lakes, DOWALTON-LOCH [which see] on the northern boundary,—Appleby-loch, upwards of half-a-mile long on the eastern boundary,—a loch nearly half-a-mile long, having an islet, near the house of Castle-Stewart,—and a lochlet $2\frac{1}{2}$ furlongs long at Ersock. Pike, perch, trout, and eels are found in them, but not in large quantity. A few leeches occur in Castle-Stewart loch. The mansions are Castle-Stewart, Craigdow, and Rhysgill; the last spacious and beautifully situated. The village is traversed by two important and branching lines of road,—one of them, that from Newton-Stewart to Stranraer, by way of Whithorn. The hamlet of Milltown of Monreith, stands on the latter road half-a-mile from Monreith bay, 6 miles west of Whithorn, and 2 miles south-east of Fort-William. The inhabitants here, and throughout the parish, are either dependent on agriculture, or directly engaged in its labours. Population, in 1801, 860; in 1831, 1,194. Houses 219. Assessed property, in 1815, £10,910.—Glasserton is in the presbytery of Wigton and synod of Galloway. Patron, the Crown. Stipend £201 12s. 5d.; glebe £20. Schoolmaster's salary £34 4s. 4½d., with from £12 to £14 fees. Another school has attached to it, besides the fees, £15 of salary, and a dwelling-house. The church was built in 1732. Sittings about 270. The ancient church belonged to the prior and canons of Whithorn, and was served by a vicar. In 1606, it was granted to the bishops of Galloway; in 1641, it was transferred to the university of Glasgow; and, in 1661, it was restored to the bishops of Galloway, and it continued to be held by them till the abolition of Episcopacy in the year 1689.

GLASSFORD, or GLASFORD, a parish in the middle ward of Lanarkshire, bounded on the north by Hamilton; north-west by East Kilbride and Blantyre; south by Avondale; and east by Stonehouse. Topographically speaking, this is an extremely irregular parish, and its figure, as represented in the map, is not unlike a sand-glass. It is about 8 miles in length, and varies in breadth from $3\frac{1}{2}$ ths of a mile at its broadest extremity to 2 miles at the opposite end, and about half-a-mile in the middle. It contains 11 square miles, or 5,598 Scots acres. The land in the parish consists of moor and dale; the former in many parts sufficiently bleak and barren, but now under a gradual process of reclamation; and the latter, which runs along the lower part of the parish, and is bounded on one side by the Avon,

smiling and fertile. The characteristics of this district are neither hilly nor mountainous. The soil generally consists of clay, moss, and light loam. In the Old Statistical Account it is stated that, although the women of the parish possess a singular dexterity in rearing calves, and the richest veal in the Edinburgh market comes from Glassford or Avondale, yet “there is in it only one man who deserves the name of a farmer. They read no books on agriculture; nor do they seek the company of those who might inspire them with a taste for improvement. They seem to be contented with what they have rather than ambitious of more.” Enterprise and improvement, however, now distinguish the farmers of Glassford as creditably as it does their neighbours; and their efforts to ameliorate the natural barrenness of a churlish soil have been praiseworthy in the extreme. Wheat has been grown in the parish, but the principal crops are oats and potatoes, which are successfully raised to great amount. Coal exists, but not abundantly; and there is only one mine going upon the estate of Crutherland, the produce of which is not extensive. There are four freestone quarries in the parish, three near the village of Westquarter, and one at a place called Flatt, and a successful limework is also in operation. The proprietary of this parish is an extremely divided one, the number of owners of land amounting to about 50, many of whom till their own little patrimonial possessions. A large portion of the population, including many of the females, are engaged in weaving; but here as well as elsewhere, the remuneration of late years has been extremely limited, and those engaged in it, therefore, barely able to do more than keep “day and way.” There are three villages in the parish, viz., Westquarter, Chapelton, and Heads—the two former containing a population of more than 500 each, and the latter about 100. Strathaven is the nearest market and post-town, distant about $2\frac{1}{2}$ miles from the parish. The district, however, has ample means of communication; the turnpike road from Glasgow to Strathaven, by East Kilbride, runs 4 miles through Glassford, and the road from Strathaven to Hamilton runs through it for $2\frac{1}{2}$ miles. Population, in 1801, 953; in 1811, 1,213; in 1821, 1,504; in 1831, 1,730. Houses 281. Assessed property, £5,627. The parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patroness, Lady Montgomerie. Stipend £256 17s. 11d.; glebe 8 acres. Unappropriated tithes £736 7s. The present parish-church was built in 1820. It is situated in the village of Westquarter, and is calculated to accommodate 560 sitters. The former church was built in 1633, and was of very uncouth appearance. With the exception of a small congregation of Old Independents, who have rented a place of meeting, there is no Dissenting church in the parish, though a large number of the inhabitants attend, and are members of Dissenting congregations in other parishes.—There are three parochial schools in the parish; the salary of the first master is £25 13s. 3½d. per annum, with £35 school-fees, and £6 annually of other emoluments; that of the second is £5 10s. per annum, with £25 school-fees; and that of the third, £2 15s. annually, with £18 school-fees. There are schools in the parish, not parochial, in which the ordinary branches are taught. The remains of the old church and belfry, which was erected in 1633, and is alluded to above, are seen in the grave-yard, and the place is still further hallowed by the tomb of a martyr, which bears the following inscription:—“To the memory of the very worthy Pillar of the church, Mr. William Gordon of Earlston in Galloway, shot by a party of dragoons on his

way to Bothwell bridge, 22d June, 1679, aged 65; inscribed by his great-grandson, Sir John Gordon, Bart., 11th June, 1772."—The well-known Mrs. Isabella Graham, so justly celebrated for the purity of her character, and the piety of her writings, was a native of Glassford. Her maiden name was Marshall, and she died in America in July, 1814.

GLENALMOND, a picturesque and romantic glen, watered by the river Almond in Perthshire: see **ALMOND**. What the name designates is only a small part of the river's basin, and lies chiefly within the parish of Monzie. In a wider sense, it is sometimes, though loosely, made to comprehend an open and cultivated part of the basin stretching to the eastward. But, more usually understood, it is entered on the east, at the boundary of the parish of Monzie, by a cross-road from the bridge of Buchanty, and after luxuriating, for a brief way, in kindred beauties to those of a glen which opens into it from the south-west [see **MONZIE**], becomes suddenly pent up between ranges of treeless, rocky, lofty elevations, and is converted into a narrow mountain-pass. The hills lift most of their summits 1,100 or 1,200 feet above the level of the sea, and press so closely on the river as barely to leave space for its bed, and for the roadway of a new turnpike to the Highlands. An occasional famishing shrub, looking squalidly out among the fissures of the rocks, rather heightens than mollifies the wildness of their aspect. The Almond, while passing beneath their dark shadow, and suffering their complete usurpation of its banks, has a rough and stony pathway, and trots rapidly along toward the soft beauties of the open country below. Near the upper end of the pass is a large round mass of stone, 8 feet high, which, having been removed from its former bed in the vicinity of its present position, disclosed a tiny subterranean apartment, faced round with stone, and containing human bones, and which is alleged by some fond antiquarians to have marked the site of Ossian's grave. This narrow and romantic pass is upwards of 2 miles in length, and terminates at the bridge of Newton. There a vale, narrow yet picturesque, gradually opens, and extends the vale several miles to the west.

GLENALOT, a valley in Sutherlandshire, 15 miles north of Dornoch, between the rivers Brora and Shin.

GLENAPP, a picturesque vale at the south corner of Ayrshire, stretching from the shore of Loch-Ryan into the interior, and abounding with fine natural scenery.

GLENARAY, a vale in Argyleshire, in the parish of Inverary, intersected by the **ARAY**: which see.

GLENARCLET, a valley in the parish of Buchanan, in Stirlingshire: see **LOCH-ARCLET**.

GLENARTNEY, a valley along the southern confines of the parish of Comrie, Perthshire, traversed by Artney and Ruchill waters. At its west end, toward the point of its being closed up by Ben-vorlich, is a preserve of some hundreds of red deer belonging to Lord Willoughby de Eresby. In its lower or eastern part, as it approaches a convergence of glens at the village of Comrie, it gives to the view a succession of interesting landscapes. Along its north side anciently spread a royal forest,—the scene of that chastisement upon some M'Gregors, by the forester of James VI., which led to the clan making reprisals, and to their notable outlawry.

GLENAVEN. See **THE AVEN**.

GLENBANCHOR, a beautiful glen in Badenoch, in the parish of Kingussie, watered by the Calder, a stream which joins the Spey about 3 miles west of the inn of Pitmain.

GLENBEG, a district in Inverness-shire, in the

parish of Glenelg, and the smaller of the two valleys to which the name Glenelg belongs in common.

GLENBERVIE, anciently termed **OVERBERVIE**, a parish in the county of Kincardine, which takes its name from its local situation, being a vale or glen through which the water Bervie runs. It is bounded on the north by Durris; on the east by Dunottar and Fetteresso; on the south by Arbuthnot; and on the west and part of the south by Fordoun. It is about 6½ miles in length from north to south, and 5 in breadth from east to west: containing 13,963 English acres. Houses 267. Assessed property, in 1815, £3,188. Population, in 1801, 1,204; in 1831, 1,248. The soil, in the upper part of the parish, is a blue clay, and in the lower, a light dry loam, abundantly fertile. The western division being considerably elevated, is bleak and little cultivated; but the eastern, though also high and exposed, is in an advanced, and even still improving, state of cultivation: so also is the northern quarter along a low ridge of the Grampians. The rest of the parish is principally heath, pasture-land, and copse, with a secluded glen. In all, there are not more than 5,000 imperial acres in a state of cultivation, though many more might be added: nearly 200 acres are planted. It is now many years since the estates, then of Lord Monboddo and Barclay of Urie, in this parish, were put in the way of agricultural improvement. The Bervie rises in the hills to the north-west of Glenbervie, and runs rapidly south-eastward through the parish. The Cowie rises on the north side of this parish, and runs eastward into Fetteresso: there are no other streams worthy of notice, except perhaps the Carron, a small streamlet, running eastward from the brae hills of Glenbervie to the valley between Dunottar and Fetteresso. The nearest market-town is Stonehaven. Drumlithie is a considerable manufacturing village on the line of road from Laurencekirk to Stonehaven: it is chiefly inhabited by linen weavers. There is here an Episcopalian chapel. The small kirk-town, or village of Glenbervie has been created a barony in the family of Douglas.—The parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, Nicolson of Glenbervie. Stipend £231 3s. 3d.; glebe £7 5s. Schoolmaster's salary £30: fees, &c., £20. There are three private schools, two friendly societies, and a savings' bank in the parish.

GLENBRAUN, a valley in Inverness-shire, in the united parishes of Abernethy and Kincardine.

GLENBRIARCHAN, a valley in Perthshire, in the parish of Moulin: which see.

GLENBUCK, a village in the parish of Muirkirk, district of Kyle, Ayrshire. It stands in a wild and secluded situation among the mountains, near the road between Ayr and Edinburgh. Some iron-works in its vicinity, erected and for some time carried on by an English company, occasioned its being built for the housing of the miners. But the works having, a considerable period ago, been abandoned, the village has been falling into decay.

GLENBUCKET, a small Highland parish in the district of Marr, Aberdeenshire, lying on both sides of the Bucket, a stream tributary to the Don. It is bounded on the north by Cabrach; on the east by Towie; on the south by Strathdon; and on the west by part of Banffshire. It is about 4 miles in length, from east to west, and 1 in breadth, from north to south, exclusive of the mountain ranges. Houses 109. Assessed property, in 1815, £625. Population, in 1801, 420; in 1831, 539. This parish is almost surrounded by, and indeed consists of, lofty mountains, through which a narrow pass leads into the centre, from the east, at the confluence of the

Bucket with the Don, near the ruinous castle of Glenbucket, which thus stands in a commanding and romantic situation. Craigscore, the highest land in the parish, rises about 2,000 feet above sea-level. The soil is mostly a light loam, mixed, on some farms, with clay. There is great abundance of excellent limestone, which is much used by the tenants. The whole parish belongs to the Earl of Fife. The remains of a house are still to be seen, called Badenyon, which gives name to the song of 'John of Badenyon.' A porter's lodge was built, in 1840, by the Earl of Fife, on this celebrated spot. Among the wild animals which frequent this vicinity, are the roe and the red deer: there is abundance of game of all kinds, with hawks, eagles, &c., and salmon and trout are found in the Bucket and the Don. The parish is in the presbytery of Alford, and synod of Aberdeen. Patron, the Crown. Stipend £158 6s. 8d.; glebe £7. Schoolmaster's salary £30; fees, &c. £6. There is a private school. Aberdeen, distant 30 miles, is the post-town.

GLENCAIRN, a parish in the western part of the district of Nithsdale, Dumfries-shire. Excepting that the sides of it are ragged, and that on the south-west somewhat deeply indented, its figure is a triangle, whose longest side stretches from north-west to south-east. This parish is bounded on the north-east, or opposite to its greatest angle, by Tynron and Keir; on the south-west by Dunscore; and on the west by Kirkcudbrightshire. It measures, in extreme length, from Black-hill in the north-west to Gordon's town in the south-east, $12\frac{1}{2}$ miles; and in extreme breadth, from Waulk-hill in the east to Castlephairn in the west, $6\frac{1}{2}$ miles; but over $3\frac{1}{2}$ miles from its north-western extremity, it has an average breadth of no more than 2 miles; and, over $3\frac{1}{2}$ miles from its south-eastern extremity, of not more than $1\frac{1}{2}$ miles; and it is conjectured to contain about 44 square miles. All the western and the northern divisions are mountainous and pastoral. One lofty range runs along great part of the western boundary, and for a considerable way forms the water-line between the streams respectively of Dumfries-shire and of Galloway; another high range runs along two-thirds of the north-eastern boundary; a third lofty range, intermediate between the others, comes down from the northern angle, and runs along the centre of the parish through almost its entire length; and the last, both before and after the first range ceases to interpose between the Galloway and the Dumfries-shire waters, sends off spurs which run transversely from it to the eastern boundary. The higher summits rise from 1,000 to 1,500 feet above the level of the sea, and are, for the most part, covered with heath. Yet the hills, which are principally of the transition class of rocks, and wearing its characteristic exterior appearances, afford in general excellent pasturage. Three valleys coming down between the mountain-ranges,—one from the north, one from the west, and one from the south-west, each about 6 miles in length, and all well-cultivated, luxuriant, and sheltered with plantation,—meet at the village of Minnyhive, and thence send off south-eastward a broader and still richer valley, beautiful and brilliant in the attractions of landscape, to the extremity of the parish. The three valleys are traversed by the streams DALWHAT, [which see,] CRAIGDARROCH, and Castlephairn, which unite at Minnyhive, and form the CAIRN [which see]; and the great valley is traversed through all its length by the united streams. The Craighdarroch rises in Auchenstrowan hill on the western boundary, and within three miles of its source receives several tributary mountain-rills. The Castlephairn—sometimes called the Cairn, and thus prematurely wearing the

honours which are contributed by the Craighdarroch and the Dalwhat*—comes in upon the parish from Kirkcudbrightshire, after having run a course of 4 miles from Loch-Howie, in the parish of Balmacellan, forms for $1\frac{1}{4}$ mile the boundary-line with Kirkcudbrightshire, and afterwards, in its meanderings along the valley, everywhere flows between wooded banks. In the south-west extremity of the parish is LOCH URR: which see. One-fifth of the whole area of the parish is arable; 800 acres are under plantation; and all the rest is pastoral or waste. A slate-quarry was for some time energetically worked; but, eventually yielding produce of inferior quality, it was abandoned.—About half-a-mile from the church is a tumulus or artificial mount, commonly called the Moat, very steep, of considerable height, and occupying about an acre of ground. It is of an oblong form, and has at each end an earthen turret cut off from the main body by a deep trench. One of the turrets, and one side of the base of the tumulus, have been much reduced in bulk by the aggressive movements of a passing rivulet. Of many traditions and conjectures respecting the original design of the Moat, the most probable is, that it was constructed either to be a watch-post, or to serve as an arena for the exercise of archery.—The Rev. James Renwick, the last of the Scottish martyrs, and a conspicuous actor in some of the most hallowed, and also in some of the most tumultuous and daring proceedings of the Covenanters, was a native of Glencairn; and is commemorated by a monument of hewn stone and about 25 feet high, erected, in 1828, near the supposed spot of his nativity, on an eminence less than $\frac{1}{4}$ of a mile from Minnyhive.—The principal mansions are Maxwellton, Craighdarroch, Auchenchain, and Crawfordton. The two villages MINNYHIVE and DUNREGGAN [which see], stand compactly on the Dalwhat, a little eastward of the centre of the parish, and are connected by a bridge. The roads of the parish, which all run along its valleys, but leave a district in the north-west unprovided with any facility of communication, all converge at the villages. Population, in 1801, 1,403; in 1831, 2,068. Houses 376. Assessed property, in 1815, £8,748.—Glencairn is in the presbytery of Penpont, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £279 15s. 10d.; glebe £18. Unappropriated tithes £279 15s. 10d. There are three parochial schools, and two non-parochial. Salary of the first parochial schoolmaster £25 13s. 4d.; of the second £17 2s. 2½d.; of the third £8 11s. 1d. The school-fees amount respectively to £20, £20, and £14. The parish-church is very spacious, and of quite recent erection. In Minnyhive is a meeting-house belonging to the United Secession. The church of Glencairn anciently belonged to the bishops or chapter of Glasgow. In the valley of the Castlephairn, at a place still called Kirkcudbright—a modernized orthography of "Kirk-Cuthbert"—there was an ancient church dedicated to St. Cuthbert.—Glencairn gave the title of Earl to an ancient branch of the family of Cunningham. Alexander, the 1st

* The Cairn is probably more vexed than any other Scottish stream, and more vexing in its turn, by the doubtful extent of the application of its name. In no part of its course, except between Minnyhive and the point where it leaves Glencairn, is its name disputed. Previous to the confluence of streams in the centre of Glencairn, what is sometimes called the Cairn, and, in strict propriety, undoubtedly is such, figures in topographical nomenclature as the Castlephairn; and after the confluence of the Cairn and the Genesland, in the parish of Dunscore, at a point $\frac{1}{4}$ of a mile south of the boundary of Glencairn, the united stream very generally begins to be called onward to its union with the Nith, the Cluden. Nomenclature thus provides three rivers in a locality where geography exhibits only one. Similar examples occur not infrequently in other parts of Scotland, but are less liable than that of the Cairn to produce mistake.

Earl, was ennobled, first as Lord Kilmaurs, and next as Earl of Glencairn, by James II. Alexander, the 5th Earl, figures illustriously in the history of the Reformation. James, the 14th Earl, is familiar to a large class of Scotsmen as the patron of the poet Burns. John, the 15th Earl, and brother of James, died in 1796, and left his noble title to go a-begging for want of an inheritor.

GLENCAPLE, a village and port delightfully situated on the east bank of the Nith; 5 miles below Dumfries, in the parish of Caerlaverock, Dumfriesshire. Its entire aspect is modern, tidy, and cheerful. A road, combining the attractions of the avenue, and exhibitions of rich and joyous scenery, stretches down to it along the Nith from Dumfries, and brings many a vehicle and group of pedestrian tourists from the gay burgh to enjoy its balmy air, and luxuriate in the landscapes around it. Nearly opposite to it, on the Kirkcudbrightshire side of the river, and accessible by fording at low water, are the beautiful ruins and circumjacent scenery of **NEW ABBEY**. Six miles to the south-west rises the dark fine form of the monarch-mountain **CRIFFEL**. Two-and-a-half miles to the south-east are the deeply-interesting ruins of **CAERLAVEROCK CASTLE**. [See those articles.] All around are objects, both in landscape and in antiquarian reminiscence, which make Glencaple a seaward retreat from the cares and bustle of a town, which Dumfries may boast as superior to that enjoyed by almost any other large town in Scotland. One attraction of no mean order occurs nowhere else in Scotland, or even in the world, except at kindred places on the Solway. The channel of the Nith is here $\frac{3}{4}$ of a mile wide, and exhibits in superlative fullness those wondrous features for which the tides of the Solway are famed. "During spring-tides," says Mr. M'Diarmid, "and particularly when impelled by a strong south-wester, the Solway rises with prodigious rapidity. A loud booming noise indicates its approach, and is distinguishable at the distance of several miles. At Caerlaverock and Glencaple, where it enters the Nith, the scene is singularly grand and imposing; and it is beautiful to see a mighty volume of water advancing foam-crested, and with a degree of rapidity which, were the race a long one, would outmatch the speed of the swiftest horses. The tide-head, as it is called, is often from 4 to 6 feet high chafed into spray, with a mighty trough of bluer water behind, swelling in some places into little hills, and in others scooped into tiny valleys which, when sun-lit, form a brilliant picture of themselves. From the tide-head proceed two huge jets of water which run roaring along, searching the banks on either side,—the antennæ, as it were, which the ocean puts forth, and by which it feels its way, when confined within narrow limits." Intimate knowledge of the peculiar navigation is requisite to guide vessels at the recess and influx of so unwonted a tide; and instances have occurred at Glencaple and its vicinity of masters acquainted from their youth with the Solway having suffered their vessels to be wildly played with by the careering invader, and even tripped fairly over and laid on their beam-ends.—The trade of Glencaple is strictly identified with that of Dumfries; the port being simply a place for such vessels discharging their cargoes as draw too much water, or are too unwieldy, to sail up to the burgh. Considerable stir, in consequence, occurs from the necessity of further transference by carriers. A splendid steamer plies regularly between Glencaple and Liverpool, clearing the Solway in one tide; and, on sailing days, she draws from Dumfries a busy throng of vehicles filled with passengers and their friends. Ship-building is carried on to the extent of annually

preparing for the launch, on the average, two vessels of 60 or 70 tons burden.

GLENCARREL, a valley in Sutherlandshire, near Glenalot.

GLENCOE, a wild and gloomy vale in the district of Lorn, in Argyleshire, near the head of Loch-Etive; extending from Ballachulish in a south-east direction 10 miles. It lies in the united parishes of Lismore and Appin. "The scenery of this valley," says a local authority quoted by Pennant, "is far the most picturesque of any in the Highlands, being so wild and uncommon that it never fails to attract the eye of every stranger of the least degree of taste or sensibility. The entrance to it is strongly marked by the craggy mountain of Buachal-ety, a little west of the King's house. All the other mountains of Glencoe resemble it, and are evidently but naked and solid rocks, rising on each side perpendicularly to a great height from a flat narrow bottom, so that in many places they seem to hang over, and make approaches, as they aspire, towards each other. The tops of the ridge of hills on one side are irregularly serrated for three or four miles, and shot in places into spires, which form the most magnificent part of the scenery above Ken-Loch-[Ceann-loch] Leven." "There is no valley in Scotland," says another authority, "so absolutely wild and singular in its features as Glencoe, in the district of Appin, Argyleshire. Entering the glen from the eastern extremity, the mountains rise in stupendous masses all around, forming an amphitheatre, vast in extent, and preserving a stillness and solemnity almost terrific, which is heightened by the desolate appearance of the vale; and, perchance, the hollow scream of a solitary eagle may excite a temporary feeling of horror. The bare rocks immediately in front shoot up perpendicularly, while those more distant appear in an innumerable variety of fantastic forms; and their singularity is increased with the deep furrows worn by the winter-torrents from the top of the mountains. Immense masses of rock are also seen near the path through the glen, which, in the course of ages, have been loosened from the side of the mountain, and hurled along with the currents of rain to the depth of the glen. In length, Glencoe is nearly 9 miles, without the least appearance of any human habitation, or even vegetation to support a few tame animals connected with the most humble household. Its general appearance has a strong tendency to excite a feeling, that the place has been proscribed by Heaven as the habitation either of man or beast."

Amid this vast, tremendous solitude,
Where nought is heard except the wild wind's sigh,
Or savage raven's deep and hollow cry,
With awful thought the spirit is imbued!
Around—around for many a weary mile,
The Alpine masses stretch, the heavy cloud
Cleaves round their brows, concealing with its shroud
Riak, barren rocks, or thawed by Summer's smile.
Nought but the desert mountains and lone sky
Are here!—birds sing not, and the wandering bee
Searches for flowers in vain; nor shrub, nor tree,
Nor human habitation greets the eye
Of heart-struck pilgrim; while around him lie
Silence and desolation, what is he!

The road from Ballachulish through this glen is carried along the edge of Loch-Leven about two or three miles, with numerous indentures. "In many places, where it has been blasted out of the perpendicular rock, a parapet, on the side next the water, renders it perfectly secure. The tide here, though it has, in fact but one inlet, seems to insinuate itself between the openings of several lofty mountains, running in different directions. Such a circumstance is the most favourable thing for picturesque effect which can happen to a watery expanse; and consequently lakes of this description are

always more striking than those which flow between straight mountain-ridges. Here are three separate groups, each of the second altitude of Scottish Alps, and forming successively Corry-yusachan, Glenoe, and Glencoe. The landscape is continually varied, by cottages, by the great slate-work of Balachulish, by a lime-kiln, and various other objects on the wayside; by the islands in the lake; and by the woods and residences at the base of the mountains. At the point where the river Coe joins the lake is Invercoe. The old house, the scene of the infamous massacre, is at a little distance, a perfect ruin. It is an object which cannot be beheld without a horror which is heightened by the solemn majesty of the surrounding scene. Our contemplations of human vice and weakness, however melancholy in themselves, receive a tinge of dignity when they are associated with the grand features of Nature; and even the indignation which we feel at the murder of the MacDonalds, is tranquillized by the sublime scenery of Glencoe. Not that the impression is therefore weakened. It sinks deeper into the mind: and that which might otherwise be a passing emotion, becomes a fixed and serious habit. The particulars of this detestable event are too well-known to need repetition; but the lesson which it inculcates is too important to be forgotten. May it never be addressed to our feelings in vain! The head of Loch-Leven is excluded from view by Scurachie; and the road quitting its banks, turns on the right, to Glencoe, the entrance of which I shall describe in the words of my friend Walker, who preceded me in this part of the tour. 'After riding two or three miles,' says he, 'up the glen, I was disappointed by the scenery, which, though on a bold scale, was nothing very different from what I had seen in other Highland valleys; and I inquired of a man, who was mending the road, whether the glen grew wilder as I proceeded. 'Indeed,' said he, 'it grows aye the langer the waur.' I therefore moved on, and had gone but a very little further, when the sun was suddenly eclipsed by a mountain. As it was about ten o'clock in the morning of the 5th of September, and as I was at a very considerable distance from the base of the hill, its height and steepness may be easily conceived. Its face was wholly of rock, almost literally perpendicular: and it rose, like a huge black wall, from the margin of a small lake formed by the river. While I was gazing at this object, proceeding slowly, and getting more abreast of a narrow opening between this and a nearer hill, a pointed rock, which rose to a height far beyond both, came gradually into view. It seemed to lean forward, to the opening of the glen, and having a round patch of snow on its front, looked like a one-eyed Cyclops, bending from an embrasure in this gigantic rampart. The beauty of the lake, and of a pretty fall on the river, were hardly to be noticed after objects on so grand a scale.' Entering here the narrow part of the glen which bends eastward, you behold, on both sides, mountains of naked crags shooting up to the skies in the wildest and most terrific forms; which, when the thick curtain of mist from above is let down upon them, seem to form the barrier to a gloomy region of everlasting night. Through this glen, the high road to Tayndrum is led, and is, for the most part, tolerably perfect; but it cannot be kept so, without very considerable trouble in removing the vast torrents of stone which are continually brought down by the tempests, spreading, as they descend, to the width of 300 yards, or more. In wet weather, also, the mountain-precipices form one continued cataract, the water pouring, in every direction, down their rifts. Such a road, it may be imagined, cannot easily be travelled in a carriage;

yet I have known ladies who have passed through it in a chaise, at night, during a tremendous storm of thunder and lightning. In no other part of Britain have I ever seen mountain-summits so wholly consisting of bare crags, as here. Even the herdsmen, and hunters, who are best acquainted with them, find it frequently difficult and dangerous to follow the straying sheep or wild roe-buck. I knew one gentleman who, in pursuit of his game, had advanced so far on one of the highest ridges, that he could only creep backward on his hands and knees, without turning his body. Another, of whom I heard, had a more miraculous escape. He was met, in one of the narrowest passes, by an old blind deer, with which, not being able to turn it back, he struggled, until they both fell together, several hundred feet down the rocks. Stunned by the concussion, he did not recover for some hours; but when he opened his eyes, he found the deer, which had broken his fall, lying dead under him. Mr. Wordsworth—one of the few poets of modern days who deign to consult Nature—has beautifully touched on those accidents, to which a mountainous country is peculiarly liable, in the 'Brothers,' a local eclogue, of a new and original species. The subject of that interesting poem is not unlike an event which happened here a little before my arrival. A young girl, the only daughter of her parents, and generally beloved by her companions, incautiously hastening after a lamb, down a declivity, wet with the morning dew, and consequently slippery, missed her footing, and was instantly dashed to pieces on the rocks. There is a degree of juvenile ambition, sharpened by curiosity, which often prompts one to scale these seemingly inaccessible cliffs. About the middle of the glen, at a great height, in the face of a mountain, is a yawning chasm, of between 200 and 300 feet. It forms a vast cave, of which the country-people relate wonders, though I could not learn with certainty that any person had ever explored it. A guide, therefore, was useless; a companion might only have been troublesome; and without expecting to reach it, I ascended alone, with the hope of getting a nearer view of the crags by which it is formed. After some hours of painful and persevering toil, I climbed beyond the height to which sheep go in search of food, and was on the highest border of vegetation: all beyond was bare rock; but, alas! the cave was still some hundred feet above me; and I reaped nothing, but the satisfaction of viewing this wonderful glen, from a point in which it has been contemplated by few travellers, and of learning experimentally the magnitude of those great rifts which from below appear to be mere roughnesses in the face of the rock. The pencil can give but an inadequate idea of objects so immense and savagely grand. The finer features—for even amidst Nature's mightiest works are frequently found traces of the minutest beauty—the finer features afford subjects for many a partial sketch, which the artist may seek, at his leisure, among the dells and chasms. Between some of the mountains are woody passes, communicating with other glens. Through them descend burns, forming fine cascades, and pouring their waters into rocky basins and hidden pools. Near one of these we sat to eat some refreshment, provided for us by the care of Mrs. Stewart, in a quiet, close scene of the most romantic nature. On one hand was a waterfall sparkling in the sun; on the other, its stream flowed deep, and still, between those rocks which overshadowed us, and formed our seat and table; whilst above them appeared the lofty mountain-tops, awfully grand and sublime." [Stoddart's 'Remarks,' vol. ii. pp. 26—32.] A chapel in connexion with the Establishment has recently been built in Glencoe.

Glencoe has acquired a mournful historical celebrity by the cruel massacre of its unsuspecting inhabitants, in 1691. King William had published a proclamation, inviting the Highlanders who had been in arms for James II. to accept of a general amnesty before the 1st of January, on pain of military execution after that period. In common with the other chiefs who had supported the cause of King James, Mackean or Alexander Macdonald of Glencoe resolved to avail himself of the indemnity offered by the Government; and accordingly proceeded to Fort-William to take the required oaths, where he arrived on the 31st day of December, 1691, being the last day allowed by the proclamation for taking the oaths. He immediately presented himself to Colonel Hill, the governor of Fort-William, and required him to administer the oath of allegiance to the Government; but the colonel declined to act, on the ground, that under the proclamation the civil magistrate alone could administer them. Glencoe remonstrated with Hill on account of the exigency of the case, as there was not any magistrate whom he could reach before the expiration of that day, but Hill persisted in his resolution. He, however, advised Glencoe to proceed instantly to Inverary, and gave him a letter to Sir Colin Campbell of Ardkinlass, sheriff of Argyleshire, begging of him to receive Glencoe as "a lost sheep," and to administer the necessary oaths to him. Hill, at the same time, gave Glencoe a personal protection under his hand, and gave him an assurance that no proceeding should be instituted against him under the proclamation, till he should have an opportunity of laying his case before the King or the Privy-council. Glencoe left Fort-William immediately, and so great was his anxiety to reach Inverary with as little delay as possible, that although his way lay through mountains almost impassable, and although the country was covered with a deep snow, he proceeded on his journey without even stopping to see his family, though he passed within half-a-mile of his own house. At Barcaldine he was detained twenty-four hours by Captain Drummond. On arriving at Inverary, Sir Colin Campbell was absent, and he had to wait three days till his return, Sir Colin having been prevented from reaching Inverary sooner, on account of the badness of the weather. As the time allowed by the proclamation for taking the oaths had expired, Sir Colin declined at first to swear Glencoe, alleging that it would be of no use to take the oaths; but Glencoe having first importuned him with tears to receive from him the oath of allegiance, and having thereafter threatened to protest against the sheriff should he refuse to act, Sir Colin yielded, and administered the oaths to Glencoe and his attendants on the 6th of January. Glencoe, thereupon, returned home in perfect reliance that having done his utmost to comply with the injunction of the Government, he was free from danger.

Three days after the oaths were taken, Sir Colin wrote Hill, acquainting him of what he had done, and that Glencoe had undertaken to get all his friends and followers to follow his example; and about the same time he sent the letter which he had received from Hill, and a certificate that Glencoe had taken the oath of allegiance, together with instructions to lay the same before the Privy-council, and to inform him whether or not the council received the oath. The paper on which the certificate that Glencoe had taken the oaths was written, contained other certificates of oaths which had been administered within the time fixed, but Sir Gilbert Elliot, the clerk of the Privy-council, refused to receive the certificate relating to Glencoe as irregular. Campbell, thereupon, waited upon Lord Aberuchil, a privy-

councillor, and requested him to take the opinion of some members of the council, who accordingly spoke to Lord Stair and other privy-councillors; all of whom gave an opinion that the certificate could not be received without a warrant from the King. Instead, however, of laying the matter before the Privy-council, or informing Glencoe of the rejection of the certificate, that he might petition the King, Campbell perfidiously defaced the certificate, and gave in the paper on which it was written to the clerks of the council.* That no time, however, might be lost in enforcing the penalties in the proclamation, now that the time allowed for taking the oath of allegiance had expired, instructions of rather an equivocal nature, signed and countersigned by the King on the 11th of January, were sent down by young Stair to Sir Thomas Livingston on the same day, enclosed in a letter from the secretary of same date. By the instructions, Livingston was ordered "to march the troops against the rebels who had not taken the benefit of the indemnity, and to destroy them by fire and sword;" but lest such a course might render them desperate, he was *allowed* to "give terms and quarters, but in this manner only, that chieftains and heritors, or leaders, be prisoners of war, their lives only safe, and all other things in mercy, they taking the oath of allegiance; and the community taking the oath of allegiance, and rendering their arms, and submitting to the government, are to have quarters, and indemnity for their lives and fortunes, and to be protected from the soldiers." As a hint to Livingston how to act under the discretionary power with which these instructions vested him, Dalrymple says in his letter containing them: "I have no great kindness to Keppoch nor Glencoe, and it is well that people are in mercy, and then just now my Lord Argyle tells me that Glencoe hath not taken the oath, at which I rejoice. It is a great work of charity to be exact in rooting out that damnable sect, the worst of the Highlands." The purport of this letter could not be misunderstood; but lest Livingston might not feel disposed to imbrue his hands in the blood of Glencoe and his people, additional instructions bearing the date of 16th January, and also signed and countersigned by King William, were despatched to Livingston by the master of Stair, ordering him to extirpate the whole clan.† In the letter containing

* Whether in thus acting, Campbell was influenced by Sir Dalrymple, who has obtained an infamous notoriety by the active part which he took in bringing on the massacre of Glencoe, it is impossible to say; but it is not improbable that this man—who, a few weeks before, had exulted that as the winter was the only season in which the Highlanders could not escape, they could easily be destroyed "in the cold long nights"—was not an indifferent spectator to Campbell's proceedings. In fact, it appears that the secretary contemplated the total extirpation of the clans, for, in a letter to Sir Thomas Livingston, dated the 7th of January, he says: "You know in general that these troops posted at Inverness and Inverlochie, will be ordered to take in the house of Invergarie, and to destroy entirely the country of Lochaber, Lochiel's lands, Keppoch's, Glengarie's, and Glencoe," and he adds, "I assure you your power shall be full enough, and I hope the soldiers will not trouble the Government with prisoners." In another letter to Sir Thomas, written two days thereafter, by which the accounts had reached him that Glencoe had taken the oaths, he expresses satisfaction that "the rebels" would not be able to oppose his designs, and as their chieftains were "all papists," he thinks it would be well that vengeance fell upon them. The Macdonalds were chiefly marked out by him for destruction, and after saying that he could have wished that they "had not divided" on the question of taking the oath of indemnity, he expresses his regret to find that Keppoch and Glencoe were safe.

† These instructions are as follow:

WILLIAM R. 16th January, 1692.
1. The copy of the paper given by Macdonald of Aughtera to you has been shown us. We did formerly grant passes to Buchanan and Cannon, and we do authorize and allow you to grant passes to them, and ten servants to each of them, to come freely and safely to Leith; from that to be transported to the Netherlands before the 15th of March next, to go from thence where they please, without any step or trouble.

these instructions, Dalrymple informs Livingston that "the king does not at all incline to receive any after the diet but in mercy," but he artfully adds, "but for a just example of vengeance, I entreat the thieving tribe of Glencoe may be rooted out to purpose." Lest, however, Livingston might hesitate, a duplicate of these additional instructions was sent at the same time by Secretary Dalrymple to Colonel Hill, the governor of Fort-William, with a letter of an import similar to that sent to Livingston.*

Preparatory to putting the butchering warrant in execution, a party of Argyle's regiment, to the number of 120 men, under the command of Captain Campbell of Glenlyon, was ordered to proceed to Glencoe, and take up their quarters there, about the end of January or beginning of February. On approaching the glen, they were met by John Macdonald, the elder son of the chief, at the head of about twenty men, who demanded from Campbell the reason of his coming into a peaceful country with a military force: Glenlyon, and two subalterns who were with him, explained that they came as friends, and that their sole object was to obtain suitable quarters, where they could conveniently collect the arrears of cess and hearth-money—a new tax laid on by the Scottish parliament in 1690—in proof of which, Lieutenant Lindsay produced the instructions of Colonel Hill to that effect. The officers having given their parole of honour that they came without any hostile intentions, and that no harm would be done to the persons or properties of the chief and his tenants, they received a kindly welcome, and were hospitably entertained by Glencoe and his family till the fatal morning of the massacre. Indeed, so familiar was Glenlyon, that scarcely a day passed that he did not visit the house of Alexander Macdonald, the younger son of the chief, who was married to his niece, and take his "morning drink," agreeably to the most approved practice of Highland hospitality. If Secretary Dalrymple imagined that Livingston was disinclined to follow his instructions he was mistaken; for immediately on receipt of them, he wrote Lieutenant-colonel Hamilton, who had been fixed upon by the secretary to be the executioner, expressing his satisfaction that Glencoe had not taken the oath within the period prescribed, and urging him now that a "fair occasion" offered for showing that his garrison served for some use, and as the order to him from the court was positive, not to spare any that had not come timeously in, and desiring that he would begin with Glencoe, and spare nothing of what belongs to them, "but not

to trouble the government with prisoners," or in other words, to massacre every man, woman, and child. Hamilton, however, did not take any immediate steps for executing this inhuman order. In the meantime, the master of Stair was not inactive in inciting his blood-hounds to the carnage, and accordingly on the 30th of January he wrote two letters, one to Livingston, and the other to Hill, urging them on. Addressing the former, he says: "I am glad Glencoe did not come in within the time prefixed; I hope what is done there may be in earnest, since the rest are not in a condition to draw together help. I think to harry (plunder) their cattle, and burn their houses, is but to render them desperate lawless men to rob their neighbours, but I believe you will be satisfied, it were a great advantage to the nation that thieving tribe were rooted out and cut off; it must be quietly done, otherwise they will make shift for both their men and their cattle. Argyle's detachment lies in Lelrickweel, to assist the garrison to do all of a sudden." And in his letter to Hill, he says: "Pray, when the thing concerning Glencoe is resolved, let it be secret and sudden, otherwise the men will shift you, and better not meddle with them than not to do it to purpose, to cut off that nest of robbers who have fallen in the mercy of the law, now when there is force and opportunity, whereby the king's justice will be as conspicuous and useful as his clemency to others. I apprehend the storm is so great that for some time you can do little, but so soon as possible I know you will be at work, for these false people will do nothing, but as they see you in a condition to do with them."

In pursuance of these fresh instructions from the secretary, Hill, on the 12th of February, sent orders to Hamilton, forthwith to execute the fatal commission, who, accordingly, on the same day, directed Major Robert Duncanson of Argyle's regiment to proceed immediately with a detachment of that regiment to Glencoe, so as to reach the post which had been assigned him by five o'clock the following morning, at which hour Hamilton promised to reach another post with a party of Hill's regiment. Whether Duncanson was averse to take an active personal part in the bloody tragedy about to be enacted, is a question the solution of which would neither aggravate nor extenuate his guilt as a party to one of the foulest murders ever perpetrated in any age or country; but the probability is, that he felt some repugnance to act in person, as immediately on receipt of Hamilton's order, he despatched another order from himself to Captain Campbell of Glenlyon, then living in Glencoe, with instructions to fall upon the Macdonalds precisely at five o'clock the following morning, and put all to the sword under seventy years of age. Campbell was a man fitted for every kind of villany, a monster in human shape, who, for the sake of lucre, or to gratify his revenge, would have destroyed his nearest and dearest friend; and who, with consummate treachery,

"Could smile, and murder while he smiled."

With this sanguinary order in his pocket, he accordingly did not hesitate to spend the eve of the massacre at cards with John and Alexander Macdonald, the sons of the chief, to wish them good night at parting, and to accept an invitation from Glencoe himself to dine with him the following day, although he had resolved to imbrue his hands in the blood of his kind-hearted and unsuspecting host, his sons, and utterly to exterminate the whole clan within a few hours! Little suspecting the intended butchery, Glencoe and his sons retired to rest at their usual hour; but early in the morning, while the prepara-

2. We do allow you to receive the submissions of Glenarry and those with him upon their taking the oath of allegiance and delivering up the house of Invergarry; to be safe as to their lives, but as to their estates to depend upon our mercy.

3. In case you find that the house of Invergarry cannot probably be taken in this season of the year, with the artillery and provision you can bring there; in that case we leave it to your discretion to give Glenarry the assurance of entire indemnity for life and fortune, upon delivering of the house and arms, and taking the oath of allegiance. "In this you are to act as you find the circumstances of the affair do require; but it were much better that those who have not taken the benefit of our indemnity, in the terms within the diet prefix by our proclamation, should be obliged to render upon mercy. The taking the oath of allegiance is indispensable, others having already taken it."

4. If M'Ean of Glenco and that tribe can be well separated from the rest, it will be a proper vindication of the public justice to extirpate that set of thieves. The double of these instructions is only communicated to Sir Thomas Livingston.

W. REX.

* From the following extract it would appear that not only the Earl of Breadalbane, but also the Earl of Argyle, was privy to this infamous transaction. "The Earls of Argyle and Breadalbane have promised that they (the Macdonalds of Glencoe) shall have no retreat in their bounds, the passes to Rannoch Weems be secured, and the hazard certified to the laird of a party that may be posted in Island-Stalker must cut them off."

tions for the intended massacre were going on, John Macdonald, the elder son of the chief, hearing the sound of voices about his house, grew alarmed, and jumping out of bed threw on his clothes, and went to Inveriggen, where Glenlyon was quartered, to ascertain the cause of the unusual bustle which had interrupted his nocturnal slumbers. To his great surprise he found the soldiers all in motion, as if preparing for some enterprise, a circumstance which induced him to inquire at Captain Campbell the object of such extraordinary preparations at such an early hour. The anxiety with which young Macdonald pressed his question, indicating a secret distrust on his part, Campbell endeavoured by professions of friendship to lull his suspicions, and pretended that his sole design was to march against some of Glengarry's men. As John Macdonald, the younger son of Glencoe, was married to Glenlyon's niece, that crafty knave referred to his connexion with the family of Glencoe, and put it to the young man, whether, if he intended any thing hostile to the clan, he would not have provided for the safety of his niece and her husband. Macdonald, apparently satisfied with this explanation, returned home and retired again to rest, but he had not been long in bed when his servant, who, apprehensive of the real intentions of Glenlyon and his party, had prevented Macdonald from sleeping, informed him of the approach of a party of men towards the house. Jumping immediately out of bed he ran to the door, and perceiving a body of about twenty soldiers with muskets and fixed bayonets coming in the direction of his house, he fled to a hill in the neighbourhood, where he was joined by his brother Alexander, who had escaped from the scene of carnage; after being wakened from sleep by his servant.

The massacre commenced about five o'clock in the morning at three different places at once. Glenlyon, with a barbarity which fortunately for society has few parallels, undertook to butcher his own hospitable landlord and the other inhabitants of Inveriggen, where he and a party of his men were quartered, and despatched Lieutenant Lindsay with another party of soldiers to Glencoe's house to cut off the unsuspecting chief. Under the pretence of a friendly visit he and his party obtained admission into the house. Glencoe was in bed, and while in the act of rising to receive his cruel visitors, he was basely shot at by two of the soldiers, and fell lifeless into the arms of his wife. One ball entered the back of his head, and another penetrated his body. The lady, in the extremity of her anguish, leapt out of bed and put on her clothes, but the ruffians stripped her naked, pulled the rings off her fingers with their teeth, and treated her so cruelly that she died the following day. The party also killed two men whom they found in the house, and wounded a third, named Duncan Don, who came occasionally to Glencoe with letters from Braemar. While the butchery was going on in Glencoe's house, Glenlyon was busily pursuing the same murderous course at Inveriggen, where his own host was shot by his order. Here the party seized nine men, whom they first bound hand and foot, after which they shot them one by one. Glenlyon was desirous of saving the life of a young man about twenty years of age, but one Captain Drummond shot him dead. The same officer, impelled by a thirst for blood, ran his dagger through the body of a boy who had grasped Campbell by the legs, and who was supplicating for mercy. Glenlyon's party carried their cruelty even so far as to kill a woman, and a boy only four or five years old. A third party, under the command of one Sergeant Barker, which was quartered in the village of Auchnaion, fired upon a body of nine men whom they observed in a house

in the village sitting before a fire. Among these was the laird of Auchintrincken, who was killed on the spot, along with four more of the party. This gentleman had at the time a protection in his pocket from Colonel Hill, which he had received three months before. The remainder of the party in the house, two or three of whom were wounded, escaped by the back of the house, with the exception of a brother of Auchintrincken, who having been seized by Barker, requested him, as a favour, not to despatch him in the house, but to kill him without. The sergeant consented, because, as he said, he had experienced his kindness; but when brought out he threw his plaid, which he had kept loose, over the faces of the soldiers who were appointed to shoot him, and also escaped. Besides the slaughter at these three places, there were some persons dragged from their beds and murdered in other parts of the glen, among whom was an old man of eighty years of age. Between thirty and forty of the inhabitants of the Glen were slaughtered, and the whole male population, under seventy years of age, amounting to two hundred, would have been cut off, if, fortunately for them, a party of four hundred men under Lieutenant-colonel Hamilton, who was principally charged with the execution of the sanguinary warrant, had not been prevented by the severity of the weather from reaching the glen till eleven o'clock, six hours after the slaughter, by which time the whole surviving male inhabitants, warned of their danger and the fate of their chief and the other sufferers, had fled to the hills. Ignorant of this latter circumstance, Hamilton, on arriving at Kinlochleven, appointed several parties to proceed to different parts of the glen, with orders to take no prisoners, but to kill all the men that came in their way. They had not, however, proceeded far when they fell in with Major Duncanson's party, by whom they were informed of the events of the morning, and who told them that as the survivors had escaped to the hills, they had nothing to do but to burn the houses and carry off the cattle. They accordingly set fire to the houses, and having collected the cattle and effects in the glen, they carried them to Inverlochy, where they were divided among the officers of the garrison. That Hamilton would have executed his commission to the very letter, is evident from the fact, that an old man, the only remaining male inhabitant of the desolate vale they fell in with, was put to death by his orders.

After the destruction of the houses, a scene of the most heart-rending description ensued. Ejected from their dwellings by the devouring element, aged matrons, married women, and widowed mothers, with infants at their breasts and followed by children on foot, clinging to them with all the solicitude and anxiety of helplessness, were to be seen all wending their way, almost in a state of nudity, towards the mountains in a piercing snow-storm, in quest of some friendly hovel, beneath whose roof they might seek shelter from the pitiless tempest, and deplore their unhappy fate. But as there were no houses within the distance of several miles, and as these could only be reached by crossing mountains deeply covered with snow, the greater part of these unhappy beings, overcome by fatigue, cold, and hunger, dropt down and perished miserably among the snow.

While this brutal massacre struck terror into the hearts of the Jacobite chiefs, and thus so far served the immediate object of the government, it was highly prejudicial to King William, who was considered its chief author. In every quarter, even at court, the account of the massacre was received with horror and indignation, and the Jacobite party did not fail to turn the affair to good account against

the government, by exaggerating, both at home and abroad, the barbarous details. The odium of the nation rose to such a pitch, that had the exiled monarch appeared at the head of a few thousand men, he would probably have succeeded in regaining his crown. The ministry, and even King William, grew alarmed, and to pacify the people he dismissed the Master of Stair from his councils, and appointed a commission of inquiry to investigate the affair, and pretended that he had signed the order for the massacre among a mass of other papers, without knowing its contents. This is the only defence ever offered for King William, but it is quite unsatisfactory. For 1st, It is inconceivable that Secretary Dalrymple or any other minister, would have ventured to prepare such an extraordinary order without the express authority of his majesty, or would have obtained his signature to it without first acquainting him of its purport. 2d, The fact that neither Dalrymple nor any other minister was impeached for such an act, makes it extremely probable that William was privy to its contents. 3d, The unusual mode of signing and countersigning the order would have made William desirous to know the import of such a document, had he not been previously aware of its nature. 4th, His refusal or neglect to order the principal parties concerned in the massacre to be brought to trial, after the estates of parliament had addressed him for that purpose, and the fact of his promoting those guilty individuals in his service, show that he could not do so without implicating himself. Though the nation had long desired an inquiry into this barbarous affair, it was not until the 29th day of April, 1695, upwards of three years after the massacre, that a commission was granted. A commission had, indeed, been issued in 1693, appointing the Duke of Hamilton and others to examine into the affair; but this was a piece of mere mockery, and was never acted upon; but it now became necessary to satisfy the call of the nation by instituting an investigation. The Marquis of Tweeddale, lord-high-chancellor of Scotland, and the other commissioners now appointed, accordingly entered upon the inquiry, and, after examining witnesses and documents, drew up a report which was subscribed at Holyrood-house, on the 20th of June, and transmitted to his majesty. The commissioners appear to have executed their task with

great fairness, but, anxious to palliate the conduct of the king, they gave a forced construction to the terms of the order, and threw the whole blame of the massacre upon Secretary Dalrymple.

Glencoe is supposed, by some, to have been the birth-place of Ossian. In the middle of the vale runs 'the roaring stream of Cona;' the mountain of Malmor rises on the south; and the celebrated Con-Fion—'the hill of Fingal'—is situated on the north side of the vale. Garnett says: "Any poetical genius who had spent the early days of his life in this glen, must have had the same or similar ideas, and would have painted them in the same manner that Ossian has done; for he would here see nothing but grand and simple imagery—the blue mists hanging on the hills—the sun peeping through a cloud—the raging of the storm, or the fury of the torrent." Stoddart says, "If any district can, with peculiar propriety, boast of the birth of Ossian, it is this. The translator of his poems has so unjustifiably altered the original names, both of men and places, that it is not easy to trace them in those which now exist. Something like many of them is to be found all over the Highlands, but here they are most numerous; several of the names referring either to the heroes of the Fingalian race, or to their general occupation, hunting. Here is *Scur-no-Fionn*, 'the mountain of the Fingalians;' *Coe*, the name of the river, is supposed to be the Cona of Ossian; *Grianan Dearduil*, 'the sunny place of Dearduil,' is supposed to refer to Ossian's Darthula, whom Nathos stole from her husband Conquhan. Here also are *Ach-na-con*, 'the field of the dog;' *Caolis-na-con*, 'the ferry of the dog;' *Bitanabeam*, 'the deerskin mountain,' &c. Add to this, that the neighbouring country bears similar traces; that *Morven* is the peculiar name of Fingal's domain; that an island in Loch-Etive is supposed to be named from Usnath, the father of Nathos; and that Etive itself is so named from the deer of its mountains. It must not, however, be dissembled that the same names occur in other places. The stream of Conan, in Ross-shire, is supposed to be Cona, and is near Knock Farril-na-Fion, which takes its name from Fingal; and *Daruil*, or *Jarduil*, is a name common to most of the rocks, which, like the one in Glen-Coe, are termed Vitriified forts.

GLENCOE.

GLENCROE, a vale in Argyleshire, one of the passes to the Highlands, near the north-east extremity of Loch-Long. The road to Inverary, from Dumbarton, by the Gair-loch and Loch-Long, after passing the village of **ARROQUHAR** [which see], and winding round the head of the latter loch, passes under a lofty threatening mountain-crag, called Ben-Arthur or the Cobbler,* and leaving Ardgarten house on the left enters Glencroe. The scenery is here wild and sublime in the highest degree; on each side rise lofty mountains, with rocks of every shape hanging on their sides, many of which have fallen to the bottom of the glen, while others threaten the traveller with instant destruction. In the middle of the glen runs a considerable brook, near which the road is carried, and hundreds of rills that pour from the mountains form in their descent innumerable cascades. There are a few cottages on the sides of the road, inhabited by shepherds. The rocks consist almost entirely of micaceous schistus, shining like silver, beautifully undulated, and in many parts imbedded in quartz. In the bed of the rivulet are considerable numbers of granitic pebbles, with pebbles of schistus, full of crystals of schorl. The length of Glencroe is between 5 and 6 miles. The road ascends gently through the whole of it, excepting the last mile, where it is very steep, and carried in a zig-zag form to the top of the hill. Here is a seat, 29 miles from Dumbarton, and a stone inscribed, 'Rest and be thankful,' placed by the 22d regiment, who made the road. From this the road turns into Glenkinlass, a vale watered by the rivulet Kinlass, and abounding with the same scenery as Glencroe, though less wild and romantic. This last valley is terminated by the house and pleasure-grounds of Ardkinlass, on the borders of Loch-Fyne. The scenery of the two vales of Glencroe and Glenkinlas are thus described in a manuscript journal now before us: "The road from Cairndow to Tarbet is a succession of magnificence and variety in landscape scenery. The mist rolled away from our immediate neighbourhood as we entered Glenkinlas, and revealed to us its scenery of solitary and impressive grandeur. Silence and solitude reign here,—a grim and awful tranquillity, inspiring overpowering ideas of loneliness, as if man had never intruded on these regions. And these characteristics deepened upon our perceptions and sentiments as we advanced towards the head of the glen, which appeared dark and shadowy and unearthly beyond anything we had ever seen or conceived of before. At or near the top of the ascent—which is long and gradual—we passed a quiet lonely tarn, whose gloomy waters harmonized well with the stern and melancholy features of the surrounding scenery. After traversing a low ridge which runs across the head of Glenkinlas, a sudden turn of the road brought us to the head of Glencroe, the waters of which run into Loch-Long, and which throughout its entire extent of several miles lay revealed to our admiring awe-impressed vision. We have seen nothing to equal Glencroe in savage grandeur. Glenkinlas has a pastoral aspect compared with Glencroe, which is hemmed in on all sides with gigantic mountains of the rudest aspect,—bare, red, and rocky, and deeply

* "This terrific rock forms the bare summit of a huge mountain, and its nodding top so far overhangs the base as to assume the appearance of a cobbler sitting at work; from whence the country people call it an *grassaiche crom*, the crooked shoemaker. It cannot easily be discovered why several mountains in Scotland take their name from the Welsh prince, Arthur, of whom no other traces remain in this country; but it appears that they have been traditionally considered as places of sovereignty. Thus, it is said, that Ben Arthur being, at one period, the most elevated and conspicuous of the mountains in the domain of the Campbells, the heir to that chieftainship was obliged to seat himself on its loftiest peak, a task of some difficulty and danger, which, if he neglected, his lands went to the next relation sufficiently adventurous."—*Stoddart*.

channelled by the torrents which rush down their rude declivities, while the whole narrow space of the valley is covered with huge blocks which have been detached from the sides of the mountains by the action of wind, water, and weather. All, however, bears the impress of grandeur, and is steeped in the silent majesty of nature. The descent is, in one place, most excessively steep; but when finished we found ourselves on a good road, over which we brushed with considerable rapidity. Indeed, as far as our experience yet extends, we have had no reason to complain of the ruggedness or badness of the Highland roads, although some travellers affect to speak of them as if it were an exploit to pass over a few miles without loss of life or limb."

GLENCROSS, or **GLENCORSE**, a parish near the centre of Edinburghshire, on the southern slope of the Pentland hills. It is bounded on the north by Colinton and Lasswade; on the east by Lasswade; and on the south and west by Pennycuik. Of a somewhat circular form, it measures about 3 miles both in its greatest length and in its greatest breadth, and contains a superficies of about 9 square miles. The north-western division, comprising about one-third of the whole area, runs up from the lower slopes to the highest summit-range of the Pentlands, and is altogether pastoral. The south-eastern and larger division consists of beautiful undulating land, part of the great plain of Mid-Lothian, finely cultivated, but adorned to excess and sheltered to undue closeness with plantation. The hills, like all the rest of the Pentland range, consist of different sorts of whinstone and other lapideous formations commonly called primitive rocks; and the lower grounds contain, of what are denominated secondary strata, sand, stone, limestone, coal, and the concomitant fossils of the last, known as coal-metals. Glencross-burn, after a course of $2\frac{1}{2}$ miles in the Pentland section of Pennycuik, and bearing hitherto the name of Logan-house water, comes in upon the parish from the south-west, runs along its boundary northward for nearly a mile,—now suddenly debouches, and flowing first eastward and next south-eastward intersects it from side to side, dividing it into two nearly equal parts,—then, a few yards after leaving it and entering the parish of Lasswade, falls into the North Esk. Another stream, a tiny brook, rises within the parish at Head-stone, flows for half-a-mile southward to the boundary, and then circulates along its margin over a distance of 3 or $3\frac{1}{2}$ miles, when the North Esk receives its little tribute. Upwards of half-a-mile from where Glencross-burn comes inward from the boundary, it is dammed up by a stupendous artificial embankment, so as to form, from this point all the way back to the boundary and a brief distance along it, a narrow but capacious lake. Compensation-pond, as the lake is called, was formed at the expense of the water-company of Edinburgh, to compensate the millers on the North Esk, for the deprivation of some of their important feeders in order to send supplies to the citizens of the metropolis; and, in times of drought, when the Esk fails to bring along its channel a water-power sufficient for the mills, it sends off, by means of a regulating and watchfully kept machinery, such discharges as keep them working. The Crawley spring, whence the Edinburgh water-company draw a large portion of their supplies, wells up near a place called Flotterston. Much of the area of the parish, which was at one time sterile moorland, is now cultivated,—tufted with plantation, clothed in autumn with luxuriant crops, or ornately disposed into lovely demesnes. Among several seats which its improved soil and fine scenery richly ornament, are Glencross house, Bellfield Bush, and Easter Bush. But of all its

charming grounds the most delightful, both for their own beauty and, above all, for their literary associations, are those of Woodhouselee. This lovely retreat ought, in propriety, to bear the name of Falford, and is not to be confounded with Old Woodhouselee, some 4 miles or more distant from it, in the conterminous parish of Lasswade. The tower of Falford, an edifice of great antiquity, and situated near the northern limit of Glencross in the opposite extreme from that which marches with Lasswade, was repaired about 180 years ago, from the stones of Old Woodhouselee—the seat of Hamilton of Bothwell-haugh, whence the Regent Murray turned out the lady of Hamilton to the inclemency of the season—and, in consequence, took its name. Towards the end of last century, Woodhouselee—the property of the Tytler family—was illustrious as the residence of William Tytler, Esq., vice-president of the Scottish Antiquarian society, author of ‘Enquiry into the Evidence against Mary Queen of Scots,’ and a masterly dissertation on Scottish music, the restorer from oblivion of the ‘King’s Quair,’ a poem written by James I. of Scotland, during his captivity in England,—and the perspicacious adjudicator to Allan Ramsay of the entire merit of the ‘Gentle Shepherd,’ and of the authorship of two fine Scots poems which hitherto had gone, like Captain Marryat’s Japhet, in search of a father, ‘the Eagle and Robin-Red-breast,’ and ‘the Vision.’ Glencross—and, no wonder, considering its pastoral beauties, and its almost strict coincidence of landscape, in one locality, with that so softly and sweetly and graphically described by Ramsay—puts in a claim, though probably a frivolous one, to the honour of figuring throughout as the scene of the exquisite pastoral of the Gentle Shepherd. See HABBIE’S HOWE.—Rullion green, at the base of Lawhead-hill, not far from the south-western boundary of the parish, figures in history as the scene of a memorable skirmish of the troops of the persecuting Stuarts, in 1666, with a resolute and daring body of the Covenanters. The western population of Scotland, driven to despair by the oppressions of the government—oppressions which rivalled those of papal Rome, and sought to enthrall or annihilate the conscience—ran hastily to arms, and rashly dreamed of making themselves masters of the metropolis; and, menaced near Edinburgh by the advance of a royal force under General Dalziel, they turned aside at the village of Collington, and climbed away among the Pentlands, but were overtaken on the little plain of Rullion green, and there—though they twice repulsed the assailing troops—they were utterly dispersed, leaving upwards of fifty of their number to fatten the spot with their slain and sepulchred carcases. Within a small enclosure is a monument, with a suitable inscription, commemorative of the Rev. Mr. Cruickshanks, Mr. M’Cormic, and other heroes who fell.—The mansion of Greenlaw, on Glencross-burn, 8 miles from Edinburgh, and near the south-eastern limit of the parish, was used, previously to 1814, as a depot for prisoners-of-war, and had erected around it, on a Government-purchase of 38 acres, wooden buildings for the accommodation of 6,000 prisoners, and a regiment of infantry. The barracks, raised at the conjectural cost of £100,000, are still occupied by small detachments from Edinburgh castle.—At a former period the parish had a distillery; and, happily freed from this, it now—with the exception of the workers on a bleachfield and some corn-mills—rejoices in a strictly rural population. Through nearly its middle, from north-east to south-west, it is intersected by the post-road from Edinburgh to Biggar and Dumfries; and, in its southern or campaign division, it has several other roads. South-west of the House-of-Muir, and about 8½ miles

from Edinburgh, are markets for ewes with lamb in the end of March or beginning of April, and for fat sheep from Galloway and other southern districts of Scotland in the end of October. Only at Milton mill and Eastern Auchindinny bridge, both near the south-eastern boundary, are there semblances of hamlets. Population, in 1801, 390; in 1831, 652. Houses 101. Assessed property, in 1815, £3,736.—Glencross is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Tytler of Woodhouselee. Stipend £156 17s. 7d.; glebe £20. Unappropriated teinds £68 16s. 5d. Schoolmaster’s salary £34 4s. 4½d., with £19 15s. fees, and £5 15s. other emoluments. There is an unendowed school, attended by a maximum of 45 scholars. The parish church was built in 1665, and repaired, but not enlarged, in 1811. Sittings about 200. In 1838, at the visit of the Commissioners of Religious inquiry, the parish minister thought that the population was slightly less than in 1831; but, assuming the census of that year to be still correct, he assigned 522 persons to the establishment, and 130 to other denominations. The dissenters belong to the United Secession congregations of Pennyuck and Roslin, and the Reformed Presbyterian congregation of Loanhead.—The parish of Glencross was formed, in 1616, from the ancient parishes of Pentland and Pennyuck, the northern division being taken from the former and the southern division from the latter. In the vale of Glencross-burn, on the northern bank of that stream, in a locality now laid under water by Compensation loch, anciently stood a chapel dedicated to Saint Catherine the virgin, called Saint Catherine of the Hopes, in contradistinction to Saint Catherine of the Kames, in the parish of Libberton.

GLENDARUEL, a vale in Argyleshire, in the parish of KILMODAN: which see.

GLENDALÉ. See DUINNISH.

GLENDÉARG, a narrow vale, about 3½ miles in length, coming down southward from Benderig, and overlooked on the west side by Benchat, and on the east side by Benvenoch, in the northern part of the parish of Blair-Athole, Perthshire.

GLENDINNING. See DUMFRIES-SHIRE.

GLENDOCHART, a valley in Perthshire, in Breadalbane, through which the Dochart runs in its course to Loch Tay: See article LOCH-DOCHART. Entering Glendochart from Glenogle, it presents a region of sterile magnificence, varied, it is true, by the winding course of the river; and several hamlets, disposed on the eminences that just rise above the level lawers which stretch far to the west in the bottom of the valley, give it some interest; but still, though the hills of this glen exhibit a lengthened chain of barren wildness, Benmore towers amid them in double cone, and excites in the mind of one who can relish rude grandeur, a sublimity of feeling not easily to be expressed by words. Proceeding by the banks of the Dochart to Killin, the hill called Strouchlachan, the craggy heights of Finlairg, and the lofty wilds of Benlawers, with Loch Tay stretching its ample breadth along the base of these mountains, are seen, as grand and simple parts of a magnificent whole. The traveller cannot fail of being pleased with the scenery about Killin. As he enters the village from the west, he observes the river Dochart rushing through rocky fragments, and dividing its waters among insulated precipices, over which it foams, and sweeps round two islets covered with pines; it then calmly seeks its way through green meadows and enclosures, till, meeting the slow-winding Locha in its course, both rivers fall silently into the bosom of the lake.

GLENDÉVON, a parish in the Ochil district, a south-east part of Perthshire; bounded on the north by Blackford and Auchterarder; on the east by

Fossaway; on the south-east by Muckhart; on the south by Clackmannanshire; and on the west by Clackmannanshire and Blackford. But for wanting the south-east corner, and being very deeply indented on the north-west by Blackford, its form would be nearly rectangular. In extreme length it measures $5\frac{1}{2}$ miles; and in breadth, over one-half its length, 4 miles, and over the other half $1\frac{1}{2}$. The whole parish lies among the Ochils, and is lifted up into green smooth hills, freckled at remote intervals with rocks, and embrowned on some spots with heath. Devon water comes in upon it from the west, 3 miles from its source; forms for $2\frac{1}{2}$ miles the northern boundary-line of the narrow part of the parish; flows eastward for $2\frac{1}{2}$ miles through the main body, receiving several tributary rills in its course; and, bending south-eastward, traces for $1\frac{1}{2}$ mile the boundary with Fossaway. The river opens up in its progress a glen or narrow vale, and, in doing so, gives name to the parish. In scattered spots along this vale, where the soil is light and dry, inclining to gravel, are about 200 acres of arable land. All the rest of the parish is pastoral, and sustains about 8,000 sheep. Experiments in ploughing the lower parts of the hills proved that attempts at cropping are, in this district, less remunerating than attention to pasture. At Burnfoot is a small mill for spinning wool. A house built in the 16th century, by the family of Crawford, for the protection of their vassals from any hostile attack, and which is more spacious than most buildings of its class, was restored from a ruinous condition, and still stands as an admonition to gratitude for the blessings of peaceful times. A turnpike runs through the parish $3\frac{1}{2}$ miles along the glen. Population, in 1801, 149; in 1831, 192. Houses 28. Assessed property, in 1815, £1,688. The parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown. Stipend £158 6s. 7d.; glebe £8 10s. Unappropriated teinds £30 4s. 7d.; schoolmaster's salary £34 4s. 4½d., with £7 fees, £5 other emoluments, and a house and garden worth about £6.

GLENDOW, a valley in the counties of Dumbarton and Stirling: See BUCHANAN.

GLENDUCE, a village in the parish of Edderachy, Sutherlandshire, on the sea-coast, near the arm of the sea called Loch-Scourie.

GLENDUROR, a district in Upper Lorn, watered by the Duror, which falls into the Linne-loch.

GLENELCHAIG, a district in Ross-shire, in the parish of Kintail. In the heights of this district is the cascade of Glommach, a considerable waterfall, the view of which is rendered strikingly awful from the darkness occasioned by the surrounding hills and woods. The light which predominates at this place seldom exceeds a twilight-brightness.

GLENELG,* a parish in the county of Inverness. It is divided into three districts: 1st, Glenelg, where-in the church and manse are situated, formerly the property of Colonel Macleod of Macleod; afterwards of Lord Glenelg, now of Mr. Baillie; 2d, Knoydart, Knowdort, or Knodyart, separated from Glenelg by an arm of the sea called LOCH HOUN: which see; 3d, North-Morar, separated from Knoydart by another arm of the sea called LOCH-NEVIS, [which see,] the property of the family of Lovat. The parish may be supposed to extend from north to south about 20 miles, and the same number of miles from east to west. It is bounded on the north-east and east by the parish of Glensheal, in the county of Ross, a ridge of hills making the division; on the south-east and

south by the outskirts of the countries of Glen-garry and Lochaber; on the south-west by Loch-Morar, which divides the parish of Ardnamurchan from that of Glenelg; and on the north-west by the navigable and much-frequented sound that separates the island of Sky from the continent of Great Britain. In the district of Glenelg there are two valleys, through each of which a river runs. The inhabitants reside in separate villages on each side of the rivers, their arable land extending along the banks, and on the declivity of the hills; some of them also dwell on Loch-Hourn-side. In this district the soil is good; part of a deep black loam, and part of a sandy gravel, yielding crops of potatoes and oats; the hills afford good pasture for cattle. In Knoydart the inhabitants dwell in villages bordering on the sea, along the sides of Loch-Hourn and Loch-Nevis; here the soil is in general light, yielding early crops of barley, oats, and potatoes. The hills, though high, are mostly green to the top, and afford excellent pasture for all kinds of cattle. North-Morar is rocky and mountainous, and chiefly adapted for cattle. The valued rent of the parish is £3,565 Scots; the land-rent was supposed in 1792 to exceed considerably £2,000. It must have greatly risen since that period; for Glenelg which, in 1781, produced an income of only £600 a-year, was in 1798 sold for £30,000; and in 1811 for £100,000, although we believe the present proprietor purchased it for £77,000. In 1815, the value of the assessed property was returned at £5,789. The air is moist, and rain frequent; the wind mostly blows from the south and west. The only mansion-house in the parish is that of Inverie on the banks of Loch-Nevis, in Knoydart. The kirk-town of Glenelg is a neat little village, and at the southern extremity of the district is the village of Arnisdale, on the banks of Loch-Hourn, with a population of 368. There have been many castles or round towers in this parish, two of which in Glenbeg are yet pretty entire. In 1722, shortly after the battle of Glensheal, Government thought it necessary to erect a small fortification on the west coast, and pitched on a spot of ground in this parish as a proper situation, being in the direct line from Fort-Augustus to the island of Sky. From that period till after 1745, there were commonly one or two companies of foot quartered here. Population, in 1801, 2,834; in 1831, 2,874. Houses, in 1831, 508.—This parish is in the synod of Glenelg, and presbytery of Lochcarron. Patron, Baillie of Kingussie. Stipend £237 7s. 9d.; glebe £60. Church repaired in 1835; sittings 400. There are Roman Catholic chapels in Knoydart and Morar: the population of these districts being chiefly Roman Catholics. There are mission-stations at Arnisdale, Fraochlan, and Inverie.—There are a parochial school, and five private schools in this parish. Salary of parish-schoolmaster £30.

GLENESK—called also in its main body, Glenmark, and in its offshoots Glenenoch, Gleneffock, and Glentinmount—the ramified valley of the northern part of the Grampian district of Forfarshire, watered by the North Esk and its mountain-tributaries. See articles FORFARSHIRE, LOCHLEE, EDZELL, and THE NORTH ESK.

GLENESLAND (THE), a brook or rivulet which rises near the water-line between Dumfriesshire and Galloway, at the western boundary of the parish of Dunscore, in the district of Nithsdale, and pursues a course $4\frac{1}{2}$ miles eastward to the Cairn. It is chiefly remarkable for occasioning the latter stream, from its point of confluence with it to the Nith, to be called the Cluden. See GLENCARN.

* *Glenelg*, the ancient and modern name, is supposed to be made up of the Gaelic words, *glen*, [*gleann*] signifying 'a valley,' and *seilg*, 'hunting'; or *glen*, 'a valley,' and *elid*, 'a roe.'—*Old Statistical Account*.

GLENFALLOCH, a valley in the shire of Perth, and chiefly in the parish of Killin, about 7 miles in

length; watered by the small river Falloch, from whence it derives its name, and which discharges itself into the north end of Loch-Lomond. This river affords good trout and pike fishing. The road from the head of Loch-Lomond into Strathfillan runs through this glen. See **THE FALLOCH**.

GLENFARG, a romantic vale or pass in the Ochil hills, leading from Kinross-shire into Perthshire, through which the Great North road proceeds.

GLENFERNAL, a narrow vale forming, with the hills and mountains which flank it, the north-eastern part of the parish of Moulin, Perthshire. It comes down southward over a distance of about 6 miles, traversed throughout by the Arnate or Earnate; and when that stream makes a confluence with the Breachan, and unites with it to form Airdle water, the glen becomes lost in the valley of Strathaird. The hills of vivid green which form the side walls of Glenfernal, contrast picturesquely with the grim and gloomy aspect of the circumjacent mountain.

GLENFICHAN, a valley on the west coast of Lorn, in Argyshire.

GLENFIDDICH, a fertile vale in the heart of Banffshire, often named Fiddichside. See articles **FIDDICH** and **MORTLACH**.

GLENFINGLASS, a narrow vale about 5 miles in length, north-east of Strathgartney, and running nearly parallel with it, in the parish of Callander, Perthshire. This glen is traversed by the streamlet Turk; and, though singularly wild in its scenery, is for the most part wooded, and possesses little of the naked and savage aspect which so generally distinguishes the Highland glens. The Turk, in passing through it, has a peaceful and meandering course; but, at the point of emerging, it "suddenly sinks into a profound chasm, formed by some terrible convulsion of nature, and there it is heard far below, brawling along the secret fragments of rock, in its rapid course." Should the traveller, approaching from Callander, be inclined to visit this retired vale, he passes through a narrow ravine, where the mountain-stream has formed a way for its waters. Here a tumultuary cataract is seen pouring over a rock, beautifully fringed with coppice-wood;

"That huge cliff whose ample verge,
Tradition names the hero's targe."

It was under this waterfall that Brian, the hermit monk, performed the "taghairm," or mysterious consultation with the oracle, in which the fate of Roderick Dhu was darkly foreshown. Sir Walter Scott relates that this wild place in former times afforded refuge to an outlaw. He was supplied with provisions by a woman, who lowered them down from the edge of the precipice above. His water he procured for himself by letting down a flagon tied to a string into the black pool beneath the fall. On emerging from the narrow ravine, the traveller enters Glenfinglass, and is surprised to meet with a soft and verdant plain of considerable extent, variegated with meadows and corn-fields. The mountains by which this beautiful valley is hemmed in are lofty, and their sides are marked by the course of many streams which flow down them. They are mostly free of heath, and covered with a fine green sward to their summits, forming pasture-ground of superior quality. Glenfinglass was anciently a deer forest belonging to the kings of Scotland, and appears to have been covered with wood, the remains of aged trees being still everywhere visible. It is now inhabited by a people of the name of Stewart, clansmen of the Earl of Moray, the proprietor, who are all connected together by intermarriages. This race have long inhabited the district under the protection of their chief, and the same farms have been

transmitted from father to son, through a lapse of ages.

GLENFINNAN, a narrow vale in Inverness-shire, at the head of Loch-Shiel, in which the river Finnan runs between high and rocky mountains. It is impassable except by travellers on foot. It is famous for being the place where Prince Charles first raised his standard on the 19th of August, 1745. See article **THE FINNAN**.

GLENFRUIN, a vale intersected by the Fruin, in the parishes of Row and Luss, in Dumbartonshire. It is separated, on the west, from the Gairloch by a lofty ridge of heath-clad mountains, rising in some points to an altitude of 1800 feet. It widens gradually as it approaches Loch-Lomond, and attains the breadth of a mile in some parts. The Fruin abounds with small trouts. This glen has attained considerable historical notoriety from its having been the scene, in 1602, of a desperate conflict, in consequence of the renewal of some old quarrels between Sir Humphrey Colquhoun of Luss, the chief of that surname, and Alexander Macgregor, chief of the Clan-Gregor. Aggressions had formerly been committed on both sides; first by Luss and his party against some of the Macgregors, and then by John Macgregor, the brother of Alexander, against the laird of Luss and his dependents and tenants. To put an end to these dissensions, Alexander Macgregor left Rannoch, accompanied by about 200 of his kinsmen and friends, entered Lennox, and took up his quarters on the confines of Luss's territory, where he expected, by the mediation of his friends, to bring matters to an amicable adjustment. As the laird of Luss was suspicious of Macgregor's real intentions, he assembled all his vassals, with the Buchanans and others, to the number of 300 horse, and 500 foot, with the design, if the result of the meeting should not turn out to his expectations and wishes, to cut off Macgregor and his party. But Macgregor, anticipating his intention, was upon his guard, and, by his precautions, defeated the design upon him. A conference was held for the purpose of terminating all differences; but the meeting broke up without any adjustment, and Macgregor then proceeded homewards. The laird of Luss, in pursuance of his plan, immediately followed Macgregor with great haste through Glenfruin, in the expectation of coming upon him unawares, and defeating him; but Macgregor, who was on the alert, observed, in due time, the approach of his pursuers, and made his dispositions accordingly. He divided his company into two parts, the largest of which he kept under his own command, and placed the other part under the command of John Macgregor, his brother, whom he despatched by a circuitous route, for the purpose of attacking Luss's party in the rear, when they should least expect to be assailed. This stratagem succeeded, and the result was, that after a keen contest, Luss's party was completely overthrown, with the loss of 200 men, besides several gentlemen and burghesses of the town of Dumbarton.* It is remarkable

* A rivulet, which runs near the spot where Fletcher of Cameron, a follower of the Macgregor chief, put to death some young men or boys who came as spectators of the battle of Luss, is called 'the Stream of young Ghosts'; and it is believed, that if a Macgregor crosses it after sunset, he will be scared by unhallowed spectres. But neither of the alleged murderers were of the Macgregor clan, and the chief, when he compelled the youths to enter a church near the spot, instead of standing exposed to random shots from the combatants, had no view but to preserve their lives, and to detain them as hostages, if circumstances required a pledge for the safety of his own people. Yet superstition represents the ghosts of the victims peculiarly hostile to the clan of Macgregor. So late as the year 1757, every spring, the tragical fate of the scholars of Dumbarton was commemorated by the boys of that ancient town. They assembled on the supposed anniversary; the dux of the highest class was laid on a bier, covered with the clergyman's gown, and carried by his companions to a grave, previ-

that of the Macgregors, John, the brother of Alexander, and another person alone, were killed, though some of the party were wounded. The laird of Luss and his friends sent early notice of their disaster to the King, and they succeeded so effectually by misrepresenting the whole affair to him, and exhibiting to his majesty eleven score bloody shirts belonging to those of their party who were slain, that the King grew exceedingly incensed at the Clan-Gregor—who had no person about the court to plead their cause—proclaimed them rebels, and interdicted all the lieges from harbouring or having any communication with them. The Earl of Argyll with the Campbells were afterwards sent against the proscribed clan, who hunted them through the country. About 60 of the clan made a brave stand at Bentside against a party of 200 chosen men belonging to the Clan-Cameron, Clan-Nab, and Clan-Ronald, under the command of Robert Campbell, son of the laird of Glenorchy, when Duncan Abernethy, one of the chieftains of the Clan-Gregor, and his son Duncan, and seven gentlemen of Campbell's party were killed. But although they made a brave resistance, and killed many of their pursuers, the Macgregors, after many skirmishes and great losses, were at last overcome. Commissions were thereafter sent through the kingdom, for fining those who had harboured any of the clan, and for punishing all persons who had kept up any communication with them, and the fines so levied were given by the King to the Earl of Argyll, who converted the same to his own use as a recompense for his services against the unfortunate Macgregors.

GLENFYNE, a valley in Argyleshire, at the head of Loch-Fyne.

GLENGABER. See MEGGET.

GLENGAIRN, or **GLENGAIRDEN**, an ancient parish in the district of Kincardine O'Neil, and shire of Aberdeen, now united to the parish of Glenmuick. The church, which is situated at the confluence of the water of Gairden with the Dee, is about 2 miles north from the church of Glenmuick, and appears to have been dedicated to St. Mungo, from an annual meeting of the parishioners on the 13th of January. It is 16 miles west of Kincardine O'Neil. The greater part of this district lies upon both banks of the Gairden, extending 6 miles north-west from the church, where the upper parts of Tulloch begin, and separate it from the parish of Crathie. A small part of it lying on the south of the Dee is called Strath-Girnie. Near the Pass of Ballatar is an ancient castle, which formerly belonged to the family of Forbes. See **GLENMUCK**.

GLENGARREL, a vale in Dumfriesshire, in the parish of Kirkmichael.

GLENGARRY, a district of Inverness-shire, occupying the central part of the great valley which extends from Inverness on the east coast to Fort-William on the west. Glengarry was, till very recently, the property of the chief of the clan of Macdonald, who here possessed an elegant seat in Invergarry castle on the north-west bank of Loch-Oich. In 1787, the estate of Glengarry produced only £800 a-year; its present rental is upwards of £7,000. It was purchased by the Marquess of Huntly from Glengarry, and was sold in 1840 to Lord Ward for £91,000.* It abounds in game of various descrip-

ously opened. The whole school, bearing wooden guns reversed, performed the ceremony of interment, and recited Gaelic odes over the dead allusive to the horrible massacre. They then returned, singing songs of lamentation in the same language.

* The present chief of the ancient sept or clan Macdonald, namely, Macdonald of Glengarry, is now in Australia, with his family and dependents. Mr. Macdonald was compelled to dispose of most of the family property, which was heavily mortgaged and encumbered by his father, the late well-known Glengarry, whose character in its more favourable light was drawn

tions, but, like most estates of a similar situation, it has also been subject to the ravages of vermin. From the lordly eagle down to the stoat and weasel, those destructive denizens of the wood and wild find ample room for exertion amidst the vast and unploughed recesses of the Highland glens and forests. An English gentleman was lessee of the Glengarry shootings previous to the purchase of the property by Lord Ward; and, annoyed by the loss of game, this gentleman set about a vigorous system of war and extermination against all his vermin intruders. He engaged numerous gamekeepers, paying them liberally, and awarding prizes to those who should prove the most successful. These rewards varied from £3 to £5 each; and the keepers and watchers pursued the slaughter with undeviating rigour and attention. The result has been the destruction, within the last three years, of above 4,000 head of vermin, and a proportional increase in the stock of game.†

GLENGONAR, a vale in the moorland parish of Crawford, at the southern extremity of Lanarkshire, watered by the Gonar or Glengonar, a streamlet tributary to the Clyde. The village of Leadhills is situated near the source of this 'ore-stain'd stream.' The vale abounds in mineral wealth, principally lead; and, in a former age, very elevated and even romantic notions were formed of its vast resources from small particles of gold having been found in the sands of the stream, and elsewhere in the vale. During the minority of James VI. a German mineralogist was commissioned by Queen Elizabeth to search the hills and valleys here for precious ores, and the place where he washed the dust, is still called Gold-scur. It was found, however, that the cost of working was more expensive than could be defrayed by the precious metal which was recovered, and the gold-search was therefore abandoned. At a more recent period, the Earl of Hopetoun, who is the principal proprietor, resumed the search, though it was abandoned from the same cause, but not until a sufficient quantity of the metal had been procured to form a

by Sir Walter Scott, in his hero, Fergus M'Ivor. "We cannot regard this expatriation of the head of an old Highland family, with its clan-associations, its pipe-music, and its feudal recollections, from the battle of Inverlochy downwards, without some regret and emotion. These Celtic strains and legends will sound strange in the new world of the wanderers, so far removed from their native Loch-Oich, the Rock of the Raven, and the other magnificent scenery of the Glengarry mountains."—*Inverness Courier*.

† "We were anxious," says the editor of the 'Inverness Courier,' "to learn the extent and nature of the vermin destroyed, and have been furnished with a complete list by Mr. D. Scott, the intelligent manager of the Glengarry estates. To such of our readers as are fond of Natural history, the list—which we subjoin—will prove interesting; and it also shows how much may be done, by steady and combined efforts, for the protection of game. The value of our Northern shootings would be immensely enhanced, if similar exertions were generally made, and proper care taken that the heather be burned only in rotation. The latter system will be found equally advantageous to the sheep-farmer; and if the sportsman does not get a fair chance, the grouse will, in many an extensive range of moor, entirely disappear. The following is the list of vermin destroyed at Glengarry, from Whitsunday, 1837, to Whitsunday, 1840:—

11 Foxes.	63 Gos-hawks.
198 Wild cats.	285 Common buzzards.
246 Martin cats.	371 Rough-legged buzzards.
106 Polecats.	3 Honey-buzzards.
301 Stots and Weasels.	462 Kestrels, or Red-haw ks.
67 Badgers.	78 Merlin hawks.
48 Otters.	83 Hen-harriers, or Ring-tailed-hawks.
78 House cats, going wild.	6 Jer-Falcon toe-feathered hawks.
27 White-tailed Sea-eagles.	
15 Golden eagles.	
18 Osprey, or Fishing-eagles.	9 Ash-coloured hawks, or Long blue-tailed hawks.
98 Blue hawks, or Peregrine falcons.	1,431 Hooded or Carrion crows.
7 Orange-legged falcons.	475 Ravens.
11 Hobby hawks.	35 Horned owls.
275 Kites, commonly called Salmon-tailed Gledes.	71 Common Fern-owls.
5 Marsh-harriers, or Yellow legged hawks.	3 Golden-owls.
	8 Magpies."

small piece of plate of native Scottish gold. It is still found in small particles, enough certainly to indicate the presence of the metal, but much too scanty to give any reasonable encouragement for working it.

GLENHOLM, a section of the modern united parish of BROUGHTON, GLENHOLM, and KILBUCHO, [which see,] in Peebles-shire. It consists of a vale 2 miles broad, and nearly 7 miles long, drained by Holms water. Along one-half of its eastern boundary, it is touched and traced and enlivened by the brilliant Tweed; and, along its northern boundary, it is separated from the parish of Stobo by Biggar water. Nowhere does it touch Broughton—the lordly usurper to which it seems to have become reluctantly united, or rather to have yielded its parochial honours and prerogatives—except at its north-west angle. But, over two-thirds of its length, it marches with its conjoint slave Kilbucho; and, as it figures in the map, seems combinedly with the latter, to oppose vastness of bulk and great superiority of physical power to the enthralment imposed upon it by the privileged but comparatively small territory of Broughton. The district is beautiful and lovely in its features. Nearly all of it is a delightful pastoral vale, cut lengthways into two nearly equal parts by Holms water, which flows so gently, and lingers with such fondness amongst the charms of the overseeing landscape, that the northerly or the southerly direction of its motion is doubted by the tourist till he comes close upon its banks. Yet the stream, though placid, is not sluggish; and the valley, though soot and mild, is exultant in the gorgeous framework of one of the richest districts of the southern highlands. Collateral vales or glens, too, come down upon the main valley, and seem like joyous and beautiful children pressing upon the sides of a happy and rejoicing mother. Glenhigton, Glencotho, Glenkirk, and Glenludo, all partake the beauty of the parent valley of Glenholm, and bring down upon its smiling stream their tributary rills. Glenholm was anciently a rectory in the deanery of Peebles. In the upper part of it, at a place called Chapelgill, there was formerly a chapel. The parish-church, though now abandoned for that of the united parish situated in Kilbucho, was rebuilt so late as 1775.

GLENISLA, a parish of a narrow oblong form, but with an angular termination on the south, stretching northward and southward, and constituting the most westerly portion of the Grampian district of Forfarshire. It is bounded on the north by Aberdeenshire; on the east by Clova, Kirriemuir, and Lintrathen; on the south-west by the Forfarshire section of Alyth; and on the west by Perthshire. From Tambowie on the north to the confluence of the Isla with a brook flowing in upon it from the west near Folds on the south, it measures, in extreme length, $15\frac{1}{2}$ miles; and from Long Craig on the east to Cairnedy on the west, or from the boundary near Glenmark on the east to that near Balloch on the west, it measures, in extreme breadth, $5\frac{1}{2}$ miles; and, in average breadth, over four-fifths of its length, from its northern boundary southward, it is not less than about $4\frac{1}{2}$ or $4\frac{3}{4}$ miles. Over its whole length—except about a geographical furlong at the highest summit-range of the Grampians, forming the water-line and boundary with Aberdeenshire—it is traversed by the ISLA: which see. This stream rises in Ceon-Lochan, formerly a deer-forest of the family of Airly, and runs sinuously southward, cutting the parish into two nearly equal parts; lingering, in spite of the mountain impetuosity of its motion, to enliven, by its foldings and windings, the stern yet attractive Highland scenery through which it flows; forming, for $2\frac{1}{2}$ miles toward the southern

extremity, the boundary-line with Lintrathen; and achieving an entire course, from its origin to the point where it leaves the parish, of 25 miles and one furlong. At brief intervals during its whole progress, it receives on both banks tributaries which vie with itself in importance,—which plough down the Grampians and form huge furrows or cleughs or glens between parallel lines of the mountain-heights,—and two of which, though they become confluent a little before uniting with the Isla, flow at a proper distance nearly alongside of it over a distance respectively of about 6 and $7\frac{1}{2}$ miles. Below the mill of Craig, the Isla makes a magnificent leap over a breast of rock 70 or 80 feet perpendicular, and there forms a cascade, called Reeky linn, which seems ashamedly modest of its own brilliant attractions, and sends floatingly over them a misty but sparkling veil of spray. The whole parish being squeezed up lengthways against the highest range of the tier-like descending Grampians, is mountainous and strictly Highland in its scenery, and adapted principally for pasturage; yet the lower parts are carpeted with good strong loam, and produce excellent crops of corn and grass. In the upland districts limestone abounds, and, in various localities, is freely worked. The air is very pure, and not a little salubrious. During the summer months the climate is generally very sultry; and, during the winter months, it is generally very cold and frosty. The entire parish anciently belonged to the Highland clan of the Ogilvies; and it still contains the ruins of two of their strongholds,—the castles of Forter and Newtown. The northern division of the parish is wholly unprovided with roads; and even the southern division is almost more tantalized than accommodated by the roads which stretch away from it to the champaign country below, and remind it of the luxuries of champaign cultivation. The kirk-town of Glenisla, a mere hamlet, stands on the left bank of the Isla, about 4 or $4\frac{1}{4}$ miles from the southern extremity of the parish. Population of Glenisla, in 1801, 996; in 1831, 1,129. Houses 234. Assessed property, in 1815, £1,606.—The parish is in the presbytery of Meikle, and synod of Angus and Mearns. Patron, the Crown. Stipend £159 12s. 3d.; glebe £10. Unappropriated tithes £116 7s. 3d. Schoolmaster's salary £29 18s. 10d., with £5 fees. A non-parochial school, held during winter, is usually attended by about 50 scholars.

GLENKENS, the northern district of Kirkcudbrightshire, comprehending—with the exception of part of the parish of Parton at the southern extremity—all the territory drained by the river Ken, whence the district has its name, and the Ken's tributaries. On the north it is bounded by the summit-range or water-line between Galloway and Ayrshire; on the east, for two-thirds of the way, by a chief-summit range which forms the water-line between it and Dumfries-shire, and, for the remaining third, by the Cairn, a tributary of the Cairn, Loch-Urr, and the water of Urr, which divide it partly from Dumfries-shire, and partly from the parish of Kirkpatrick-Durham; on the south-east by the parish of Parton; on the south-west by the river Dee, which divides it from Balmaghie, Girthon, and Minnigaff; and on the west by Gala Lane and Loch-Doon, which divide it from Ayrshire. The district comprises the four parishes of Carsphairn, Dalry, Balmacellellan, and Kells; and is celebrated, as to a large part of its extent, both for its breeds of sheep and black cattle, and for the attractions of its mountain landscape. "Thousands, we believe," says M'Diarmid, in one of his editorial contributions to his Scrap Book, [Edin. 1825. Vol. iii. p. 334,] "have visited the Glenkens, a district which has been de-

scribed as the Grampians of Galloway, and which is alike celebrated for the wild grandeur of its scenery, and the feudal power and exploits of the noble house of Kenmuir. In summer and autumn this interesting district presents a most inviting prospect, whether to the sportsman or more contemplative visitor, with its fine amphitheatre of hills, amidst which the Scottish eagle still fixes his eyrie; and boundless slopes of the loveliest heather, where even the patient sheep finds out a scanty meal, and of which the blackcock and moorfowl, the plover and curlew, appear to be the sole occupants. In the foreground the spectator has the broad and beautiful expanse of the Ken, here hurrying along with the rapidity of a mountain-stream, and there settling into the quiet tranquillity of an extensive lake; at one place washing the granite base of Laurin, and at another nourishing the luxuriant reeds near Kenmuir castle, where the teal and the wild duck, the coot and the heron, enjoy a little world of their own, and hardly seem to look upon man as an enemy. The time-worn towers of the castle, too, peering from an avenue of limes, or more veteran clump of oaks, every one of which might stand for a patriarch among trees, immediately carry the mind back to those unsettled yet romantic times when a mother frequently presented her son with his spurs to remind him that her larder was empty; and when the fosse, and the donjon-keep, the draw-bridge, and the warder, supplied all the purposes of a modern police. Nor is it only in summer or autumn that the Glenkens afford a rich treat to the admirers of mountain scenery. In winter, too, when the new-fallen snow levels all the features of an ordinary landscape, it is delightful to see the farmers and shepherds hurrying with their curling stones to the neighbouring loch or river, and forgetting all the evils of high rents and falling markets in an anxiety to distinguish themselves in this manly sport. And on Sundays, it is still more interesting to see the same individuals gathering round the porch of the parish-church, and kicking as they enter the frozen snow-balls from their ponderous shoes; while the far-off shepherd, whose compass is the warning bell, is seen manfully climbing the trackless hill, and pausing at intervals to catch another sound of that tuneless instrument which might now plead the never-failing apology of better musicians, and appeal to the hooded belfry as a sufficient excuse for its increased hoarseness.

GLENKILN, a narrow vale stretching north and south along nearly the whole length of the parish of Kirkmichael, in the district of Annandale, Dumfriesshire, and giving name to a tributary of the Ae, by which it is traversed, and to a range of high hills by which it is overlooked. Glenkiln burn rises between Holehouse-hill and Deer-edge, near the northern extremity of the parish, and after a course of 5½ miles due south, it passes the manse and church of the parish, and, 3 furlongs farther down, falls into the Ae. The Glenkiln hills are a range, coming down from the central mountain-barrier of the Lowlands confronting a parallel range between the Ae and the Glenkiln, and sending up Glenkiln-craig, Gray-hill, Kirkmichael-fell, and other summits from 1,100 to 1,400 feet above the level of the sea. See **KIRKMICHAEL**, Dumfriesshire.

GLENKINLASS, a vale in Argyleshire, extending from the shores of Loch-Fyne to the head of Glencroe. See **GLENCROE**.

GLENLEDNOCK, a narrow vale forming, with the hills along its sides, the north-eastern part of the parish of Comrie, Perthshire. It stretches south-eastward over a distance of about 7 miles, is watered throughout by the Lednock, lies from 200 to 300 feet

above the level of the sea, and makes a convergence with two other vales at the village of Comrie.

GLENLICH, a valley in the parish of Glenshiel, in Ross-shire, running along the eastern base of Benmore, and opening at the lower end into Strathcroe. See **GLENSHIEL**.

GLENLIVET, a vale or district in Banffshire, to the south-west of Glenfiddich, and watered by the Livet. It is a barony, giving the second title to the family of Aboyne. Glenlivet has been celebrated for a particularly fine-flavoured Highland whisky, which is made here, and goes by the name of the district. Attention has recently been directed to the existence of iron and lead ore on the Duke of Richmond's estates in Strathdown and Glenlivet. It appears that Mr. Burgess, schoolmaster of Dipple, in the course of some geological researches among the mountains, having discovered veins of these metals, Mr. Smith, the mining-engineer at Dudley, was employed to survey the spot, and this gentleman has pronounced his opinion that 80 per cent. of iron is in the ore, and that the supply appears to be inexhaustible. The veins are found within a few miles of the village of Tomantoul, and lie completely exposed. The lead ore exists in large quantities on the farm of Tomvoulin in Glenlivet. The smelting of iron was formerly carried on in the same district by an English company, a branch of the York building company. This company brought iron-ore from the hills of Lecht, at the source of the burn of Conglass, near Tomantoul, and smelted it at their works at **ABERNETHY**: see that article. Very few traces of the works remain, but the floods of 1829 excavated part of the machinery. The river Nethy cut a new channel for its waters right through an arable field, and disclosed part of the Yorkshire company's smelting-works, which must have been near the bed of the stream. See **INVERAVEN**.

The battle of Glenlivet was stricken on Thursday, the 3d day of October, 1594. Argyle, a youth of 19 years of age, having collected a force of about 12,000 men, entered Badenoch, and laid siege to the castle of Ruthven, on the 27th day of September. He was accompanied in this expedition by the Earl of Athol, Sir Lauchlan Maclean with some of his islanders, the chief of the Mackintoshes, the laird of Grant, the Clan-Gregor, Macneil of Barra with all their friends and dependents, together with the whole of the Campbells, and a variety of others whom a thirst for plunder or malice towards the Gordons had induced to join the Earl of Argyle's standard. The castle of Ruthven was so well defended by the Clan-Pherson, who were the Earl of Huntly's vassals, that Argyle was obliged to give up the siege. He then marched through Strathspey, and encamped at Drummien, upon the river Avon, on the second day of October, from whence he issued orders to Lord Forbes, the Frasers, the Dunbars, the Clan-Kenzie, the Irvings, the Ogilvies, the Leslie, and other tribes and clans in the north, to join his standard with all convenient speed. The Earls, against whom this expedition was directed, were by no means dismayed. They knew that although the King was constrained by popular clamour to levy war upon them, he was in secret friendly to them; and they were, moreover, aware that the army of Argyle, who was a youth of no military experience, was a raw and undisciplined militia, and composed, in a great measure, of Catholics, who could not be expected to feel very warmly for the Protestant interest, to support which the expedition was professedly undertaken. The seeds of disaffection, besides, had been already sown in Argyle's camp by the corruption of the Grants and Campbell of Lochnell. On

hearing of Argyle's approach, the Earl of Errol immediately collected a select body of about 100 horsemen, being gentlemen on whose courage and fidelity he could rely, and with these he joined the Earl of Huntly at Strathbogie. The forces of Huntly, after this junction, amounted, it is said, to nearly 1,500 men, almost altogether horsemen, and with this body he advanced to Carnborow, where the two Earls and their chief followers made a solemn vow to conquer, or to die. Marching from thence, Huntly's army arrived at Auchindun the same day that Argyle's army reached Drummin. At Auchindun, Huntly received intelligence that Argyle was on the eve of descending from the mountains to the lowlands, which induced him, on the following day, to send captain Thomas Carr and a party of horsemen to reconnoitre the enemy, while he himself advanced with his main army. The reconnoitring party soon fell in, accidentally, with Argyle's scouts, whom they chased, and some of whom they killed. This occurrence, which was looked upon as a prognostic of victory, so encouraged Huntly and his men, that he resolved to attack the army of Argyle before he should be joined by Lord Forbes, and the forces which were waiting for his appearance in the lowlands. Argyle had now passed Glenlivet, and had reached the banks of a small brook named Alchonlachan. On the other hand, the Earl of Argyle had no idea that the Earls of Huntly and Errol would attack him with such an inferior force; and he was, therefore, astonished at seeing them approach so near him as they did. Apprehensive that his numerical superiority in foot would be counterbalanced by Huntly's cavalry, he held a council of war to deliberate whether he should at once engage the enemy, or retreat to the mountains, which were inaccessible to Huntly's horsemen, till his lowland forces, which were chiefly cavalry, should come up. The council advised Argyle to wait till the King, who had promised to appear with a force, should arrive, or, at all events, till he should be joined by the Frasers and Mackenzies from the north, and the Irvings, Forbeses, and Leslies from the lowlands with their horse. This opinion—which was considered judicious by the most experienced of Argyle's army—was however disregarded by him; he determined to wait the attack of the enemy; and to encourage his men he pointed out to them the small number of those they had to combat with, and the spoils they might expect after victory.

He disposed his army on the declivity of a hill, betwixt Glenlivet and Glenrinnies in two parallel divisions. The right wing, consisting of the Macleans and Mackintoshes, was commanded by Sir Lauchlan Maclean and Mackintosh—the left, composed of the Grants, Macneills, and Macgregors, by Grant of Gartinbeg—and the centre, consisting of the Campbells, &c., was commanded by Campbell of Auchinbreck. This vanguard consisted of 4,000 men, one-half of whom carried muskets. The rear of the army, consisting of about 6,000 men, was commanded by Argyle himself. The Earl of Huntly's vanguard was composed of 300 gentlemen, led by the Earl of Errol, Sir Patrick Gordon of Auchindun, the laird of Gight, the laird of Bonnitoun, and Captain, afterwards Sir Thomas Carr. The Earl himself followed with the remainder of his forces, having the laird of Cluny upon his right hand and the laird of Abergedly upon his left. Three pieces of field-ordnance under the direction of Captain Andrew Gray, afterwards colonel of the English and Scots who served in Bohemia, were placed in front of the vanguard. Before advancing, the Earl of Huntly harangued his little army to encourage them to fight manfully; he told them that they had

no alternative before them but victory or death—that they were now to combat, not for their own lives only, but also for the very existence of their families, which would be utterly extinguished if they fell a prey to their enemies.

The position which Argyle occupied on the declivity of the hill gave him a decided advantage over his assailants, who, from the nature of their force, were greatly hampered by the mossiness of the ground at the foot of the hill, which was interspersed by pits from which turf had been dug. But, notwithstanding these obstacles, Huntly advanced up the hill with a slow and steady pace. It had been arranged between him and Campbell of Lochnell, who had promised to go over to Huntly as soon as the battle had commenced, that, before charging Argyle with his cavalry, Huntly should fire his artillery at the yellow standard. Campbell bore a mortal enmity at Argyle, as he had murdered his brother, Campbell of Calder, in the year 1592; and as he was Argyle's nearest heir, he probably had directed the firing at the yellow standard in the hope of cutting off the Earl. Unfortunately for himself, however, Campbell was shot dead at the first fire of the cannon, and upon his fall all his men fled from the field. Macneill of Barra was also slain at the same time. The Highlanders, who had never before seen field pieces, were thrown into disorder by the cannonade, which being perceived by Huntly he charged the enemy, and rushing in among them with his horsemen increased the confusion. The Earl of Errol was directed to attack the right wing of Argyle's army commanded by Maclean, but as it occupied a very steep part of the hill, and as Errol was greatly annoyed by thick volleys of shot from above, he was compelled to make a *dejour*, leaving the enemy on his left. Gordon of Auchindun disdaining such a prudent course, galloped up the hill with a small party of his own followers, and charged Maclean with great impetuosity; but Auchindun's rashness cost him his life. The fall of Auchindun so exasperated his followers that they set no bounds to their fury; but Maclean received their repeated assaults with firmness, and manœuvred his troops so well as to succeed in cutting off the Earl of Errol and placing him between his own body and that of Argyle, by whose joint forces he was completely surrounded. At this important crisis, when no hopes of retreat remained, and when Errol and his men were in danger of being cut to pieces, the Earl of Huntly, very fortunately, came up to his assistance and relieved him from his embarrassment. The battle was now renewed and continued for two hours, during which both parties fought with great bravery, the one, says Sir Robert Gordon, "for glorie, the other for necessity." In the heat of the action the Earl of Huntly had a horse shot under him, and was in imminent danger of his life; but another horse was immediately procured for him. After a hard contest the main body of Argyle's army began to give way, and retreated towards the rivulet of Alchonlachan; but Maclean still kept the field and continued to support the falling fortune of the day. At length, finding the contest hopeless, and after losing many of his men, he retired in good order with the small company that still remained about him. Huntly pursued the retiring foe beyond the water of Alchonlachan, when he was prevented from following them farther by the steepness of the hills, so unfavourable to the operations of cavalry. The success of Huntly was mainly owing to the treachery of Lochnell and of John Grant of Gartinbeg, one of Huntly's vassals, who, in terms of a concerted plan, retreated with his men as soon as the action began, by which act the centre and the left wing of Argyle's army

was completely broken. On the side of Argyle 500 men were killed besides Macneill of Barra, and Lochnell, and Auchinbreck, the two cousins of Argyle. The Earl of Huntly's loss was comparatively trifling. About fourteen gentlemen were slain, including Sir Patrick Gordon of Auchindun and the Laird of Gight; and the Earl of Errol and a considerable number of persons were wounded. At the conclusion of the battle the conquerors returned thanks to God on the field for the victory they had achieved. This battle is called by some writers the battle of Glenlivet, and by others the battle of Altchonlachan. Among the trophies found on the field was the ensign belonging to the Earl of Argyle, which was carried with other spoils to Strathbogie, and placed upon the top of the great tower.

GLENLOCHY, a narrow vale along the course of the Lochy, in the district of Breadalbane, Perthshire. It extends in length about 12 miles; has the form of the arc of a circle, stretching from west to east, with its concave side to the north; and is distributed into detached portions of the parishes of Kenmore, Weem, and Killin. It is separated by a ridge of mountains from Glendochart and Strathfillan.

GLENLUCE, a valley in Wigtonshire, stretching from the head of Luce bay northward to the extremity of the shire. Most of it is comprised in the modern parishes of Old Luce and New Luce. The valley had its name from being traversed over its whole length by the river **LUCE**: which see. In some ancient Latin documents, it is called *Vallis Lucis*, 'the valley of light;' a name which may have been derived, either from the valley being deep and broad, and laying its bosom fully open to the play of the day-beams, or more probably from its being the site of an ancient abbey whence, in the estimation doubtless of the anti-reformation inhabitants, emanated all the moral light enjoyed by the circumjacent district. But the really original name was *Glenlus*, from the *Scoto-Irish* *glen*, 'a valley;' and *lus*, 'an hero;' and seems to have been descriptive of the fertility or horticultural capabilities of its soil. The appellation *Glenluce*—though, as applied to the valley, seldom used—is yet fully identified with its village and with the ruins and history of its abbey.

The village of **GLENLUCE** is situated near the centre of the parish of Old Luce, on the slope of a glen or little valley, traversed by a small tributary of the river Luce, half-a-mile east of the confluence of the streams, and about $\frac{1}{2}$ mile from the most inland point of Luce bay. The beautiful seat of Balcail, $\frac{1}{2}$ of a mile to the south-east, and the extension on all sides of its fine wooded policies, give the village an aspect of opulence and comfort. *Glenluce*, though a place of no trade, and deriving nearly all its importance from its relation to the circumjacent agricultural district, has risen from a population of between 200 and 300, in 1817, to a present population of about 850. It stands on the great Galloway post-road leading to Dumfries and Carlisle; is enlivened by the transit of the Dumfries and Portpatrick mail; and has an annual hiring-fair in the month of May, and a cattle-market on the first Friday of every month from April to December. In the village is a small meeting-house of the United Secession; stipend, £80: and a little out of it, on the north-west side, stands the parish-church of Old Luce, built in 1814. Sittings, about 800.

The ruins of the abbey of *Glenluce* stand $\frac{1}{2}$ mile north-west of the village, on the left bank of the river Luce. They cover an entire acre of surface, and present distinct indications of ancient vastness and magnificence. The chapter-house still stands entire, and continues to bear its appropriate name.

It is a small apartment, on the east side of the square of ruin, sending up at its centre from floor to roof a strong pillar about 14 feet in height, from whose top 8 divergent arches span the intervening space to the surrounding walls. The arches are of white freestone, and are curiously sculptured at their highest elevation into various ornamental figures. So late as 1646, nearly a century after most other monasteries in Scotland had been destroyed, the abbey of *Glenluce* had sustained little injury. In 1684, Symson says, in his *Account of Galloway*, that the steeple and a part of the walls of the church, together with the chapter-house, the walls of the cloisters, the gatehouse, and the walls of the large precincts, were, for the most part, then standing. A field adjacent to it was anciently a cemetery, and is still the burying-place of the Hays of Park. A garden and orchard, 12 Scots acres in extent, formerly belonged to the convent, and now forms the glebe of the minister of Old Luce.—The abbey was founded in 1190, by Roland, Lord of Galloway, and constable of Scotland; and was set apart for monks of the Cistercian order, brought from Melrose. In 1214, William was abbot; a man none otherwise known than as the author of an extant letter to the Prior of Melrose, giving an account of a remarkable phenomenon in the heavens, observed by two of his monks. In 1235, the monastery was plundered, during the judicial inroad upon the rebel Gallowegians, by the lawless soldiery of Alexander II. In the reign of James IV., Walter was abbot,—having been sent to *Glenluce* by John, Duke of Albany. In 1507, when James IV., with his Queen, Margaret, was on his pilgrimage to Whitbourn, he called at *Glenluce*, and gave the gardener a present of four shillings. In 1514, died the abbot, Cuthbert Baillie, who, for the two preceding years, was lord-treasurer of Scotland, and who, previous to his obtaining the abbacy, was first a canon in the chapter of Glasgow, and next rector of Cumnock. In 1560, a papal bull arrived from Rome, confirming the King's appointment of Thomas Hay, of the house of Park, to be commendator of the abbey; and is still preserved among the archives of his lineal descendant, Sir James D. Hay, Bart., the principal resident heritor of Old Luce. In 1587, the whole property of the monastery was, by the general annexation act, vested in the King. In 1602, James VI. erected it into a temporal barony in favour of its commendator, Lawrence Gordon, second son of Alexander, bishop of Galloway, and titular archbishop of Athens. In 1610, at the death of Lawrence, his brother John Gordon, dean of Salisbury—a person of high literary reputation as an author—received it by royal charter; and he immediately transferred it, as the dowry of his daughter Louisa, to his son-in-law, Sir Robert Gordon of Gordonston. In 1613, it was purchased from the latter possessor by the King, and annexed to the bishopric of Galloway. In 1641, on the temporary abrogation of Episcopacy, it was transferred to the university of Glasgow; in 1681, it was restored to the re-erected see of Galloway; and after the final overthrow of Episcopacy in 1689, it was once more made a temporal barony, and bestowed on the family of Dalrymple, afterwards Earls of Stair.

GLENLYON, a long narrow vale in the district of Breadalbane, and parish of Fortingal, Perthshire. It extends from Loch Lyon on the west, away eastward, near the southern verge of Fortingal, a distance of about 28 miles, and is traversed throughout by the river Lyon, from which it receives its name. Its breadth is very inconsiderable,—seldom, in the level part, exceeding a furlong,—and in some places so squeezed in by the hills, as to contain a space of only 8 or 10 yards for the transit of the river. Its

flanking eminences, on both sides, but especially on the northern, come down upon it with such speedy declivity as to ward off from it the sun-beams, and render it a valley of shadows, during the entire day of the winter months, and during a large portion of every other day of the year. But the sides of the glen, up to the very summits of the hills, are, in general, green with verdure, and dotted over with sheep, lying like pearls on plates of emerald; and streaked at intervals, with the foaming waters of brawling brooks, careering over impediments, and forming cataracts and cascades on their impetuous way to the river, or cloven down with fairy dells which bring down their quiet and smiling rills from a distance of 3 or 4 miles inland, they present many a picture of mingled beauty and romantic grandeur. Nor are the general effects of the landscape less heightened, by the singular careerings and natural beauties of the river: See The LYON. "We drove 7 miles," says Miss Sinclair in her 'Northern Circuit,' "through the narrow mountainous vale of Glenlyon, an exquisite specimen of Highland beauty, being enlivened by the sparkling river, and hemmed in by hills glowing with heather. It might have made a schoolboy tremble to see how the birches were waving over our heads; and here the mountains are so lofty, that villages lying at their base are three or four months every year without seeing the sun. The river Lyon, which now looked like a flood of light, once ran red with the blood of the slaughtered Macgregors [M'Ivers], when, after a fierce conflict, the conquerors washed their swords in the stream. Not a feature in this landscape could be altered without injury, and a painter might advantageously spend his whole life in taking views, every one of which would appear completely different. In some places you seem to have discovered an unknown world, never trod by human footstep, then comes an old ruin, hiding its decay in wreaths of ivy and roses, next appears a smiling village, afterwards a long colonnade of superb plane or ash trees, then a thriving farm, here and there a church; and the old burying-ground at Fortingal is particularly interesting." Much of the glen, especially toward its upper end, is distributed into very large sheep-farms, and, in consequence, has few human inhabitants. A battle is traditionally reported to have been fought in Glenlyon, between the M'Ivers, who claimed it as their territory, and Stewart of Garth, commonly called "the fierce wolf," and it is said to have terminated in the utter defeat of the M'Ivers, and their expulsion from the district. Several of the localities appear to have acquired their names from the event or the circumstances of the battle.—Excepting a small part at its lower end, the whole of Glenlyon, with some parts of its flanking uplands, was erected into a *quoad sacra* parish in 1833. The parish measures 26 miles in extreme length, from 6 to 8 miles in breadth, and about 156 miles in superficial area, and was detached in a small degree from Weem, but chiefly from Fortingal. The population, according to the minister's census in 1836, consisted of 571 churchmen, 15 dissenters, and 3 persons not of any known religious connexion,—in all 588; the whole of whom, with the exception of two or three, were of the working classes. The church was built in 1828, by the heritors of the new parish, at the cost of £673. Sittings between 500 and 600. Stipend £120, derived wholly from government. The minister has a manse and a glebe, the latter worth from £2 to £3. The parish has a small religious library, which was aided in its formation by the late Rev. S. Gilfillan, United Secession minister at Comrie. A small Baptist congregation at Milton of Eonan in the parish, was established about the year 1805, meets generally in a private dwelling-house, and produces

an average attendance of 6 in winter, and 20 in summer.

GLENMORE, a narrow vale chiefly in the parish of Fortingal, and partly in that of Dull, Perthshire. It lies immediately south of the remarkable mountain SCHICHALLION, [which see,] first stretching 2½ miles along the mountain's southern base, and next running 3½ miles south-eastward and southward to a convergence with the vale of Fortingal. Over its whole length, it is traversed by Glenmore water, a tributary of the river Lyon, rising a little westward of the head of the glen, and forming, for 2 miles above its embouchure, the boundary between Fortingal and Dull. In ancient times the glen was covered with the extinct forest of Schichallion. During a long period the roots of fir-trees and the trunks of oaks furnished a profitable produce to the natives. The fir roots were not only excellent fuel, but, when in a state of combustion, emitted a light surpassing the brilliance of gas. The oak trunks, dug up from beneath the soil, were of a blackish colour, and, though somewhat soft, became very hard on exposure to the air; and they were split up and manufactured into sharpening tools for scythes, and found in the neighbouring places of traffic a ready market. Though the inhumed relics of the forest continue still to be employed as before, they have been greatly thinned in number, and are hastening to extinction.

GLENMORE, a vale or district, partly in Morayshire, and partly in Inverness-shire, abounding with fir-wood of excellent quality, on the property of Sir J. Grant and the Duke of Richmond, late the Duke of Gordon. It is almost all floated down the Spey to GARMOUTH: which see. This wood is considered the oldest and best in Scotland. It is situated in a glen, and surrounds Loch-Morlich, the source of the Abernethy or Drurie. It is upwards of 4 miles in length, and nearly 3 in breadth. In 1786, the late Duke of Gordon sold his fir-woods in this district to Mr. Osbourne, a wood-merchant in Hull, for £10,000 sterling. "The progress of the railroads in England and Scotland," says the editor of the Inverness Courier, "has lately caused a great demand for fir-wood in this part of the country. The sound of the axe and the saw-mill are heard in the loneliest and most remote parts of the Highlands. We have heard of one proprietor selling his fir-wood for £10,000; and another, for £5,300. Within the last eight or ten years, a vast number of sales of this kind have been effected. A considerable amount of shipping is engaged in this trade; and the vessels that carry out the timber in the shape of railroad sleepers, pit-props, &c., generally return with cargoes of coals, lime, and other commodities. The number of men employed in felling the trees, sawing them up, and exporting them, is also a source of advantage to the country. A great trade has thus sprung up,—the *avatar*, we trust, of extended commerce in our northern region. When the Duke of Gordon, about fifty years ago, sold his mighty forest of Glenmore for £10,000, the sum was considered unprecedented; yet the same timber would now, from superior management, as well as superior value in the market, be worth more than treble the amount. Previously to this period, the laird of Grant, it is said, sold his timber at the rate of 1s. 8d. for what one man could cut and manufacture in a year! Thus, our fine forests have been thinned and destroyed, and the country denuded of one of its noblest ornaments and most valuable products." Sir Thomas Dick Lauder, in his excellent edition of Gilpin's 'Forest Scenery,' says the Duke's forest "was supposed to be the finest fir-wood in Scotland. Numerous trading vessels, some of them above 500 tons, were built from the timber of this forest; and one frigate, which

was called the Glenmore. Many of the trees felled measured 18 and 20 feet in girth; and there is still preserved, at Gordon-Castle, a plank nearly 6 feet in breadth, which was presented to the duke by the company.* The forests of Glenmore and Rothiemurchus, though belonging to different estates, were so united as to form in reality one continuous forest, and they are now equally denuded of all their finest timber. We remember this a region of such wildness, where its calm silent lakes were for ever reflecting, from their dark bosoms, the endless forests of pine, which rose distance after distance over the broken sides of their minor hills and more lofty mountains, and where the scenes we wandered through were such as the florid imagination of a poet might fancy, but could not describe. Alas! the numerous lakes, and the hills, and the mountains, are yet there, but the forests shall no more bewilder both the steps and the imagination of the stranger, till time shall give the same aged forms to those younglings which are everywhere springing up in the room of their ancestors. The Glenmore forest is fast replenishing itself. Nothing could be more savagely picturesque than that solitary scene when we visited it some years ago. At that time many gigantic skeletons of trees, above 20 feet in circumference, but which had been so far decayed at the time the forest was felled as to be unfit for timber, had been left standing, most of them in prominent situations, their bark in a great measure gone—many of them without leaves, and catching a pale unearthly looking light upon their grey trunks and bare arms, which were stretched forth towards the sky like those of wizards, as if in the act of conjuring up the storm which was gathering in the bosom of the mountains, and which was about to burst forth at their call." See ABERNETHY.

GLENMORE-NAN'ALBIN, that is, 'the Great glen of Caledonia,' is a term applied to that valley which runs in a direction from north-east to south-west, across the whole breadth of the kingdom, from the Moray frith at Inverness to the sound of Mull below Fort-William, and the bottom of which is almost filled with a chain of extensive lakes. The distance in a direct line is little more than 50 miles, and of this the navigable lakes, LOCH-NESS, LOCH-ORCH, and LOCH-LOCHY, [which see,] make nearly 40 miles. It is through this glen that the Great Caledonian canal runs: See CALEDONIAN CANAL.

GLENMORISTON, a valley in Inverness-shire, which gives name to a parish united to that of Urquhart. Anoch, a small village in this glen, was visited by Dr. Johnson, in 1773. "Some time after dinner," says he, "we were surprised by the entrance of a young woman, not inelegant either in mien or dress, who asked us whether we would have tea. We found that she was the daughter of our host, and desired her to make it. Her conversation, like her appearance, was gentle and pleasing. We knew that the girls of the Highlands are all gentlewomen, and treated her with great respect, which she received as customary and due, and was neither elated by it, nor confused, but repaid my civilities without embarrassment, and told me how much I honoured her country by coming to survey it. She had been at Inverness to gain the common female qualifications, and had, like her father, the English pronunciation. I presented her with a book, which I happened to have about me, and should not be pleased to think that she forgets me." Dr. Johnson eloquently and beautifully adds, "As the day advanced towards noon, we entered a narrow valley not very flowery, but sufficiently verdant. Our guides told us that the

horses could not travel all day without rest or meat, and entreated us to stop here, because no grass would be found in any other place. The request was reasonable, and the argument cogent. We therefore willingly dismounted, and diverted ourselves, as the place gave us opportunity. I sat down on a bank, such as a writer of romance might have delighted to feign. I had indeed no trees to whisper over my head, but a clear rivulet streamed at my feet. The day was calm, the air was soft, and all was rudeness, silence, and solitude. Before me, and on either side, were high hills, which, by hindering the eye from ranging, forced the mind to find entertainment for itself. Whether I spent the hour well I know not; for here I first conceived the thought of this narration."—An excellent line of road, executed under the auspices of the parliamentary commissioners, commences at the west side of Loch-Ness, from Invermoriston, passes up Glenmoriston, and preserving a westward direction for upwards of 50 miles through an improveable country, terminates at Kyle-Rhea, the usual ferry from the mainland of Scotland to the isle of Sky. The river Moriston comes off the superfluous waters of the lakes of Clunie and Luin in Glenhiel. See URQUHART and GLENMORISTON.

GLENMOY, a vale in Forfarshire, near Brechin.

GLENMUICK, an extensive parish, in the district of Marr, Aberdeenshire, formed by the union of the parishes of Glengairn, Glenmuick, and Tulloch. It is bounded on the north by Strathdon and Logie-Coldstone; on the east by Aboyne and Glentanar; on the south by Forfarshire; and on the west by Crathie and Braemar. It is of an irregular figure, about 18 miles in length, and 15 in breadth. Assessed property, in 1815, £4,066. Population, in 1801, 1,901; in 1831, 2,279. The parish is intersected by the river Dee from west to east; by the Gairn, from north-west to south-east, till it joins the Dee; and by the Muick from south-west to north-east, till it also joins the Dee, in the same vicinity, in the middle of the parish. These streams are all joined by numerous others of minor importance; the whole forming a series of the best trout waters in this part of Scotland. Lying in the midst of the Grampians, this parish is mostly hilly and pastoral. Many of the hills are clothed with wood to the very summit: others are covered with heath, and beautifully fringed along the base with natural wood and plantations. Abundance of moor game is found on these hills, particularly on Morven, upon the higher grounds of which ptarmigans are always to be found. The most remarkable of the other wild creatures are red and roe deer, foxes, otters, pole-cats, &c., and eagles, hawks, black cock, woodcock, partridges, &c. The soil of this parish is in general shallow, but early, producing good grain, though proportionally little fodder. Agriculture has been long in a state of improvement. The arable ground, however, bears a very small proportion to the waste and barren tracts. There is plenty of limestone in all the parishes: near Pannanich it assumes the appearance of fine marble. Glengairn, the least and most compact of the three districts, lies chiefly to the north-west; on both banks of the rocky Gairn, extending 6 miles north-west of the church, where the upper parts of Tulloch begin, and separate it from the parish of Crathie. A small part of it lies on the south side of the Dee, called Strathgirmie. Near the pass to Ballater is the Castle of Glengairn, in the vicinity of which a vein of lead has been long known, though never worked to advantage. Glenmuick extends south-westwards, 15 miles in length, on the south side of the Dee, lying on both sides of the Muick, which originates in a

* It is 6 feet 2 inches long, and 5 feet 5 inches broad. The annual layers from its centre to its side are about 235.

large lake or loch of the same name, about $4\frac{1}{2}$ miles from Ballater. The Muick possesses a tolerably good fall, to which a good road leads along the south side of the Muick. The stream dashes over a rock of about 40 feet in height, into a basin below, and forms a beautiful cascade. In this district are the celebrated wells of **PANNANICH**, which see: and in the vicinity stands Ballater, the most fashionable watering-place in the north of Scotland: see **BALLATER**. There are two ruins in Glenmuick, namely, the tower of Knock, on the top of a hill, and Dee castle, built by the family of Gordon, in the eastern extremity of the parish. Tulloch is the most populous and extensive district in the parish, being 18 miles in length, from east to west, and intersected, at the Crags of Ballater, by Glengairn, which divides the lower parts of this district from the upper. The hill of Culblean is in this district: at its foot there is a beautiful lake of about 3 miles in circumference, called **LOCH CANNOR**: which see. There is a stone on the north bank of the lake with a great deal of carving upon it; but the figures are now unintelligible. It is supposed that it was put up in memory of some of the Cumings who fell in the chase or battle of Culblean, in 1335, and as the Earl of Athole fell that day, it may have been here. On the hill of Culblean, there is a remarkable hollow rock, which, from its shape, bears the name of the Vat, and through which a rivulet runs. In going up to visit this natural curiosity, a stranger is much struck with the narrowness of the entry to the Vat (being less than an ordinary door) and the large spacious area, in which he immediately finds himself enclosed by rocks from 50 to 60 feet high, and from the fissures of which tall and healthy birch trees are growing. There is one particular clift of the rock which the eagle generally occupies as a safe and secure asylum for hatching and nourishing her young, and where her nest is always to be seen. The rivulet falls down at the upper end through broken shattered rocks, and when flooded adds greatly to the picturesque appearance of the whole. The Pass of Ballater, and surrounding scenery, has been already noticed in the article **BALLATER**.—This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeen. Patron, the Marquess of Huntly. Stipend £237 1s. 1d.; glebe £7 10s. Schoolmaster's salary £30 2s. 9d. per annum, with fees, &c., about £22. There are 8 private schools in the parish.

GLENMUIR, a valley in the parish of Old Cumnock, Ayrshire, which has been rendered interesting by the beautiful poem called 'the Cameronian's Dream.'

"In Glenmuir's wild solitudes lengthened and deep
Were the whistling of plovers and bleating of sheep."

The author of this exquisite poem lived, when a boy, in the midst of this sequestered glen, at a place called Dalblair, where his fine poetic genius was stimulated and nurtured by the mingled scenes of soft beauty and wild grandeur with which he was surrounded. Glenmuir-shaw, near the head of this valley, is a pleasant spot; and must in former times have been a place of some consequence, as the ruins of its ancient baronial castle still indicate. Some lordly chieftain of the Saxon line seems to have selected it as the locality in which he chose to live in a state of rude splendour, and which must have been witnessed by the lonely sentinels that still guard the spot,—the stately trees, whose dotard boughs and scaly rind bespeak the age of several centuries. He who sighs after a sweet meditative seclusion will find that seclusion at Glenmuir-shaw.

GLENNEVIS, a valley of Inverness-shire, near Fort-William, running from the head of Glen Treig,

round the south base of Bennevis, to the eastern shore of Loch-Eil.

GLENOGILVIE. See **GLAMMIS**.

GLENOGLE, a wild and dreary valley in the parishes of Balquhider and Killin, in Perthshire, at the head of Loch-Earn. "It is narrow," says Campbell, in his 'Journey through Parts of North Britain,' [vol. i. p. 156,] "and a mountain-stream, collected from a hundred more which in times of heavy rain run down the furrowed steep of the glen, brawls along through a deep chasm till the lake receives it. The rugged sides of Glenogle exhibit terrible marks of former and recent convulsions of the earth. As we advance into this narrow wild, on either hand we behold rocks whose deep-cloven summits, high over head, hang in sullen aspect, and seem ready to start into shivers and overwhelm the traveller, who sees no way of avoiding the threatened destruction. This illusion is heightened, in observing on our left huge piles, but lately rolled down the brow of that precipice, strewed in every direction, and of indefinite dimensions, from the smallest splinter to fragments of immense bulk, all tumbled together in the wildest disorder. We pass swiftly by this awful appearance, lest nature, in convulsive throes, similar to what produced the explosion of which the scene before us was the terrible effect, should again precipitate the impending ruin. On looking back through this rugged defile, we have a glimpse of the lake, and the hills that rise from its margin; behind which, the cliffs of Ben-voirlich and Stuchactroin tower in lofty grandeur, and give a noble air to the gloomy wildness of this truly Alpine scene."

GLENORCHY AND INISHAIL, two united parishes in the county of Argyle, on the borders of Perthshire. They extend upwards of 24 miles in length, but are of unequal breadth. They were united in 1618. The whole district is mountainous and hilly, excepting the vale of Glenorchy, which forms a beautiful plain of 3 miles in length, and half-a-mile in breadth. The river Orchy, which falls into Loch Awe, glides through the middle, dividing it into two parts. On the sides of this river the soil is a mixture of light earth and sand; but on the banks of the loch it is generally deep and fertile. The church and parsonage-house of the parish are situated on a beautiful oblong islet formed in the bed of the Orchy, and upwards of a mile in circumference. In the churchyard are several grave-stones of great antiquity. The hills and moors—which some years ago were covered with heath and coarse herbage—have, since the introduction of sheep into the country, become clothed with a richer sward of a greener hue, and afford excellent pasture. In former times it was supposed that no domestic animal could stand the severities of a winter here, in the more elevated grounds,—now the hills are covered with sheep through the whole year. There are still some tracts of natural wood in Glenorchy, chiefly of firs and oaks, intermixed with ash, birch, and alder. The banks of Loch-Awe are covered with plantations of various kinds of wood, of which the horse-chestnut, the mountain-ash, the lime, and the plane, are the most conspicuous. At the east end of Loch-Awe, on a rocky point, stand the fine ruins of the castle of **KILCHURN**: which see. There is another ruinous castle at Auchallader, in the upper part of the parish. Near this castle, a fatal conflict took place about two centuries ago, between two hostile clans: and several cairns still visible on the heath mark the place where the slain were interred. In the island of Inishail, the remains of a small monastery, with its chapel, are still to be seen. The chief hills are **BENDORAN** and **BENCRACHAN**: which see. **Be-**

sides Loch Awe, there are several minor lakes, and numerous rivulets which abound with trout. The military road from Stirling to Inverary, Tyndrum, and Fort-William, passes through the parish; and one part of this beautiful line,—from the bridge of Awe to Dalmally,—presents a fine succession of beautifully varied views. Part of the road lies through a narrow defile, amidst deep chasms and impending rocks, which seem to indicate that some vast convulsion of the earth happened here at a remote period: see article LOCH AWE. Cobalt, talc, asbestine filaments, and a beautiful green jasper, have been found in the mountains, which are mostly of granite, with porphyry and a mixture of felspar. Limestone is quarried in several places. Glenorchy was at one time the property of the warlike clan Macgregor, who were gradually driven from the territory before the influence of the rival clan Campbell. The gallows-hill of Glenorchy, famed in Highland tradition as the place of expiation of many criminals obnoxious to the summary justice of Macgregor, is an eminence opposite the parish-church. The ancestors of the late Angus Fletcher of Berenice, author of a well-known political work upon Scotland, were, according to the traditions of the country, the first who raised smoke or boiled water on the braes of Glenorchy. Population, in 1801, 1,851; in 1831, 1,806; in 1841, 1,644. Houses, in 1831, in Glenorchy, 185; in Inishail, 146; in 1841, in Glenorchy, 131; in Inishail, 163. Assessed property in 1815, in Glenorchy, £7,329; in Inishail, £936; in 1842–3, as assessed to property tax, £8,911.—This parish is in the presbytery of Luss, and synod of Argyle. Patrons, the Duke of Argyle and the Marquess of Breadalbane. Stipend £206 2s. 4d.; glebe £20. The two parishes of Glenorchy and Inishail are united *quoad sacra* only as regards payment of stipend and repairing of income. Glenorchy church was built in 1811; sittings 570. Inishail church was enlarged in 1793; sittings 191. The minister officiates on alternate Sundays in each parish. A portion of Glenorchy with a population in 1841 of 247, has been annexed *quoad sacra* to a chapel at Strathfillan. There are two parish-schools in Glenorchy, the masters of which have each £25 13s. 3½d. per annum; and there is one parish-school in Inishail, the master of which has a salary of £25.

GLENPROSEN. See PROSEN.

GLENQUHAGEN CRAIG, a romantic and mountainous mass of rock near the northern extremity of the parish of Penpont, in the district of Nithsdale, Dumfries-shire. Amidst remarkably varied Highland scenery, abounding in the wilder beauties of nature, it forms the most remarkable feature, presenting irregular and precipitous fronts to the south and south-west, and towering above the river Scarr at its base to the height of 1,000 feet, above the level of the sea.

GLENQUHARY, a cluch in the parish of Kirkconnel, above Kirkland, and a little to the west of the beautiful valley of Glenaymer. Glenquhary heights command on the south an extensive view of the delightful vale of the Nith; on the north, they overlook one of the most perfect solitudes in nature, and of vast extent, reaching forward to Glenmuir water. The cluch is a retired and deep recess among the mountains, and a locality extremely favourable to those who were under hiding, on account of the facilities it afforded of escape to the hills, and to the dreary desert that lay beyond.

GLENQUEICH,* a rude valley in Inverness-shire, intersected by the Queich or Quoich, which descending from the Maolcheandarg mountain flows into the north side of Loch-QUEICH: which see.

GLENQUEICH, a valley in Forfarshire, near Kiriemuir.

GLENQUEICH, a valley in Perthshire, intersected by the Bran.

GLENROY, a valley in the parish of Kilmani-

* Dr. Robertson, in his Agricultural Survey of Inverness-shire, says: "The *Glenqueichs*—of which several are in the Highlands—are oblate ellipses, narrow at both ends, and comparatively broad at the middle. The name is borrowed from the shape of the silver cup with which the Scotch used to drink their favourite liquor before the introduction of glasses."

vaig, in Lochaber, Inverness-shire, celebrated for its Parallel roads, as they are called, on which many treatises have been written, and which have given rise to many conflicting theories. It may be regarded as a lateral branch of Glenspean. It is a long, narrow, winding, and steep ravine, nearly 14 miles in length, with a breadth of little more than half-a-mile, through the entire extent of which, a rapid stream bearing the same name as the glen dashes down to join the Spean, on the right bank, at the Bridge of Roy. At its entrance, the scenery of the glen is comparatively tame and uninteresting. Except in the bottom of the strath, where the Ruaigh or Roy runs betwixt a line of low dwarfish trees, there is no timber in the lower end of the glen. About a mile and a-half up the glen the road enters a fine oak coppice, and crosses the Roy by a high stone bridge. We now enter the inhabited portion of the glen. Four villages,—Upper and Lower Bahantin, Bahinnie, and Creanachan,—are here situated within a mile. They consist respectively of from 10 to 20 houses, and are inhabited chiefly by Macdonalds. Beyond Upper Bahantin, the road passes Brogich, and the commencement of the Parallel roads is observed on the high hill of Benvanicaig on the left. A few yards farther forward, the three lines are seen distinctly, one over the other, on the hill of Creanachan, on the right. "Curiosity is excited by finding that the same description of lines are marked on both sides of the glen; and that not only do the lines on the same side run parallel to each other, but that the lines on both sides occupy the same horizontal levels. As you proceed into the glen, the lines become more marked; and upon ascending to them, the traveller finds that they are ample terraces or roads projecting from the sloping side of the mountain, and composed of a mixture of clay and gravel. These terraces are of varying breadth,—at some parts projecting only a few feet from the side of the hill, and at others swelling out into magnificent pathways 18 or 20 yards wide. Where the surface of the hill is composed of bare, sharp rock, the roads are entirely effaced; but these gaps are too insignificant to destroy the unbroken continuity of the lines when viewed along two or three miles of the valley. The first or lowest terrace is 972 feet above the level of the sea; the second is 1,184 feet; and the third or highest is 1,266 feet. One or two detached rocks tower up out of the centre of the valley, and on these, as well as on the lateral mountains, a line corresponding with the lowest terrace is discovered. The origin of these wonderful appearances has long been subject of curious and earnest discussion. Five different theories have been advanced in explanation of their construction. In the first place, of course, they have been traced back to the Flood,—that unfailling resource by which the popular mind resolves every difficulty presented in the physical construction of the globe. In the second place, some people who take delight in accumulating proofs of the antiquity and greatness of the Celts, have contended that the Parallel roads were formed by the persevering labour of the Fingalians, and were intended to expedite the movements of the huntsmen as they scoured the forests after the deer. These venerable notions received their first blow from Sir Thomas Dick Lauder and Dr. Macculloch, who broached quite a different view of the matter." According to Dr. Macculloch: "the Parallel roads are the shores of ancient lakes, or of one lake, occupying successively different levels; for, in an existing lake among hills, it is easy to see the very traces in question produced by the wash of the waves against the alluvial matter of the hills. Ancient Glenroy was therefore a lake, which, subsiding first by a vertical depth of 82 feet, left its shore to form the uppermost line, which, by a second sub-

sidence of 212 feet, produced the second, and which, on its final drainage, left the third and lowest, and the present valley such as we now see it. If this deduction," adds the learned doctor, "should arouse the indignation of a Fingalian, he ought to be satisfied in the proud possession of one of the most striking and magnificent phenomena of the universe,—singular, unexampled, and no less interesting to philosophy, than it is splendid in its effects, and captivating by its grandeur and beauty." But it was not long till the correctness of the doctor's own theory was called in question. Mr. Darwin maintained, at a later period, that the terraces are sea-beaches, formed at the period when the now elevated land constituted a level bay of the ocean, and that the successive volcanic forces by which this land was ultimately raised to its present height, gave time for the formation of a lower and lower beach. A more recent theory is that of Professor Agassiz, who, in a letter to Professor Jameson, dated Fort-Augustus, October 3d, 1840, says,—“After having obtained in Switzerland the most conclusive proofs, that at a former period the glaciers were of much greater extent than at present, nay, that they had covered the whole country, and had transported the erratic blocks to the places where these are now found, it was my wish to examine a country where glaciers are no longer met with, but in which they might formerly have existed. I therefore directed my attention to Scotland, and had scarcely arrived in Glasgow, when I found remote traces of the action of glaciers, and the nearer I approached the high mountain-chains these became more distinct, until, at the foot of Ben-nevis, and in the principal valleys, I discovered the most distinct morains and polished rocky surfaces, just as in the valleys of the Swiss Alps, in the region of existing glaciers, so that the existence of glaciers in Scotland at early periods can no longer be doubted. The Parallel roads of Glenroy are intimately connected with this former occurrence of glaciers, and have been caused by a glacier from Bennevis. The phenomenon must have been precisely analogous to the glacier-lakes of the Tyrol, and to the event that took place in the valley of Bagne.” The view taken by Agassiz is participated by Professors Buckland and Forbes, and is now the commonly received doctrine of the learned. The Parallel roads are not confined to Glenroy. Similar appearances occur in Glenspean, Glencloy, and the adjoining valleys, as well as in the neighbourhood of Loch Laggan, Fort-William, and other parts of the Highlands and in various other quarters of Scotland.

GLENSANNOX, a magnificent mountain-valley in the island of Arran, through which a small stream, descending from the north-eastern shoulder of Goat-fell, flows north-east into the channel between Arran and Bute. Dr. Macculloch pronounces this glen the most striking as well as the most accessible in this picturesque island: See article ARRAN. In the midst of the sublime and romantic scenery of Glensannox, and on the edge of the precipitous rivulet of the same name, has been discovered a rich vein of barytes. In 1839 a manufactory for the article was erected on the spot. The quarry is about a hundred yards up the rivulet, whence the ore is brought to the manufactory on a wooden railway. The ore is first washed from any mixture of earth, by means of a stream formed by some rude stones placed across a waterfall. It is then ground into a fine pulp: and is afterwards put into square wooden frames, and again well-washed; after which it is removed to the boilers, where, being mixed with sulphuric acid, it is boiled with steam, and the ferruginous scum which arises in the process is carefully removed. It is then run-off into troughs, and dried in a drying-house, kept at a high temperature, till it

becomes so solid that it can be cut into an oblong brick form; after which it is removed into a cooler house, where it is dried thoroughly, and made ready for packing into barrels, or removed to the dyeing-house, to be dyed to any shade which may be desired. The machinery erected for this manufactory cost upwards of £3,000, and with its aid 10 workmen are enabled to turn out about 4 tons of barytes daily. Barytes is now extensively used instead of white-lead to form the body of paints, and for many purposes is preferable. At about a quarter of a mile from the manufactory is the cooperage, close on the sea-shore, where several men are employed making barrels for packing the barytes; and close beside it is a quay, by which the managers will be enabled to load vessels to convey their manufactory to the mainland, without the troublesome process of having recourse to small boats to carry it out into the deep water. These operations and erections have been little favourable to the beauty of the glen.

GLENSAX BURN, a small tributary of the Tweed, belonging partly to Selkirkshire and partly to Peebles-shire. It rises in Blackhouse-height, at the commencement of a narrow but long northerly projection of the parish of Yarrow in Selkirkshire; runs $4\frac{1}{2}$ miles along that projection to nearly its extremity; forms, for 3 furlongs, the boundary-line between Selkirkshire and Peebles-shire; traverses the latter county first $1\frac{1}{2}$ mile northward, next 1 mile eastward, and then falls into the Tweed $1\frac{1}{2}$ mile below the town of Peebles. At its mouth, and a little way up, it is often, in consequence of there watering the demesne of Haystone, called Haystone-burn. In the upper part of its course it flows through bleak scenery; but in the lower part it is a mirthful stream, dressed in keeping with the magnificent appearance of the Tweed in the vicinity of Peebles, and affording good trouting.

GLENSHEE, a vale about 7 miles long, and less than a mile broad, running south-eastward and southward down the eastern verge of the parish of Kirk-michael, at the north-east extremity of Perthshire. At its head, the vale diverges into the three smaller glens,—Glenbeg, Glentalnich, and Glenloch. A hill at the head of Glenshee, called Bengehul-bhuinn, is distinguished as the scene of a hunting-match which proved fatal to Diarmid one of the Fingalian heroes. Here are shown the den of the wild boar that was hunted, a lochlet called the Boar's loch, a spring called the Fountain of the Fingalians, and the spot where Diarmid was buried by his comrades. At the Spittal of Glenshee, near the head of the vale, is a chapel built by the heritors of the parish about the year 1831. Sittings nearly 400. At the date of the Religious Instruction inquiry, the district for whose benefit it was erected enjoyed no other religious services than the ministrations once a-month of the parish-minister. The population at that time was stated at 400. The Spittal of Glenshee is a stage on the great military road to Fort-George; 22 miles north from Cupar-Angus; 15 south of Castleton of Braemar; and 77 from Edinburgh.

GLENSHIEL,* a parish in the district of Kintail in Ross-shire, extending from east to west 26 miles in length, and from $1\frac{1}{2}$ to 6 miles in breadth. It is bounded on the east by the parishes of Kiltarlity, Urquhart, and Kilmanivaig; on the south by Glenelg; on the west by the Kyle Rhea; and on the north by Loch-Duich, which separates it from Lochalsh and Kintail. The surface consists chiefly of two valleys, Glenshiel and Glenlicht, and an elevated tract of land on the south bank of Loch-Duich, called

* Probably *Glen-shielg*, or the Valley of hunting.

Letterfearn. The mountain ridges abruptly rise to a prodigious height. In many places these mountains are rocky, and covered with heath to the summit; the interjacent valleys are pleasant, being clothed with grass and some natural wood; but the proportion of arable ground is very inconsiderable. The mountains appear to be composed of micaceous schist, which is sometimes alternated with horn-blende slate, and veins of granite appear traversing these strata in various places.* The shores abound with fish, and Loch-Duich receives an annual visit from shoals of herring: see article **LOCH-DUICH**. The lower end of Glenshiel is occupied by **LOCH-SHIEL**: which see. The great military road from Fort-Augustus to Bernera passes through this parish. In the heights of this parish is the pass of Glenshiel, famous for a battle fought in June 1719, between the English troops and the Highland adherents of King James, led by the Earl of Seaforth, in which the latter were defeated. Population, in 1801, 710; in 1831, 715. Assessed property, in 1815, £1,211. Gross rental £2,600. Houses, in 1831, 138.—This parish, formerly a vicarage, is in the presbytery of Loch-Carron, and synod of Glenelg. Patron, the Crown. Stipend £158 6s. 8d.; glebe £16. The parish-church is in the district of Letterfearn. It was built in 1758; sittings 300.—The parish-school is also in Letterfearn. Salary of master £28.

GLENSHIRA, a glen in the parish of Laggan, in the western part of Badenoch, forming the basin of the Spey for the first part of its course. Its principal feature is the grandeur of the mountains which rise around, sending down numberless torrents, particularly from the northern side, to swell the waters of the Spey.

GLENSHIRA, a picturesque and finely wooded glen about 5 miles long, at the head of Loch-Fyne, near Inverary.

GLENSPEAN, a beautiful glen in the parish of Kilmanivaig in Lochaber; commencing near the lower end of Loch-Laggan, and following in a westerly direction the course of the Spean.

GLENSTRAE, a wild glen which opens upon the end of Loch-Awe, at the northern base of Sroin-molchoin, a mountain forming part of the eastern boundary of Glenorchy. Macgregor of Glenstrae had a mansion here, of which the site can hardly now be traced among the heather, but of which the following interesting tradition is still related:—His son, who had been hunting in the neighbourhood, met the young Laird of Lamond travelling with a servant from Cowal towards Fort-William. They

dined together at a little house on the Black-mount, between Tyndrum and King's house; but, unfortunately quarrelling during the evening, dirks were drawn, and the young Macgregor was killed. Lamond instantly fled, and was hotly pursued by some of the Clan Gregor. With difficulty he outstripped his foes, and reached the house of the old laird of Glenstrae, whom he besought earnestly to afford him protection. "You are safe here, whatever you may have done," said the laird, as he led Lamond into his house. The pursuers arriving, informed the unfortunate father of what had occurred, and demanded the murderer; but Macgregor refused to deliver him up, as he had passed his word to protect him. His wife and daughter, with many tears, besought him to yield to the wishes of his clansmen, but the laird sternly refused to break the pledge which he had given, or to yield to their entreaties, and bade them be silent. "Let none of you dare to injure the man," said he; "Macgregor has promised him safety, and, as I live, he shall be safe while in my house!" He afterwards, with a party of his clan, escorted the youth home; and on bidding him farewell, said, "Lamond, you are now safe on your own land, I cannot, and I will not protect you farther! Keep away from my people; and may God forgive you for what you have done!" Shortly afterwards the name of Macgregor was proscribed, and the aged laird of Glenstrae became a wanderer without a name or a home. But the Laird of Lamond had now an opportunity of returning the kindness he had received, by protecting Macgregor and his family, which he hastened to improve, receiving the fugitives into his house, and shielding them from their enemies, until the cold-blooded policy of the Earl of Argyle towards the devoted Clan Gregor, prevailed against that of more generous rivals. In the MS. diary of Robert Birrell, is the following entry: "The 2 of October (1603,) Allester M'Gregour of Glainstre tane be the Laird of Arkynles, bot escapit againe; bot efter, taken be the Earle of Argyll the 4 of Januar; and brocht to Edinburge the 9 of Januar 1604, with mae of 18 his freindis, M'Gregouris. He wes convoyit to Bervick be the Gaird, conforme to the Earlis promise; for he promesit to put him out of Scottis grund. Swa he keipit ane Hieland-manis promes; in respect he sent the Gaird to convoy him out of Scottis grund: Bot thai wer not directit to pairt with him, bot to fetche him bak agane! The 18 of Januar, at evine, he come agane to Edinburge; and vpon the 20 day, he was hangit at the croce, and ij (eleven) of hes freindis and name, vpon ane gallous: Himself, being chieff, he wes hangit his awin hicht aboue the rest of his freindis."

GLENSTRATHFARRAR, a very romantic and picturesque glen in Inverness-shire. The prevailing rock is gneiss everywhere stratified and varying in colour from red to gray and white. The strata range from north-east to south-west and dip to the east under various angles, and are frequently very tortuous in their direction. The gneiss is traversed by veins of granite and quartz. The most frequent imbedded mineral is precious garnet. A valuable mine of graphite or blacklead was discovered by accident here in 1816; it occurs not in veins or regular beds, but in irregular masses imbedded in the gneiss.

GLENTANAR, or **GLENTANNER**, a mountain and forest district in Marr, Aberdeenshire, once a separate parish, but now united to **ABOYNE**: which see. The forest of Glentanner is very extensive, and is celebrated for its superb fir-trees.

GLENTARKIN. See **LOCH-EARN**.

GLENTILT, a narrow vale or mountain-pass 13 miles in length, coming down from the northern ex-

* This valley is inhabited by the clan of Macrae. The Macraes, as we heard afterwards in the Hebrides, says Dr. Johnson, "were originally an indigent and subordinate clan, and having no farms nor stock, were, in great numbers, servants to the Macleennans, who, in the war of Charles I., took arms at the call of the heroic Montrose, and were, in one of his battles, almost all destroyed. The women that were left at home, being thus deprived of their husbands, like the Scythian ladies of old, married their servants, and the Macraes became a considerable race." This state of matters is stoutly denied by the writer of the New Statistical Account, who pronounces it "an unworthy invention." The Macraes and Macleennans, except in the name only, are one clan, united by every tie, and alike distinguished for their deep-rooted attachment to the family of Seaforth, for many centuries the sole proprietors of this country. One instance of this attachment may serve as a specimen. Owing to the side which William, Earl of Seaforth, espoused during the troubles of 1715 and 1719, his lands of Kintail—a name then common to this and the parish of that name—were forfeited to the Crown; yet, during the years of the forfeiture it baffled all the endeavours and policy of government and of its commissioner, Ross of Fearnie, to penetrate into this country, or to collect any rents in Kintail. Seaforth's tenants were assisted in their stout resistance by the advice and animated by the example of Donald Murchison of Auchtertyre, whose name, had his talents been employed on a more conspicuous theatre, the page of history would not blush to transmit with honour to posterity. He regularly collected the rents, and found means either of remitting them to Seaforth, who then lived in France, or of snatching an opportunity of conveying them safe to his chief in person.

tremitry of the parish of Blair-Athol in Perthshire, south-westward and southward to its southern extremity at Blair-castle, and there opening at right angles into the valley of the Garry. At its entrance or lower end it is enriched for several miles by the groves and horticultural adornings of the superb demesne of Lord Glenlyon; and 2 miles from its entrance it lifts across its intersecting stream a bridge from which a magnificent landscape is spread out before the eye; but over most of its extent, especially as it recedes toward the north, it presents in the aspect of the Tilt, by which it is traversed, and of the huge mountains which form its skreens, a prospect of mingled beauty and deeply impressive grandeur. On its east side, about mid-distance between its extremities, rises the vast Bengloe, whose base is 35 miles in circumference, and whose summit towers far above the many aspiring eminences of the adjacent mountain-land. The kestrel has his nest in the glen, and the eagle builds his eyry on the overshadowing heights. Glentilt has provoked the geological inquiries, and tested the scientific acumen of Playfair, Macculloch, and other celebrated men. Marble of a pure white, of a light gray, and of a beautiful and much admired green, has of late years been quarried in its recesses and carried away to adorn the dwellings of luxury and taste.

GLENTATHEN. See **LINTRATHEN**.

GLENTURRET, a vale in the north-east part of the parish of Monivard, a mile north of the town of Crieff, Perthshire. It is traversed by the rivulet Turret, flowing from a lochlet of the same name, and has been noted by men of taste, and celebrated in song, for the romantic beauties of its scenery.

GLENURQUHART, a valley in Inverness-shire, in the united parish of Urquhart and Glenmoriston.

GLENWHURRY. See **GLENQUHARY**.

GLIMSHOLM, one of the smaller Orkney isles, nearly 2 miles south of Pomona.

GLITNESS, one of the smaller Shetland isles, 6 miles north by east of Lerwick.

GLOMACH (THE), a fine waterfall formed by the Girsac, in a remote and uninhabited valley about 7 miles from the inn of Sheilhouse in the parish of Kintail, in Ross-shire. Its total height is 350 feet; but at a distance of about 50 feet from the surface of the pool into which it falls, it encounters a slight interruption from a projecting ledge of rock. The surrounding scenery is wild, barren, and rocky.

GLOTTA, the ancient name of the Clyde.

GLUSS, a small island on the north coast of the mainland of Shetland.

GOATFELL. See **ARRAN**.

GOGAR (THE), a rivulet in the eastern part of Edinburghshire. It rises near the centre of the parish of Kirknewton, and flows along that parish first $2\frac{1}{2}$ miles northward, and next $2\frac{1}{2}$ miles to the north of east. It then, in an easterly direction, over a distance of $1\frac{1}{2}$ mile, flows right across the parish of Ratho; and now, over a course of 3 miles, most of it north-easterly, and the rest northerly, divides that parish on the west from the parish of Currie on the east. Flowing next $\frac{3}{4}$ of a mile westward, it divides Ratho on the south from Corstorphine on the north; then, for $1\frac{1}{2}$ mile, in a northerly or north-westerly direction, flows through Corstorphine; then, for $\frac{3}{4}$ of a mile in the latter direction, divides Corstorphine from Cramond; and finally, after a further course of $\frac{3}{4}$ of a mile northward through Cramond, falls into Almond water. Anciently it gave name to a parish and two villages on its banks; and still—besides meandering through the extensive estate of Gogar—it is overlooked, in its progress, by Gogar bank, Gogar green, Gogar camp, Gogar mount, Gogar mains, and Gogar house.

GOGAR, an ancient but suppressed parish in the eastern part of Edinburghshire, incorporated chiefly with Corstorphine, and partly with Ratho and Kirkliston. A small part of the church still exists, and, soon after the Reformation, was set apart as a family burying-place by the lord of the manor. The church of Gogar is older than that of Corstorphine, but was of little value, and presided over a scanty population. Soon after the formation of their establishment it was acquired by the monks of Holyrood; but, against the reign of James V., it had been withdrawn from them, and constituted an independent rectory. In 1429 Sir John Forrester conferred its tithes on the collegiate church which he then formed at Corstorphine, and made it one of the prebends of his collegiate establishment. In 1599, after vain efforts had been made by its few parishioners to raise a sufficient provision for the maintenance of an incumbent, the parish was finally stripped of its independence. Of the two villages of Gogar-Stone and Nether-Gogar, which it formerly contained, the former has disappeared, and the latter has dwindled away from a population of 300 to a population of only about 20. In the New Statistical Account there is mention made of a number of stone coffins which have been lately discovered on the lands of Gogar. It appears that in this district, particularly towards the western side of the field formerly called 'the Flashes,' and on which the villa of Hanley is now built, many of these coffins had been found in the year 1809, and from that period down to 1836, it is stated that numbers have continued to be disclosed at short intervals. The writer of the Statistical Account inclines to the belief that they owed, in the first place, their origin to the Gogar fight, which took place in August 1650; and that during the remainder of that year, and throughout 1651, the place may probably have been used as a cemetery by the English who remained in the parish; or that its use might have commenced at the earlier period of the plague of 1645, which is referred to in the parish-register as having been so severe that the church was closed, and all work at a stand while it lasted; and that it might have been added to after the fight, and during the invasion.

GOIL (LOCH), a small arm of the sea in Argyleshire, which strikes off, at the point of Strone, from Loch-Long in a north-west direction. On its western shore, at a little distance from the opening into Loch-Long, is Carrick-castle, an ancient seat of the Campbells. It is situated on a high and nearly insulated rock, advancing into the water. At the head of Loch-Goil there is much wild and romantic beauty; and the road to Loch-Fyne passes through a deep rude valley called Hell's glen, which has been compared by some travellers to Glencroe, in point of wild gloomy majesty.

GOLDIE-LANDS, an ancient castle in the shire of Roxburgh and parish of Wilton; 1 mile south-west of Hawick; situated upon an eminence on the south side of the Teviot, nearly opposite to where the water of Borthwick joins that river. It was anciently the mansion of a family of the surname of Goldy, whence it derived its present appellation. It is now the property of the Duke of Buccleuch. Grose has preserved a view of it. See **HAWICK**.

GOLSPIE, anciently called **CULMALLIE**, a parish in the county of Sutherland; bounded on the north by Rogart; on the east by Clyne; on the south-east by the Moray frith; and on the west by the Littleferry and the **FLEET**: which see. It extends along the south-east coast of the county, about 10 miles in length; and is from 1 to 2 miles in breadth. It is intersected by the rivulet of Golspie, at the mouth of which is the pretty little village of the same

name, containing nearly 400 inhabitants. Fairs are held here in May and October. **DUNROBIN-CASTLE**, [which see,] the ancient seat of the Earls of Sutherland, is here built on an eminence near the shore. The arable soil is in general light, but of good quality, and tolerably fertile. In some parts it is a deep strong clay, but the greater part of the parish is hilly, and covered with heath. The principal mountains are, Ben-a-Bhragidh, 1,300 feet; Benlundie, 1,464 feet; and Benhorn, 1,712 feet. There are several small lochs. The number of acres under cultivation is about 2,000; average rents 22s. Assessed property, in 1815, £2,734. The shores abound with fish. Freestone and grey slate are abundant. There was a chapel built in Golspie in very early times, and dedicated to St. Andrew. Near the ground on which the chapel stood, amid the remains of other carved monuments, is an obelisk, a drawing of which is given by Cordiner in his 2d volume. Population, in 1801, 1,616, in 1831, 1,149. Houses, in 1831, 233.—This parish, formerly a vicarage, is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend £204 16s.; glebe £6.—Parish-schoolmaster's salary £34 4s. 4d. There is a small female school.

GOMETRA, a small basaltic island of the Hebrides, situated between the islands of Mull and Staffa, and separated from Ulva by a narrow strait or sound. The inhabitants support themselves by their breed of cattle and horses, and the manufacture of kelp. It is in the parish of Killninian.

GOODIE (THE), a rivulet in the south of Perthshire. It issues from the south-eastern extremity of the Loch of Monteith, in the parish of Port-of-Monteith; and, after having intersected that parish over a distance of $3\frac{1}{2}$ miles eastward, flows 4 miles south-eastward, through a detached part of the parish of Kincardine and the southern verge of the parish of Kilmadock, to the Forth at the fords of Frew.

GORBALS, a burgh-of-barony, a parish, and a large and important suburb of Glasgow, lying on the south bank of the Clyde. It contains upwards of 65,000 inhabitants: See **GLASGOW**. The parish of Gorbals was originally a part of the parish of Govan. As the parish-church was at the distance of more than 2 miles, it was thought an object of importance to provide the inhabitants with a place of worship and the means of religious instruction among themselves, by disjoining Gorbals from the parish of Govan, and erecting it into a separate parish. The funds which were necessary for carrying this plan into effect were obtained in the following manner:—Prior to the year 1699, the inhabitants of the village had established a small public fund, by the voluntary imposition of a tax called reek-money—withdrawn in 1768—and another small tax upon malt. The revenue thus raised was expended in making common-sewers, in making and repairing pump-wells, in paying cess and rogue-money, and other such useful and necessary purposes within the village. From the funds raised, partly in this way and partly by voluntary contribution among the heritors, the inhabitants were enabled, about the year 1720, to purchase a piece of burying-ground and a mortcloth. This, of course, proved an additional source of revenue; by means of which, and farther contributions, the inhabitants were able, in 1728, to build a chapel; and from the produce of seat-rents, and other sources of revenue above mentioned, to maintain a preacher, besides defraying the public expenses of the village, for which the revenue had originally been established. Having contracted a debt, however, by building the chapel, which they were unable to pay, they, in the year 1743, applied to the presbytery of Glasgow for assis-

tance, and a collection was made throughout their bounds for that purpose. Shortly afterwards, however, a dreadful fire occurred in the village, attended with such calamitous circumstances, that a subscription was made throughout almost all Scotland for relief for the sufferers; and that subscription was so ample as to relieve the sufferers, and to leave a considerable balance. That balance, by consent of parties, was paid over to the managers of the village-funds, and by this fund chiefly, it is believed, the debt which had been contracted by building the chapel was liquidated. Some time after this the heritors purchased a piece of ground, and upon their own credit built a tenement upon it, which cost upwards of £600. This tenement has since been known by the name of the Community land, and was valued, in 1823, at £1,000. The additional debt contracted by building it was gradually paid off out of the surplus revenue. Such was the state of matters when, in 1771, a summons of disjunction and new erection was raised in the court of teinds; and on the 20th of February, 1771, the court disjoined the village of Gorbals from the parish of Govan, and erected it into a new parish. See **GOVAN**.

GORDON, a parish in the western part of the Merse, Berwickshire. It is bounded on the north by Westruther and Greenlaw; on the east by Greenlaw; on the south by Hume and Earlstoun; and on the west by Legerwood. Its greatest length, from Rumelton on the east, to an angle near Legerwood church on the west, is nearly 5 miles; and its greatest breadth, from a point near Haliburton on the north to the confluence of two boundary rills on the south, is 4 miles. The surface is uneven; has several rising-grounds, one of which is entitled to be called a hill; and, in general, lies higher than any district in the eastern part of the Merse. Till a very recent date it had great tracts of moss and moorland, and wore a bleak and sterile aspect; but it is now very extensively cultivated, and considerably sheltered with plantation; and it begins to wear a smiling and productive appearance. About one-half of the whole area is arable; about 500 acres are under wood; and the remainder is in pasture, or continues to be waste. Three head-streams of the Eden rise on or near its boundaries on the north, on the south-west, and on the south-east; in one case intersecting it southward nearly through the centre, and in the other cases forming its southern boundary-line, and all making a confluence at or near the point of leaving it. Two other rills respectively at its western and its eastern limit, and, after for a brief way tracing its boundary, flow the one westward to join the Leader, and the other eastward to join the Blackadder. The last stream—the Blackadder—also touches it for a short way along the north. The parish is distinguished for giving title to the ducal family of Gordon, and for having contained their earliest seat and possessions in Scotland. They are supposed to have settled within its limits in the reign of Malcolm Canmore; and when they removed to the north, they not only transferred some of its local names to the territories or objects of their new home, but afterwards recurred to it for their ducal title. Huntly—which through the medium of the northern domain named after it—gave them their titles successively of Lord, Earl, and Marquis—was a village in the western extremity of Gordon parish; and, though commemorated only by a solitary tree which marks its site, survived till a recent date in the form of a small hamlet. Two farms within the parish are still called respectively Huntly and Huntly wood. A little north of the village of West-Gordon is the reputed site of the Gordon family's early residence, —a rising ground still called

the Castle, though now covered with plantation, presenting vestiges of fortification. The parish is intersected south-eastward by the post-road from Edinburgh to Kelso, and is traversed south-westward by a road from Dunse to Earlstoun. On the former road stands the village of West-Gordon, 8 miles distant from Kelso. It is the site of the parish-church, has a population of 300, and, owing to facility of obtaining fuel from a neighbouring bog, is increasing in bulk. The parishioners of Gordon, till a recent period, were very primitive in their manners, and careless, through a descent of several generations, to make a removal of residence, or go a sight-seeing in the busier districts of the country; and, probably on account solely of their habits of seclusion and content, earned from malicious wit the soubriquet of "the Gowks o' Gordon." Population, in 1801, 802; in 1831, 882. Houses 171. Assessed property, in 1815, £5,748.—Gordon is in the presbytery of Lauder, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £163 16s. 11d.; glebe £30. Unappropriated teinds £163 16s. 11d. Schoolmaster's salary £34 4s. 4½d., with £21 fees, and £9 other emoluments. This parish was formerly of very large extent. But part of it, called Durrington-laws, was annexed to Longformacus, 12 miles distant; and out of it, jointly with Bassandean, a parish formerly in the presbytery of Melrose, was also erected, about the year 1647, the parish of Westruther. The church was originally dedicated to St. Michael the archangel, and given to the monks of Coldingham. In 1171, according to the spiritual traffic of that age of priestcraft, the Coldingham monks exchanged it with the monks of Kelso for the chapel of Earlstoun and St. Laurence church of Berwick. In the ancient parish were several chapels. In 1309, Sir Adam Gordon, in consideration of relaxing to them some temporal claims, obtained from the monks of Kelso leave to possess a private chapel with all its oblations. At Huntly wood was another chapel, dedicated to the Virgin Mary, the advowson of which appears to have passed, during the reign of James IV., into the possession of the family of Home. A third chapel, the ruins of which were at no remote period traceable, was built, during the reign of David, by John de Spottiswoode, at his hamlet of Spottiswoode.

GORDON-CASTLE, or, as it is more usually termed, CASTLE-GORDON, the seat of the Dukes of Gordon, now of their representative, and heir of entail, the Duke of Richmond, is probably the most magnificent edifice north of the frith of Forth. It is situated in the parish of Bellie, between the old and the new course of the river Spey, and about a mile north of the little town of Fochabers, which formerly stood in its more immediate vicinity. Castle-Gordon is approached, on the high road between Fochabers and the Spey, by a gateway consisting of a lofty arch, between two domes, and elegantly finished. This arch is embellished by a handsome battlement within the gate. The road to the mansion winds, about a mile, through a green parterre, skirted with flowering shrubbery and groups of tall spreading trees, till it is lost in an oval in front of the castle. There is, besides this, another approach, from the east, sweeping for several miles through the varied scenery of the park, and enlivened by different pleasant views of the country around, the river, and the ocean, till it also terminates at the great door of this princely mansion. The castle stands on a flat, at some distance from the Moray frith, from which the ground gradually ascends; but it possesses a much finer view than might be supposed in such a situation, commanding as it does the whole plain with all its wood, and a variety of reaches on the river, glitter-

ing onwards to the sea, and comprehending also the town and shipping of Garmouth, and a large handsome edifice that terminates the plain on the shore, consisting of the hall and other buildings for the accommodation of the salmon-fishery.

Willis, the American tourist, in his 'Pencilings,' has described the view from the castle in pleasing terms: "The last phaeton," says he, "dashed away, and my chaise advanced to the door. A handsome boy, in a kind of page's dress, immediately came to the window, addressed me by name, and informed me that his Grace was out deer-shooting; but that my room was prepared, and he was ordered to wait on me. I followed him through a hall lined with statues, deer's horns, and armour, and was ushered into a large chamber, looking out on a park, extending with its lawns and woods to the edge of the horizon. A more lovely view never feasted human eye. * * * It was a mild, bright afternoon, quite warm for the end of an English September; and with a fire in the room, and a soft sunshine pouring in at the windows, a seat by the open casement was far from disagreeable. I passed the time till the sun set, looking out on the park. Hill and valley lay between my eye and the horizon; sheep fed in picturesque flocks, and small fallow-deer grazed near them; the trees were planted, and the distant forest shaped by the hand of taste; and broad and beautiful as was the expanse taken in by the eye, it was evidently one princely possession. A mile from the castle-wall, the shaven sward extended in a carpet of velvet softness, as bright as emerald, studded by clumps of shrubbery like flowers wrought elegantly on tapestry; and across it bounded occasionally a hare, and the pheasants fed undisturbed near the thickets, or a lady with flowing riding-dress and flaunting feather, dashed into sight upon her fleet blood palfrey, and was lost the next moment in the woods, or a boy put his pony to his mettle up the ascent, or a gamekeeper idled into sight with his gun in the hollow of his arm, and his hounds at his heels. And all this little world of enjoyment, and luxury, and beauty, lay in the hand of one man, and was created by his wealth in these northern wilds of Scotland, a day's journey almost from the possession of another human being! I never realized so forcibly the splendid results of wealth and primogeniture."

The castle was originally a gloomy tower, in the centre of a morass hence called the BOG-OF-GIGHT [which see]—and accessible only by a narrow causeway and a bridge. It is now a vast quadrangular edifice; the front stretching to the length of 568 feet. "The change," observes Mr. Chambers, in his 'Picture of Scotland,' "has been naturally commensurate with that of the fortunes of the noble race who, for centuries past, have owned it; and we believe the most ancient title of the Duke of Gordon, and that by which the old Highlanders still know him, is the humble one of 'the Gudeman o' the Bog.'" As we have already noticed, however, the title and estates of the Dukes of Gordon have now merged in those of the Duke of Richmond. The breadth of the magnificent pile of this castle being various, the breaks arising from the different depths create a variety of light and shade which obviates the appearance of excess in uniformity throughout so great a frontage. The body of the edifice is of four stories. In its southern front stands, entire, the tower of the original castle, harmonizing ingeniously with the modern palace, and rising many feet above it. The wings are magnificent pavilions of two lofty stories, connected by galleries of two lower stories; and beyond the pavilions, are extended to either hand, buildings of one floor and an attic story. The whole of this vast edifice is externally of white hard finely

dressed Elgin freestone, and finished all around, like the gateway, with a rich cornice and a handsome battlement.

The hall or vestibule of this magnificent structure is embellished by copies of the Apollo Belvidere and the Venus de Medici, in statuary marble, by Harwood. There is also a bust—a peculiarly striking likeness—of Pitt. Here also, by Harwood, are busts of Homer, Caracalla, M. Aurelius, in their unfading laurels, and of Faustina, a Vestal virgin, in her plain attire; and at the bottom of the grand staircase are a Cæsar, Cicero, Seneca, and Caracalla, each raised on a handsome pedestal of Sienna marble; with a bust of Cosmo, third duke of Tuscany, a relation of the Gordon family. In the staircase are some curiosities, among which is a plank, nearly 6 feet in breadth, cut from a fir-tree in the forest of GLENMORE: see that article. The first floor contains the breakfast, dining, and drawing-rooms, the bed-chamber of state, with its dressing-room, and several other elegant apartments. All the rooms are well proportioned, and sumptuously finished, and the distribution of light is managed to the greatest advantage. The great dining-room is strikingly magnificent; and is surrounded with the portraits of Earls, Marquisses, and Marchionesses of Huntly. A handsome sideboard stands in a recess, within lofty Corinthian columns of Scagliola, in imitation of verd antique marble. Among the pictures are Abraham turning off Hagar and her son, Joseph resisting the solicitations of Potiphar's wife, Venus and Adonis, Dido, and St. Cecilia. In the drawing-room is a portrait of the celebrated and beautiful Jane, Duchess of Gordon, by Sir Joshua Reynolds. There is also a very fine portrait of the late Duke, the last heir of his long line. In the breakfast-room is a good copy, by Angelica Kauffman, of the celebrated St. Peter and St. Paul, from the masterpiece of Guido Rheim, for which, it is said, 10,000 sequins had been offered; it was esteemed the most valuable piece in the Lampieri palace at Bologna. Various other paintings adorn this and other apartments of this splendid mansion. One of the most interesting of these, perhaps, is a portrait of the second Countess of Huntly, daughter to James I., and the lady through whom Lord Byron boasted of having a share of the royal blood of Scotland in his veins. There is also a very antique portrait of Queen Mary, bearing the date 1568. In the third story of the house are a small theatre, a music-room, and the library, containing thousands of volumes, as well as some ancient manuscripts, with astronomical and geographical instruments, &c.

GORDONSBURGH. See **MARYBURGH**.

GOSFORD. See **ABERLADY**.

GOULDIE, a village in the parish of Monikie, Forfarshire, containing about 200 inhabitants.

GOURDON, a fishing-village in the parish of Bervie, Kincardineshire. It lies about 2 miles south of Inverbervie, and possesses a small harbour. This harbour was imperfectly sheltered by scattered and insulated rocks at a short distance from it; but not being capable of admitting the coasting-trade, and containing many fishing-boats which find full employment, the proprietor applied to the commissioners on Highland roads for aid towards constructing a pier and clearing the entrance of the inlet, by which operations the place has been rendered commodious and secure at all seasons of the year, greatly to the benefit of an agricultural district—Gourdon having now become an intermediate shipping-place between Stonehaven and Montrose, which are more than 20 miles apart. The joint expense of the work, to the harbour-fund and the contributor, was £2,000. See **BERVIE**.

GOUROCK, a *quoad sacra* parish in Renfrewshire, divided from Innerkip by the General Assembly in May 1832. It lies on the left bank of the frith of Clyde, immediately below Greenock, and is in length about 3½ miles, and in breadth about 3. The bay of Gourock possesses great advantages for a sea-port, being well-sheltered, and unobstructed by bank or shoal, and having depth of water for vessels of any burden; nevertheless, the shipping-trade has been attracted higher up the frith. So early as the year 1494, when Greenock was a mean fishing-village, and long before Port-Glasgow was known even by name, the eligibility of Gourock as a haven was appreciated. This appears from an indenture entered into at Edinburgh on the 27th of December, 1494, between that redoubted seaman, Sir Andrew Wood of Largs, and other two persons, on behalf of the king, on the one part, and "Nicholas of Bour, maister, under God, of the schip called the Verdour," on the other part, whereby it was stipulated that "the said Nicholas sall, God willing, bring the said Verdour, with mariners and stuff for them, as effeirs, to the *Goraik*, on the west bordour and sey [sea], aucht mylis fra Dunbertain, or tharby, be the first day of the moneth of May nixt to cum, and there the said Nicholas sall, with grace of God, ressave within the said schip thre hundred men boden for wer [equipped for war], furnist with ther vitales [victuals], larnes, and artizery, effeirand to sa mony men, to pass with the kingis hienes, at his plessore, and his lieutenentes and deputis, for the space of twa monthis nixt, and immediat folowand the said first day of May, and put thaim on land, and ressave thaim again;" for which there was to be given to the shipmaster £300 Scots money, being at the rate of £1 Scots for each man.* From the terms of this agreement, and from the spot appointed for the rendezvous being on the west coast, it is evident that the vessel was fitted out for the use of the king himself, James IV., in one of the voyages which he undertook, about the time in question, to the Western isles, for the purpose of bringing their turbulent inhabitants into subjection; and at Gourock, in all probability, he embarked.—The lands of Gourock formed the western part of the barony of Finnart, which belonged to the great family of Douglas. On the forfeiture of their estates in 1455, this portion was conferred by the Crown on the Stewarts of Castlemilk, from whom it was called Finnart-Stewart. It continued in their possession till 1784, when it was sold to Duncan Darroch, Esq., to whose son, Lieutenant-general Darroch, it now belongs. About the year 1747, the old castle of Gourock was entirely removed, and the present mansion erected near its site.

The village of Gourock is prettily situated upon the bay, and has, we believe, been resorted to for sea-bathing longer than any other place on this coast. In 1694 it was created a burgh-of-barony, with the right of holding a weekly market on Tuesday, and two annual fairs. Power was also given to form a "harbour and port," in virtue of which there was probably constructed the quay, which was lately supplanted by the present substantial and convenient one. A great proportion of the permanent inhabitants are engaged in the herring and white fishery. This was the first place in Britain where red herrings were prepared. The practice was introduced, towards the end of the 17th century, by Walter Gibson, an enterprising Glasgow merchant, who was provost of that city in 1688, and of whom our authority—Semple, in his History of Renfrewshire—says, he "may justly be styled the father of

* The Acts of the Lords of Council in Civil causes from 1478 to 1495, published in 1839.

the trade of all the west coasts." The curing of red herrings has long since been abandoned here; as has also the preparation of salt in connection with it, for which pans were constructed. A considerable rope-work has been carried on since 1777; and whinstone for street-paving is quarried to some extent. About 1780, an attempt was made for coal in the neighbourhood of the village; but meeting with copper ore, the undertakers were diverted from their first object. "This new discovery," says the Old Statistical reporter, "promised well both in richness and quantity; but being wrought by a company who were chiefly engaged in England, it was so managed as to defeat the expectation."—Kempock Point, which forms the western termination of the bay, is crowned by a long upright fragment of rock, called "Kempock stane," which, it is said, indicates the spot where a saint of old dispensed favourable winds to the navigators of the adjacent waters. The stone is without any sculpture or inscription. Some superstitious belief appears to have been connected with it in former times; for at the trial of the Innerkip witches, in 1662, one of them, Mary Lamont, an infatuated creature, aged only 18, confessed that she and some other women, who were in compact with the devil, held "a meeting at Kempock, where they intended to cast the long stone into the sea, thereby to destroy boats and ships."* Kempock point consists of a mass of light blue columnar porphyry, abutting from a hill of the same materials which has been quarried to a great extent. In our own time, this abrupt point of land has become memorable on account of two melancholy accidents which took place on the frith close to it. The first occurred to a vessel called the Catherine of Iona, which was run down by a steam-boat during the night of the 10th of August, 1822, when 42 persons perished out of 46. The other catastrophe referred to was that of the Comet steamer, which, when rounding the point, at about the same spot, was run on board, and instantly sunk, by another steam-vessel, about 60 human beings losing their lives.

According to a census taken by the minister in 1837-8, the population of the parish amounted to 1,302; of whom 1,000 resided in the village, the rest being dispersed over the country parts. In the report made to the Commissioners of Religious instruction, in 1838, it was stated that of the population 45 were lunatics. This is accounted for by the fact that there are in the parish establishments for maintaining such unfortunate persons.—About the year 1776, a chapel-of-ease was built at the east end of the village. The present parish-church, which stands about its centre, was built by subscription in 1832. The original cost was £1,731 2s. 9½d., exclusive of the aisle erected at an expense of £535 by General Darroch, the principal heritor, who gave the ground, upon payment of £3 1s. 4d. per annum for feu-duty. The additional sum of £197 2s. 0½d. has been expended in procuring communion-cups, painting, and otherwise improving the church. *Sittings 947. The average attendance at church during June, July, and August, is about 900, and during November, December, and January, about 500: the increased attendance during the summer-months is caused by the numerous strangers who resort hither for sea-bathing. Stipend £120, of which £100 is paid by the managers from the seat-rents, and £20 by General Darroch. It is permanent, and secured by a bond from these parties. The minister has no

manse, glebe, or other privileges. Parochial schoolmaster's salary £20 10s., with about £30 of school-fees, and £2 2s. annually for distributing the poor's money. There are two private schools, with one teacher in each.

GOVAN, a parish principally in the lower ward of Lanarkshire, with a small section in Renfrewshire; bounded by New-Kilpatrick, Barony, and Glasgow on the north; Barony, Gorbals proper, and Rutherglen on the east; Cathcart, Eastwood, and the Abbey parish of Paisley on the south; and by Renfrew on the west. It is about 6 miles in length, and 3 at its greatest breadth, near the centre; and contains about 10 square miles. It is somewhat unusual for a parish to be situated in two counties, and Hamilton of Wishaw affirms that part of these lands were disjoined from the sheriffdom of Lanark, and annexed to the sheriffdom of Renfrew, for the convenience of Sir George Maxwell, who died in 1677; but this statement is not fully borne out by the documents of that time relating to the parish, which are still in existence. In other respects Govan is a somewhat irregularly constructed parish, from lying on both banks of the Clyde; the larger section stretches along the south side of the river, and the smaller along the north, to the west of the classic streamlet of Kelvin. That portion lying on the south bank of the Clyde used to be termed, of old, the township or territory of Govan; and the part lying on the north of the river was designated the township or territory of Partick, or, according to the orthography of ancient charters, Perdyce, Perdehich, or Perthec. *Quoad civilia* Govan contains not only a landward district, but a large portion of the population, and the manufacturing and other establishments of the southern suburb of Glasgow; but as these have long since been disjoined *quoad sacra* by the presbytery, this portion is generally known and spoken of as the barony and parish of the Gorbals of Glasgow: see articles GLASGOW and GORBALS. Divested of this section the parish is a landward one. It may be mentioned as a circumstance somewhat remarkable, that on the northern boundary of the parish the counties of Dumbarton, Lanark, and Renfrew, and the parishes of New Kilpatrick, Govan, and Renfrew, all meet in one point. The land of the parish is entirely arable. The average rental of the land is about £4 per acre, and its produce consists of potatoes, turnips, wheat, hay, oats, and grass for pasture. It is worthy of remark, that upon the farm of White Inch in this parish, the greater part of the earth, mud, and gravel, which is cut away from the banks in widening the Clyde or lifted by the dredging-machine, has been deposited. In one year soil to the extent of nearly 150,000 cubic yards has been laid down, by the consent of the proprietor, Mr. Smith of Jordanhill, and at immense expense to the Clyde trustees. The superficial extent of the farm is about 70 acres, and the average height to which the ground has been raised by these deposits is 10 feet; in some places it has been elevated about 15 feet. At the commencement of these operations it was considered by many that they would prove utterly ruinous to the farm; but the consequence has been nearly to double the value of the farm, by the judicious mixture of the earth which has been laid down. Within the last half-century the salmon-fishings in the Clyde, belonging to the heritors of Govan, used to be valuable, and they have even been let for so much as £330 annually; but the mass of foreign and pernicious matter which is now held in solution by the river, the refuse of the manufactories along its banks, and the everlasting stirring and turmoil of its waters from the revolution of steam-boat paddles, has of late years sadly deteriorated the value of the Govan fisheries, having reduced the rental to £60 per an-

* The commission for the trial, and the confession, are printed in the 'Visitor,' or 'Literary Miscellany,' vol. ii. p. 135, Greenock, 1818. Mr. R. Chambers, in his 'Picture of Scotland,' p. 206, 4th edition, speaks as if the stone no longer existed here; but this is a mistake, it still remains.

num, and the wonder is that salmon can exist in it at all. Fertile as the superficies of Govan may be, however, the great source of its wealth is its mineral treasures, not only from their own actual value, but as providing the means of aggrandizing the commercial and manufacturing population. The coal at the Govan collieries has been worked from a very remote period, and forms part of the celebrated 'Glasgow field,' to which the city is so much indebted for its wealth and population. This coal is of the best quality; and in some parts of the parish it is so abundant that, within 50 fathoms of the surface, no fewer than 16 separate beds have been found, the thickness of which varies from 4 inches to 2 feet. In addition to these there are valuable seams of black-band (that which is mixed with coal) and clay-band ironstone, the former varying from 10 to 15 inches in thickness, and the latter from 6 to 12 inches. Although the estimated value of the land in the parish is not more than £5,000 Scots, it has been calculated upon pretty sure data that the actual value of its agricultural produce and minerals is more than £90,000 sterling per annum. Manufactures are carried on to a very considerable extent in the parish, and in addition to the power-loom, cotton, and silk factories of Hutchesontown and Tradestown, with the carpet-manufactory at Port Eglinton, all of which are embraced in the *quoad sacra* division of Gorbals, there are also public works of considerable importance in the landward parts of the parish, viz., at the villages of Govan and Partick. At the former there is an extensive dye-work, and also a factory for throwing silk, which was the first of its kind in Scotland, and was erected in 1824.* In 1828 a power-loom factory was established at Partick, and here are situated, besides, a printfield, a work for bleaching cotton-fabrics, and the celebrated Partick wheat and flour-mills, which, situated upon the banks of the Kelvin, have been in existence from time immemorial, and were granted by the Regent Murray, after the battle of Langside, to the bakers' corporation of Glasgow. Ship-building yards are also situated upon the Clyde at the mouth of the Kelvin. The most important establishment in the parish is, however, the iron-works of Mr. William Dickson, situated at Govan-hill, in the south-eastern suburbs of Gorbals. Here there are hot-blast furnaces erected, and in the course of erection, which are intended to produce the average quantity of 4,000 tons of pig-iron annually; and in the neighbourhood of these furnaces the enterprising proprietor is constructing a bar-iron manufactory with 42 puddling furnaces; and it is computed that these, if fully worked, will turn out 400 tons of bar-iron weekly. As the works in Govan, however, are almost entirely kept moving by Glasgow capital, and fall properly to be classed along with the manufactures of

that city, it is not necessary here to enter into any further or more lengthened details regarding them. From its proximity to the western capital, Govan, of course, enjoys every advantage in the shape of ready and easy communication; and in the villages of Govan and Partick, there are regular post-office establishments, by which letters are transmitted to and from Glasgow twice a-day. Four great turnpike-roads traverse the parish. One leads from Glasgow to Paisley; a second from Glasgow to Kilmarnock and Ayr; a third parallel with, and on the south bank of the Clyde, leads through Renfrew to Port-Glasgow; and the fourth, also parallel with, but on the north bank of the river, forms the carriage-road to Dumbarton and the West Highlands. The Glasgow, Paisley, and Johnstone canal also passes through the southern division of the parish; and the branch of the Forth and Clyde canal, which joins the Clyde at Bowling bay, skirts for a short distance its northern boundary. In addition to these the great joint branch to Paisley of the Glasgow and Greenock, and the Glasgow, Paisley, Kilmarnock, and Ayr railways, passes through the parish for nearly 3 miles. This portion of the line was opened in July, 1840. The north and south divisions of the parish are connected at the village of Govan by a commodious horse and carriage ferry-boat, and here also the river-steamers land and receive passengers. It is impossible to conceive a rural district which contains so many of the elements of busy life as the parish of Govan. Morning, noon, and night, the river, which divides it, is traversed by steam-vessels of every size, and by sailing vessels bound to and from the most distant parts of the earth's confines. From the river the view of the country is peculiarly picturesque and pleasing; the banks exhibit every variety of landscape,—beautifully cultivated fields, and thriving belts of plantation, sprinkled with the handsome villas of the Glasgow citizens,—while the rural village of Govan, with the Stratford-upon-Avon like steeple of its parish-church, bursts upon the gaze with a truly panoramic effect. Nowhere has the hand of improvement been more decidedly apparent than upon this portion of the Clyde. In some old legal instruments in the Glasgow chartulary, there are mentioned, "The islands between Govan and Partick;" but these have long since ceased to be. Even so late as 1770, the depth of the river at the mouth of the Kelvin, as surveyed by the celebrated James Watt, was only 3 feet 8 inches at high-water, and 1 foot 6 inches at low water; and in the present day it is amusing to read the complaint of Patrick Bryce, tacksman of the Gorbals 'coal-heugh,' who, in 1660, represented to the magistrates of Glasgow that he could not get his coals loaded at the Broomielaw from a scarcity of water, and that he had been necessitated on this account to crave license to lead them through the lands of Sir George Maxwell of Nether Pollok, for the purpose of loading them "neare to Meikle Govane." Up till 1770, indeed, this portion of the Clyde could with difficulty be navigated by vessels of more than 30 tons burthen; now the depth of water is from 16 to 17 feet, and foreign merchantmen of 600 tons burthen sail along it from the sea to the harbour of the Broomielaw.

The population of the parish of Govan, exclusive of the portion annexed to Gorbals, was, in 1801, 3,038; in 1811, 3,542; in 1821, 4,325; in 1831, 5,677; and in 1836, 6,281. The population of the village of Govan, in 1836, was 2,122. Houses, in 1831, 838. Assessed property £14,086.

This parish is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patron, the college of Glasgow. Stipend £315 9s. 4d; glebe £24. Unap-

* The silk factory at Govan is heated in a peculiar manner, and one which has been considered worthy of imitation in other large establishments where adults and children are employed in large congregated numbers for the greater portion of the day. The process is thus described in Leighton's Historical and Descriptive illustrations of Swan's Views on the Clyde:—"The factory is heated by steam; and the steam-pipes, instead of being suspended from the ceiling of each flat, are disposed in beds in the ground-floor, within a few inches of the ground. Round the bottom of the ground are perforations in the walls, through which is constantly rushing a current of fresh air, which being heated and rarified by the steam-beds, ascends from them through pipes and holes in the floor, to the upper stories, producing a constant supply of pure and warm air, from the bottom to the top of the factory. The benefit of this is evinced by the total absence of that feeling of suffocation met with in most other factories. The boiler is fed with boiling water by means of a subsidiary boiler, which the proprietor has called a *Colville*, in honour of a young man named Peter Colville, whose suggestion it was. Besides saving fuel, the operation of the steam is thereby more steady, not being damped by the influx of water comparatively cold. The Colville is placed at the side of the large boiler, constituting, for its length, one side of the flue, and is thus kept boiling by that heat which otherwise would be lost in the wall."

propriated teinds £763 7s. The parish-church—which is situated close upon the river, and is distant about 3 miles from Glasgow—was built in 1826, from a plan by Mr. Smith of Jordanhill, one of the heritors. It is a chaste Gothic structure, seated for nearly 1,100 persons. The design of the tower and spire, as has been hinted, was taken from the church of Stratford-upon-Avon. The churchyard has a peculiarly romantic appearance, and is fringed with a double row of reverend elms. The manse adjoins the church, and, from recent additions, has been rendered very commodious. There are four churches belonging to the Establishment and connected with this parish, to which *quoad sacra* districts have been allocated, viz. Partick church, built in 1834, seated for 580 persons; Hutchesontown church, opened in 1839, seated for 1,024 persons; Kingston church, opened in the same year, for 1,000 sitters; and a fourth additional church in connection with the establishment is in course of erection in Warwick-street, Laurieston. Of late years the small village of Strathbungo has been a missionary-station, in which a licentiate of the church of Scotland officiated: a church is now being built there.—There are three dissenting churches in the parish connected with the United Secession, in addition to a school-house, in the parish of Govan, capable of accommodating 100 persons, and in which service has been performed for two or three years. These churches are Nicholson-street church, built in 1814, for 910 sitters; Eglinton-street church, built in 1825, for 1,218 sitters; and Partick church, built in 1824, for 600 sitters.—There are two Relief churches, viz., Hutchesontown church, built in 1800, for 1,624 sitters; and Partick Relief church, built in 1824, for 840 sitters.—There is also a small Roman Catholic chapel in Portugal-street, Gorbals.—The parish-school is situated in the village of Govan, and in addition to the school-fees—which are stated to be very ill-paid—and a school-house and dwelling-house, the emoluments amount to more than £80 annually, made up of the maximum salary of the heritors, in addition to £1 13s. 4d. from Glasgow college; £5 from the trustees as librarian of Thom's library; £1 18s. 10d., the interest of 1,000 merks bequeathed by George Hutcheson; and £36, the rent of 10 acres of land, accruing from Abraham Hill's mortification, for the education of 10 poor children. In addition to the parochial there are a number of other schools in the parish, both in the villages of Govan, Partick, and Strathbungo, where the ordinary branches are taught; but the majority of the children of the more opulent classes are educated in Glasgow. Under grants by David I., confirmed by the bulls of several popes, the whole parish of Govan belonged originally, both in property and superiority, to the Bishop of Glasgow, and was included in the regality of Glasgow. The church of Govan—or Guvan, as it was formerly termed—with the tithes and lands pertaining to it, was constituted a prebend of the Cathedral of Glasgow by John, Bishop of Glasgow, who died about 1147; and continued so till the period of the Reformation. The prebendary drew the emoluments, and paid a curate for serving the cure. The patronage of this prebendal church belonged to the see of Glasgow; but at the Reformation it was assumed by the Crown. In 1577 the parsonage and vicarage of Govan, with all the lands and revenues, were granted by the king, *in mortmain*, to the college of Glasgow; and by the new erection of the college, at that date, it was ruled that the principal of the university should officiate in the church of Govan every Sabbath. This practice continued from 1577 till 1621, when the principal was absolved from this duty, and a separate minister was appointed for the parish, to

whom a stipend was assigned from the tithes, and the patronage was reserved by the university, in which it still remains. For more than a century previous to 1825, the university of Glasgow, by successive renewals from the Crown, enjoyed a beneficial lease of the feu-duties, rents, and revenues, which were paid by the heritors of Govan to the Crown, as coming in the place of the Archbishop; but the lease was discontinued at the time stated. To make up for it so far, however, the Crown granted to the college, in 1826, an annuity of £800 for fourteen years.

The first minister of Govan after the Reformation was Andrew Melville, who was at the same time principal of the university; and it is related by his nephew that the Regent Morton offered this "guid benefice, paying four-and-twentie chalders of victuall" to him, on condition that he would not urge upon the government or the church his peculiar views of ecclesiastical polity. For the purpose of winning Melville to his side, the Regent kept the living in the hands of the Crown for nearly two years; and finally granted the temporalities to the college of Glasgow, imposing upon the principal the duty of serving the cure, Morton intending thereby, as Melville's nephew states, "to demearit Mr. Andro, and cause him relent from dealling against bischopes; but God keepit his awin servant in uprichtnes and treuthe in the middis of manie heavie tentations." The hospital of Polmadie was situated in this parish, near the place which still bears its name. It was a refuge for persons of both sexes, and was endowed with the church and temporalities of Strathblane, along with part of the lands of Little Govan. No trace of the ruins of the hospital now remains. St. Ninian's hospital, for the reception of persons afflicted with leprosy, was founded by Lady Lochore in the middle of the 14th century, and it is understood that it was situated near the river, between the Main-street of Gorbals and Muirhead-street. Near the centre of the Main-street of Gorbals, on the east side, an old edifice still remains, which from time immemorial has gone by the name of the chapel of St. Ninians. A considerable extent of ground, including that upon which part of the district of Hutchesontown is built, was called St. Ninian's croft. When the house of Elphinston obtained the lands of Gorbals the revenues of the hospital were misapplied, and the care of the 'lepers' afterwards devolved upon the kirk-session of Glasgow.—Hagg's castle, in this parish, is a very interesting and picturesque ruin. It was built by an ancestor of the house of Maxwell of Pollock, and was, for a long time, the jointure-house that family. It appears to have been a building of considerable strength. It is intimately and painfully associated with the transactions of those iron times when Scotland groaned under a 'broken covenant and a persecuted kirk.' In November 1667, the Episcopal authorities of Glasgow having heard that a conventicle had been held in Hagg's castle, summoned the persons reported to have been present to appear before them on the 20th of the same month. Amongst others, John Logan was arraigned, and he boldly confessed "that he was present at ye said conventicle, and not onlie refused to give his oath to declare who preached, or wer then present, but furder declared he would not be a Judas, as otheris, to de-late any that wer ther present." The name of Logan, with others in the same situation, were given in to the Archbishop, but the punishment which was meted out has not been recorded. Wodrow, in his history, states that, in 1676, Mr. Alexander Jamieson, who had been thrust forth the parish of Govan on account of his refusal to conform to "black prelacy," "gave the sacrament in the house of the Haggis, within 2

miles of Glasgow, along with another clergyman. Mr. Jamieson did not again drink of the vine till he drank it new in the Father's kingdom." It is well known that the family of Pollock suffered severely for their resistance to episcopacy, and for succouring the Covenanters, and allowing them a place of meeting for their conventicles. Sir John Maxwell was fined by the privy-council in 1684, in the sum of £8,000 sterling, and when he refused to pay this tyrannical exaction he was imprisoned for 16 months. See GLASGOW.

GOWRIE. See CARSE of GOWRIE, and BLAIR-GOWRIE.

GRÆMSAY, one of the Orkney islands. It is about $1\frac{1}{2}$ mile in length, and 1 in breadth. A great part is arable, and only a few sheep are reared in the hilly district. Græmsay was formerly a vicarage, united to the ancient rectory of Hoy. This cure was served by the minister of Hoy, every third Sunday; but it is singular, that it neither pays stipend, nor has any glebe. It is in the presbytery of Cairnston, and synod of Orkney. The population, in 1801, was 179; and, in 1831, 225. It is $1\frac{1}{2}$ mile south from Stromness. The whole of it is level, and seems to be of an excellent soil. The interior parts of the island, under a thin soil, contain a bed of schist or slate, through almost its whole extent. There is here a school supported by the Society for Propagating Christian knowledge. See HOY.

GRAHAM'S DYKE, or **GRIME'S DYKE**. See ANTONINUS'S WALL.

GRAHAMSTON, a neat and important suburb of the town of Falkirk. See FALKIRK.

GRAHAMSTON, a village in the Barony parish of Glasgow. It is a suburb of that city, being connected to it by several streets.

GRAHAMSTON, a village in the parish of Neilston, Renfrewshire, upon the Levern; 3 miles south-east of Paisley. It was commenced about the year 1780, and received its name from Mr. Graham, a neighbouring proprietor. Population in 1811, 448; in 1835-6, as given in the New Statistical Account, 595.

GRAITNEY. See GRETNÄ.

GRAMPIANS (THE), that broad mountain-fringe or stripe of elevations which runs along the eastern side of the Highlands of Scotland, overlooking the western portion of the Lowlands, and forming the natural barrier or boundary-line between the two great divisions of the country. The name is so indefinitely applied in popular usage, and has been so obscured by injudicious and mistaken description, as to want the definiteness of meaning requisite to the purposes of distinct topographical writing. The Grampians are usually described as "a chain" of mountains which stretches from Dumbarton, or from the hills behind Gareloch opposite Greenock, or from the district of Cowal in Argyleshire, to the sea at Stonehaven, or to the interior of Aberdeenshire, or to the eastern exterior of the shores of Elgin and Banff. No definition will include all the mountains which claim the name, and at the same time exclude others to which it is unknown, but one which regards them simply as the mountain-front, some files deep, which the Highlands, from their southern continental extremity, to the point where their flank is turned by a champaign country east of the Tay, present to the Lowlands of Scotland. But thus defined, or in fact defined in any fashion which shall not limit them to at most two counties, they are far from being, in the usual topographical sense of the word, "a chain." From Cowal north-eastward, to the extremity of Dumbartonshire, they rise up in elevations so utterly independent of one another as to admit long separating bays between; and are of such vari-

ous forms and heights and modes of continuation, as to be at best a series of ridges and single elevations, some of the ridges contributing their length, and others contributing merely their breadth, to the continuation. East and north of Loch-Lomond in Stirlingshire, their features are so distinctive and peculiar, and their amassment or congeries so overlooked by the monarch-summit of Benlomond, as to have become more extensively and more appropriately known as the Lomond hills, than as part of the Grampians. Along Breadalbane and the whole highlands of Perthshire, they consist chiefly of lateral ridges running from west to east, or from north-west to south-east, entirely separated by long traversing valleys, and occasionally standing far apart on opposite sides of long and not very narrow sheets of water; and they even—as in the instances of Schichallion and Beniglo—include solitary but huge and conspicuous monarch-mountains, which, either by their insulatedness of position, or their remarkable peculiarity of exterior character, possess not one feature of alliance to any of the groups or ridges except their occupying the confines of the Highland territory. In the north-west and north of Forfarshire and the adjacent parts of Perthshire and Aberdeenshire, they at last assume the character of a chain, or broad mountain elongation, so uniform and distinctive in character that we must strongly regret the non-restriction of the use of the word Grampian exclusively to this district. In Kincardineshire, they fork out into detached courses, and almost lose what is conventionally understood to be a highland character: and at the part where they are popularly said to stretch to the coast and terminate at the sea, are of so comparatively soft an outline and of so inconsiderable an elevation, that a stranger who had heard of the mountain-grandeur of the Grampians, but did not know their locality, might here pass over them without once suspecting that he was within an hundred miles of their vicinity. Northward, or rather westward and north-westward, of the low Kincardineshire ranges which loose popular statement very frequently represents as the terminating part of "the chain," they consist partly of some anomalous eminences, but mainly of two ridges, one of which hems in the district of Mar on the south-west, and the other separates Aberdeenshire from Banffshire.

A mountain-district so extensive and chequered, and so varied in feature, cannot be described, with even proximate accuracy, except in a detailed view of its parts. Yet, if merely the main part, or what occupies the space from Loch-Lomond to the north of Forfarshire, be regarded, the following description will, as a general one, be found correct. "The front of the Grampians toward the Lowlands has, in many places, a gradual and pleasant slope into a champaign country, of great extent and fertility; and, notwithstanding the forbidding aspect, at first sight, of the mountains themselves, with their covering of heath and rugged rocks, they are intersected in a thousand directions by winding valleys, watered by rivers and brooks of the most limpid water, clad with the richest pastures, sheltered by thriving woods that fringe the lakes, and run on each side of the streams, and are accessible in most places by excellent roads. The valleys, which exhibit such a variety of natural beauty, also form a contrast with the ruggedness of the surrounding mountains, and present to the eye the most romantic scenery. The rivers in the deep defiles struggle to find a passage; and often the opposite hills approach so near, that the waters rush with incredible force and deafening noise, in proportion to the height of the fall and the width of the opening. These are commonly called Passes,

owing to the difficulty of their passage, before bridges were erected; and we may mention as examples, the Pass of Leney, of Aberfoil, and the famous Passes of Killicrankie and the Spittal of Glenshee. Beyond these, plains of various extent appear, filled with villages and cultivated fields. In the interstices are numerous expanses of water, connected with rivulets stored with a variety of fish, and covered with wood down to the water-edge. The craggy tops are covered with flocks of sheep; and numerous herds of black cattle are seen browsing on the pastures in the valleys. On the banks of the lakes or rivers is generally the seat of some nobleman or gentleman. The north side of the Grampians is more rugged in its appearance, and the huge masses are seen piled on one another in the most awful magnificence. The height of the Grampian mountains varies from 1,400 feet to 3,500 feet above the level of the sea; and several of them are elevated still higher. The Cairngorm in Morayshire, the Bennabuid in Aberdeenshire, the lofty mountains in Angus and Perthshires, and the mountains of Benlomond in Dumbartonshire, are elevated considerably above that height."

The range whose highest summit-line forms the western and northern boundary of Forfarshire, while quite continuous and of uniform appearance, and specially entitled to be known by a distinctive and comprehensive name, is probably, in despite of its local appellation of "the Binnchinnin mountains," more frequently grouped, in popular speech, under the word Grampians than any other part of the border Highland territory. None of the summits here are so abrupt and majestic as those of Perthshire and the Lomonds, nor are they covered with such herbage as those which form the screens of Glenlyon, and some others of the more southerly Grampian valleys. The mountains are, in general, rounded and tame, and covered for the most part with moorish soil and stunted heath. On the south-east side, they exhibit ridge behind ridge, rising like the benches of an amphitheatre slowly to the background summit range, but laterally cloven down at intervals, by glens and ravines emptying out rills or torrents toward the plain; and, on the north-west side, they descend with a considerably greater rapidity, and occupy a smaller area with their flanks. Tracing a section of the range, occupying a space of about 10 miles, from Strathmore to the summit of Mount-Battock, or converging point of the counties of Forfar, Aberdeen, and Kincardine, and twice minutely surveyed by the ingenious Colonel Imrie, a fair idea may be formed of its geological structure. Following up the channel of the North Esk, the first native rock which occurs is a reddish brown argillaceous sandstone, stratified in layers of various thickness, from 1 inch to 4 feet of solid stone. Its component parts are small particles of quartz, still smaller particles of silvery-lustred mica, and an inconsiderable admixture of calcareous matter; which owe their adhesion and their colour to a martial argillaceous cement. In the plain, the rock is perfectly horizontal; when it approaches the skirt of the Grampians, it perceptibly begins to rise, and, slowly going off the horizontal for $\frac{1}{4}$ of a mile, it afterwards rises so rapidly that, a mile onward, it becomes quite vertical. At the point of its assuming this position, and of its being in the firmest state of consolidation, a bed of trap 40 feet thick occurs between two of its layers. The sandstone continuing vertical for some way beyond, the gravel which hitherto had been but occasionally imbedded in it, becomes rapidly augmented in quantity; and, at last, the sandstone entirely disappears, and is seen to pass into a conglomerate or gravel rock, composed of rounded water-

worn stones, varying in diameter from $\frac{1}{2}$ an inch to a foot. The stones consist chiefly of quartz and granites, and subordinately of porphyries, jaspers, and other materials, all the productions of the interior mountains; and are cemented into rock by a highly ferruginated reddish-brown clay, mixed with very small particles of quartz, and very minute fragments of silver-lustred mica, and so binding, while it fills up the interstices, that the hardest little stones in the composition may be more easily broken than removed from their sockets. In this conglomerate, thin strata of fine-grained sandstone, from one-third of an inch to a foot in thickness, occur at various intervals, and stretch longitudinally through the rock, dividing its mass into separate beds. The rock thus shown, by the lines and thin beds of sandstone, to be of various deposits, and to stretch from west to east, runs along the face of the Grampians over an extent of more than an hundred miles. At Stonehaven, it is some miles in thickness; in the middle district it occupies less space; towards the south-west, it again swells out, and forms high mural precipices of immense thickness; and in this long stretch it has uniformly a vertical position. Its whole thickness in the channel or cut of the North Esk is only 400 yards; and here it rests upon a very fine-grained sandstone, of a dark ferruginous brown colour,—succeeded by a pale purplish or lilac brown clay porphyry,—a stratification of transition slate, variable in its composition, irregularly stratified, and occasionally contorted,—a narrow bed of slate, arranged in thin lamellæ, of a greenish grey colour, with some tints of yellow and of bluish grey,—a bed of trap, of a black colour, with a small admixture of brown,—and various other formations. Leaving the cut of the North Esk—which, farther up, discloses much to interest a geologist—the deep-cut of a torrent coming down from Mount-Battock shows the formations of the higher grounds. On entering this cut, the basis of the hills seem entirely composed of mica slate, much veined with quartz, and much twisted in its texture. This rock stretches from west to east, and dips toward the south at an angle of about 45°. Next to it occurs gneiss, with veins of porphyry passing from the one rock into the other. These veins of porphyry, stretching nearly from south to north, cutting the Grampians nearly at right angles, and all parallel to one another, are numerous in this district. They vary from 8 to 12 yards, are all, with very slight variations, of a reddish-brown colour, and have a basis of felspar, embosoming rhomboidal felspars, and specks of quartz. On the acclivity, before reaching the frequent recurrence of the porphyry veins, two beds of trap are seen considerably apart, both traversing gneiss, and, in a vertical position, the lower 12, and the higher 6 yards thick. In the region of the porphyry veins, hornblende slate twice occurs, inconsiderably thick in the bed, resting upon gneiss, and of a fine texture, thinly slaty, and of great induration. At no great distance from it, is a considerably thick stratified bed of primitive limestone, of a bluish-grey colour, resting upon gneiss. Ascending towards the summit of Mount-Battock, the gneiss is seen to rest on granite of a brownish flesh colour,—a tint which it derives from its felspar. The granite is largely granulated, has very little mica in its composition, occasionally discloses veins of compact felspar, sometimes scattered with specks of quartz. The particles of quartz in the composition of the granite are of a dark smoky colour. The etymology of the word "Grampians" is so obscure, and—worthless though the topic be—has occasioned so many disputes and so much theorizing, that we may be excused for not rushing among the

melee of antiquarians in a vain effort to ascertain it. Nor would it be much wiser to make any attempt at fixing the locality of "the battle of the Grampians," fought between Galgacus and Agricola.

GRAMRY, a small island of Argyleshire, in Loch-Linnhe, a few miles north of Lismore.

GRANDTULLY, a compact district in the parishes of Dull and Little Dunkeld, Perthshire, measuring 6½ miles in extreme length, 5 miles in extreme breadth, and 32½ miles in superficial area. Though not a parish, it was erected, in 1820, by the presbytery of Dunkeld, into a mission, under the committee for managing the Royal bounty. The church is supposed to be several centuries old; was formerly a chapel subordinate to the church of Dull; and is at present maintained by the proprietor of the estate of Grandtully. Sittings about 450. Stipend £85, with a manse and glebe. According to a survey made by the minister in 1836, the population consisted of 865 churchmen and 5 dissenters,—in all 870 persons, 850 of whom belonged to the parish of Dull, and 20 to that of Little Dunkeld.

GRANGE, a parish in Banffshire, situated in the lower district,* and bounded on the north by Deskford, Fordyce, and Ordiquhill; on the east by Mar-noch and Rothiemay; on the south by part of Aberdeenshire and by Keith; and on the west also by Keith. It extends 6 miles in length, from north to south; and 5 in breadth, from east to west. Population, in 1801, 1,529; in 1831, 1,492. Assessed property, in 1815, £3,121. Houses, in 1831, 333. It runs north from the banks of the river Isla, in three long but low ridges, terminating in the mountains called the Knock-hill, the Lurg-hill, and the hill of Altmore, which divide it from the fertile districts of Boyne and Enzie. These hills are of considerable height, the first being elevated 1,200 feet above the level of its base. The low grounds and parts of the hills are finely cultivated and enclosed. On the banks of the Isla, the ground, having a fine southern exposure, is dry and early; but the northern district is naturally more cold, wet, and unproductive, the soil being on poor clay on a spongy, mossy bottom. The whole parish has formerly been covered with wood. There are inexhaustible quarries of the best limestone, which is burnt with the peats dug from the mosses. The parish is intersected by roads in every direction, from Banff, Cullen, Aberdeen, &c., to the interior. The ruins of 'the Grange,' once the residence of the abbots of Kinloss, and a place of great splendour, whence the parish derived its name, are still to be seen on the top of a small mount, partly natural and partly artificial. This castle was surrounded by a dry ditch, and overlooked extensive haughs then covered with wood, the small river Isla meandering through them for several miles of a district then celebrated for its beauty. Several trenches or encampments, upon the haughs of Isla, with the defensive side thrown up towards the coast, are supposed to have been made by the Scots. "Two of the fields of battle," says the writer of the Old Statistical Account of the parish, "are clearly to be seen, being covered with cairns of stones, under which they used to bury the slain. One of these fields is on the north side of the Gallow-hill, not far from the encampments above mentioned; and the other is on the south side of

Knockhill, to which there leads a road, from the encampments, over the hill of Sillicearn, called to this day, 'the Bowmen's road.' Auchinhove, which lies near the banks of Isla, has been another field of battle; and in a line with it, towards Cullen, upon the head of the burn of Altmore, some pieces of armour were said to have been dug up several years ago, but were not preserved; and in the same line, towards the coast, upon the top of the hill of Altmore, there is a cairn, called the King's cairn, where probably the Danish king or general was slain in the pursuit."—This parish is in the presbytery of Strathbogie, and synod of Moray. Patron, the Earl of Fife. Stipend £164 12s. 2d.; glebe £7. Unappropriated tithes £332 19s. 2d. Schoolmaster's salary £34 4s. 4d.; fees £6, besides interest of a legacy of £100 11s., and a share of the Dick bequest. There are 4 private schools in the parish.

GRANGE. See ERROL.

GRANGE-BURN—sometimes called West Quarter-burn—a rivulet in Stirlingshire. It rises in the parish of Falkirk near Barleyside, and having flowed a very brief distance eastward, pursues a course of 3½ miles north-eastward to Laurieston, and thence of 2½ miles northward to the Carron at Grangemouth, forming, over the whole distance, except 4 or 5 furlongs above its embouchure, the boundary-line between Falkirk and Polmont.

GRANGEMOUTH, a thriving and important sea-port in the parish of Falkirk, Stirlingshire. Deriving its name from the mouth of Grange-burn, it stands at the confluence of that rivulet with the Carron, half-a-mile above the influx of the united streams into the Forth. Its resources and capacities as a port depend mainly on its commanding the entrance, through the mouth of Grange-burn, of the Forth and Clyde canal. The town, though small, contains some neat and good houses; and, with advantageous position, ample appliances of an inland harbour, and a beautiful framework of rich circumjacent scenery, presents a decidedly pleasing appearance. It has a dry dock, commodious quays, and lofty extensive storehouses. The Carron company have here a spacious wharf. Rope-making and ship-building employ a number of hands. The construction of steam-vessels also has been introduced. The maiden-effort of the place in this department was completed in the autumn of 1839 by the launch of the steam-ship *Hecla*, 80 feet long, 36 feet across the midships, and about 100 tons register, designed for towing trading-vessels over the Memel bar in Prussia. Previous to 1810, all vessels belonging to the port were registered at Borrowstonness: Grangemouth, however, has now a customhouse of its own. It has also a branch-office of the Commercial bank of Scotland, four schools, a *quoad sacra* parish-church, and a library. In its vicinity, a little to the south-west, stands Kerse house, a seat of the Earl of Zetland. The Carron foundry attracted, after 1760, the maritime trade formerly enjoyed by Airth, long the chief sea-port of Stirlingshire; and the subsequent formation of the Forth and Clyde canal, occasioned, in 1777, the erection of Grangemouth by Sir Lawrence Dundas. The incipient port speedily rose into notice, and acquired an attractive influence; and, from nearly the date of its erection, it has been the emporium of the commerce of Stirlingshire. The Carron company alone drive a very large traffic through its harbour. The Stirling merchants unload their cargoes here, floating their timber from it up the Forth, and transporting their iron by land. An accession of trade is drawn to it by the cheapness of its harbour-dues, compared with the demands made at Leith. All the great traffic along the canal from the Forth to Port-Dundas and the

* This parish is part of the district of Stryla or Strathisla; so called from the small river Isla, which runs along the south side of it from west to east, dividing a farm or two, on the north side of the ridge of hills called Ballach, from the rest of this parish; and empties itself into the Deveron, about 2 miles east of the parish, after a short course of 12 miles, in which it receives a number of rapid mountain-streams, which have caused it frequently to overflow its banks, and damage the crops upon its haughs.

Clyde, makes lodgements on it in passing, or adds, in various ways, to its interest. Timber, hemp, flax, tallow, deals, and iron from the Baltic, and grain from foreign countries, and from the east coast of Scotland and England, are landed on its quays.* The *quoad sacra* parish of Grangemouth consists of only a small adjacent district, additional to the town, and containing about 1,500 inhabitants. The church was built in 1838. Sittings about 700. Population of the town, in 1831, 1,155.

GRANNOCH (Loch), a sequestered and romantic lake, in the northern extremity of the parish of Girthon, about 3 miles in length, and half-a-mile broad. Beautifully belted, and bounded with hills, it resembles in summer, when the winds are asleep, a huge mirror set in a deep frame. On approaching it from Gatehouse, the traveller threads the beautiful vale of Fleet, and by merely turning his horse's head, obtains many glorious and welcome peeps of the magnificent scenery around Cally. Crossing the 'big water o' Fleet,' the tourist climbs the brae to Murraytown—a farm-house perched on the hill-side; and then bidding adieu to the abodes of men, enters on a wide and dreary moor, intersected here and there with patches of meadow, and covered with ling, heather, and gall. The Fleet is fed by two mountain-streams, and these the traveller has to cross repeatedly, before ascending the hill in front, and entering on the most perilous part of his journey. Crag-Ronald, and Crag-Lowrie, frown defiance on either side, and ever and anon some shaggy mountain-goat skips from one ledge of rock to another, and bleats forth his surprise at recognising a stranger in a region so desolate. The pass at this point is farther bounded by a huge ravine, which, although unvisited by spring or brook, is amply supplied with the means of filtration. Immense masses of granite rudely piled the one above the other, and disclosing numerous chasms between, line the bottom to a great depth,

" With rocks on rocks confusedly hurled,
The fragments of an earlier world "

The road, too—if such a term be applicable—lies in some parts through peat-bags, at others over seams of naked granite, where the slightest giddiness or want of caution might precipitate the traveller into situations from which he could never emerge alive. At length every difficulty surmounted, Loch-Grannoch, in all its Alpine solitude, imparts a sheeny brightness to the vale below, whether dyed with the ruddy tints of even, or illumined with the broader glare of noon. Its banks, where the water leaves the land, are lined with the finest pulverized granite. Opposite the cliffs nearest to Cairnsmuir, the water has been sounded to the depth of 90 feet; but more towards the centre, though trials have been made, no bottom has ever been found. Loch-Grannoch abounds with the finest trout; and char of a rich and delicate flavour are caught in it in considerable

quantities at the proper season. A large boat is kept on the lake, and here the angler may while away most delightfully the longest summer-day. Different rivulets run into the loch, and a large one which escapes from it, feeds the black water of Dee, and mingles with the Ken at the beautifully wooded promontory of Airds—a spot which Lowe has rendered immortal by his inimitable lyric of 'Mary's Dream.' A sweet little island guards the spot where the lake becomes a running stream, and there within the last dozen years eagles used to build and rear their young.

GRANTON, an incipient town and sea-port on the frith of Forth; $2\frac{1}{2}$ miles from Edinburgh, in the parish of Cramond. The Duke of Buccleuch, proprietor of the estate of Caroline park, has, solely at his own expense, raised erections here which will attract shipping, and, to a moral certainty, secure the speedy construction of a town and port of considerable importance. The main structure is a well-planned, very extensive, and altogether magnificent pier, forming decidedly the best harbour in the frith of Forth. The pier was commenced in November 1835, and partially opened on the Queen's coronation-day, the 28th of June, 1838,—and is already carried seaward to the length of 1,600 feet. When completed, it will be 1,700 feet in length, and from 80 to 160 in breadth; four pairs of jetties, each running out 90 feet, will go off at intervals of 350 feet; 2 slips, each 325 feet long, will facilitate the shipping and the landing of cattle; a strong high wall, cleft with brief thoroughfares, will run along the middle of the whole esplanade; a lighthouse will rise up from the extreme point, exhibiting a brilliant and distinctive light; and altogether accommodation will be afforded, the depth of water around it and by means of its low-water jetties, for the easy access, in any state of the tide, of steamers and ships of even the largest size. All these works, except over 100 feet at the northern extremity, are, in fact, already completed; and they exhibit such a massive and beautiful masonry, and realize so fully the advantages of an excellent harbour, as—viewed in connexion with the vicinity of the metropolis of a country opulent in its mines and its agriculture, and with the general disadvantageousness of the ports on the Forth—to be regarded by almost every patriotic Scottish onlooker in the light of a great national work. A spacious, neat, and commodious hotel has been built by the Duke of Buccleuch as the nucleus of the future town. The Duke—in terms of the act of parliament for erecting the pier—will be entitled to a given levy of dues on passengers, cattle, and land-conveyances.

GRANTOWN, a modern village, in the parish of Cromdale, Inverness-shire; 22 miles south of Forres; $13\frac{1}{2}$ north-east of Aviemore; $30\frac{1}{2}$ south-east of Fort-George; and 1 south of Castle-Grant, on the left side of the river Spey, on the road from the lower to the higher districts of the country. From Grantown to Aviemore, the head of Strathspey, a military road, extending southward 12 miles, forms part of the communication from the Laggan road to the Spey-side road; and a road branching from it along the north side of the river Dulnain, called the Duthel road, opens a more direct intercourse with Inverness. The military road from Grantown extends northward 9 miles to Dava or Tominarroch, where it is met by a branch of the Findhorn road, and thus conduces with it in forming access to the coast at Nairn and at Forres. Previous to the year 1774, the site of this village was a barren and untenanted heath. It was then begun to be built under the patronage of the Grant family, who have been its continual benefactors. It is neatly built, and possesses a town-

* A Bill is now before Parliament [April 1841] by which the directors of the Forth and Clyde canal are empowered to improve and extend the harbour and basin at Grangemouth; to form a new harbour and wharfs, with an entrance from the river Carron; to alter the course of the Grange-burn; and to improve the entrance from the frith of Forth into the harbour by making a sea-dyke. It confirms and gives effect to an agreement between the Company and the Earl of Zetland respecting the works at Grangemouth, by which all the rates and duties which the Earl and the Company may be entitled to levy for the use of the harbour and wharfs are to be received by the Company; and, after satisfying the purposes mentioned in the agreement, to divide the surplus equally between the Earl and the Company. In consideration of the expense in making the sea-dyke from the harbour of Grangemouth to the mouth of the Carron, the Company are empowered, when the work shall be completed, to take a toll, not exceeding 4d. per ton on all vessels passing into or out of the harbour of Grangemouth, and using the towing path of the Company in navigating the Carron from or to the frith of Forth.

house and prison of elegant architecture, and under the jurisdiction of the sheriff of the county. There is an excellent school in the village, and an hospital for 30 poor orphans has been established on the plan of the Edinburgh Orphans' hospital. The National bank has a branch here. Population, in 1801, about 400; in 1831, 1,850.—There is a mission-station here, the district attached to which comprises the old parish of Inverallan. The church was built in 1802; sittings 1,000. The mission was established in 1835, previous to which time the minister of Cromdale preached every alternate Sabbath at Grantown. Salary of missionary £80.

GRASHOLM, one of the small Orkney isles, situated half-a-mile south of Shapinsbay.

GRASSY-WALLS, a Roman camp in the shire of Perth and parish of Scone; on the east side of the Tay, about 3 miles north of Perth. General Roy supposes it to have been of sufficient dimensions to contain the whole of Agricola's army, after passing the Tay; and has given a plan of it. The farm of Grassy-Walls has taken its name from its situation within the earthen intrenchments.

GRAVE, a small island on the coast of Lewis.

GREENHOLM, one of the Shetland islands, lying 10 miles north-north-west of Lerwick.

GREENHOLMS, two islets of the Orkneys, a mile-and-a-half south-west of Eday.

GREENLAW, a parish in the Merse, Berwickshire. It is of an oblong form, extending from north-west to south-east; and measures, in extreme length, 8 miles,—in extreme breadth, 4 miles,—and in superficial area, 25 square miles. It is bounded on the north by Longformacus; on the north-east by Polwarth and Fogo; on the south-east by Eccles; on the south-west by Hume and Gordon; and on the west by Westruther. The southern division, comprising rather more than one-half of the whole area, is well-enclosed and highly cultivated, and presents in general a level surface, variegated here and there with low detached rounded grassy hills of the class called laws,—from one of which the parish derived its name. Throughout this division the soil is a deep strong clay, and produces excellent wheat, prime grain of other species, and fine pasture. The northern division is, for the most part, a moorland and hilly tract. Some of the hills are dry, and partially cultivated; others are wet and covered with short heath, and adapted only for sheep-walks and the raising of young cattle. Across the moor, over a distance of fully two miles, stretches an irregular gravelly ridge, about 50 feet broad at the base, and between 30 and 40 feet high, called the Kaimes. The ridge bends round in the form of a semicircle, presenting its face or hollow to the hills. On the south side of it is Dogden moss, 500 acres in extent, and in some places 10 feet in depth, yielding peats which, when properly cut and dried, are a fuel little inferior to coals. Blackadder water comes down upon the parish from Westruther, runs along its western boundary for 3 miles, and then, including a considerable bend in its course southwards, at the extremity of which lies the town of Greenlaw, it passes through to the eastern boundary over a distance of about 4 miles. In summer, and even in winter, it is, in general, but a tiny stream; but, being fed by a number of rills and little mountain torrents, it sometimes swells suddenly to a great size, and overflows, to a considerable extent, the grounds adjacent to its banks. The stream is of much local value by giving water-power to a lint-mill, a fulling-mill, and two flour-mills. A rill of about 4 miles in length of course comes in upon the parish from the north, and flows southward

through it to the Blackadder. Another stream, of about 8 miles in length of course, comes down from the south-west upon its most southerly angle, forms its south-east boundary-line over a distance of $2\frac{1}{4}$ miles, and then passes onward through the conterminous parish of Eccles to fall into the Leet. The high and precipitous banks of the Blackadder, before the river reaches the town, afford abundant quarries of red sandstone, and, at the point of its leaving the parish, exhibit a coarse white sandstone, with a superincumbence of dark claystone porphyry. At Greenlaw, which is well-sheltered by hills, the air is mild; in the southern division of the parish it is more gentle and dry than in the northern division; and, in the entire district, it very rarely floats the miasma of any epidemical disease, and is peculiarly healthy. Two miles north-west of the town, on the verge of the bold banks of the Blackadder, and its confluent stream from the north, are vestiges of an encampment; and leading off directly opposite to them, an intrenchment, whence numerous coins of the reign of Edward III. were very recently dug up, runs first along the banks of the river, and then goes due south in the direction of Hume castle. About a mile north from the town, an old wall or earthen mound, fortified on one side with a ditch, but of unknown original dimensions, formerly ran across the parish, and is traditionally reported to have extended from a place called the Boon—a word which in Celtic means boundary, or termination—in the parish of Legerwood, all the way to Berwick; but at what time, or by whom, or for what purpose, the wall was constructed, are matters not known. The principal mansion in the parish is Rochester; the beautiful one of Marchmont, with its extensive and wooded demesnes, belonging to Sir H. Purves Hume Campbell, Bart., the proprietor of two-thirds of the soil, being within the limits of the conterminous parish of Polwarth. The parish is traversed by the post-road between Edinburgh and Coldstream, and by a branch going off toward Dunse, and contains altogether about 18 miles of public road. Population, in 1801, 1,270; in 1831, 1,442. Houses, in 1831, 252. Assessed property, in 1815, £5,477. Greenlaw is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, Sir W. P. H. Campbell, Bart. Stipend £254 15s. 5d.; glebe £25. Unappropriated tithes £1,023 16s. 3d. The parish-church is ancient, and was new-seated about 1776. Sittings 476.—There were two Dissenting places of worship in 1835. The United Secession congregation was established in 1781. Their place of meeting, originally a dwelling-house, was purchased in 1783-4 for £115, and altered and repaired at a cost of upwards of £100. Sittings 329. Stipend £92, with a house and garden; £8 for sacramental expenses.—The Original Burgher congregation was established in 1800. Their place of worship is now a *quoad sacra* chapel, the congregation having joined the Established church. Sittings 222. Stipend £65.—The parish-school is attended by a maximum of 150 scholars. Salary £34 4s. 4½d., with £55 fees, and £16 other emoluments. A non-parochial-school is attended by a maximum of 47 scholars. The interest of a legacy of 2,000 merks Scots, left in the year 1667 by Thomas Broomfield, and called the Broomfield mortification, is currently expended in alleviating the sufferings of the poor, and educating their children. The church of Greenlaw, and chapels respectively at Lambdeno, and on the old manor of Halyburton, belonged, till the Reformation, to the monks of Kelso. The ruins of the two chapels have but recently disappeared. During the 12th, 13th, and 14th centuries, the kirk-town of

Greenlaw, or Old Greenlaw, was the residence of the Earls of Dunbar, the ancestors of the family of Home: see article DUNBAR.

The town of GREENLAW, the capital of its parish, a burgh-of-barony, and the county-town of Berwickshire, stands on the north bank of the Blackadder, on a peninsula formed by a bend of the river, $7\frac{1}{2}$ miles south-west of Dunse; 20 miles south-west of Eyemouth; 20 miles west of Berwick; 10 miles north-west of Coldstream; 12 miles east of Lauder; and 37 miles south by east of Edinburgh. The original town—still commemorated by a farmstead on its site called Old Greenlaw—stood on the top of a verdant eminence, or *green law*, about a mile south of the present town. At some distance to the east stood the ancient castle of Greenlaw, vestiges of which have long since disappeared. When the modern town rose from its foundations, its baronial superiors, the family of Marchmont, who had great political influence after the Revolution, speedily invested it with very considerable importance. In 1696—in spite of the superior intrinsic greatness and the more advantageous relative position of Dunse, which, jointly with Lauder, wore at that time the county-honours—it was constituted by act of parliament the county-town of Berwickshire; and it has continued since to be the seat of the county-courts and other jurisdictions. Yet, apart from its public civil buildings—which belong rather to all Berwickshire than properly to itself—it is a mere village, inconsiderable in bulk, sequestered in position, and innocent of the activities and the productiveness of trade or manufacture. It consists simply of one long street, with a square market-place opening from it on the north side. Over the whole recess or further side of the square, the parish-church on the one side, and the old court-house on the other, send up between them an ancient and sepulchral-looking steeple, formerly occupied as the prison; and the entire group of building—its seat of justice and its place of worship jamming up the gloomy narrow jail between them, and all backed by the burying-ground of the town and parish—suggested to some wag the severe couplet:—

"Here stand the gospel and the law,
Wi' hell's hole atween the twa!"

But both the court-house and the prison have been superseded by new edifices which, in an architectural point of view, are highly ornamental to the town, and whose position is less liable to satirical remark. In the centre of the square formerly stood an elegant Corinthian pillar, surmounted in sculpture by the armorial bearings of the Earls of Marchmont, and serving as the market-cross. The site of this defunct antiquity and some circumjacent spaces are now occupied by the new county-hall. This is a chaste yet elegant Grecian edifice, built solely at the expense of Sir W. P. H. Campbell, Bart., the baronial superior of the town, and the successor of the powerful family of Marchmont, and presented by him to the county. In front, it has a beautiful vestibule surmounted by a dome. In the interior is a hall, 60 feet long, 40 feet wide, and 28 feet high, adorned at each end with two fluted pillars with Corinthian capitals. In the dome is a fire-proof room for the conservation of documents. There are in the building, also, several other apartments for the accommodation of the sheriff and other county officials. The new jail, at a little distance, was built in 1824. It has 2 day-rooms for felons, 1 day-room for debtors, 18 cells, and 3 courts for the use of prisoners; and is surrounded and rendered quite secure, by a high wall bristling up in a che-

vauz-de-frieze. It will, however, require considerable alterations to adapt it to the separate system of discipline now introducing under the New Prisons act. The town, besides 6 or 7 inferior inns or alehouses, has one large inn, a new, neat, and commodious edifice. It has also the two Dissenting chapels of the parish, a public subscription library, a friendly society, a branch bible society, a regular hiring-market for servants, and two annual cattle fairs, one on the 22d day of May, and the other on the last Thursday of October. A daily coach, plying between Edinburgh and Dunse, passes through the town.—Greenlaw, as a burgh-of-barony, holds of the proprietor of Marchmont. Nearly the whole town is feued; and the feuars, about 80 in number, are a respectable class of persons. Population, in 1811, about 600; in 1821, 765; in 1831, 895.

GREENLAW, a hamlet in the parish of Glencross, Edinburghshire, on the road between Edinburgh and Pennycook, 8 miles from the former, and 2 miles from the latter, where there is an extensive range of barracks, but chiefly for prisoners of war.

GREENMILL AND BANKEND, two contiguous villages on Lochar water, at the eastern verge of the parish of Caerlaverock, Dumfries-shire. They are distant 5 miles south-east from Dumfries; and 2 miles east from Glencaple. At Greenmill is the parish-church; and at Bankend is a grammar-school, endowed with £40 a-year of salary.

GREENOCK,* a parish in the north-west of Renfrewshire, bounded by the frith of Clyde on the north; and in other directions by the parishes of Inverkip, Kilmacolm, and Port-Glasgow. It stretches about $4\frac{1}{2}$ miles along the shore, and extends considerably more up the country to the south. The land is hilly, with the exception of a stripe of level ground by the water-side, varying from less than half-a-mile to a mile in breadth. The soil of this level portion is light, mixed with sand and gravel. It has been rendered very fertile, owing to the great encouragement given to cultivation, from the constant demand for country produce by the numerous population. In the ascent the surface is diversified with patches of loam, clay, and t. l. Farther up, and towards the summits of the hills, the soil for the most part is thin, in some places mossy; the bare rocks here and there appearing. The land in this quarter is little adapted to any thing but pasturage for black cattle and sheep. On the other side of the heights, except a few cultivated spots in the descent to, and on the banks of, the Gryfe, heath and coarse grass prevail. The greatest elevation attained by the Greenock hills is 800 feet. The views from thence are varied, extensive, and grand, combining water, shipping, the scenery on either bank of the Clyde, and the lofty Highland mountains. The sides of the hills overlooking the town and the river are adorned with villas, and diversified with thriving plantations; so that the defect in the landscape pointed out by the Rev. Archibald Reid, the tasteful and intelligent Statistical reporter of 1793, has been removed. The parish contains 6,365 English acres, nearly 5-6ths of which belong to the family of

* According to the popular belief, Greenock received its name from a *green oak*, which, it is said, once stood upon the shore; but this seems a mere play upon words, and there is no reason to suppose that any such oak ever existed. The name may be derived from the British *Gruen-ag*, signifying a gravelly or sandy place; or from the Gaelic, *Grian-aig*, signifying a sunny bay. Both these terms are applicable to the site of Greenock, which has a sandy and gravelly soil and is finely exposed to the sun on the margin of a beautiful bay. The last derivation is the most probable, and in support of it we must add that the name of the place is still pronounced *Gruanag* by the Highland portion of the population.

Shaw Stewart, Bart. In 1818 the land was thus arranged:

	English Acres.
Arable,	2,315
Sound dry pasture,	930
Moorish land of little value,	2,780
Sites of houses, roads, and rivulets,	300
Woodlands, mostly natural,	40
Total,	6,365

The earliest name which occurs in connection with this place is that of "Hugh de Grenok," who is recorded in Ragman Roll as one of the many Scottish barons who, in 1296, came under subjection to Edward I. of England. Crawford, the historian of Renfrewshire, does not appear to have been aware of the existence of this person, and in his account of the barony of Greenock goes no farther back than the reign of Robert III., (1390-1406) during which he mentions it was divided between the two daughters and heiresses of Malcolm Galbraith, the proprietor, one of whom married Shaw of Sauchie, and the other married Crawford of Kilbirnie. The two divisions were from that time held as separate baronies—Wester Greenock by the Shaws, and Easter Greenock by the Crawfurds—till 1669, when John Shaw purchased the eastern portion, and thus became the proprietor of both. John Shaw Stewart—afterwards of Blackhall, Baronet—succeeded to the conjoined baronies, on the death of his grand-uncle, Sir John Shaw, in 1752, and in this family it has since continued. The castle of Easter Greenock, a square tower, stood at Bridge-end, about a mile east of the town of Greenock. It was ruinous when Crawford wrote (1710) and probably was not inhabited after the sale to the Shaws in 1669. An engraving of the ruin, exhibiting only a portion of the north wall with spaces for two small windows, at different heights, was published in the Scots Magazine for October 1810. The castle of Wester Greenock occupied the site of an edifice which stands upon an eminence above the assembly-rooms. This edifice formed the residence of the Shaws, the feudal superiors of the district, and thence received the name of "the Mansion-house,"—a name it still retains, although it has not been occupied by the proprietors since 1754, two years after the accession of Mr. Shaw Stewart to the estate. The older portion of this house appears to have been built in the 17th century. Over a back entrance is the date 1674; a well close by bears the date 1629; and over one of the entrances to the garden is affixed the date 1635. The front and the greater part of the building is of more modern construction: it is still inhabited. Before the houses of the town encroached upon it, this mansion, with its terraces and pleasure-grounds overlooking the river, must have had a very striking aspect. It was thus noticed by Alexander Drummond, when speaking of Vabro in Italy, in the travels he performed in 1744:—"Here the Count de Mercì possesses a beautiful house, that stands upon the top of the hill, with fine terraced gardens sloping down to the river side, which yield a delicious prospect to the eye; yet beautiful as this situation is, the house of Greenock would have been infinitely more noble, had it been, according to the original plan, above the terrace with the street opening down to the harbour; indeed, in that case, it would have been the most lordly site in Europe."^{*}

During the papacy, the baronies of Greenock were comprehended in the parish of Innerkip. Being at a great distance from the parish-church, the inhabitants had the benefit of three chapels within their

own bounds. One of them, and probably the principal, was dedicated to St. Laurence, from whom the adjacent expanse derived its name of the Bay of St. Laurence. It stood on the site of the house at the west corner of Virginia-street, belonging to the heirs of Mr. Roger Stewart. In digging the foundations of that house, a number of human bones were found, which proves that a burying-ground must have been attached to the chapel. A late writer states that this place of worship "disappeared in the wreck of the Reformation;"† whereas, in point of fact, it remained in some preservation so recently as the year 1760. On the lands still called Chapelton, on the eastern boundary of the east parish, there stood another chapel, to which also there must have been a cemetery attached; for when these grounds were formed into a kitchen-garden, many grave-stones were found under the surface. A little below Kilblain, there was placed a third religious house, the stones of which the tenant of the ground was permitted to remove for the purpose of enclosing his garden. From the name it is apparent that this was a cell or chapel dedicated to St. Blane.

After the Reformation, when the chapels were dissolved, the inhabitants of Greenock had to walk to the parish-church of Innerkip, which was 6 miles distant, to join in the celebration of public worship. To remedy this inconvenience, John Shaw obtained a grant from the king, in 1589, authorizing him to build a church for the accommodation of the people on his lands of Greenock, Finnart, and Spangock, who, it was represented, were "all fishers, and of a reasonable number." Power was also given to build a manse and form a churchyard. This grant was ratified by parliament in 1592. The arrangement resembled the erection of a chapel-of-ease in our own times. Shaw having, in 1591, built a church and a manse, and assigned a churchyard, an act of parliament was passed, in 1594, whereby his lands above-mentioned, with their tithes and ecclesiastical duties, were disjoined from the parsonage and vicarage of Innerkip, and erected into a distinct parsonage and vicarage, which were assigned to the newly erected parish-church of Greenock; and this was ordained to take effect for the year 1593, and in all time thereafter. The parish of Greenock continued, as thus established, till 1636, when there was obtained from the lords commissioners for the plantation of churches a decree, whereby the baronies of Easter and Wester Greenock, and various other lands which had belonged to the parish of Innerkip, with a small portion of the parish of Houstoun, were erected into a parish to be called Greenock, and the church formerly erected at Greenock was ordained to be the parochial church, of which Shaw was the patron. The limits which were then assigned to the parish of Greenock have continued to the present time; but it has since been sub-divided into parochial districts, which will be described afterwards.

GREENOCK, a burgh-of-barony, and a parliamentary burgh, the principal sea-port in Scotland, and the sixth town in point of population, is situated in the above parish, on the south shore of the frith of Clyde. It stands in 55° 57' 2" north latitude, and 4° 45' 30" west longitude, and is distant westwards from Paisley 16 miles; from Glasgow 22; and from Edinburgh 65. It occupies the whole of the stripe of level ground already mentioned, and even ascends a considerable way up the ridge of hills which rise abruptly behind; in front is a fine bay. The situation is both beautiful and convenient for commerce. In the beginning of the 17th century, Greenock was a mean fishing village, consisting of a single row of

* Drummond's Travels, London, 1754, p. 21, folio.

† Chalmers' Caledonia, Vol. III., p. 845.

thatched cottages. In 1635, Charles I., as administrator-in-law of his son Charles, then a minor, Prince and Steward of Scotland, granted a charter in favour of John Shaw, proprietor of the barony of Greenock, holding of the Prince, erecting the village of Greenock into a free burgh-of-barony, with the privilege of holding a weekly market on Friday, and two fairs annually. This creation was confirmed and renewed by Charles II., as Prince and Steward, in 1670, and received the ratification of parliament in 1681. In the course of that century it acquired some shipping, and engaged in coasting, and, to some extent, in foreign trade. The herring-fishery was the principal business prosecuted, and in it no less than 900 boats, each having on board 4 men, and 24 nets were, during some seasons, employed. Besides the home consumption, immense quantities of herrings were exported to foreign markets; in particular, in the year 1674, 1700 *lasts*, equal to 20,000 barrels, were exported to Rochelle, besides what were sent to other ports of France, to Sweden, to Dantzic, and other places on the Baltic. This branch of industry is still prosecuted here. In 1684, a vessel sailed from Greenock with a number of the persecuted religionists of the West of Scotland, who were sentenced to transportation to the American colonies. Next year a party connected with the Earl of Argyle's invasion landed here; the bay probably affording some facility for such a purpose. In 1699, as appears from Borland's History, and not in 1697, as is usually represented, part of the Darien expedition was fitted out at Carlsdyke, which at that time was separate from Greenock, and had a quay, while Greenock had none.

The baronial family of Shaw took a deep interest in the progress of the town, which indeed may be said to have been formed under their patronage. In 1696, and again in 1700, Sir John Shaw applied to the Scottish parliament for public aid to build a harbour at Greenock; but his applications were unsuccessful. The importance of the measure induced the inhabitants to make a contract with Sir John by which they agreed to an assessment of 1s. 4d. sterling on every sack of malt brewed into ale within the limits of the town; the money so levied to be applied in defraying the expense of forming a pier and harbour. The work was begun in 1707, and was finished in 3 years. Within 2 circular quays—a mid quay or tongue intervening, consisting of above 2,000 feet of stone—were enclosed about 13 imperial acres. This formidable undertaking, the greatest of the kind at that time in Scotland, incurred an expense of about £5,600, the magnitude of which alarmed the good people of Greenock so much, that on Sir John Shaw's agreeing to take the debt upon himself, they gladly resigned to him the harbour and the assessment. Such, however, was the effect of the harbour in increasing the trade and the population of the town, that by the year 1740 the whole debt was extinguished, and there remained a surplus of £1,500, the foundation of the present town's funds. In our day it may seem strange that the above tax on malt should have produced so large a sum as £5,600; and Messrs. Chambers, in their *Gazetteer*, pleasantly remark that the speedy *liquidation* of the expense affords a proof, either of the great trade carried on, "or of the extreme thirstiness of the inhabitants," at the time in question; but it is to be recollected that at that time, and for a good while after, ale, not ardent spirits, formed the common drink of the labouring people.

Since 1773, several acts of parliament have been passed for regulating the affairs of the port, which are under the management of trustees or commissioners, consisting of the magistrates and town-

council, and 6 gentlemen annually elected by the shipowners of the place. Of the original harbour scarcely a vestige remains, successive repairs and new erections having nearly effaced it. More capacious harbours, with dry docks and other appropriate accommodations, have, from time to time, been formed at an immense expense. These works are as commodious and elegant as any in the kingdom. The east quay is 531 feet in extent; entrance to the harbour, 105 feet; custom-house quay, 1,035 feet; entrance to the harbour, 105 feet; west quay, 425 feet; extreme length from east to west, 2,201 feet; breadth of piers, 60 feet. The quays run into deep water, and are approached by steamers at any state of the tide. Vessels of the largest class can be admitted into the harbours. In the outer harbour vessels of any burthen have sufficient depth of water, and good anchorage, but the roadstead is narrowed by a sand-bank of considerable breadth, which renders the navigation to Port-Glasgow difficult, though it serves as a protection to the harbour of Greenock during north-east gales.

The prosperity of Greenock began at the auspicious era of the Union with England in 1707, which opened new views to the traders of the Clyde, by giving them a free commerce to America and the West Indies, which they had not before enjoyed; and they soon began to send out goods to the colonies, returning chiefly with tobacco. After the completion of the harbour, Greenock was established a custom-house port, and a branch of Port-Glasgow, by an exchequer commission, dated the 16th of September, 1710. In 1719, the first vessel belonging to Greenock crossed the Atlantic. The growing prosperity of the port excited the jealousy of the traders of London, Bristol, Liverpool, and Whitehaven, who accused those of Greenock and Port-Glasgow of defrauding the revenue; but the charge was triumphantly refuted. The commerce of Greenock continued to increase gradually till about 1760, when the increase became very rapid, and continued its course till it met with a check from the American war. After the peace in 1783, the increase became still more rapid; and during the 7 years from 1784 to 1791, the shipping trade of the place was nearly tripled in amount. About the beginning of the present century, it had increased to a much greater amount than that of any other port in Scotland. The principal intercourse is with North and South America, and the East and West Indies; and here it deserves to be remarked that it was in Greenock, in 1813, that the first movement was made for breaking up the monopoly of the East India Company. The Greenland whale-fishery, commenced here in 1752, was never of any importance, and is now discontinued. The coasting trade at this port has declined since 1800. This, however, does not indicate a general failure of that trade on the Clyde, which, upon the whole, has greatly increased, but merely an alteration of the mode of carrying it on; many of the coasters, in consequence of the deepening of the river, and the introduction of towing by steam, now proceeding direct to Glasgow, instead of stopping in the first instance at Greenock. For the same reasons, not a little of the foreign trade has been transferred to Glasgow.

In 1728, the gross receipt of the customs at Greenock was £15,231; in 1770, £57,336; in 1802, £211,087; in 1831, £592,008; in 1834, £482,138; in 1837, £380,704; in 1838, £417,673; and in 1839, £315,084. The recent decrease is partly accounted for by the duties on tobacco having been paid at Glasgow since 1834.

The vessels entered inwards, and cleared outwards, to foreign ports, with cargoes, in the years

after-mentioned, each year ending 5th January, were as follows:—

1837	196	55,758	8	2,807	
1838	216	58,714	17	6,521	

In 1825, the registered vessels belonging to the port were 241, tonnage 29,054, men 1,987; in 1837, vessels 386, tonnage 47,421, men 3,039; each year ending 31st December. At the beginning of 1840, the number of vessels was 408, and the tonnage 63,820.

In 1830, the vessels entered inwards and cleared outwards, coastwise, with cargoes, were, inwards 684, tonnage 67,884; outwards 796, tonnage 81,988; in 1835, inwards 999, tonnage 103,185; outwards 924, tonnage 95,172; each year ending 5th January.

The declared value of British and Irish goods exported from Greenock to foreign parts was, in 1831, £1,493,405; in 1832, £1,662,251; in 1834, £1,459,086; in 1836, £1,623,362; in 1837, £1,555,560; in 1838, £1,141,765; each year ending 5th January.

Before the war with the North American colonies, 1775, all the large vessels belonging to the Clyde were built in that country; but since then ship-building has been carried on to a great extent at Greenock. At present there are here 9 establishments in this business, one of which—that of the Messrs. Scott—is one of the largest in the empire. In March 1840 there were 21 vessels building; the aggregate tonnage of which was 7,338. The Britannia, the first of the line of steamers which was established between Liverpool and Halifax in 1840, was built here. Five of the steam-vessels for carrying the royal mail to the West Indies are building or have been built in Greenock, and it is to supply 6 with their machinery. This place is celebrated for the construction of boilers and other machinery for steam-vessels. Boat-building is a considerable branch of trade. Rope and sail-making, commenced in 1725, are extensively carried on at several works. Sugar-refining is here prosecuted to a greater extent than any where else in Scotland. The first house for this purpose was erected in 1765, and now there are eleven. The town has iron foundries, manufactories of pottery ware, flint-glass, glass bottles, and silk and felt hats; with 4 breweries, 2 tanneries, 2 soap and candle works, besides other establishments common in towns of this size. Straw-hat making affords employment to many females, and the manufacture of hats from rye-straw in imitation of Leghorn bonnets has been brought to great perfection.

One of the most extraordinary works of the kind to be met with in any country, is that by which the town is plentifully supplied with water for domestic use, and machinery to a prodigious extent can be impelled. It was accomplished in 1827 by an asso-

ciation called the Shaws Water company, constituted by act of parliament in 1825. The work consists of an immense artificial lake or reservoir situate in the bosom of the hills, behind the town, formed by turning the course of some small streams, the principal called Shaws water, which formerly ran into the sea at Innerkip, and from which the company takes its name. From this reservoir an aqueduct passes along the mountain-range, running for several miles at an elevation of 500 feet above the level of the sea. The whole length of the aqueduct is $6\frac{1}{2}$ miles; the reservoir covers $296\frac{3}{4}$ imperial acres of land, and there is a compensation-reservoir covering 40 acres, besides smaller basins. Self-acting sluices, most ingeniously constructed, prevent the danger of any overflow, and completely preserve the water during the greatest floods. There are also two extensive filters. The whole of this magnificent work was planned and executed by Mr. Robert Thom, at the expense of £52,000. In the vicinity of the town it pours down a current of water in successive falls, which impel two grist mills, a mill for cleaning rice and coffee, a paper work, a sail-cloth and cordage manufactory, a factory for spinning wool, and an extensive mill for spinning cotton, all erected on its course. The construction of the cotton-mill has been regarded with great interest, contributing as it does to impart to Greenock the character of a manufacturing town.

The following information regarding it, is taken from the Greenock Advertiser of 30th March, 1841. The foundation-stone of the manufactory was laid with masonic honours on 15th June, 1838—the very day on which the railway was commenced at Greenock. The mill is an oblong building 300 feet in length, 65 in width, and four stories in height. The elevation is plain but chaste and elegant, and surpasses in appearance any building of the same kind which it has been our lot to witness. The centre portion projects, with a pediment on the top, and finishes with an octagon belfry on which is a vane resembling a first-rate steamer. There is a staircase at each end of the mill of easy ascent, with spacious landing-places.—The flats being all exactly alike, a description of one will stand for the whole. Each room is 215 feet long and 61 broad. The ceilings, which are lined with timber, are supported by two ranges of cast-iron pillars, of which there are 40 in each room. Over these pillars are transverse beams, each 9 feet apart. The apartments at the east end of the mill, which are intended for cotton and for blowing rooms, are fire-proof. They are separated from the work rooms by a stone gable—their ceilings are of arched brick-work resting on cast-iron beams, and the floors are of Arbroath flags. Those at the west end are employed as a counting room, and for warping and winding apartments. A considerable part of the ground flat is already filled with throstle frames, with which the entire apartment is intended to be occupied. The second floor contains preparing machinery, such as carding, drawing, slobbering, and finishing fly frames, entirely for throstle spinning. The third flat contains the various kinds of preparing machinery for mule spinning only; and the fourth flat is to be filled with self-acting mules. When fully at work, this mill will give employment to about 600 persons, and for their behoof the proprietors have already erected an extensive range of dwelling-houses, of the most comfortable and commodious description. Other houses are to be reared in due time, as it is desired that those employed at the work should live as nigh to it as possible.—The wheel-house stands at a distance of 21 feet from the east end of the mill. It is also a large building, of plain but neat design. Its length is 90

feet, and its breadth 33. The base is nearly 50 feet below, while the roof is about 35 feet above, the level of the road. From its bottom a tunnelled tail-race runs under the road in an oblique direction, for a distance exceeding 100 yards. This tunnel, a considerable proportion of which is 50 feet beneath the surface, and the under part of the wheel-house, have been cut through solid whinstone rock. The arch of the tunnel, and the arc on which rests the axle of the wheel, are constructed of dressed freestone, the joints of which are joggled and filled with cement. The stones forming the arc weigh from one to ten tons each, and the whole consists of 5,000 tons of dressed mason work, ten feet thick. The wheel itself is the largest and most magnificent structure of the kind in the world. It measures 70 feet 2 inches in diameter, or 220 feet 6 inches in circumference, and, with the stream furnished by the Shaws Water company, will work equal to 130 horses' power; but, from the capacity of the buckets, and the strength of its parts, it is capable of working up to 200 horses' power with a full supply of water. It is constructed on what is called the tension or suspension principle; the shrouding or outer rings of the wheel being braced to the centre by 32 chain cable iron bars or arms, 2½ inches in diameter, and an equal number of diagonal braces of the same thickness. The axle of the wheel is of cast-iron, and weighs 11 tons. The bearings in which the wheel revolves, are 24 inches long and 18 inches in diameter, resting in cast-iron bushes. The centres or naves, into which the arms and braces are fixed with gibs and cutters, are 10 feet in diameter, and weigh 8½ tons each. They are of a ribbed form, with punched coverings, and have prominent sockets, for receiving the ends of the arms. They have a rich and elegant appearance, and the arms radiating towards the periphery of the wheel, give an impression of lightness to the ponderous machine. The shrouding is of cast-iron, and is of 17 inches in depth. On the side which is not covered by the gearing, there are two sunk pannels with a neat "egg and dart" moulding all round the styles; and, in the body of each pannel, there is a very elegant branch of the water-lily in bas relief, which has a very handsome effect, by relieving this part of the wheel from that inexpressive plainness which is usual in such structures, and yet does not partake of that inappropriate expression of misplaced ornament, which too often gives a gingerbread appearance when applied to large machines. The weight of the wheel is 117 tons. The shrouding is composed of 64, and the teetted segment of 32 pieces, containing in all 704 teeth. The buckets are 160 in number, and each will contain 100 gallons of water. The sole of the wheel is constructed of iron plates fastened with no fewer than 20,000 rivets. The wheel performs nearly one revolution in the minute. The spur wheel and segment pinion, which works in the teetted segment of the water-wheel, weighs with its shaft 23 tons, and the pinion and main shaft into the mill weigh 13 tons. The spur wheel, the diameter of which is 18 feet 3 inches, revolves at the rate of 600 feet per minute, and the whole act together so smoothly that not the slightest shaking or noise is perceptible.—The cistern conducting the water to the wheel is of iron rivetted together, and is supported by two cast-iron beams the full width for the wheel-house. The water strikes the wheel six feet from the top of the diameter. The governor of the wheel, which is of beautiful workmanship, and the rack for the sluice, are placed on a level with the cistern. Although, as already stated, the weight of the wheel exceeds 100 tons, it revolves as smoothly and steadily as a well-adjusted pinion in a time-piece. Indeed,

it is impossible for any description to give an adequate idea of the effect produced upon the spectator by the calm, majestic, but resistless force with which it moves, never deviating by an hair's-breadth from its appointed sphere, and yet seemingly capable of rending to pieces the walls within which it is enclosed. To the east of the wheel-house a capacious store for holding cotton wool has been erected. It is capable of containing 800 bales. The building is fire-proof, having an arched roof of brick-work and stone side-walls. Besides, matters are so arranged that, in the event of fire, the whole could be covered with water in fifteen minutes.—Behind the wheel-house stands the gas-work for lighting the manufactory. Its roof is formed by the troughs for conveying the water from the ordinary channel to the wheel, as is also that of the boiler-house for heating the mill by steam-pipes.—The wheel which forms the stupendous piece of mechanism above described, was first set in motion by its constructor, Mr. Smith of Deanston, on 23d March, 1841. It received the name of the Hercules, but, we believe, it will be more generally called, as in time past, 'the Big wheel.'—Several of the falls on the Shaws water have been taken on lease for various branches of manufacture, which it is expected will ere long be in operation.

In connection with the Shaws water works we have to record the most awful catastrophe that ever occurred in this part of the country. On the night of Saturday the 21st of November 1835, the Whin-hill dam, which forms one of the reservoirs, suddenly burst its banks in consequence of the heavy rains, and poured its contents, consisting of three millions cubic feet of water, upon the grounds below, overwhelming the eastern extremity of Greenock, and part of the suburb of Carlsruhe.* The lateness of the hour, and the darkness of the night, added to the appalling character of the scene. About 40 persons lost their lives, and an immense amount of property was destroyed. So sweeping and so sudden was the torrent, that many of the victims were surprised in bed and drowned before they could leave their houses. Many persons made most remarkable escapes. In one instance, a man who volunteered, when the flood was at its height, to rescue two children who had been left behind in a house, discovered the bed on which they had been laid floating on the water, and its occupants sound asleep, altogether unconscious of their danger.—In the summer of the same year (25th July, 1835), a dreadful accident occurred at the quay by the bursting of the boiler of the Earl Grey steamer, when 6 persons lost their lives, and a number were seriously injured. As the railway from Greenock to Glasgow has already been described in our notice of the latter city, it may suffice to state here that the line was opened throughout on Tuesday, 23d March, 1841.

The following is the earliest description of Greenock which has fallen under the observation of the writer of this article, and which he quoted in a former publication.† It is translated from a work by M. Jorevin de Rocheford, a French gentleman who visited these parts about the year 1670. "Krinock.‡—This town is the passage of the Scotch post and packet-boat to Ireland. Its port is good, sheltered by the mountains which surround it, and by a great mole, by the side of which are ranged the

* In justice to Mr. Thom it must be stated, that the Whin-hill dam was not constructed by him. It was formed before the works were projected, and was purchased by the company in 1829.

† Views in Renfrewshire. Lizars, Edinburgh, 1839.

‡ *Krinock*—such is the orthography employed by the Frenchman, who must have picked up the names of places as he best could, Travellers' Guides and Road Books having in his day been unknown.

barks and other vessels for the conveniency of loading and unloading more easily." The "great mole" here mentioned was merely a rude landing-place. Crawford, who wrote in 1710, at the time when the harbour was completed, describes Greenock (p. 124), as "the chief town upon the coast, well built, consisting chiefly of one principal street, about a quarter of a mile in length." About this time the houses were covered with thatch; in 1716, there were only 6 slated houses in the place. In 1782, Semple, the continuator of Crawford's work, said: "About two years ago John Shaw Stewart of Greenock, Esq., caused survey and draw a plan of the town, and laid off a great part of the adjacent ground regularly for building upon, having feued off a number of steadings, where several good houses are built, part of which is to be called the New Town of Greenock. The town has greatly increased in building within these thirty years, being compact with elegant houses, a number of them slated. Good streets, and well-caused, some of them very broad, particularly north of the New (or Middle) church." To describe the town at the present day:—in the eastern, which is also the oldest portion, the streets are, in general, irregular and narrow with not a few dirty alleys; but towards the west, in which direction the town has of late years extended, there are several elegant and spacious streets, while numbers of beautiful villas are scattered on the heights behind, and along the shore. Wordsworth, who visited this place some years ago, celebrated it in one of his "Itinerary Sonnets," which we may here transcribe, as being slightly connected with this branch of our subject; fervently wishing that the reversed condition which the poet has, in the concluding lines, so gloomily foreshadowed, may be far distant.

"GREENOCK.

Per me si va nella Citta dolente.

We have not passed into a doleful city,
We who were led to-day down a grin'd dell,
By some too boldly nam'd 'the Jaws of Hell':*
Where be the wretched ones, the sights for pity?
These crowded streets resound no plaintive ditty:—
As from the hive where bees in summer dwell,
Sorrow seems here excluded, and that knell,
It neither damps the gay, nor checks the witty.
Alas! too busy Rival of old Tyre,
Whose merchants princes were, whose decks were thrones;
Soon may the punctual sea in vain expire
To serve thy need, in union with that Clyde
Whose rustling current brawls o'er noisy stones,
The poor, the lonely, herdsman's joy and pride!"†

"One of the most remarkable circumstances connected with Greenock is the proximity of the Highlands. But a few miles off, across the frith of Clyde, this untameable territory stretches away into Alpine solitudes of the wildest character; so that it is possible to sit in a Greenock drawing-room amidst a scene of refinement not surpassed, and of industry unexampled, in Scotland, with the long cultivated Lowlands at your back, and let the imagination follow the eye into a blue distance where things still exhibit nearly the same moral aspect as they did a thousand years ago. It is said that when Rob Roy haunted the opposite coasts of Dumbartonshire, he found it very convenient to sail across and make a selection from the goods displayed in the Greenock fairs; on which occasion the ellwands and staves of civilization would come into collision with the broadswords and dirks of savage warfare, in such a style as might have served to show the extremely slight hold which the law had as yet taken of certain parts of our country."‡

From its nearness to the Highlands, a great pro-

* The poet had, we presume, approached Greenock from Inverary, by way of Loch Gail: see that article.
† Chambers' Gazetteer.

portion of the inhabitants of Greenock are either Highlanders by birth, or derive their lineage from that region, as their surnames plainly testify. We learn from the Old Statistical Account that, in the 3,387 families which composed the population of Greenock in 1792, there were 1,825 heads of families from the Highlands, who were classified thus: born in Argyleshire—among whom the prevailing name is Campbell—1,433; in Buteshire 78; and in the northern counties 314. According to the same authority, one might at that time walk from one end of the town to the other, passing many people, without hearing a word of any language but Gaelic. After the lapse of half-a-century, the above holds true, though only to a modified extent, there being now a greater infusion of Lowlanders, and the Gaelic tongue not being in such common use.

With regard to public buildings, the most conspicuous is the custom-house, an oblong Grecian edifice, with a splendid portico, situated upon the quay, where—not being encumbered with contiguous buildings—it is seen to much advantage. It was erected in 1818, at the expense of £30,000. The town-hall and public offices were planned in 1765 by James Watt, and finished the following year: considerable additions have since been made to them. The tontine, an inn and hotel in Cathcart-street, is a substantial and handsome structure erected, in 1801, at the expense of £10,000. Nearly opposite are the exchange buildings, finished in 1814, at a cost of £7,000, and containing 2 assembly-rooms and other accommodation. Behind these buildings, is the theatre, which was erected in the beginning of this century by Stephen Kemble. An hospital or infirmary was erected in 1809, and a jail or bridewell in 1810. A commodious news-room was opened in Cathcart-square in 1821. The gas-work was constructed in 1828, and cost £8,731. The churches will be noticed afterwards.

James Watt, the celebrated improver of the steam-engine, was a native of Greenock. A fine statue of him by Chantrey, the expense of which was raised by subscription, is placed in a building in Union-street, which is appropriated as a library. This building cost about £3,000, which was defrayed by Mr. Watt of Soho, only surviving son of the great man whom it and the statue are intended to commemorate. On the front of the pedestal of the statue is the following inscription from the elegant pen of Jeffrey:—"The inhabitants of Greenock have erected this statue of James Watt, not to extend a fame already identified with the miracles of steam, but to testify the pride and reverence with which he is remembered in the place of his nativity, and their deep sense of the great benefits his genius has conferred on mankind. Born 19th January, 1736. Died at Heath-field in Staffordshire, August 25th, 1819." On the right of the pedestal is a shield, containing the arms of Greenock, and, on the left, emblems of strength and speed. On the back is an elephant, in obvious allusion to the beautiful parallel drawn by the writer of the inscription between the steam-engine and the trunk of that animal, which is equally qualified to lift a pin or to rend an oak. Watt is the only celebrated person to whom Greenock has given birth. Galt, the novelist, a native of Irvine, passed part of his early days in Greenock; and, having returned toward the end of his life, he died here in 1839. Here also died Burns' "Highland Mary," in memory of whom it is in contemplation to raise a monument.

For a long time the inhabitants of Greenock were almost exclusively devoted to commerce, and literature and science received little countenance at their hands. In 1769, when John Wilson, a poet of con-

siderable merit, was admitted as master of the grammar-school, the magistrates and ministers made it a condition that he should abandon "the profane and unprofitable art of poem-making,"—a stipulation which 30 years afterwards drew from the silenced bard the following acrimonious remarks in a letter addressed to his son George when a student at Glasgow college:—"I once thought to live by the breath of fame; but how miserably was I disappointed when, instead of having my performances applauded in crowded theatres, and being caressed by the great—for what will not a poetaster in his intoxicating delirium of possession dream?—I was condemned to bawl myself to hoarseness to wayward brats, to cultivate sand and wash Ethiopians, for all the dreary days of an obscure life—the contempt of shopkeepers and brutish skippers." Since that time a better taste, and more liberality of sentiment, have prevailed, and some attention has been paid to the cultivation of science. In 1783, the Greenock library was instituted; and, in 1807, a collection of Foreign literature in connection with it was commenced. In 1841 this library contained about 10,000 volumes. It is the one already mentioned as occupying the building erected by Mr. Watt. Another library—the Mechanics'—was formed in 1832. An elegant Mechanics' Institution was built in 1840: it sometimes has 800 students. There is also a Scientific association. Letter-press printing was established here in 1765, by one MacAlpine, who was also the first bookseller. It was confined to handbills, jobbing, &c., till 1810, when the first book was printed by William Scott. In 1821, Mr. John Mennons began the printing of books, and since that time many accurate and elegant specimens of typography, original and selected, have issued from his press. With regard to newspapers the Greenock Advertiser, a respectable journal, published twice a-week, has existed since 1802. The Clyde Commercial List appears three times a-week. The Observer, published once a-week, was begun in 1840. The Intelligencer was established in 1833, but was discontinued in about 3 years afterwards.

The town possesses 3 banking establishments; namely, the Greenock bank, established in 1785; the Renfrewshire bank, in 1802; and the Greenock Union bank in 1840. The last-mentioned is a joint-stock company; the other two are private banks. There are also 4 branches of Glasgow and Edinburgh banks; a Provident bank; and 24 agencies for insurance offices. Charitable and religious institutions are numerous and liberally supported.

Till 1741 the affairs of the burgh were superintended by the superior, or by a baron-bailie appointed by him. By a charter dated in that year, and by another dated in 1751, Sir John Shaw, the superior, gave power to the feuars and sub-feuars to meet yearly for the purpose of choosing 9 feuars residing in Greenock, to be managers of the burgh funds, of whom 2 to be bailies, 1 treasurer, and 6 councillors. The charter of 1751 gave power to hold weekly courts, to imprison and punish delinquents, to choose officers of court, to make laws for maintaining order, and to admit merchants and tradesmen as burgesses on payment of 30 merks Scots—£1 13s. 4d. sterling. It is believed there is no instance on record of any burgesses ever having been admitted. The qualification of councillor was, being a feuar and resident within the town. The election was in the whole feuars, resident and non-resident. The mode of election of the magistrates and council was by signed lists, personally delivered by the voter, stating the names of the councillors he wished to be removed, and the persons whom he wished substituted in their room. In 1825, 497 feuars voted. The com-

missioners on municipal corporations stated in their Report, in 1833, that "this manner of electing is much approved of in the town." They also reported, that "the affairs of this flourishing town appear to have been managed with great care and ability. The expenditure is economical, the remuneration to officers moderate, and the accounts of the different trusts are clear and accurate." The municipal government and jurisdiction of the town continued to be administered under the charter of 1751, without any alteration or enlargement, until the Burgh Reform Act of 1833 came into operation. Under that act, the town-council consists of a provost, 4 bailies, a treasurer, and 10 councillors, for the election of whom the town is divided into 5 wards, 4 of which return 3 councillors each, and one returns 4: the ward having 4 councillors has a preponderance of electors. The bailie-court of Greenock has now the same jurisdiction, both civil and criminal, competent to a royal burgh. By an act of parliament passed in 1840, Carlsdyke forms part of the burgh of Greenock. In 1839-40, the corporation revenue was £22,564. In virtue of the reform act of 1832, Greenock sends one member to parliament; previously, the town had no voice in the representation. The parliamentary and municipal boundaries are identical. In 1840, the constituency was 1,168.

The noble family of Cathcart take from this town their second title in the peerage, Baron Greenock, conferred in 1807. They are descended from Sir John Shaw of Greenock, who died in 1752, through his only child Marion, and inherit feu-duties in the town to a considerable amount, being that part of the Shaw estate which was not entailed on the family of Shaw Stewart of Blackhall, now also of Greenock.

Till 1815, the sheriff-court for the whole of Renfrewshire was held at Paisley. In that year an additional sheriff-substitute, to be resident at Greenock, was appointed; and by an act of court promulgated by the sheriff-depute, dated 3d May, it was declared that the district or territory falling under the ordinary jurisdiction of the court at Greenock should be termed "the Lower Ward," and that it should in the meantime consist of the towns and parishes of Greenock and Port-Glasgow, and the parish of Innerkip. To this ward the parish of Kilmacolm has since been annexed.

In 1834, the parishes forming the Lower Ward were, with Erskine in Renfrewshire, Largs in Ayrshire, and Cumbray in Bute, erected into a presbytery, called the presbytery of Greenock.

In January 1838, when the Commissioners of Religious instruction visited Greenock, it was composed of 3 parishes *quoad civilia*, the Old or West, the Middle, and the East; and of 3 *quoad sacra*, the North, St. Andrews, and the South.

1. OLD OR WEST CHURCH.—This is the original parish, from which the others have, from time to time, been disjoined. It is partly landward, and partly town. *Quoad sacra* its greatest length is $3\frac{1}{2}$ miles, its greatest breadth $2\frac{1}{2}$. According to a census taken by the minister and elders, its population *quoad sacra*, in 1835, was 7,863, of whom there belonged to the Established church, 4,212; to other denominations, 2,613; not known to belong to any denomination, 1,038. The original church was built in the end of the 16th century, and enlarged in 1677. About 20 years after this enlargement, the masters of vessels and seamen of the port, erected a gallery in the south aisle. This church is in the form of a cross, with a small belfry, and stands in the middle of an extensive burying-ground close by the shore. It was in such a bad state of repair, that on 16th October, 1837, it was formally condemned by the presbytery, and the heritors appointed to build a new one

on another site. Accordingly, a new and elegant church, accommodating 1,400 persons, has been erected in Nelson-street, Mr. Cousin architect. The benefice of this parish is considered the most lucrative in Scotland. The following were the emoluments and advantages of the minister, as reported by the Commissioners in 1838:—

Stipend from teinds, average of crops 1833 and 1834,	£286	14	11½
Annuitiy bond, town of Greenock,	25	0	0
Feu-duties from glebe,	406	12	4
	£718	7	3¼

The minister has also a manse and glebe. It will be observed that the greater part of the above is derived from feuing out the glebe for building, which was allowed to be done at an average rent of £100 per acre, by an act of parliament obtained in 1801.—The United Secession congregation, which meets in Innerkip-street, was first established in 1748. The present place of worship was built in 1803, at a cost of £1,202 9s. 1d.; and £153 15s. 8d. has since been expended in building a session-house, and making other repairs. Sittings 730. Stipend £180.—Another congregation of the same body, established in 1832, has a church in Union-street, which was built, in 1834, at a cost of £2,400. Sittings 950. Stipend £164.—The Relief congregation, Sir Michael-street, established in 1808, assembles in a building erected in 1807, at an expense of £2,400. Sittings 1,498. Stipend £200, besides a house and garden, rented by the congregation for the minister's use, at £27. There is a colleague, who has a stipend of £180.—The Independent congregation, Sir Michael-street, was established 1805. Church built same year, cost £1,250. Sittings 750. Stipend £110.*—The Episcopal congregation, Union-street, was established in 1824, when a chapel was built and consecrated. Sittings 400. Stipend £125.—The Roman Catholic congregation, established about 1809, has a chapel, built 1814-15, which cost about £3,000. Sittings 761. The annual emolument of the former minister was £100, but the present one has never received any. It may be diminished, but not increased. The minister has a house, valued at £24 per annum, but no glebe, nor any provision in lieu thereof.—The Universalist congregation, established in 1801, assembles in a hall, which is used during the week for various purposes. The hall is fitted up with forms, and will accommodate about 200. There is no regular minister.—The Holy Catholic Apostolic congregation, established in May 1834, has a church built in 1834-5, which cost about £1,170, and is capable of containing from 500 to 600. In 1837 there were a minister and 2 subordinate ministers, the stipend paid to whom in that year amounted to £180.—The Wesleyan Methodist congregation, established in or about 1811, has a chapel built in 1814; cost not known. Sittings 400. There is no fixed provision for a minister.

2. NEW OR MIDDLE CHURCH.—This, which is wholly a town parish, was disjoined from the original parish of Greenock in 1754. *Quoad sacra* its length is $\frac{1}{2}$, and its breadth $\frac{1}{4}$ of a mile. Its population in 1838, according to a survey by the minister, was 8,223; of whom there belonged to the Established church, 4,570; to other denominations, 3,049; not known to belong to any denomination, 604. The church, which is in Cathcart-square, was built in 1757. It cost £2,388 17s. 8½d., of which £1,058 5s. 9d. was defrayed by subscriptions, and the remainder paid by the corporation. That sum does not include the cost of the steeple and clock, which were erected by subscription in 1787. The steeple is 146 feet high. Sittings 1,497. Stipend £275, besides £20 for com-

munion elements, with a manse and garden, but no glebe.—The Seamen's chapel was built in 1831, at a cost of £120, by a Seamen's Friend society, for the benefit of the seafaring population of Greenock, which amounts to about 2,500, about 1,000 of whom are generally at home. Sittings from 300 to 350. Chaplain's salary £26 annually.

3. EAST CHURCH.—This parish is partly landward and partly town, and was disjoined from the Old or West parish in 1809. *Quoad sacra* its extent is 7 square miles; its greatest length $2\frac{1}{2}$, and its greatest breadth $3\frac{1}{2}$ miles. Its population, according to a census taken by the elders in the end of 1835, was 5,580, of whom there belonged to the Established church, 2,994; to other denominations, 2,311; not known to belong to any denomination, 275. The church was built in 1774, as a chapel-of-ease, and has never been altered since, with the exception of a very partial change in the arrangement of some of the seats. Sittings 1,053. Stipend £250, with £20 for sacramental expenses. The minister has a house allowed him by the community, and kept in repair at their expense, but no glebe, nor any provision in lieu thereof.

4. NORTH CHURCH.—This is a *quoad sacra* town parish, divided from the West parish in 1834. Its greatest length is half-a-mile, and its greatest breadth 400 yards. According to a survey made by the elders, as reported in 1838, the population was 2,464, of whom there belonged to the Established church, 1,568; to other denominations, 857; not known to belong to any denomination, 39. The church was built in 1822-3, as a chapel-of-ease, and was slightly altered, but not enlarged, in 1824. It was built by a joint-stock subscription in 600 shares of £5 each, but this not proving sufficient, a further payment of about 22s. 6d. on each share was made. Sittings 1,165. Stipend £200, besides £10 for communion expenses at each sacrament.—The Gaelic station, Ardgowan-street, established in May, 1832, is maintained by the Congregational Union of Scotland. Sittings 200. The minister receives £20 per annum from the Union. Public worship is performed twice each Sunday in the Gaelic language.

5. SOUTH CHURCH.—This *quoad sacra* parish consists of a small compact district of the town, and was disjoined from the West parish in 1834. By a survey by the minister, reported in 1838, the population was 2,116, of whom there belonged to the Established church, 1,110; to other denominations, 928; not known to belong to any denomination, 78. The church was built by subscription in 1791, and cost £1,300. It was originally intended for a Gaelic chapel, and service is still performed in Gaelic in the forenoon, but in English in the afternoon. Sittings 1,300. Stipend £260.—The Baptist congregation, Tobago-street, was first established about 1809. Their chapel was built in 1821, and cost £1,250. Sittings 550. No stated minister.

6. ST. ANDREWS.—Another *quoad sacra* parish, which contains a small section of the town, and was divided from the West parish in 1835. According to a census taken by the minister and elders, reported in 1838, the population was 2,117, of whom there belonged to the Establishment, 1,095; to other denominations, 939; not known to belong to any denomination, 83. The church, which is a beautiful Gothic building, from a design by Mr. Henderson of Edinburgh, was opened on the 29th May, 1836. It was built by private subscription and aid from the General Assembly's church-extension fund, at an expense—including school—of £2,662 2s. The grant from the Assembly's committee amounted to £350. Sittings 945. Stipend £150.—The United Secession congregation, Nicholson-street, was established in 1790. The church was built in 1791, at

* This congregation has recently removed to a new and handsome chapel.

an expense of £1,400. Sittings 1,106. Stipend £200.—The Reformed Presbyterian congregation, West Stewart-street, was first established about 1824. The church was built in 1833, and cost £500. Sittings 447. Stipend £80.—The Unitarian congregation, Sir Michael-street, was first established in 1831, and assemblies in the second floor of a building which is fitted up as a chapel at a cost of about £150. Sittings 250. The minister, from choice, received no emolument in 1838.

7, 8. ST. THOMAS'S and CARTSDYKE.—Other two *quoad sacra* parishes, bearing these names respectively, have been formed since the visit of the Religious Instruction Commissioners in January 1838, from the appendix to whose report the foregoing ecclesiastical details have been chiefly taken.

From the abstract of education returns made to parliament in 1834, it appears that there were no parochial schools in Greenock, but that of other schools there were in all 36, with 52 instructors, the greatest number attending which were, from Lady Day to Michaelmas 1833, 2,661; and from Michaelmas 1833 to Lady Day 1834, 2,937. The grammar-school, with a rector and mathematical teacher, is under the control of the magistrates. The Highlanders' academy, which was erected in 1836, has upwards of 300 pupils.

There is authentic information as to the population of Greenock from a pretty early period. In 1695, according to a survey made for the purpose of a general poll-tax, there were 367 families, which, estimating $4\frac{1}{2}$ for each family, gives a population of 1,651 souls.* By a survey generally said to have been made in 1735, but which, it is believed, is assignable to the year 1741, the population was 4,100. By 1755 there was a slight decrease, the return to Dr. Webster being only 3,858. In 1782 Semple estimated the inhabitants at 12,000. By the government enumerations, the population, exclusive of seamen, was, in 1801, 17,458; and in 1831, 27,571. Houses, in 1831, 2,577. Assessed property, in 1815, £52,507.

GRENAND-CASTLE, in the district of Carrick, and parish of Maybole. This fortalice is situated upon the summit of a rock overhanging the ocean, and appears to have been intended as a place of security against any sudden surprise rather than a constant residence. Grose has preserved a view of it.

GREINORD (LOCH). See GRUINARD.

GRESSALLACH (LOCH), a bay on the east coast of Harris, south of East Loch-Tarbet.

GREтна or GRAITNEY, a parish on the southern verge of Dumfries-shire, not easily assignable to either Annandale or Eskdale, but lying between them on the Sark and the Solway frith. It is bounded on the north by Half-Morton; on the east by the river Sark, which divides it from England; on the south-east and south by the Solway frith; on the west by Dornock; and on the north-west by Kirkpatrick-Fleming. Its figure may be described as a parallelogram, stretching east and west, with a pentagon rising northward and attached to its east end. The greatest length of the parish is $6\frac{1}{2}$ miles; the greatest breadth $3\frac{1}{2}$ miles; and the superficial area 18 square miles. The surface is, in general, level; and only slightly diversified with inconsiderable rising grounds or hillocks. The highest elevation is Gretna-hill, which rises about 250 feet above water-mark, and commands a delightful and extensive prospect of the coast of Cumberland, the long stretch of the Solway frith, the How of Annandale, and the mountain-ranges of upper Annandale,

Eskdale, Liddesdale, and part of Northumberland. Near the extremity of the frith, which terminates at the influx of the Sark, a large tract of marsh land of a lively green colour has been formed, and is progressively enlarging, in consequence of a recession of the waters on the Dumfries side, and an encroachment of them on the side of Cumberland. Excepting some small and detached patches of moss, the parish is everywhere cultivated, enclosed, and luxuriant in its agricultural produce. In several parts, particularly on a stripe of land along the frith, the soil is a fine rich loam, and in other parts it is of a wet and clayey nature; but, in general, it is dry, sandy, and mixed with stones, powerful in its fertility, and abundant in its autumnal response to the call of cultivation. Perennial springs, welling up from the fissures of sandstone-rocks, or through beds of reddish-coloured sand, are numerous, and afford a luxurious supply of excellent water. Some mineral springs also send up their treasures, but have been neglected, owing chiefly to their being sometimes submerged by the tide. The SARK [which see] forms the boundary-line for $3\frac{1}{2}$ miles, and over all that distance intervenes between Gretna and Cumberland; and $1\frac{1}{2}$ mile from its embouchure, it is spanned by a neat bridge on the great road of communication between England and the south-west of Scotland. The KIRTLE [which also see] comes in upon the parish from the north, intersects it over its greatest breadth, flowing along an almost horizontal sandstone bed, and falls into the Solway 7 furlongs west of the mouth of the Sark, forming at its embouchure a very tiny bay. The Black Sark comes down upon the north-western angle of the parish, forms its boundary-line for a mile with Half Morton, and then flows circuitously through it over a course of $2\frac{1}{2}$ miles, and falls into the Sark at Newton. The line of sea-coast, somewhat sinuous, and about $4\frac{1}{2}$ miles in length, is low, and consists of mixed sand and clay. Redkirk-point, $1\frac{1}{2}$ mile, and Tordoff-point, $3\frac{1}{2}$ miles distant from Sarkfoot, alone break the uniformity of the level; and the latter is, on a small scale, a bold headland. There are several small ports or landing-places, particularly those of Sark and of Brewhouses; but they are of trivial importance, and facilitate chiefly the landing of coals from the ports of Cumberland. Vessels of 120 tons burden may sail up to Sarkfoot, and vessels of 100 tons may put into the other landing-places; and all may, at any time, lie in safety on the flat and sandy shore stretching out from the beach. The Solway, from Sarkfoot to Redkirk-point, opposite to which it receives the waters of the Eden, is only $1\frac{1}{2}$ mile broad; but, lower down, it expands to a breadth of $2\frac{1}{2}$ miles. The tide of the Solway—here of a whitish colour, owing to its traversing and tearing up a vast expanse of sand—flows due east, or directly along the bed of the frith, with amazing impetuosity: See SOLWAY FRITH. Abundance of salmon, and occasionally supplies of cod, sturgeon, and herrings, are here obtained from its waters. The climate of the parish is remarkably salubrious. "Of two brothers who died a century ago," says the writer of the Old Statistical Account, "one was 111" years of age, "and the other 110. In the year 1791 a woman died at the age of 103. There is [are] now living"—in 1792—"one woman upwards of 100, two between 90 and 100, and several persons between 80 and 90." About 600 persons in the parish, men, women, and children, are employed in cotton weaving, subordinately to manufacturers in Carlisle; and they partake largely—though not to the same extent as the inhabitants of many other localities—in the distress from limited earnings which has so universally overtaken the community of hand-loom

* Wilson's Survey of Renfrewshire, p. 215.

cotton weavers. The parish is intersected by the Portpatrick and Carlisle, and the Glasgow and London mail-roads, and has numerous subordinate public roads, kept in a state of excellent repair.

On the farm of Gretna-Mains, within this parish, stood, 50 years ago, considerable remains of a Druidical temple, oval in form, enclosing about half an acre of ground, and formed of large rough whinstones, which must have been brought from a distance of at least 10 or 12 miles. One of the largest of the stones—the only one not removed in a process of agricultural improvement—measures 118 cubic feet, and is computed to weigh upwards of 20 tons. This temple is traditionally famous as the scene of the formation of ancient alliances between Scotland and England. Traces exist, in various localities, of old square towers, very thick in their walls, which appear to have been strongholds of freebooters, or places of defence against marauders from the English border.—There are, in the parish, four villages,—Old Gretna, Gretna-green or Springfield, Rigg of Gretna, and Brehouses. All, except SPRINGFIELD, [which see,] are mere hamlets.—Old Gretna stands on the east bank of the Kirtle, in a hollow about half-a-mile from the Solway; and is remarkable chiefly for giving name to the parish,—the words *Gretan-hol*, or *Gretan-how*, in the Anglo-Saxon, signifying 'the great hollow,' and describing the topographical situation of the village.—Rigg of Gretna stands on the west bank of the Kirtle, opposite the former hamlet, and 5 furlongs distant from it; and is noticeable solely for being the site of a United Secession chapel.—Brehouses, situated on the bay or slight inland bend of the frith between Redkirk and Tordoff-points, is noticeable only as a tiny seaport.—Gretna-green, originally called Meg's-hill, is in reality a farm-stead in the vicinity of Springfield; but, in popular parlance, is very generally identified with that village. It is composed of the parish-church, a simple and unassuming little pile by the road-side, and near it the manse or residence of the clergyman; then the parish school-house, and under the same roof with it, the schoolmaster's neat, unadorned, and modest dwelling; next a farm-house, and a small licensed depot of tea, tobacco, and snuff; a cottage or two, and a carpenter's work-shop; and, lastly, an inn and posting-house. The inn was formerly the residence of Colonel Maxwell, but possessing an advantageous situation both with respect to distance from the city of Carlisle, and its vicinity to the great roads from Portpatrick and Glasgow, it was thought proper to convert it into an hotel. This was effected a good many years ago, when that line of road was carried more directly to Gretna-green by a bridge of cast-iron over the Esk, about 3 miles below Longtown, and the coaches ceased running round by that town and Springfield.—On the Cumberland side of the frith,* opposite Gretna-green, on a place called Burgh-marsh, stands a monument, marking the spot where death arrested the proud and impetuous career of the first Edward, as he was marching with giant-strides across the Border to conquer Scotland. Nearly in the same direction, Skiddaw, Helvellyn, and Scawfell, with other mountains in the lake-district of Cumberland, rear their tall blue summits in the distance, and seem to plant an insuperable barrier against the progress of the Northman venturing south. The hills, extending all along the horizon, appear, when the sun is high in summer, to form one regular and unbroken chain from Penrith to Whitehaven. As soon, however, as the rays of the sinking sun begin to fall upon the earth with considerable obliquity, and to tinge with a golden hue the long steep flank of this Alpine sierra, it is cut and broken into a thousand individual mass-

es; and deep ravines, and winding valleys, and rugged slopes, present all the beautiful variety of their forms, which, though perfect in outline, the distance sometimes renders indistinct in colour.—Population of the parish, in 1801, 1,765; in 1831, 1,909. Houses 334. Assessed property, in 1815, £8,192. Gretna is in the presbytery of Annan, and synod of Dumfries. Patron, the Earl of Mansfield. Stipend £237 6s. 11d.; glebe £20. Unappropriated teinds £365 19s. 10d. The parish-church was built about the year 1786. Sittings 800.—The United Secession congregation at Rigg of Gretna, was established in 1830. The church was built in 1832, and, along with a manse, cost about £1,000. Sittings 357. Stipend £95, with a manse and garden.—According to a survey by the parish minister, in 1836, the population then was 1,949; of whom 1,601 belonged to the Establishment, and 348 were Dissenters. The present parish comprehends the old parishes of Gretna-How and Ren-Patrick, which were united in 1609. The churches of both parishes were, in the 12th century, bestowed by Robert de Bruce, on the monks of Gisburn. In 1609 John Murray, the first Earl of Annandale, obtained the churchlands of Ren-Patrick, and the tithes of both it and Gretna-How. The church of Ren-Patrick was dedicated to Saint Patrick by the predilections of the Scots-Irish colonists, and, according to the meaning of its name in their language, was 'St. Patrick's portion;' but, owing to the colour of the stones of which it was constructed, it was popularly called the Red-kirk, and it gave that name to the headland or point on which it stood. Its ruins, as well as its cemetery, have now entirely disappeared, having been worn away by the powerful attrition of the tide on the headland, in careering round to the mouth of Kirtle water.

The reasons which have placed the little hamlet of Gretna-green amongst the famous of British villages, are not to be discovered in its architectural merits, or in its eminence for rural scenery. In its immediate vicinity you have, it is true, the valley of the Esk, with its luxuriant woods and crystal river; and on the banks of the same stream lies the whole scene of Sir Walter Scott's 'Young Lochinvar;' and indeed the poet could not have chosen a spot in every respect more appropriate than this for 'a runaway marriage,' so as to cause

"Mounting 'mong Græmes of the Netherby clan,"

or more convenient for

"——— racing and chasing on Canobie lea."

Fifteen minutes' walk from the inn brings you to the Solway frith, to the ebbings and flowings of whose tide the same author in the same song has well-compared the ebbings and flowings of love. But Gretna has gained for itself an unenviable notoriety from other causes. Lying on the frontier of Scotland, contiguously with the debatable lands between the Sark and the Esk, Gretna, down to the period of the union of the crowns, was the scene of almost incessant feuds and forays; and even after that date, down to half-a-century ago or even later, it was nearly as much demoralized, and as completely a stranger to the arts and comforts of civilized life, by being the retreat of numerous bands of desperate and incorrigible smugglers, as in formerly having been the scene of constant petty predatory warfare. "It is well-known that the Cumberland portion of the Border was, formerly, not the most remarkable district of England for the attention of many of its inhabitants to the fourth commandment. Living on ground long considered doubtful,—as forming a part of the English or Scottish territory, and still called 'Debat-

able,'—they regarded themselves as belonging to no one's flock, and subject to no one's superintendence or jurisdiction. The same may be said of the careless and lukewarm amongst the inhabitants of Graitney, who thus allowed themselves and their children to become the slaves and supporters of a pernicious example. It is not to be wondered at that many other demoralizing habits, of which some were entirely of a personal and domestic character, should be found deeply rooted and reigning along this part of the Scottish border. Systematic absence from the house of public prayer, and a no less systematic desecration of the Sabbath, invariably bring in their train idleness and discontent; and to thefts, at this time, were added an almost endless catalogue of other crimes. One circumstance, above all, tended to involve this parish in a kind of moral degradation, from which others, by their geographical position, were happily exempted. The low duty upon whiskey in Scotland, compared with the high duty in England, upon an article of such extensive consumption, continued to afford the idle and dishonest every encouragement to smuggling. The mosses and plantations on each side of the Border have been the scenes of many fearful, and, in many cases, lamentably fatal struggles between the smugglers and the officers of excise. The populous village of Springfield, a mile from Gretna-green, on one side of the Border, and Longtown, a still more populous place, on the other, once contained hordes of persons who lived entirely by this illicit commerce. Every artifice was here in use to elude detection,—vessels of tin, fitted round the body like stays,—bladders resembling bundles of old clothes, carried by old women in the garb of itinerants,—small casks, buried in the dark interior of loads of turf, conveyed over the Sark and Esk on wheelbarrows, by a thrifty-looking housewife, or an industrious and provident-looking husbandman,—these and many other such means were employed to continue a lucrative, secret, and dangerous trade. Again, vagrants from all parts of the British isles could scarcely miss Graitney either on their northward or southward peregrinations. Many a poor unfortunate fellow, without a home or a morsel of bread in England, has been forced to seek an asylum in the North. Finding himself disappointed in his search for relief in the North, he has again involuntarily turned his face towards the South; and has continued, crossing and recrossing the Border, till 'the Debatable land' at last afforded him a comparatively quiet, but wretched, bare, and roofless resting-place. With such a promiscuous and fluctuating assemblage of inhabitants as was likely, from this circumstance, to be introduced, it cannot be expected that any place could establish a character for settled principles of moral duty. It is only when the population of a district feel themselves interested in one another's well-being, and benefited by living on terms of harmonious intercourse, and by cultivating sentiments of friendship, that we can expect from them a general improvement in their condition, manners, and character. In this respect the Borderers have lately made amazing and gratifying progress towards a happier state of things; and the change is no doubt chiefly attributable to the increased exertion which clergyman, schoolmaster, landowner, and farmer, have combined to use in rendering the condition of the poor and unemployed in these parts more tolerable."

Another stigma attaches itself to this place, in its being the favourite locality for the celebration of what are called "Border marriages." How this happens, the reader will best understand by following us in a brief review of the laws of the two countries on either side of the Tweed, as to what constitutes a

valid marriage. Dr. Lushington, in the House of Commons, March 17, 1835, thus explained the history and principles of the law of England in regard to marriage:—"By the ancient law of this country as to marriages, a marriage was good, if celebrated in the presence of two witnesses, though without the intervention of a priest. But then came the decision of the Council of Trent, rendering the solemnization by a priest necessary. At the Reformation, we refused to accept the provision of the Council of Trent; and, in consequence, the question was reduced to this state—that a marriage by civil contract was valid; but, there was this extraordinary anomaly in the law, that the practice of some of our civil courts required, in certain instances, and for some purposes, that the marriage should be celebrated in a particular form. It turned out that a marriage by civil contract was valid for some purposes, while for others—such as the descent of the real property to the heirs of the marriage—it was invalid. Thus, a man in the presence of witnesses, accepting a woman for his wife, *per verba de presenti*, the marriage was valid, as I have said, for some purposes; but for others, to make it valid, it was necessary that it should be celebrated *in facie ecclesie*. This was the state of the law till the passing of the Marriage act in 1754." It may be added, that a common notion prevailed, that the solemnization of a marriage by a person in holy orders, rendered it sacred and indissoluble. This belief was one cause of the Fleet and other marriages in London, to repress the scandals and indecencies of which the act of Lord-chancellor Hardwicke was passed in 1754. This act abolished all clandestine and irregular marriages, and compelled all persons, except Jews and Quakers, to be married according to the ritual of the Church of England. It might be expected that some loophole would soon be sought for escape from such stringent enactments. This was soon found in the state of the law in Scotland, in regard to matrimony, taken in connexion with the rule of the law of England, that a marriage is valid in England, if it has been validly contracted according to the law of the country in which it was contracted. In Scotland, nothing further is necessary in order to constitute a man and woman husband and wife, than a mutual declaration of consent by the parties, before witnesses, to constitute, as at that date, the relation of husband and wife; or even such a declaration in writing, without witnesses, constitutes a marriage which is considered binding in all respects.* Still, a marriage of Scotch people,

* "We are aware that among our Southern friends very erroneous notions prevail, relative to Scotch marriages, particularly marriages made at Gretna-green. They seem to think that there is some privilege of place or person, by which the performances of the veteran there are sanctified. And because his predecessor, who forged the chains of so many fugitive supplicants for his decrees of perpetual bondage, was a disciple of Vulcan, it seems to be thought that in Scotland there is some sort of alliance between the occupations of clergymen and blacksmiths, such as subsisted at no very distant period between those of surgeons and barbers. We wish to correct these erroneous notions, and to explain to our Southern friends, that in this respect Gretna-green has no privilege and no charm, except those which it derives from its proximity to England. Those who pass the border to escape the obstacles which the law of England has opposed to the lawful enjoyment of expected bliss, generally repair to the nearest spot at which their happiness can be consummated—hence the celebrity of Gretna-green; neither has the veteran minister of bliss there any privilege whatever, which does not belong to any other individual who happens for the time to be on the Scotch side of the border. The law of Scotland has prescribed certain ceremonials to be observed in the regular celebration of marriage,—the publication of banns and the benediction of a clergyman. But although a marriage made without these ceremonials is not *regular*, it is not on that account invalid. To make a *valid* marriage, nothing is requisite but a mutual interchange of real consent, with a full intention to constitute, as at that date, the relation of husband and wife; and evidence of that fact, either in writings in which it is declared, or by witnesses before whom it has been declared. The Bishop of Gretna is a mere witness. The de-

in Scotland, not celebrated by a clergyman, is now rarely or never heard of. What the Scottish people, however, generally eschewed as evil, the English, under certain circumstances, did not scruple to avail themselves of; and the Marriage act of 1754 had not been many years in force, before "Love found out a way" of evading its enactments, and still, to a certain extent, playing propriety. It was only requisite that the knot should be tied in Scotland, to set at defiance all parents and guardians; for matches so made, appear to have been almost exclusively "stolen," or "runaway," and the parties all English. To enter Scotland was sufficient; and the situation of Gretna—only 9 miles north-west of Carlisle—rendered it a most convenient spot for fugitive lovers.

The parish of Gretna, says a characteristic but accurate and amusing account written about 46 years ago, by the Rev. John Morgan, the incumbent, "has been long famous in the annals of matrimonial adventure, for the marriages of fugitive lovers from England, which have been celebrated here. People living at a distance erroneously suppose that the regular and established clergyman of this parish is the celebrator of those marriages: whereas, the persons who follow this illicit practice, are mere impostors, priests of their own erection, who have no right whatever either to marry or to exercise any part of the clerical function. There are, at present, more than one of this description in this place. But the greatest part of the trade is monopolized by a man who was originally a tobacconist, and not a blacksmith, as is generally believed. It is 40 years and upwards since marriages of this kind began to be celebrated here. At the lowest computation about 60 are supposed to be solemnized annually in this place. Taken at an average through the year, they may be estimated at fifteen guineas each; consequently this traffic brings in about £945 a-year. The form of ceremony—when any ceremony is used—is that of the church of England. On some occasions, particularly when the parson is intoxicated, which is often the case, a certificate only is given. The certificate is signed by the parson himself, and two witnesses under fictitious signatures. The following is a copy of one of these certificates, in the original spelling:—"This is to sartify all persons that my be consenrid, that A. B. from the parish of C. and in county of D. and E. F. from the parish of G. and in the county of H. and both comes before me and decayled themselves both to be single persons, and now mayried by the forme of the Kirk of Scotland, and agreible to the Church of England, and givine ondre my hand, this 18th day of March, 1793." Joseph Paisley, the individual above referred to, removed from Gretna-green to Springfield, in 1791, and kept up his lucrative employment till his death, in 1814.* On more occasions than one he earned the handsome fee of 100 guineas, or upwards,

in briefer space than a barber requires to smoothe the chin of a country bumpkin; yet, like all his successors—and all persons, in fact, who earn money, no matter how much, in pursuits which frown defiance on propriety and moral decency—he never became rich. A fellow of his own stamp, who became husband to Paisley's grand-daughter, fell heir to his trade in much the same way that some persons acquire the right of vending quack medicine; and, for many years, though competed with by a rival nearly as successful as himself, he almost equalled the notoriety of his tobacconist predecessor.†

one who incurred his anger. Many marvellous stories are told of this worthy. We believe he is the first pointed out as having, on the advice of a learned juriconsult, settled the form of procedure according to law, by attesting marriages merely as a witness. But this circumstance laid open the secret of his calling, and after him a sort of democracy ensued in the dispensation of the hymeneal privilege. Paisley's immediate predecessor—for the trade was not founded by him, as some of our contemporaries represent it to have been—was one George Gordon, an old soldier, who succeeded Scott of the Riggs.

† "Not long before my visit to Springfield,"—says one of the best of our provincial journalists, to whom our pages are under no small amount of obligation,— "a young English clergyman, who had failed to procure his father's consent, arrived for the purpose of being married without it. The fee demanded was thirty guineas,—a demand at which his reverence demurred, at the same time stating, that, though he had married many a couple, his highest fee never exceeded half-a-guinea. The clergyman, in fact, had not so much money about him; but it was agreed that he should pay ten pounds in hand, and grant a promissory note for the balance; and the bill—certainly a curiosity of its kind—was regularly negotiated through a Carlisle banking-house, and as regularly retired at the time appointed. And here I must mention a circumstance which has not been provided for in the late bill ancient combinations, though it manifestly tends to augment the tax on irregular marriages. At Springfield there are two inns, as well as two priests, one of which each of the latter patronises exclusively. More than this, the house at which a lover arrives at Springfield depends entirely at what inn he starts from at Carlisle. Though he may wish to give a preference, and issue positive orders on the subject, these orders are uniformly disobeyed. The postboys will only stop at one house; and that for the best of all reasons,—that the priest, knowing the value of their patronage, goes snacks with them in the proceeds. Except in cases of sickness or absence, the priests never desert their colours. All the guests of the one house are married by Mr. —, and of the other by Mr. Elliot, so that those who are most deeply concerned have very little to say in the matter. In this way something like a monopoly still exists; and—what is more strange still—not only the postboy who drives a couple, but his companions, and the whole litter of the inn-yard, are permitted to share in the profits of the day. The thing is viewed in the light of a windfall, and the proceeds are placed in a sort of fund, to be afterwards shared in such proportions as the parties see fit. Altogether, the marrying business must bring a large sum annually into Springfield: indeed, an inhabitant confessed that it is 'the principal benefit and support of the place,' although he might have added that smuggling has lately become a rising and rival means of subsistence. Upon an average 300 couples are married in the year, and half-a-guinea is the lowest fee that is ever charged. But a trifle like that is only levied from poor and pedestrian couples; and persons even in the middle ranks of life are compelled to pay much more handsomely. Not long before I visited Springfield, a gentleman had given forty pounds; and, independently of the money that is spent in the inns, many hundreds must annually find their way into the pockets of the priests, and their concurrents the postboys. In its legal effect the ceremony performed at Gretna merely amounts to a confession before witnesses that certain persons are man and wife; and the reader is aware that little more is required to constitute a marriage in Scotland,—a marriage which may be censured by church-courts, but which is perfectly binding in regard to property and the legitimacy of children. Still, a formula has a considerable value in the eyes of the fair; and the priests, I believe, read a considerable part of the English marriage-service, require the parties to join hands, sign a record, and so forth. At my request Mr. Elliot produced his marriage-register, which, as a public document, is regularly kept, and which, to say the truth, would require to be so, seeing that it is sometimes tendered as evidence in court." Elliot's rival for many years was David Laing, who caught cold on his way to Lancaster, to give evidence on the trial of the Wakefields, and died at the age of 72. The facetious Thomas Hood composed an elegy on this blacksmith and "joiner without license," of which we quote the concluding strophe:

Sleep—David Laing!—sleep
In peace, though angry governesses spurn thee!
O'er thy grave a thousand maidens weep;
And honest postboys mourn thee;
Sleep, David!—safely and serenely sleep,
Bewept by many a learned legal eye!—
To see the mould above thee a heap,
Drowns many a lid that heretofore was dry;—
Especially of those that, plunging deep
In love, would "fide and tie!"
Had I command, thou shoud'st have gone thy ways
In chaise and pair—and lain in Pere la Chaise!

claration might with equal effect be made in any other part of Scotland, and be witnessed by any other person. A mere promise of marriage, if followed *conjunctione corporum*, makes a valid marriage in Scotland."—*Remarks on the case of Wakefield in Blackwood's Magazine*, vol. xxi. p. 324.

* Paisley was long an object of curiosity to travellers. In person he was tall, and had been well-proportioned, but at his death he was literally an overgrown mass of fat, weighing 25 stone. He was grossly ignorant, and insufferably coarse in his manners, and possessed a constitution almost proof against the ravages of spirituous liquors; for though an habitual drinker, he was rarely ever seen drunk. For the last forty years of his life he discussed a Scots pint—equal to two English quarts—of brandy per diem! On one occasion, a bottle-companion, named Ned the Turner, sat down with him on a Monday morning to an anker of strong Cogniac, and before the evening of the succeeding Saturday, they kicked the empty cask out at the door; neither of them were at any period of the time drunk, nor had they the assistance of any one in drinking. Paisley was celebrated in his prime for his stentorian lungs, and almost incredible muscular powers; he could with ease bend a strong poker over his arm, and has frequently been known to straighten an ordinary horse-shoe in its cold state; in fits of irascibility he would, by a grasp, squeeze the blood from the finger-ends of any

Gretna-green celebration of marriage, as a system of fraud and insufferable indecency and disgraceful profanation, was menaced with destruction by unhappily a bootless attempt of the General Assembly, in 1826; but, though still surviving, it has been so deeply stigmatized with popular scorn, and so fully raimented in the felon-dress of what has been publicly arraigned and condemned, that it now skulks and hides its head in conscious degradation.

GREY MARE'S TAIL (THE), a celebrated cascade or cataract in the mountainous region of the northern verge of Dumfries-shire, $\frac{3}{4}$ of a mile from the northern boundary of Moffat parish, and geographically 8 $\frac{1}{2}$ miles north-east of the town of Moffat. **LOCH-SKENE** [which see] collects among the mountains superfluous supplies of waters, at the height of about 1,000 feet above the level of the sea, and sends them off in a considerable stream south-eastward, to Moffat water. The stream, about $\frac{3}{4}$ of a mile after its efflux from the lake, is precipitated over a stupendous breast of rocks, 400 feet in height, marred in its sublime descent only by slightly projecting ledges; and with a thundering noise, dashes down between two high, precipitous, and rocky hills; in a long stripe of foam, darkened, or made greyish in its whiteness, by the foil of black rock behind it; and, bearing on a magnificent scale, a resemblance to the object whence—somewhat fantastically—it has derived its name. The cataract is seen to most advantage after a heavy rain; for then, escaping or overleaping the ledges, it becomes almost strictly a cascade, and appears to be, from top to bottom, an unbroken sheet of water. "To see this cascade," says Garnett, "we went nearly half-a-mile from Moffat, on the Carlisle road, and then, turning to the left, ascended a hill called Craigy-hill, and from which we had a fine view of the venerable woods of Duncrief. Following the road to Selkirk, we crossed a small impetuous brook, with a very rocky channel, called Craigy-burn, and soon entered a fine glen beautifully wooded. This wood, which consists chiefly of hazel and birch, is called Craigy-burn-wood. In the midst of a flat and fertile, but narrow vale, the Moffat winds its serpentine course. The other side of the river was formerly wooded, which no doubt added much to the beauty of the scenery; but the wood having been cut down, and no attention afterwards paid to it by the owner, this ornament of the country is lost. When we had passed Craigy-burn-wood, we had a full view of the romantic glen, bounded by lofty hills, frowning like the surly sentinels of the legion posted behind them. A ride more romantic than this, on a fine day, can scarcely be imagined. After riding by the side of the Moffat about 7 miles, we crossed it, and ascending the hill on the other side, had a full view of the cascade we were in search of. Here the water precipitating itself from rock to rock,—dashing, foaming, and thundering from a great height, between two steep hills,—falls into a dark pool, from whence it runs with less impetuosity to augment the waters of the Moffat, which it joins a little above the place where we crossed the stream. The water, by its precipitous fall, is broken by the air, so as to appear as white as snow."

GRIMBUSTERHOLM, one of the small Orkney islands, near the town of Stromness.

GRIME'S DYKE. See **ANTONINUS'S WALL**.

GRIMSAY, a barren island of the Hebrides, lying between North Uist and Benbecula. It is about 2 miles in length.

GRIMSHADER (LOCH), an arm of the sea, in the island of Lewis, near Stornaway.

GROAY, one of the Hebrides; part of the parish of Harris. It is uninhabited.

GRUINARD (LOCH), or **GREINORD**, a bay on the north-west coast of Ross-shire, containing an isle of the same name. The Gruinard or Greenyard, which flows into the head of this loch, forms the boundary betwixt the parishes of Lochbroom on the north, and Gairloch on the south.

GRUINARD (LOCH), a small arm of the sea indenting the north-west coast of the island of Islay. In the year 1598, Sir Lauchlan Maclean was slain at the head of this loch, by Sir James Macdonald, his nephew, eldest son of Angus Macdonald of Kintyre. Sir Lauchlan had long had an eye upon the possessions of the Clanronald in Islay; but having failed in extorting a conveyance thereof from Angus Macdonald in the way before alluded to, he endeavoured by his credit at court and by bribery or other means, to obtain a grant from the Crown, in 1595, of these lands. At this period Angus Macdonald had become infirm from age, and his son, Sir James Macdonald, was too young to make any effectual resistance to the newly-acquired claims of his covetous uncle. After obtaining the gift, Sir Lauchlan collected his people and friends and invaded Islay, for the purpose of taking possession of the lands which belonged to the Clandonald. Sir James Macdonald, on hearing of his uncle's landing, collected his friends and landed in Islay to dispossess Sir Lauchlan of the property. To prevent the effusion of blood, some mutual friends of the parties interposed, and endeavoured to bring about an adjustment of their differences. They prevailed upon Sir James to agree to resign the half of the island to his uncle during the life of the latter, provided he would acknowledge that he held the same for personal service to the Clandonald in the same manner as Maclean's progenitors had always held the Rhinns of Islay; and he moreover offered to submit the question to any impartial friends Maclean might choose, under this reasonable condition, that in case they should not agree, his Majesty should decide. But Maclean, contrary to the advice of his best friends, would listen to no proposals short of an absolute surrender of the whole of the island. Sir James, therefore, resolved to vindicate his right by an appeal to arms, though his force was far inferior to that of Sir Lauchlan. Taking possession of a hill at the head of Loch-Gruinard, which the Macleans had ineffectually endeavoured to secure, Sir James attacked their advanced guard, which he forced to fall back upon their main body. A desperate struggle then took place, in which great valour was displayed on both sides. Sir Lauchlan was killed fighting at the head of his men, who were at length compelled to retreat to their boats and vessels. Besides their chief, the Macleans left 80 of their principal men, and 200 common soldiers, dead on the field of battle. Lauchlan Barroch-Maclean, son of Sir Lauchlan, was dangerously wounded, but escaped. Sir James Macdonald was also so severely wounded, that he never fully recovered from his wounds. About 30 of the Clandonald were killed, and about 60 wounded. Sir Lauchlan, according to Sir Robert Gordon, had consulted a witch before he undertook this journey into Islay, who advised him, in the first place, not to land upon the island on a Thursday; secondly, that he should not drink of the water of a well near Gruinard; and lastly, she told him that one Maclean should be slain at Gruinard. "The first he transgressed unwillingly (says Sir Robert), being driven into the island of Ila by a tempest upon a Thursday; the second he transgressed negligently, having drunk of that water before he was aware; and so he was killed ther at Groinard, as was foretold him, bot doubtfullie. Thus ended all these that doe trust in such kynd of responses, or doe hunt after them!"

GRUNA, one of the Shetland isles, to the north-

ward of Fetlar, and constituting part of that parish. It is uninhabited.

GRYFE (THE), a river in Renfrewshire, which rises in the western part of the county, among the highlands of the parish of Greenock, and runs eastward. At Walkinshaw, it joins the Black Cart, and after a short course, bending to the north, a junction is formed with the White Cart at Inchinnan bridge. Having flowed about half-a-mile farther, the united streams, which now bear the general name of Cart, fall into the Clyde at Blythswood house, 7 miles below Glasgow, and $3\frac{1}{2}$ miles north of Paisley. The whole run of Gryfe is about 17 miles. On its banks are some cotton-mills, and other works. Anciently, this stream gave the name of Strathgryfe to the district it traverses, if not to the whole of what now forms the county of Renfrew.

GUIDIE (THE), or **GOODIE**, a small stream issuing from the lake of Monteith, and running along the north-side of Moss-Flanders into the Forth, half-way to Stirling. The stream was anciently a morass, styled "the Lake of Guidie," which is connected with the military history of Scotland in 1646. When marching through Strathspey, Montrose received intelligence that Athole was threatened with a visit from the Campbells,—a circumstance which induced him to despatch Graham of Inchbrakie, and John Drummond, younger of Balloch, to that country, for the purpose of embodying the Athole-men, who had remained at home, in defence of their country. The inhabitants of Argyle, on hearing of Sir Alexander Macdonald's arrival in their country, after the battle of Kilsyth, had fled to avoid his vengeance, and concealed themselves in caverns or in the clefts of the rocks; but being compelled by the calls of hunger to abandon their retreats, they had been collected together by Campbell of Ardkinlass to the number of about 1,200, and had attacked the Macgregors and Macnabs for favouring Montrose. Being joined by the Stuarts of Balquidder, the Menzieses, and other partisans of Argyle, to the number of about 300, they meditated an invasion of Athole, and had advanced as far as Strathample, with the intention of carrying their design into execution, when intelligence was brought to Inchbrakie of their approach. Inchbrakie and Balloch had by this time collected a body of 700 able-bodied men, and, with this force, they proceeded to meet the Campbells. These had laid siege to Castle-Ample; but, on being apprised of the advance of the Athole-men, they retired to Monteith, whither they were hotly pursued by the Athole-men, who overtook them at Callander, near the village of Monteith. After crossing the Teith, they halted and prepared for battle, having previously stationed a large party of musketeers to guard the ford of the river. Having ascertained the strength and position of the Campbells, Inchbrakie ordered a hundred of his men to advance to the ford, as if with the intention of crossing it, in order to draw the attention of the Campbells to this single point, while, with the remainder of his men, he hastened to cross the river by another ford, higher up, and nearer the village. This movement was immediately perceived by the Argyle-men, who, alarmed at such a bold step, and probably thinking that the Athole-men were more numerous than they really were, abandoned their position, and fled with precipitation towards Stirling. As soon as the Athole party, stationed at the lower ford, saw the opposite bank deserted, they immediately crossed the river and attacked the rear of the retiring Campbells. They were soon joined in the pursuit by the party which had crossed the higher ford; but, as the Athole-men had performed a tedious march of ten miles that morning, they were unable to continue the pursuit

far. About eighty of the Campbells were killed in the pursuit. Bishop Guthrie, in his memoirs, mentions that of Argyle's people "divers of them were slain in the fight, and more drowned in the river of Guidie, their haste being such that they stood not to seek for fords."

GUIRM (LOCH), a sheet of water, about 4 miles in circumference, in the island of Islay. There are the remains of a fortalice of the Macdonalds upon a small island in it.

GULANE, or **GOLYN**, a small village in the parish of Dirleton, Haddingtonshire. It is situated 3 furlongs from the shore, half-way between the villages of Dirleton and Aberlady, on the road between Edinburgh and North Berwick; and, though irregularly built, possesses several good modern houses. Till the year 1612, when, by act of parliament, the original parish-church was abandoned, and a new one erected at the village of Dirleton, Gulane gave name to the parish in which it stands. The name is the British *Go-lyn*, signifying 'a little lake'; and seems to have been suggested by the vicinity to the village of a lochlet, which is now drained. Gulane is the site of a school-house, of two establishments for the training of race-horses, and of the venerable ruins of the ancient parish-church. The village is famed for its extensive sandy downs, thinly carpeted with herbage, which abound with gray rabbits, and are farmed at a high rent as a rabbit-warren, and, at the same time, form the finest coursing-ground in Scotland: See **DIRLETON**. Gulane common comprises nearly one-half of the links, or downs of the parish. About 30 horses, on the average, are kept during summer at the training-establishments. Grose, in his *Antiquities*, gives a view of the ruins of the old parish-church,—which are still in good preservation; and says—though without mentioning his authority—that the last vicar was expelled by James VI. for smoking tobacco. The church, which is very ancient, was dedicated to St. Andrew; and after having been, for some time, partially in the possession of the Cistercian nuns of Berwick, was given, in the reign of William the Lion, to the monks of Dryburgh. Subordinate to it, and within the limits of the parish, there were anciently no fewer than 3 chapels;—one on the isle of **FIDDIE**, which see; another built, in the 12th century, by the laird of Congleton; and another built, in the reign of Alexander III., by Alexander de Valibus, at the village of Dirleton. Population of Gulane, about 70.

GULANE-NESS, a small promontory composed of greenstone rock, in the parish of Dirleton, Haddingtonshire. It is 13 miles distant from the isle of May; and is regarded by some as the point where the Frith of Forth opens into the German ocean.

GULBERWICK, an ancient parish on the Mainland, in the shire of Orkney, constituting part of the union of Lerwick. It is situated to the southward of Lerwick; and is about 5 miles in length, and 2 in breadth. It is principally inhabited by fishermen.

GUMSCLEUGH, a mountain on the south-west boundary of the parish of Traquair, Peebles shire; and the northern boundary of the parish of Yarrow, Selkirkshire, forming at its summit the water-line between the two counties. It rises 2,485 feet above the level of the sea; and is one of the stations of the trigonometrical survey of Britain.

GUNNA, a small island of the Hebrides, lying in the sound betwixt the islands of Coll and Tiry. It is about a mile long, and half-a-mile broad.

GUNNISTER, one of the smaller Shetland isles, in the parish of Northmaven, a mile north of the Mainland.

GUTHRIE, a parish in the Sidlaw district of Forfarshire, inconveniently divided into two parts, one

of which lies 6 miles south-west of the other. The northern part would be a regular parallelogram, but for a detached little section of Kirkden occupying its north-east corner; and it measures, in extreme length, from east to west, 3 miles, and in extreme breadth, from north to south, 3 miles; and is bounded on the north by Aberlemno, Farnell, and Kirkden; on the east by Kirkden and Kinnell; on the south by the main body of Kirkden, and the parish of Rescobie; and on the west by Aberlemno. Almost the whole of this division, from the hill of Guthrie on the west, rising at its highest point about 500 feet above the level of the sea, slopes gently to the south and east. About 370 acres of it on the north-east, are part of the moor of Monrithmont, a plain of probably 5,000 acres, which was at a remote date covered by the sea, and till a recent period remained a common, but is now distributed into several parishes, Kirkden, Kinnell, Farnell, and others, which press upon its boundaries. The northern division has its southern boundary traced along the whole extent by Lunan water. On the north-east is a lochlet, whence issues the main head-stream of Torr water, a tributary of the South Esk. The southern division of the parish has the distinctive name of Kirkbuddo, and is in form a triangle, two of whose sides measure each $1\frac{3}{4}$ mile, and the other $2\frac{1}{4}$ miles; and it is bounded, on the north, by Inverarity and Dunnichen; on the south-east by Carmylie; and on the south-west by Monikie and Inverarity. Though it has no hill, it all lies high; the lowest ground in it being, not improbably, 700 feet above the level of the sea. But nearly all of it,

as well as the greater portion of the northern division—though not rich in soil—is well-cultivated, and agreeably sheltered with wood. Kirkbuddo—as indeed its name would seem to imply—anciently had, as is reported, a chapel of its own for religious worship; but now its inhabitants, in going to their parish-church, must traverse the parishes of Dunnichen, Kirkden, and Rescobie. On its south-western limit, but partly in the parish of Inverarity, are traces of a Roman camp, which covered at least 15 acres. The vallum and fosse are yet distinct, and of considerable height and depth. The castle of Guthrie, supposed to have been built by Sir Alexander Guthrie, who was slain at Flodden, is a massive building, with walls about 60 feet high, and 10 feet thick, and is still entire. The hamlet in which the church and manse are situated, is the largest in the parish, and contains 9 families. The parish, though well-provided with facilities of communication, is not touched by any great line of road. Population, in 1801, 501; in 1831, 528. Houses 101. Assessed property, in 1815, £1,826. —Guthrie is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, Guthrie of Guthrie. Stipend £158 7s. 6d.; glebe £9, with 3 acres of moor. Unappropriated teinds £88 18s. 8d. According to an ecclesiastical survey in 1836, the population then was 533; of whom 514 belonged to the Establishment, 18 were dissenters, and 1 was not known to make any profession of religion. The parish-church was built in 1826. Sittings 306. Parochial schoolmaster's salary 2 chalders of grain. A non-parochial school is situated in Kirkbuddo.

INCH-GALBRAITH IN LOCH-LOMOND.

H

HAA, a small island of Sutherlandshire, $3\frac{1}{2}$ miles east of the promontory of Far-out-head.

HAAR-MOOR, or **HARD-MOOR**. See **DYKE** AND **MOY**.

HAAY, a small island of the Hebrides, in the sound of Harris.

HABBIE'S HOW, a sequestered spot on Glencross-burn, about 10 or 12 miles from Edinburgh, which popular opinion has very generally—though somewhat hastily—identified with the scene of Allan Ramsay's 'Gentle Shepherd,' and which has, in consequence, been, for many years, a favourite resort of the citizens of the metropolis. Towards the upper part of a glen, a small stream falls, from between two stunted birches, over a precipitous rock, 20 feet in height, and inaccessible on each side of the linn; and beneath, the water spreads into a small basin or pool. So far the scenery exactly corresponds with the description in the pastoral:—

"Between twa birks, ont o'er a little linn,
The water fa's, and makes a singin' din;
A pool breast-deep, beneath as clear as glass,
Ki-see, with easy whirls, the bord'ring grass."

But, though there may be one or two other coincidents sufficiently close to satisfy an easy critic, the Habbie's How of Glencross is far from being a place like the Habbie's How of the pastoral,—

"Where a' the sweets o' spring an' summer grow."

The locality is bare, surrounded with marshes, and not in the vicinity of human abodes; it has scarcely a birch or a shrub, except a solitary stunted thorn, or rowan-tree, projecting from a fissure as if dropped by accident from a rock; it is adorned with not a flower or patch of lively verdure, but only, where the soil is dry, with a few tufts of whins; and it seems never to have claimed connexion with Ramsay, and probably never met the gaze of his eye, or was mentioned in his hearing. Tytler, the celebrated antiquarian, the restorer of Ramsay's fame, and the proprietor of a mansion and an estate in the very parish of the Glencross Habbie's How, had no difficulty in identifying all the scenery of 'The Gentle Shepherd' with the exquisite landscape in and around the demesne of Newhall, lying near the head of the North Esk, partly within the parish of Pennycuik in Mid-Lothian, and partly within that of Linton in Peebles-shire. "While I passed my infancy at New-hall," says he in his edition of King James' Poems, "near Pentland-hills, where the scenes of this pastoral poem were laid, the seat of Mr. Forbes, and the resort of many of the literati at that time, I well remember to have heard Ramsay recite as his own production, different scenes of 'The Gentle Shepherd,' particularly the two first, before it was printed." Between the house and the little haugh, where the Esk and the rivulets from the Harbour-Craig meet, are some romantic grey crags at the side of the water, looking up a turn in the glen, and directly fronting the south. Their crevices are filled with birches, shrubs, and copse-wood,—the clear stream purls its way past, within a few yards, before it runs directly under them,—and projecting beyond their bases, they give complete hold to whatever is beneath, and form the most inviting retreat imaginable:—

"Beneath the south side of a craggy bield,
Where crystal springs the halesome water yield."

Farther up, the glen widens immediately behind the house, into a considerable green or holm, with the brawling burn, now more quiet, winding among pebbles, in short turns through it. At the head of this "howm," on the edge of the stream, with an aged thorn behind them, are the ruins of an old washing-house; and the place was so well-calculated for the use it had formerly been applied to, that another more convenient one was built about twenty years ago, and is still to be seen:—

"A flowery howm between twa verdant braes,
Where lasses use to wash and spread their claes;
A trotting burnie wimpling through the ground;
Its channel-pebbles shining smooth and round."

Still farther up the burn, agreeable to the description in the dialogue of the second scene, the hollow beyond Mary's bower, where the Esk divides it in the middle, and forms a linn or leap, is named the How burn; a small enclosure above is called the Braehead park; and the hollow below the cascade, with its bathing pool, and little green,—its birches, wild shrubs, and variety of natural flowers in summer,—with its rocks, and the whole of its romantic and rural scenery, coincides exactly with the description of Habbie's How. Farther up still, the grounds beyond the How burn, to the westward, called Carlops—a contraction for Carline's Loup—were supposed once to have been the residence of a carline or witch, who lived in a dell, at the foot of the Carlops hill, near a pass between two conic rocks: from the opposite points of which she was often observed at nights, by the superstitious and ignorant, bounding and frisking on her broom, across the entrance. Not far from this, on a height to the east, stood a very ancient half-withered solitary ash-tree, near the old mansion-house of Carlops, overhanging a well, with not another of 30 years' standing in sight of it; and from the open grounds to the south, both it and the glen, with the village, and some decayed cottages in it, and the Carline's loup at its mouth, are seen. Ramsay may not have observed, or referred to this tree, but it is a curious circumstance that it should be there, and so situated as to complete the resemblance to the scene, which seems to have been taken from the place:—

"The open field;—a cottage in a glen,
An auld wife spinning at the sunny end;—
At a small distance, by a blasted tree,
With faulded arms, and half-raised look ye see,
Baudy his laue."

HACKLEY-MOOR. See **DYSART**.

HADDINGTON, a large and important parish nearly in the centre of Haddingtonshire; bounded on the north by Aberlady and Athelstaneford; on the east by Preston; on the south-east by Moreham; on the south by Yester, Bolton, Salton, and Gladsmuir; and on the west by Gladsmuir and Athelstaneford. It is of very irregular figure, having a main body of a coffin outline, and, at various points, no fewer than five projections, two of which run respectively north and south to a considerable distance. Exclusive of its projections, it is 6 miles long from east to west, and, on the average, 2 or $2\frac{1}{2}$ miles broad. But measured from the extremity of a long narrow stripe on the north, to the Wauk-mill

near Gifford-Vale on the south, it is 8 miles long, and what, according to the former mode of measurement, is its length, becomes now, with the addition of a projection 1 mile eastward, its breadth,—a breadth, altogether, from the boundary west of Brown's Mains on the west, to the boundary east of Kingshot on the east, of 7 miles. The entire superficial area is about 22½ square miles. The parish, as a whole, presents a lovely and fascinating landscape. Along the north side of the main body are the soft summits and green declivities of the Garleton hills, frilled down their southern slopes by rows of plantation. Through the middle of the parish from west to east, flows, in beautiful sinuosities, and between wooded and variegated banks, and under the shade, now of the town of Haddington, and now of smiling and superb mansions, with a width generally of from 50 to 56 feet of waters, the river Tyne. All the rest of the district is a beautifully undulating surface, here almost subsiding into plain, and there lifting its grassy elevations up to nearly the height of hills, and everywhere exhibiting the adornings of either well-enclosed and luxuriant fields, or extensive parks of deep green pasture, or arrays and amassments of thriving plantation, or elegant seats and ornamental lawns and policies of nobility and gentry. Agriculture is here in its glory, and exults in its highest achievements. Upwards of 9,000 imperial acres are under cultivation; nearly 1,300 are covered with wood; and only about 250 have been untouched by the hand of culture. All the parish, in fact, is arable, except a few unimportant patches on the summits of the Garleton-hills. On nearly 1,000 acres at the western extremity the soil is thin, and of inferior quality, though here the surface wears a soft, a crowded, and profitable plantation; and, in nearly all other parts, the soil is rich and highly fertile. The climate is temperate, serene, and remarkably salubrious, and appears to be unusually promotive of longevity. Nine children of parents who were married in 1657, attained the aggregate age of 738 years,—making the average age of each member of the family no less than 82. But—what is still more surprising—the mother of these children, in the 18th year of her married state, bore twins, and in the 21st year of it, bore twins. The aggregate age of the twins was 342 years; and, of course, their average age upwards of 85. Yet Haddington was the first place in Scotland visited by malignant cholera; and had 125 of its inhabitants prostrated, and upwards of 50 of them carried off by the pestilence.—A mile and a quarter south of the town stands the mansion of Lennoxlove, anciently called Lethington, the seat of Lord Blantyre. Part of it, consisting chiefly of a square tower, was built by the Giffords, and dates high in antiquity, and, as a fortalice, is of surpassing strength and height. Lethington was the birth-place and residence of John, Duke of Lauderdale, the home of Secretary Maitland and Sir Richard Maitland, and, for a long period, the chief seat of the Lauderdale family. The contemporary Duke of York having sarcastically said that, before his first visit to Scotland, he understood the country to be unembellished with a single park, John, Duke of Lauderdale, piqued by the sarcasm, built, it is said, the first park-wall of Lethington, enclosing an area of more than a square mile, in the space of six weeks, and raised it to the massive height of 12 feet. Lethington gives name to an excellent species of apple, brought from France about the middle of the 16th century, and first, on Scottish ground, grown within its orchards.—Three quarters of a mile south of Lethington or Lennoxlove, is the mansion of Coalston, the seat of the family of Brown, the most

ancient in the parish, and now the property of that family's representative, the Countess of Dalhousie.—Three quarters of a mile east of Lennoxlove, is Monkkrig, the beautiful new mansion of the Honourable Captain Keith, R. N.—On the south bank of the Tyne, ¾ of a mile east of the town of Haddington, is the mansion of Amisfield, the property of the Earl of Wemyss and March; and 1½ mile east of it, is Stevenson, the seat of Sir John Gordon Sinclair, Bart. On the north of the Tyne, and west of Haddington, are the mansions of Clerkington, Lethem, Alderston, and Huntington—the first on the banks of the river, and the rest at intervals northward—the properties respectively of Colonel Robert Houston, Sir Thomas Hepburn, Bart., Robert Stewart, Esq., and William Ainslie, Esq.—On Byres or Byrie-hill, one of the summits of the Garletons, stands, prominent in its position, and distinctly visible from Edinburgh, a monument to the memory of the celebrated Earl of Hopetoun, one of the heroes of the peninsular war.—Haddington, in the suburb of Gifford-gate, contests the honour of having given birth to the Reformer Knox; but it is somewhat sternly resisted in this claim by the village of GIFFORD: which see.—The parish, considering its position, and the smallness of the stream by which it is traversed, figures somewhat remarkably in history, as the theatre of great inundations. The Tyne—though of no great length of course, and generally possessing an inconsiderable volume of water—drains a large extent of sloping surface along the declivity of the Lammermoor range, and, in particular circumstances, may, though not without a wide stretch of calculation, be conceived to bring suddenly down an amount of flood fearfully invasive of the champaign country through which it flows. On Christmas eve, 1358, swollen by excessive rains, it burst beyond its banks, swept away houses, bridges, and villages,—gulped down many a brave swimmer who attempted to rescue his property from its power,—and even tore up tall oaks, and other large trees, and, laden with vast spoils of corn and cattle and timber, careered away with them to the sea. On the festival of St. Ninian, 1421, it once more rioted at will among the fields of the parish, and deeply menaced, as it had done before, the town of Haddington; and rose to so great a height, and took such full command of the streets, that many houses were injured, and persons floated from place to place in the town in a boat or on rafts. On the 4th of October, 1775, it once more menaced everything on the low grounds of the parish with destruction; and, instantaneously swollen, as is supposed, by a water-spout, came suddenly down in a flood of waters 17 feet above its ordinary level, which, but for the period of the occurrence being day rather than night, would have destroyed many a life.—The parish is intersected 6 miles from west to east by the great mail-road between Edinburgh and the east of England; sends off a post-road to North-Berwick; and, in every part, is cut in all directions by a profusion of subordinate roads. Over the Tyne, within the limits of the parish, are 4 bridges. There are two small villages or rather hamlets,—St. Lawrence, ¾ of a mile west of the town of Haddington on the Edinburgh road, and the Abbey, 1½ east of the town on the north bank of the river; but both so inconsiderable as jointly to contain only about 110 inhabitants. Population of the parish, in 1801, 4,049; in 1831, 5,883. Houses 838. Assessed property of burgh and parish, in 1815, £29,037.

Haddington is the seat of a presbytery in the synod of Lothian and Tweeddale. The charge is collegiate. Patron, the Earl of Hopetoun. Unappro-

priated teinds, £775 11s. 7d. First minister's stipend £343 2s. 2d.; glebe £24. Second minister's stipend £366 6s. 9d.; glebe £25. The parish-church is supposed to have been built in the 12th or 13th century, and was last repaired in 1811. Sittings 1,240.—A *quoad sacra* parish, called St. John's, has recently been erected out of the *quoad civilia* parish. Church built in 1838. Sittings 940.—The second United Secession congregation, is a branch of the original seceding congregation formed in Haddington, the exact date of whose establishment is known no farther than that the communion cups and tokens used under the first minister bore the date of 1745. The church was built in 1787 by another denomination, and bought about the year 1807, by the present congregation. Sittings 549. Stipend £120, with a house and garden worth about £25, and between £12 and £15 for sacramental expenses.—The Original Seceder congregation was established in 1744. Church fitted up in 1752. Sittings 385. Stipend £100, with a manse and garden valued at £20, and £10 for sacramental expenses.—The Independent congregation was established in 1801. Their place of worship was built in 1815 at the cost of £330. Sittings 240. Stipend £70.—The first United Secession congregation claims at least equal antiquity to the other Seceding congregations of the town. Sittings in their church 450. Stipend £110, with a house and garden worth £30, and allowance for sacramental expenses.—The Episcopalian congregation, it is thought, may be dated back to the period of the Reformation. The church was built about the year 1770, on ground gifted by the Earl of Wemyss. Sittings 279. Stipend £110, with a house and garden worth £25.—The Wesleyan Methodist congregation was established in 1816. The chapel cost £600. Sittings 300. Stipend £50.—A small Baptist congregation—about which none of their own number gave information to the Commissioners of Religious Instruction—was believed, by one of the parish ministers, to produce an average attendance of not more than 5 or 6 persons.—According to a census taken by the second parish-minister, but believed by the first minister to be too low, the population then was 5,147; of whom 4,125 belonged to the Establishment, and 1,022 were Dissenters; 2,137 of the former, and 611 of the latter residing in the burgh of Haddington; 557 of the former, and 159 of the latter residing in the suburb of Nungate; and 1,431 of the former, and 252 of the latter, residing in the landward parts of the parish.—The parochial-school is attended by a maximum of 135 scholars: and 9 non-parochial schools, conducted by 11 teachers, are attended by a maximum of 644. Parochial-school-master's salary, £34 5s., with £50 school-fees.

Haddington was of old the seat of a deanery, and of the synodical meetings of the diocese. The parish seems, through the medium of its town, to have derived its name from a Saxon chief of the name of Haden, who sat down here on the banks of the Tyne, after the commencement of the Scoto-Saxon period; and its origin is so ancient as to be untraceable amid the obscurities of that early epoch, and the ages which followed. At the accession of David I. to the throne, it stands clearly out to the view as a defined parish; and both then and afterwards, was of much larger extent than at present. Till the year 1674, it comprehended a considerable part of Athelstaneford; and till 1692, it comprised also a large portion of Gladsmuir. The ancient church was dedicated to the Virgin Mary,—the common patron of similar establishments in the circumjacent district. About the year 1134, David I. granted it—along with its chapels, lands, tithes, and every

thing belonging to it in the parish—to the priory of St. Andrews. Soon after he gave to the priory, as a largess or endowment on this church, the lands of Clerkington on both sides of the Tyne, a toft in the town, and the tithes of the mills and of all produce within the parish. All these grants were confirmed by David's grandsons, Malcolm IV. and William, as well as by the successive bishops of St. Andrews; and they occasioned the church of Haddington to be held by the St. Andrews' priory, and served by a vicar, till the Reformation.—Connected with the church, and within the limits of the parish, were six chapels. At the hamlet to which it has bequeathed its name, was a chapel dedicated to St. Lawrence. In the town or its immediate vicinity were four chapels,—one dedicated to St. Martin,—one dedicated to St. Catherine,—one dedicated to St. Kentigern,—and one, probably the property of the Knights Templars, dedicated to St. John. And there was a chapel within the barony of Penston, which, previous to the erection of Gladsmuir parish, lay within the limits of Haddington. At the Reformation, the property of all these chapels, with that of the church to which they were attached, belonged, as part of the immense possessions of the priory of St. Andrews, to James Stewart, the notorious Earl of Murray, the bastard brother and the minister of Mary of Scotland. The possessions were soon after usurped by the Earl of Morton, during the period of his regency; and when he was put to death for his participation in the murder of Darnley, they were forfeited to the Crown. Esme, Duke of Lennox, the cousin and favourite of James VI., now obtained the whole, as a temporal lordship, from the king. In 1615, Thomas, the 1st Earl of Haddington, purchased the Haddington portion of the lordship—consisting of the patronage and property and emoluments of the church and its chapels—from Ludovic the son of Esme; and, in 1620, obtained from the king a confirmation of his purchase. In the 18th century, the patronage and property were transferred, by another purchase, to Charles, the 1st Earl of Hopetoun; and they have since continued in the possession of his descendants. From the period of the utter curtailment of ecclesiastical revenue at the Reformation till the year 1602, the church of Haddington, the chapel of St. Martin, and the church of Athelstaneford, were all served by one minister. The chapel of St. Martin now received an incumbent of its own; but, at the expiry of his period of service, it was abandoned; and, at the present day, it still exhibits, on the east side of the suburb of Nungate, in its external walls, a memorial of an age of superstitious substitution of supernumerary churches, and tedious ceremonials, for the simple appliances and spiritual duties of true religion. In 1633, the church of Haddington was appointed one of the 12 prebends of the chapter of Edinburgh; and, in 1635, the magistrates of the town concurred with the Bishop of Edinburgh in pronouncing the necessity of it having for itself not one minister only but two; and they assumed the responsibility of providing for a second minister. The magistrates, naturally enough, thought themselves entitled to the patronage of the additional ecclesiastical office; but—resisted in their claim by the patron of the parish as settled at the Reformation—they pushed their case first before the College of Justice, and next up to the House of Peers, and, suffering a defeat in both appeals, raised a precedent which has been a famous one in Scottish law for the settlement of similar questions.

Additional to the ecclesiastical edifices which have been enumerated, Haddington had two monastic establishments,—one in the burgh, and one in the village

of the Abbey. The former, a large and venerable structure, built apparently in the 12th or 13th century, and still in considerable preservation—was a monastery of Franciscan or Grey friars. Lord Seton appears to have been one of its principal benefactors, and, in 1441, was buried within its walls. The strictly monastic part of the edifice was defaced by Edward I. Even the choir and the transept of the church are now in a somewhat dilapidated state; but the square tower, 90 feet high, is still entire; and the western part of the cross, fitted up in a superior style in 1811, is the present parish-church. On account of the beauty of its structure, and because the lights constantly exhibited at night from its lofty windows were seen at a great distance, the ruinous choir was anciently called "*Lucerna Laudonia;*" the lamp of Lothian. The length of the fabric, from east to west, is 210 feet; the length of the transept or cross, from north to south, is 110 feet; and the breadth of the nave is 62 feet.—The convent at the village of the Abbey, was an establishment of Cistercian nuns. Only a very small fragment of one of the walls now remains. The edifice was founded, in 1178, by Ada, countess of Northumberland, and mother of Malcolm IV. and William the Lion; and it was dedicated by her to the Virgin, and endowed with extensive and valuable possessions. The lands called the Nunlands, now Huntington, and the churches of Athelstaneford and Crail, with their tithes, were also the property of this convent. In 1292, Alicia the prioress, did homage, with her nuns, to Edward I. In 1296, Eve, the successor of Alicia, submitted to the same overbearing prince, and, in return, had a restoration of her rights. In 1358, the convent was strongly menaced, and well nigh swept away, by the inundation already noticed; and, according to the absurd legend of the times, it was preserved by the intervention, through means of the prioress, of a wooden image of the Virgin Mary. In 1359, it was more tangibly conserved and benefited by an inexpressive charter from the bishop of St. Andrews, which, while speaking of the convent as near the hostile border and exposed to depredation, recognises its privileges, and confirms its rights. In 1471, the lairds of Yester and Makerston, provoked to cupidity by its wealth and its fine manors, unceremoniously and rapaciously seized their lands of Nunhopes. The prioress had no resource but to appeal to the civil power; and, failing to get from them a disengagement of their prey by command of the privy-council, she eventually procured the interference of parliament to commit their persons and restore her property. But such was the anarchy of the age that, in order to protect their granges from the depredations of the aristocratic robbers in their vicinity, the nuns had to get them fortified, and, in particular, had a fortalice erected on their establishment at Nunraw: See GARVALD and BARO. In 1548, the Estates held a parliament in the convent, and there adopted their resolution to send their infant queen to France. In 1561, the prioress, Elizabeth Hepburn, in obedience to the new authorities established by the Reformation, gave a statement of her estate preliminary to the suppression of the convent; and she reported the number of nuns to be 18, and the revenues to be £308 17s. 6d., besides 7 chalders, and 11 bolls of wheat. The property was conferred by the queen on her secretary, William Maitland of Lethington, the son of Sir Richard, and afterwards was converted into a temporal lordship in favour of the family of Lauderdale.

HADDINGTON, a royal burgh, a town of great antiquity, and the metropolis of East Lothian, is pleasantly situated within a bend of the Tyne, and on

the left bank of the river, surrounded on all sides by a landscape rich in the beauties of culture and of noble demesnes, and overlooked at a little distance to the north by the soft and sylvan declivity of the Garleto hills. It stands on the great road between the metropolitan cities of Scotland and England; 16½ miles from Edinburgh; 11 from Dunbar; and 38 from Berwick-upon-Tweed. Haddington, though comparatively small in bulk, and long, mean or indifferent appearance, is now one of the neatest, best-built, and most cheerful towns of Scotland, everywhere clean and tidy in its streets, generally tasteful and frequently elegant in its buildings, and all around gay and joyous in the character of its immediate environs. Approaching it eastward from Edinburgh, the traveller passes on both hands a considerable number of villas; enters a straggling outskirts of the town called the Gallow green; and at the termination of this, finds the road he is pursuing joined on the north side by the road from Aberlady, and directly opposite on the south side by the road from Pencaithland. Here the town properly commences; and hence stretches the High-street—called in the early part of its progress the West port—due east over a distance of 600 yards, forming the most conspicuous part of the burgh. About 270 yards from the commencement or western end of High-street, another important thoroughfare, bearing the mean name of Back-street, goes off at a very sharp angle from its north side, and continues slowly to diverge from it till, at its termination 330 yards from its commencement, it and the High-street are about 80 yards asunder. The line or lines of building between them are, in three places, during the progress of Back-street, cloven by connecting thoroughfares. Across the termination or east end of the two streets, and at right angles with them, runs a street called Hardgate, 700 yards in length, stretching northward and southward a considerable way beyond the slender latitude formed by the eastward and westward streets. All the three streets we have described have the graceful property—so commonly wanting in the thoroughfares of old towns—of being straight. But from Hardgate, nearly opposite the end of High-street, a thoroughfare goes off eastward to the Tyne and suburb of Nungate; and this, though only about 210 yards in length, makes two considerable divergencies before reaching the bridge. The town thus far has nearly the figure of a Latin cross, the transverse or intersecting part running north and south; and in point of fact it deviates from a close resemblance to this figure mainly by sending off northward from Back-street, and nearly parallel to Hardgate, a thoroughfare called, over most of its length of 370 yards, Newton port, but bearing, toward its extremity, the fantastic and unaccountable name of Whisky row. Connected with the town by a bridge of 4 arches, stands the suburb of Nungate. This, from a point opposite the parallel of Back-street, stretches southward along the bank of the river over a distance of 340 yards; and chiefly consists of two parallel streets lengthways—one of which, or that next the river, bears the name of Gifford gate—and three brief intersecting streets.—The entire arrangement of town and suburb, unusually good though it is in itself, receives from its relative position to the Tyne material aid in conveying an agreeable impression. The river, when approaching, flows in a northerly direction on a line with Gallow green, or the western extremity of the town; but when at 560 yards distance, it debouches in a beautiful curve, and, with two slight bendings, flows due east, till it passes the whole town, and is on a line with Nungate; then making another graceful turn, it flows slightly to the west

of north, washing both the town and the suburb, till it passes the northern extremity of both; and immediately it once more goes suddenly and beautifully round one-fourth of the compass, and pursues its course to the east.—The High-street is a spacious and handsome thoroughfare, with excellent high houses, some elegant and even imposing edifices, and a good array of shops. Back-street, though not so spacious or extensive, presents no unpleasant picture to the eye, and is the scene of one of the most spirited, and perhaps absolutely the most interesting, grain-markets in Scotland. In Hardgate also, and its extremities or continuations northward and south, called respectively the North port and the South port, are numerous good houses, many of them altogether or comparatively new, and two or three in the style and with the accompaniments of villas. The various thoroughfares enjoy the luxury—so scantily found in provincial towns, and so indicative of tasteful and opulent imitation of metropolitan comforts—of side-pavements; and they are likewise lighted up at night with gas.—At the west end of the town stand the County buildings, erected in 1833, from a design by Mr. Burn of Edinburgh, at a cost of £5,500. They are in the old English style of architecture, spacious and elegant; built chiefly of stone procured near the town; but, in the front, mainly, with polished stone brought from Fife; and they contain the sheriff and justice-of-peace court-rooms, and offices and apartments for various functionaries connected with the county. At the point where the High-street and Back-street separate stand the Town's buildings; containing the council-room, the assembly-room, and the county and burgh jail; erected at various dates and in successive parts, but producing an embellishing effect upon the burghal landscape, and now surmounted by a handsome and highly ornamental spire, erected in 1831 from a design by Mr. Gillespie Grabame, and raising aloft its tapering summit to the height of 150 feet. Near the west end of the town are the gas works. In the High-street are the George and the Bell inns. On a line with Hardgate, or the South port, at a point in the eastward course of the Tyne south of the town, a bridge of one arch, called Waterloo bridge, spans the river, and opens the way to Salton. St. John's church—the place of worship of the new *quoad sacra* parish—is a very pleasing Gothic edifice. But the principal structure, combining the attractions of antiquity, Gothic magnificence, and bulky grandeur, is the pile, already noticed in our view of the parish, as the church of the ancient monastery. This is finely situated on an open area south-east of the body of the town, skirted by the gently flowing Tyne. Around is the spacious cemetery of the parish, embosoming the remains of much departed worth; and, in particular, those of the devout and illustrious John Brown, whose excellencies long shed a lustre over the town, and whose pious and useful writings have embalmed him in the affections of the truly Christian of every denomination. Within the edifice itself are a vault containing the remains of John, Duke of Lauderdale, as well as those of various members of his family; and an imposing monument, 24 feet long, 18 broad and 18 high, consisting of two compartments supported by black marble pillars with white alabaster capitals of the Corinthian order, and containing, in the one, full-length alabaster figures of Lord-chancellor Thirlestane and his lady in a recumbent posture, and, in the other, similar figures of John, Earl of Lauderdale, and his Countess. At the southern extremity of Gifford-gate is a field which those who claim the reformer Knox as a native of Haddington, point out as having been attached to the house in which he was born. At the

north-east extremity of Nungate stand the ruins of St. Martin's chapel, surrounded by a cemetery.

Haddington, particularly in its suburb of Nungate, was for some time the seat of a considerable manufactory of coarse woollen fabrics. During the period of Cromwell's usurpation, an English company, in which the principal partner was a Colonel Stanfield, expended a very large sum of money in establishing the manufactory; and, for this purpose, purchased some lands which formerly belonged to the monastery, erected fulling-mills, dyeing-houses, and other requisite premises, and imposed on the whole the name of Newmills. After the Restoration, the company, for their encouragement, were, by several Scottish acts of parliament, exempted from some taxes, and Colonel Stanfield was raised to the honour of knighthood. But after his death the affairs of the company going into disorder, and throwing embarrassment upon the manufactory, Colonel Charteris purchased their lands and houses, and, in honour of the very ancient family in Nithsdale from whom he was descended, changed the name from Newmills to Amisfield. In 1750, a company was established, and contributed a large sum, to revive the manufactory; but the trade proving unsuccessful, they dissolved. Soon after their failure, another company was formed, but proved equally unsuccessful in their efforts. Haddington would hence seem destined—though from what actual cause is not very apparent—not to partake the benefits, or become the scene, of any such stirring movements as, in peaceful times, have rapidly raised not a few hamlets and villages of Scotland to the condition of thriving and populous towns. At present it has, in the strict sense, no manufactory; yet it conducts a considerable trade in wool, is the centre of mercantile supply to an extensive and wealthy agricultural district, and has an iron-forge, a coach-work, 2 breweries, 2 distilleries, and establishments for the tanning and currying of leather, and for preparing bone-dust and rape-cake for manure. But its chief trading importance consists in its being a leading market for the exposure and sale of agricultural produce. Its fairs have gone into desuetude; but its weekly market, held on Friday, attracts, on the one hand, the large and very intelligent body of East Lothian farmers as sellers, and a vast number of corn-dealers and others from Edinburgh, Leith, and more distant places, as purchasers, and is always—but especially at the most suitable seasons for agricultural trafficking—a very stirring and important scene. In the morning, butter, eggs, and poultry are discussed; half-an-hour past noon, oats and barley are exposed; and at one o'clock, wheat—East Lothian wheat, the prime produce of the kingdom—challenges attention. As a wheat market, it is probably the first in Scotland; and, at all events, is, as a market for general agricultural produce, rivalled in the south-east counties only by Edinburgh and Dalkeith. A large cattle-fair is held on a Friday in April, which is fixed by the East Lothian Agricultural society, at which some prime fat cattle are sold. A second cattle-market is held on the Friday preceding the Edinburgh All-hallow fair.

Haddington was at one time the seat of a circuit justiciary court, but now sends all its justiciary business to Edinburgh. It is the seat, every Thursday, during session, of the county-courts of the sheriff,—every alternate Thursday, of a sheriff small debt court,—and, on the first Thursday of March, May, and August, and the first Tuesday of every other month in the year, of a justice-of-peace court. By means of coaches—some of which pass through from Dunbar, Berwick-upon-Tweed, Newcastle, or London—facilities are offered daily for communication with

Edinburgh. The town has a savings' bank and branch-offices of the Bank of Scotland, the Royal bank of Scotland, and the British Linen Banking company. Nor is it feeble or unimportant in the number and value of its social, literary, benevolent, and religious institutions. The United Agricultural society of East Lothian meets several times a-year here and at Salton. The East Lothian Horticultural society, and the ancient fraternity of Gardeners of East Lothian, both meet in Haddington. The Haddington New club is an association of the gentlemen of the county. The Tyneside games, consisting of various gymnastic exercises, are of recent institution and perhaps little real value. They are celebrated, under permission of Lord Elcho, in Amisfield park. The town has an excellent grammar-school, under the conduct of a rector, two masters, and an assistant, for classics, mathematics, and English literature; a mechanics' school of arts, in which lectures are delivered on the physical sciences, and ethics, and economics; a museum of scientific specimens, and a collection of experimental apparatus for chemistry, galvanism, pneumatics, and astronomy; a presbytery library, a mechanics' library, a parish library, a subscription library, a town-library originally founded in a bequest of books from the Rev. John Gray of Aberlady, and one or two circulating libraries. It is also the depot or head-quarters of the itinerating libraries, devised and established, and worked with incalculable advantage to the enlightenment and high moral cultivation of the towns, villages, and parishes of East Lothian by the late pious and philanthropic Samuel Brown, the worthy offshoot of the venerable John Brown. Of benevolent and religious institutions, there are a dispensary,—a society of females for the relief and instruction of the aged, poor, and sick,—the East Lothian society for propagating the knowledge of Christianity,—and the East Lothian Bible society, probably the earliest organized in Scotland.

Prior to the date of the Burgh Reform act, the town-council of Haddington, according to an act of the convention of Royal burghs passed in 1665, consisted of 16 merchants' and 9 trades' councillors. The number of council remains, as formerly, 25; and are elected according to the provisions of the Burgh reform act. The magistrates are a provost, 3 bailies, a treasurer, and a dean-of-guild. The council nominate a baron-bailie of the suburb of Nungate, and another of a portion of the parish of Gladsmuir which holds feu of the burgh; but neither of these functionaries holds baron-bailie courts. The magistrates have jurisdiction over the whole royalty, and hold a weekly court in which, assisted by the town-clerk, they try civil causes. They are in the practice also of trying criminal causes brought before them by the procurator-fiscal of the burgh; and they maintain order in the town, by imposing summarily fines not exceeding 5 shillings, for offences in matters of police. The sheriff of the county exercises a cumulative authority with them within the royalty. The dean-of-guild, with his council, judge of all questions of boundaries and disputed marches, and must be consulted previous to the erection of any new building; he also—though this function has for several years rusted in desuetude—takes cognizance of ruinous buildings; and he is independent and alone in his jurisdiction from any cumulative authority of the sheriff. The magistrates have the appointment of the town-clerk, the fiscal, the gaoler, and other burgh-officers, and of the burgh-schoolmasters. There is no guildry in Haddington; but there are merchant-burgesses, who have a fund called the guildry fund, devoted to charitable purposes, from which they generally distribute about £25 a-year.

The fees of entry are:—to a stranger £10,—to an apprentice £6 1s. 2d.,—to children of burgesses £2 13s. 4d. There are 9 incorporated trades,—the hammermen, wrights, and masons, weavers, fleshers, shoemakers, bakers, tailors, and skimmers; all of them, except the weavers, enjoying the exclusive privilege of exercising their crafts within burgh. The property of the town consists of lands, mills and houses, feu-duties, customs and market-dues, and fees on the entry of burgesses. The debt at Michaelmas 1832, was £6,901 6s. 3d.; contracted chiefly in the erection of a new butcher market at the cost of upwards of £2,000,—in the expenditure of £1,500 upon the church and manse, and of £2,000 upon the spire and renovation of the town-house, and of £1,500 in an unsuccessful search for coal on the lands of Gladsmuir. Though the income of the town has very much increased during the last 30 years, there is no prospect of its soon affording such a surplus as should extinguish the debt. The income for 1831–2, was £1,422 16s. 3d.; for 1839–40, £1,498 19s. 4½d. Municipal constituency, in 1840, 180. Haddington unites with Dunbar, Lauder, North Berwick, and Jedburgh, in returning a member to parliament. Constituency, in 1840, 198.

Haddington was, at a very early period, a royal burgh; and on the charter of confirmation and *de novo damus* of James VI., dated 30th January, 1624, by which it now holds its privileges and property, record is made of its great antiquity, and of ancient charters of the town having been lost or destroyed during the international wars. The earliest recorded notice of it exhibits it to view in the 12th century as a demesne town of the Scottish king. David I. possessed it as his burgh, with a church, a mill, and other appurtenances of a manor; yet, so far as documentary evidence is concerned, he does not appear to have had a castle in its vicinity. Ada, the daughter of the Earl of Warren, received it, in 1139, as a regal dower, on her marriage with Earl Henry, the son of David, and the prince of Scotland; and, till her decease in 1178, this mother of kings, in other matters than the founding of the Cistercian nunnery in its neighbourhood, seems to have been attentive to its interests. William the Lion now inherited it as a demesne of the crown; and appears—though no royal castle is yet spoken of in the place—to have sometimes made it his residence. In 1180, William, supported by his brother, Earl David, and by many clergymen and a vast assemblage of laity, heard here and decided a tumultuous though unimportant civil controversy between the monks of Melrose and Richard Morville, the constable of Scotland. In 1191, the same king affianced at Haddington his daughter Isobel to her second husband. In 1198, the town became the birth-place of Alexander II., the son of William. During the reigns of David I., Malcolm IV., and William the Lion, Haddington seems to have luxuriated in the comforts of peace and the smiles of royal favour. It was first involved in the miseries of war, after Alexander II. had taken part with the English barons against their unworthy sovereign; and in 1216, it was burnt by King John of England during his incursion into the Lothians. In 1242, on occasion of a royal tournament held at the town, and in revenge of his having overthrown Walter, the chief of the family of Bisset, Patrick, Earl of Athole, was assassinated within its walls. As the town, after being reduced to ashes by John, had been hastily rebuilt of wood, it was, a second time, in 1244, destroyed by the flames. But, at that period, all the towns and cities of Scotland were constructed chiefly or wholly of wood, and covered with thatch; and when we learn from For-

don that Stirling, Roxburgh, Lanark, Perth, Forfar, Montrose, and Aberdeen, were all burnt at the same time as Haddington, we can hardly believe—though several historians concur in telling us so—that Haddington, on this occasion, owed its conflagration to accident. The town, though formally demanded, in 1293, by Edward I., of John Baliol, does not seem to have suffered much from the wars of the succession. In 1355–6, Edward III., in revenge of the seizure of Berwick by the Scottish troops during his absence in France, making a devastating incursion over the whole country south of Edinburgh, Haddington fell a prey to his fury, and was a third time reduced to ashes. This disaster happening about the beginning of February, it was many years afterwards remembered by the name of ‘the burnt Candemas.’ In April 1548, the year after the fatal battle of Pinkie, the English, under Lord Grey, took possession of Haddington, fortified it, and left in it a garrison of 2,000 foot and 500 horse, under Sir John Wilford. The Scots were, at the time, so much dispirited, that this garrison ravaged the country to the very gates of Edinburgh. But Andrew de Montalembert, Sieur D’Essé, the French general, having landed at Leith on the 16th of June, at the head of 6,000 foreign troops, composed of French, Germans, and Italians, in concert with a force of 5,000 Scots troops, under Arran, drove the English within the fortifications, and laid siege to the town. Wilford, the governor, made a gallant defence, and even so outmanœuvred the Frenchman’s activity, as, in spite of him, to receive into the town from Berwick a reinforcement of men and a supply of provisions. While D’Essé maintained the siege, and environed the Cistercian nunnery at the village of Abbey with his camp, the meeting of the Estates of parliament in that edifice, which we noticed in our ecclesiastical sketch of the parish, took place on 17th July. As the siege of Haddington continued, and both attack and defence grew increasingly spirited, the vicinity became the principal theatre of war between the two nations. Sir Thomas Palmer, at the head of 1,500 horse, made an attempt to throw supplies into the town; but was repulsed, with the loss of 400 prisoners. Admiral Lord Clinton, brother of Somerset the protector of England, was now directed to draw the attention of the Scots from the siege by menacing their coasts; while Talbot, Earl of Shrewsbury, was sent to reinforce and conquer at the head of 22,000 men. The admiral, though repulsed at different points where he attempted a landing, achieved his main object of distracting the attention of the besiegers of Haddington; while the Earl of Shrewsbury raised the siege, supplied the garrison with every necessary and an additional force of 400 horse, and then marched to Musselburgh to look into intrenchments which D’Essé had suddenly thrown up for his army. But he in vain attempted to draw the wary Frenchman from his camp; and becoming tired of his sentinels, marched off with his troops, burned Dunbar and other places in his route, and departed into England. D’Essé now resolved to attempt Haddington by a *coup de main*. The enterprise was conducted with so much secrecy and adroitness, that the English advanced guards were slain, and the bas court before the east gate was gained, before the garrison was alarmed. The assailants were employed in breaking open this gate, when a soldier—who a few days before had deserted from D’Essé’s camp—fired upon them a piece of artillery which killed many of them and threw the rest into confusion; while a party sallied out through a private postern, and made such a furious onset with spears and swords that few of the assailants who had entered the bas court escaped

slaughter. D’Essé, in June 1549, was succeeded in the command of the foreign auxiliaries, and in the prosecution of measures for the capture of Haddington, by the Chevalier De Thermes, who brought over with him from France a reinforcement of 1,000 foot, 100 cuirassiers, and 200 horse. His first act was to build a fort at the sea-port of Aberlady, to straiten the garrison by cutting off from them all supplies by sea. Wilford, reduced to extremity from want of provisions, and informed that a supply had arrived at Dunbar, marched out at the head of a strong detachment, in order, if possible, to cut his way to the supply and convey it to Haddington; but he was attacked by a large body of the French troops, overpowered by numbers, and, after an obstinate resistance, during which most of his detachment were hewn down, was taken prisoner. The English now found the tenure of Haddington impracticable, on account at once of the distant and inland situation of the town, of the determination of the French commander at all hazards and at any cost to take it, and of the appearance among the garrison of that fell and insidious and unconquerable foe, the plague; and they resolved to contend no longer for its possession. The Earl of Rutland determined, however, that neither soldiers nor military stores should fall into the hands of the Scots or their auxiliaries; and, marching into Scotland at the head of 6,000 men, he entered Haddington in the night, and, on the 1st of October, 1549, safely conducted all the soldiers and artillery to Berwick. Of the fortifications of Haddington not a vestige now remains, except a few portions of the old town-wall.*

In 1598, Haddington was a fourth time consumed by fire. The calamity is said to have been occasioned by the imprudence of a maid-servant, in placing a screen covered with clothes too near the fire of a room during night. In commemoration of the event, and as a means of preventing its recurrence, the magistrates made a law, that a crier should go along the streets of the town every evening during the winter months, and, after tolling a bell, recite some admonitory rhymes. This unusual ceremony got the name of “Coal an’ can’le;” and either is, or very recently was, still observed. The rhymes recited are sufficiently rude; but, in connexion with the fact of Haddington having so often and severely suffered from fire, they are not without interest, and we accordingly quote them below.†

* A French officer who was present, has left us a minute account of the operations of this siege, and the following description of the fort: “Le plant du fort d’Edimton est tout quarré, et assis au milieu d’une plaine raze et basse, n’ayant montagne ne colline qui lui puisse commander. Il est clos d’un large fosse a fonds de cur, et d’une bonne et forte courtine de gazon de grosse terre, reparee de spacieux rempars, et appropriée de bons et seurs parapets; aux quatre coins de la quelle sont assis quatre fors boulevards,” &c. It appears from what follows in the same author, that the fort was surrounded by a deep ditch, behind the rampart of the first wall, lined with a strong curtain, and case-mated. The French general advanced his lines so near the fort, that his men were often knocked down by pieces of lead fixed to strings which the besieged held in their hands.

† “A’ guid men’s servants wher’e yer ye be,
Keep coal an’ can’le for charitie!
Baith in your kitchen an’ your ha’,
Keep weel your fires whate’er befa’!
In bakehouse, brewhou-e, barn, and byre,
I warn ye a’ keep weel your fire!
For often times a little spark
Brings mony hands to mickle wark!
Ye nourrices that hae bairns to keep,
See that ye fa’ nae o’er sound asleep,
For losing o’ your guid renoun,
An’ banishing o’ this barrous toun!
’Tis for your sakes that I do cry:
’Tak’ warning by your neighbours bye!”

It is not long since a somewhat similar expedient was resorted to by the magisterial authorities of Canton. Instead, however, of chaunting a poetical warning after the fall of night, these magnates of the Celestial empire caused a square board to be attached to the upper part of a pole, so that a man or boy

Haddington gives the title of Earl, in the peerage of Scotland, to the descendants of the Hamiltons of Innerwick, the remote kinsmen of the ducal family of Hamilton. In 1606, Sir John Ramsay, brother of George Lord Ramsay of Dalhousie, and the chief protector of James VI. from the conspiracy of the Earl of Gowrie, was created Viscount Haddington and Lord Ramsay of Barns; in 1615, he was raised to a place among the peers of England, by the titles of Earl of Holderness and Baron Kingston-upon-Thames; but dying, in 1625, without issue, he left all his honours to be disposed of at the royal will either as forgotten toys or as the award of future aspirants. In 1627, Thomas Hamilton of Priestfield—who was eminent as a lawyer, and had become Lord-president of the Court of Session, and Secretary of State, and had been created Baron of Binning and Byres in 1613, and Earl of Melrose in 1619—obtained the king's permission to change his last and chief title into that of Earl of Haddington. In 1827, Thomas, 9th Earl, while only heir-apparent, was created Baron Melrose of Tynningham, in the peerage of the United Kingdom; and this nobleman, during the brief administration of Sir Robert Peel in 1834-5, was Lord-lieutenant of Ireland. The family-seat is about 8 miles east of Haddington, at Tynningham in the parish of Whitekirk.

HADDINGTONSHIRE, or **EAST LOTHIAN**, an important and beautiful county in the south-east part of Scotland; bounded on the north-west and north by the frith of Forth; on the north-east by the German ocean; on the south-east and south by Berwickshire; and on the west by Mid-Lothian. With the exception of four very inconsiderable rills, which divide it respectively toward its north-west and south-west angles from Mid-Lothian, and toward its south-east and south-west angles from Berwickshire—the two rills at the south-west angle making a confluence at the point of leaving it—and of the highest summit or water-shedding line of the Lammermoor hills over about one-half of the march with Berwickshire, it has, along the south-eastern, the southern, and the western frontier, no natural or geographical features to mark its boundary. The county stretches between $55^{\circ} 46' 10''$, and $56^{\circ} 4'$ north latitude, and between $2^{\circ} 8'$, and $2^{\circ} 49'$ longitude west from Greenwich. Along the frith of Forth to North Berwick it extends, in a straight line, $15\frac{1}{4}$ miles; thence, along the ocean till it touches Berwickshire, it extends, also in a straight line, $16\frac{1}{2}$ miles; in a chord from the eastern to the western point of its contact with Berwickshire, it extends 25 miles; and in a chord from the southern to the northern points of its contact with Mid-Lothian, it extends 13 miles. But on the sides of the frith and of Berwickshire it sends considerable projections beyond this line of measurement; on the Mid-Lothian side it makes a considerable recession from that line; and on the ocean side it both—though not to a great extent—recedes from that line and overlaps it. The extent of its superficial area is variously computed at 224, 250, and 280 square miles. The highest computation, though probably beyond the truth, seems to have been made with the most care, and upon the best authority.

The county consists of highlands and lowlands, each broadly and distinctly marked in its features, and both stretching east and west with an exposure

to the north. The highland or southern district is part of the very broad but comparatively low Lammermoor range, which, coming off at an acute divergence from the middle of the lofty chain which intersects the south-west of Scotland, runs eastward by Soutra to the sea. In their more upland regions, or in the degree of their lying near the southern boundary, the hills of this district are chiefly brown heaths, fit only to be used as a sheep-walk; but as they descend toward the plain they become capable of cultivation, and yield a fair though generally a late return to the labours of the husbandman. In general height and form and appearance—though Spartleton-hill, one of their summits, rises 1,615 feet above the level of the sea—they are rather a wide stretch of upland moor, than either a chainwork or a congeries of mountains, and, apart from their deep solitude and their pastoral character, possess none of the bold or wild features of the properly Highland districts of Scotland. The lowlands of the county, with the Lammermoors for a background, and the burnished or surgy or bright blue waters of the frith and the ocean for a foil, exhibit, from the summit of any of the few elevations which command them, a finely diversified and very beautiful and brilliant landscape. The surface, while generally though very gently declining from the foot of the Lammermoors to the frith of Forth, is sufficiently broken and swollen to be relieved from the tameness of aspect distinctive of a plain, and has its elevations lifted up in such softness of form and picturesqueness of variety as to let it retain, in the strictest sense, and with fascinating attractions, a Lowland character. In the south-east division the ground stretches away from the hills for several miles like a bowling-green, and is surpassingly fertile in its soil and opulent in its vegetable dress. Along the centre and toward the western limit of the county the rich vale of the Tyne comes down with a gentle slope from the hills, and forms a long, beautiful, and thoroughly cultivated broad stripe, stretching east and west. On the north side of this vale, a low swelling hilly range comes down from Mid-Lothian, runs eastward to the parish of Haddington; and there, after having gradually sunk till it is almost lost in the plain, it rises up again in the more marked but simply hilly and soft form of the Garleton range, and runs along several miles farther to the east. North of the Garleton hills is another stretch of plain, extending its length eastward and westward; and between this and the northern angle of the county, a very low or moundish ridge rising at Gulane, stretches eastward to the northern division of the parish of Whitekirk. Beyond this ridge North Berwick law lifts, singly from the plain, its beautifully conical form 800 feet above the level of the sea; and from the bosom of the sea itself rises the remarkable and commanding form of the Bass; and away in the plain which stretches from the foot of the Lammermoors, rises, 8 miles due south from North Berwick law, a rival to that beautiful hill as to both form and position, in the solitary cone called T'aprain law. The whole lowlands of the county, though distinct and fascinating as beheld either from the Lammermoors or from other elevations, are seen to best advantage and unfold their inequalities most distinctly to the eye from the Garleton hills in their centre. The ascent of the county from its northern shore to the foot of the Lammermoors, is there perceived to be accomplished, not in an inclined plane, or in shelving esplanades, or in ridges of uniform heights, but in alternations of variegated plain and diversified hilly range extending invariably from east to west; and from the foot of the Lammermoors to the southern boundary it is seen to be achieved in easy swells and by gentle and

could carry it conveniently, as is done in London, since walls for placards have become scarce. On this board is written—

“Mind your doors!
Watch your fires!”

The people of Cantion, and perhaps those of Haddington also, much at the vigilance of their worthy magistrates, as quite unnecessary, for they are deeply enough interested in doing what they are exhorted to, to render admonition superfluous.

very gradual progress. The central summits of the Garletons, some of the Lammermoor elevations, and especially North Berwick law and Taprain law, are exceptions to the generally soft and gentle graduation of the features of the district; but, while conspicuous objects in its topography, they add munificently to the brilliant attractions of its scenic beauty.

Haddingtonshire, owing to its geographical position and its limited extent, has few waters of any description, and none of considerable magnitude. The Tyne, entering it as a mere rill on the west, and traversing the whole width of its lowlands to the sea at Tynningham, is the only stream which can, in any sense, claim the name of river. Several burns or rivulets, from among the many which rise in the Lammermoors, either flow down upon the Tyne, or flow through the whole lowlands in independent courses to the sea, and are of magnitude sufficient to claim separate notice in the details of topographical description. But a strange circumstance connected with the Haddingtonshire streams—owing, probably, to their dearth and their beauty, and the eagerness with which they are locally claimed—is that they very generally glide from place to place under such a confusion of names as almost defies the management of a topographer. The stream, for example, which joins the Tyne on the lands of Clerkington, bears, during its brief course from the head of Garvald parish, the names successively of the Hope, the Gifford, the Bolton, and the Coalston. The rivulet, too, which rises in the same parish as this, a little to the east, traverses the parishes of Garvald, Whittingham, Stenton, and Dunbar, and falls into the sea at West Belhaven, and which is next in length of course, if not in volume of water, to the Tyne, glides from the county under an appellation imposed on it within 2 or 3 miles of its embouchure, and previously wears and casts aside and assumes names with such rapidity of succession that it is coolly allowed to figure anonymously on the map. A ridiculously contrasted instance is, that two streams which rise respectively on the north-eastern and the south-western limit of the parish of Athelstaneford, and which flow respectively westward to the frith at Aberlady bay, and eastward to the ocean at Ravensheugh, are both called Peffer-burn. The only inland sheets of water of any extent are Presmennan and Danskin lochs,—the former is a recent artificial formation. The county's destitution of lakes and poverty in running waters, is, in a large degree, compensated both by the beauty and the alluvial deposits of such streams as it possesses, and by the far-spreading brilliance and the abundant fishy productiveness of the frith and the ocean.—Kist-hill-well, in the parish of Spott, several mineral springs in the parish of Pencaitland, and an acidulous spring in the parish of Humble, have, at various periods, been more or less in repute for their medicinal properties. A mineral spring near Salton house is said to be of the same nature, and to have the same virtues, as the Bristol waters.

The county, in its upland or Lammermoor division, is geologically composed of the transition strata,—chiefly those of aquatic formation; and, in its lowlands, except in a few localities where trap-rock has been forced up to the surface through the entire intermediate strata, consists of the various and alternating strata of the secondary formation. Old red sandstone, superincumbent on the transition strata, looks out at various places on the coast, and flanks the Lammermoor hills over their whole range, and bears aloft limestone, coal, fire-clay, ironstone, shales, clay, and all the alternating strata of sandstone distinctive of the old red sandstone basis. Coal, in continuation of the Mid-Lothian coal-field, and co-extensive

with the northern half of the western frontier, stretches eastward through the parishes of Prestonpans, Tranent, Ormiston, Pencaitland, and Gladsuir. But toward the extremity of the last parish, and on its entering Haddington, it becomes so interrupted with dykes and so thin in the seam as not to repay the cost or mining. So early as the year 1200 coal was discovered and worked on their lands of Prestongrange by the monks of Newbattle. A charter, which must have been granted between 1202 and 1218, and which confers on these monks exclusive power to work coal on their lands of Preston, bounded by the rivulet Pinkie, is still in existence. Another charter also exists, granted by James, steward of Scotland, and dated 20th of January, 1284-5, which confers a grant of coal, and authority to work it, on his lands in Tranent. Yet many persons—very erroneously, as these documents show—have supposed that the earliest coal-mine in Scotland was opened at Dunfermline about the year 1291. Coal is either known or very probably conjectured to stretch from the main coal-field all its breadth north-eastward to the very extremity of Haddingtonshire, and it even, north of the village of Dirleton, crops out near the sea; but, in spite of numerous and expensive attempts, in various localities, to find it in sufficiently thick and available seams, it will never probably be found workable elsewhere than in the parishes west of Haddington. Limestone in great abundance and of prime quality is so generally met with as nowhere to be undiscoverable within a longer interval than 5 or 6 miles; and it is in general from 12 to 14 feet in thickness, and so level and near the surface as to be procurable at a moderate cost. Shell-marl has been found at Salton and at Hermiston; but, owing to the plenty and the cheapness of lime, is no treasure in East Lothian as it would be esteemed in less favoured districts. Clay ironstone suitable for smelting was, several years ago, worked at Gulane by the Carron company; but, though occurring there and in some other spots in considerable quantity, it has ceased to attract notice, or to be treated as an article of value. Sandstone for building is plentiful and of easy access; but, though durable, it is of a dark reddish colour so disagreeable to the eye as to give buildings or towns constructed with it, especially when compared in recollection with the buildings of Edinburgh, a sombre and rueful aspect. Clay suitable for the manufacture of brick and tiles, occurs, of various colours in the uplands, and of a blue colour in the lowlands; and in the vale of the western Peffer-burn occurs in beds of from 10 to 25 feet deep, and stretches away into the sea beneath the wide flat sands of Aberlady. Dr. Buckland, in an essay recently read before the Geological society, states that a large portion of the low lands between Edinburgh and Haddington is composed of till, or the argillaceous detritus of glaciers, interspersed with pebbles. In the valley of the river Tyne, about one mile east of Haddington, he observed a district longitudinal moraine, midway between the river and the high road, and ranging parallel to them; and he directs attention to the trap rocks which commence a little further eastward, and are intersected by the Tyne at various points for 4 or 5 miles above Linton, as likely to afford scored and striated surfaces in the most contracted parts of the valley. About 4 miles west of Dunbar, another long and lofty ridge of gravel stretches along the valley, parallel to the right bank of the river; and for 3 miles south-east of Dunbar there occurs a series of lateral moraines, modified into terraces by the action of water.

In early times the Lammermoor division seems to have been abundantly clothed with natural woods and shrubberies. This fact—even if documentary

evidence were wanting—is very strongly attested by the frequent recurrence, in its topographical nomenclature, of the syllables, ‘wood,’ ‘oak,’ ‘pres,’ and ‘shaw;’ the two last signifying respectively in Celtic and in Saxon, a copsewood. Thus we have Braidwood, Presmennanwood, Humbiewood, Woodhall, Woodley, Woodcot, Cranshaw, Crackinshaw, Pyotshaw, and a host of others. But in the lowlands of the county woods do not seem anciently to have existed; nor can they be traced in the names of its localities or in the statements or allusions of charters.

Till a comparatively recent date the mass of the population were in a state of villanage, astricted to the land on which they dwelt, and transferable only with its soil. The charters of David I., Malcolm IV., and William the Lion, exhibit the county as distributed in large districts among a few domineering and enslaving barons. The kings and the nobles and the ecclesiastics were then all agriculturists; every manor had its place, its church, its mill, its kiln, and its brewhouse; and the villains or retainers were chained down around the baron on a house, a croft, some arable land, a meadow, and a right of commonage. The monks, in particular, were keen and skilful cultivators, and seem to have laid the foundation of its agricultural greatness. There were undoubtedly many lands cultivated under the baronial lords of manors, and under the monks of Newbattle and Kelso, and the nuns of Haddington by tenants and subtenants for certain rents and services. A curious fact is that, along the conterminous line of the uplands and the lowlands, the parishes were anciently—as they are still—so distributed that each, while stretching away into the fertile plain, had attached to it a section of the Lammermoor as a necessary adjunct to its agricultural practice of summer pasturage. Even the nomenclature shows that each parish had its pasturage or ‘shieling.’ Thus, in Oldhamstocks are Luckyshiel and Powelshiel; in Innerwick, Auldshiel; in Stenton, Gamelshiel and Airlieshiel; and in Whittingham, Penshiel and, Mayshiel. While mills were everywhere numerous, and in much requisition in the lowlands, and evinced, by the activity with which they were employed, how comparatively vast a quantity of grain was raised; pasturage was, at the same time, much followed, during summer, by all who had easy access to the Lammermoors. Hay also was raised in abundance, and, so early as the 13th century, was subjected to tithes. From the fact that the English soldiers subsisted, during the siege of Dirleton castle in 1298, on the pease which grew in the neighbouring fields, pulse likewise appears to have been early an object of attention. But, what is greatly more surprising, gardens and orchards, so early as during the 12th and the 13th centuries, were numerous and large. Agriculture and its sister-arts, however, received a fearful check, and even were compelled to recede during the disastrous period of the wars of the succession. Yet, in 1336, East Lothian, in its infantile movements, resembled so singularly the paramount greatness of its adult agricultural character of the present day, that the labour of no fewer than 100 ploughs was suspended by the arousing effects upon the people of Allan of Wynton abducting one of the daughters of Seton. Against the middle of the 17th century improvements had so far advanced that the English soldiers who entered Scotland with Cromwell in 1650, were astonished to find in East Lothian “the greatest plenty of corn they ever saw, not one of the fields being fallow,” and made no scruple to trample down the crops in their march, and feed their horses with the wheat. We may suppose, however, that Whitelocke, who makes this

report, indulged somewhat in exaggeration; and we must perceive, also, that implements of the rudest and most clumsy sort being still in use, the husbandry, notwithstanding its superiority at the period, was still, as compared with the state of things at present, in a sufficiently primitive and lumbering condition.

The era of georgic improvement in East Lothian, was about the period of the Union, in 1707. Lord Belhaven led the way, by tendering advice to the farmers, and endeavouring to inoculate them with new doctrines. Lord Haddington, and some of his tenantry, followed in a path less lofty and commanding, but more alluring and successful,—the path of experiment and example. Through means of some English servants among his retainers, he introduced over his estate the practice—altogether novel in the country—of sowing grass-seeds. Fletcher of Salton, “after he saw his own political career at a close by the Union,” emulated Lord Haddington in a race along the new road to fame; and in 1710, patronized a mill-wright of the name of Meikle, sent him to Holland to observe and invent improvements in machinery, and, by his means, introduced “the fanners,” and set up a manufactory of them at Salton, and also constructed a mill for the manufacture of decorticated barley, thenceforth everywhere known as Salton barley. A ready market being offered for this species of corn, the erection of the mill, and of others elsewhere in imitation of it, occasioned a rapid improvement in agriculture. In 1723, a great society of improvers arose, and endeavoured to impart to the ploughmen its own energy. About 1736, the elder Wight introduced the horse-shoeing husbandry in all its vigour, raised excellent turnips and cabbages, fed cattle and sheep to perfection, and attempted, though without adequate success, to extend the horse-shoeing husbandry to wheat, barley, and pease. Patrick, Lord Elibank, and Sir Hugh Dalrymple, each claim the merit of having introduced the fructifying process of hollow draining. Two farmers of the name of Cunningham were the first who levelled and straightened ridges. John, Marquis of Tweeddale, and Sir George Suttie, were the earliest and most successful practisers of the turnip-husbandry. In 1740, John Cockburn, younger, of Ormiston, retired from political business, and zealously endeavoured to introduce the agricultural practices of England. Before 1743, there was a farming society at Ormiston. In 1740, the potatoe was introduced; and about 1754, was first raised in the fields, by a farmer of the name of Hay, in Aberlady. Very early in the century, another farmer, John Walker in Prestonkirk, prompted by the advice of some gentlemen from England, successfully tested the beneficial effects of fallowing, and, by his example, incited his neighbours to adopt the practice. In 1776, when 40 years of progressive improvements elapsed, every agricultural practice had been attempted in East Lothian which the most intelligent could think of as beneficial. All the youthful farmers had adopted the mode of intermixing broad-leaved plants with white-corn crops, and speedily, by their superior gains, provoked their seniors to follow their example. They still, however, worked their ploughs with four horses; and, in not a few particulars on which more modern advances in science were destined to throw light, were very materially inferior, in their notions and professional practice, to their highly intelligent successors of the present day. Progressions have subsequently been made, and continue to move on, chiefly by so concentrating the skill and science, and practical tact of the county, in a society, that the knowledge of all becomes the knowledge of each. In 1804, a farmers’ society was organized by General Fletcher of Salton, and was supported by a larg

body of intelligent and respectable agriculturists, and exerted a propelling influence on general improvement. In 1819-20, another society, on a more extensive scale, and combining nearly every available energy in the county, started into being, took the Salton society into its fellowship, and assumed the appropriate name of "The United East Lothian Agricultural society." This association, wielding all the power which the nobility, wealth, intelligence, and tact of the county can produce, has hitherto worked with such effect as, jointly with the individual and detached labours of its members and followers on their respective properties and farms, to have enabled East Lothian, amidst the general and emulous and praiseworthy aspirations of many agricultural districts of Scotland after celebrity, to maintain that pre-eminence which it so early acquired, and which it has not once allowed to be disputed.

Great care has been used by the pastoral farmers of the Lammermoors to improve the breed of their stock as to both wool and carcass. The English large breed of white-faced sheep have been tried on these hills; but they have climbed only the lower ascents, and even there have been found to grow lean and meagre. The active and restless black-faced breed seem more at home in the region, and are retained in considerable numbers on its pastures. But the Cheviot breed greatly predominates, being generally preferred on account of the superior value of the wool. Smearing or salving is everywhere practised in the Lammermoor district. A composition, partly resinous and partly oleaginous, is spread over the whole body of the sheep, at the commencement of winter, or soon after the separation of the fleece, and is believed to protect the animal from vermin, to protect it against the acerbities of the climate, and even to improve and increase its wool. In the lowlands, the fattening of stock of all sorts for the shambles has long been an object of attention, and essentially figures in the economy of every regularly conducted farm. Yet not one variety has arisen in the district of any species of stock. Some of the cattle are of the short-horned breed; but most are those brought from the Highlands, either directly or through the medium of the north-eastern counties. Black-faced Highland widders were, at one time, very generally fed off on turnips, and annually sent away to the butcher; but they have recently been, in a considerable degree, displaced by half-breed hogs, from Cheviot ewes by Leicester rams. Grass-fed sheep are, for the most part, ewes, bought in autumn with the view of their lambing in the spring, and then fattened with their lambs, and sold with them to the butcher.

East Lothian owes its agricultural superiority, not wholly, nor even, perhaps, in a chief degree, to the advantageousness of its situation and its soil. Having throughout a northern exposure, it seems averted from the sun's rays, and exposed to the fierce and chilling blasts which proceed from the shores of the Baltic. The soil also—though upon the coast, and in a variety of localities, consisting of a light loam, or of a loamy admixture—is in general of that sort in which clay predominates. Yet, in point of climate, the lowlands are highly favoured. In winter, snow, though brought down by winds in every point, from the west round by the north to the east, almost never lies many days. Spring is, in general, dry, with only occasional severe showers of hail or rain from the north-east. During the whole of May, the winds usually blow from some point to the north, with a bright sun, and a dry, keen, penetrating air. During the summer and autumn, the only rainy points are from the south and the east. The district is all but totally unacquainted with those heavy falls of rain,

brought from the Atlantic by westerly winds, which so frequently deluge the western parts of Scotland. The greater part of the clouds which come from the west are intercepted and broken by the mountain-range or high-grounds which occupy the eastern limits of Lanarkshire; and the few which escape are, for the most part, broken and divided by the Pentland hills, part of them being sent off by way of Arthur's seat to the frith of Forth, and part sent away by the Moorfoot hills, and Soutra hill, along the summits of the Lammermoors. The district, therefore,—viewed in connexion with the aggregate character of its climate, and with the amount and the skill of georgic operation to which it has been subjected,—must be regarded as peculiarly favourable to the growth of corn. Wheat, accordingly, is its staple produce, and is cultivated chiefly in its white variety, but to a considerable extent, also, in its red. Hunter's sort has long been a favourite, and, after many trials of competition with other sorts, has been found, on the whole, the best adapted to the soil. The Taunton-dean, though not yet very extensively tried, promises to come into favour. In particular localities, though not for general diffusion, the woolly-eared and the blood-red are found to be well adapted, and very valuable. Of late oats, the grey Angus is everywhere the most suitable; of early oats, the potato and the Hopeton compete for ascendancy, according to the nature of the soil; and of barley, the Chevalier, though but lately introduced, has asserted undisputed superiority over all other varieties. In the most fertile district, comprising the lowlands of Oldhamstocks, Innerwick, Dunbar, Spot, Stenton, Whittingham, and Garvald, every acre annually teems with an exuberant produce either of the finest quality of grain, or of food for the fattening of stock; and there the system of cropping begins with turnip, which is partly eaten on the ground, and partly carted to the yard,—it proceeds with wheat sown at any period after the ground is cleared, or with barley sown in the spring,—it next has clover or rye-grass, either cut or pastured,—and it usually finishes in the fourth year by a crop of oats. In a district a degree less fertile than the former, and larger in extent, comprising the parish of Morham, the lowlands of Yester, and all the western parishes of the county, the system of cropping is, in general, based on summer fallowing,—and then proceeds first with wheat, next with cut or pastured grass; and now, in many instances, concludes with sown grass, but in others, goes on to a sixth year course, with grass, oats, a mixture of pease and beans, and finally wheat. In the northern district, considerably different in character from the others, more retentive in its subsoil, often of a heavy loamy surface, and comprising the parishes of Whitekirk, North Berwick, Dirleton, Athelstaneford, Haddington, and Prestonkirk, the system of cropping commences, in some places, with summer fallowing, and in others with turnips, has wheat in the second year, grass pastured with sheep in the third, oats in the fourth, drilled beans in the fifth, and finishes, in the sixth year, with wheat.

The first park or pleasure-ground in the county was the Duke of Lauderdale's, 500 acres in extent, formed during the reign of Charles II., and already noticed in our account of the parish of Haddington. In 1683, John Reid, the Quaker gardener, in his book entitled 'The Scots Gardener,' showed the whole population of Scotland "how to plant gardens, orchards, avenues, groves, and forests." But the inhabitants of the lowlands of East Lothian were somewhat incredulous as to the arboriferous capacities of their country. The 1st Marquis of Tweeddale, who died in 1697, Lord Rankeilour, who died in 1707 and their contemporary the 5th Earl of Hadding-

ton, were, on a small scale, considerable planters, and sufficiently tested the powers of the soil to excite a desire for the luxury of sylvan shade and shelter. The Earl of Mar trode close on their heels, introduced the system of planting in forests, and polished the taste and provoked the imitation of many of his aristocratic neighbours. The 9th Earl of Haddington, however—the same who figured soon after the Union as an important improver of agriculture—was the first great planter. The trees he reared about the year 1730, on his estate of Tynninghame, were all of the hardwood kind, and with subsequent additions now form the most beautiful forest in the south of Scotland. Plantation, ever since his time, has secured a fair amount of attention, and—in some places, aggregated into groves and sylvan wildernesses—in many, or most, disposed in sheltering tufts and rows,—maintains dominion over between 6,000 and 7,000 acres. Humble and Salton woods lying contiguously, and forming together a broad expanse of forest, sloping away down the Lammermoors to their base, present a beautiful feature, in the magnificent and vast landscape which stretches out before a spectator on Soutra hill, and exquisitely chequers his path, and tantalizes and variegates his prospect, as he descends to the plain.

"The green-sward way was smooth and good,
Through Humble's and through Salton's wood—
A forest glade which varying still
Here gave a view of dale and hill,
There narrower closed, till over head
A vaulted screen the branches made."

MARMION, *Canto iv.*

Some of the woods of Penciland are said to have suffered much from squirrels, which attack the young Scots firs, the larch, and the elm. A very frequent fence in the county is the luxurious hedge of white-thorn, mixed with sweet-briar, honeysuckle, and hedge-row trees.

Haddingtonshire appears to have so entirely exhausted its energies on agriculture as to have had no strength left for a successful attempt at manufacture. In a few instances, it has threatened competition with the manufacturing districts of the kingdom, and endeavoured to reap fruit from its advantageous position on the seaboard and on a coal-field; but it has uniformly failed. Repeated and even prolonged efforts to naturalize a woollen manufactory in the town of Haddington, have left no other memorial than the records of them in history. A variegated fabric of wool seemed for a time to have become a staple in Athelstaneford, and won for the dress which was fashioned out of it the distinctive epithet of the Gilmerton livery, but has ceased to be manufactured, and will soon be remembered only by the antiquarian. In 1793, a flax-mill was erected at West Barns, and, in 1815, a cotton-factory established at Belhaven, both in the parish of Dunbar; but they only entailed pecuniary losses on their proprietors, and let loose a swarm of paupers on the parish. Haddingtonshire, in fact, figures only as a blunderer and a bankrupt in almost every manufacture which it has touched. In the parish of Salton alone was the earliest manufactory in Britain for the weaving of Hollands, the first bleachfield belonging to the British Linen company, the earliest manufacture of decorticated or pot-barley, and also a paper-mill, and a starch-work; but all failed, and have utterly disappeared, and—excepting the famous barley-work, now converted to other uses—have not even left a wall of their edifices to commemorate their existence. The only noticeable existing manufactures in the county are the ancient and extensive one of salt in the parishes of Tranent and of Prestonpans, a small remnant in the latter parish of a once flourishing and very extensive manufacture of pottery,

two foundries in the parish of Dunbar, two or three extensive distilleries, and one or two unimportant establishments for the manufacture of bone-dust.

So late as thirty years after the Union, Haddingtonshire, in common with the contiguous part of Mid-Lothian, was so savagely deficient in facilities of communication, that it was the work of a winter's day to drive a coach with four horses from the town of Haddington to Edinburgh; no small effort being requisite to reach Musselburgh for dinner, and to get to the end of the journey in the evening! The first really practicable road in the county was commenced in 1750, from Ravenshaugh-bridge at the boundary with Edinburghshire, to Dunglass bridge at the boundary with Berwickshire. Now, however, no district in Scotland is provided with roads more commodiously laid out, or maintained in a state of better repair. One good line of post-road runs along the whole coast of the frith of Forth eastward to North-Berwick; another runs southward from Dirleton to Haddington; another—the great mail line between Edinburgh and London—runs along the whole breadth of the county eastward through Haddington to Dunbar, and then along the coast till it enters Berwickshire; another leaves the former at Tranent, and passes through Salton and Gifford, and over the Lammermoor hills, to Dunse; another, the post-road between Edinburgh and Lauderdale, intersects the south-west wing of the county at Soutra.—We give, in a note below, a brief outline of the projected East coast railway line as far as this county is concerned.*—The harbours of the county are all, in point of commerce, very inconsiderable, and, even in point of commodiousness, are very inferior. Their extent, and other particulars, will be found noticed in the articles PRESTONPANS, COCKENZIE, BERWICK [NORTH], and DUNBAR.

The most remarkable feudal strongholds are those of DUNGLASS, long the guard of the main pass from Berwickshire to the Lothians,—INNERWICK, for ages the inheritance of the Stewarts,—DUNBAR, the tumultuous seat of the redoubtable Earls of Dunbar and March,—DIRLETON, demolished by Cromwell in 1650,—and TAMALLON, 2 miles eastward of North Berwick: see these articles. Haddingtonshire, which confronted the border-foe

* This line, starting from the intended depot at the North bridge in Edinburgh, passes round the north side of Pier's hill barracks over Prestarig meadow, by an embankment half-a-mile in length, and 23 feet in height, having a short viaduct over the turnpike-road; it then, keeping a course so as to leave Portobello and Musselburgh to the north, takes a direction about midway between Prestonpans and Tranent, to the south of Seaton and Long-Niddry, south of Gosford-house and north of Ballencrief; it then curves round to the north of West-Fortune and through the village of East-Fortune, whence it is directed to the village of Linton, intersecting the turnpike-road from Edinburgh to Dunbar. It will be observed, that this line passes about midway between Haddington and North Berwick. Leaving Linton, the line crosses the Tyne by a bridge 55 feet in height, keeps to the south of the Dunbar road, and passes Nineware and Belton, and the valley of the Hedderwick-burn by an embankment of a mile in length, the centre part being crossed by a viaduct 600 yards in length, and 65 feet in height; the Bell-water requires a bridge of 38 feet in height and 100 yards in length. The line continues in a direction towards Bowerhouses, where a branch is proposed to Dunbar, of rather more than 2 miles in length. Between the 27th and 28th miles from Leith-walk, the Spott-burn is crossed by a bridge 50 yards long and 47 feet high, and the Dry-burn by a viaduct 170 yards long and 95 feet high. The line passes to the north-east of Innerwick and Braxton, and to the south-west of Cockburnspath, where it crosses a stream which empties itself into the sea near Linehead; from Linehead the shore runs to the east towards St. Abb's Head, whereas the proposed railway takes a south-easterly course, reaching the Ey-water near Renton-house, and crossing this river three times. Between Renton and West-Renton, where it leaves the river, and skirts round by Peel walls, it takes a course rather to the northward of east, and crosses the Berwick turnpike-road near the village of Cocklaw and the road between Aytton and the sea, at Flemington; it then curves with the shore, occasionally encroaching upon the sea near Mar-hall-meadows, from whence it gradually curves towards the west side of Berwick-upon-Tweed.

with the broad and strong shield of the Lammermoor-hills, and was somewhat removed from the post of greatest danger, never could boast of the same number of towers and bastle-houses as the conterminous counties of Berwick and Roxburgh. In every point of view, the most instructive antiquities of Haddingtonshire are the radices and component parts of its topographical nomenclature, which illustrate obscurities in the history of its early colonization, and indicate the presence and ascendancy of successive classes of settlers. The Tyne, the Peffer, Aberlady, Treburn, Tranent, Traprain, Pencaitland, Yester, and many other Cambro-British names, attest the British origin of the Ottadini whom the Romans found in possession of the county. The preponderating prevalence, in the composition of names, of the Anglo-Saxon, *shiel, lee, law, dod, ham, ton, dean, rig, wick, by, cleugh*, as well as some entire names, but especially the name Lammermoor, attest the eventual predominance of the Saxon people, and the superinduction of their tongue upon the British. A more frequent recurrence of Gaelic names here than in Berwickshire—such as in the instances, Dunbar, Dunglass, Garvald, Kilspindie, Tamtallon, and many others—evinces that the Scots, when they acquired power in the south-east of Scotland, settled more numerous on the northern than on the southern side of the Lammermoors.

The original erection of East Lothian into a shire, or sheriffdom, is involved in great obscurity. In the charters of David I., Malcolm IV., and William the Lion, "the shire of Haddington" is mentioned; but it seems then to have been nearly or quite identified with the ancient parish of Haddington, and though placed under the regimen of a sheriff, does not appear to have been a constabulary. But in an ordinance of Edward I., in 1305, for settling the government of Scotland, the shire or sheriffdom of Edinburgh is distinctly recognised as extending, not only over Linlithgow on one side, but over Haddington on the other. A grant of Robert I. to Alexander de Seaton, expressly mentions for the first time the constabulary of Haddington. The office of sheriff of Edinburgh and constable of Haddington was held, under Robert III., by William Lindsay of Byres, and from 1490, till the forfeiture of the odious James, Earl of Bothwell, in 1567, by Patrick Hepburn, Earl of Bothwell, and his lineal descendants; and again it was held by the restored Francis, Earl of Bothwell, from 1584 till that ingrate reaped, in 1594, the forfeiture earned by a thousand treasons. The regimen of a sheriff-principal of Edinburgh, combining the office of sheriff of Edinburgh for the constabulary of Haddington, long continued. Though "the office of *sherefcscip*" was conferred by James VI. on the corporation of Haddington within their limits, all the rest of the county continued to be a constabulary at the Restoration, and perhaps throughout the reign of Charles II. At the period of the Revolution, however, Haddingtonshire comes distinctly into view in the character and independence of its present form. For a considerable number of years previous to his death, in 1713, the sheriff was John, the second Marquis of Tweeddale; and from 1716 till his death in 1735—though at first appointed only during the King's pleasure—the sheriff was Thomas, Earl of Haddington. At the epoch of the abolition of hereditary jurisdictions in 1748, Haddingtonshire made but few and inconsiderable claims on public compensation.

Haddingtonshire comprehends 24 *quoad civilia* parishes, and the two presbyteries of Haddington and Dunbar in the synod of Lothian and Tweeddale; and it has the three royal burghs of Haddington, Dunbar, and North Berwick, and the towns

or villages of Prestonpans, Tranent, Cockenzie, Gifford, Salton, East-Linton, Dirleton, Aberlady, Belhaven, Ormiston, Stenton, and Tynninghame, Langniddry, Samuelston, Penston, Preston, Gulane, &c. The county sends one member to parliament. Constituency, in 1839, 740. The valued rent in 1674, was £168,873 Scots; the valued rental of the lands, in 1811, was £180,654 sterling, and of the houses, £6,870; and the annual value of the real rent, as assessed in 1815, was £251,126. The parochial schools, in 1834, were 30; conducted by 32 teachers; and attended by a minimum of 682 scholars; and a maximum of 1,656; and its non-parochial schools, in the same year, were 51; conducted by 55 teachers; and attended by a minimum of 473 scholars, and a maximum of 1,642. Population, in 1801, 29,986; in 1811, 31,057; in 1821, 35,127; in 1831, 36,145. At the last of these dates, the population was distributed into 308 occupiers of land, employing labourers; 90 occupiers of land not employing labourers; 2,870 agricultural labourers; 1,645 labourers not agricultural; 194 manufacturing operatives; 2,581 persons employed in retail trades and handicrafts; 358 capitalists; 226 male servants; and 1,444 female servants. At the same date, the total number of families was 8,080; and of inhabited houses, 6,561.

When the Romans, during the first century, invaded Scotland, the great tribe of the British Ottadini inhabited the whole lowlands of East-Lothian. The topographical nomenclature, the hill-forts, the caves, the weapons of war, the ornaments, the modes of sepulture, which have all been investigated, are evidence of the British descent of the original settlers, and of the genuine Celticism of their speech. The abdication of the Roman government left them in the quiet possession of the country. Neither the congenerous Picts beyond the Forth, nor the Scots in Ireland, disturbed their repose. At the end of a century, however, they were taught their insecurity by the irruption of a Teutonic people, who came from the settlement of a kingdom on the south of the Tweed, to seek on the banks of the Tyne an enlargement of their territories. The Saxons, after having obtained the ascendancy, were occasionally, after the battle of Drunnechton, annoyed by incursions of the Picts; they were next, after the suppression of the Pictish dominion, overpowered by the Scots; and eventually, in 1020, they and their territory were ceded by their Northumbrian superior to the Scottish king. During almost a century, the Scots had here, as elsewhere, undisturbed domination. In the reigns of David I., Malcolm IV., and William the Lion, the town of Haddington and its environs were special objects of royal attention and favour. Except during the devastating inroad of John of England in 1216, Haddingtonshire suffered little from foreign or domestic hostilities till the wars of the succession. In 1296, the heroic resistance of the castle of Dunbar, and the battle fought under its walls, if they did protect Scotland from Edward I.'s usurping interference, showed him at least the bold bearing and the indomitable spirit of its people. In 1298, when the enterprises of the patriotic Wallace dared and taunted Edward again to subdue the kingdom, the vigorous resistance of the castle at Dirleton, combined with the subsequent dearly-won victory on the field of Falkirk, so shook the self-possession of the invader that he afterwards penetrated to the utmost verge of Moray before he could think himself secure as the self-constituted superior of Scotland. From the battle of Bannockburn, or the early part of the 14th century, till the year 1433, the history of Haddingtonshire—an almost continuous narrative of warlike enterprises and machina-

tions and miseries—is nearly identical with that of the Earls of Dunbar,—a full outline of which is sketched in the article **DUNBAR**; and even after 1435, it presents but a gleanings of events additional to the bulky ones detailed in that article, and some of limited importance noticed in the article **HADDINGTON**. The forfeiture of the powerful family who had all but dragged the county at their heels, nearly “frightened it from its propriety.” Several of its landholders, who formerly held under the superiority of the Earls of Dunbar, now became tenants in chief of the King; and others placed themselves under the immediate protection, and swelled the retinue and the array of the potent family of Douglas. In 1446, some sensation was produced by the rebellious broils of the Hepburns and the Homes for the litigated spoils of the forfeited estates. The profligacy, the artifice, and the turbulence of the Duke of Albany, who obtained from his father James II. the earldom of Dunbar, with all its jurisdictions, destroyed the peace and imperilled the safety of the whole county. One of the first effects was the incitement of hostilities with England. In 1482, an English army, which was introduced by his intrigues, encamped in the very heart of the county. During the long minority of James IV., Patrick, Lord Hailes, and Alexander Home ruled the district as the King’s lieutenants, with more than royal power, and so oppressed and over-reached the inhabitants as to make the welkin vocal with their groans. But after the majority of James IV., and during the reign of James V., the county, as to its domestic affairs, enjoyed quiet. In 1544, the English, on their return, under the Earl of Somerset, from the siege of Leith, burned and razed the castle of Seaton, and reduced to ashes the towns of Haddington and Dunbar. In 1547, the invading army of the protector Somerset, razed the castle of Dunglass, captured the castles of Thornton and Innerwick, stained the soil in their progress with several skirmishes, and, prelude to the victory of Pinkie, defeated a party of the Scottish army at Fallside brae on the border of Edinburghshire. In 1548, Lord Gray advanced from strong positions in which Somerset, the previous year, had left him on the border, and took the castle of Yester, fortified and garrisoned the town of Haddington, and wasted the county by every mode of inveterate hostility. Till March, 1549–50, when the ancient limits of the conterminous kingdoms were restored by a treaty of peace, Haddingtonshire passed under the power of the English, and became the prey of their German mercenaries. Except that Seaton and Dunbar castles afforded a retreat to Mary, the county was little affected by the turbulencies and distractions of her reign; and during the 30 years of civil broils which followed, it seems to have suffered more of mortification than of waste. It had its full share, however, in the devastation and murderous achievements of Cromwell’s invasion in 1653; and in that year was the theatre of the great conflict by which he became temporary master of Scotland: See **DUNBAR**. No further event of note occurs, except the battle of Preston, fought in 1745, between Prince Charles Edward and the royal troops: See **PRESTONPANS**.

HADDO, a small town in the parish of Methlick, Aberdeenshire; 9 miles north-north-east of Inverury. From it the Earl of Aberdeen takes his second title of Lord Haddo.

HAGGS, a village in the south corner of the parish of Denny; 5 miles from Kilsyth, and 6½ miles from Falkirk, Stirlingshire. It stands nearly half-a-mile north of the Forth and Clyde canal, on the road between Kilsyth and Falkirk, near the intersection of that road by the turnpike between Glasgow and

Stirling. Along with the adjoining hamlet of Bankier, it contained, in 1838, a population of 764. The village, and some territory around it, were recently erected into a *quoad sacra* parish, and provided with a neat new church. See **DENNY**.

HAGG’S CASTLE. See **GOVAN**.

HAILES, a celebrated quarry, about 4 miles west of Edinburgh, on the estate of Sir Thomas Carmichael, Baronet. It yields a strong hard stone of a dark grey colour, admirably adapted for rubble work. In the top feaks of this quarry good hard flags are produced, which are extensively used for pavement in Edinburgh.

HAILES-CASTLE. See **PRESTONKIRK**.

HAKERSAY, one of the smaller Hebrides, lying between Barra and South Uist.

HALBEATH. See **DUNFERMLINE**.

HALBORN-HEAD, a promontory in Caithness, on the west side of Thurso bay; 3 miles west-south-west of Dunnet-head.

HALEN, a *quoad sacra* parish in the isle of Skye. There is a government church here. Stipend of minister £120; glebe £11.

HALF-MORTON, a *quoad civilia* parish, but joined *quoad sacra* to the parish of Langholm, in Eskdale, Dumfries-shire. It is of an oblong form, stretching north and south, with an indentation on its southern end; and is conterminous with Langholm over a distance of only 5 furlongs. It is bounded on the north by Middlebie and Langholm; on the east by Canoby and England; on the south by Gretna; and on the west by Kirkpatrick-Fleming and Middlebie. Its greatest length is about 5 miles; its greatest breadth about 3½ miles; and its superficial area about 6,054 imperial acres. Excepting the lowest spurs of the Eskdale hills on the north, and a small patch of bog on the south-west, the whole surface partakes the beauty and fertility of the terminating plain of Dumfries-shire. One of two principal head-waters of the Sark rises on the north-western limit, traverses the breadth of the parish to its eastern limit, and, being there joined by its sister head-water, traces the boundary of the parish southward, over a distance of 4 miles. Another stream rises also on the north-west boundary, half-a-mile south of the former, and traverses the parish south-eastward or diagonally, over a distance of 4 miles, passing the chapel or modern parish-church, and falling into the Sark. The Black Sark comes in from the west,—forms for half-a-mile the western boundary-line,—flows through the parish for 1½ mile, first eastward and next southward, and again, before leaving it, forms for 1 mile the western boundary-line. The banks of all the streams are tufted with wood, and fall gently back in carpetings of fine soil and luxuriant vegetation. The principal mansion is Solway bank on the north. The only antiquities are vestiges of three towers. About one-sixth of the population are aggregated into 4 or 5 small hamlets. Population, in 1801, 497; in 1831, 646. Houses 109. Assessed property, in 1815, £2,691.—The district drained by the Sark and the Glenzier, or the present parish and about one-third of the present conterminous parish of Canoby, formed the ancient parish of Morton. About the year 1650, it was divided into two parts, and the eastern half annexed to Canoby; and the western half to Wauchope; and Wauchope itself having subsequently suffered annexation to Langholm, Half-Morton followed its fortunes. The church of Morton stood near a hamlet of the same name on the eastern side of the Sark; but, after the disruption of the parish, was allowed to become ruinous. A chapel, however, for the accommodation of the parishioners of the western half, or Half-Morton, was built in 1744, and repaired and enlarged in 1833. Sittings

212. When Half-Morton was annexed to Langholm, the General Assembly ordained that the minister should hold both benefices, on condition of his preaching at Half-Morton every fourth Sabbath. The condition came eventually to be forgotten; and during 12 years previous to 1833, there was no public worship connected with the Establishment at Half-Morton. By a temporary arrangement, an assistant minister, whose time should be entirely devoted to the district, was in that year appointed; and in 1836, promised to become permanent. Stipend £140, paid as a voluntary contribution by the Duke of Buccleuch and the two heritors of the parish.—At Chapel-knowe, $\frac{3}{4}$ of a mile south of the parish-church, is a United Secession meeting-house, built in 1822, at the cost of £175, by a congregation established in 1814. Sitings 244. Stipend £75, with a house and garden.—According to an ecclesiastical survey in 1835-6, the population then was 687. Of these, 503 were churchmen; 167 were dissenters; and 17 were not known to belong to any religious body.—Parochial schoolmaster's salary, £25 13s. 3d., with £16 fees, and £4 other emoluments. There is a small non-parochial school.

HALFWAY. See IRVINE.

HALGREEN. See CANOBY.

HALKIRK,* a parish in the centre of the county of Caithness; bounded on the north by Thurso; on the east by Olrick and Watten; on the south by Latheron; and on the west by Reay. It extends 24 miles in its greatest length; the breadth varies from 7 to 12. Its area is about 90 square miles. Assessed property, in 1815, £2,319. The soil is in general good, consisting in some parts of a clay or loam mixed with moss; in others of gravel on a cold rocky bottom. The surface is flat; for, though there are several hills, they are of inconsiderable height, and slope gently from their summit to the adjacent plains. "The only hill that is anywise worthy of notice, is that of Spittal. The summit of it is 4 miles from the nearest bank of the river Thurso, from whence there is a very gentle elevation to its base. From this to the summit the acclivity is very considerable. It is green all over, not very high, though yet I believe it is the highest in this end of the country. It has the command of a very pleasant, grand, and extensive

prospect, being the most central in the country. Immediately on a person's arrival at the top, the Orkney isles, the Pentland frith, the stupendous rocks on each side of the frith, and the surrounding seas, burst on his view at once, and overwhelm him with surprise and transport. Nor is he less delighted when he beholds the whole country exposed in all its varieties, as it were, in a map, to his eye, looking down from this elevated centre on the grand subjacent and circumjacent objects. It is, I believe, 7 miles distant from the north shore; 12 miles from the east shore; and 14 from the north-west shore; having a gradual, gentle ascent from these shores, with the interruption of some small hills or rising grounds. The name of it is derived from the religious house which was immediately below it, called the Hospital, by way of contraction, Spittal." [Old Statistical Account.]—A considerable number of sheep are annually reared here; but the greatest attention is paid to the raising of oats and barley. A considerable part of the surface, however, is still uncultivated, and covered with lakes and swamps, the largest of which, Loch-Cathel, is 3 miles long, and 2 broad. "They all abound with excellent trout, and eel of different kinds and sizes. These fishes differ also in colour, according to the nature of the lake where they were spawned. In the lake of Cathel there are trouts which are found no where else in the country, of a reddish beautiful colour, a pretty shape, very fat, and most pleasant eating. I suspect they are that kind of fish which naturalists call fresh-water herring. There are no pike-fish in any of them." [Old Statistical Account.]—These lakes give rise to numerous streams, amongst which are the rivers of THURSO and FORSE: which see. There is abundance of limestone and marl; slate and argillaceous stones having impressions of fish and plants have been found; and specimens of ironstone and lead ore are also to be met with.—Of antiquities, the castle of Braal claims first notice.† It stands on an eminence, at a small distance from the river of Thurso. It is a square building, of a large area, and wonderfully thick in the walls, which are partly built with clay, partly with clay and mortar mixed, and in some parts with mortar altogether. The stairs and conveyances to the several stories are through the heart of the walls. These stories were all of them floored and vaulted with prodigiously large stones. A deep, large, well-contrived ditch secures it on the north. It has the appearance of having been fortified also with other outworks, such as walls, moats, &c., which have been all demolished when the gardens about it were first planned or enlarged. It is not known by whom, or when it was built, though it is the current report, that it was built and inhabited by the Harolds, who came over here from Denmark, but more immediately from Orkney, where they bore princely sway. A much more modern building stands close to the bank of the river. The design of it has been grand and magnificent, and worthy of its princely site; and had it been finished, it would, in all appearance, have been one of the most stately and commodious edifices in the North, according to the style of those times. The work has been carried on a few feet above the vaults.

* The tract of ground now called Halkirk, consisted formerly of two parishes, viz., Skinnet and Halkirk. Their union took place some time after the Reformation. Circumstances make it probable, that Halkirk was no parish at all before the Reformation; but that Skinnet was a stated parish of very early date. "Halkirk, by all I can learn or conjecture," says the writer of the Old Statistical Account, "was originally no more than a chaplaincy occupied by the Bishop's chaplain, who also served the great family that had one of its seats at Bawell,—a place very near the chapel. Here also the Bishop had one of his seats, within a few yards of the present manse. It was here—as I have it from report—that the Bishop was assassinated by a set of ruffians from Harpsdale,—a place belonging to the chaplainry. These savages were the sons of John of Harpsdale, whom the then Earl of Caithness suborned as instruments very fit for the execution of that horrid deed, in revenge of the Bishop having assessed his lands in the chaplainry with an addition to the chaplain's living.—The spot where the chapel formerly stood—and where now the kirk of the two united parishes stands—is a small round hill, in the middle of a large extensive plain. From this spot, as the centre, there is a very gentle rise, almost in every direction, to the surrounding hills. From this circumstance, it is more than probable the parish derives its name; for the rising ground whereon the kirk stands is called *Tore-Harlogan*, and the kirk, *Teaumput-Harlogan*; and so they retain the original Irish names, though the parish is called by the name of *Harrigg*, and more frequently of *Halkirk*, manifestly [?] a corruption of the original name, *Tore-Olaggan*. Now, *laggan*, in Erse, signifies 'a low place,'—the lowest in the neighbourhood,—and *tore*, 'a mount,' or 'small hill.' As to the name of the other parish, it is sometimes pronounced *Skinnet*, sometimes *Skinit*, sometimes *Skinnit*, sometimes *Skinnon*, sometimes *Skinnine*. Nothing can be concluded from this confused variety of pronunciation; but from the situation of the kirk, with the aid of these sounds, I have reason to believe that the real name should be *Skiea-Noyffe*, 'the Wing of the Burn'; for that place goes off from the burn that runs beside it, in the form of a wing."

† "So lightly were clergy and divine worship esteemed some time after the Reformation, that in Mr. Cumming's days—the last Episcopalian minister in this parish—there was no singer of psalms in church but the lettergae, as they called the precentor, and one Tait, gardener in Braal. This Tait sung so loud, and with such a large open mouth, that a young fellow, of the name of Iverach, was tempted to throw a small round stone into his mouth, whereby his teeth were broke, and his singing stopped at once, and he himself almost choked. Iverach immediately took to his heels; the service was converted to laughter; two of Tait's sons chased and overtook him, and the scene was closed with a most desperate fight."—*Old Statistical Account*.

Though there was abundance of stones ready at hand, and well-calculated for building on any plan, yet, to suit the grandeur and elegance of the design, vast numbers of large freestone were brought from the shore, at the distance of 8 miles. This carriage was attended with great labour and expense in the then state of the roads, and occasioned, it is said, the death of several men and horses. The failure of funds also, and in short, all things put together, speedily effected a total miscarriage of the undertaking, and left this piece of work as a standing monument of the undertaker's great spirit, but of his great folly also. It was begun by John Sinclair, one of the Earls of Caithness, distinguished by the mock appellation of "John the Waster," but in what year is not known. —The next piece of antiquity worthy of notice is Dirlet castle. It stands in a very beautiful romantic place, called Dirlet, on a round high rock, almost perpendicular on all sides. The rock and castle hang over a very deep dark pool in the river Thurso, which runs close by its side. On each side of the river and the castle, are two other rocks much higher, looking down over the castle with a stately and lowering majesty, and fencing it on these sides. The last inhabitant was a descendant of the noble family of Sutherland. He was called in Erse the *Ruder derg*, that is, 'the Red knight.' Having been denounced a rebel for his oppressive and violent practices, he was apprehended by Mackay of Farr, his own uncle, and died while on his way to Edinburgh —some say to Stirling—to be tried for his life.—Loch-More castle, 8 miles above Dirlet, is situated on the banks of Loch-More, hanging over the point where the first current of the river of Thurso issues out of it. It is said, by report, to have been built and inhabited by a personage called Morrar na Shean, that is, 'the Lord of the Game,' because he delighted in these rural sports.*—At a place called Achnavarn, near the loch of Cathel, there are the remains of a building of great strength. Population, in 1801, 2,545; in 1831, 2,847; in 1836, 3,085, of whom about 150 were resident in the kirk-town. Houses, in 1831, 515.—This parish is in the presbytery of Caithness, and synod of Sutherland and Caithness. Patron, Sir James Colquhoun, Bart. Stipend £205 19s. 1d.; glebe £8. Unappropriated Crown teinds £302 1s. 9d. Church built in 1753; enlarged in 1833; sittings 858.—There is a Mission-house at Acharainy on the property of Sir George Sinclair; sittings 403. Stipend £95.—There were 8 private schools, besides the parish-school, in this parish in

1834. Salary of parish-schoolmaster £36 14s. 4½d., with about £15 fees.

HALIVAILS (THE), two mountains in the parish of Kilmuir, isle of Skye, elevated about 2,000 feet above the level of the sea. These mountains are situated within a mile of each other, are of an equal height, and exactly resemble each other. On the top of each is a flat or table-land; and they afford an excellent land-mark for these coasts.

HALLADALE (THE), a river which takes its rise at the base of the Ben-Griam mountains, in the parish of Kildonan, and, taking a northerly direction, after a course of 20 miles, falls into the Pentland frith at the Tor on Bighouse-bay, 5 or 6 miles south-east of Straththead. It is a rapid stream, and receives many tributary rivulets from the neighbouring mountains to Golval, whence it flows through level ground to the sea. The tide flows about 2 miles up the river, but it is only navigable by boats. Strath-halladale is under the ecclesiastical charge of the same missionary who officiates at Acharainy mentioned in Halkirk.

HALLYARDS, a barony in the parish of West Calder in Mid-Lothian. John Graham of Hallyards succeeded to the office which Sir Archibald Napier had held, of justice-depute to the Earl of Argyle; and at the trial of Morton, in 1581, he presided in that capacity. On the trial of Gowrie in 1584, he was appointed justice by special commission; and immediately thereafter obtained the place of an ordinary Lord-of-session in the room of Robert Pont, who was then removed under a peremptory act, incapacitating 'all persouns exercising functions of ministrie within the kirk of God to bear or exerce any office of civil jurisdiction.' David Moyse—who has left a very curious journal of his time—records; that in June 1590, "the Lordis of Sessioun wer intendit to be altered, and sum accusatioun past betwix Mr. John Grahame and Mr. David M'Gill, bathe Lordis of the Sessioun, ather of thame accusing utheris of bryberie and kneaverie." But Graham afterwards became involved in a matter yet more serious, and which proved fatal to him. "The estate of Hallyards consisted of Templelands, [see article WEST CALDER,] which Graham had obtained through his wife, the widow of Sir James Sandilands of Calder. That lady held them upon a title granted by her first husband, whose tenants in those lands had a preferable right of possession. To defeat this, a deed was forged by a notary, at the suggestion of William Graham, a brother of the Lord-of-session, by which it was made to appear that these tenants had yielded their preferable right; and consequently, they were cast in an action raised to establish it. But the forgery was discovered, and the notary hanged; upon which John Graham raised another action against the minister of Stirling, who, he alleged, had extorted a false confession from the unfortunate notary. This proceeding brought the General Assembly of the Church and the Court-of-session into violent collision. The Assembly cited Graham to appear before it, and answer for his scandal against the church. The Court-of-session stood up for the independence of their own jurisdiction and members; and sent their president Lord Provand, with the Lords Culross and Barnbarrach, as a deputation to the ecclesiastical court, disclaiming the Assembly's right to interfere in the matter. Both jurisdictions were obstinate, and the dispute was quashed without being properly adjusted. The result was, that the tenants of the Temple lands pursued the young heir of the original proprietor, whose tutor and uncle, Sir James Sandilands, took up the matter with all the vindictive

* It is said that there was a chest, or some kind of machine, fixed in the mouth of the stream, below the castle, for catching salmon in their ingress into the loch, or their egress out of it; and that, immediately on the fish being entangled in the machine, the capture was announced to the whole family by the ringing of a bell, which the motion and struggles of the fish set agoing, by means of a fine cord, fixed at one end to the bell in the middle of an upper room, and at the other end to the machine in the stream below. This Morrar na Shean, according to report, was very anxious and impatient to have a son to inherit his estates and honours; but he had three daughters successively, at which he was greatly disappointed and enraged. The mother, dreading more and more her husband's displeasure, and ill-usage of herself and the infants, sent them privately to a place where, without his knowledge, they were reared up into very beautiful and accomplished young ladies, all along amusing the barbarian husband and parent with the pretext that they were dead. Morrar na Shean, at last despairing of having any more children, and making a vast regret that he had no child at all, his lady suddenly presented his three daughters to him, and thereby converted his rage and discontentment into a transport of joy and surprise. The young ladies were soon disposed of in marriage; the eldest to a Sinclair from the Orkneys, the second to a Keith, and the last to one of another name but of some rank. "This story," adds the writer of the Old Statistical Account, "is wild and romantic, but it is by no means irreconcilable to the savage notions and barbarous usages of these dark and superstitious times. It may not be altogether according to the original fact; but it is exactly the current tradition of the neighbourhood."

violence of the times. The Duke of Lennox lent his powerful aid; and, says Calderwood, 'upon Tuesday, 13th February, 1593, Mr. John Graham of Hallyards went out of Edinburgh towards Leith, being charged to departe oof the toun. The Duke and Sir James Sandilands following as it were, with clubs in their hands, and coming down Leith-wynd, one of Mr. John's company looked back, and seeing them, they turned to make resistance. The Duke sent and willed them to go forward, promising no man should invade them; yet Mr. John Graham's company shot, whereupon the Duke suffered Sir James and his company to do for themselves. Mr. John was shot; his company fled before ever he was carried to a house. Sir Alexander Stuart's page, a French boy, seeing his master slain, followed Mr. John Graham into the house, dowed a whinger into him, and so despatched him. Before this encounter, Mr. John was accompanied with three or four score.' The tragic end of this unhappy Lord-of-session affords a curious picture of the times, and shows," says Mr. Mark Napier, in his 'Memoirs of John Napier of Merchiston,'—"that our philosopher acted wisely in his endeavours to prevent *cumner* in such matters, and in his anxiety to '*melt with na sik extraordinary doings*.'"

HALTREES, an ancient chapelry in the parish of Heriot, in Mid-Lothian; 5 miles north-west of Stagehall.

HALYBURTON, a chapelry anciently valued at 4 merks, and appendent to the rectory of Greenlaw. It is situated in Berwickshire, upon the river Blackadder, at the distance of 3 miles north-west of Greenlaw. It furnished the title of baron, in 1401, to Sir Walter Halyburton. See **GREENLAW**.

HAMILTON, a parish in the middle ward of Lanarkshire; bounded by the parish of Bothwell on the north; by Dalziel, Cambusnethan, Dalsers, and Stonehouse on the east; by Glassford on the south and south-west; and by Blantyre on the west. For nearly 5 miles the Clyde forms the north and north-east boundary of the parish, excepting in one place where a large corner is cut off on the north side of the river. In form it is nearly a square, extending 6 miles each way, and contains 22.25 square miles, or 14,240 imperial acres. Originally the name of this parish and lordship was *Cadyhou*, *Cadyou*, or *Cadzow*, and the latter designation is still retained by Cadzow burn which waters the parish. The name was, however, changed from Cadzow to Hamilton in 1445, by virtue of a charter granted by James II. of Scotland to James, 1st Lord Hamilton. The parish was at that time erected into a lordship. Hamilton of Wishaw says—"This lordship was anciently the proprietie of the kings of Scotland, there being severall old charters be Alexander the Second and Alexander the Third, kings of Scotland, dated 'apud castrum nostrum de Cadichou,' call'd afterwards the castle of Hamilton. The precise tyme when this lordship was given to the Duke of Hamilton his prediceors is not clear; but there is ane charter extant, granted by King Robert Bruce in the 7th year of his reigne, 1314, to Sir Walter the sone of Sir Gilbert de Hamilton, of this baronie and the tenderry of Adelwood, which formerly belonged to his father Sir Gilbert, and heth, without any interruption, continued in that familie since; and was long since joynted to the baronie of Bothwell by a stately bridge of four great arches over the river of Clyde, where there is a small duty payed by all passengers to the town of Hamilton, for upholding the bridge." Along the Clyde lie extensive valleys of a deep and fertile soil. Thence the land rises gradually to the south-west, to a considerable height: in the higher parts to more than 600 feet above the

level of the sea. Still it is not a hilly district, these ascents being formed of an undulating upward swell. The soil of the rising ground is mostly of a clayish nature. The lower parts of the ascent are tolerably fertile and well-cultivated; but from the nature of the soil and bottoms, it is not an early district—the higher parts often producing scanty and late crops. There are a few swampy meadows in the upper part of the parish, but with this exception, and that of the woods, it is almost entirely arable. After all, this parish is rather a beautiful than a fertile one, and according to the Old Statistical Account, "cultivation has been more successful in enriching the scenery than in multiplying the annual productions." The district is exceedingly well-fenced and wooded, and the crops raised comprise every thing included in the usual agricultural catalogue: viz. wheat, barley, oats, beans, hay, flax, and potatoes. Orchard-produce is not cultivated here so extensively as in many parishes in Clydesdale; but there are nevertheless many large gardens in the parish, which are not only productive in themselves, but add vastly to the beauty of the landscape. There is some fine wood in the parish, particularly the "old oaks" behind Cadzow, which are scattered over a noble chase of 1,500 acres, and are supposed to have been planted by David, Earl of Huntingdon, afterwards king of Scotland, about the year 1140. Many of these trees have attained a vast size, and there is one of them called 'the Boss tree,' near Wood-house, which is capable of accommodating eight persons in its interior. In the glades and openings between these olden trees, nearly 80 of the ancient British breed of white cows are browsing. Their bodies are purely white, with the exception of the ears, muzzles, and hoofs, which are black; and they are perfectly safe and docile, excepting when they have young, to which they manifest a more than usual affection.* A number of fallow-deer are kept in a field on the opposite bank of the Avon. Coal, lime, and ironstone abound in the parish. The former is most extensively worked at Quarter, about 3 miles from Hamilton. It is brought from Quarter by a railway laid along the banks of the Avon; and it is stored at Avonbridge within half-a-mile of the town of Hamilton at from 3s. 9d. to 4s. a ton, whence it is carted into the town at from 10d. to 15d. a ton. There are valuable beds of lime at Crooked-stone and Boghead in the south-west portion of the parish; and at these places also ironstone occurs below the lime, but it has not been worked.—In addition to the Clyde, this parish is watered by the Avon [which see], and nine small streamlets, six of which fall into the Avon, and three into the Clyde. The course of the Clyde has been often described, but the scenery on some parts of the banks of the Avon, after it enters the parish, at Millheugh-bridge, is almost unsurpassed in picturesque grandeur and beauty. In many places the rocks raise their bristling summits to the height of 300 feet above the bed of the streamlet, and are often crowned with majestic oaks.—The ruins of Cadzow castle stand on a lofty rock on the west bank of the Avon. It has been a ruin for two and a half centuries, and, as has been stated, some of the charters of the Scottish kings are dated from it. It is celebrated in the beautiful ballad of "Cadzow Castle," by Sir Walter Scott.—On the eastern side of the river is seen the chateau of Chatelherault, with its red walls, its four square towers, and its pinnacles. It is understood to have been built in imitation of the citadel of Chatelherault in Poitou, about the year 1732. "It is a sumptuous pile; but con-

* For a description of this fine breed of cattle, see article **CUMBERNAULD**. See also a paper by the Rev. W. Patrick in 'Quarterly Journal of Agriculture,' vol. ix.

tains the odd assemblage of a banquetting-house, and a dog-kennel. It stands on a rising ground near the Avon; the banks of which river form a deep, woody dell behind it; open in many parts, and in general wider, and of larger dimensions, than these recesses are commonly found. Frequent as they are in mountainous countries, and rarely as they are marked with any striking or peculiar features, yet they are always varied, and always pleasing. Their sequestered paths; the ideas of solitude which they convey; the rivulets which either sound or murmur through them; their interwoven woods, and frequent openings, either to the country or to some little pleasing spot within themselves, form together such an assemblage of soothing ingredients that they have always a wonderful effect on the imagination. I must add, that I do not remember ever meeting with a scene of the kind which pleased me more than the wild river-views about Chatelherault." [Gilpin's 'Observations,' vol. ii. p. 66.]—In the romantic dell of the Avon are also situated the ancient terraced gardens of Barncluth, or Baron's Cleugh, the property of Lord Ruthven. The house is situated on the top of a bold bank, with walks cut out of the rock, one under the other descending towards the river, supported by high walls, and beautified by fruit-trees of various kinds, and commands an enchanting prospect of the wooded banks of the Avon, and the delightful amphitheatre around and beyond.—The post-town of the parish is Hamilton, distant $10\frac{3}{4}$ miles from Glasgow, and 36 from Edinburgh. In this parish there are 15 miles of turnpike, and about 30 miles of parochial road.* The great Glasgow and London road, and the Edinburgh and Ayr road pass through the parish; and upon the London road—the line of which through the town has been recently altered and improved—there is an imposing bridge over the Cadzow-burn, of three arches, of 60 feet span, and the parapet of which is 60 feet above the bed of the streamlet. There is also a new bridge over the Avon on the same line of road. Farther up the stream is an old bridge of 3 arches, said to have been built long since at the expense of the monks of the monastery of Lesmahagow. Hamilton bridge, over the Clyde, upon the Edinburgh road, has 5 arches, and was built by authority of parliament in 1780. It is burdened with a pontage for foot-passengers. Bothwell bridge, also over the Clyde, is well known to history: see BOTHWELL. The population of the town and parish was, in 1801, 5,911; in 1811, 6,453; in 1821, 7,613; and in 1831, 9,513. By a census recently taken, however, the numbers have increased to 9,822. According to the census of 1831, there were in the town 7,490 persons; in villages 500 persons, and in the landward part of the parish, 1,523. The old valued rent of the parish is £9,377 Scots; but according to the New Statistical Account, the average gross rental of the landward part of the parish is £11,537 6s. 3d., and of the burgh £8,638 4s. 7½d. Total £20,175 19s. 10d.

* It has been proposed to form a railway, from the termination of the Pollock and Govan railway at Rutherglen, to the town of Hamilton. This railway would be led under the Bantyre road by a tunnel 130 yards in length; and would cross the Rotten Calder water by a viaduct. The distance from Glasgow by this line, would be 10 miles 39 chains. Mr. Locke adopts this line as the commencement of the Clydesdale line of railway between Glasgow and Carlisle. This line would be led by a viaduct 32 chains in length, through the town of Hamilton; and at 7 miles' distance from Hamilton would cross the Nethan water by a viaduct 850 feet in length, and 232 feet in extreme height; it would approach within a mile of Lanark, and enter Dumfriesshire near the Clyde's Nap. The remaining part of its course to Carlisle—a distance from Hamilton of 90 miles 35 chains—is traced in a note to our article DUMFRIES-SHIRE.

Assessed property, £18,863. Houses, in 1831, 1,013.—This parish is situated in the presbytery of Hamilton, and synod of Glasgow and Ayr. The ancient parish of Cadzow comprehended the present parish of Hamilton, in addition to the chapelry of Machan, now the parish of Dalsersf. David I., with consent of his son, Earl Henry, made a grant of the church of "Cadihou," with its pertinents, to the Bishops of Glasgow, and the grant was confirmed by the bulls of several Popes. The church of Cadihou was afterwards constituted a prebend of the Cathedral church of Glasgow, by John, the Bishop of that see; and his successor, Herbert, granted to the dean and canons the lands of Barlanerck and Badlernock, in augmentation of the prebend. Long before the Reformation, however, the chapelry of Machan was erected into a separate parish by the name of Dalsersf, but the rectory of the parish-churches of Hamilton and of Dalsersf continued to belong to the prebend of the dean of Glasgow down to the epoch of the Reformation. When the church was erected into a prebend, a vicarage was instituted for serving the cure. In 1589, the king granted to James, Earl of Arran, and his heirs male, the right of patronage of the deanery of Glasgow with the parsonage of the churches of Hamilton and Dalsersf; and this part was ratified to the Earl's nephew, James Marquis of Hamilton, in 1621. The patronage of the collegiate church of Hamilton—which has been recently uncollegiated—has ever since remained in the noble house of Hamilton. At the period of the charge being made collegiate in 1451, James, Lord Hamilton, built a fine Gothic church, with a choir, two cross aisles, and a steeple; and this continued the parish-church down till 1732, when a new church was built, and the old one removed, with the exception of the aisle, which contains the burying vault of the family of Hamilton. For further particulars of the ecclesiastical state of the parish, see BURGH OF HAMILTON.

As has been stated, the old Scottish kings held their courts at Cadzow castle, which continued to belong to the Crown till after the battle of Bannockburn; and the district has occasionally been the scene of important events in the history of the kingdom. In the times of trouble, Hamilton was a sort of headquarters of the Covenanters, and the majority of the inhabitants were devotedly attached to the cause. In the winter of 1650 Cromwell despatched General Lambert and Commissary-general Whalley to Hamilton, with five regiments of cavalry; for the purpose of keeping the Covenanters of the district in check, or of seducing them over to his own views. They were attacked by a party of 1,500 horsemen from Ayrshire, under Colonel Kerr, and a great number of horses fell into the hands of the Covenanters; but Lambert having rallied his forces, attacked the Covenanters in turn, at a spot 2 miles from Hamilton, killed Colonel Kerr, with about 100 of his men, and took a great number of prisoners. In June 1679 Graham of Claverhouse, when upon his way to the field of Drumclog, seized, near the town of Hamilton, John King, a field-preacher, and 17 other persons, whom he bound in pairs and drove before him in the direction of Loudon hill. After their success at Drumclog, the Covenanters marched to Hamilton, and resolved upon an attack on Glasgow, but, as is well-known, they were severely repulsed, after which they again retired to Hamilton, where the more moderate portion of the body drew up the document which afterwards obtained the name of, 'the Hamilton declaration,' and the purport of which was to deny any intention of overturning the government, to forbear all disputes and recriminations in the meantime, and to refer all matters to a free parlia-

ment and a general assembly lawfully chosen. This proposition was scouted by the violent party, and their guard being attacked in the night-time, near Hamilton ford, one of their number, named James Clelland, was killed. After the disastrous battle of Bothwell Brig, the fugitives fled in all directions through the parish, and Gordon of Earlstone, who had reached the parish with a body of men under his command from Galloway, met his vanquished brethren near Quarter, at which place he was killed. About 1,200 men were taken prisoners in the parish by the king's troops; and it is well-known that many of the persecuted 'hill folk' only escaped death by hiding in Hamilton woods. For this safety they were much indebted to the amiable and generous Anne, Dutchess of Hamilton, who begging of the Duke of Monmouth, the commander, that the soldiers might not be permitted to enter her plantations, the request was immediately complied with, and thus many lives were saved which, but for her interference, would have been sacrificed.—The parish contains, or lately contained, the ruins of many old edifices, whose pristine glory has long since departed, among which may be named Silvertown-hill, Earnock, Ross, Motherwell, Nielsland, Barncluth, Allanshaw, Damgaber, ('the house between the waters,' the foundations of which can now scarcely be traced,) Edlewood, Mirritoun, and Udstoun, which were formerly seats of different scions of the house of Hamilton. Cadzow castle—formerly alluded to—still remains an interesting ruin, though time has left no record of its erection. The keep of the castle, with the fosse around it, a narrow bridge over the fosse, and a well in the interior, are still in a fair state of preservation. They are constructed of a reddish coloured polished stone. Some vaults, walls, and other remains are yet visible.—There is a Roman tumulus in the parish, near Meikle-Earnock, about 2 miles from Hamilton. It is 8 feet high, and 12 feet in diameter. When broken up many years ago, a number of urns were found containing the ashes of human bones, and amongst them the tooth of a horse. There was no inscription seen; but some of the urns—which were all of baked earth—were plain, and others decorated with moulding, probably to mark the quality of the deceased.—In the haugh, in the vicinity of the palace of Hamilton, an ancient moat-hill or seat of justice is pointed out. It is about 30 feet diameter at the base, and 15 feet high, and is evidently a construction of great antiquity.—The celebrated Dr. Cullen was a native of this parish, having been born in it April 15, 1710. He was a magistrate of Hamilton for a number of years. Lord Cochrane, now the Earl of Dundonald, spent many of his younger years in the parish; and the father of the late Professor Millar of Glasgow was one of the parochial clergymen, as was also the father of the late Dr. Baillie of London, and his celebrated sister Joanna.

The Ducal house of Hamilton being so intimately connected with this parish and district, a short sketch of its history may not be uninteresting. This illustrious family is said to be descended from Sir William de Hamilton, one of the sons of William de Bellomont, 3d Earl of Leicester Sir William's son, Sir Gilbert Hamilton, having spoken in admiration of Robert the Bruce, at the court of Edward II., received a blow from John de Spencer, who conceived the discourse was derogatory to his master. This led, on the following day, to an encounter in which Spencer fell, and Hamilton fled for safety to Scotland in 1323. Having been closely pursued in his flight, Hamilton and his servant changed clothes with two woodcutters, and, taking the saws of the workmen, they were in the act of cutting an oak-tree when his pursuers passed. Perceiving his servant to

notice them, Sir Gilbert cried out to him 'Through!' which word, with the oak and saw through it, he took for his crest in remembrance and commemoration of his escape. He afterwards became a favourite with Robert Bruce, and from an old manuscript it appears that he was one of seven knights who 'kept the king's person' in the field of Bannockburn, and afterwards continued with him till his death, and attended his burial at Dunfermline. Sir Walter de Hamilton, the son of Sir Gilbert, acquired the lands of Cadzow, in the sheriffdom of Lanark, and others; and from him was descended, in the fifth degree, Sir James Hamilton of Cadzow, who was the first peer of the family. He was originally attached to the powerful family of Douglas, and was an important adherent of the Earl of that name, when in 1455 that nobleman took the field in open rebellion against his sovereign. Sir James, however, deserted from Douglas to the king, almost upon the eve of a battle, upon which the chances appeared as much in favour of the subject as the sovereign, and his example being followed by others, the army of Douglas rapidly disappeared, and ruin came upon his once potent house. For this notable service Sir James was created a lord of Parliament, and he also obtained a grant, dated 1st July, 1455, of the office of sheriff of the county of Lanark, and subsequently grants of extensive territorial possessions. He married for his second wife, in 1474, Mary, eldest daughter of King James II., and widow of Thomas Boyd, Earl of Arran. Dying in 1479 he was succeeded by his only son, James, second Lord Hamilton, who obtained a charter of the lands and earldom of Arran in 1503. This nobleman was constituted lieutenant-general of the kingdom, warden of the marches, and one of the lords of the regency in 1517. He was succeeded by his son James, the second Earl, who had only, betwixt him and the throne, Mary daughter of James V., and afterwards Queen of Scots. In 1543 he was declared heir-presumptive to the Crown, and was appointed guardian to Queen Mary, and governor of the kingdom during her minority. He was mainly instrumental in bringing about the marriage of the youthful princess to the Dauphin, in opposition to the wishes of Henry VIII. of England; and in token of his approval of these services, the French king—Henry the Second—conferred upon him the title of Duke of Chatelherault, in addition to a pension of 30,000 livres a-year. He continued to take an active part in public affairs till his death in 1575, when he was succeeded in the earldom of Arran by James his eldest son, the dukedom of Chatelherault having been resumed by the French crown. This nobleman, upon the arrival of Queen Mary, in 1561, openly aspired to the honour of her hand, but having opposed the enjoyment of the Queen's exercise of her religion, and having entered a protestation against it, he entirely lost her favour. His love, inflamed by disappointment, gradually undermined his reason, and at last he broke out into ungovernable frenzy. He was in consequence declared by the cognition of inquest to be insane, and the estates of his father devolved upon his brother, Lord John Hamilton, commendator of Aberbrothock, who, in 1567, was one of those who entered into an association to rescue Queen Mary from the castle of Lochleven, and upon her escape she fled to his estate of Hamilton, and there held her court. From thence she proceeded to Langside where her forces were defeated by the Regent Murray. The castle of Hamilton was besieged and taken, and Lord John went into banishment. The fealty of this nobleman to his unhappy Queen never swerved for a moment; and so well aware was she of his fidelity that one of her last acts was to transmit to him a ring—which

is still preserved in the family—through the medium of an attendant. He was recalled by James VI., restored to the family-estates, and created, in 1599, Marquis of Hamilton. Dying, in 1604, he was succeeded by his only son, James, 2d Marquis, who also obtained an English peerage by the titles of Baron of Ennerdale in Cumberland, and Earl of Cambridge. He died in 1625, and was succeeded by his eldest son, James, 3d Marquis, who was created Marquis of Clydesdale, and in 1643 Duke of Hamilton, and received a grant of the hereditary office of keeper of Holyrood palace. He warmly espoused the cause of King Charles I., and promoted 'the engagement' to raise troops for the service of his sovereign. As is well-known, he was defeated at the battle of Preston, where he was made prisoner, and being brought to trial by the same court by which the king had been condemned, he was found guilty of having levied war upon the people of England, and suffered decapitation in Old Palace-yard on 9th March, 1649. His Grace was succeeded by his brother, William, the 4th Marquis, and 2d Duke, who had previously been elevated to the peerage as Lord Macanshire and Polmount, and Earl of Lanark. The duke was mortally wounded in the cause of Charles II. at the battle of Worcester, and by Cromwell's act of grace, passed in 1654, he was excepted from all benefit thereof, and his estates forfeited, reserving only out of them £400 a-year for his dutchess for life, and £100 to each of his four daughters and their heirs. His Grace's own honours fell under the attainder, and his English dignities expired, but the Dukedom of Hamilton, in virtue of the patent, devolved upon his niece, the eldest daughter of James, the first Duke. Lady Anne Hamilton, Dutchess of Hamilton, introduced the Douglas name into the family by marrying Lord William Douglas, eldest son of William, first Marquis of Douglas, and she obtained by petition for her husband, in 1660, the title of Duke of Hamilton for life. His Grace had previously been elevated to the peerage as Earl of Selkirk. This peer sat as president of the convention parliament, which settled the crown upon William and Mary. He died in 1694, and was succeeded by his eldest son, James, Earl of Arran, who, upon the Dutchess, a few years afterwards, surrendering her honours, became then, by patent, Duke of Hamilton, with the precedence of the original creation of 1643, in the same manner as if he had originally inherited. He was created an English peer in 1711, as Baron of Datton in the county of Chester, and Duke of Brandon in the county of Suffolk; but upon proceeding to take his seat in the House of Lords it was objected, that by the 23d article of the Union, "no peer of Scotland could, after the Union, be created a peer of England;" and the house came to this resolution after a protracted debate. The Duke having accepted a challenge from Charles, Lord Mohun, fought that nobleman in Hyde Park on 15th November, 1712, and having slain his opponent fell himself, through the treachery, as was suspected, of General Macartney, Lord Mohun's second, for whose apprehension a reward of £500 was subsequently offered. Macartney eventually surrendered and was tried in the court of king's bench in June 1716, when he was acquitted of the murder, and found guilty of manslaughter. His Grace was succeeded by his son, James, 5th Duke of Hamilton and 2d Duke of Brandon, who died in 1742-3, and was succeeded by his eldest son, James, the 6th Duke, who died in 1758. He was succeeded by his son James George, the 7th Duke, who succeeded to the Marquisate of Douglas and Earldom of Angus, upon the demise, in 1761, of Archibald, the last Duke of Douglas. The guardians of his Grace asserted his right and

laid claim to the Douglas estates, upon the ground that Mr. Stewart, son and heir of Lady Jane Stewart, sister of the Duke of Douglas, was not her son, and this led to a most unwonted legal contest, ending in the defeat of the Hamiltons, and known as the celebrated Douglas cause: See Note to article DOUGLAS. His Grace died unmarried in 1769, and the honours devolved upon his brother Douglas, the 8th Duke, who, in 1782, again brought up the point decided against his predecessor, the 4th Duke, relative to his right to a seat in the house of lords; after the opinion of the judges had been taken, he obtained a resolution in his favour, and was consequently summoned to the house of lords as Duke of Brandon. He died in 1799 without issue, and the title and estates reverted to his uncle, Archibald, the 9th Duke of Hamilton and 6th Duke of Brandon, eldest son, by his third wife, of James 5th Duke of Hamilton. Archibald died on 16th February, 1819, and was succeeded by Alexander Hamilton Douglas, the 10th and present Duke. The Duke of Chateaufort still finds a place in the roll of titles belonging to the family, as it was never formally abandoned by them, but it is not now legally recognised either in this country or in France. Many honourable families of the name of Hamilton have sprung from the junior branches of this noble house. It is the premier peerage of the kingdom, and its possessors have acted a conspicuous part in all the stirring incidents in Scottish history. Both from this cause and from the circumstance that, failing the Brunswick line, it is the next Protestant branch of the royal family in succession to the Crown of Scotland, the title carries with it much of the respect and veneration of the country.

HAMILTON, a town in the middle ward of Lanarkshire, and capital of the parish of that name, is situated in the centre of a pleasant and fertile agricultural district, abounding in minerals. It is 10½ miles from Glasgow; 15 from Lanark; 7 from Strathavon; 8 from Airdrie; and 36 from Edinburgh; and lies on the great London mail-road from Glasgow by Carlisle, and also on the road from Edinburgh to Ayr. It is understood to date its existence from the 15th century, and its early rise was no doubt owing to the influence of the noble family of Hamilton. Hamilton of Wishaw says—"In the tyme of King James the Second, James Lord Hamilton erected here ane burgh of baronie in the midst of ane large and pleasant valley, extending from the mouth of Aven to Bothwell bridge, near 2 myles along the river, with a pleasant burn, called Hamilton burn, running through the town and gardens, now belonging to the duke; giving out severall lands to the inhabitants to be holden of the family, reserving to themselves the superioritie, jurisdiction, and naming of the magistrates. This Lord Hamilton also founded here ane provostrie, consisting of ane provest and eight prebends, giving to each of them ane manse and yeard, and glebe in the Haugh of Hamilton; and gave them the vicarage tiends of the parishes of Hamilton and Dalserfe, together with severall lands lying within those two parishes and the parish of Stonehouse. He also built new the parish kirk of Hamilton, the quere and two cross isles and steeple, all of polished stone." No doubt therefore exists that the town owes its origin to the family of Hamilton. The situation is a very pleasant one, in a richly wooded country, on the left bank of the Clyde, and it is partly surrounded by the park of Hamilton palace. The town consists of a new and an old part, the latter of which lies on the low grounds close upon the palace, and considerable portions of it have been recently bought up, and are now untenanted, to pre-

serve the amenity and seclusion of the Ducal domain. The new part of the town, which is intersected by the great Glasgow and London road, is built with considerable regard to taste and ornament, and occupied by inhabitants of a very respectable kind. Formerly this road took an inconvenient sweep through the old or lower part of the town; but, by the recent improvement, this bend has been removed. Hamilton is a burgh-of-regality governed by a provost, three bailies, and a town-council. The territory of the regality is very extensive, and the magistrates exercise the same jurisdiction, both in civil and criminal cases, as the magistrates of royal burghs. The sheriff-court for the middle ward of the county, and the quarter-sessions for the peace are held here. The greater part of the burgh-territory is in possession of the Duke of Hamilton, but it still derives a considerable revenue from its feu-duties and other property. By the census of 1831, there were 1,036 houses in the burgh and parish, and according to the estimate of the Parliamentary commissioners, made at a more recent period, there were 300 of these rated at £10 and upwards. Hamilton presents the anomaly of having been at one time a royal burgh, and of having afterwards denuded itself of its status and privileges. The earliest charter of the burgh in the possession of the town-council is dated 23d October, 1475, and was granted by James Lord Hamilton. It recognises the burgh as a then existing burgh-of-regality, and grants to the community and bailies certain lands, and the common muir, a considerable portion of which is still retained by the burgh. The next charter was granted by Queen Mary, on 15th January, 1548, and by it Hamilton was erected into a royal burgh with certain privileges; but it would appear that two bailies, named James Hamilton and James Naismith, agreed to resign that privilege in 1670, by accepting of a charter from Anne, Dutchess of Hamilton, by which she constituted the town the chief burgh of the regality and dukedom of Hamilton. Long subsequent to this, in 1726, the then magistrates and inhabitants made an effort to throw off the superiority of the Hamilton family, and resume their long disused rights as a royal burgh; but the charter of Dutchess Anne was found to be the governing one, by the Court of Session, in an action of Declarator of the privileges of Hamilton, as a royal burgh, to the free choice of its magistrates. The court sustained the defence of the Duke of Hamilton, that the privileges of the burgh had been lost by prescription. It was not, therefore, till the passing of the Reform bill, in 1832, that the inhabitants were invested with the privilege of sharing in the election of a member of parliament: the burgh being associated for this purpose with Lanark, Falkirk, Linlithgow, and Airdrie. The revenues of the burgh are derived from lands, houses, flesh-market dues, customs, interest on shares in bridge, feu-duties, &c., and, according to the report of the Parliamentary commissioners, amounted, in 1832, to £654 per annum. In 1839-40, it amounted to £715 5s. 2½d. At the same period the debt due by the burgh amounted to £2,000, the larger portion of which had been mortgaged with the magistrates more than 100 years ago.

Although the Ducal palace has rendered Hamilton somewhat fastidious and aristocratic in its pretensions, yet it is a place not without manufactures. Since the introduction of the cotton trade into Scotland, it has been one of the principal seats of imitation cambric weaving, and employs about 1,200 looms within the town, and a few in the country. But although, about 50 years ago, this trade was a most flourishing one, it has of late been considerably on the decline. The old lace manufacture was introduced or encouraged by the

Dutchess of Hamilton, afterwards Dutchess of Argyle, but it also had almost entirely dwindled away, until resuscitated by a company about twelve years ago, and it has since gone on increasing. Upwards of 2,500 females are engaged in this manufacture in Hamilton and the adjacent parishes, and a number of black silk veils are also produced here, in addition to check shirts for the foreign colonial market.* Formerly the fairs at Hamilton were of considerable importance for the sale of lint and wool, and, about 1750, large quantities of yarn were sent from this town to the north of Ireland, but the Irish have long since learned to make yarn for themselves, and this market, of course, is entirely closed up. From this cause the fairs, of which there were five in the year, have dwindled into insignificance. In addition to those named, there is a manufactory of hempen goods, for making bags and such other purposes, a manufactory of agricultural implements, a foundery, and a few breweries. Hamilton contains within itself all the elegancies and conveniences of civilized life, and, from the existence of the cavalry barracks—which are situated at the Glasgow entrance to the town, and generally occupied by a troop from the regiment lying in Glasgow—it has often an appearance of considerable gaiety and bustle. In 1831 gas was introduced, by subscription shares, at an expense of £2,400, and when burned by meter it is sold at the rate of 10s. per 1,000 cubic feet. In 1816, a spacious trades-hall was erected in Church-street; and in June, 1833, the foundation-stone of the new prison and public offices was laid, which have since been completed and occupied. These consist of apartments for the sheriff-clerk, town-clerk, a court-room, a hall for county-meetings, and the prison and governor's house. The prison contains 43 cells, and is surrounded by a high wall, enclosing also a large open court, or airing yard, half an acre in extent. These buildings stand in the west end of the town near the cavalry barracks. There is a debt of about £1,200 upon them. The old prison was erected in the reign of Charles I., but has now been dismantled with the exception of the steeple and clock. It was situated in the lower or olden portion of the town immediately adjoining the park wall of Hamilton palace.

The ecclesiastical state of the town has been briefly noticed in the foregoing account of the parish. The

* A few years ago, a company in Nottingham established an agent in Hamilton, to procure a number of women to ornament bobbin-net with the tambouring needle. Previous to that time their whole attention had been directed to the same kind of work upon muslin; and there was so much difficulty in removing the prejudices which they entertained against the lace-work, that even a third more wages could not induce the greater part of them to embrace that which was to be so essential to their present and future interests. Mr. John Gowan, a man of considerable enterprise, commenced manufacturing caps of various shapes and patterns, collars, tippets, pelerines, veils, and dresses, &c. The variety and elegance of the patterns, the chasteness and delicacy of design, the superiority and beautiful arrangement of the work, took with the public; and, in a short time, not only every town and village in Scotland was supplied with goods of the above description, but they were eagerly bought up, and sent into the English market. The goods made in Hamilton not only excelled those of the English in neatness of make and lowness of price, but rivalled even those of the French when compared in the American market. As the embroidering of bobbin-net continued still to increase, that of muslin seemed gradually to decline; the transparency and durability of the ground, and the lively figures with which it was ornamented, attracted the notice of ladies of the first rank in the country to its use; their example was soon followed by the other classes of the community, and, as an article of dress, in a short time it became almost universal. The commercial affairs of the country were now beginning to wear a gloomy aspect, when the attention of several individuals was keenly directed to the manufacturing those articles; and some of them entering into it with ardour, it happened that Hamilton, amidst the dreadful and unparalleled distress of the country, suffered little comparatively speaking. This novel trade gave employment to a great proportion of its females; while their industry and good sense preserved many a family from undergoing those privations which were generally experienced elsewhere.

name of the original parish is the Old Church parish of Hamilton. The church is rather a handsome one, and was designed about 100 years ago, by the elder Adams, for 800 sitters. Till July 1835, the original parish was a collegiate charge. At that time, however, it was uncollegiated, *quoad sacra*, by the presbytery of Hamilton, and, in 1836, was divided by the same authority into two parishes, *quoad sacra*, the new parish receiving the name of St. John's. Patron, the Duke of Hamilton. Stipend of minister of the Old church £313 13s. 10d. There is no manse, but in lieu of one, together with an allowance in name of rent for glebe, the minister receives £107 10s. annually from the Duke of Hamilton.—St. John's, the new parish-church, was built by the Hamilton National Church association at a cost of £1,630, and was opened in 1835. It is seated for 1,100 persons. Stipend £313 13s. 10d. Patron, the Duke of Hamilton. There is a manse, but no glebe, and no provision in lieu thereof.—The first Relief congregation was established in 1776, when the church was built, which is seated for 1,105. There is a manse built in 1832, at the cost of £717, and an excellent walled garden. The stipend is £185 per annum.—The second Relief congregation was established in 1831, and their church, seated for 945, was erected at an expense of £1,300. Stipend £120 per annum without manse or glebe.—The first United Secession congregation was established in 1759, and the church built in 1761, for 582 sitters. Stipend £100 per annum, with house and garden.—The second United Secession congregation was established in 1799, and the church is seated for 656 sitters. Stipend £130 per annum, without manse or glebe.—The Independent congregation was established in 1834, and their place of meeting is seated for 230. Stipend £100 per annum, without manse or glebe.—There is also an old Scotch Independent congregation, established about 60 years since, the numbers of which are very limited, and the pastors have no emoluments. The Reformed Presbyterians also meet regularly in the town. The Catholic population are superintended by a priest from Glasgow.—Hamilton is well-known for the excellence of its educational establishments, and, in addition to the parochial or grammar-school, there are many private seminaries conducted with considerable ability. The salary of the parochial master is £34 4s. per annum, and it is understood that his fees are not less than £50, in addition to £30 for officiating as session-clerk. The school-house is a venerable erection near the centre of the town, containing a long wainscotted hall, upon which are graven the names of the former scholars, many of whom have distinguished themselves in their several walks in the world. In 1808, a public subscription library was instituted in the town principally through the exertions of the late Dr. John Hume, and it now contains more than 3,000 volumes. The charitable institutions belonging to the town and parish are of a very respectable order. The Duke's hospital is an old building, with a belfry and bell, situated at the Cross, and erected in lieu of the former one, which stood in the Netherton. The pensioners do not now reside here; but it contributes to the support of a dozen old men, at the rate of £8 18s. yearly, with a suit of clothes biennially. Aikman's hospital in Muir-street, was built and endowed in 1775, by Mr. Aikman, a proprietor in the parish, and formerly a merchant in Leghorn. Four old men are here lodged, have £4 per annum, and a suit of clothes every two years. Rae's, Robertson's, and Lyon's, and Miss Christian Allan's mortification also produce considerable sums for the support of the poor, and some other

funds have been placed at the disposal of the kirk-session for the mitigation of distress.

To the stranger, however, the great object of attraction about Hamilton is the palace of the premier Duke, situated in the immediate neighbourhood, with the enchanting grounds, laid out in lawn, woods, and gardens, stretching far away around and beyond it. The germ of this magnificent structure was originally a small square tower, and the olden part of the present house was erected about the year 1591. The structure was almost entirely rebuilt or renewed more than a century afterwards. The present Duke—whose architectural taste is well known—commenced a series of additions in 1822, which have entirely altered the character of the building, and though scarcely yet completed, promise to make it one of the most magnificent piles in the kingdom, and not inferior to the abode of royalty itself. "The modern part consists of a new front, facing the north, 264 feet 8 inches in length, and 3 stories high, with an additional wing to the west for servants' apartments, 100 feet in length. A new corridor is carried along the back of the old building, containing baths, &c. The front is adorned by a noble portico, consisting of a double row of Corinthian columns, each of one solid stone, surmounted by a lofty pediment. The shaft of each column is upwards of 25 feet in height, and about 3 feet 3 inches in diameter. These were each brought in the block, about 8 miles from a quarry in Dalsersf, on an ironstone waggon constructed for the purpose, and drawn by 30 horses. The principal apartments, besides the entrance-hall, are, the tribune, a sort of saloon or hall, from which many of the principal rooms enter; a dining-room, 71 by 30; a library and billiard-room; state bed-rooms, and a variety of sleeping apartments; a kitchen, court, &c. The gallery, 120 feet by 20, and 20 feet high, has also been thoroughly repaired. This, like all the principal rooms, is gilded and ornamented with marble, scagliola, and stucco-work. The palace stands close upon the town, on the upper border of the great valley, about half-a-mile west of the conflux of the Clyde and Avon. As a curious statistical fact we may state, that there were employed in building the addition to the palace 28,056 tons, 8 cwt., and 3 quarters of stones, drawn by 22,528 horses. Of lime, sand, stucco, wood, &c., 5,534 tons, 6 cwt., 1 quarter, 7½ lbs., drawn by 5,196 horses. In drawing 22,350 stones, 62,200 bricks, with engine-ashes, and coal-culm to keep down the damp, 731 horses were employed. Total days, during which horses were employed for other purposes, 658½. In the stables there are 7,976 tons of stones, drawn by 5,153 horses. Of lime, sand, slates, &c., 1,361 tons, drawn by 1,024 horses; besides 284 days of horses employed for other purposes." [New Statistical Account, July 1835.] The interior furnishings of the palace are, in every sense of the word, well worthy of its magnificent and imposing exterior, and here, in many instances, in the case of the cabinet and other furnishings, the triumph of art is so conspicuous that it may be truly said the "workmanship surpasses the material." The collection of paintings in the picture-gallery, which has been vastly increased by the present Duke, has been long allowed to be the finest in North Britain, and it may not be out of place to name a very few out of many that are rare and excellent. Daniel in the lions' den has been often described. The portraits of Charles the First, in armour on a white horse, and of the Earl of Denbigh in a shooting dress, standing by a tree, with a black boy on the opposite side pointing to the game, are allowed to be master-pieces by Vandyke. An Ascension-piece, by Georgione; an entombment of

Christ, by Poussin; a dying Madona, by Corregio; a stag-hunt, by Sneyder; a laughing-boy, by Leonard de Vinci; and a faithful portrait of Napoleon, by David, painted from the original, by permission granted to the present Duke, are admitted to be rare specimens of art and value. Upon the east staircase is a large altar-piece, by Girolamo dai Libri, from San Lionardo nel Monte, near Verona; and, in the breakfast-room is a picture by Giacomo da Pontormo, of Joseph receiving his father and brethren in Egypt; and a portrait of Artonelli of Mycena, said to have been the first painter in oil, date 1474. The great gallery, saloons, and principal rooms, contain a collection of splendid family-portraits, and other paintings, by many of the first masters, among whom may be named Vandyke, Kneller, Rubens, Corregio, Rembrandt, Guido, Titian, the Carracci, Salvator Rosa, Carlo Dolce, Poussin, Spagnoletti, Reynolds, &c. In the principal apartments are placed some splendid vases, rare of their kind, both for their antiquity and beauty. There are also some beautiful antique cabinets, studded with precious stones; in particular, a casket of ebony, ornamented with gold bronze, and oriental stones, which formerly belonged to the Medici family. At the extremity of the gallery is the ambassadorial throne, used by the present Duke in his embassy at St. Petersburg: on each side are two magnificent busts of oriental porphyry, of the Roman emperors, Augustus and Tiberius, and upon the walls are two excellent portraits of George III. and his queen, Charlotte, painted soon after their marriage. At the opposite end of the gallery is a splendid architectural door of black marble, the pediment being supported by two oriental columns of green porphyry, supposed to be the finest of the kind in Europe. The pieces of painting amount to more than 2,000, about 100 of which are at Chateaubault, and it is impossible to affix with any degree of exactitude a value to this mine of artistical wealth. The prints in his Grace's possession, few or none of which are exhibited to strangers, are understood to be worth not less than £15,000. Some of the cabinets are valued at from £1,500 to £2,000; and a single table, with all its ornamental gildings and carving, has been set down at £4,000. The value of the plate, including a gold set, is not less than £50,000. Altogether the halls of Hamilton palace, for beauty and costliness of ornament and furnishing, are unrivalled in Scotland.

HANDA, an island belonging to the parish of Ederachylis in Sutherlandshire. It is separated from the mainland by a narrow sound, through which vessels may pass with good pilots. Its name is derived either from the Celtic, *Aonda*, 'the Island of one colour,' or from *Aon-taobh*, 'the Island of one side,' in either of which senses the appellation is just and applicable. For viewing it from the sea upon the south it appears wholly dusky and green; and rises gradually by a gentle ascent towards the north so as to consist of one face or side, having upon the north a tremendous rock of 80 or 100 fathoms high in some places. It is about a mile square, and is famous for the numbers of sea-fowl which breed upon it. "Here once lived Little John M'Dhoil-mhich-Huishdan, a gentleman of the Assint M'Leods, who were a branch of the M'Leods of Lewis, or Shiol Torquil. He was low of stature, but of matchless strength, and skill in arms; kept always a berlin or galley in this place with 12 or 20 armed men, ready for any enterprise. Some allege he practised piracy; but of this there is no certainty. By him it was that Judge Morison of Lewis—of whom several respectable families now living there are descended—was slain. This judge had James VI.'s commission for maintaining justice and good order in that country; and

though he was murdered by this M'Leod, it was for no personal quarrel, or injury done M'Leod himself, but in revenge of his being instrumental in putting to death one of that family who acted as laird of Lewis. The preceding laird of that place dying without lawful issue, but leaving a number of natural sons—some say 60—a contention arose among them about the succession to the estate. The eldest being not so popular among the name as one other especially, the son of a gentlewoman whose parents were of considerable influence among the tribe, was obliged to leave Lewis, and live upon the mainland. Judge Morison being informed that there was a French vessel employed in killing fish contrary to law upon the neighbouring coast, sent for the reputed laird, who lived near that place, and taking also a party along with him, boarded this vessel, and made her a prize; but whether by stress of weather or design, they came to anchor below the house of the eldest of the brothers, upon the main land, who in this way getting his rival within his power, had him immediately put to death by hanging him up, thinking no more was necessary to his succeeding to the possession of the estate of Lewis. But the death of the favourite young man so irritated the whole clan of M'Leod, that they resolved nothing except the death of the judge should atone for it, and this Little John M'Dhoil-mhich-Huishdan being universally reputed the fittest person for this enterprise, it was committed to him accordingly. The judge, informed of his danger, thought fit to come and wait on the Master of Reays who then lived in Diurness, about the Christmas holidays, in order to prevail with him to protect him, and to threaten John M'Leod from attempting any thing against him. But John M'Leod being told of the judge's having left his boat at Inverchirkak in Assint, waited for him there on his return, slew both him and his brother, and after this went to Lewis and married the judge's widow. On account of the barbarity and cruelty of these M'Leods at this time, and their murder of a very promising youth who was the rightful heir of the estate of Lewis, immediately upon his coming home to his estate from Edinburgh, where he had his education under the King's eye, and this murder of Judge Morison, of whose integrity his majesty had a high opinion, the king disposed of Lewis to a company of adventurers from Fife and Dundee whose history is well-known. Among the numerous islands on this coast is one called *Elan a Bhriu*, or, 'the Island of the Judge,' from the above-mentioned Judge Morison. After he had been slain, his friends in Lewis came in a galley to bring home his corpse; but contrary winds arising drove them with the body on board to this island, where they found it convenient, after taking his bowels out, to bury them; and the wind soon after changing, they arrived in safety at home."—Old Statistical Account.

HANG-CLIFF, or Noss-head, a mural promontory on the eastern side of Bressa, one of the Shetland islands, rising to the height of 600 feet.

HANGINGSHAW-LAW, a mountain rising 1,980 feet above the level of the sea, and situated on the boundary between the parishes of Traquair and Yarrow, in the counties respectively of Peebles and Selkirk.—Hangingshaw-house, which was once an extensive edifice, is now an undefined ruin, having been devastated by fire, and never again rebuilt, although its situation is one of the most romantic in the beautiful vale of Yarrow.—The projected inland line of railway from Edinburgh to Hexham, after passing through Fala-hill, reaches its northern summit near Hangingshaw, where it is 694 feet above the level of the Carlisle and Newcastle railway at Tyne-green near Hexham, and 809 above high water

mark at Newcastle. It has been proposed to carry this line through the Border-ridge by a tunnel, 2,970 yards in length, at Note-oth-gate, the level of which would be 691 feet above that of Tyne-green at Hexham, or only 3 feet below that of the Hangingshaw summit.

HARARAY, two small islands on the west coast of Ross-shire, near Loch-Broom.

HARAY, two small islands on the east coast of the mainland of Shetland.

HARDEN CASTLE, the ancient residence of the Scotts of Harden, and a fine specimen of a Border-fortress, situated in the deep narrow vale of Borthwick water, 2½ miles above the point of that stream's junction with the Teviot, and 4 miles south-west of Hawick, Roxburghshire. The lobby is paved with marble; the ceiling of the old hall is formed of curiously-carved stucco-work; and the mantel-piece of one of the rooms commemorates the ancient noble title of the house of Harden, by bearing aloft an Earl's coronet, inscribed with the letters W. E. T., the initials of "Walter, Earl of Tarras." The house is embosomed in wood, and was of old fortified at every point where an assailant might have approached; and it overlooks, or overhangs, a deep precipitous glen, alike romantic for the mingled gloom and verdure of its thick sylvan dress, and darkly interesting as the receptacle of the droves of cattle which the well-known Border-chieftain, Wat of Harden, swept before him in his nightly raids. The scenery and associations of the place are finely and succinctly described by Leyden:—

"Where Bertha hoarse, that loads the meads with sand,
Rolls her red tide to Teviot's western strand,
Through slaty hills, whose sides are shagged with thorn,
Where springs in scattered tufts the dark green corn,
Towers wood-girt Harden, far above the vale,
And clouds of ravens o'er the turrets sail.
A hardy race who never shrunk from war,
The Scott, to rival realms a mighty bar,
Here fixed his mountain-home,—a wide domain,
And rich the soil, had purple heath been grain;
But what the nigard ground of wealth denied,
From fields more blessed his fearless arm supplied."

Mary Scott, the Lady of Harden, and the descendant of her namesake, the Flower of Yarrow, fostered, it is said, an unknown child brought home by Wat of Harden, from one of his wild excursions,—a child so gifted that he is believed to have been the modest anonymous author of not a few of the Border songs:—

"What fair, half-veiled, leans from her latticed hall,
Where red the waving gleams of torch-light fall?
'Tis Yarrow's flower, who, through the gloom,
Looks wishful for her lover's dancing plume.
Amid the piles of spoil that strew'd the ground,
Her ear, all-anxious, caught a wailing sound;
With trembling haste the lovely nymph then flew,
And from the plunder'd heaps an infant drew!
Scared at the light, his feeble hands he flung
Around her neck, and to her bosom clung;
While beautiful Mary soothed in accents mild,
His fluttering soul, and kissed her foster child.
Of milder mood the gentle captive grew,
Nor loved the scenes that scared his infant view;
In vales remote from camps and castles far,
He shunn'd the cruel scenes of strife and war.
Content the loves of simple swains to sing,
Or wake to fame the harp's heroic string;
He lived o'er Yarrow's fairest flower to shed a tear,
And strew the holly leaves o'er Harden's bier.
But none was found above the minstrel's tomb,
Emblem of peace, to bid the daisy bloom;
He, nameless as the race from whence he sprung,
Sung other names, and left his own unsung."

LEYDEN'S *Scenes of Infancy*.

HARD-MOOR. See DYKE and MOY.

HARLAW, a locality in Chapel-of-Garioch parish, Aberdeenshire, noted for a battle fought, in 1411, between the royal forces under the Earl of Mar, and the forces of Donald, Lord of the Isles.

"The fight," says Buchanan, "was severe and bloody; for the valour of many nobles did then contend for estate and glory against the ferocity of the adverse party. The night parted them at last; and it might rather be said that both parties were weary of fighting, than that any gained the victory. In this fight there fell so many noble and eminent persons as scarce ever perished in one battle with a foreign enemy for many years before; and, of consequence, the place of the engagement became famous to posterity." The origin of the feud was as follows: The male succession to the earldom of Ross having become extinct, the honours of the peerage devolved upon a female, Euphemia Ross, wife of Sir Walter Lesley. Of this marriage there were two children, Alexander, afterwards Earl of Ross, and Margaret, afterwards married to the Lord of the Isles. Earl Alexander married a daughter of the Duke of Albany. Euphemia, Countess of Ross, was the only issue of this marriage, but becoming a nun she resigned the earldom of Ross in favour of her uncle, John Stewart, Earl of Buchan. The Lord of the Isles conceiving that the Countess, by renouncing the world, had forfeited her title and estate, and, moreover, that she had no right to dispose thereof, claimed both in right of Margaret his wife. The Duke of Albany, Governor of Scotland—at whose instigation the Countess had made the renunciation—of course refused to sustain the claim of the prince of the islands. The Lord of the Isles then raised the standard of revolt; and having formed an alliance with England, from whence he was to be supplied with a fleet far superior to the Scottish, he, at the head of an army of 10,000 men, fully equipped and armed, after the fashion of the Islands, with bows and arrows, pole-axes, knives, and swords, burst like a torrent upon the earldom, and carried every thing before him. He, however, received a temporary check at Dingwall, where he was attacked with great impetuosity by Angus Dubh Mac-kay of Farr, or Black Angus, as he was called, but Angus was taken prisoner, and his brother Roderic Gald and many of his men were killed. Flushed with the progress he had made, Donald now resolved to carry into execution a threat he had often made to burn the town of Aberdeen. For this purpose he ordered his army to assemble at Inverness, and summoned all the men capable of bearing arms in the Boyne, and the Enzie, to join his standard on his way south. This order being complied with, the Lord of the Isles marched through Moray without opposition. He committed great excesses in Strathbogie and in the district of Garioch, which belonged to the Earl of Mar. The inhabitants of Aberdeen were in dreadful alarm at the near approach of this marauder and his fierce hordes; but their fears were allayed by the speedy appearance of a well-equipped army, commanded by the Earl of Mar, who bore a high military character, assisted by many brave knights and gentlemen in Angus and the Mearns. Advancing from Aberdeen, Mar marched by Inverury, and descried the Highlanders stationed at the village of Harlaw, on the water of Ury near its junction with the Don. Mar soon saw that he had to contend with tremendous odds, but although his forces were, it is said, as one to ten to that opposed to him, he resolved, from the confidence he had in his steel-clad knights, to risk a battle. Having placed a small but select body of knights and men-at-arms in front, under the command of the constable of Dundee and the sheriff of Angus, the Earl drew up the main strength of his army in the rear, including the Murrays, the Straits, the Maules, the Irvings, the Lesleys, the Lovels, the Stirlings, headed by their respective chiefs. The

Earl then placed himself at the head of this body. At the head of the Islesmen and Highlanders was the Lord of the Isles, subordinate to whom were Mackintosh and Maclean and other Highland chiefs, all bearing the most deadly hatred to their Saxon foes. On a signal being given, the Highlanders and Islesmen, setting up those terrific shouts and yells which they were accustomed to raise on entering into battle, rushed forward upon their opponents; but they were received with great firmness and bravery by the knights, who, with their spears levelled, and battle-axes raised, cut down many of their impetuous but badly armed adversaries. After the Lowlanders had recovered themselves from the shock which the furious onset of the Highlanders had produced, Sir James Scrymgeour, at the head of the knights and bannerets who fought under him, cut his way through the thick columns of the Islesmen, carrying death every where around him; but the slaughter of hundreds by this brave party did not intimidate the Highlanders, who kept pouring in by thousands to supply the place of those who had fallen. Surrounded on all sides, no alternative remained for Sir James and his valorous companions but victory or death, and the latter was their lot. The constable of Dundee was amongst the first who suffered, and his fall so encouraged the Highlanders, that seizing and stabbing the horses, they thus unhorsed their rivers, whom they despatched with their daggers. In the mean time the Earl of Mar, who had penetrated with his main army into the very heart of the enemy, kept up the unequal contest with great bravery, and, although he lost during the action almost the whole of his army, he continued the fatal struggle with a handful of men till night-fall. The disastrous result of this battle was one of the greatest misfortunes which had ever happened to the numerous respectable families in Angus and the Mearns. Many of these families lost not only their head, but every male in the house. Lesley of Balquhain is said to have fallen with six of his sons. Besides Sir James Scrymgeour, Sir Alexander Ogilvy the sheriff of Angus, with his eldest son George Ogilvy, Sir Thomas Murray, Sir Robert Maule of Panmure, Sir Alexander Irving of Drum, Sir William Abernethy of Salton, Sir Alexander Straiton of Lauriston, James Lovel, and Alexander Stirling, and Sir Robert Davidson, Provost of Aberdeen, with 500 men at-arms including the principal gentry of Buchan, and the greater part of the burgesses of Aberdeen who followed their Provost, were among the slain. The Highlanders left 900 men dead on the field of battle, including the chiefs, Maclean and Mackintosh. This memorable battle was fought on the eve of the feast of St. James the Apostle, the 24th day of July, in the year 1411, "and from the ferocity with which it was contested, and the dismal spectacle of civil war and bloodshed exhibited to the country, it appears to have made a deep impression on the national mind. It fixed itself in the music and the poetry of Scotland; a march, called 'the Battle of Harlaw,' continued to be a popular air down to the time of Drummond of Hawthornden, and a spirited ballad, on the same event, is still repeated in our age, describing the meeting of the armies, and the deaths of the chiefs, in no ignoble strain." Mar and the few brave companions in arms who survived the battle, were so exhausted with fatigue and the wounds they received, that they were obliged to pass the night on the field of battle, where they expected a renewal of the attack next morning; but when morning dawned, they found that the Lord of the Isles had retreated, during the night, by Inverury and the hill of Benochie. To pursue him was impossible, and he was therefore

allowed to retire, without molestation, and to recruit his exhausted strength. The site of the battle is thus described in the manuscript Geographical description of Scotland, collected by Macfarlane and preserved in the Advocates' Library [Vol. i. p. 7.]: "Through this parish (the Chapel of Garioch, formerly called Capella Beatae Mariæ Virginis de Garryoch) runs the king's highway from Aberdeen to Inverness, and from Aberdeen to the high country. A large mile to the east of the church lies the field of an ancient battle called the battle of Harlaw, from a country-town of that name hard by. This town, and the field of battle, which lies along the king's highway upon a moor, extending a short mile from south-east to north-west, stands on the north-east side of the water of Urie, and a small distance therefrom. To the west of the field of battle, about half-a-mile, is a farmer's house, called Legget's den, hard by, in which is a tomb, built in the form of a malt-steep, of four large stones, covered with a broad stone above, where, as the country people generally report, Donald of the Isles lies buried, being slain in the battle, and therefore they call it commonly Donald's tomb." This is an evident mistake, as it is well known that Donald was not slain. Mr. Tytler conjectures with much probability that the tomb alluded to may be that of the chief of Maclean or Mackintosh, and he refers, in support of this opinion, to Macfarlane's genealogical collections, in which an account is given of the family of Maclean, and from which it appears that Lauchlan Lubanich had, by Macdonald's daughter, a son, called Eachin Rusidh ni Cath, or Hector Rufus Bellicosus, who commanded as lieutenant-general under the Earl of Ross at the battle of Harlaw, when he and Irving of Drum, seeking out one another by their armorial bearings on their shields, met and killed each other. This Hector was married to a daughter of the Earl of Douglas.

HARPORT (Lochn), a safe harbour, on Loch-Bracadale, on the south-west coast of the Isle of Skye, in the parish of Bracadale.

HARRAY. See **BIRRAY**.

HARRIS,* a district of the outer Hebrides, comprehending the southern part of Lewis, and the small islands which surround it, of which **BERNERA**, **CALLIGRAY**, **ENSAY**, **PABBAY**, **TARANSAY**, **SCALPAY**, and **SCARP**, [see these articles,] only are inhabited; besides a vast number of pasture and kelp-isles, holms, and high rocks, which are also distinguished by particular names.

The northern part of the mainland of Harris is separated from Lewis by an isthmus of about 6 miles across, formed by the approximation of the two harbours of Loch-Resort on the west coast, and Loch-Seaforth on the east. The whole length, from the isthmus to the southern end of Harris, where the Sound of Harris separates it from North Uist, may be estimated at 25 or 26 miles. Its breadth is extremely various, in consequence of its being deeply intersected by several arms of the sea, but it generally extends from 6 to 8 miles. Harris is again naturally divided into two districts by two arms of the sea, called East and West Loch-Tarbert, which approach so near each other as to leave an isthmus

* "Till of late, this parish has been designed Kilbride, from one of the churches or cells in so called. It is now denominated, in English, Harris, and, in the vernacular dialect, *Na Heradh*, that is, 'the Herries,'—a name which seems to be Gaelic, though we cannot pretend to trace its origin with precision. A fanciful etymologist might derive it from *na har-dubh*, signifying 'the Heights,' this parish being in reality the highest and most mountainous part of the Long-Island, in which it is situated; and another circumstance, which seems to give countenance to this derivation, is, that the highest part of the island of Rum, another of the Hebrides is also called *Na Heradh*."—*Old Statistical Account*.

of not more than a quarter of a mile in breadth.* The northern district, between Tarbert and Lewis, is termed the Forest, though without a tree or shrub.† It is also sometimes called *Na Beannibh*, that is 'the Mountains.' Its surface is exceedingly mountainous, rising in CLISHEIM [which see] to nearly 3,000 feet above the sea. These mountains are in general bare and rocky; but the valleys contain tolerable pasturage; and some coarse grass is found growing in the interstices of the mountains. The largest stream empties itself into Loch-Resort. Along the eastern and western shores there are a number of creeks or inlets of the sea—most of them commodious harbours—at each of which a colony of tenants contrive, by a wonderful exertion of industry, to raise crops from a soil of the most forbidding aspect; but in the whole of this tract there is not a piece of good arable land of the extent of 4 acres. There are several lakes in the valleys, at various altitudes, but none exceeding 2 miles in length. On the east coast is the low swampy island of Scalpay; and on the west, the high and rocky island of Scarp.

The surface of the ground south of Tarbert is much of the same appearance as the northern district; but the mountains are not so elevated. The highest are Ronaval, Bencapool, and Benloskentir, which have an altitude of nearly 2,000 feet. "The aspect of this region, as seen from the Minch, is singularly uninviting, almost the whole surface appearing to consist of bare white rock. Indeed, a more perfect picture of sterility can scarcely be imagined. Viewed from the west, however, this district has a very different appearance,—the shores being in general sandy, and the hills for the most part covered with a green vegetation. Along the east coast—which is everywhere rocky and low—there are numerous inlets and creeks, here denominated bays, that word being supposed to correspond to the Gaelic *baigh*, which latter, however, appears to be nothing else than a corruption of the Danish *voe*. Many of these afford good harbours. Many small islands lie along this coast. The southern shore partakes in a great measure of the nature of the eastern, being rocky and low; but toward the west side it exhibits a few sandy beaches, and ends in a tremendous precipice, with a high neck of land running out from it, in which there are two fine caves. On the west coast there are, besides several sandy beaches, two great sands—or *fords*, as they are here called—namely, the sand of Northtown and that of Loskentir. They consist of nearly level expanses, each extending upwards of a mile from the sea. At their mouth there is a long bar formed by the surf and winds, broken only in one place, close to the adjacent rocky land, where a channel is formed which admits the waters of the sea at each tide. These, at spring-tides, cover the whole sands. The rest of the coast is rocky, but low, excepting toward Tarbert, where there are tremendous cliffs. This division is intersected by two great valleys, one passing from the sand of Loskentir to the east coast, the other from the farm of Borg. The bottom of a

great portion of the latter is occupied by a lake about 3 miles long, the largest in the district. There are thus formed three natural subdivisions; that to the south of the lake mentioned consists of six mountains, including the peninsular one of Ben Capval, which are separated by broadish valleys. The vegetation here is tolerable, excepting on Ronaval, which is rocky and bare, and exhibits on its eastern side a fine excavation, resembling the crater of a volcano. It is chiefly heathy, however, excepting along the west side, where the pasturage is rich and varied. The middle division, from Loch-Langavat‡ to the northern valley, is marked by a ridge of very rugged mountains, running in the general direction of the range, and situated nearer the western side. Along the west coast of this subdivision, there is some good pasture, but on the eastern side, the only soil being peat, and even that existing only in patches among the rocks, the vegetation is extremely coarse and scanty. From one of the summits of the ridge mentioned, I have counted upwards of eighty small lakes on its eastern side. The northern subdivision consists of Benloskentir, which gradually lowers to the eastward. The lakes in the low grounds on its eastern part are also extremely numerous. The water of all these lakes is brown. There are no harbours on the west coast of this southern division of the mainland of Harris, and it is even very difficult for boats to land on the beaches, owing to the high surf. It possesses no sylvan vegetation, excepting a few bushes in ruts and on islets in the lakes. The principal island is Taransay, on the west coast, the greater part of which is rocky, although it contains good pasture. This division has no general name applied to it in the country, but its western part is called the *Macchar*, i. e. 'the Sandy district;' and its eastern, *Na Baigh*, 'the Bays,' or more correctly 'the Voes.'" [Edinburgh New Philosophical Journal, No. VII., pp. 142, 143.]

"The climate of Harris," says the writer of the article just quoted, "may be said in a general sense, to be extremely varied; for a great part cold and boisterous, with a very large quantity of rain, and but little snow, considering its high latitude. Spring commences about the 20th of March, when the first shoots of grass make their appearance, and the *Draba verna* begins to unfold its small white blossoms. It is not until the end of May that the pasture-grounds have fairly exchanged the grey and sad livery of winter for the green and lively hue of summer. From the beginning of July to the end of August may be considered as the summer season, when the sandy pasture-grounds of the west coast and islands are decorated with the most diversified hues. The end of October terminates the autumnal season. The rest is winter. During the whole spring season easterly winds prevail; at first interrupted by blasts from other quarters, accompanied with sleet or rain, but, as the season advances, becoming more steady, and accompanied with dry weather, occasioning much sand-drift. The first part of summer is sometimes fine, but not unfrequently wet, with southerly and westerly winds. There is seldom any thunder at this season; nor does the summer temperature scarcely ever rise so high as to be oppressive. Frequently the wet weather continues with intervals till September, from which period to the middle of October the weather is generally fine. As the winter advances the westerly gales become more boisterous and continued, and, in this season, there is frequently a good deal of thunder. The lakes seldom freeze in winter; and, although the hills are often tipped with snow, it is seldom that a general covering takes

* This isthmus in many maps is erroneously made the boundary between Harris and Lewis.

† "Speaking vaguely,"—says Mr. Macgillivray in an interesting article on 'the Present State of the Outer Hebrides,' in the 2d vol. of the *Prize Essays of the Highland Society*,—"speaking vaguely, one might pronounce these islands entirely destitute of wood. In fact, an incurious person might travel from one end of them to the other without seeing a single shrub. But in the ruts of streams, or lucustrine islets, occasionally along the shores of lakes, and in the clefts of rocks, there may be found stunted specimens of several species of trees. The common birch, the broad-leaved elm, the mountain-ash, the hazel, and the aspen, are those commonly met with. Willows of a few species are abundant along some of the rills, but seldom attain a height of three feet. *Rubus corymbosus*, *Rosa tomentosa*, *Lonicera Periclymenum*, and *Hedera Helix*, are the only shrubs worth mentioning."

‡ There is a lake of the same name in Lewis.

place. After continued westerly and northerly gales, enormous billows roll in from the Atlantic, dashing upon the rocky shores with astonishing violence; I have seen the spray driven over rocks a hundred feet in height, to a great distance inland." On the mainland of Harris there are many monuments of Druidism, and several religious edifices erected about the time of the introduction of Christianity. The churches, together with the smaller chapels, all seem to have depended immediately on the monastery at Rowadill, dedicated to St. Clement; which, though its foundation be attributed to David I., is generally supposed to be of more ancient date. The different branches of the family of Macleod of Macleod, and of Harris, are proprietors of the island. The mountains contain no minerals of great value, except some iron and copper-ore; granite and freestone abound in every part, potstone, serpentine, and asbestos occur here and there; but the predominating rock is gneiss, which has undergone little decomposition. "In general," says the writer already quoted, "the natives are of small stature; those individuals who are considered by them as exceeding the ordinary size, and accordingly designated by the epithet *Mor*, or 'Big,' seldom exceeding 5 feet 10 inches in height. Scarcely any attain the height of 6 feet; and many of the males are not higher than 5 feet 3 or 4 inches. They are in general robust, seldom, however, in any degree corpulent, and as seldom exhibiting the attenuated and pithless frame so common in large, and especially in manufacturing towns. The women are proportionally shorter, and more robust, than the men. There is nothing very peculiar in the Harrisian physiognomy; the cheek-bones are rather prominent, and the nose is invariably short; the space between it and the chin being disproportionately long. The complexion is of all tints. Many individuals are as dark as mulattoes, while others are nearly as fair as Danes. In so far as I have been able to observe, the dark race is superior to the fair in stature and strength. It is scarcely possible to conceive a constitution more callous to all sorts of vicissitudes and hardships, than that of the Hebridians in general. A native of Harris thinks nothing of labouring in a cold and boisterous spring-day with his spade, up to the ankles in water, and drenched with rain and sleet. Nor is there to be found a race more patient under privation. A small quantity of coarse oatmeal and cold water will suffice to support him under fatigues that would knock up a pampered Englishman or Lowlander. In respect to intellect, they are acute, accurate observers of natural phenomena, quick of apprehension, and fluent in speech. In their moral character, they are at least much superior to the population of most of the lowland parishes." Martin, in his account of the Western isles, says, he knew several in Harris of 90 years of age. The Lady Macleod, he adds, who passed the most of her time here, lived to 103, had then a comely head of hair and good teeth, and enjoyed a perfect understanding till the week she died. Her son Sir Norman Macleod died at 96; and his grandson Donald Macleod, Esq., of Bernera, died at 91. Four persons, calling themselves upwards of 90, died during the incumbency of the late minister; and an old gentleman born and brought up in this parish, said by her relations to be 102, was alive in the isle of Skye, at the time when the Old Statistical Account was drawn up.—Population of Harris and its islands, in 1801, 2,996; in 1821, 3,909; in 1831, 3,900. The population has been kept down by emigration to Cape-Breton and Canada; but it is thought that at least 2,000 of the present population would require to be withdrawn in order to enable the re-

mainder to earn a moderate subsistence. There were in the whole island, in 1840, about 440 families of crofters, holding small farms directly from Lord Dunmore, of whom not above 50 could be regarded as in comfortable circumstances; while 400 families held no land directly from the proprietor, and were in a state of still greater destitution. [See 'Report of Select Committee on Emigration,' 1841.] Houses, in 1831, 759. Value of assessed property, in 1815, £7,658.

The parish of Harris, from the northern to the southern extremity, along the common track of travelling by land, and the course of navigation through the Sound, is at least 48 miles long. Its breadth varies much: near the northern extremity it is 24 miles; from thence to the Sound, it may be at an average from 6 to 7; and, of the Sound, navigators usually calculate the breadth as well as length at three leagues. Its total extent is about 90,000 acres. It is in the presbytery of Uist, and synod of Glenelg. Patron, the Earl of Dunmore. Stipend £158 6s. 7d.; glebe £12. Bernera has been detached from this parish *quoad sacra*: see BERNERA. The parish-church was built about 1770; sittings 200. The minister officiates every 3d Sunday at Rodil, and there is a mission-station at Tarbert. A catechist visits the whole parish once in the course of the year. He has an annual salary of £12 paid out of a fund left by Macleod of Bernera. The parish-schoolmaster has a salary of £23 5s. 8d.; and there are three itinerating schools supported by the Gaelic school society; each teacher receiving £25 of salary.

HARRIS (SOUND OF), a navigable channel between the islands of Harris and North Uist; 9 miles in length, and from 8 to 12 in breadth. It is the only passage for vessels of burden passing from the east to the west side of that long cluster of isles called the LONG ISLAND: which see. It is much incumbered with rocks, shoals, and islets; but, with a skilful pilot, can be passed in safety. A few of them may measure a mile in length, and about half-a-mile in breadth. They are covered with heath and moss, and afford pretty good summer-pasture. The people of the larger islands repair to them with their families and cattle, in the season of kelp-manufacturing, and here they get peats for fuel, there being no moss in any of the inhabited islands of this district, excepting Calligray. The names of the largest isles are Hermitray, Hulmitray, Saartay, Votersay, Neartay, Opsay, Vaaksay, Haay, Suursay, Torogay, Scarvay, Lingay, Groay, Gilsay, Sagay, Stromay, Skeilay, and Copay. There are, besides these, a vast number of islets, holms, and high rocks, for each of which the people have names.* A remarkable variation of the current happens in this sound, from the autumnal to the vernal equinox; the current in neap-tides passes all day from east to west, and all night in a contrary direction. After the vernal equinox, it changes this course, going all day from west to east, and the contrary at night. At spring-tides the current corresponds nearly to the common course.

HARTFELL, or HARTFIELD, a mountain on the boundary between the parishes of Tweedsmuir and Moffat, in the counties respectively of Peebles and Dumfries, rising 3,300 feet above the level of the sea, and believed to be the highest mountain in the south of Scotland.† Nearly the whole way up the

* It is remarkable, that as the names of the larger isles terminate in *ay*, so the names of these last generally terminate in *em*, *e. g.* *Thiem, Gudem, Coddem, &c.*

† Few things are more tantalizing to a writer on topography than the various statements he meets—all on authority—respecting the height of mountains. Thus Hartfell is stated by different authorities to be 2,800, 3,300, 3,900, and even nearly

gentle acclivity of its sides, it may be ascended on horseback; and by a broad flat summit, carpeted with verdure, spread out like a field among the clouds, and commanding a vast, a magnificent, and a varied landscape, it invites the approach of the tourist to the survey of the far-spreading prospect which it commands. To the north, over a wide and billowy sea of mountains, the spectator sees, in certain states of the atmosphere, the snowy cap, or the cloud-wreathed brow of Benlomond; to the east, he looks athwart the green hills of Tweeddale and the forest, generally shaded beneath a gorgeous aerial sea of clouds, till his eye rests on the far-away Cheviots; to the west, he looks along the rugged and wild scenery of the Lowthers, till he describes the towering summit of Blacklurg; and to the south, he surveys the magnificent uplands of Dumfriesshire, and finds no limit to his view till it is pent up by the Cumberland mountains, presided over by the lofty Skiddaw. But Hartfell, though strictly the single summit we have described, is often understood to mean the whole group of Alpine elevations at the centre of the great mountain-range which runs from Northumberland to Lochryan,—Whitcomb, Broadlaw, Ettrick-Pen, Queensberry, Saddleback, and Lochraig, all worthy, in their grander proportions, and picturesqueness of dress, to be attendants on the monarch-mountain, and forming, as a group, the points of radiation for most of the spurs or ranges of the southern Highlands. Hartfell, again, is frequently noticed in connexion chiefly with its celebrated spa. This is one of two chalybeate springs in the parish of Moffat, which more than any kindred fountains in Scotland possess, and hitherto have maintained the character of presenting, in their waters, a slow but safe and certain remedy for diseases which a chalybeate has power to remove. The Hartfell spa issues from a rock of alum slate in a tremendous ravine on the side of Hartfell-mountain, nearly 4 miles distant from the village of Moffat. Mr. Jamieson observed, in the ravine, frequent efflorescences of yellowish grey-coloured natural alum; and Dr. Garnet found in it crystals of natural iron-vitriol. In the alum-slate, from among which the spa has its efflux, Mr. Jamieson observed also massive and disseminated iron-pyrites. A wine gallon of the water, as analyzed by Dr. Garnet, contains 84 grains of iron-vitriol, or sulphate of iron, 12 grains of sulphate of alumina, 15 grains of oxide of iron, and 5 cubic inches of azotic acid gas. The sulphuric acid maintained in combination, seems to be supersaturated with the oxide of iron, and deposits it either gradually by exposure to the air, or immediately by ebullition. Owing to the atmospheric water, during heavy rains, passing through channels in the alum-rock more richly impregnated with the minerals of the spring than those which it traverses during a long-continued drought, the water of the spa, after a copious and protracted fall of rain, is always increased in quality and strength. The principal mineralizers being the sulphates of iron and alumina, the water, if well corked, will keep unimpaired for months, and perhaps for years, and does not need to be drunk by invalids in the wild scene of its origin, but may always be procured in a fresh state in the village of Moffat. Dr. Johnston, speaking of its properties, apart from its acknowledged power as a tonic, and

4,000 feet high; and till lately was universally admitted to be the loftiest elevation in the Southern Highlands. But, according to a recent calculation, Hartfell, with a niceness of figuring which assumes the appearance of accuracy, is determined to have a height of only 2,635 feet, while Broadlaw, incomparably less celebrated, and lifting its head on the boundary between Lyne and Tweedsmuir parishes, amid the heights in the interior of Peebles-shire, is, with an assigned elevation of 2,741 feet, proclaimed the monarch of the southern alps.

consequent usefulness in all cases of debility, says, "I have known many instances of its particular good effects in coughs proceeding from phlegm, spitting of blood, and sweatings; in stomach-complaints, attended with headaches, giddiness, heartburn, vomiting, indigestion, flatulency, and habitual costiveness; in gouty complaints affecting the stomach and bowels; and in diseases peculiar to the fair sex. It has likewise been used with great advantages in tetterous complaints, and old obstinate ulcers." The spa was discovered about a century ago, by John Williamson. In 1769, Sir George Maxwell erected over his grave, in the churchyard of Moffat, a monument to transmit to future times his name, and the date of his discovery.

HASCUSAY, one of the smaller Shetland isles, between Yell and Fetlar.

HASSENDEAN, or HAZELDEAN, a suppressed parish on the left bank of the Teviot, opposite Cavers, Roxburghshire.* The surface is so gently and thrillingly beautiful, as to have made the bosoms of tuneless poets throb, and drawn from them some of their sweetest numbers. What *par excellenc* constitutes Hassendean, and gave name to the ancient church and the whole parish, is a winding dell, not much different in its curvatures from the letter S, narrow and varied in its bottom, gurgling and mirthful in the streamlet which threads it, rapid and high in its sides which are alternately smooth, undulating, and broken,—richly and variedly sylvan in hollow, acclivity, and summit,—and coiled so snugly amid a little expanse of forest, overlooked by neighbouring picturesque heights, that a stranger stands upon its brow, and is transfixed with the sudden revelation of its beauties, before he has a suspicion of its existence. Near its mouth some neat cottages peep out from among its thick foliage, on the margin of its stream; on the summit of its right bank are the umbrageous grounds which were famed, for upwards of a century, as the nursery-gardens of Mr. Dickson, the parent-nurseries of those which beautify the vicinity of Hawick, Dumfries, and Perth, and either directly or remotely the feeders of nearly one-half of the existing plantations of Scotland. The dell, at its mouth, comes exultingly out on one of the finest landscapes of the Teviot. The river, on receiving its rill, is just half-way on a semicircular sweep of about $\frac{3}{4}$ of a mile in length; on the side next the dell, it has a steep and wooded bank; and on the side which the dell confronts, a richly luxuriant haugh occupies the foreground, the rolling and many-shaped rising grounds of Cavers, profusely adorned with trees, occupy the centre, and the naked frowning form of Rubber's law cuts a rugged sky-line in the perspective.—The monks of Melrose, to whom the ancient church belonged, formed a cell at Hassendean, which was to be a dependency on their monastery. From the date of this establishment, the old tower of Hassendean was called the Monk's Tower; and a farm in the vicinity continues to be called Monk's Croft. After the Reformation, the church, with its pertinents, was granted to Walter, Earl of Buccleuch. Various attempts to suppress the parish seem to have been rendered abortive by the resistance of the parishioners. But in 1690, amid scenes of violence which rarely attended acts of suppression, and which evinced surpassing indignation on the part of the people, the church was unroofed, and otherwise so dilapidated as to be rendered useless. The workman who first set foot on

* In ancient charters, the name was spelt Halstaneadeane, Halstenden, Halstansdene, and Hastenene. The modern name Hassendean is simply a softened form of the old one, and has been transmuted into Hazeldean in song merely by the caprice of poets. Yet Sir Walter Scott gives his dictum that Hazeldean is the ancient name.

ladder to commence the demolition, is said to have been struck and killed with a stone; and so general and furious a turn-out was there of females to assist in the fray of resistance that an old song, still well-known in the district, says—

"They are a' away to Hassendean burn,
And left both wheel and cards," &c.

While the parties who had pulled down the church were carrying off whatever parts of it might be serviceable at Robertson, the people of Hassendean pursued them, engaged them in a sharp conflict at Hornshole, halfway to Hawick, wrenched from them the church-bell, and flung it into a very deep pool of the Teviot at the place, and gave them so rough a handling that the sheriff of the county, an ancestor of Douglas of Cavers, was obliged to interfere. An old woman, it is said, uttered in true weird-style, a denunciation upon Douglas for abetting the destruction of the church, and foretold—what seems as little likely to happen in the line of his posterity as in that of any other great family—the extinction of his race by a failure of male heirs. The parishioners, though bereft of their church, continued to use the cemetery of their fathers, till some of it was swept away, and many of its remaining graves laid open, in 1796, by a flood of the Teviot. The site of the old church is supposed to be now identified with a sand-bank on the opposite side of the Teviot to that on which the edifice stood—the river having swept away the whole of a low projecting point of land which it and its cemetery occupied. The parish was distributed to Minto, Robertson, and Wilton,—the major part of the territory being given to Minto, and all the vicarage or remaining tithes to Robertson,—Walter, the son of Alan, received the lands of Hassendean from David I. David Scott, who lived in the middle of the 15th century, and was the eldest son of Sir William Scott of Kirkurd who exchanged Murdiston for Branhholm, was the first of the Scotts of Hassendean. Satchell alludes to him in the lines,—

" Hassendean came without a call,
The ancientest house of them all."

Sir Alexander Scott of Hassendean fell, in 1513, at the battle of Flodden. The lands of the original barony of Hassendean are now distributed into the estates of Hassendean-bank, Hassendean-burn, and Teviot-bank, and some lands belonging to the Duke of Buccleuch.

HAVEN (EAST AND WEST), two fishing-villages, about a mile distant from each other, on the coast of the German ocean, in the parish of Panbride, Forfarshire. From the end of January till the beginning of June, lobsters are caught in large quantities, and sent up alive, in appropriately fitted up vessels, to the London market. In winter, cod is taken in abundance, and salted for exportation. But had-docks constitute the chief produce, and are regularly sent to Dundee, Forfar, and other markets in the vicinity. Population of East Haven, about 120; of West Haven, upwards of 300.

HAVERA, a small island in Shetland, near the southern extremity of the mainland, in the parish of Bressay, Burra, and Quarff.

HAVERAY, a small island near Lewis.

HAVERSAY, a small island on the south-west coast of the isle of Skye. See **LOCH-BRACADALE**.

HAWICK, a parish in the south-west of Roxburghshire; 15½ miles in extreme length, by 3½ in extreme breadth. It comes down north-eastward from the upland extremity of the county, in a stripe which for 9 miles does not average quite 1½ mile in breadth; it then first contracts to nearly half-a-mile,

and next suddenly expands to 3 miles; and it afterwards slowly and gradually contracts till it terminates, at its north-east extremity, in a regular and very acute angle. The parish is bounded, along its north-west side, by Robertson and Wilton; along its south-east side, by Lower Cavers, Kirkton, and Upper Cavers; and along its brief south-west base, by Dumfries-shire. Its superficial area is computed at about 24 square miles, or 15,360 imperial acres. The "sweet and silver Teviot" rises in two head-streams at the boundary with Dumfries-shire,—traces for 9 miles the boundary with Upper Cavers, till it makes a confluence with the Allan,—runs along 2½ miles farther to a point where it receives Borthwick water, and, being now on the north-west side of the parish, traces, thenceforth till the point of its exit, the boundary with Wilton. Allan water comes down from the south-east upon the extremity of the parish's sudden expansion a little below its middle, and till its confluence with the Teviot traces along the south side of that expansion the boundary with Cavers. The Borthwick comes in from the west, and, for about 1¼ mile before falling into the Teviot, traces the boundary with Wilton. The Slittrig comes in from the south, traces for 1¼ mile the boundary with Lower Cavers, and then runs sinuously across the parish over a distance of 1½ mile, and falls into the Teviot at the town of Hawick. Down the whole length of the parish, along the course of the Teviot, bending sinuously with the stream, stretches a valley pressed, for the most part into narrow limits, by flanking ranges of hills,—looking up, at intervals, through clefts or converging vales which bring down to the Teviot their tributary rills or rivulets, beautified in every part, and greatly enriched as to both soil and vegetation in some, by the sparkling progress of the traversing river, and set in an upland frame-work remarkable for the graceful forms and the gay verdant clothing of its summits. For several miles down from its southern extremity, the parish is wildly but beautifully pastoral, untouched by the hand of culture, and seldom trodden by other human feet than those of the shepherd, but presenting a thousand charms to a tourist who loves to gaze on the virgin purity and the unadorned simplicity of mountain but verdant landscape. In its central and lower parts, the valley becomes loamy and luxuriant, frilled or dotted with plantation, carpeted with waving crops of grain, or mirthful and picturesque with the rival and emulous enterprises of agriculture and manufacture; and at several stages of its long and narrow progress, it embosoms or spreads out to the view objects and scenes which have been celebrated in story and awarded with sweet outpourings of song. Another vale—of brief length compared with the former—follows the course of the Slittrig, paving the bed of that stream with rough stones and declivitous shelves, pressing in upon it at times with high and almost perpendicular banks of bare rock, garlanded or capped with young wood, and presenting altogether an aspect of mingled wildness, seclusion, beauty, and romance. While passing along the valleys southward or eastward, respectively toward Dumfries-shire or toward Liddesdale, a tourist, though never indulged with more than a limited view, is delighted and surprised at very brief intervals by the constantly changing beauties and varieties of the landscape, and all around, is environed with chains and congeries of hills, delightfully variegated in form and dress, presenting an endless gradation of aspect from gloom to joyousness as the many-tinted clouds flit across the sky, and pervaded by such a stilly silence as softly distils upon the mind mingled emotions of gladness and awe.—The soil, in the haughs, is a mixture of loam, gravel, and

sand; on rising grounds, between the valleys and the hills, is loam, with occasionally a mixture of gravel; and on the hills is, in some places, light and dry,—in some soft and spongy,—and in others wet and stiff. Moss and heath occur only in small patches. The valleys and their adjacent rising grounds, though not thickly carpeted with soil, are far from being unfertile, and the hills are everywhere an excellent sheep-walk. Rather more than one-fourth of the whole area of the parish is in tillage; about 160 acres are under wood; and all the rest, with due deductions for roads, and the sites of the town and scattered buildings, is in pasture.—One mile-and-a-half above Hawick, on the right bank of the Teviot, stands the ancient tower of Goldielands, one of the most entire on the border, whose last laird, a Scott, is said to have been hanged over its gate for the treasons and the maraudings of a riever's career. The tower is square, and of massive and venerable aspect, and, foiled by the background of its site on the brow of an eminence, it forms a feature in the landscape as picturesque as it is conspicuous.—One-and-a-half-mile farther up, on the opposite bank of the river, is Branhholm-house, wearing, at present, the appearance of a modern mansion, but preserving the remains of the ancient castle so celebrated as the principal scene of 'The Lay of the Last Minstrel.' In the reign of James I., the castle became the property of Sir William Scott; and, during the 15th and the 16th centuries, it was the residence of the family of Buccleuch, and the scene of great baronial splendour and festivity. But owing to the feudal power of its barons, and the dangerous vicinity of the foemen of the English border, it was often the object of impetuous attack, and bold but sanguinary defence. In 1532, it was fired by the Earl of Northumberland; and, in 1570, it was blown up with gunpowder during the inroad of the Earl of Surrey. Almost immediately after its destruction, however, it was rebuilt,—the re-edification having been begun in 1571 by Sir Walter Scott, and completed in 1574 by his widow. A venerable and magnificent ash-tree rises on the lawn, with a girth of 13 feet at 4½ feet from the ground, and lifts its stem 16 feet aloft before shooting out into branches. [See BRANHOLM.]—Population, in 1801, 2,798; in 1831, 4,970; in 1841, 6,573,—an increase attributable to the extension of the woollen manufactures. Assessed property, in 1815, £8,327; in 1842-3, £12,922.

The Edinburgh and Carlisle mail-road crosses the Teviot, and enters the parish at the town of Hawick; it then runs 2 miles along the right bank of the river, and crosses to the left; it now runs 4 miles along the left bank; and there, recrossing to the opposite side, it leaves the parish,—though, for 2½ miles farther, it keeps close to the Teviot, and as strictly commands its scenery, and offers its inhabitants facility of communication, as before leaving it. The road into England through Liddesdale diverges from the former at Hawick, and runs along the valley of the Slitrig, a third of the way to the right bank of the stream, and two-thirds on the left till it leaves the parish. A post-road from Hawick to Kelso and Berwick follows the course of the Teviot; and, even after leaving the parish, keeps constantly in its company till the confluence of the river with the Tweed. In the lower part of the parish are two other roads, one leading due south, the other due east, and both diverging from the town of Hawick. The Edinburgh and Hawick railway, 49½ miles in length—for which an act has been obtained—will branch off from the southern terminus of the Dalkeith and Edinburgh railway, and passing by Middleton-moor, Galashiels, and Selkirk, and crossing the Tweed about a mile below Melrose-bridge, near Abbotsford, will terminate at Hawick. It is at present intended to be only a single line, and the expense is estimated at £400,000. An inland railway was some time ago projected from Hexham, on the Newcastle and Carlisle railway, to Edinburgh, crossing the Teviot about 4 miles to the eastward of the town of Hawick; but this design seems to have been abandoned.

Hawick is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, the Duke of Buccleuch. Stipend £278 1s. 4d.; glebe £62.

Unappropriated teinds £936 6s. 5d. The parish-church was built in 1764. Sittings 704. An additional church, connected with the Establishment, has been completed. Sittings 1,500. A district of the parish, with a population of 216, is attached to the preaching station at Caerlanrig, in the parish of Cavers: See CAVERS.—There are in the parish, but all situated in the town, 5 dissenting places of worship. The First United Secession congregation was established in 1763. The original church was built in 1766; and the present one in 1823, at a cost of upwards of £900. Sittings 639. Stipend £108, with a manse.—The Second United Secession congregation was established between the years 1775 and 1780. The place of worship was built in the latter of these years. Sittings 752. Stipend £185; but, while the charge is collegiate, the senior minister has £85, and a manse, garden, and glebe, valued at £25, and the junior minister has £100, and a manse.—The Relief congregation was established in 1810. The place of worship was built in 1811, and cost between £800 and £900. Sittings 750. Stipend £85.—The Independent congregation was established in 1832. Their place of meeting is a room built in 1836, and rented at about £5 10s. Sittings 300. No stipend.—The society of Friends was established about the year 1800. The place of worship was built in 1822, at a cost of from £500 to £510. The average attendance is only from 9 to 12. No stipend.—According to a survey made by the parish minister in February 1836, the population then was 5,363. Of these 3,962 were churchmen, and 1,464 were dissenters.—The parochial school is conducted by two teachers. Salary £33, with school-fees, and £19 other emoluments. There are 12 non-parochial schools, conducted by 7 male and 5 female teachers, and attended, on the average, by 242 boys and 310 girls.—The parish is probably as ancient as the date of the Saxon settlement. The church was, in 1214, dedicated to St. Mary, and, previous to the Reformation, was a rectory. The edifice, long after the Scottish canons had prohibited such an abuse, was employed not only as a place of worship, but as a court-house; and it was occupied for the discharge of county-business by the sheriff, during the period of the English having possession of the castle and town of Roxburgh. In 1342, while William Ramsay, one of the most gallant men of the age, was here seated on the bench, he was seized by William Douglass, the knight of Liddesdale, to be carried off to Hermitage castle, and there starved to death in solitary confinement.

HAWICK, the capital of the parish just described, and a burgh-of-regality, is situated at the confluence of the Teviot and the Slitrig, 10 miles from Jedburgh, 20 from Kelso, 45 from Carlisle, 11 from Selkirk; and 50 from Edinburgh. The Teviot approaches the town in a north-easterly direction, makes a beautiful though small bend opposite the upper part of it, and then resumes and pursues its north-easterly course. Just after it has completed the bend, the Slitrig comes down upon it from the south at an angle of about 50 degrees; but, opposite the bend of the Teviot, is not far from being on a parallel line.* The town adapts its topographical arrangement almost entirely, and even very closely, to the course of the streams and to the angle of their confluence; and maintains a delightfully picturesque seat upon both, amidst a somewhat limited but magnificent hill-locked landscape. The Slitrig ap-

* Either the curving reach of the Teviot, or the crook made by the confluence with it of the Slitrig, seems, in combination with an adjacent house or hamlet, to have suggested the name Hawick,—*ha*, or *hav*, a mansion or village, and *wic* or *wick*, the bend of a stream, or the crook, or confluence of the rivers.

proaches the Teviot with a narrow plain, immediately backed by hills on the further bank, and with an abrupt and considerable acclivity falling off in a fine slope on the hither bank; and the Teviot, coming down in a narrow and sylvan vale, begins, when it touches the town, to fold out its banks into a limited haugh, framed on the exterior with sloping ascents, and somewhat acclivitous but beautifully rounded and verdant hills. The town occupies all the narrow vale on the right bank of the Slittrig, and all the summit, as well as the slope, toward the Teviot of the high ground on its left bank; and, aided by its "common haugh," or public burgh-ground, and by its suburb of Wilton, it also stretches over all the little haugh of the Teviot, and mounts the softer rising eminences on the back ground; and both up and down the latter stream—which is here limpid and garrulous, and bright with the features of a river wearing in picturesque admixture a highland and a lowland dress—the town sends off environs of no ordinary attraction,—here extensive nursery-grounds, there tufts of grove and lines of plantation casting their shade upon luxuriant fields, and yonder a factory busy in industrious pursuits, yet sequestered and tranquil in appearance, and combining—as the rural aspect and the pure air and the bright sky indicate the town itself to do—the athletic and productive toils of factorial industry, with the healthful habits and the peacefulness of almost a pastoral life. Seen from almost any point of view, but especially from the Edinburgh road, where it comes over the brow of the hills beyond the Teviot, Hawick and its environs spread out a picture of loveliness to the eye which the mere imagination would have in vain tried to associate with the seat of a great staple manufacture, or with any other town than one whose site had been selected by taste, and whose arrangements had been made with a view to poetical effect.

Entering the town on the Kelso road from the north-east, a stranger finds himself in the principal street. A short way on, a new and neatly built though short street comes in at an acute angle on his right hand, bringing down the Edinburgh and Carlisle mail-road. The main street now runs along parallel to the Teviot, with no other winging on that side than back-tenements and brief alleys, and sending off on the other side two streets, called Melgund Place and Wellgate, till it passes on the same side, first, the town-hall, and a little way farther on, the Tower-inn, and is terminated by two houses which disperse it into divergent thoroughfares. A street, at this point, breaks away on the east, up the right bank of the Slittrig, disclosing, in a snug and almost romantic position, a curved and beautifully edified terrace called the Crescent. An ancient bridge, carried off, at the commencement of this street, leads across the Slittrig, to an eminence surmounted by the parish-church. Another bridge, spacious and of modern structure, spans the Slittrig nearer the Teviot, and carries across the continuation of the Edinburgh and Carlisle mail-road. From its farther end, one street, called the Sandbed, runs westward to communicate by a bridge across the Teviot with the suburb of Wilton; another street, called the Howgate, diverges in the opposite direction, and after ascending the rising ground splits into three sections, called the Back, the Middle, and the Fore Row, which again unite and form what is called the Loan; and the main thoroughfare, continuing the mail-road, runs right forward, lined with new and elegant houses, and adorned at its extremity with the beautiful new church, afterwards to be noticed. The general appearance of the town has of late years been greatly improved. Besides the erection of entirely new streets, uniformly edified, or pleasingly

diversified with a rivalry of taste in the structure of the houses, many old tenements with their thatched roofs or thick walls, and clumsy donjon-looking exterior, have been substituted by airy and neat buildings accordant in their aspect with modern taste. In the unrenovated parts it still presents a rough and clownish exterior; but as a whole it cannot offend even a fastidious eye. All its edifices are constructed with a hard bluish coloured stone, which does not admit of polish or minute adorning, but pleases by its suggestions of chasteness and its indications of durability and strength. But though lighted up at night with gas, and always clean and airy, and in other respects tasteful, the town utterly disappoints a stranger by its poverty or utter destitution in suitable public buildings. Excepting the handsome bridge which carries the Edinburgh road across the Teviot, and the elegant new parish-church in the course of erection at the expense of the Duke of Buccleugh, it contains not one public edifice on which the eye can rest with satisfaction. The town-hall is plain even to meanness, and does not make so much as the poor amends of being commodious in the exterior; and it embowels somewhere in its gaunt and squalid proportions, a jail so small, so fulsome, and so ill-secured, that criminals, for sake both of safe durance, and of decent regard to their health, have to be sent off to the care of the turnkeys at Jedburgh. The steeple of the town, rising from the town-hall, while it seems the most conspicuous object in the burghal landscape as seen from a little distance, is so plain and dingy as to be scarcely ornamental. All the places of worship, too, with the exception already-mentioned, are, in the aggregate, plainer than the average of any equal number in the secluded villages or sequestered valleys of the country. The principal or Tower inn, however, strongly arrests attention, if not for architectural elegance, at least for its spaciousness, its imposing appearance, and especially its connexion with antiquity. Part of it was an ancient fortress of a superior order, surrounded with a deep moat drawn from the Slittrig, and originally the residence of the barons of Drumlanrig, the superiors of the town. At a later period, it was the scene of the princely festivities of Anne, Duchess of Buccleuch and Monmouth. This building connects modern and ancient Hawick, having been the only edifice which escaped several fearful devastations to which the town was subjected. Another very curious structure, is one of two bridges across the Slittrig,—that which leads up to the parish-church. Though of unascertained date, it bears marks of a very high antiquity, and certainly was constructed without the remotest advertency to the existence of wheeled carriages. Though strong and of solid masonry, and abundantly capable of bearing considerable pressure, it is so very narrow as to be available only for foot passengers. A series of narrow abutments, on the sides of the main arch, rise from the water-course, and run along till they meet in the centre, and form a semicircle; and they thus present a rude approximation to the architectural adornings on the porticoes of many ancient cathedrals. At the upper end of the town, and overlooking the main street, is an artificial earthy mound, of a circular form, called the moat, 312 feet in circumference at the base, rising on an inclined plain to the height of 30 feet, and terminating in a nearly flat summit 117 feet in circumference. This vast tumulus is supposed to have been used in remote times, both as the seat of the administration of justice, and as the place of assembly and of deliberation on public affairs, of the chiefs of the district.

Hawick has considerable manufactures in the tan-

ning of leather and dressing of skins, and in the making of thongs, gloves, candles, and machinery. The winnowing-machine, or corn-fanner, according to the statement of the writer in the Old Statistical Account, first made its appearance in Hawick. "Andrew Rodger," he says, "a farmer on the estate of Cavers, having a mechanical turn, retired from his farm and gave his genius its bent; and probably from a description of a machine of that kind, used in Holland in the year 1737, constructed the first machine fan employed in this kingdom." This ingenious person, it seems, pushed a considerable trade in the article of his manufacture, and bequeathed it to his descendants; and when the reporter wrote, they made and disposed of about 60 in the year, and found a market for many of them in England. An inkle manufacture was commenced in 1783, and, after 10 or 11 years, employed about 65 persons, and consumed annually 10 tons of linen-yarn in fabricating common linen-tapes and twists. But the town has immersed most of its temporal well-being, and expended nearly all its genius and enterprise, in the various departments of woollen manufacture, and is famous over Britain as the seat of various species of staple woollen produce. Though labouring, like Galashiels, under the serious disadvantages of great distance from coals and extensive inland carriage, and though apparently possessing only such average intrinsic facilities as are enjoyed by one-half of the towns and villages of Scotland, it has been lifted up, by the sheer force of energetic and skilful artisanship, to a high status among places of manufacturing importance. But in estimating its productiveness we must pass parochial limitations, and go across the Teviot so as to include the suburb of Wilton. Though the great majority of both proprietors and operatives reside in Hawick, yet the factories and their dependencies are, to so considerable an extent, distributed on the Wilton side of the river, that the town must be viewed just as it presents itself to the eye of the traveller, and not as parcelled off into two detachments and marched away to widely distant places in the alphabet by parochial assignment of territory. The earliest woollen manufacture seems to have been that of carpets, established in the year 1752. This was followed, in 1780, on the part of the same proprietors, with the manufacture of serges for carpet covers, plain cloths for table-covers, rugs, and collar-checks, and other articles used by saddlers. In the same year, but by a different party, Mr. John Nixon, was established the manufacture of stockings. During 4 years Mr. Nixon was employed chiefly in making hose for persons who furnished their own materials; but after 1785 he turned his attention to various departments of hosiery, and laid the foundation of the fame which Hawick rapidly obtained for lamb's-wool hose. In September, 1787, was commenced the manufacture of cloth; and during the first year it consumed only 10 packs of wool. After the introduction of machinery, about the commencement of the century, the various manufactures moved rapidly onward to importance; and from that period to the present day they have, as a whole, steadily and bulkily increased. During the last 8 or 10 years, in particular, several new factories, on a large scale, have been erected, and large additions made to almost all the previously existing mills. In 1839 there were 11 extensive factories, 10 of which were driven by water-power, and 1 by steam; and there were also several extensive buildings fitted up with stocking-frames. The fabrics at present made, are hosiery, druggets, checked woollen for trousers, checked woollen for shepherds' plaids, checked woollen for women's shawls with fringe, coarse and large pattern, a fine tartan, coarse Scotch blankets, and a coarse white plaiding for

trousers. All these fabrics, except the first, are estimated as to fineness of the reed by porters of 4 to the split except when stated otherwise; so that a 16 porter is equivalent to a 32 porter at Kilmarnock, or to a 64 reed in the cottons. So hard-driven is the trade that some of the factories work during a great portion of the night; and wages average as high as in any part of Scotland, except Galashiels.* A table constructed by the writer of the New Statistical Account from returns made to him by some of the leading manufacturers, exhibits very tangibly the state of trade in 1838. According to that table the value of property employed in manufacture was £101,861; the annual amount of wages, £48,726; the quantity of yarn manufactured, 854,462 lbs.; the annual consumption of wool, 108,162 stones; the annual consumption of soap, 132,899 lbs.; the number of stockings made, 1,049,676 pairs; the number of articles of under-clothing, 12,552; the number of operatives, 1,788; the number of stocking-frames, 1,209; and the number of weaving-frames, 226. The number of hand-frames, as exhibited in the report of the Commissioners on Hand-loom weavers, was, in 1828, 55; and, in 1838, 121. But the influence of Hawick on the prosperity of artisans is very far from being limited to the persons employed immediately upon its fabrics in its factories and loom-shops. Besides smiths, carpenters, masons, mill-wrights, and needle-makers, on the spot, who are chiefly or wholly maintained in subordination to its staple manufactures, it gives employment to weavers and stocking-makers, clustered together in villages, or dispersed over the face of the country in almost every parish within a radius of 20 or 30 miles; and, through the stocking-makers both within and beyond burgh, it regularly maintains a large, though unascertainable, number of females as sewers or seamers. The principal manufacturers are the Messrs. Wilson, Messrs. Dickson and Laing, and Mr. Nixon.

Hawick has branch-offices of the British Linen company's bank, the Commercial bank, and the National bank of Scotland. Markets for cattle and for hiring servants are held usually on the 17th of May and on the 8th of November; for sheep on the 20th and 21st of September; and for horses and cattle on the 3d Tuesday of October. A market for hiring hinds and herds is held generally on the 1st, 2d, and 3d Thursdays of April; a hiring-fair is also held on the 17th of May. A sheep-fair, at which from 2,000 to 3,000 Cheviots are generally shown, is held on the 20th and 21st of September, or the Tuesday after, if the 20th falls on a Saturday. Hawick tryst is held on the 3d Tuesday of October. This is a tup show, but some young horses, and a few Highland cattle from the Falkirk tryst, are also shown. A winter cattle-market is held on the 8th of November, or on Tuesday after, if the 8th falls on a Saturday, Sunday, or Monday. Till 1778 no regular corn-market existed in the town; but one was, in that year, established by the Farmer's club. Not only in this matter, but in others of a similar nature, and in most things bearing on agricultural improvement, the Farmer's club has been a vigilant, active, and highly useful association. The club was formed in Hawick in 1776, and continues to hold its meetings on the 1st Thursday of every month. A kindred association of wider range and more powerful influence, owes its paternity to the

* A good plaid-weaver, in 1838, gained 15s. per week of clear wages; inferior hands averaged 10s.; blanket-weavers' wages averaged about 1s. less, in each class. The wages of the woollen-weavers in Galashiels, Hawick, &c. are above 100 per cent. higher than those of the cotton-weavers.—See for these and the above details 'Reports on Hand-loom Weavers,' 1839. Pp. 39, 40.—and Report of Commissioners, 1841.

patriotic and enlightened James Douglas, Esq. of Cavers, and was formed in the town in 1835, under the patronage of the Duke of Buccleuch. This association—the Agricultural society for the west of Teviotdale—includes in its sphere of action 13 parishes, and holds an annual general meeting in Hawick on the 1st Thursday of August. A School of Arts, originating in the same judicious and benevolent quarter as the Agricultural society, was established in 1824, and has procured the delivery of several courses of lectures. Three reading and news-rooms, which enrich the town, are liberally conducted, and possess appliances equal to the best in almost any town in Scotland. A Public library, established in 1762, contains about 3,500 volumes, besides the principal current periodicals; and the Trades' library, instituted in 1802, contains about 1,200 volumes. Several shops are maintained solely or chiefly by the binding of books, and two local printing-presses have issued various useful publications. Besides associations of a directly religious nature, and a good grammar-school and private schools for education, the town has a clothing society for indigent females, a society for rendering medical relief, a Temperance, or rather Total Abstinence society, various small friendly associations, and a Savings' bank.

Hawick is a burgh-of-regality or barony, nearly approaching, in some of its institutions, the character of a royal burgh. Its oldest extant charter is one of confirmation granted by James Douglas of Drumlanrig, Baron of Hawick, dated 11th October, 1537; and confirmed by a charter of Queen Mary, dated 12th May, 1545. A detail of the sett, previous to 1781, would be unnecessary, as, at that time, the sett was regulated and established by a decree of the Court of Session. About 1778, certain burgesses having challenged the administration of the magistrates and council, mutual actions of declarator were raised, which terminated in a decree pronounced by the court in August 1781. The purport of that decree is:—The bailies, when elected with the advice of the council, shall have the right of administration of the town's property; the bailies are to be elected annually, by a poll of the burgesses trading and residing within the burgh, from a leet (list) of six, prepared by the magistrates and council; the council is to consist of 31 members,—viz., the two bailies, 15 standing councillors, elected by the bailies and the other standing councillors, and 14 quarter-masters, two of whom are annually elected by each of the seven incorporated trades out of their own number; on the death or removal of any councillor, the bailies and other standing councillors are to elect another in his place; and, if a bailie be chosen from among the standing councillors, the bailies and the remaining councillors are to elect a councillor to supply his place for the year for which the bailie is so elected.—The magistrates exercise jurisdiction directly, with the assistance of the town-clerk as assessor; and they hold courts when necessary, and regulate their proceedings in terms of the act of sederunt, 12th November, 1825. They try both civil and criminal causes. They issue services of heirs on briefs forth of Chancery; they judge in matters of property and disputed marches within burgh; they authorize the repair of ruinous tenements; and, in other particulars, they have, as to civil causes, a wide range of authority. In criminal causes their jurisdiction may be stated generally to be the same as that in royal burghs. They try for assaults, riots, petty thefts, and other delinquencies; and they fine and imprison, and have frequently pronounced sentence of banishment forth of the burgh; nor are they limited in their warrants of imprisonment, to any particular time. Of late the criminal jurisdiction has, for the

most part, been exercised summarily on complaints at the instance of the procurator-fiscal; and aggravated cases, after procognitions taken by the magistrates, have been remitted to the sheriff. The patronage of the magistrates is limited to the appointing of 3 burgh-officers, and the procurator-fiscal of the burgh. Other officers—the town-clerk, the town-treasurer, an overseer of public-works, a surveyor of weights and measures, and billet-master, and a clock-keeper—are elected, the first biennially, and the rest annually, by the burgesses. The qualification of being a burghess or guild-brother is not necessary to entitle any one to manufacture or deal within the burgh, and trade is quite free; but the magistrates levy certain dues on the admission of burgesses. These have been from time to time regulated by acts of council. According to the existing acts, dated 1st December, 1813, they are, for the son of a burghess, £1,—for the son-in-law of a burghess, £2,—and for all other persons, £4. The total amount for ten years preceding 1833, was £401 18s., giving an average of £10 11s. per annum, and the yearly average of non-burgess stent, during the same period, amounted to £2 17s. 1d. The dues of burghess entries and non-burgess stent are, like the other branches of the revenue, applied to the general purposes of the burgh.—There are seven incorporated trades within the burgh, viz., weavers, tailors, hammermen, skimmers, fleshers, shoemakers, and bakers; but they do not enjoy any exclusive privilege, or other right or advantage, except that of each sending two of their number to represent them in the council.—The police departments, such as watching, cleaning, and lighting, are not regulated by any local statute. The duty of watching, when necessary, has been done voluntarily by the inhabitants, under direction of the magistrates; and the expense has been defrayed out of the funds of the corporation. The cleaning is conducted under the order of the magistrates and council, the expense being defrayed, in the first instance, out of the funds of the corporation. The proceeds of the periodical sales of street dung are brought by the treasurer to the credit of the same funds; but, in general, their proceeds fall short of the expense. The lighting is managed by a committee of the inhabitants, appointed annually, and named partly by the magistrates and council, and partly by the other inhabitants. The magistrates and council have been in the practice of voting £30 a-year towards the expense of lighting, and the deficiency has been made up by a subscription by the inhabitants at large, which is collected by the committee, who annually report a state of their accounts to the magistrates and council.—A plentiful supply of water has, at different periods, been brought into the town, at the expense of the corporation, by whom also the wells are kept in good repair.—The middle of the principal street, which has of late been macadamized, and forms a part of the turnpike road, is kept in repair at the expense of the road trustees. A sum is annually granted by the statute-labour trustees, from the statute-labour fund of the parish of Hawick, towards keeping the paved streets and bye-lanes in repair; and the expense of keeping up the remainder is defrayed out of the funds of the corporation; but owing to the state of these funds, and to the circumstance of one of the magistrates only being, *ex officio*, a trustee upon the public roads, the power of the magistrates, with relation to the repairs of the streets and lanes, is very limited; and, in consequence, these are not in good order.—The procurator-fiscal's account for criminal business, and all other expenses incurred in preserving the peace of the burgh, are defrayed out of the funds of the corporation; but the police-establish-

ment is far from being efficient.—The property of the burgh consists in the common muir and common haugh of Hawick, and in the town-house and an adjoining dwelling-house. A low estimate of the value is £6,317 12s. 6d.; and this, after deducting amount of debt, exhibits a balance, in the burgh's favour, of £3,537 12s. 6d. The revenue, from Whitsunday 1832 to Whitsunday 1833, was £386 5s. 7d.; and the expenditure, during the same period, was £506 4s. 9½d.; thus exhibiting a super-expenditure of £119 19s. 2½d. In preceding years, also, there was a super-expenditure occasioned by the borrowing of money, partly for public improvements, and partly for a purpose of litigation. The population of the town, exclusive of the suburb of Wilton, and of the landward parts of its own parish, was,—as stated in the New Statistical Account,—in 1791, 2,320; in 1821, 3,684; in 1836, 4,744; and in 1838, 5,306.

The barony of Hawick is not traceable in history higher than in a charter granted in the reign of Robert Bruce. Along with Sprouston it was given by David II. to Thomas Murray; and in the same reign it descended to Maurice de Moravia, Earl of Strathearn. In 1357 the town figures as a burgh-of-regality. Near the commencement of the 15th century the barony went into the possession of Sir William Douglas, the ancestor of the family of Drumlanrig. A curious charter granting to this baron the lands of Drumlanrig, 'Hawkye,' and Selkirk, and written in the autograph of James I., is still in existence. In 1478-9 Alexander Murray, parson of Hawick, pursued an action in parliament, for 44 marks, a part of his church-dues, against David Scott of Buccleuch. Hawick, at three several periods, suffered destruction from the irruptions of the English; in 1418 it was burnt by Sir Robert Umfraville, vice-admiral of England, and governor of Berwick; in 1544 it shared the disasters which were unsparingly inflicted on all Teviotdale by Sir Ralph Evers and Sir Brian Latoun; and in 1570, in order to prevent its being occupied by the troops of the Earl of Surrey, it was fired by its own inhabitants, and, with the exception of the Black tower, now agglomerated with the Tower inn, entirely burnt to the ground. Situated so near the Border, amid territories frequently debated, constantly possessed or overrun by clans of freebooters, and almost incessantly the scene of foreign incursions or intestine feuds, it could not escape the rough contacts and barbarizing influences of contention and warfare; and, during many centuries, it seems to have worn a character entirely contrasted to its present peacefulness, and plodding, energetic, sturdy, honest, manufacturing pursuits. But at comparatively a late date, long after tranquillity and order acquired ascendancy over its affairs, it was the scene of a remarkable and very memorable occurrence. "The town of Hawick," says the writer in the Old Statistical Account, narrating this event, "though not subject to inundations, has every reason to be afraid of them. It stands at the conflux of the rivers Slittrig and Teviot, which, after great rains, or the dissolving of the snows on the adjacent hills, rise several feet upon the houses immediately situated on their banks. A remarkable one happened in August, 1767. Slittrig then rose to an astonishing height, occasioned by a cloud bursting at its source. It began to rise at four o'clock in the afternoon, and continued to increase till past six, when it was 22 feet above its usual level. It marked its progress with destruction. Part of the surface of the hill, where the cloud fell, floated into the river. Corn and cattle, with every thing on its banks, were borne away by the torrent. In Hawick its devastations were great,—15 dwelling-houses and a corn-mill,

were carried off, and the rock swept so clean, that not a bit of rubbish was left to tell where they stood. At the height of the flood, a maid-servant belonging to a merchant, recollecting that in the house, now surrounded with water, her master had £300 in gold, boldly ventured in and got hold of the bag with the money. In returning, however, she was carried down by the stream, but was cast ashore on a green below the town, herself and the money both safe. In this alarming event two lives were lost; both, indeed, through rashness and inattention."

Hawick, either within itself, or in common with a limited district, is signalized by some curious moral peculiarities. Fictitious designations of individuals, or soubriquets borrowed from ancient clanships or whimsically descriptive of distinctive physical features, very extensively usurp the place of proper names; and stick so adhesively to persons in all ranks of life as, in some cases, to cause the utter oblivion of their real names, and to follow them even to the grave and into the records of mortality. When an individual is believed to be dying, relatives and friends still, in rare instances, maintain the Border practice of crowding near his bed, and lifting their voices in a strain of pathetic sacred melody, singing some psalm which they regard as adapted to solemnize his departure from life. On the last Friday of May, old style, a procession, consisting of the magistrates on horseback, and a large multitude of the burghesses and inhabitants on foot, and graced with the banner of the town, the copy of an original which is traditionally reported to have been taken from the English soon after the battle of Flodden, moves along the boundaries of the royalty, greeted by the hilarious demonstrations of youths and children, and ostensibly describing the limits of their property, and publicly asserting their legal rights; thus very idly and childishly perpetuating the ancient and once necessary practice of 'riding the marches.' Some writers on Hawick think it worth their attention to record that 'a Hawick gill' was formerly, by conventional licence, half an English pint; and they remind us that this double-barrelled 'pocket-pistol,' is alluded to in the song of 'Andrew wi' the cuttie gun.' We allude to the worthless reminiscence simply to remark that such writers seem—from some strange concurrence of misconceptions—to agree in representing the inhabitants as still having a strong dash of the characteristic peculiarities of the ancient Border-men. Had we not seen so grave a charge made by highly respectable authority, we should have been disposed to view the Hawick-men in an entirely opposite light, and to exhibit them as a remarkable instance of acknowledged excellencies, asserting dominion in a locality once all but infamous by antagonist vices. Wassailing and the free use of 'the Hawick gill,' for example, was a very marked peculiarity of the reiving age. But now the town of Hawick, all manufacturing though it be, and crowded with hard-working and thirsty artisans, is more signalized than probably any other town or district of Scotland, by the extensive adoption, and the consistent, zealous observance of the total abstinence pledge. Then as to the other, the only other really distinguishing peculiarity of the roistering period—the confounding of distinctions between *meum* and *tuum*—what can be more contrasted to it than the persevering and patient industry, and the high commercial rectitude, and the strong sense of moral honesty, for which every one is ready to give the Hawick-men credit as a community? What alone has induced the notion of their exhibiting in a softened form the spirit of the ancient Border-men, seems to be their sturdy independence, their

jealousy of their rights, and their vigilant outlook against the assault or the insinuation of any domineering influence. For these properties, undoubtedly, the people of Hawick are noted, to a degree which nearly stamps them upon them as peculiarities. Hawick-men are about the last in Scotland in whom a penetrating observer could discover any trace of the subjugated and cringing and servile spirit of the serfs of the feudal times; and resemble more, in political animus, the citizens of the ancient free states of Greece, or the spirited and enterprising citizens of the young states in America, than the lawless, and by turns enthralling and enthralled, race to whom they have been somewhat hastily—though gently and remotely—compared.

HAWKHEAD, an estate in the Abbey parish of Paisley, about 2 miles south-east of that town, on the left bank of the White Cart. It anciently belonged to a family named Ross, who were raised to the peerage about the year 1503, under the title of Baron Ross of Hawkhead. The title became extinct on the death of William, 13th Lord Ross, in 1754, and the estate devolved, first, on his eldest sister, Mrs. Ross Mackye, and afterwards on another sister, Elizabeth, widow of John Boyle, 3d Earl of Glasgow. On her ladyship's death, in 1791, the estate was inherited by her son, George, 4th Earl of Glasgow, and in 1815 the title of Baron Ross of Hawkhead, a peer of the United Kingdom, was revived in his favour. Hawkhead-house is an irregular pile, of which Crawford says: "This fabric is built in the form of a court, and consists of a large old tower, to which there were lower buildings added in the reign of King Charles I., by James, Lord Ross, and Dame Margaret Scott, his lady, and adorned with large orchards, fine gardens, and pretty terraces, with regular and stately avenues fronting the said castle, and almost surrounded with woods, and enclosures, which adds much to the pleasure of this seat." This was one of the earliest attempts made in Renfrewshire to introduce the Dutch style of gardening, and to construct low buildings approaching to the modern fashion, in addition to the high castellated places of defence which anciently formed the habitations of the nobility and gentry. Very little alteration was made upon the place from Crawford's time till 1782, when the Countess-dowager of Glasgow greatly repaired and improved the house, and formed a new garden, consisting of nearly 4 acres, a short distance to the south. The estate is still finely adorned with trees.—Law, in his 'Memorials', has recorded as one of the memorable events in his time, that in October, 1681, when Scotland was under the administration of the Duke of York, afterwards King James II., his royal highness "dined at the Halcatt with my Lord Ross."—For notice of minerals wrought in this quarter, see **HURLET**.

HAWTHORNDEN, the seat of Sir Francis Walker Drummond, in the parish of Lasswade, Edinburghshire. The house stands on the south bank of the North Esk, amidst exquisitely picturesque and romantic scenery [see **LISSWADE**], and contributes, in its own figure and in the fine demesne which surrounds it, interesting features to the warmly tinted landscape. Constructed with some reference to strength, it surmounts to the very edge a grey cliff which, at one sweep, rises perpendicularly up from the river.

The hazel throws his silvery branches down:
There, starting into view, a castled cliff,
Whose roof is lichen'd o'er, purple and green,
O'erhangs thy wandering stream, romantic Esk,
And rears its head among the ancient trees."

Beneath are several remarkable artificial caves, hollowed with prodigious labour out of the solid rock, communicating with one another by long passages, and possessing access to a well of vast depth bored from the court-yard of the mansion. The caves are reported by tradition, and believed by Dr. Stukeley, to have been a stronghold of the Pictish kings, and, in three instances, they bear the names respectively of the King's gallery, the King's bed-chamber, and the Guard-room; but they seem simply to have been hewn out, no person can tell by whom, as places of refuge during the destructive wars between the English and the Picts, or the English and the Scots; and during the reign of David II., when the English were in possession of Edinburgh, and strove to deal death to Scottish valour, they and the adjacent caves of Gorton gave shelter to the adventurous band of the heroic Sir Alexander Ramsay of Dalhousie. Hawthornden was the property and residence of the celebrated poet and historian, William Drummond, the friend of Shakspeare and Ben Johnson. A sort of seat cut in the face of the rock adjoining the house, and called Cypress grove, is pointed out by tradition as the place where he composed many of his poems. Ben Johnson journeyed on foot from London to spend some weeks with him at Hawthornden. Drummond was zealously attached to the cause of Charles I., and is said to have sunk in health, and been crushed to the grave, by the blow from the unhappy monarch's fate. A profusion of beautiful wood in the opulent landscape around the house, suggested to Peter Pindar the caustic remark respecting Dr. Samuel Johnson, that he

"Went to Hawthornden's fair scene by night,
Lest e'er a Scottish tree should wound his sight."

THE HEBRIDES,

General position and relations.

Or Western islands, are a large and elongated cluster of islands and islets stretching along nearly the whole west coast of Scotland. The Hebrides—called by the ancients Hebride, Hebudes, Ebudæ, and Emodæ—include, according to some writers, the islands and islets in the frith of Clyde, the isle of Rachlin due west of the southern part of Cantyre close to the north-eastern extremity of Ireland, and even the isle of Man situated in the Irish sea, at nearly equal distances from Scotland, England, and Ireland; while they are limited, according to other writers, to a chain stretching from about 56° 46' to about 58° 37' N. latitude, and separated from the more easterly groups and the coast of Ross-shire and Sutherlandshire by the sounds called the Little Minch and the Minch. But by a nearly universal consent, and in methodical regard to their geographical position and political connexion, they have in recent times been defined as terminating respectively in 55° 35' and 58° 37' N. latitude, and as lying westward of the peninsula of Cantyre on the south, and the continent of Scotland in the middle and on the north. The Hebrides, thus defined, are, for the most part, disposed in groups, yet not, in every case, with distinctness of aggregation, or without leaving particular islets to stand in doubt as to the group to which they belong. On the south, opposite Cantyre and Knapdale, lies the Islay and Jura group. The most southerly individuals of it are Gigha and a trivial islet near its southernmost point; both stretch-

—"The spot is wild, the banks are steep,
With egplantine and hawthorn blossom'd o'er,
Lychins, and daffodils, and hare-bells blue;
From lofty granite crags precipitous,
The oak, with scanty footing, topples o'er,
Tossing his limbs to heaven; and, from the cleft,
Fringing the dark-brown natural battlements,

ing north and south near the coast of Cantyre, and screening the entrance to Loch Tarbert from a south-west wind. On a line with Gigha to the west, but three times farther from it than Gigha is from the peninsula, commences the large island of Islay; and though not elongated in its own form, it has resting on its north-east side, with the intervention of the narrow strait or sound bearing its own name, the base of the slenderly pyramidal figure of Jura, and is so continued by that island as to form with it a stretch of territory extending from the south-west to the north-east, and separated, in the Jura part of it, from the districts of Knapdale and Lorn, on the mainland, by the sound of Jura. West of Jura, north-west of the sound of Islay, and north of the island of Islay, lie the islets Oronsay and Colonsay. North of Jura, and pretty near the coast of Lorn, Scarba, Seal, Easdale, and various other islets, form a chain which belongs geographically, in its southern end, to the Islay and Jura group, and in its northern end to the Mull group, but which strictly connects them, and might over its whole length be pronounced independent. West of the northern part of this chain, or opposite the districts of Lorn and Appin, and along the whole south-west coast of the district of Morvern, and separated from the narrow stripe of water called Mull sound, lies the large island of Mull. On its east side, in the mouth of Loch-Linnhe, stretches Lismore; near its south-west limb, is Icolmkill; in a deep broad bay on its west side lie Ulva, Gometra, Staffa, and some other islets; due west, at a considerable distance, lies Tirree; and on the north-west, not so far from Mull, is Coll,—Tirree and Coll forming in their elongated shape and continuous position, a stretch of territory extending from the south-west to the north-east. Immediately north of Mull, the long promontory of Ardnamurchan runs out into the sea, and so far intervenes between the two Hebridean groups we have noticed, as, if not strictly to separate them from the groups on the north, at least to give fair occasion for their being respectively designated the southern and the northern Hebrides. The Skye group lies in general very near the coast, and flanks the whole of the little continental districts of Moidart, Arisaig, Morer, Glenelg, Kintail, Lochalsh, Applecross, and Gairloch. Commencing a little north of the point of Ardnamurchan, and at a greater distance west of the district of Moidart, Muck, Eig, Rum, Sandy, and Canna form, with the intervention of two considerable belts, and two thin stripes of sea, a stretch of territory extending from the south-east to the north-west. Northward of it, and very slenderly detached by sea from the districts of Glenelg and Kintail, stretches north-westward the very large island of Skye,—the largest in the Hebrides except the compound or double-named one of Harris and Lewis. North of Skye, commencing very close on its shore, and running direct northward between its north-western horn and the continental district of Applecross, is a chain of islets, consisting of Scalpa, Rasay, and Rona. From a point nearly due west of Ardnamurchan, but at a great distance, to a point considerably west of Loch Inchar in Sutherlandshire, and, in its central part, westward of the island of Skye, and separated from it by the Little Minch, extends curvingly from the south to the east of north, through an extent of 150 miles, the largest and most compact of all the Hebridean groups, quite elongated and continuous in its form, and cut asunder from all other territory by a broad sea-belt,—that which is commonly designated the Long Island, is sometimes called the Western Hebrides, or the Outer Hebrides, and has, by some, been made to usurp the whole Hebridean name. At its southern point Bernera, Mingala, Pabba, Sanderà,

Muldonick, Vatersa, Barra, Fladda, Hellesa, Fudia, Linga, Eriska, and some other islets, are closely concatenated, and, as they have Barra for their mainland or monarch of the series, are usually called the Barra islands. Immediately on the north, with a profusion of islets in the sound which separates them, and a noticeable sprinkling of islets on their flanks, stretch continuously the islands of South Uist, Benbecula, and North Uist. In the sound of Harris, north of North Uist, the series is continued by Borera, Bernera, Killigra, Ensa, Pabba, and various other islets. From the north side of that sound, Harris and Lewis, the continuous part of one great island, the monarch one of the whole Hebrides, stretches away to the northern extremity of the group, flanked, in various parts of its progress, by Scalpa and numerous tiny islets on the east, and by Taransa, Scarpa, Berensa, and some smaller islets on the west. Far away to the west of the western extremity of Lewis, lies the desolate and pigmy group of St. Kilda, consisting of the islet St. Kilda itself, and its tiny attendants Levenish, Soa, and Borera. Classified geographically, the whole Hebrides thus consist of five groups;—three, or those of Islay, Mull, and Skye, of considerable and nearly equal bulk, close upon the coast, almost continuous and concatenated in their range, and flanking the continent from the district of Cantyre to the district of Gairloch,—one group, so large in its proportions, or in the aggregate extent and the number of its isles, and so distinctive in its position at a considerable distance from the coast and from the other groups, as to have occasionally won the plea of being exclusively Hebridean,—and another group so distant and solitary as to be visited at seasons or on occasions “few and far between,” and so exceedingly inconsiderable as to attract notice solely on account of remarkable features in its natural history, and patriarchal peculiarities in the character of its inhabitants. They shelter the whole western coast of Scotland from the fury of the Atlantic ocean, and, in a certain and no mean degree, do it service as a sort of umbrella; and they seem, especially the three groups nearest it, to have once been a continuation of its shores, and to have become disconnected by the dis severing action of the elements.

Number and Area.

In their political classification, the islands belong to the shires of Argyll, Inverness, and Ross, very nearly in the line of their coincidence with the coasts of the respective counties. Their entire number, including considerable rocks and utterly inconsiderable islets, has been usually stated in round numbers at 300; but, understanding islands and islets to be objects which, on a large map, have a distinct figure, and characteristic outline, it amounts to only about 160. Of this number 70 are inhabited throughout the year; 8 are provided with houses, but abandoned by their inmates during winter; and 40 are either transitorily inhabited or turned to some productive account during summer. In area, the Hebrides, measured on the plane, comprehend rather more than 3,184 square miles, or 1,592,000 Scottish acres, or 2,037,760 English statute acres, nearly one-twelfth of Scotland or one-thirtieth of Great Britain; and, in consequence of the general ruggedness and mountainousness of their character, they might, if measured over the undulations of their superficies, be found to comprehend between 3,600 and 3,700 square miles. These measurements, however,—which are those of Mr. James Macdonald in his ‘General View of the Agriculture of the Hebrides’—include the Clyde islands, and must suffer a subtraction equivalent in value to their area,—that of Arran alone

being about 100,000 Scottish acres.—The islands are distributable, as to size, into four classes. The first class, consisting of the largest in dimensions, includes Islay, Jura, Mull, Skye, Lewis, Harris, and Uist, and comprehends 1,323,000 Scottish acres, or about eight-ninths of the whole Hebridean area. The second class includes Gigha, Colonsay, Tirree, Coll, Lismore, Ulva and Gometra, Bernera, Luing, Seil, Eig, Rum, Rasay, Rona, and Barra. The third class includes Scarba, Lunga, Shuna, Icolunkill, Eisdale, Inch Kenneth, Staffa, Muck, Canna, Ascrib, Fladda, and St. Kilda. The fourth class includes about 120 tiny islets, which are chiefly satellites of the others, and which have some productive value, and an unascertained number of rocks and dottings on the sea which figure in the flaunting announcement of three hundred Hebrides, both classes too unimportant and multitudinous to require the specification of names.

Geological character.

Dr. M'Culloch classifies the Hebrides according to their geological character, under the heads schistose, trap, sandstone, and gneiss. The schistose islands are the Islay and Jura group, with all the islets, even including Lismore, which connect it with the group of Mull. Though not of schistose structure as to every rock which they contain, they consist chiefly of those primary stratified rocks—micaceous, schist, quartz rock, argillaceous schist, chlorite schist, and other associated substances—which all, in a greater or less degree, present the schistose character. They are capable, however, of subdivision into three portions, the islands in each of which have features of mutual resemblance peculiar to them from those of the other islands. Kerrera, Seil, Luing, and Torva, are characterized by the prevalence of clay slate, and may be called the slate islands. Islay, Jura, Scarba, Lunga, Oransay, Colonsay, and the Garveloch islets, are characterized, in the main body of the group, by the prevalence of quartz rock, and in the wings by community or alternation of the other leading strata of that rock, and may be designated the quartz islands. Gigha, Carra, St. Cormac, Lismore, and Shuna, are distinguished by a series of schistose rocks in which chlorite schist predominates, and may be entitled the chlorite islands.—The trap islands, excepting Tirree, Coll, Iona, Rona, and some islets, are the Mull, the Skye, and the St. Kilda groups, with a cluster of very small islets, called the Shiant isles, off the west coast of Lewis. Some individuals in the groups contain few masses or none of trap, yet they present conspicuous and interesting tracts both of the primary and of the secondary rocks, the illustration of which mainly depends on a joint view of the structure of all the neighbouring parts, and are included in the classification less in methodical accuracy than for scientific convenience. The Mull and the Skye groups, while connected yet distinct in geographical position, are blended yet respectively peculiar also in their geological character. The trap which distinguishes them in common is distributed into fields corresponding to their groups, occurs in detached but connecting masses either in the intermediate islands or on the mainland, and again looks up at the Shiant isles, and far to the west—but without any connecting links—in the little group of St. Kilda. The connexions of the Skye subdivision with the continent are formed solely by the primary strata; and those of the Mull subdivision are traced chiefly in the secondary strata, and in the superincumbent masses of trap.—The sandstone islands are, for the most part, a few inconsiderable islets close on the coast of the continent, either of doubtful geographical aggregation with the Skye group, or far distant from it, and

dissociated from all the Hebrides. They consist of Soa, in the Skye group, Lunga and the Croulin isles at the mouth of Loch-Krishorn, the Summer isles off the entrance of Loch-Broom, Handa, lying between Scourie bay and Loch-Laxford, and two or three other islets; and present similar features to those of the sandstone field of the continent.—The gneiss islands are Iona, Tirree, and Coll, belonging to the Mull group, Rona belonging to the Skye group, and, with the very trivial exception of the Shiant isles, the whole of the largest of all the Hebridean groups,—that of the Long island. The granitic subdivision of gneiss is that which prevails; and it is characterized not only by a large granular and imperfectly foliated substance, but by frequent partial transitions into granite. Often—as in Tirree, Benbecula, and other islands—it exhibits, for a considerable space, a dead level; the naked rock being accessible only by some breach in the superincumbent surface, or by the imperforation of a pool or lochlet; occasionally—as in Lewis—it looks up through the soil in protuberant masses; and, in some instances—as in Coll and Rona—it rises aloft in such rapid congeries of low hills, intersticed in the hollows with herbage and lochs, that, seen from a distance, or from low vantage-ground, only a sea of rock seems presented to the view.

Characteristic scenery.

The Hebrides abound in the grand and the sublime, the picturesque and the wild, the desolate and the savage features of scenery. From the sound of Jura, the conical and far-seeing paps of that name close up the view immediately on the north, and tower up to the height of 2,240 feet; the north-eastern point of Islay is screened by the dark and broken precipices of M'Karter's Head; the eastern entrance of the sound seems dotted over with islets, or walled across with the spray of the vexed waters attempting to make an ingress; Colonsay appears in perspective on the west; and eastward the rugged summits of Arran tower aloft in the distance over the intervening seas and the peninsula of Cantyre. From the castle of Dunolly in the vicinity of Oban, the eye wanders over a wide expanse of Hebridean and mainland scenery, fully depicted in the tints of Highland panorama, and wanders southward through the picturesque group of the Mull islands, presided over or backed by Benmore in Mull, rising aloft to the height of more than 3,000 feet. Leaving Tobermory, says Lord Teignmouth, "we started early for Staffa and Iona. Partial gleams of sunshine illuminated the bold rugged headland of Ardnarmurchan, and were reflected dimly from the distant, lofty, and conical summits of the isle of Rum. The point of Cailliach in Mull was sheathed in foam, by the waves of a wild sea mingling their hoarse uproar with the shrill cries of innumerable sea-fowl, hovering around its summit. * * * The grouping of the numerous islands off Mull is extremely picturesque; Staffa, amongst them, rearing its basaltic pillars, forming a long causeway, gradually terminating in a majestic colonnade, crowned by a green and overhanging brow." "The grandest scenery of Skye, and perhaps of Scotland," says the same noble tourist, "occurs in the south-eastern division of the island. * * * Crossing Loch Slapin, I proceeded along the rugged coast of Strath to its point called the Aird, a promontory which—penetrated by caverns, or severed into buttresses, in some places projecting far in tabulated ledges over the sea, tinted richly with yellow, green, and other colours, presents a strikingly beautiful and majestic front to the stormy ocean—to the ravages of which its shattered and perforated precipices bear ample tes-

timony. Reflecting the rays of an unclouded sun, it offered a brilliant contrast to the dark forms of Rùm, and the neighbouring islands which rose to the southward. * * We rowed slowly under the Aird, as every cove or buttress deserves attention, till the opposite headland beyond Loch-Scarig discovered itself; and as we entered the bay, we perceived the precipitous and serrated ridges of the Coolin mountains towering [about 3,000 feet in height] in all their grandeur, above the shores, terminating a perspective formed by the steep side of the two prominent buttresses of the range, and enclosing the gloomy valley and deep dark waters of Loch-Coruisk, from which the principal peaks rise abruptly." ['Sketches of the Coasts and Islands of Scotland, and of the Isle of Man.' By Lord Teignmouth. Lond. 1836.] "Let any one who wishes to have some conception of the sublime," says William Macgillivray, Esq., "station himself upon a headland of the west coast of Harris during the violence of a winter tempest, and he will obtain it. The blast howls among the grim and desolate rocks around him. Black clouds are seen advancing from the west in fearful masses, pouring forth torrents of rain and hail. A sudden flash illuminates the gloom, and is followed by the deafening roar of the thunder, which gradually becomes fainter until the roar of the waves upon the shore prevails over it. Meantime, far as the eye can reach, the ocean boils and heaves, presenting one wide-extended field of foam, the spray from the summits of the billows sweeping along its surface like drifted snow. No sign of life is to be seen, save when a gull, labouring hard to bear itself up against the blast, hovers over head, or shoots athwart the gloom like a meteor. Long ranges of giant waves rush in succession towards the shores. The thunder of the shock echoes among the crevices and caves; the spray mounts along the face of the cliffs to an astonishing height; the rocks shake to their summit, and the baffled wave rolls back to meet its advancing successor." * * "Scenes of surpassing beauty, however, present themselves among these islands. What can be more delightful than a midnight walk by moonlight along the lone sea-beach of some secluded isle, the glassy sea sending from its surface a long stream of dancing and dazzling light,—no sound to be heard save the small ripple of the idle wavelet, or the scream of a sea-bird watching the fry that swarms along the shores! In the short nights of summer, the melancholy song of the thrushle has scarcely ceased on the hill-side, when the merry carol of the lark commences, and the plover and snipe sound their shrill pipe. Again, how glorious is the scene which presents itself from the summit of one of the loftier hills, when the great ocean is seen glowing with the last splendour of the setting sun, and the lofty isles of St. Kilda rear their giant heads amid the purple blaze on the extreme verge of the horizon." [Anderson's 'Guide to the Highlands.']—But pictures bright and interesting as these with their wild beauty, or bewildering and impressive with the grandeur of desolation, or mixedly playful and sublime in the twistings and aerial ascents of rock, or the *melée* and uproar of conflict among sea and wind and beetling cliffs, occur so often and so variously throughout the Hebrides, that no general description, and scarcely any limited selection of views, can convey an idea of their aggregate features.

Lakes and Shores.

No part of the known world is more watered from above and from below than the Hebrides. Where the sea does not indent and almost bisect the islands in almost every conceivable direction, they abound

in rivulets and fresh-water lakes. Upwards of 40 streams carry salmon, and diffuse beauty and the elements of opulence along their banks. Skye has Snizort and Sligachan, the largest of the region, and 13 other streamlets. Islay has two streams of considerable size, fit for moving machinery and for other practical applications. Mull has about 10 rivulets, and the Long Island has 8. All these abound, not only in salmon, but in trouts and eels; and many of them abound also in other species. Lakes and lochlets are so numerous in some of the islands that they perplex the view and defy enumeration. In North Uist, for example, the agricultural reporter on the Hebrides counted 170, and then despaired to ascertain how many small lochlets remained unreckoned. The Hebridean lakes may safely be computed at 1,500 in number, covering an area of 50,000 acres; those of Lewis and Uist alone being 25,000 acres in extent. But the lakes, while they frequently interrupt communication and occasion other inconveniences, offer few compensating advantages; and they have, in general, an inconsiderable depth, none of them approaching that of the continental lakes of Scotland, or indeed exceeding 3 or 4 fathoms water. But though the fresh-water lakes are chiefly of a character which the genius of improvement should seek to dislodge from their possession of the soil, the inlets and arms of the sea which multitudinously and in the most various directions indent the islands, and which mainly among the Hebrideans and the Highlanders receive the name of lochs, possess, as to both scenery and utility, many features of engrossing interest. Traced along the line of their deep incisions and their sinuosities, they give the islands the enormous aggregate of 3,950 miles of coast; and they offer a vast number of harbours, some of which are equal, in point of spaciousness and security, to any in the world.

Manufacture of Kelp, and Fisheries.

So rife are these shores in the fish common to the west of Scotland, and in materials for the manufacture of kelp, that their annual produce was, a few years ago, calculated to be four times greater in amount than that of the land. During the war the kelp-shores annually yielded from 5,000 to 5,500 tons of kelp, at the average value of £16 per ton; and their 50,000 acres covered by sea at high-water were thus in nett annual value £80,000,—a sum exceeding five times the rent of the 30,000 acres of Hebridean arable land. Since the introduction of Spanish barilla and other substitutes, indeed, kelp has fallen in price, from two-thirds to one-third of the former average; but, as it is manufactured at a cost of only from £3 to £4 per ton, it is still produced in the Hebrides and along the west coast of Scotland to the amount annually of 8,000 tons.*—The fisheries, though not by any

* Mr. Macleod, the late proprietor of Harris, in a letter to Lord Glenelg, then Secretary of State, dated April 10th, 1829, says: "The production of and manufacture of kelp which has existed more than 200 years, had, for a very great length of time, received a vigilant and special protection against the articles of foreign or British growth or manufacture which compete with it in the market, namely, barilla, pot and pearl ash, and black ash; the last of which is formed by the decomposition of salt, effected chiefly by the use of foreign sulphur, which sulphur forms three-fourths of the value of the manufactured alkali. Up to the year 1822, considerable duties were leviable on all the commodities just enumerated; but in that year the duty on salt was lowered from 15s. to 2s. a bushel. Shortly afterwards the impost on barilla was considerably reduced. This measure was quickly succeeded by a repeal of the remainder of the salt duties (duties which had lasted more than 130 years), and of the duty on alkali made from salt. Close upon this followed a considerable reduction in the duty on pot and pearl ash, and an entire removal of that on ashes from Canada; and this last step was accompanied by a diminution in the duty on foreign sulphur from £15 to 10s. a ton. Such is the succession of the measures which now threatens the total extinction of the kelp manufacture, and with it (in reference to Scotland

means so extensive as the capacities of the region admit, and though long damaged by an injudiciously distributed parliamentary bounty, and still encumbered by the pressure of principles not well-adapted to their management, yield annually a considerable sum; and about twenty years ago brought the natives a clear profit in money and sustenance of about £100,000, and, jointly with the kelp-manufacture, employed about 2,600 boats and vessels, and, for some months in the year, about 11,000 sailors. The shores of the Hebrides and the western coast of the mainland seem, indeed, to present as richly furnished and as facile a fishing-ground as the fancy can well imagine; but it would appear that the herring-fishery has greatly declined for the last ten or twelve years. In the New Statistical Account it is stated that, "Barra has been in former times much frequented by great shoals of herrings, but its lochs are almost now entirely deserted by that useful fish." Of the parish of Portree, in the island of Skye, it is stated that, "It is a matter deeply to be regretted that the herring-fishery in this quarter has been much on the decline for several years past; so much so, that failure in this branch of industry, together with other causes operating injuriously, has produced the ever-memorable destitution of the years 1836 and 1837." In the account of Kilmuir, also in the island of Skye, we read: "At one period the herring appeared in prodigious shoals, not only around the coast of the parish, but in all the lochs, creeks, and bays of the island; it then formed an extensive and lucrative source of traffic, and the benefits derived from it by the country in general were very great. It was caught at comparatively little expense, as the natives could, for the most part, make their own nets and reach their own homes. In every creek and bay large fleets of schooners, brigs, sloops, wherries, and boats of all sizes and descriptions, were to be seen eagerly engaged in the securing of stores for private families, and of cargoes for the southern markets; now the irregular appearance of the migratory fish, together with the small quantities of it which frequent, at the present day, its wonted haunts, have deprived the natives of one of their most lucrative sources of support, and have been in no small degree the means of reducing the redundant population to poverty, and of unfitting them to meet such seasons of destitution as those of 1836 and 1837." Of late years it has been notorious that the herring-fishery has been very different from what it was in former years; and now parties do not calculate on it, though in 1840, in some districts, large shoals of herrings did appear; but they came upon the people at a period when they were altogether unprepared; they had no salt to cure them; and, the fact is, though the supply of herrings was unusually large, they were in a great measure unproductive, except affording food for a short time, for the people were unprepared for curing the fish.—Mr. R. Graham, in a letter to Mr. Fox Maule, under date May 6th, 1837, says: "It is the opinion of some people, that

the cod and ling and lobster fisheries of the West Highlands and Islands, might be much improved by encouragement and assistance, and would be a source of benefit to the tenantry and the people; this is a subject which has attracted public attention from the time of James V. downwards, and everything which royal support, and the establishment of associations, corporations, and boards could effect, has been done to promote the herring-fishery in particular. No branch of industry has repaid the encouragement so ill, from its precarious nature; and upon the whole it may be doubted, whether it can be considered as an increasing source of wealth in this country. Its failure, generally on the west coasts, for several years back has had a very serious effect upon the circumstances of the people; and the migrating character of the fish ought to deter the local fishermen from trusting entirely to that one branch of the art; probably, however, in many situations the general white-fishery might be further improved by the countenance and support of Government singly, or by Government conjointly with the maritime and insular proprietors, though all parties should guard against flattering descriptions of the coasts, as if the seas were everywhere full of the finest fish, and as if the demand could be procured for any amount of supply. Many accounts rest on the idea that fish exist on all the coasts; I have found this frequently contradicted; the greater part of the western coast of the Long-Island, from the nature of the shores and the violence of the sea, is almost precluded from the possibility of being fished. Some of what were formerly considered the best stations have greatly fallen off. Gairloch was once a famous station, but for the last eight years it has been unproductive. Lochbroom never was much of a station, except for herrings, and there has not been a good fishery there since 1811. At Arisaig, Tobermory, Ulva, and Iona, it was alleged that the people were inactive, and did not take the full advantage of their opportunities of fishing. The parishes of Knock and Lochs were the only portions of the Lewis which seemed to be considered as favourable stations; there is said to be none in Harris; and Boisdale and Barra were the only favourable points spoken to in the southern portions of the Long-Island. There are none of these stations where the fisheries could be much advanced, but by assistance in procuring for the inhabitants boats and tackle, and perhaps the example of a few more practised fishermen than themselves; but it might be an object of great importance to have the soundings more extensively ascertained, on the west coast of Scotland and north-west of Ireland, to show the fishing-banks. The piers and quays would be an improvement at many of the stations, and new ones were suggested, not for the fishery, but for exporting fuel, from the Ross of Mull; and at Dunvegan and Uig in Skye, for the traffic of cattle."—The evidence of the Rev. Alexander Macgregor of Kilmuir, in Skye, is valuable under this head. That gentleman, in a paper in the 9th volume of 'The Agricultural Journal,' says: "It has been already mentioned, that, at one period, the herring appeared in immense shoals in every loch and bay which intersect the Hebridean isles, and that the natives caught it in large quantities, both for the market and for domestic consumption. But while that fish has deserted its wonted places of resort, it is well-ascertained that, in its annual migrations, it passes by in the streams and currents of the deep sea, where the people have neither skill nor materials to catch it. Some years ago, when it abounded in almost every creek, the people had nets and other necessities for procuring it. Their circumstances then enabled them to provide such things

alone) the ruin of the landed proprietors in the Hebrides and on the west coast, the most serious injury to all descriptions of annuitants on kelp estates, and the destitution of a population of more than 50,000 souls."—Mr. Bowie, in his evidence before the Select committee on Emigration, in February 1841, says: "I know one estate where formerly 1,100 tons of kelp were manufactured annually; another where 1,200 tons were manufactured annually; and, assuming that the price got at market was only £15 a ton, taking the expense of manufacturing and of conveying to market at £3, we had there a profit of £12 a ton; so, in the one case, we should have a profit to the proprietor of £13,200 a-year, and in the other case a profit of £14,400, and this independent of the land-rental. But the whole of that kelp-rental has vanished; the proprietors are reduced to their nominal land-rental; and while so reduced to their land-rental, they have thrown upon their hands a large surplus population, whom they cannot assist, and for whom they have not the means of employment."

as are now beyond their reach ; besides, that the stations which that fish then frequented, enabled them to catch it with far less skill, as well as with less danger and expense, than at the present day. Herring, however, is not the only fish which might, through time, afford the natives lucrative employment. Cod and ling, and endless varieties of lesser fish, frequent the banks and currents of the western seas, which might, through skilful management, turn out of vast advantage to the people. As matters stand at present, the benefit derived from fishing is very limited indeed. With the exception of small quantities, which are caught by such of the natives as are able and inclined in good weather to go a-fishing, for the immediate use of their families, little or nothing is secured for the market in many of the Western isles. The natives of Lewis island must, however, be excepted, who are in this respect rather industrious, and catch considerable quantities of cod and ling on the western coast of their island. The London cod-smacks furnish ample proof that white fish of this description is still abundant in the open channels which surround the Northern Hebridean isles. These vessels are furnished with 'wells,' into which the fish is put alive, and is brought in that state to the British capital. A certain number of these vessels visit the Lewis coast annually, and supply the London market during the season with considerable quantities of fish in excellent condition. When the London season is over, they are generally engaged for some weeks in supplying the Stornoway fish-curers with the fruits of their industry, giving them the ling for sixpence or so each, and the cod for threepence or fourpence, according to size and quality. It is said that hand-lines are the only tackle made use of by these English fishermen ; and that they are possessed of so much skill in their vocation, that a vessel, by leaving Stornoway on Monday morning, and resorting to banks in the deep seas, returns on the following Saturday evening, having almost incredible quantities of fish on board. About the year 1810, an English fish speculator of the name of Degraives, visited the shores of Orkney and Shetland, and there carried on his traffic with considerable success. The fishermen whom this gentleman employed were Dutch ; and, it is reported that, had he not ruined his prospects with over-speculation, the undertaking would have proved very successful. Several years ago a man from Fraserburgh, in the county of Aberdeen, went to the coasts of South Uist, where, from his skill and perseverance in fishing, he not only benefited himself by his industry, but also the natives of Uist by his example. He had in all four boats and twenty-one men, and his speculation was so successful, that he cured about forty tons of fish during the season. The greatest fishing now carried on in the Western isles, besides that by the London vessels already mentioned, is by the Irish, who have frequented for some years back the different banks in the channels between Barra-head, Coll, and Tirree. They are supplied with large Port-ross wherries, well-adapted for the boisterous stations which they make choice of, as well as for carrying the produce of their labours, generally, to the Irish markets."

Climate.

Westerly winds, which prevail on the average during 8 months in the year, bring deluges of rain from August till the beginning of March. But often in October and November, and, in general, early in March, a stubborn north-east or north-north-east wind prevails ; and, though the coldest that blows, is generally dry and pleasant. Due north and south winds are not very frequent, and are seldom of more

than two or three days' continuance. The mountainous tracts of Jura, Mull, and Skye, sending up summits from 2,000 to upwards of 3,000 feet above the level of the sea, intercept the clouds from the Atlantic, and draw down on the lands in their vicinity a large aggregate of moisture ; but they, at the same time, modify the climate around them, and serve as a screen or gigantic shield from the stern onset of careering winds. The comparatively low islands, Coll, Tirree, North Uist, and Lewis, though sharing plentifully enough in moisture, are probably as dry as any district in the western section of the Scottish continent. Snow and frost are almost unknown in the smaller isles, and seldom considerably incommode those of larger extent. The medium temperature in spring is 44° ; and in winter is probably never known, on the lower grounds or in the vicinity of a dwelling-house, to descend lower than 5° below the freezing-point. Owing to the comparative warmth of the region, and to the lowness and the vicinity to the coast-line of the arable grounds, grasses and corn attain maturity at an earliness of period altogether incredible by one who, while he considers the high latitude and the saturating moisture and the unsheltered position of the islands, does not duly estimate the mollifying effects of their own mountain-screens, and the powerful influences of their being so deeply and variously serrated by cuts of the sea. In the southern isles sown hay is cut down in the latter end of June and till the middle of July, and, in the northern isles, 10 or 14 days later ; in all the isles barley is often reaped in August, and crops of all sorts secured in September ; and in Uist, Lewis, and Tirree, bear or big has ripened and been cut down within ten weeks of the date of sowing. Nor is the climate less favourable to animal life than to vegetation. Longevity is of as frequent occurrence as among an equal amount of population in any part of Europe ; and diseases formerly deemed of peculiar prevalence are gradually losing their malignant and epidemical characteristics. So salubrious, in fact, are the Hebrides, that the natives, if the other natural advantages of the islands could be enjoyed in a degree proportionate to the pure and bracing air, might, in spite of their local seclusion and the rough character of their Highland and insular home, be pronounced on a par, as to the physical appliances of real well-being, with the inhabitants of some of the finest countries of the world.

Mineralogy.

The Hebridean minerals may, for popular purposes, and with reference to their practical value, be better viewed apart than if they had been glanced at in connection with the geological distribution of the islands. Coal has been discovered in all the large islands except those of the Long Island group, but either in so small quantities or under such disadvantageous circumstances, that attempts to work it either have not been made or have uniformly failed. That of Skye either occurs among stratified rocks, in thin seams of rarely a few inches, overwhelmed or cut off by trap, or it lies enclosed in trap, generally in irregular nests from one-fourth of an inch to a foot in thickness. The largest mass of it hitherto known lay in Portree harbour, and, after yielding 500 or 600 tons, was overwhelmed by the fall of superincumbent rocks of trap. The coal of Mull occurs, in one place, in a bed nearly 3 feet thick, but though subject to repeated attempts at being worked, it has hitherto—probably from the interference of trap—offered stubborn resistance, and sent away the miners in discomfiture. Wherever else the valuable and much desiderated fossil occurs, it seems—as in Eig and in several parts of Skye—to lie embedded in sandstone,

alternating with some of the calcareous strata, and to be so very thin and unpersistent in its laminae as to offer no hope of repaying search and labour. Copper was probably discovered and wrought in ancient times by the Scandinavians in Islay; but it now offers no appearances there which are tempting, and does not occur elsewhere in the Hebrides. Lead seems to exist in Coll, Tirree, and Skye, particularly in the district of Strath, but has been wrought in no island except Islay. No fewer than in five places in Islay was it mined from, as it would seem, distinct masses or independent veins; and in all of them it has been abandoned. To the north-west of Port Askaig were mines which yielded between 1761 and 1811 produce to the value of £12,000, whose ore consisted of galena, intermixed with copper pyrites, and containing enough of silver to have bequeathed to the present proprietor of the island the rare boast of having a large part of his family-plate manufactured from material found on his own estate. Iron is met with in almost every one of the Hebrides; and, in many of the islands, especially in Lewis, Skye, and Mull, the ore appears to be particularly rich. Some ore which occurs in Islay is occasionally magnetic, and is said to produce good iron, and has furnished supplies for exportation. The want of coal, however, has hitherto prevented the Hebridean mine of intrinsic iron wealth from being practically more than nominal. The most remarkable of the Hebridean metals is quicksilver. In a peat-moss on the western face of the eastern ridge of Islay, two quarts were, upwards of 60 years ago, collected. Reports exist also—though without such substantial evidence as might convince an incredulous or even perhaps a cautious inquirer—that manganese, cobalt, emery, and native sulphur have all likewise been found in Islay. Fuller's earth is found in the district of Strathskeay, and alum-earth in the neighbourhood of Megstadt in Trotternish. Limestone, the most useful mineral for the Hebrides, occurs in several of them in inexhaustible abundance. Regular limekilns are erected in many parts of Islay, in three places in Lismore, and in some localities in Skye, and produce vast quantities of lime for exportation. Marl is found in most of the large islands, and has been turned to great account in Islay, and some parts of Skye. Marble of tolerable quality has been quarried on the Duke of Argyll's property in Tirree, and on Lord Macdonald's estate of Strath in Skye; and it occurs also of interesting character, though not well capable of adaptation to the arts, in Iona. The marble of Skye, where there are hills of the noble stone, and where chief though faltering attention has been paid to its claims, exhibits several varieties. Though all white in its ground-colour, and, in one variety, unixed with any tint, it has one variety with a scarcely discernible shade of grey,—another, with variously disposed veins of grey and black, resembling the common veined marble used in architectural ornaments,—another with narrower and well-defined veins often almost regularly reticulated,—another distinguished, independently of the veins, by a parallel and regular alternation of layers of pure white and greyish white,—and another variously mottled and veined with grey, yellow, purple, light green, dark green, and black. Of all the varieties the most valuable is the pure white, which appears the best adapted in its qualities to the uses of statuary. Slates form one of the principal articles of Hebridean export. Easdale, Belnahuagh, and the adjacent islands, yielded, for some period before 1811, upwards of 5,000,000 a-year, and employed nearly 200 workmen in preparing them for the market. As the slates sold at 30s. per 1,000, the annual value of the produce was £7,500,—a vast sum for ground

which would not let for £20 in corn or grass. Luig and Seil and other islands now greatly attract the notice of tourists in the steamers from the Crinan canal northward, by their great diversity of forms, and by the lively scenes of their extensive slate-quarrying establishments.

Manufactures and Commerce.

The Hebrides may be said, with the exception of kelp, to have almost no manufacture; and, with the exception of bartering the produce of the sea, the mine, the natural aviary, and the limited soil, for the wares of more favourably situated communities, to have no commerce. Projects for establishing regular manufactories at Tobermory were made dependent on the unplastic, intractable, and slow-moving inhabitants of Mull for the supply of workmen, and braved the competition not only of Glasgow, but of the favoured though clumsy native manufacturers; and they, in consequence, failed. An attempt of Mr. Campbell of Islay to introduce the weaving of book-muslin on his property, by importing some families from Glasgow, providing them with cottages, and placing around them, in a locality where provisions are cheap, the appliances of a manufacturing colony, remained, in 1836, of doubtful success, and probably has not yet been finally tested. The spinning of yarn, at one time, formed a staple in Islay, and continued to prosper till superseded by the Glasgow manufactories. While it flourished it employed all the women on the island, and produced for exportation so much as £10,000 worth of yarn in a year; but it is now limited to supply for domestic consumption. The distillation of spirit from malt has very extensively ceased in its illicit form, but, from the legal still, is carried on to a great extent in Islay. But, in general, the manufactures of the Hebrides—or what, in the absence of better, must be called such—are of remarkably patriarchal and simple character. Clusters of twenty or more farmers give employment to women and girls in carding and spinning wool, and to men, accommodated with looms in little workshops or cottages, in weaving it into plaiding, blankets, and other coarse fabrics; and they maintain, in the same way, wrights, tailors, smiths, shoemakers, and other handicraftsmen, in their respective vocations. Each customer provides the material for the work to be done, and makes payment, either in money, or by conceding the temporary use of a portion of land; and, in the article of cloth, he receives it as it comes from the loom, and acts the part of dyer for himself, very probably tincturing it with a hue destructive of its whiteness by a process very primitive, and not unlike what was practised a few years ago by the untamed natives of the gorgeous islands of the Pacific.* “I was assured by an old man in Jura,” says Lord Teignmouth, “that the coat which he wore cost but two shillings.” Most persons who enjoy the luxury of stockings must procure it either from their own knitting-wires or from those of some member of their family. The making of brogues, as a succedaneum for shoes, while very extensive, is a somewhat peculiar and strictly a home manufacture. The material, or cow-leather, is stripped of its hair by prolonged immersion in lime-water, and then tanned by being steeped in water of oak-bark. The brogue is stretched with thongs of calf-leather, instead of the rosined thread of hemp employed on shoes, and freely admits water; but it is

* With the exception of blue and scarlet, the Hebrideans produce a variety of dyes from native plants. Thus the common ling affords a fine permanent yellow, which, however, is not a favourite colour in the islands. A brown red is obtained from the yellow bed-straw; black is procured from the roots of the white water-lily, and the common butter-bur: the yarn having been previously immersed in a solution of coppers.

fortified at the toe with a double ply or a patch of leather to protect it from the effects of the edgy collision of the heath; and, though only an eighth or a seventh less expensive than a shoe, it seems very extensively, even where the latter might be obtained, to occupy a favourable place on—in two senses of the word—the understandings of the natives. Except in the Outer or more westerly Hebrides, however, the facilities of steam-navigation, and easy access to the grand emporium of Scottish manufactures on the Clyde, have already very much curtailed the range of the native manufacture, and created a taste for the more refined fabrics imported into the islands. Had not the Hebrideans hitherto evinced indifference to acquire the arts with which free intercourse with the continent of Scotland has of late years made them acquainted, and even shown an utter indisposition to learn lessons advantageously offered respecting them, they might already have been in a state of far advanced transition from their patriarchal usages to those of incipient competition with the neighbours who are invading their markets and revolutionizing their social tastes. But even the inhabitants of the South Sea islands, who 30 years ago were almost wholly in a degenerately savage condition, have, proportionately to their previous attainments, prospered more in the acquisition and the tact of manufacturing skill than Scotland's Western islanders. Mr. Graham, in his report addressed to Mr. Fox Maule, under date May 6th, 1837, says: "A few people (but a great minority of those whose opinions on the state of the Highlands I had an opportunity of gathering) hold the opinion, that a good deal might be done for the surplus population in getting employment for them in the manufactories in the great towns, or in establishing works for them near their own homes. How far a certain proportion of the population might find employment in this way, it is surely worth while to inquire. The habits and language of the people, however, are much against their reception in the manufactories in the great towns; and it is alleged there are associations of the native interests in those places against their admission. The ignorance of the people disqualifies them from permanent employments, which they might otherwise obtain by moving southwards. They are rivalled successfully even in what used to be their own especial work in the harvest season, by the great influx of Irish, men and women, who now find their way into the south of Scotland. Extensive works in their own country might only tend to increase a population dependent entirely upon their endurance. Several exertions have recently been made to prop up the kelp-manufacture still. Establishments have been erected for manufacturing soda, the muriate of potass, and carbonate of soda; the largest of these, for the present, is inactive, and the next in scale has not existed long enough to establish its chance of success; but such works must be limited in extent, and the relief they can afford must be but partial. I was casually informed that a house at Glasgow has lately pointed out a new channel for the consumption of kelp, in the production of iodine for manufacturing purposes; but it is probable that this outlet cannot give rise to a great increase in the consumption of the commodity. Many parts of the Highlands are peculiarly adapted for the establishment of manufactures, from the extent of water-power, and other facilities; but unless these come chiefly as the results of private enterprise, they have never yet been forced with any advantage in any country."

Agriculture.

The Hebrides—though more populous and aggre-

gately productive than the same extent of the continental Highlands, or even of the mountainous part of Northumberland, Cumberland, and Westmoreland, and possessing, in comparison with all Scotland, an amount of value nearly proportionate to their relative extent—are but a few degrees superior in the arts of agriculture to what they are in those of manufacture. Yet the islands are not, in the aggregate, naturally sterile. Though a stranger may hastily excite suspicion respecting them by talking—more with a view to poetic effect than from regard to ascertain and convey a correct estimate of their character—of Jura's 'mass of weather-beaten barrenness,' and of 'the obtruding sterility of the stormy, cloud-enveloped Rum,'—and though he may even be misled by the state of total neglect in which several isles have lain for ages, by the scarcity of timber, by the broken and desultory system of tillage extensively followed, and by the absence, to a great degree, of enclosures, and of the results of draining and improvement, to form conscientiously an unfavourable opinion; yet, on a close inspection, he will find, in many parts, as fertile a soil, and, but for the want of a fair sheltering and adorning with trees, as varied and beautiful a surface, as in almost any portion of Great Britain, and he will distribute his feelings into admiration of the bountifulness of the Creator, and poignant, condemnatory regret for the ingratitude and the sloth, or for the ignorance and the ill-directed exertions of man. In a region so extensive, a great diversity of soils and of surfaces may be expected to exist—so great as, with difficulty, to be even remotely represented, in a rapid and general statement. Islay has 36 square miles of a thin stratum of decomposed limestone, occasionally intermixed with clay and gravel, several miles of rich clay upon gravel, and some thousands of acres of fine old loam. Jura—despite the rashly rhetorical sarcasm of Pen-nant which we have quoted—contains some fertile patches of clayey gravel, and of loam mixed with *cailloux roulés*, and many hundred acres of improveable moss. Mull, while very various in soil, has generally, in the south and south-west, a thin but sharp and fruitful surface of decomposed granite and basalt, occasionally mixed with clay, upon gravel or rock; and, in the north and north-west, a thin soil of decomposed whinstone, carpeted with comparatively poor and scanty pasture. Skye has, excepting pure sand, all the diversities of soil in all their modifications; in one parish it has 4,000 acres of as fine loam, and loam and clay, upon a gravelly bottom, as are to be found in Scotland; and, in general, from Megstadt or Duntulm, it has a surface rich in agricultural capacities and loveliness. The Long-Island group possesses extensively a soil of decomposed granite which, when mixed with clay, or with marine productions, or when assisted by the manures plentifully furnished on the spot, yields abundant crops of the common grains of the district. Lismore is all limestone; and, where tolerably well-managed, exhibits great luxuriance of vegetation. Gigha, though surfaced with reddish clay and gravel, and an admixture of decomposed schistus, granite, quartz, and sandstone, and inferior in natural capacities to other islands, is one wide field of segmented and intersected agricultural beauty, and an evidence to the world of what a large section of the Hebrides might become under the operations of improvement. Though, then, two-thirds of the whole Hebridean surface must be deducted for moss—a deduction from arable ground only, but a real and valuable addition to the wealth of the district in the supply of fuel, and, to a large extent, a territory offering scope for the play of georgical enterprise—and though a considerable fraction more must be deducted for sand; yet, considering how Highland is the character

of the region, a large aggregate remains to be classified as productive, and even as highly fertile soil. Mr. James Macdonald, in 1811, estimated the whole Hebrides, including the Clyde islands, to contain 180,000 Scottish acres of arable and meadow land; 20,000 occupied by villages, farm-houses, gardens, and gentlemen's parks; 10,000 occupied as glebes, and churchyards, and by schoolmasters; 5,000 under plantation and natural wood; 700,000 of hill-pasture, paying rent and partially enclosed; 30,000 of kelp-shores, dry only at low-water; 22,000 dug for peat, or occupied by roads, ferry-houses, and boats; 25,000 of barren sands; and 600,000 of mountain, morass, and undrained lake, yielding little rent. In all 1,592,000 Scottish acres.

The Hebrides were, for sometime preceding 1811, distributed into 49 estates; 10 of which yielded from £50 to £500 of yearly rental, 22 from £500 to £3,000, and 8 from £3,000 to £18,000; and 6 of the largest were in the possession of noblemen. But in Mull and Skye, and some of the smaller islands, the number of proprietors often fluctuates. A fifth part of the whole region is under strict entail; and three-fifths are the property of absentees. The great estates are managed by resident stewards or factors, who usually reside on them, and superintend the conduct of the tenants. The state of property is neither very favourable, nor the reverse, to agricultural improvement. Nor, amid the mixture of large and of small estates, is it easy to determine on which class, in general, the spirit of improvement has been most abroad. Four sets of men are in contact with the soil, and wield its productive destinies,—proprietors, who keep their lands under their own management,—tacksmen, who hold lands by lease of the proprietor,—tenants, who hold lands without lease and during the proprietor's pleasure,—and sub-tenants, who hold from year to year, either of the proprietor or of the tacksmen. Some of the proprietors who work their own lands, have extensive estates, and are keen and successful agriculturists; and others are resident simply because their properties want capacity to support both their own families and those of tacksmen. The tacksmen—a totally different class of persons from the Lowland farmers, connected with the proprietors by clansmanship or consanguinity, possessing leases of from 9 to 99 or even a much larger number of years, valuating their grounds, not by the acre or by productiveness in corn, but solely by capacity of rearing and maintaining cattle, and making pretensions, in many instances just ones, to the status of gentlemen—are, from various causes, in possession of the greater part of the Hebrides, and have, with some exceptions, seriously prevented the ingress, or blocked up or impeded the march of agricultural improvement. But while some—such as those of Mr. Campbell of Islay—have, under the inspection of their landlord, moved in the very van of improvement, and been, in general, an honour to their order, all, as a class, act a useful and even necessary part in maintaining government and good order in the district. Tenants are becoming more numerous as the tacksmen die out, and pay from £5 to £20 of yearly rent; but, in consequence of the insecurity of their tenure, they seldom attempt improvements. The sub-tenants are a class similar to the cotters of the Lowlands, responsible for a rent rarely exceeding £3, which they usually pay in labour; and as they almost always support large families in a state bordering on complete idleness, they would fare much better, and prove more useful members of society, were they, in the strict sense of the word, day-labourers. They are oppressed and rendered actionless by a spirit of enslavement; they often prefer having their children about them in a

state of abject misery to what they esteem the hardship of driving them into service; and, destitute of any prospect of independence, and amounting in number to probably 40,000, they sit so heavily on the soil as very greatly to daunt expectation of its being soon brought under these georgical influences which have so generally diffused beauty and exultancy over the face of the Lowlands of the continent.* Except in Gigha, and portions of Islay, Mull, and Colonsay, the Hebridean farms are estimated and allotted, not by measurement of area, but by the ploughgate of tillage or the quantity of corn used for seed, and by aggregate productiveness in kelp, and

* John Bowie, Esq., in his evidence before the Select committee on Emigration, in February 1841, states that he knows one estate, the farm-rental of which "amounts to £5,200 a year, and that rental is paid by 1,108 crofters; the rental on the average being £4 14s. 5d. each. But it is matter of notoriety that, in the highlands of Scotland, crofts are not occupied by one party or family alone; almost every other has two, three, and even sometimes four families on it; therefore if, in the case I allude to, I take one-half of the crofts as each possessing two families, and take five to a family, I find a population of 5,310 living upon a landed rental of £5,232, which gives a rental of 12s. 7d. per individual. There is another estate with which I am also very intimately connected, where I bring out a population of 2,337. Mr. Graham, in his letter to Mr. Fox Maule, already referred to, says on this subject: "The tendency to over-population is not sufficiently restrained by regulations in the management of properties. In a few well-regulated farms, and in some cases on small properties, especially where they are farmed by the proprietors themselves, there is complete evidence that the thing may be done, and there is every appearance that the subject will soon be taken up on a system by the larger proprietors in general. The over-population has increased chiefly under the operation of the crofting system, or the minute subdivision of possessions, either directly permitted to too great an extent, or connived at by the landlords with the object or in the consideration of taking in muirs and waste land. Some of these hold directly from the landlords, sometimes only from a kind of middle-man or greater tenant; in both cases there are instances where the system is not attended with bad effects; but it is the abuse of the system which makes the practice objectionable; and in the general absence of regulations or limitations it is very difficult, with the present habits of Highlanders, to prevent its abuse; these poor people often hold patches of land at two or three times its value of rent. If the allotment has been a fair one once for a single family, it in many cases has been split down to an arrangement for three families. On these spots, as in Ireland, they do what they can to raise potatoes for rearing large families, for whom there is no employment. The rents are paid by that worst of all methods, the work of the cottier and his family. If the superiors are heartless, the amount of wages is entirely in their hands. If the labour on the land is not sufficient, the produce of the fisheries is taken to account of the rent; and having no power to better their condition, these poor people are almost unavoidably consigned to a state of degraded and hopeless slavery. These are the extreme cases, which, however, I fear, in complicated managements, are not infrequent. The more common case is without the intervention of the managers, and where the population themselves are chiefly to blame, and arises from the rapid growth of two or more families on a spot which was originally not more than a sufficient adaptation for one. To use the words of a private communication which was handed to me on the subject: 'The croft or cottier system in a country where there is no capital, no trade, no fishing, no manufacture, has been very prejudicial. Indolence and ignorance are fostered; human beings are multiplied in proportion to the increase of poverty, and the people, seeing no prospect of improving their condition, give way to a sullen despondency, that incapacitates them for those active and animating exertions, which are as necessary to mental enjoyment as they are to bodily comfort and worldly prosperity.' Another cause of crowded population in villages and particular spots (arising sometimes out of the desire of curing the former evil), springs from the determination of the proprietors to abolish joint-holdings, and to enlarge possessions, or to change the systems of cultivation or management. If this is done with too much celerity, an influx is directed upon some other spot, where the means of subsistence, perhaps, are not to be procured; and while improvement goes on in one part, additional and probably permanent misery is inflicted on another part. On the mainland, and in the islands of Mull and Skye, and even in some portions of the Long Island, a great change has been produced by the increase in the number of sheep farms. The rearing of black-cattle had a direct tendency to support a greater proportion of population; but, since turnips have been so successfully introduced, and applied to the feeding of sheep; and since prices of cattle have fallen so low, and prices of wool have for some years risen so high, the farmers find it their interest to change black-cattle for sheep; and it is alleged that this has been done to an extent not compatible with the welfare of the people, and in some instances without much regard to their feelings and interests as human beings."

aggregate capacity to rearing and maintaining stock. Mr. Macdonald conjectured the average rental, in 1811, to be 5s. for each sheep, 25s. for each full-grown cow, and from £12 to £60 for each plough-gate of arable land. But Islay—the centre of influence on the Hebrides, and the home of their chief agricultural value, ‘the island’ par excellence in productiveness now, as the island in paramount civil importance in days of antiquity—has copied, in the allotment and management of farms, very largely from the practice of the Scottish Lowlands, and set up among the islands a successful and arousing example of departure from their antique and unwieldy system which they are in the course of slowly and very profitably following. Houses occupied by proprietors are all built of stone and lime, frequently three stories high, often by some strange imprudence in arrangement facing the tempestuous west, garreted and glazed in their roofs, not always rain-proof, and protected at their main doors by porches. Those occupied by tacksmen, though far inferior to the snug houses of considerable farmers in the Lowlands of Scotland, are, on the whole, tolerably decent and comfortable; and in some instances, especially on the large estates, may be pronounced elegant. Those occupied by tenants and by sub-tenants, are, generally speaking, wretched hovels,—so wretched, in the case of the latter, as to be indescribably putrid and repulsive. What Mr. Pennant said respecting Islay—though now a foul libel on that generally beautiful island, and no longer true respecting some other districts, both entire isles, and large expanses of the greater islands—is still too correctly descriptive of the domiciles of a large proportion of the Hebridean tenantry: “People worn down with poverty; habitations, scenes of misery, made of loose stones, without chimneys or doors, excepting the faggot opposed to the wind at one or other of the apertures permitting the smoke to escape, in order to prevent the pains of suffocation. Furniture corresponds: a pot-hook hangs from the middle of the roof, with a pot hanging over a grateless fire, filled with fare that may rather be called a permission to exist than a support of vigorous life: the inmates, as may be expected, lean, withered, dusky, and smoke-dried.” The Hebridean implements of husbandry—a somewhat distinct index to the state of agriculture—present some features which arrest attention. The *càs-chrom*, probably the oldest tool known in the region, and still used in the Long-Island group, and in parts of Skye, consists of an oak or ash shaft nearly 6 feet long,—a flattened head nearly at right angles with the shaft, nearly 3 feet long, about 4 inches broad, and about $1\frac{1}{2}$ inch thick,—an iron coulter, of a quadrangular form, attached to the flattened head for penetrating the ground,—and a strong wooden pin at the junction of the shaft and the head, for receiving the pressure of the workman’s foot. The labourer works this primitive succedaneum for a plough, by driving, with two jerks of his whole body, the coultured head into the soil, and by turning the clod from right to left, walking backward in the progress of the operation; and he is able to pulverize an acre in 12 days, nearly as well as if it had been subjected to two ordinary Hebridean ploughings. The tool, though rude, and costing only 3 or 4 shillings for purchase, and for the service of 10 or 12 years, has advantages over both the plough and the spade, and is particularly useful in bogs and stony grounds. In many parts, especially in the granite range of the Long-Island, it seems the only implement which can be applied to cultivation; and there it promises to retain long its ascendancy.* The ristle

has a similar object to that of the English scarificator, but is armed with only one coulter or sickle, fixed in a small plough, drawn by one horse; and it is useful in cutting the strong sward of old land, or the tough roots of plants, and in making first incisions into stubborn soil. But both this implement, which employs two men, and the old Hebridean plough, which employs four horses and from two to four men, must soon universally give place, as the latter has already generally done, to the far more economical and efficient scarificator and plough of continental Britain. The clow-maite or wooden tongs, a powerful pincers, with jaw 10 inches long, and handles $2\frac{1}{2}$ feet long, and, when worked, drawn from 20 inches to 2 feet apart, is an effective instrument, known principally on limestone lands for the destruction of thistles. The raaken, racan, or clod-breaker, consisting of a handle 4 or 5 feet long, and a head rather thicker than the handle sharpened at both extremities for breaking stubborn clods, and armed along the face with 5 or 6 wooden teeth, each 3 or 4 inches long and $\frac{3}{4}$ of an inch in diameter, for pulverizing less resisting soil, is a rude, ancient, and unimproved implement. Threshing-mills have, for upwards of 30 years, been well-known in Islay, Colonsay, Gigha, Skye, and other islands; large importations have been made of modern ploughs, carts, and appliances of less considerable importance; yet, aggregately viewed, the agricultural implements of the Hebrides indicate a state, at best, of transition between the cumbersome and skillless management of the feudal period, and the adroitness and play of contrivance which distinguish modern Scotland.

Three gentlemen of the name of Macneil, the proprietors respectively of Barra, Colonsay, and Gigha, all, about the beginning of the present century, greatly improved the cultivation of their estates, and the condition of their dependents. Barra has recently passed into the hands of a new proprietor, but is still the scene of some highly ingenious and beneficial regulations; Colonsay is famed for good farming, excellent cattle, and ad-

the ‘*càs-chrom*’ is much more expeditious in tilling than the common spade, yet it becomes a tedious and most laborious task to till several acres of ground with it. The consequence is, that the poor people must begin the work of cultivation even as early as Christmas, and keep toiling at the same under the boisterous and rainy climate of their country, until the middle or end of May, ere their labours are finished. By being thus exposed to the inclemency of the weather, they are seldom either dryly clad or shod. From this arises among them the prevalence of inflammatory complaints, diseased action of the lymphatic system, as also acute rheumatism, pleuritic diseases, typhus fevers, &c. Besides that the ‘*càs-chrom*’ mode of tilling is both toilsome and tedious, it very much injures the ground, as it does not turn it up in that regular manner which is accomplished by the plough. And this is not all; when cultivating with this instrument, it is found necessary to convert the field into long, narrow ridges, and rounded on the top by heaping up the earth to carry off the water. The said ridges are also made as crooked, irregular, and distorted as the characters in the Greek alphabet; and while the latter has no more perhaps than four acres in all, much of even that is lost by the broad and useless spaces which are left between the ridges. When the ground is turned over, the sowing commences, which is generally performed in a slow and awkward manner. The sower goes backwards, and having a fistful of seed, he shakes his hand with the same three or four times, in a vertical position, before he disposes of it and is ready for the next. The harrowing then takes place, which the women for the most part execute, by dragging after them the fatiguing instrument. Owing to the lightness of the harrow which the poor women are thus capable of dragging after them, the ground cannot be made sufficiently smooth; and to remedy this they commence anew, with another instrument, called the ‘*racan*,’ which gives a smooth finish to the whole. The ‘*racan*’ is merely a block of wood, having a few teeth in it with a handle about three feet in length. The poor people must also convey sea-ware from the shores, manure from their houses to the field, and peats from the hills to their dwellings, with the creel on their backs, which is fastened there by a belt passing over their breasts. In harvest they have no alternative but to carry home the produce of their possessions the best way they can, the potatoes by the creels, and the corn in bundles upon their backs.”

* The Rev. Alexander Macgregor, in a paper in the 9th vol. of *The Journal of Agriculture*, remarks that, “Though

mirable economical management; and Gigha is regularly portioned out in measured farms, and cultivated with great skill. Macleod of Rasay, so far back as 30 years ago, extensively enclosed and planted his estate, raised some of the best sown grasses and green crops in the Western isles, and was distinguished by his kindness to his tenantry. Coll, Rum, and Staffa also, partook, about the same period, of similar benefits from their proprietors. Even the Long-Island group, so much more backward than the easterly Hebrides, have had some spirited improvers. On Lord Macdonald's fine estates in Skye—though that large island is devoted chiefly to pasturage, and is far behind the southern isles in agriculture—several tacksmen have considerably improved the soil, while others are distinguished by their skill as graziers. But the chief Hebridean improver, as to both extent and energy, is Mr. Campbell of Islay. So greatly has that gentleman revolutionized the agricultural character of the island, that while, 18 years ago, it annually imported grain to the value of £1,200, it is believed to be now capable of supplying corn for food to all the Hebrides and the Western Highlands. The estate of Sunderland, on this island, from being chiefly a peat-moss which the sea is supposed to have covered, has been reclaimed and disposed, partly in pasture and partly in arable grounds, with the result of prodigiously increasing its value. Oats of the white potato variety are grown in Islay both for home-consumption and for exportation, and cultivated, to some extent, in most of the large islands. The common wild black oat is raised in Skye and the remoter Hebrides. Barley is produced in Islay, Jura, Colonsay, and Gigha. Wheat, though experimented in Islay, does not promise to suit the Hebridean climate. Bigg, rammle-bear, bear, or the four-row grained barley, forms one-half of the grain-crops of the whole region. Rye is raised in sandy districts. Turnips, so peculiarly adapted to the Hebrides, were introduced with such rapidity, that the little island of Gigha alone had more acres of them in 1808 than the entire region had in 1707. Pease and beans seem not adapted to the climate. Rape and cabbages, though of easy adaptation, have been tried only in some garden-plots. Potatoes hold a similar place in the Hebrides to what they do in Ireland, and constitute four-fifths of the food of the inhabitants; and the sorts most commonly cultivated are the Scottish, the round Spanish, the pink-eye, the long-kidney, and the Surinam or yam. Clover, both red and white, is indigenous all over the Hebrides, and grows spontaneously on sandy and mossy soils near the shore; yet, through some unaccountable oversight, it is very limitedly cultivated.

The meadows and pastures of the Hebrides are to the full as important as the arable grounds. Meadows, in the strict sense of the word, lie near the shore, exposed either to the overflow of the sea in high spring-tides, or to the inundations of lakes or streams; and, aggregately extending, as was formerly stated, to about 25,000 acres, they receive no further aid from art than a very imperfect and partial draining in spring and summer, and produce about $1\frac{1}{4}$ ton of hay per Scottish acre. The pastures comprehend by much the larger portion of all the islands, and may be viewed in two great classes, the high and the low. The high pastures yield herbage all the year round, consisting of the hardier plants which delight in pure keen air and a high exposure; and the low pastures, though luxuriant and rich during summer and autumn, are totally useless in winter and spring. A vast extent of very rich pasture occurs in Skye, Islay, Lismore, Tirree, Uist, and Lewis; and were it properly managed, it might

annually rear and maintain some thousand head of fat cattle for exportation. In 1811, the aggregate number of black cattle in the Hebrides was 110,000; one-fifth of which was annually exported to Britain, and brought, at a low average, £5 a-head. The breed was originally the same in all the islands; but it now varies so considerably that the parent-stock, or its unmixed offspring, cannot now with certainty be anywhere found. Islay and Colonsay, though not possessing what can be called a peculiar breed, have, by judicious selections from the native Hebridean and the western Argyleshire breeds, and by skilful attention to their grazing, attained such superiority that, for whole droves, 50 or even 100 per cent. more has been obtained than the average market value of cattle from the other islands. The size preferred by all skilful graziers, as best adapted to the Hebrides, is that which, when fattened at the age of 5, weighs, if a bullock or ox, from 30 to 36 stones avoirdupois, and, if a heifer, from 24 to 30 stones. Though breeding, and not fattening, is the principal object throughout the islands, yet the latter receives some attention. The acknowledged excellence of Hebridean cheese and butter, is the effect, not of skill or economy in dairying, but of the intrinsic goodness of the milk. One of the best and one of the worst milk cows yield together, during the summer-season, about 44 pounds of butter and 88 pounds of cheese. Though a very large portion of the Hebrides is adapted peculiarly or solely to sheep-pasturage, no proprietor or farmer, till a comparatively recent date, thought of rearing sheep with any other view than the supply of his own family with mutton and wool. But now three different breeds occur, in considerable numbers, on almost all the larger islands. The native, or more properly, the Norwegian breed—the smallest in Europe, thin and lank, with straight horns, white face and legs, a very short tail and various colours of wool—was the only kind known in the region from the period of the Danish and Scandinavian invasions down to about 40 years ago, and so late as 1811 continued to be more numerous than all other sheep-stock on the islands. The Linton or Tweeddale or black-faced sheep, is here three times heavier and more valuable than the former, and, at the same time, is equally hardy. The Cheviot breed has been successfully introduced to Mull and Skye. The Hebridean breed of horses is small, active, and remarkably durable and hardy, and resembles that found in almost all countries of similar climate and surface. Excepting in Islay, and on about two dozen farms throughout the other islands, very little has been done to improve the breed, or even to prevent it from degenerating. Islay and Eig are the only islands which export horses. The ass, notwithstanding its seeming adaptation to the region, is unknown in the Hebrides. Hogs, once an object of antipathy to the Hebrideans, are now reared in the Islay and the Mull groups, and scantily and carelessly attended to north of Ardnamurchan point. The whole of the Hebrides rear fewer poultry than the island of Bute does, and do not contain one rabbit-warren.

Roads.

Most of the larger islands of the three groups next the west coast of Scotland are as well-provided as most Highland districts with roads. In 1809 the whole of the very large Long-Island group had only two pieces of carriage-road,—one of 15 miles between Stornoway and Barvas in Lewis, and one of 7 or 8 miles in North Uist,—both made at the expense of the proprietors. Many substantial and some elegant bridges, all built of stone and lime, carry the

roads across interruptions. In very numerous instances, however, bridges are desiderata in parts of road already made, and, in not a few districts, remain to be desiderated with roads themselves. Floodgate bridges occur in some localities,—principally in places recovered from water, or occasionally exposed to the access of high spring-tides; and they are generally composed of earth and clay, faced with stone, of considerable breadth so as to be nearly impenetrable by water, and are all furnished with floodgates which open for the outgoing and shut against the incoming current. The Hebrides received a great accession to their facilities of communication with the lowlands of Scotland by the formation of the CRINAN CANAL, [see that article,] and a still greater by the invention and enterprise of steam-navigation. A fine steam-vessel, communicating by portage across the narrow intervening isthmus with regular steam-vessels from the Clyde, East Tarbert, plies from West Tarbert to Islay, and some other islands. Other steamers, either independent of connexion, or communicating with the great line of steam-navigation between the Clyde and the Caledonian canal, ply from Oban to Staffa and Iona, to Portree and Skye, and even, once a fortnight, to Stornoway in Lewis. Others regularly and directly ply from the Clyde to Tobermory in Mull, either as their destination, or as a place of call and of stoppage on their way to Inverness.—The Hebrides have three towns or considerable villages, Tobermory in Mull, Stornoway in Lewis, and Bowmore in Islay, and have also some hamlets; but, notwithstanding these—which have rather been imposed on them by speculators from without, than reared up from their own resources—they are almost strictly, throughout their whole extent, a sequestered region of dissociated, and, for the most part, secluded habitations. They have, accordingly, no regular fairs, and only such country-markets and such mercantile gatherings of graziers with their cattle as are secured by appointment of influential persons on the different isles, or by notification at the various parish-churches.

Moral condition of the Population.

For a general view of the moral, educational, and religious condition of the Hebrides, which intimately resembles that of the Highlands, and is much interwoven with it in its history, we refer the reader to our article on the HIGHLANDS; and here we shall only make some brief statements, and glance at a few statistics respecting matters not quite common to the two regions. The Rev. John Lane Buchanan, a missionary minister to the Isles from the Church of Scotland, draws, in a book of his published in 1793, a picture of the ecclesiastics of the outer Hebrides, or Long-Island and St. Kilda groups, very nearly as dark as if the originals of his limning had been Romish priests of the Middle ages. Utter disregard to the spiritual interests of their flocks,—jealousy and spite against any missionary who had zeal or conscientiousness,—chicanery, caballing, utter earthliness, and shameful devotion to the bottle,—are the deep dark tints with which he embrowns and blackens his canvass. What then—even supposing considerable exaggeration—must have been the moral condition of the people? Even, too, if the ecclesiastics were fully what they ought to be—not only correct in conduct, and zealous in their ministrations, but spiritually enlightened, thoroughly evangelical, devoutly prayerful men—they are quite incompetent, from the fewness of their number compared with the amount and the wide dispersion of the population, to achieve successful efforts for the reclaiming of their huge and impracticable parishes. Yet very visible, somewhat extensive, and, in some instances,

most marked improvements on the general moral character of the islands have taken place. Lewis, more perhaps than any district in Scotland, has received a salutary influence from the Gaelic schools,—for an account of which see the article HIGHLANDS; and during a providential visit a few years ago of an eminent Gaelic preacher, Mr. Macdonald of Farintosh, in Ross-shire, it became, throughout its length and its breadth, the scene of a strong religious sensation which, we may hope, has left not a few salutary and abiding results. St. Kilda, abandoned for ages in its loneliness to a companionship on Sabbath with the sea-fowls, has, for several years past, enjoyed the residence and the labours of a well-selected missionary. In Islay—though some of its districts are still in an uncivilized state—most of the inhabitants, from being, so late as 18 years ago, nearly all wild, savage, averse to reformation, and addicted to smuggling, drunkenness, and plundering of wrecks, have become equal, in external demeanour, to many districts in the lowlands of Scotland. In the majority of the inhabited islands, the amenity of landlords and tacksmen, the appliances of education, an extensive dispersion of the Scriptures, an improved ministration in the parish-churches, the stated labours of Church of Scotland missionaries, and the visits or regular exertions of self-denied agents of various dissenting communities, have been instrumental in working, to a greater or less extent, an observable and benign change. One class of the community, indeed, with the exception of accepting Bibles and partially crying for education, has, in almost necessary accordance with the “semper eadem” boast and spirit of its ecclesiastical connection, remained, as to moral principles of acting and the influence of superstitions and the elements of abstract character, in a stationary position. The Roman Catholics, so far from coming within the range of the moral machinery which has been the instrument in religiously ameliorating the Hebrides, nestle as closely under the wing of their priesthood as during the period of almost utter ecclesiastical neglect of the Hebrides; and to evangelical and philanthropic Protestants, they are an object deeply interesting, not only from their resistance of the influences which are at work for the well-being of the other Hebrideans, but from their numbers and their insular intrenchment, constituting, as they do, the predominant population of Barra, Benbecula, South Uist, Canna, and part of North Uist. Entire sections also of the nominally Protestant community remain nearly or quite as wild, ignorant, and uncared-for as before the period of moral improvement commenced. A glance at the church and school-statistics of the Hebridean parishes, as exhibited in their respective places in our work, will show that the beneficial changes which are in progress necessarily occur within seriously contracted limits. The parish of Kildalton, in the Islay group, for example, comprehends a large section of the island of Islay, and the inhabited islets, Ardmores, Ardelister, and Texa; measures 14 miles by 8; and has upwards of 3,000 inhabitants; yet it possesses church-accommodation for only 600 persons, some of whom are 10 miles distant from the church, while all produce an average attendance of only 325; and has just one school, with an average attendance of about 55, and three Sabbath-schools with an average attendance of 90. The parish of Kilmeny, in the same group, with an area of 66 square miles, and a population of 2,100, was, till lately, without any moral provision whatever, and even yet commands an average attendance at its church, with 362 sittings, of only 250 persons, and has one school and one Sabbath-school, averagely

attended by only about 80. The parish of Jura and Colonsay, which comprehends the islands of Jura, Scarba, Lunga, Balnaha, Colonsay, Oronsay, and the Garvellach or Mare islands, and is about 45 miles in length, with a population of 2,300, has only one minister, 249 church-sittings, an average church-attendance of 150, and a school and a sabbath-school averagely attended by about 60. The parish of Small Isles, in the Skye group, comprehending, with a population of upwards of 1,000, the islands of Canna, Eig, Rum, and Muck, lying mutually many miles distant, has no other exterior moral appliances than a dwelling-house occupied as a place of worship by Roman Catholics, a school-house of 80 sittings occupied as a parish-church, a school in Eig, and a Gaelic itinerating school in Muck. Other examples—these being selected nearly at random—would exhibit a destitution quite as great, and in some instances greater, throughout by far the larger part of the whole Hebridean region. Nor does the prospect of material amelioration appear either near or distinct. Christian men in the highest and legitimate sense of the word, are the party solemnly and deeply responsible for attempts at improvement somewhat commensurate with the existing evils. But churchmen, with the exception of the missionary but utterly inadequate exertions of their General Assembly's committee, content themselves with invocations upon government. Independents and Baptists seem satisfied to have made inconsiderable lodgments on some five or six of the islands; and the bulk of Scottish dissenters, as well as the whole body of both churchmen and dissenters south of the Tweed, appear entirely at their ease simply as lookers-on, or, more strictly, as lookers-off,—caring not a rush, so far as their actions testify, whether the whole Hebrides blaze forth by some latent energy into a renewal of their ancient ascendancy in knowledge and moral worth over the Scottish continent, or become submerged and extinct in the Atlantic. With so fine a field of missionary and moralizing enterprise as the Hebrides at their door, the Christian community of Britain, so long as they all but entirely neglect it, ought to use fewer and less magniloquent words than they do respecting their high and cosmopolitan spirit of benevolence, and the lofty enlightenment and liberality of their out-field exertions.—The Hebrides are distributed *quoad civilia* into 26 parishes,—Bracadale, Diurnish, Kilmuir, Portree, Sleat, Snizort, and Strath, in Skye,—Barvas, Lochs Stornoway and Uig, in Lewis,—Killarrow, Kilchoman, and Kildalton, in Islay,—Kelninian, Kilfinichen, and Torosay, in Mull,—and Barra, Gigha and Carra, Harris, Jura, Lismore, Small Isles, Tirree and Coll, North Uist, and South Uist, in the smaller islands. Districts, however, have, of late years, been detached from several, and erected into *quoad sacra* parishes. Among these are Kilmeny, Iona, and Icolmkill, Ulva, Slenschoil, Trumisgarry, and St. Kilda. The parishes, with some additions from the nearest parts of the continent, constitute the five presbyteries of Isla and Jura, Mull, Skye, Uist, and Lewis; the first and second in the synod of Argyle, and the others in the synod of Glenelg.

History.

The early history of the Hebrides—except in its ecclesiastical department, for which see the article ICOLMKILL—is scanty, interrupted, and somewhat uncertain. The original inhabitants seem to have been Albanich, Caledonians, or Picts, displaced or overrun in the southern islands by Scots, and entirely modified in their character by settlements of Scandinavians. The pirates of Norway were ac-

quainted with the Hebrides, and made occasional descents on them so early at the close of the 8th century, and during the whole of the 9th. Some petty Norwegian kings, who resisted the celebrated Harald Harfager's monopoly of kingcraft in their hyperborean territories, made permanent settlements about the year 880 on several of the islands, and thence piratically infested the coasts of Norway. In 888, Harald retaliated on the pirates, and added the Isles to his kingdom. In 889, the petty kings, or *vikingr*, shook off his authority, and bearded him anew in his Norwegian den; and next year they were again pent up in their insular fastnesses, and completely enthralled. But Ketil, their subjugator, and the emissary of Harald, worked himself into their favour, renounced the allegiance of his master, proclaimed himself king of the Isles, and established a dynasty who, though they maintained brief possession, are the only figurants in the annals of about 50 years. In 990, the Hebrides passed by conquest into the possession of Sigurd, Earl of Orkney, and under the government of a jarl or vice-king of his appointment; they soon after were under the power of a king, or usurper called Ragnal Macgophra; in 1004, they were again seized by Sigurd, and probably continued under his sway till his death, 10 years later, at the famous battle of Cluantarf in Ireland; in 1034, they were, after some alienation, reconquered by Earl Thorfin, the son of Sigurd; from 1064 to 1072, they were annexed to the Irish dominions of Diarmed Macmaelnambo; and they next passed into the possession successively of Setric and his son Fingal, kings of the Isle of Man. Godred Crovan, a Norwegian, having landed on the Isles as a fugitive in 1066, gradually drew around influence and force, and, in 1077, after a desperate struggle, subdued and ejected Fingal; and he afterwards extended his conquests to the Scandinavian vikingship of Dublin, and a large part of Leinster, and stoutly tried the tug of war with Malcolm Canmore, king of Scotland. In 1093, Sigurd, the son of Magnus Barefoot, king of Norway, in revival of the Norwegian claims which had long lain in abeyance, was placed by a powerful and conquering force on the throne of the Isles; and two years later, Godred Crovan, the dethroned prince, died in retirement on the island of Islay. Sigurd being called away, on the death of his father, in 1103, to inherit his native dominions, Lagonan, the eldest son of Godred Crovan, was, seemingly with Sigurd's consent, elected king of the Isles; and, after a reign of seven years, he abdicated in favour of his brother Olave, a minor, and went on a pilgrimage to Palestine. Donald Mactade, a nominee of Murchard O'Brian, king of Ireland, was sent at the request of the Hebridean nobles, to act as regent during Olave's minority; but he played so obnoxiously the part of a tyrant as to be indignantly turned adrift after a regency of two years. Olave assumed the sceptre in 1113, and swayed it peacefully and prosperously till 1154, when he was murdered in the isle of Man, by his nephews, the sons of Harald. Godred the Black, Olave's son, succeeded him, and, early in his reign, conducted some successful wars in Ireland; but, puffed up with vanity and disposed to domineer, he speedily alienated the affections and poisoned the allegiance of his subjects. Somerled, the powerful and ambitious Lord of Argyle, who had married Ragahildis, the daughter of Olave, who had some remote claims on the Hebridean throne by his own ancestors, and who became the founder of the great family of Macdonald, Lords of the Isles, now carried his son Dugall, the infant nephew of Godred, through all the islands, except that of Man, which was the seat of the royal residence, and compelled the principal inhabitants to give host-

ages on his behalf as their king. Godred, informed late of the rebellious proceedings, sailed away with a fleet of 80 galleys, and gave battle to the rebels; but was so gallantly resisted, and became so doubtful of success, that, by way of compromise, he ceded to the sons of Somerled the Scottish Hebrides south of Ardnamurchan. The kingdom of the Isles was now, in 1156, divided into two dominions, and rapidly approached its ruin. In 1158, Somerled, acting nominally for his sons, invaded and devastated the isle of Man, drove Godred to seek a refuge in Norway, and apparently took possession of all the Isles; and, in 1164, becoming bold in the spirit of conquest, he menaced all Scotland, landed a powerful force on the Clyde near Renfrew, and there perished either in battle with Malcom IV., or by assassination in his tent. The northern isles now returned with the isle of Man to Godred; Islay was allotted to Reginald, a son of Somerled; and all the other isles were inherited by Dugall, in whose name they and the whole Hebrides had been seized by Somerled. All the princes, and afterwards three successors to their dominions, were contemporaneously called Kings of the Isles, and appear to have held their possessions in subordination to the kings of Norway.

The Scots having long looked with a jealous and ambitious eye on the existence, so near their shores, of a foreign domination, Alexander II. died on the coast of Argyleshire, at the head of an expedition intended to overrun the Isles. In 1255, Alexander III. ravaged the possessions of Angus Macdonald, Lord of Islay, and descendant of Reginald, in revenge of his refusing to renounce fealty to the king of Norway, and gave it to himself. In 1263, Haco of Norway poured down his northern hosts on the intrusive Scots, drove them from the Isles, chased them into Arrshire, but, seeing his army shattered by adverse elements, and by a rencontre at Largs, retired to an early grave in Orkney. Alexander III. now resumed his schemes with so great vigour, that, in 1265, he obtained from the successor of Haco, a cession of all the Isles to Scotland. Islay, and the islands adjacent to it, continued in the possession of the descendants of Reginald; some of the northern isles were held by the descendants of Ruari, both sons of Somerled, and Skye and Lewis were conferred on the Earl of Ross,—all in vassalage to the Scottish monarch. In the wars of the succession, the houses of Islay and of the North Isles gave strenuous and hearty support to the doubtful fortunes of Robert Bruce. In 1325, Roderick MacAlan of the North Isles, intrigued against Robert, and was stripped of his possessions; and about the same date Angus Oig of Islay received accessions to his territories, and became the most powerful vassal of the crown in the Hebrides. John, the successor of Angus, adopted different politics from his father's, joined the standard of Edward Baliol, and, when that prince was in possession of the throne, received from him the islands of Skye and Lewis. David II., after the discomfiture of Baliol, allowed John to have possession of Islay, Gigha, Jura, Scarba, Colonsay, Mull, Coll, Tirree, and Lewis; and granted to Reginald, or Ranald, son of Roderick MacAlan, Uist, Barra, Eigg, and Rum. Ranald dying, in 1346, without heirs, Amie, his sister, married to John, became his heir; and John, consolidating her possessions with his own, assumed the title of Lord of the Isles.

The wearer of the new-born title and wielder of the power which it implied, resisting or revenging some fiscal arrangements of the Scottish government, broke loose into rebellion, and, after being with difficulty subdued, was, in 1369, reconciled with David II., a year before the king's death. Having previously divorced his first wife Amie, and mar-

ried Lady Margaret, daughter of Robert, High Steward of Scotland, he, in 1370, when Robert succeeded to the throne, altered the destination of the Lordship of the Isles, so as to make it descend to his offspring by his second wife, the grandchildren of the king. Ranald, a younger son of the first wife, and more accommodating and wily than Godfrey his eldest son, who claimed the whole possessions, expressed formal acquiescence in the alienating arrangement from the rightful line of descent, and was rewarded by a grant of the North isles, as well as lands on the continent, to be held of the Lords of the Isles. John died in 1380, after having propitiated monkish and priestly favour by liberal largesses to the church, and obtained from the cowed and insatiable beggars, who happened to monopolize all the pitiful stock of literature which existed at that period, the posthumous and flattering designation of "the good John of Islay." Donald, his eldest son by the second marriage, succeeded him as Lord of the Isles; and, marrying Mary Leslie, who afterwards became Countess of Ross, was precipitated, with all the clans and forces of the Hebrides at his heels, into the well-known contest with the Regent Albany respecting the earldom of Ross, and into its celebrated upshot, the battle of Harlaw. Acknowledged by all the Hebrides, even by his half-brothers, as indisputably Lord of the Isles, admitted to have earned in liberality and prowess and lordly qualities what he wanted in strict justness of claim, and possessing strictly the status of the first Earl of Ross of his family, he died, in 1420, in Islay, and, as his father had been before him, was pompously sepulchred in Iona. Alexander, the third Lord of the Isles, was formally declared by James I. to be undoubted Earl of Ross, and, in 1425, was one of the jury who handed the Duke of Albany, and his sons, and the aged Earl of Lennox, over to the slaughter. Having become embroiled with his kinsmen, the descendants of the first Lord of the Isles by his first marriage, and having shared in conflicting agencies which had thrown the Hebrides into confusion, he was, in 1427, summoned, along with many Hebridean and Highland chieftains, to appear before a parliament convened at Inverness. No sooner had he and his subordinates arrived than, by a stratagem of the King, they were arrested, and conveyed to separate prisons. Though suffering himself no other castigation or inconveniency than temporary imprisonment, he was galled by the execution of not a few of his chieftains, and roused to revenge by the indignity practised on his own person; and, in 1429, he made a levy throughout both the Isles and his earldom of Ross, and, at the head of 10,000 men, devastated the crown-lands in the vicinity of Inverness, and burned the town itself to the ground. The King, informed of his proceedings, so promptly collected troops, and led them on by forced marches, that he confounded the Lord of the Isles by suddenly overtaking him in Lochaber, won over by the mere display of the royal banner, the Clan Chattan and the Clan Cameron, two of his most important tribes, and so hotly and relentlessly attacked and pursued him that he vainly sued for terms of accommodation. The Lord of the Isles, driven to a fugitive condition, and despairing to escape the pursuers whom the King, abandoning personally the chase, had left to hunt along his track, resolved to cast himself on the royal mercy; and, on the eve of a solemn festival, clothed in the garb of pauperism and wretchedness, he rushed into the King's presence, amidst his assembled court in Holyrood, and, surrendering his sword, abjectly sued for pardon. Though his life was spared, he was undungeoned for two years in the castle of Tamtallor; and he learned there such les-

sons of rebuke from his chastisement, that, when afterwards pardoned by parliament for all his crimes, he conducted himself peaceably, and even rose into favour. During the minority of James II., he held the responsible and honourable office of Justiciary of Scotland north of the Forth; and, probably more as its occupant, than in the use of his power as Lord of the Isles, he drove the chief of the Clan Cameron, who had deserted him in his conflict with the Crown, into banishment to Ireland, and virtual forfeiture of his lands. In 1445, however, he took part in a treasonable league with the Earls of Douglas and Crawford against the infant-possessor of the royal throne, and probably contemplated nothing short of aiding an usurpation; but, before his treasons had time to be sunned into maturity, he died, in 1449, at his castle of Dingwall. John, the 4th Lord of the Isles, and the 3d Earl of Ross, having sold himself to the rebellious and mischief-making Earls of Douglas, who had justly though too severely reaped the fruits of the royal displeasure, despatched, in 1455, an expedition of 5,000 men to Ayrshire against James II., but reaped little other fruit than the ravaging of Arran and the Cumbraes, the wringing of some exactions from the isle of Bute, and the driving into exile of the bishop of Argyle or Lismore. Finding himself balked by his faithless allies, the Earls of Douglas, John, Lord of the Isles, made his submission to the King, and seems to have been fully received into royal favour. In 1457, he filled the very important and responsible office of one of the wardens of the marches; and, in 1460, previous to the siege of Roxburgh castle, he offered, at the head of 3,000 armed vassals, to march in the van of the royal army so as to sustain the first shock of conflict from expected invasion of the English, and was ordered to remain, as a sort of body-guard, near the King's person. But, on the accession of James III., he gave loose anew to his rebellious propensities, and, in 1461, sent deputies to the King of England who agreed to nothing less than the contemplated conquest of Scotland by the forces of the Lord of the Isles jointly with an English army. While his deputies were yet in negotiation, he himself impatiently burst limits, poured an army upon the northern counties of Scotland, took possession of the castle of Inverness, and formally assumed a regal style of address and demeanour. In 1475—though he had been previously forborne for 14 years, and allowed, by compromise or connivance to run unmolested a traitorous and usurping career—he was sternly denounced as a traitor and rebel, and summoned to appear before a parliament in Edinburgh to answer for his crimes. Held back by a sense of guilt from confronting his accusers, or showing face to his judges, he incurred sentence of forfeiture; and, menaced with a powerful armament to carry the sentence into execution, he gladly put on weeds of repentance, and, under the unexpected shelter of the Queen and of the Estates of parliament, appeared personally at Edinburgh, and humbly delivered himself to the royal clemency. With great moderation on the part of the King, he was restored to his forfeited possessions; and, making a voluntary surrender to the Crown of the earldom of Ross, and some other continental possessions, he was created a baron and a peer of parliament by the title of Lord of the Isles. The succession, however, being restricted to his bastard sons, and they proving rebellious, John, either actually participating in their measures, or unable to exculpate himself from the show of evidence against him, was finally, in 1493, deprived of his title and estates. A few months after his forfeiture, making a virtue of necessity, he voluntarily surrendered his

Lordship; and, after having become, for some time, a pensioner on the King's household, he sought a retreat in Paisley abbey, which he and his ancestors had liberally endowed, and there sighed out the last breath of the renowned Lords of the Isles.

James IV. seems now to have resolved on measures for preventing the ascendancy of any one family throughout the Isles; and, proceeding warily and liberally to work, he went in person to the West Highlands to receive the submission of the vassals of the Lordship. Alexander of Lochalsh, who was the presumptive heir before the last Lord's forfeiture, John of Islay, who was the descendant of a side branch from the first Lord, John Maclean, of Lochbuy, and other chief vassals immediately waited on the King, and were favoured with an instatement by royal charter in their possessions; and the first and the second received, at the same time, the honour of knighthood. But several other vassals of power and influence delaying to make their submission, the King made a second and a third visit to the western coast, repaired and garrisoned the castle of Tarbert, and seized, stored, and garrisoned the castle of Dunaverty in Cantyre. Sir John of Islay, deeply offended at the seizure of Cantyre, on which he made some claims, came down on the peninsula when the King, with a small rear-body of his followers, was about to sail, and stormed the castle of Dunaverty, and hanged the governor before the King's view. James IV., though unable at the moment to retaliate or punish, soon after had Sir John and four of his sons captured, carried to Edinburgh, and convicted and executed as traitors. A year after, he made a fourth expedition westward, and received the submission of various powerful vassals of the defunct Lordship, who hitherto had declined his authority. In 1496, an act was passed by the Lords of Council, making every chieftain in the Isles responsible for the due execution of legal writs upon any of his clan on pain of becoming personally subject to the penalty exigible from the offender. In 1497, Sir Alexander of Lochalsh first invaded Ross, and was driven back by the Mackenzies and the Munroes, and next made an ineffectual attempt to rouse the Isles into rebellion round his standard, and drew upon himself, in the island of Oransay, a surprise and slaughter from Macian of Ardnamurchan, aided by Alexander, the eldest surviving son of Sir John of Islay. In 1499, the King suddenly changing his policy, revoked all the charters he had granted to the vassals in the Isles, and commissioned Archibald, Earl of Argyle, and others, to let, in short leases, the lands of the lordship within all its limits as they stood at the date of forfeiture. The vassals, seeing preparations afoot for their ejection, and having now amongst them Donald Dubh, whom they viewed as the rightful Lord, and who had just escaped from an incarceration, one main object of which was to prevent him from agitating his claims, formed a subtle, slowly-consolidated, and very dangerous confederacy. In 1503, Donald Dubh and his followers precipitated themselves on the mainland, devastated Badenoch, and wore so formidable an insurgent aspect as to rouse the attention of parliament, and agitate the whole kingdom. Though all the royal forces north of the Clyde and the Forth were brought into requisition, and castles in the west were fortified and garrisoned, and missives, both seductive and menacing, were thrown among the rebels, two years were required for the vindicating of the King's authority. In 1504, the army acted in two divisions,—the northern, headed by the Earl of Huntly, and the southern, rendezvoused at Dumbarton, and led by the Earls of Arran and Argyle, Macian of Ardnamurchan, and Macleod of Dunvegan; but, except its besieging

the strong fort of Carneburg, on the west coast of Mull, and probably driving the islanders quite away from the continent, it did little execution. But, next year, the King personally heading the invasion of the Isles on the south, while Huntly headed it on the north, such successes were achieved as completely broke up the insurgent confederacy. Torquill Macleod of Lewis and some other chiefs still holding out in despair, a third expedition was undertaken in 1506, and led to the capture of the castle of Stornoway, and the dispersion of the last fragmentary gatherings of rebellion. Donald Dubh, the last male in the direct line of the forfeited Lords of the Isles, was again made prisoner, and shut up in Edinburgh castle. Sheriffs or justices were now appointed respectively to the North Isles and to the South Isles, the courts of the former to be held at Inverness or Dingwall, and those of the latter at Tarbert or Lochkilkerran; attempts were made to disseminate a knowledge of the laws; and the royal authority became so established that the King, up to his death, in 1513, was popular throughout the islands.

In November, 1513, amid the confusion which followed the battle of Flodden and the death of James IV., Sir Donald of Lochalsh seized the royal strengths in the islands, made a devastating irruption upon Inverness-shire, and proclaimed himself Lord of the Isles. The Earl of Argyle, and various other chieftains in the western islands, exhorted by an act or letters of the council, adopted measures against the islanders, but only checked, and did not subdue their rebellion. Negotiation achieved what arms could not accomplish, and, in 1515, brought the rebels into subjection, and effected an apparently cordial reconciliation between Sir Donald of Lochalsh and the Regent Albany. In 1517, however, Sir Donald was again in rebellion; but he so disgusted his followers by deceptions which they found him to have used in summoning them to arms, that they indignantly turned upon him, and were prevented, only by his making an opportune flight, from delivering him up to the Regent. In 1527, the tranquillity of the Isles was again menaced by the inhuman conduct of Lauchlan Cattanaich Maclean of Dowart to his wife, Lady Elizabeth, daughter of Archibald, second Earl of Argyle. On a rock, still called "the Lady's Rock," between Lismore and Mull, the lady was exposed at low water by this monster, with the intention of her being swept away by the tide; but, being accidentally descried by a boat's crew, she was rescued, and carried to her brother's castle. One of the Campbells unceremoniously taking revenge by assassinating the truculent chief, the Macleans and the Campbells both ran to arms for mutual onset, and were prevented from embroiling the Isles only by the special interference of government. In 1528, all grants of the Crown lands in the Isles, made during the regency of the Earl of Angus, and considerable in extent, having been withdrawn, the Clan Donald of Islay and the Macleans, who were interested parties, rose up in insurrection; and drew down a devastation upon large portions of Mull and Tirree, by the Campbells, in revenge of sanguinary descents upon Roseneath and Craignish; and, in the same year, disastrous broils accrued in the North Isles from a feud between the Macdonalds and the Macleods of Harris. Nearly the whole Hebrides being, in 1529, in a state of insubordination and tumult, James V. made vast military and naval preparations for visiting them in person, and inflicting on them a royal castigation; and he so overawed the Islesmen by the multitudinousness and the might of the hosts which he seemed about to precipitate on their territories, that many of their considerable chiefs hurriedly poured in letters and messages of submission.

The King no longer esteeming his personal presence necessary, the Earls of Argyle and Murray, respectively, in the north and in the south, headed departments of the expedition, and, more by the mere display than by the application of the force which they commanded, reduced all the islands to obedience and order. Alexander of Islay, the most active mover in the insurrection, having in an abject manner placed himself wholly at the King's mercy at Stirling, was not only, on some easy conditions, freely pardoned, but even enriched with accessions to his estates; and in 1532, this pardoned insurgent was despatched at the head of 7,000 or 8,000 to Ireland, to make a diversion in favour of the Scots in their war with England. In 1539, Donald Gorme of Sleat, the next lineal male heir of the Lords of the Isles after Donald Dhu, who continued in imprisonment, became the centre of an extensively ramified conspiracy for re-edifying the lordship of the Isles and the earldom of Ross on their ancient basis; and, strengthened by a numerous alliance, made a descent from Skye, upon Ross-shire, wasted the district of Kinlochlen; but while attacking the castle of Elandonan, he was mortally wounded by a poisoned arrow, and bequeathed to his followers only the disasters of a hurried retreat, and the responsibility of a fruitless insurgent expedition. Though the insurrection was now at an end, the King, strongly resenting the object of it, sailed, in 1540, with a powerful armament, from the Forth, round the north of Scotland, to the Isles, and landed successively on Lewis, Skye, Mull, and Islay, took on board his ships all the principal chiefs, disembarked at Dumbarton, and thence sent the chiefs captive to Edinburgh. Some stringent regulations seem now to have been made, though they have not come down to posterity, respecting the future preservation of Hebridean order and subordination; and several of the more intractable and dangerous chiefs were denied their personal freedom; others who were liberated, were obliged to give hostages for their good conduct; and all the islanders were overawed by the garrisoning with royal troops of some of the strengths of their territory. The early death of the King, however, in 1542, prevented his vigorous measures—the only ones of competent energy which had ever been hitherto adopted toward the turbulent Hebrideans—from bringing their fruit to maturity.

Donald Dubh, the immediate heir of the lordship of the Isles, after having been forty years a prisoner from the period of his attempt to seize his inheritance, again broke from his jailers in 1543, and was received with enthusiasm by the people of the Isles. The Regent Arran in miserable policy exulted in his escape, as in the prospect it afforded of carving out embarrassing work for the Earls of Argyle and Huntly, who had large possessions within the territories of the forfeited lordship, and, in order to give indirect but most efficient aid, shortsightedly liberated the chiefs and hostages whom the late King had placed in custody for the conservation of the Hebridean peace. Donald Dubh, supported by all the chiefs of the isles except James Macdonald of Islay, made a descent on the Earl of Argyle's territories, and performed such feats of plunder and slaughter as detained the Earl from prosecuting some intrigues of state. The Regent Arran suddenly changing his views on the leading political question of the day—support or resistance of the views of the King of England, made munificent offers to Donald Dubh and the liberated chiefs to induce their detachment from the English party, but was mortified with total failure, and doubly mortified to reflect, that, by connivance at Donald, and the liberation of the chiefs and hostages, he had himself originated the evil which he

now vainly negotiated to avert. In 1544, during the expedition of the Earl of Lennox to the Clyde, the islanders readily responded to a call by that commander and the English king, perpetrated hostile excesses in all accessible quarters where support was given to the Earls of Argyle and Huntly, and, in some instances, gave bonds of future service to England. Among the English in their defeat, in 1545, at Ancrum, was Neill Macneill of Gigha, one of the Hebridean chiefs,—present, possibly, as an ambassador from Donald Dubh. In June, 1545, the Regent Arran and his privy council learning that the islanders were in course of formally transferring their allegiance from Scotland to England, issued against them a smart proclamation, and, afterwards, seeing this to be regarded as a mere “*brutum fulmen*,” commenced prosecutions for treason against the principal leaders. On the 5th of August, however, Donald Dubh and his chiefs in capacity of Lord and Barons of the Isles, appeared, with 4,000 men and 180 galleys, at Knockfergus in Ireland, and there, in the presence of commissioners sent to treat with them, formally swore allegiance to England; yet, acting under the advice of the Earl of Lennox, and regarding him as the real regent of Scotland, they did not consider themselves as revolting from the Scottish monarch. Four thousand armed men were, at the same time, left behind them under leaders in the Isles, to watch and check the movements of the Earls of Argyle and Huntly; and these, in common with the 4,000 in attendance on Donald, were kept in pay by the English king to take part in a contemplated but abortive expedition against Scotland, and, immediately after Donald's return, quarrelled among themselves respecting the distribution of the English gold. Donald dying toward the close of the year, at Drogheda in Ireland, seemingly while in the train of the baffled and retreating Earl of Lennox, the islanders elected James Macdonald to succeed him in his titular Lordship of the Isles. Yet the Macleods, both of Lewis and of Harris, the Macneills of Barra, the Mackinnons and the Macquarries, who had supported Donald, stood aloof from James Macdonald, and asked and obtained a reconciliation with the Regent; and, in the following year, the Island-chiefs, in general, were exonerated from the prosecutions for treason which had been commenced against them, and sat down in restored good understanding with the Scottish government. James Macdonald now dropped the assumed title of Lord of the Isles, and seems to have been the last person who even usurpingly wore it, or on whose behalf a revival of it was attempted.

At this date of the utter extinction of the celebrated title of the Lord of the Isles, we properly close our historical account of the collective and distinctive Hebrides. Almost all the events which followed were either strictly common to the Islands and the Highlands, and fall to be exhibited in our article on the Highlands, or clanish feuds, or other occurrences transacted in limited localities, and occur to be noticed, so far as they are worthy of mention, in our articles on particular islands, or particular Hebridean objects.

HECK. See **FOUR TOWNS.**

HECLA. See **SOUTH UIST.**

HEISKER, a small island of the Hebrides, lying about 2 leagues westward of North Uist. It is nearly 2 miles in length, but very narrow. The soil is sandy, and yields very little grass, and it was formerly only valuable for its kelp shores.

HELDAZAY, a small island near the south coast of the mainland of Shetland.

HELENSBURGH, a delightfully situated watering-place, and handsome little town, on the north

shore of the frith of Clyde, at the entrance of the Gareloch, Dumbartonshire. It stands on the turnpike from Glasgow, through Dumbarton and Arroquhar, to Inverary, and sends away, over the soft hill behind it, an easy line of communication with Luss and Balloch ferry; and is distant 8 miles from Dumbarton, 23 miles from Glasgow, 17 miles from Arroquhar inn, and 4 miles, by water, from Greenock. The town is arranged in a terrace toward the sea, and parallel streets or lines of houses behind, with short intersecting streets which cut the main thoroughfares at right angles, and is thus a slender parallellogram; but, at both ends, it straggles pleasantly along the shore and melts gently away into rural solitude through the medium of successive villas. As seen from the opposite shore, it is a town dressed in white, and seems to be keeping perpetual holiday; and, in certain and not infrequent combinations of shade and sunshine, it appears to be a miniature Venice, a city of the sea, resting its edifices, with their clearly-defined outlines, on the bosom of the bur-nished or silvery waters. Though its streets are not compact, and are altogether destitute of the finer adornings of architecture, they present—even where the buildings are capriciously asunder—an agreeable appearance to the eye. Most of the houses have been built solely or chiefly as sea-bathing quarters, and are not unworthy of their pretensions to be a pleasant summer-home to the families of the plodding and wealthy merchants of Glasgow. The town has two hotels, a branch-office of the Western bank, and a savings'-bank. At the east end is an elegant and commodious edifice called the Baths, where the luxury of immersion in any degree of temperature may be enjoyed. For persons who love to luxuriate all day amid the beauties of landscape, there are in the vicinity choice rambling-grounds; and for such as wish to please the intellect jointly with the taste, there are a public reading-room, and a somewhat extensive public library. The town, with the exception of a little weaving, has no manufacture, nor any suitable employment for its inhabitants, but depends for subsistence almost wholly on its capacities as a watering-place; and, while joyous, bustling, and full of life during the bathing-season, it fades away and languishes toward the approach of winter, and, like the vegetable creation and the hibernating dormant animals, waits in sluggish inaction the return of the warm spring for the revival of its energies. The smallness and incommodiousness of its quay would seem to be a hinderance to its prosperity. Yet five or six steamers ply daily between it and Glasgow during 7 months of the year, making each three trips, one up and two down, or two up and one down in the day; and even during winter, 2 or 3 make daily trips, and keep up the communication; while there is almost hourly communication with the opposite port of Greenock, and thence by railway to Glasgow. At the west end of the village is the mansion of Ardincaple, surrounded with pleasure-grounds which charm the eye with their beauty. Directly opposite, on the Roseneath side of Gareloch, rise the stately towers of Roseneath castle from amidst a green sea of forest. A mile and a quarter beyond Ardincaple are a snug spot around Row church, and a projecting point into Gareloch, from both of which splendid views are obtained east, south, and west. Between Row point and the Roseneath shore a ferry-boat constantly plies, and up to both the Helensburgh steamers steer their way, introducing tourists and pleasure-parties, and lovers of fine scenery, to fairy nooks in the vicinity of Roseneath church and castle, and to vantage-ground for the survey of Nature's panoramic views, which are thrillingly attractive. But, even apart from its environs, Helensburgh, within its own

limits of observation, is curtained round by quite enough of the brilliance of landscape to shut out the tormentors from every sort of ennuyée except the cynic. In front of it, but some points to the west, rise the gentle swells of Roseneath, rolled into variety of surface, belted in some places, and clothed in others with wood, and foiled by the deep brown or the snowy white summits of the Argyleshire mountains cutting the sky-line with their rugged edges in the distance; south-eastward, the broad low peninsula of Ardmore brings an invasion of forest on the frith of Clyde on the foreground, and the Renfrewshire hills slowly recede up a frilled and chequered gentle ascent of verdure till their summits undulate on the horizon in the back-ground; and right in front Port-Glasgow, just visible past the point of Ardmore, Greenock, with its grove of masts in the front, and its terraces or straggling buildings climbing the acclivity in the rear, and Gourcock, beautifully foiled by the intervening and thoroughly wooded Castle-point of Roseneath, stretch out before the eye at such intervals of distance as finely combine town and country landscape, and repose against such an immediate background of miniature highland hills, and behind so beautiful an expanse of land-locked water, with its stir of ship and steam-boat and wherry, as, if they do not astonish and thrill, impart the more prolonged enjoyment of calm delight.—Helensburgh was erected into a burgh-of-barony in 1802, and holds of Sir James Colquhoun, Bart. of Luss. It is governed by a provost, 2 bailies, 4 councillors, a treasurer, and a dean-of-guild. All inhabitants of full age who have a house and garden within the burgh by feu or lease of 100 years, are burgesses, and they annually, on the 11th of September, elect the magistrates and council from among their own number. In terms of its charter, the town is authorized to have a weekly market on Thursdays, and 4 annual fairs. The town was founded in 1777 by its superior, Sir James Colquhoun, Bart., and named after his wife, Helen, the daughter of William, Lord Strathnaver, son and heir apparent of John, 19th Earl of Sutherland. After the commencement of the present century, it was the scene of the successful efforts of the ingenious Henry Bell to propel vessels by steam. After all the original steam-projectors had ceased to make experiments, Mr. Bell having employed Messrs. John Wood and Co., of Port-Glasgow, to build a steam-vessel of 30 tons burden, he personally constructed an engine for it of 3 horses' power, applied the paddles, imposed on it the name of the Comet, and, after several experiments, dismissed it, in January 1812, on a course of regular navigation between Glasgow and Greenock. Though confronted with piratical claims, and obliged to combat powerful influence exerted on their behalf, he wrung from the jury of the civilized world an acknowledgment of his having been the first person in Europe who successfully propelled a vessel by steam on a navigable river; and, so far as scene of residence makes genius the common property of a limited community, he wreathed the garland of his fame round the brow of the smiling little town of Helensburgh. He died at the Baths of the town in March 1830, aged 63, and was interred in the parochial burying-ground.—Helensburgh stands, *quoad civilia*, near the eastern verge of the parish of Row. But, in 1839, when a part of the Original Burgher body, including the congregation in this town, joined the Establishment, it was erected into a *quoad sacra* parish. The parochial place of worship is, of course, simply the quondam meeting-house of the Original Burghers. The congregation was established in 1823; and the meeting-house—

now the church—was built in 1824, at the cost of £1,000. Sittings 700. Stipend £100.—An Independent congregation in the place was established in 1800. The chapel was built in 1801, at the conjectured cost of £350 or £400. Sittings 550. Stipend £70, but variable.—A small Baptist congregation was established about the year 1831, and meets in the wing of a dwelling-house rented as a place of worship. Sittings 80. No stipend.—The town has a boarding-school conducted by the Independent minister, a girl's boarding-school; and possesses a due proportion of schools of the ordinary class. Population, in 1817, 450; in 1821, 600; in 1835, 1,400; in 1840, probably 1,600.

HELL'S CLEUGH, a hill in the parish of Kirkurd, in Peebles-shire, rising 2,100 feet above the level of the sea. On the summit is a cairn, called the Pyked-stane, from which there is an extensive prospect of Fife and Perth shires, the mouth of the Forth, and the Eildon and Cheviot hills.

HELL'S SKERRIES, a cluster of small islands of the Hebrides, about 10 miles west of Rum. They are so named from the violent current which runs through them.

HELLISAY, one of the smaller Hebrides, lying between Barra and South Uist.

HELMSDALE, a large and thriving village, situated in the parish of Loth, Sutherlandshire, at the mouth of the Helmsdale river, from which it takes its name. It is built on the property of the Duchess of Sutherland, for the accommodation of those cottagers whom the new mode of sheep-farming has driven from the rural districts of Sutherlandshire, and dates its existence from the same period as Port-Gower and Golspie, and here a good harbour has been finished, to which immense fleets of fishing-boats resort during the herring-season. It is accessible to large vessels only at high water.

HELMSDALE (THE), a river of Sutherlandshire. It takes its rise from Loch-Coyn, and several other lakes, in the parish of Kildonan, and running in a south-easterly direction, about 20 miles, falls into the German ocean, about 3 miles south of the Ord of Caithness. It abounds with salmon.

HENDER, a small island on the west coast of Sutherland.

HENDERLAND. See BLACKHOUSE.

HERIOT (THE), a small stream in the parish of the same name, Edinburghshire. It rises in three principal head-waters, which all well up on the south-western boundary of the parish. The two of longest course, called respectively Blakeup water and Hope burn, rise within a mile of each other, and make a confluence at Garval, after having flowed north-eastward about 4 miles; and the third, bearing from its source the name of the united streams, rises farther to the east, and, after a northerly course of 3 miles, falls into the other streams half-a-mile below their point of confluence. The Heriot now pursues a course generally to the north of east, over a distance of 3½ miles, swelled in its progress by Row burn from the south, and Heckle burn from the north; and it then bends south-eastward, receives the waters of Dead burn from the west, traces for 5 furlongs the boundary between the parishes of Heriot and Stow, and, at Haultree, pours its accumulations into the Gala. The Heriot is, in strict propriety, the parent-stream, and the Gala the tributary; the former having, at the point of confluence, flowed 8 miles, while the latter has flowed only 4½. Both streams, before uniting, afford excellent trouting, and, at a former period, occasioned scenes of poaching which are somewhat lugubriously and quaintly, though rather graphically noticed by the writer in the Old Statistical Account. "It is much

to be regretted," says he, "that the gentlemen in the neighbourhood permit poachers with nets to visit these prolific rivers. A party of three or four will sally out from Edinburgh, Dalkeith, &c., and in a short space fill their creel or bag, by sweeping every thing before them. They exemplify the old proverb, 'All is fish that comes in the net.' Even the salmon, in close time, which come up to spawn, do not escape a dreadful massacre. During the autumnal months, and after a few weeks, the water is covered with lights, composed of old sacks, or rags and tar; and the *lister*, as it is commonly called, is heard plunging in every hole." The Heriot frequently comes down in impetuous floods; and, three years ago, it swept away not only the usual prey of invading torrents, but dikes and walls of ordinary masonry, and, for a brief period, sheeted the low grounds along its course with a little inland sea.

HERIOT, a parish in the south-eastern part of Edinburghshire. It is of an irregular oblong form, stretching north-east and south-west, and is bounded on the north-west by Temple; on the north-east by detached parts of Borthwick and Stow, and by Fala and Stow; on the south-east by Stow; and on the south or south-west by Innerleithen in Peeblesshire. Its greatest length, from Blakeup Scars on the south-west to an angle beyond the point where the Edinburgh and Carlisle road enters it on the north-east, is $7\frac{1}{2}$ miles; its greatest breadth, from Mansley's hill on the north-west to Dewar hill on the south-east, is $4\frac{1}{2}$ miles; and its superficial area is computed to be between $23\frac{1}{2}$ and 24 square miles. Heriot water, described in the preceding article, divides it into two not very unequal parts; but, in the upper district, is so distributed in its head-streams and their tributary rills, as to figure on the map similarly to the distribution of the veins on the back of the human hand. Gala water rises on its north-western limit, flows two miles due east; and there assuming a southerly direction, divides it for half-a-mile from a detached part of Stow, then for 1 mile intersects a wing of Heriot projecting eastward, then for 1 mile divides it from the main body of Stow, and finally passes away from it at the point of confluence with Heriot water. Another tiny stream, from Heriot's cleugh, rises 5 furlongs south of the source of the Gala, and flows $2\frac{1}{2}$ miles due east to the Gala at the Tollbar. Except on the lower parts of these streams, where there are some flat lands, the whole parish is a congeries of mountainous hills; and, viewed as a whole, it is a strictly pastoral district. Though the grounds on the lower part of Heriot water are fertile, and when duly cultivated yield an abundant produce, only about one-tenth of the area of the entire parish is arable. The hills are, for the most part, covered with heath and of bleak and forbidden aspect; though, in some instances, their sides are ploughed up into fields, and being cropped for a few years, and sown out, afford a rich pasture for sheep. The hills along the sides and centre are the two ranges of the moorfoots, with their spurs, running along from Peeblesshire, to join the main body of the Lammemoors at Soutra hill, in the parish of Soutra. The highest is Blakeup Scars, and the next in height is Dewar hill; which rise respectively 2,193, and 1,654 feet above the level of the sea. The climate, though cold, is remarkably healthy.—On the summits of some of the hills are distinct traces of ancient camps, consisting of three or more concentric circles, with spaces for gateways. In the farm of Dewar, on the boundary with Innerleithen, are the head and footstones of what is called "the Piper's grave," and traditionally reported to be the grave of a piper of Peebles who wagered that he would play from Peebles to Lauder with a certain

number of blasts, but became exhausted, fell down, and was inhumed on the wild and sequestered scene of his defeat. On Dewar hill, $1\frac{1}{4}$ mile north-east of the grave, is a remarkably large stone, called—no one knows why—"Lot's Wife." Not far from Heriot house is a stone, on which an unfortunate woman was burnt for the imputed crime of witchcraft, and which is called from her, Mary Gibbs. On Heriot-town-hill-head, and Borthwick-hall-hill-head, respectively, are a circle of tall stones 70 or 80 feet in diameter, and three concentric rings or ditches about 50 paces in diameter, which Chalmers says are the only Druidical remains in Scotland, except those in the parish of Kirknewton.—About 4 miles of the new turnpike between Edinburgh and Innerleithen cut the parish into parts of one-third and two-thirds; upwards of 2 miles of the Edinburgh and Carlisle railroad run along its eastern extremity; and a road runs about 4 miles up its interior along the banks of Heriot water; but no facility of communication whatever exists for its south-western division. Population, in 1801, 320; in 1831, 327. Houses 53. Assessed property, in 1815, £3,348.—Heriot is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Earl of Stair. Stipend £158 6s. 7d.; glebe £30. Unappropriated tithes £123 11s. 1d. The parish-church, situated on Heriot water, was built in 1804. Sitings about 200. Many of the parishioners of Stow find it a more convenient place of worship than their own parish-church; but, on the other hand, about one-third of the parishioners of Heriot attend the United Secession meeting-houses of Stow and Fala. Parochial schoolmaster's salary £34 4s. 4½d., with £25 fees, and £4 15s. other emoluments. During winter, there is a non-parochial school. The church was early of considerable value; and, in the ancient Taxatio, is rated at 30 marks. The manor of Heriot belonged to the Morvilles, and next to the Lords of Galloway, and certainly was possessed by Roger de Quincey, the constable of Scotland. In the division of De Quincey's great estates, Elena, the youngest daughter, who married Allan la Zouche, an English baron, inherited Heriot; and she granted the church, with its tithes and other rights, to the monks of Newbattle. In 1309, William Blair, the vicar of "Heryeth," having resigned his vicarage to Lambert, bishop of St. Andrews, the monks of Newbattle obtained a grant from the bishop of all the vicarage dues. The monks obtained also—though from whom, or at what date, does not appear—the lands of Heriot; and they were proprietors of the whole parish at the epoch of the Reformation. The manor, after that epoch, passed into the possession of Mark Ker, and of his heir, Robert, 2d Earl of Lothian; but it is now distributed among seven proprietors, the chief of whom is the Earl of Stair, the patron.

HERMATRA, one of the uninhabited Harris islands, on which a fishing-station was established by Charles I.

HERMISTON, or **HERDMANSTON**, an estate in the parish of Salton, in East Lothian. There are still some remains here of an ancient castle or fortalice of the Sinclairs, of which the following tradition is related:—In the year 1470, Marion and Margaret Sinclairs, co-heiresses of Polwarth, being in the full possession of their estates of Polwarth and Kimmergham, were decoyed by their uncle Sinclair to his castle of Herdmanston, in East-Lothian, and there they were cruelly detained prisoners. The feudal system then reigned in all its horrors, and every baron had the power of life and death within his territory. The two young heiresses were in great perplexity and terror. Marion, the eldest

conveyed a letter by the hands of Johnny Faa, captain of a gang of gipsies, to George Home, the young Baron of Wedderburn, her lover, acquainting him of her own and her sister's perilous situation; upon the receipt of which, the Baron and his brother Patrick set out with a hundred chosen men to relieve the two fair captives, which they achieved not without the loss of lives on both sides, as Sinclair made a stout resistance with all the force he could collect. The fair captives were brought off in triumph, and after travelling all night on horseback across the Lammermoors, arrived next morning at Polwarth, guarded by their two young champions, whom they soon after married, which gave rise to the old song of 'Polwarth on the Green,' and from them descended the succeeding Barons of Wedderburn and the Earls of Marchmont.

HERMITAGE (THE), a rivulet in the parish of Castletown, or district of Liddesdale, Roxburghshire. It is formed by the confluence of two streamlets called Twislehope burn, and Billhope burn. They rise respectively in the north-western and western extreme angles of the parish, the former on the north side of Mellingwood hill, and the latter on the south side of Cauldcleugh hill, at points about $4\frac{1}{2}$ miles asunder; and, flowing respectively southward and northward till the distance between them is only half-a-mile, they then both debouch eastward, and about half-a-mile farther on, unite to form the Hermitage. The united stream flows $1\frac{1}{2}$ mile eastward, and $2\frac{3}{4}$ southward of east, receiving, in its progress, several inconsiderable mountain-rills, sweeping past the dark and venerable tower of Hermitage castle, [see CASTLETOWN,] and fringed in the lower part of the course with natural wood and plantation, but generally overlooked by wild and rugged mountain-scenery. It now receives from the north the waters of Whithope burn, a tributary of 4 miles course, and, half-a-mile down, those of Roughley burn, which rises only half-a-mile from the source of the former stream, and flows parallel to it over its whole course; and the Hermitage, swollen by its feeders, and driven aside by their collision, makes an abrupt turn, and runs in a direction nearly due south, over a distance of $3\frac{3}{4}$ miles, along a vale of much rural beauty, and, $1\frac{1}{2}$ mile above the village of Castletown, falls into the river Liddel. Its entire length of course, measuring from the head of Twislehope burn, and including sinuosities, is between 11 and 12 miles.

HESTON, an islet in the Solway frith, off the coast of Kirkcudbrightshire. It is of an oval form, $\frac{3}{4}$ of a mile and $\frac{1}{4}$ of a mile broad; and lies about $\frac{3}{4}$ of a mile from Almerness Point, between the entrances to Auchencairn bay and the estuary of the Urr.

HIGGIN'S NEUCK. See **AIRTH.**

THE HIGHLANDS,

A thinly inhabited division of Scotland, comprehending somewhat more than one-half of its surface, and remarkable for the peculiar character of its ancient inhabitants and history, and for a pervading mixture of wildness, beauty, and sublimity in its scenery. To define the limits of the Highlands, or rather to trace the boundary-line with the Lowlands, requires a previous fixation of the differential or characteristic features of the region. If by the Highlands be meant the territory commensurate with the use of the Gaelic language, and with marked vestiges of ancient Celtic manners, the limits must include considerable districts in the present day, such as the isle of Bute, and large tracts in the shires of Dumbarton, Perth, Forfar, and Aberdeen, which were undoubtedly included at comparatively a very

modern date. If *high lands*, in the literal signification of the words, be understood, the broad mountain-belts south of the Forth, and south and east of the Clyde, though sometimes popularly called the Southern Highlands, were never included by community of peculiar name or history or manners in the Highlands properly so designated, and stand far apart from them in geographical position; while, on the other hand, the stretches of low country which intervene amongst the Highland mountains, and, in some instances—as in Dumbartonshire and Caithness—come down from these mountains in gentle slopes to points where they are terminated by a great natural barrier, never were included in the Lowlands. Though, with these exceptions, mountainousness of surface, and the perpetuation to the present day of the Celtic language and some Celtic usages distinctively characterize the whole Highlands, yet the definition of the territory which best suits the purposes of history, and, in all respects, most nearly accords with those of political and moral geography, is one which makes it commensurate with the country or locations of the ancient Highland clans. This definition assigns to the Highlands all the continental territory north of the Moray frith, and all the territory, both insular and continental, westward of an easily traceable line from that frith to the frith of Clyde. The line commences at the mouth of the river Nairn; it thence, with the exception of a slight north-eastward or outward curve, the central point of which is on the river Spey, runs due south-east till it strikes the river Dee at Tullach, nearly on the third degree of longitude west of Greenwich; it then runs generally south till it falls upon West-water, or the southern large head-water of the North Esk; it thence, over a long stretch, runs almost due south-west, and with scarcely a deviation, till it falls upon the Clyde at Ardmore in the parish of Cardross; and now onward to the Atlantic ocean, it moves along the frith of Clyde, keeping near to the continent, and excluding none of the Clyde islands except the comparatively unimportant Cumbræ. All the Scottish territory west and north-west of this line is properly the Highlands. Yet both for the convenience of topographical description, and because, altogether down to the middle of the 13th century, and partially down to the middle of the 16th, the Highlands and the Western Islands were politically and historically distinct regions, the latter are usually viewed apart under the name of the **HEBRIDES**, and in that light are treated in our work. See article **HEBRIDES**. The mainland Highlands, or the Highlands after the Hebrides are deducted, extend in extreme length, from Duncansby Head, or John o'Groats on the north, to the Mull of Cantyre on the south, about 250 miles; but, over a distance of 90 miles at the northern end, they have an average breadth of only about 45 miles,—over a distance of 50 or 55 miles at the southern end, they consist mainly of the Clyde islands, and the very narrow peninsula of Kintyre,—and even, at their broadest part, from the eastern base of the Grampians on the east to Ardnarnachan Point on the west, they scarcely if at all extend to more than 120 miles. The district comprehends the whole of the counties of Caithness, Sutherland, Ross, Cromarty, Inverness, and Argyre, the large parts of Nairn, Perth, Dumbarton, and Bute, and considerable portions of Elgin, Banff, Aberdeen, Forfar, and Stirling. Those counties, all of which are comprehended,—with the exception of Caithness, and the addition of the Perthshire and Dumbartonshire sections—contain, in a geographical or physical point of view, nearly all the territory and the scenic features which are strictly Highland.

General Features.

A district so extensive can be but faintly pictured in a general and rapid description. Mountains, chiefly covered with heath or ling, but occasionally, on the one hand, displaying sides and summits of naked rock, and, on the other, exhibiting a dress of verdure, everywhere rise, at short intervals, in chains, ridges, groups, and even solitary heights. Their forms are of every variety, from the precipitous and pinnacled acclivity, to the broad-based and round-backed ascent; but, in general, are sharp in outline, and wild or savagely grand in feature. Both great elongated ridges, and chains or series of short parallel ridges, have a prevailing direction from north-east to south-west, and send up summits from 1,000 to upwards of 4,000 feet above the level of the sea. Glens, valleys, and expanses of lowland stretch in all directions among the mountains, and abound in voluminous streams and large elongated lakes of picturesque and magnificent appearance,—nearly all the inland lakes extending in stripes either north-eastward and south-westward, or eastward and westward. Along the whole west coast, at remarkably brief intervals, arms of the sea, long, narrow, and sometimes exceedingly rugged in outline, run north-eastward, or south-eastward into the interior, and assist the inland fresh water lakes in cleaving it into sections. The rivers of the region are chiefly impetuous torrents, careering for a while along mountain-gorges, and afterwards, either expanding themselves into beautiful lakes and flowing athwart delightful meadows, or ploughing narrow and far-stretching valleys, green and ornate with grasses, trefoils, daisies, ranunculi, and a profuse variety of other herbage and flowers. Native woods, principally of pine and birch, and occasionally clumps and expanses of plantation, climb the acclivities of the gentler heights, or crowd down upon the valleys, and embosom the inland lakes. On the east side, along the coast to the Moray frith, and toward the frontier in the counties of Nairn, Elgin, and Perth, gentle slopes and broad belts of lowland, fertile in soil and favourable in position, are carpeted with agricultural luxuriance, and thickly dotted with human dwellings, and successfully vie with the south of Scotland in towns and population, and in the pursuit and display of wealth. But almost everywhere else, except in the fairyland of Loch-Fyne, and the southern shore of Loch-Etive, the Highlands are sequestered,—sinless of a town,—a semi-wilderness, where a square mile is a greatly more convenient unit of measurement than an acre. A district characterized by such features as we have named “necessarily exhibits, within very circumscribed limits, varieties of scenery of the most opposite descriptions; enabling the admirer of nature to pass abruptly from dwelling on the loveliness of an extensive marine or campaign landscape into the deep solitude of an ancient forest, or the dark craggy fastnesses of an alpine ravine; or from lingering amid the quiet grassy meadows of a pastoral strath, or valley, watered by its softly-flowing stream, to the open heathy mountain-side, whence ‘alps o’er alps arise,’ whose summits are often shrouded with mists, and almost perennial snows, and their overhanging precipices furrowed by foaming cataracts. Lakes and long arms of the sea, either fringed with woods or surrounded with rocky barren shores, now studded with islands, and anon extending their silvery arms into distant receding mountains, are met in every district; while the extreme steepness, ruggedness, and sterility of many of the mountain-chains impart to them as imposing and magnificent characters as are to be seen in the much higher and more inaccessible elevations of Switzerland. No wonder, then, that this ‘land

of mountain and of flood’ should have given birth to the song of the bard, and afforded material for the theme of the sage, in all ages; and that its inhabitants should be tinctured with deep romantic feelings, at once tender, melancholy, and wild; and that the recollection of their own picturesque native dwellings should haunt them to their latest hours, wherever they go. Neither, amid such profusion and diversity of all that is beautiful and sublime in nature, can the unqualified admiration of strangers, from every part of Europe, of the scenery of the Highlands fail of being easily accounted for; nor can any hesitate in recommending them to visit the more remote or unknown solitudes.” [‘*Andersons’ Guide to the Highlands*,’ pp. 4, 5.]

Early History and Antiquities.

The Highlands, till less than a century ago, were exclusively occupied by a people whose manners, language, and framework of society were strikingly peculiar, and quite as different from those of the inhabitants of the south of Scotland, as if the two races had been separate nations, mutually removed by the intervention of an ocean. When Agricola invaded North Britain in the year 81 of the Christian era, it appears to have been possessed by twenty-one tribes of aboriginal Britons, having little or no political connexion with one another, although evidently the same people in origin, speaking the same language, and following the same customs. The topographical position of these Caledonian tribes or clans who occupied the district above defined as falling within the Highland territory, and the adjoining lowland frontiers, at the epoch in question, may be thus stated:—

1st. The *Damnii*, the most important of the southern tribes, inhabited the whole extent of country from the ridge of hills between Galloway and Ayrshire on the south, to the river Earn on the north. They possessed all Strathclyde, the shires of Ayr, Renfrew, and Stirling, and a small part of the shires of Dumbarton and Perth. According to Ptolemy the *Damnii* had six towns; namely, *Vanduaria*, at Paisley; *Colania*, supposed to be Lanark; *Coria*, at Carstairs in Eastern Clydesdale; *Alauna* on the river Allan, believed by some to be Kier near Stirling; *Lindum* near Ardoch; and *Victoria*, at Dalginross on the Ruchil water.

2d. The *Horestii* inhabited the country between the *Bodotria* or Forth, on the south, and the *Tarvus* or Tay on the north; comprehending the shires of Clackmannan, Kinross, and Fife, with the eastern part of Strathearn, and the country westward of the Tay, as far as the river Bran.

3d. The *Venricones* possessed the territory between the Tay on the south, and the Carron on the north; comprehending Gowrie, Strathmore, Strathardle in Perthshire; with the whole of Angus, and the larger part of Kincardineshire. Their chief town was *Orrea* on the Tay.*

4th. The *Taixali* inhabited the northern part of the Mearns, and the whole of Aberdeenshire, as far as the Doveran. The promontory of Kinnaird’s head, the *Taixalorum* promontorium of the Romans, was included in this district. *Devana*, on the northern side of the Dee, six miles above its influx into the sea, was their principal town, which perhaps stood on the site of Normandykes of the present day.

5th. The *Vacomagi* inhabited the country on the southern side of the Moray frith, from the Doveran on the east to the Ness on the west; comprehending the shires of Banff, Elgin, Nairn, the eastern

* This and the last-mentioned tribe were afterwards named *Vetriciones* by the Romans.

part of Inverness, and Braemar in Aberdeenshire. Their towns were the Ptoroton of Richard, the Alata Castra of Ptolemy, at the mouth of the Varar, where the present Brough-Head, or Burghhead, runs into the Moray frith; Tuessin on the eastern bank of the Spey; and Tamea and Banatia in the interior country.

6th. The Albani—afterwards called Damnii-Albani, on their subjection to the Damnii—possessed the interior districts between the lower ridge of the Grampians which skirts the southern side of the loch and river Tay, on the south, and the chain of mountains which forms the southern limit of Inverness-shire on the north. These districts comprehended Breadalbane, Athole, a small part of Lochaber, with Appin and Glenorchy in Upper-Lorn.

7th. The Attacotti inhabited the whole country from Loch-Fyne on the west, to the eastward of the river Leven and Loch-Lomond; comprehending the whole of Cowal in Argyshire, and the greater part of Dumbartonshire.

8th. The Caledonii proper inhabited the whole of the interior country from the ridge of mountains which separates Inverness and Perth, on the south, to the range of hills which forms the forest of Balnagowan in Ross on the north; comprehending all the middle parts of Inverness and of Ross. This territory formed a considerable part of the extensive forest which, in early ages, spread over the interior and western parts of the country, on the northern side of the Forth and Clyde, and to which the British colonists, according to Chalmers, gave the descriptive appellation of Celyddon, signifying literally 'the Coverts,' and generally denoting 'a Woody region.*'

9th. The Cantæ possessed the east of Ross-shire, from the æstuary of Varar or the Moray frith on the south, to the Abona, or Dornoch frith on the north; having Loxa or Cromarty frith which indented their country in the centre, and a ridge of hills, Uxellum montes, on the west. This ridge—of which Ben-nevis, one of the highest mountains in Great Britain, is the prominent summit—gradually declines towards the north-east, and terminates in a promontory, called Pen Uxellum, the Tarbet-ness of modern times.

10th. The Logi possessed the south-eastern coast of Sutherland, extending from the Abona, or Dornoch frith, on the south-west, to the river Ila on the east. This river is supposed to be the Helmsdale river of the Scandinavian intruders, called by the Celtic inhabitants Avon-Uile, or Avon-Iligh, 'the Floody water.'

11th. The Carnabii inhabited the south, the east, and north-east of Caithness, from the Ila river; comprehending the three great promontories of Virubium or Noss-Head; Virvedrum, or Duncansby-Head; and Tarvedrum, or the Orcas promontorium, the Dunnet-Head of the present times.

12th. The Catini, a small tribe, inhabited the north-western corner of Caithness, and the eastern half of Strathnaver in Sutherlandshire; having the river Naver, the Navari fluvius of Ptolemy, for their western boundary.

13th. The Mertæ occupied the interior of Sutherland.

14th. The Carnonacæ inhabited the northern and western coast of Sutherland, and a small part of the western shore of Ross, from the Naver on the

east, round to the Volsas bay, on the south-west. A river called Straba falls into the sea in this district, on the west of the Naver, and the headland at the burn is named Ebudium promontorium.

15th. The Cerones inhabited the western coast of Ross from Volsas-sinus on the north, to the Itys, or Loch-Duick, on the south.

16th. The Cerones inhabited the whole western coast of Inverness, and the countries of Ardnarmurchan, Morvern, Sunart, and Ardgowar in Argyshire; having the Itys or Loch-Duich on the north, and the Longus or Linne-Loch on the south.

17th. The Epidii inhabited the south-west of Argyshire from Linne-Loch on the north, to the frith of Clyde and the Irish sea on the south, including Cantyre, the point of which was called the Epidian promontory, now named the Mull of Cantyre; and they were bounded on the east by the country of the Albani, and the Lelanonius Sinus or the Loch-Fine of the present day.

It is impossible to say what form of government obtained among these tribes. When history is silent, historians should either maintain a cautious reserve, or be sparing in their conjectures; but analogy may supply materials for well-grounded speculations, and it may therefore be asserted, without any great stretch of imagination, that, like most of the other uncivilized tribes we read of in history, the Northern Britons or Caledonians, were under the government of a leader or chief to whom they yielded a certain degree of obedience. Dio indeed insinuates that the governments of these tribes were democratic; but he should have been aware that it is only when bodies of men assume, in an advanced stage of civilization, a compact and united form, that democracy can prevail; and the state of barbarism in which he says the inhabitants of North Britain existed at the period in question seems to exclude such a supposition. The conjecture of Chalmers that, like the American tribes, they were governed under the aristocratic sway of the old men rather than the coercion of legal authority, is more probable than that of Dio, and approximates more to the opinion we have ventured to express.

The aboriginal inhabitants of North Britain brought from the East a system of religion,—modified and altered no doubt by circumstances in its course through different countries. The prevailing opinion is that Druidism was the religion followed by all the Celtic colonies; and in proof of this, reference has been made to a variety of Druidical monuments abounding in all parts of Britain and particularly in the north. An author, Mr. Pinkerton—whose asperity, to use the words of Dr. Jamieson, "has greatly enfeebled his argument"—has attacked this position under the shields of Cæsar and Tacitus; but although his reasoning is powerful and ingenious, he appears to have failed in establishing that these monuments are of Gothic origin. Various Druidical remains yet exist in the Highlands of Scotland, of which notices are given in different articles of the present work. The pillars which mark the sites of their places of worship are still to be seen; and so great is the superstitious veneration paid by the country-people to those sacred stones, as they are considered, that few persons have ventured to remove them, even in cases where their removal would be advantageous to the cultivator of the soil.

As connected in some degree with religion the modes of sepulture among the Pagan people of North Britain come next to be noticed. These have been various in different ages. The original practice of interring the bodies of the dead gradually gave way among the Pagan nations to that of burning the bodies, but the older practice was resumed wherever

* It was on this account that the large tribe in question were called *Celyddoni*, a name afterwards Latinized into the more classical appellation of *Caledonii*. The descriptive name, *Celyddon*, restricted originally to the territory described, was afterwards extended to the whole country on the northern side of the Forth and Clyde, under the Latinized appellation of *Caledonia*. See article CALEDONIANS.

Christianity obtained a footing. The practice of burning the dead at the time we are treating of was common among the inhabitants of North Britain; but the process of inhumation was not always the same, being attended with more or less ceremony according to the rank of the deceased. Many of the sepulchral remains of our Pagan ancestors are still to be seen, and have been distinguished by antiquaries under the appellations of *barrows*, *cairns*, *cistvaens*, and *urns*. Among the learned, the barrows and cairns, when they are of a round shape and covered with green sward, are called *tumuli*, and hillocks by the vulgar. These *tumuli* are generally circular heaps resembling a flat cone; some of them are oblong ridges resembling the hull of a ship with its keel upwards. The most of them are composed of stones, some of them of earth, many of them of a mixture of earth and stones, and a few of them of sand. There is a great distinction however between the barrow and the cairn; the first being composed solely of earth, and the last of stones. The cairns are more numerous than the barrows. Some of these cairns are very large, being upwards of 300 feet in circumference and from 30 to 40 feet in height; and the quantity of stones that has been dug from their bowels is almost incredible. Numerous notices of these funeral monuments are scattered throughout our pages. The *cistvaen*—which, in the British language, signifies literally ‘a Stone chest,’ from *cist*, ‘a chest,’ and *maen*, changing in composition to *vaen*, ‘a stone’—was another mode of interment among the ancient inhabitants of our island. Sometimes the *cistvaen* contained the urn within which were deposited the ashes of the deceased; yet it often contained the ashes and bones without an urn. But urns of different sizes and shapes have been found without *cistvaens*; a circumstance which may be owing to the fashion of different ages and to the rank of the deceased. The same observation may be made with respect to urns which have been found generally in *tumuli*, but often below the surface where there had been no hillock: they were usually composed of pottery, and sometimes of stone, and were of different shapes, and variously ornamented according to the taste of the times and the ability of the parties. The fields of ancient conflict are still denoted by sepulchral cairns; and it is even conjectured that the battle at the Grampians has been perpetuated by sepulchral *tumuli* raised to the memory of the Caledonians who fell in defence of their country. “On the hill, above the moor of Ardoch”—says Gordon in his ‘*Itin. Septen.*,’ p. 42—“are two great heaps of stones, the one called *Carn-wochel*, the other *Carnlee*: the former is the greatest curiosity of this kind that I ever met with; the quantity of great rough stones, lying above one another, almost surpasses belief, which made me have the curiosity to measure it; and I found the whole heap to be about 182 feet in length, 30 in sloping height, and 45 in breadth at the bottom.”

The next objects of antiquarian notice are the Standing-stones, so traditionally denominated from their upright position. They are all to be found in their natural shape without any mark from the tool or chisel. Sometimes they appear single, and as often in groups of two, three, four, or more. These standing-stones are supposed to have no connection with the Druidical remains, but are thought by some to have been erected in successive ages as memorials to perpetuate certain events which, as the stones are without inscriptions, they have not transmitted to posterity, although such events may be otherwise known in history. In Arran there are two large stone edifices which are quite rude, and several smaller ones; and there are also similar stones in

Harris. These standing-stones are numerous in Mull, some of which are very large, and are commonly called by the Scots-Irish inhabitants *carra*, a word signifying in their language ‘a Stone pillar.’ These stones, in short, are to be seen in every part of North Britain as well as in England, Wales, Cornwall, and Ireland; but being without inscriptions, they “do not,” as Chalmers observes, “answer the end either of personal vanity or of national gratitude.”

After the aboriginal inhabitants of North Britain had become indigenous to the soil—which the bounds set to their farther emigration to the north by the waters of the Atlantic would hasten sooner than in any other country over which the Celtic population spread—it became necessary for them to select strongholds for defending themselves from the attacks of foreign or domestic foes. Hence the origin of the hill-forts and other safeguards of the original people which existed in North Britain at the epoch of the Roman invasion. There were many of these in the north of Scotland; and they are described in our articles *CATERTHUN*, *DUN-DORNADIL*, &c.

Subterraneous retreats, or caves, were common to most early nations for the purpose of concealment in war: the Britons and their Caledonian descendants had also their hiding-places. The excavations or retreats were of two sorts: first, artificial structures formed under ground of rude stones without cement; and, secondly, natural caves in rocks which have been rendered more commodious by art. Of the first sort are the subterraneous apartments which have been discovered in Forfarshire, within the parish of *TEALING*: which see. Several hiding holes of a smaller size, and of a somewhat different construction, are to be seen in the Western Hebrides. Subterraneous structures have been also found on Kildrummie moor in Aberdeenshire; in the district of Applecross in Ross-shire; and in Kildonan parish in Sutherland. A subterraneous building 60 feet long has been discovered on the estate of Raits in the parish of Alvie in Inverness-shire. Of the second kind there are several in the parish of Applecross. On the coast of Skye, in the parish of Portree, there are some caves of very large extent, one of which is capacious enough to contain 500 persons. In the isle of Arran there are also several large caves which appear to have been places of retreat in ancient times. See article *ARRAN*.

Among such rude tribes, marine science must have been little attended to and but imperfectly understood. As the ancient Caledonians had no commerce of any kind and never attempted piratical excursions, the art of ship-building was unknown to them; at least no memorials have been left to show that they were acquainted with it. They, however, constructed canoes consisting of a single tree, which they hollowed with fire in the manner of the American Indians; and they put these canoes in motion by means of a small paddle or oar, in the same manner as the Indian savages do at this day. With these they crossed rivers and arms of the sea, and traversed lakes. Many of these canoes have been discovered both in South and North Britain embedded in lakes and marshes. The canoes were afterwards superseded, at an early period, by another marine vehicle called a *currach*. Cæsar describes the *currachs* of South Britain as being accommodated with keels and masts of the lightest wood, while their hulls consisted of wicker covered over with leather. Lucan calls them little ships in which he says the Britons were wont to navigate the ocean. Solinus says that it was common to pass between Britain and Ireland in these ‘little ships.’ It is stated by Adamson in his *Life*

of St. Columba that St. Cormac sailed into the North sea in one of these currachs, and that he remained therein fourteen days in perfect safety; but this vessel must have been very different from the currachs of Cæsar, as according to our author it had all the parts of a ship with sails and oars, and was capacious enough to contain passengers. Probably the currachs in which the Scoto-Irish made incursions into Britain during the age of Claudian were of the latter description.

Bards, and Ossianic Controversy.

No question of literary controversy has been discussed with greater acrimony and pertinacity, than that regarding the authenticity of the poems of Ossian, and never did Saxon and Gael exhibit more bitter enmity in mortal strife than has been shown by the knights of the pen in their different rencontres in this field of antiquarian research. It seems really to be a matter of little importance whether the poems from which Macpherson translated, or any part of them were actually composed by Ossian or not, or at what period the poet flourished, whether in the 3d, or 4th, or 5th centuries: it is, we apprehend, quite sufficient to show that these poems are of high antiquity, and that they belong to a very remote era.

One of the most remarkable traits in the character of the Celtic tribes, was their strong attachment to poetry, by means of which they not only animated themselves to battle, but braved death with joy, in the hope of meeting again their brave ancestors who had fallen in battle. Either unacquainted with letters, or despising them as unworthy of a warlike race, the ancient Celts set apart the bards, whose business it was to compose and recite in verse the military actions of their heroes or chiefs, and by the same means they sought to preserve the memory of their laws, religion, and historical annals, which would otherwise have been buried in oblivion. "When the Celts," says Posidonius, "go to war, they take with them associates whom they call Parasites who sing their praises, either in public assemblies, or to those who wish to hear them privately. These poets are called bards." It is well-known that the Druids to whom the education of the Celtic youth was committed, spent many years in committing to memory the compositions of the bards. This peculiarity was not confined to any one of the Celtic nations, but prevailed universally among them. The bards, according to Buchanan, were held in great honour both among the Gauls and Britons, and he observes that their function and name remained in his time amongst all those nations which used the old British tongue. "They," he adds, "compose poems—and those not inelegant—which the rhapsodists recite, either to the better sort, or to the vulgar, who are very desirous to hear them; and sometimes they sing them to musical instruments." And in speaking of the inhabitants of the Hebrides or Western islands, he says that they sing poems "not inelegant, containing commonly the eulogies of valiant men; and their bards usually treat of no other subject." Thus the existence of bards from the most remote period among the Celtic population of Scotland is undoubted; and some idea of their importance may be formed from the following observations from the elegant and classical pen of a distinguished scholar. "Although it is well known that the Scots had always more strength and industry to perform great deeds, than care to have them published to the world; yet, in ancient times, they had, and held in great esteem, their own Homers and Maros whom they named bards. These recited the achievements of their brave warriors in

heroic measures, adapted to the musical notes of the harp; with these they roused the minds of those present to the glory of virtue, and transmitted patterns of fortitude to posterity. This order of men still exists among the Welsh and ancient Scots (the Highlanders), and they still retain that name (bards) in their native language."* So formidable were they considered in rousing the passions against the tyranny of a foreign yoke, by their strains, that Edward I. adopted the cruel policy of extirpating the order of the Welsh bards about the end of the 13th century. They continued, however, to exist in England down to the reign of Queen Elizabeth, "till which period," as Dr. Graham observes, "there was a regular public competition of harpers maintained; and there is, at this day, as Mr. Pennant informs us, in his tour through Wales, a silver harp, awarded during that period, in the possession of the Mostyn family." The bardic order was preserved longer in Scotland than in any other country, for it was not till the year 1726, when Niel Macvuirich the last of the bards died, that the race became extinct. He, and his ancestors had for several generations exercised the office of bard in the family of Clanranald. Every great Highland family had their bard, whose principal business was to amuse the chieftain and his friends by reciting at entertainments, the immense stores of poetry which he had hoarded up in his memory, besides which he also preserved the genealogy, and recorded the achievements of the family which were thus traditionally and successively handed down from generation to generation. At what particular period of time the Caledonian bards began to reduce their compositions to writing, cannot now be ascertained; but it seems to be pretty evident that no such practice existed in the Ossianic age, nor, indeed, for several centuries afterwards. To oral tradition, therefore, as conveyed through the race of bards, are we indebted for the precious remains of Gaelic song which have reached us. But although the bards were the depositories of the muses, there were not wanting many who delighted to store their memories with the poetical effusions of the bards, and to recite them to their friends. The late Captain John Macdonald of Breakish, a native of the island of Skye, declared upon oath, at the age of 78, that he could repeat, when a boy (about the year 1740), from one to two hundred Gaelic poems differing in length and in number of verses; and that he had learned them from an old man about eighty years of age, who sung them for years to his father, when he went to bed at night, and in the spring and winter before he rose in the morning. The late Rev. Dr. Stuart, minister of Luss, knew an old Highlander in the isle of Skye, who repeated to him for three successive days, and during several hours each day, without hesitation, and with the utmost rapidity, many thousand lines of ancient poetry, and would have continued his repetitions much longer, if the Doctor had required him to do so. That such a vast collection of Gaelic poetry, as that which has reached us, should have been handed down by oral tradition may appear extraordinary to those who have not sufficiently reflected on the power of the human memory, when applied and confined to the acquisition of those sublime and lofty effusions of poetic fancy in which the Highlanders took such

* "Quamvis intelligunt omnes plus semper virum et industriæ Scotis fuisse ad res gerendas, quam commentationis ad prædicandas, habuerunt tamen antiquitus, et coluerunt suos Homeros et Marones, quos Bardos nominabant. Hi fortium virorum facta verisibus heroicis et lyræ modulis aptata concinebant; quibus et præsentium animos acuebant ad virtutis gloriam, et fortitudinis exempla ad posteris transmittabant. Cujusmodi apud Cambros et prisca Scotos nec dum desiere; et nomen illud patrio sermone adhuc retinetur."—J. Johnston in *Prajat, ad Hist. Scot.*

delight, as to supersede all other mental pursuits. The mere force of habit in persons who, from their childhood, have been accustomed to hear recitals often repeated, which delighted them, will make an indelible impression, not confined to the ideas suggested, or to the images which float in the imagination, as reflected from the mirror of the mind, but extending to the very words themselves.* Besides these and other reasons in favour of the oral transmission of the Gaelic poetry, to which we shall afterwards allude, one more important consideration, as far as we can ascertain, has been entirely overlooked, namely, that to insure a correct transmission of the poems in question, through the medium of oral tradition, it was by no means necessary that one or more individuals should be able to recite all of them. To secure their existence it was only necessary that particular persons should be able to recite with accuracy such parts as they might have committed to memory so as to communicate them to others. Doubtless there would be great differences in the powers of acquisition and retention in different persons, but we have no idea that one person could carry in his memory the whole poetry of Ossian. Besides these arguments in support of oral tradition, the following reasons are given by the Right Honourable Sir John Sinclair, Baronet, in support of the preservation of the poems of Ossian through that medium: 1. The beauty of the poetry, of which it is impossible to form an adequate idea from any translation hitherto given; 2. The partiality which the Highlanders naturally entertained for songs, which contained the traditional history of the greatest heroes, in the ancient annals of their country; 3. It is to be observed that the bards were for a long time a distinct class or caste, whose whole business it was either to compose verses themselves, or to recite the poetry of others; 4. Though the poems were not composed in rhyme, yet there was an emphasis laid upon particular syllables of a particular sound in every line, which greatly assisted the memory; 5. The verses were set to particular music, by which the remembrance of the words was greatly facilitated; and, 6. The Highlanders, at their festivals and other public meetings, acted the poems of Ossian, and on such occasions, those who could repeat the greatest number of verses were liberally rewarded. What also tended greatly to preserve the recollection of the Gaelic poetry, was a practice followed by the Highlanders of going by turns to each other's houses in every village during the winter-season, and reciting or hearing recited or sung the poems of Ossian, and also poems and songs ascribed to other bards.†

* Mr. Wood, in his Essay on the original writings and genius of Homer, remarks, with great justice, that we cannot, in this age of dictionaries and other technical aids to memory, judge what her use and powers were at a time when all a man could know was all he could remember, and when the memory was loaded with nothing either useless or unintelligible. The Arabs, who are in the habit of amusing their hours of leisure by telling and listening to tales, will remember them though very long, and rehearse them with great fidelity after one hearing.

† The first person who made a collection of Gaelic poetry was the Rev. John Farquharson, a Jesuit missionary in Strathglass, about the year 1745.—Alexander Macdonald, a school-master at Ardnamurchan, was the next who made a collection of Gaelic poetry, which was published in Gaelic at Edinburgh, in the year 1751.—Jerome Stone, a native of the county of Eife, and who had acquired a knowledge of the Gaelic language during some year's residence in Dunkeld, where he kept a school, was the third person who collected several of the ancient poems of the Highlands, and was the first person who especially called public attention to the beauty of these poems in a letter which he addressed 'To the Author of the Scots Magazine,' accompanied with a translation in rhyme of one of them, both of which appeared in that periodical in January, 1756.—The next and most noted collector of Gaelic poetry was the celebrated James Macpherson, whose spirited translations, or forgeries, as some writers maintain, have consigned his name

A writer of great penetration and extensive erudition, thus speaks of the poems published as Ossian's: "Some fragments of the songs of the Scottish Highlanders, of very uncertain antiquity, appear to have fallen into the hands of Macpherson, a young man of no mean genius, unacquainted with the higher criticism applied to the genuineness of ancient writings, and who was too much a stranger to the studious world to have learnt those refinements which extend probity to literature as well as to property. Elated by the praise not unjustly bestowed on some of these fragments, instead of insuring a general assent to them by a publication in their natural state, he unhappily applied his talents for skilful imitation to complete poetical works in a style similar to the fragments, and to work them into the unsuitable shape of epic and dramatic poems. He was not aware of the impossibility of poems, preserved only by tradition, being intelligible after thirteen centuries to readers who knew only the language of their own times; and he did not perceive the extravagance of peopling the Caledonian mountains, in the 4th century, with a race of men so generous and merciful, so gallant, so mild, and so magnanimous, that the most ingenious romances of the age of chivalry could not have ventured to represent a single hero as on a level with their common virtues. He did not consider the prodigious absurdity of inserting as it were a people thus advanced in moral civilization between the Britons, ignorant and savage as they are painted by Cæsar, and the Highlanders, fierce and rude as they are presented by the first accounts of the chroniclers of the 12th and 14th centuries. Even the better part of the Scots were, in the latter period, thus spoken of:—'In Scotland ye shall find no man lightly of honour or gentleness: they be like wylde and savage people.' The great historian who made the annals of Scotland a part of European literature, had sufficiently warned his countrymen against such faults, by the decisive observation that their forefathers were unacquainted with the art of writing, which alone preserves language from total change, and great events from oblivion. Macpherson was encouraged to overleap these and many other improbabilities by youth, talent, and applause: perhaps he did not at first distinctly present to his mind the permanence of the deception. It is more probable, and it is a supposition countenanced by many circumstances, that after enjoying the pleasure of duping so many critics, he intended one day to claim the poems as his own; but if he

to immortality in the literary world. The circumstances which gave rise to this collection are fully detailed in various publications,* and need not be here repeated. The districts through which Mr. Macpherson travelled in quest of Gaelic poetry were chiefly the north-western parts of Inverness-shire, the isle of Skye, and some of the adjoining islands; "places, from their remoteness and state of manners at that period, most likely to afford, in a pure and genuine state, the ancient traditional tales and poems, of which the recital then formed, as the committee has before stated, the favourite amusement of the long and idle winter evenings of the Highlanders." On his return to Edinburgh from his poetical tour, Macpherson took lodgings in a house at the head of Blackfriars'-wynd, immediately below that possessed by his chief patron, Dr. Blair, and immediately set about translating from the Gaelic into English. He soon afterwards, viz., in 1761, published one volume in quarto, containing *FINGAL*, an epic poem, in six books, and some other detached pieces of a similar kind. He published, in the year 1762, another epic poem called *TEMORA*, of one of the books or divisions of which he annexed the original Gaelic, being the only specimen he ever published, though at his death he left £1,000 to defray the expense of a publication of the originals of the whole of his translations, with directions to his executors for carrying that purpose into effect. Various causes contributed to delay their appearance till the year 1807, when they were published under the sanction of the Highland Society of London.—A good collection of Gaelic poetry, with very interesting Notes, has recently been published by Mr. John Mackenzie: Glasgow: Macgregor & Polson, 1841, 8vo.

* See Report of Highland Society.—Graham's 'Essay on the Authenticity of Ossian's poems.'—Browne's 'History of the Highlands and Highland clans,' vol. i. chap. ii.

had such a design, considerable obstacles to its execution arose around him. He was loaded with so much praise that he seemed bound in honour to his admirers not to desert them. The support of his own country appeared to render adherence to those poems, which Scotland inconsiderately sanctioned, a sort of national obligation. Exasperated, on the other hand, by the, perhaps, unduly vehement, and sometimes very coarse attacks made on him, he was unwilling to surrender to such opponents. He involved himself at last so deeply as to leave him no decent retreat. Since the keen and searching publication of Mr. Laing, these poems have fallen in reputation, as they lost the character of genuineness. They had been admired by all the nations, and by all the men of genius in Europe. The last incident in their story is perhaps the most remarkable. In an Italian version, which softened their defects, and rendered their characteristic qualities faint, they formed almost the whole poetical library of Napoleon, a man who, whatever may be finally thought of him in other respects, must be owned to be, by the transcendent vigour of his powers, entitled to a place in the first class of human minds. No other imposture in literary history approaches them in the splendour of their course.*

A sentence so severe and condemnatory, proceeding from an author of such acknowledged ability as Sir James Mackintosh, and who we presume had fully considered the question, must have considerable effect; but we apprehend it is quite possible that minds of the first order may, even in a purely literary question, be led astray by prepossessions. That Macpherson endeavoured to complete some of the poetical fragments he collected, in his translation, may, we think, be fairly admitted; and, indeed, the committee of the Highland Society, with that candour which distinguished their investigation in answering the second question to which their inquiries were directed, namely, How far the collection of poetry published by Mr. Macpherson was genuine? considered that point as rather difficult to answer decisively. The committee reported, that they were inclined to believe that Mr. Macpherson "was in use to supply chasms, and to give connexion, by inserting passages which he did not find, and to add what he conceived to be dignity and delicacy to the original composition, by striking out passages, by softening incidents, by refining the language, in short, by changing what he considered as too simple or too rude for a modern ear, and elevating what in his opinion was below the standard of good poetry. To what degree, however, he exercised these liberties it is impossible for the committee to determine. The advantages he possessed—which the committee began its inquiries too late to enjoy—of collecting from the oral recitation of a number of persons, now no more, a very great number of the same poems, on the same subjects, and then collating those different copies or editions, if they may be so called, rejecting what was spurious or corrupted in one copy, and adopting from another something more genuine and excellent in its place, afforded him an opportunity of putting together what might fairly enough be called an original whole, of much more beauty, and with much fewer blemishes, than the committee believes it now possible for any person, or combination of persons, to obtain." But this admission, when all the other circumstances which are urged in favour of the authenticity of these poems are considered, assuredly does not detract in any material degree from their genuineness. While we readily subscribe to the position as to the impos-

sibility of poems, preserved only by tradition, being intelligible after thirteen centuries to readers who knew only the language of their own times, we cannot agree to the assumption that the Gaelic of the Highlands, as it was spoken in the Ossianic era, has been so materially altered or corrupted as to be unintelligible to the Gaelic population of the present age. That some alterations in the language may have taken place there can be no doubt; but, in an original and purely idiomatic language, these must have been necessarily few and unimportant. No fair analogy can be drawn between an original language, as the Gaelic unquestionably is, and the modern tongues of Europe, all, or most of which, can be deduced from their origin and traced through their various changes and modifications; but who can detect any such in the Gaelic? "A life of St. Patrick," says the Rev. Dr. John Smith, "written in the 6th century, in Irish verse, is still intelligible to an Irishman; and a poem of near one hundred verses, of which I have a copy, and which was composed about the same time by St. Columba, though for ages past little known or repeated, will be understood, except a few words, by an ordinary Highlander." And if such be the case as to poetical compositions, which had lain dormant for an indefinite length of time, can we suppose that those handed down uninterruptedly from father to son through a long succession of generations, could by any possibility have become unintelligible? "The preservation of any language from total change" does not, we apprehend, depend upon the art of writing alone, but rather upon its construction and character, and on its being kept quite apart from foreign admixture. Owing to the latter circumstance all the European languages, the Gaelic alone excepted, have undergone a total change notwithstanding the art of writing. In connexion with this fact it may be observed, that the purest Gaelic is spoken by the unlettered natives of Mull and Skye, and the remote parts of Argyshire and Inverness-shire; and it has been truly observed, that "an unlettered Highlander will feel and detect a violation of the idiom of his language more readily than his countryman who has read Homer and Virgil."† The high state of refinement and moral civilization depicted in the poems of Ossian affords no solid objection against their authenticity. The same mode of reasoning might with great plausibility be urged against the genuineness of the Iliad and Odyssey. Fiction is essential to the character of a true poet; and we need not be surprised that one so imaginative and sublime as Ossian should people his native glens with beings of a superior order. The most formidable objection against the genuineness of the poems of Ossian, and which has been urged with great plausibility, is the absence of all allusions to religion. It is certainly not easy to account for this total want of religious allusions, for to suppose that at the era in question the Caledonians were entirely destitute of religious impressions, or in other words, a nation of atheists, is contrary to the whole history of the human race. It cannot, however, be denied that this silence has puzzled the defenders of the poems very much, and many reasons have been given to account for it. The reason assigned by Dr. Graham of Aberfoil in his valuable Essay appears to be the most plausible. "We are informed," says he, "by the most respectable writers of antiquity, that the Celtic hierarchy was divided into several classes, to each of which its own particular department was assigned. The Druids, by the consent of all, constitute the highest class; the bards seem to have been the next in rank;

* History of England. By the Right Honourable Sir James Mackintosh, LL.D., M.P., vol. i. p. 86.

† Essay on the Authenticity of Ossian's Poems, by Dr. F. G. Graham, p. 103.

and the Eubages the lowest. The higher mysteries of religion, and probably, also, the science of the occult powers of nature, which they had discovered, constituted the department of the Druids. To the bards, again, it is allowed by all, were committed the celebration of the heroic achievements of their warriors, and the public record of the history of the nation. But we know, that in every polity which depends upon mystery, as that of the Druids undoubtedly did, the inferior orders are sedulously prevented from encroaching on the pale of those immediately above them, by the mysteries which constitute their peculiar badge. Is it not probable, then, that the bards were expressly prohibited from encroaching upon the province of their superiors by intermingling religion, if they had any knowledge of its mysteries, which it is likely they had not, with the secular objects of their song? Thus, then, we seem warranted to conclude upon this subject, by the time that Ossian flourished, the higher order of this hierarchy had been destroyed; and in all probability the peculiar mysteries which they taught had perished along with them; and even if any traces of them remained, such is the force of habit, and the veneration which men entertain for the institutions in which they have been educated, that it is no wonder the bards religiously forbore to tread on ground from which they had at all times, by the most awful sanctions, been excluded. In this view of the subject, it would seem, that the silence which prevails in these poems, with regard to the higher mysteries of religion, instead of furnishing an argument against their authenticity, affords a strong presumption of their having been composed at the very time, in the very circumstances, and by the very persons to whom they have been attributed." But although the poems of Ossian are marked by an abstinence from religious mysteries, they abound with a beautiful, because simple, and natural mythology, which demonstrates that the ancient Caledonians were not only not devoid of religious sentiment, but were deeply impressed with the belief of a future state of existence. "Ossian's mythology is, to speak so," says Dr. Blair, "the mythology of human nature;

for it is founded on what has been the popular belief in all ages and countries, and under all forms of religion, concerning the appearances of departed spirits." "It were indeed difficult," observes Professor Richardson, "if not impossible in the history of any people, to point out a system of unrevealed, and unphilosophical religion, so genuine and so natural, so much the effect of sensibility, affection, and imagination, operating, unrestrained by authority, unmodified by example, and untinctured with artificial tenets, as in the mythology of the poems of Ossian."

Highland Music.

We have alluded to the poetry of the Celts: it may not be out of place to take some notice of their music, which seems to have been cultivated with greater success by the Scots than by the Picts. The great characteristics of the Gaelic music, are, its simplicity, tenderness, and expression. All the ancient music is distinguished by the first quality; for the complex movements and intricate notes of modern composers were unknown to antiquity: but the latter qualities—which may be termed *national*, inasmuch as they are dependent upon the genius and character of a people, and the structure of language—are peculiar attributes of the music of the Highlanders. "The Welsh, the Scots, and the Irish, have all melodies of a simple sort, which, as they are connected together by cognate marks, evince at once their relationship and antiquity."* The ancient Scottish scale consists of six notes, as shown in the annexed exemplification, No. 1. The lowest note, A, was afterwards added to admit of the minor key in wind-instruments. The notes in the diatonic scale, No. 2, were added about the beginning of the 15th century; and when music arrived at its present state of perfection, the notes in the chromatic scale, No. 3, were further added. Although many of the Scottish airs have had the notes last mentioned introduced into them, to please modern taste, they can be played without them, and without altering the character of the melody. Any person who understands the ancient scale can at once detect the latter additions.

The Gaelic music consists of different kinds or species. 1. Martial music, the *Goltraidheacht* of the Irish, and the *Prosnachadh Cath* of the Gaël, consisting of a spirit-stirring measure, short and rapid. 2. The *Geantraidheacht*, or plaintive, or sorrowful, a kind of music to which the Highlanders are very partial. The *Coronach* or lament, sung at funerals, is the most noted of this sort. 3. The *Suantraidheacht*, or composing, calculated to calm the mind, and to lull the person to sleep. 4. Songs of peace, sung at the conclusion of a war. 5. Songs of victory sung by the bards before the king on gaining a victory. 6. Love songs. These last form a considerable part of the national music, the sensibility and tenderness of which excite the passion of love, "and stimulated by its influence, the Gaël indulge a spirit of the most romantic attachment and adventure which the peasantry of perhaps no other country exhibits."* "No songs could be more happily constructed for singing during labour, than those of the Highlanders, every person being able to join in them, sufficient intervals being allowed for breathing-time. In a certain part of the song, the leader stops to take breath, when all the others strike in and complete the air with a chorus of words and syllables, generally without signification, but admirably adapted to give effect to the time. In singing during a social meeting, the company reach their plaids or handkerchiefs from one to another, and swaying them gently in their hands, from side to side, take part in the chorus as above. A large company thus connected, and see-sawing in regular time, has a curious effect; sometimes the bonnet is mutually grasped over the table. The low country manner is, to cross arms and shake each other's hands to the air of 'auld lang syne,' or any other popular and commemorative melody. *Fluir a bhata*, or, 'the Boatmen,' is sung in the above manner by the Highlanders with much effect. It is the song of a girl whose lover is at sea, whose safety she prays for, and whose return she anxiously expects. The greater proportion of Gaelic songs, whether sung in the person of males or females, celebrate the valour and heroism, or other manly qualifications, of the clans."†

Connected with the Gaelic music, the musical instruments of the Celts remain to be noticed; but we shall confine our observations to the harp and to the bag-pipe, the latter of which has long since superseded the former in the Highlands. The harp is the most noted instrument of antiquity, and was in use among many nations. The royal household always included a harper, who bore a distinguished rank. Even kings did not disdain to relieve the cares of royalty by touching the strings of the harp; and we are told by Major, that James I., who died in 1437, excelled the best harpers among the Irish, and the Scotch Highlanders. But harpers were not confined to the houses of kings, for every chief had his harper, as well as his bard. The precise period when the harp was superseded by the bag-pipe, it is not easy to ascertain. Roderick Morrison, usually called *Rory Dall*, or 'Rory the blind,' was one of the last native harpers. He was harper to the laird of *M'Leod*. But the last harper, as is commonly supposed, was *Murdoch M'Donald*, harper to *M'Lean* of *Coll*. He received instructions in playing from *Rory Dall*, in *Skye*, and afterwards in *Ireland*, and from accounts of payments made to him, by *M'Lean*, still extant, *Murdoch* seems to have continued in his family till the year 1734, when he appears to have gone to *Quinish*, in *Mull*, where he died.

The history of the bag-pipe is curious and interesting. Although a very ancient instrument it does

not appear to have been known to the Celtic nations. It was in use among the Trojans, Greeks, and Romans; but how or in what manner it came to be introduced into the Highlands, is a question which cannot be solved.‡ The effects of this national instrument in arousing the feelings of those who have, from infancy, been accustomed to its wild and warlike tones, are truly astonishing: "In halls of joy and in scenes of mourning it has prevailed; it has animated her (Scotland's) warriors in battle, and welcomed them back after their toils, to the homes of their love and the hills of their nativity. Its strains were the first sounded on the ears of infancy, and they are the last to be forgotten, in the wanderings of age. Even Highlanders will allow that it is not the gentlest of instruments; but when far from their mountain-homes, what sounds, however melodious, could thrill round their hearts like one burst of their own wild native pipe? The feelings which other instruments awaken, are general and undefined, because they talk alike to Frenchmen, Spaniards, Germans, and Highlanders, for they are common to all; but the bag-pipe is sacred to Scotland, and speaks a language which Scotsmen only feel. It talks to them of home and all the past, and brings before them, on the burning shores of India, the wild hills and oft frequented streams of Caledonia,—the friends that are thinking of them, and the sweethearts and wives that are weeping for them there. And need it be told here, to how many fields of danger and victory its proud strains have led! There is not a battle that is honourable to Britain in which its war-blast has not sounded. When every other instrument has been hushed by the confusion and carnage of the scene, it has been borne into the thick of battle, and, far in the advance, its bleeding but devoted bearer, sinking on the earth, has sounded at once encouragement to his countrymen and his own coronach."—Preface to *Macdonald's 'Ancient Martial Music of Scotland.'*

History has thrown little light on the state of learning in the Highlands during the Pictish and Scottish periods; but, judging from the well-attested celebrity of the college of *Icolm-kill*, which shed its rays of knowledge over the mountains and through the glens of Caledonia, we cannot doubt that learning did flourish in some degree among the Scots and Picts. See article *IONA*.

History resumed.—Manners and Customs.

At the time when the Romans invaded North Britain, the whole population of both ends of the island consisted of a Celtic race, the descendants of its original inhabitants. Shortly after the Roman abdication of North Britain, in the year 446, which was soon succeeded by the final departure of the Romans from the British shores, the Saxons, a people of Gothic origin, established themselves upon the Tweed, and afterwards extended their settlements to the frith of Forth and to the banks of the Solway and the Clyde. About the beginning of the

‡ Two suppositions have been started on this point: either that it was brought in by the Romans, or by the Northern nations. The latter conjecture appears to be the most probable, for we cannot possibly imagine, that if the bag-pipe had been introduced so early as the Roman epoch, no notice should have been taken of that instrument by the more early annalists and poets. But if the bag-pipe was an imported instrument, how does it happen that the great Highland pipe is peculiar to the Highlands, and is perhaps the only national instrument in Europe? If it was introduced by the Romans, or by the people of Scandinavia, how has it happened that no traces of that instrument, in its present shape, are to be found anywhere except in the Highlands? There is, indeed, some plausibility in these interrogatories, but they are easily answered by supposing, what is very probable, that the great bag-pipe, in its present form, is the work of modern improvement, and that, originally, the instrument was much the same as is still seen in Belgium and Italy.

* Logan, II. 252-3.

† Ibid. II. 255.

6th century the DALRIADS [see that article] landed in Kintyre and Argyle from the opposite coast of Ireland, and colonized these districts, from whence, in the course of little more than two centuries, they overspread the Highlands and Western islands, which their descendants have, ever since, continued to possess. Towards the end of the 8th century, a fresh colony of Scots from Ireland settled in Galloway among the Britons and Saxons, and having overspread the whole of that country, were afterwards joined by detachments of the Scots of Kintyre and Argyle, in connexion with whom they peopled that peninsula: see article SCOTS. Besides these three races, who made permanent settlements in Scotland, the Scandinavians colonized the Orkney and Shetland islands, and also established themselves on the coasts of Caithness and Sutherland. But notwithstanding these early settlements of the Gothic race, the era of the Saxon colonization of the Lowlands of Scotland is, with more propriety, placed in the reign of Malcolm Canmore, who, by his marriage with a Saxon princess, and the protection he gave to the Anglo-Saxon fugitives who sought for an asylum in his dominions from the persecutions of William the Conqueror, and his Normans, [see article DUNFERMLINE,] laid the foundations of those great changes which took place in the reigns of his successors. Malcolm Canmore had, before his accession to the throne, resided for some time in England as a fugitive, under the protection of Edward the Confessor, where he acquired a knowledge of the Saxon language, which language, after his marriage with the princess Margaret, became that of the Scottish court. This circumstance made that language fashionable among the Scottish nobility, in consequence of which and of the Anglo-Saxon colonization under David I., the Gaelic language was altogether superseded in the Lowlands of Scotland in little more than two centuries after the death of Malcolm. A topographical line of demarcation was then fixed as the boundary between the two languages, which has ever since been kept up, and presents one of the most singular phenomena ever observed in the history of philology. The change of the seat of government by Kenneth on ascending the Pictish throne, from Inverlochay, the capital of the Scots, to Abernethy, also followed by the removal of the marble chair, the emblem of sovereignty, from Dunstaffnage to Scone, appears to have occasioned no detriment to the Gaelic population of the Highlands; but when Malcolm Canmore transferred his court, about the year 1066, to Dunfermline, which also became, in place of Iona, the sepulchre of the Scottish kings, the rays of Royal bounty, which had hitherto diffused its protecting and benign influence over the inhabitants of the Highlands, were withdrawn, and left them a prey to anarchy and poverty. "The people," says General David Stewart, "now beyond the reach of the laws, became turbulent and fierce, revenging in person those wrongs for which the administrators of the laws were too distant and too feeble to afford redress. Thence arose the institution of chiefs, who naturally became the judges and arbiters in the quarrels of their clansmen and followers, and who were surrounded by men devoted to the defence of their rights, their property, and their power; and accordingly the chiefs established within their own territories a jurisdiction almost wholly independent of their liege lord." The connexion which Malcolm and his successors maintained with England, estranged still farther the Highlanders from the dominion of the sovereign and the laws; and their history, after the Gaelic population of the Lowlands had merged into and adopted the language of the Anglo-Saxons, presents, with the exception

of the wars between rival clans, nothing remarkable till their first appearance on the military theatre of our national history in the campaigns of Montrose, Dundee, and others.

The earliest recorded history of the Highlanders presents us with a bold and hardy race of men, filled with a romantic attachment to their native mountains and glens, cherishing an exalted spirit of independence, and firmly bound together in septs or clans by the ties of kindred. Having little intercourse with the rest of the world, and pent up for many centuries within the Grampian range, the Highlanders acquired a peculiar character, and retained or adopted habits and manners differing widely from those of their Lowland neighbours. "The ideas and employments, which their seclusion from the world rendered habitual,—the familiar contemplation of the most sublime objects of nature,—the habit of concentrating their affections within the narrow precincts of their own glens, or the limited circle of their own kinsmen,—and the necessity of union and self-dependence in all difficulties and dangers, combined to form a peculiar and original character. A certain romantic sentiment, the offspring of deep and cherished feeling, strong attachment to their country and kindred, and a consequent disdain of submission to strangers, formed the character of independence; while an habitual contempt of danger was nourished by their solitary musings, of which the honour of their clan, and a long descent from brave and warlike ancestors, formed the frequent theme. Thus, their exercises, their amusements, their modes of subsistence, their motives of action, their prejudices and their superstitions, became characteristic, permanent, and peculiar. Firmness and decision, fertility in resources, ardour in friendship, and a generous enthusiasm, were the result of such a situation, such modes of life, and such habits of thought. Feeling themselves separated by Nature from the rest of mankind, and distinguished by their language, their habits, their manners, and their dress, they considered themselves the original possessors of the country, and regarded the Saxons of the Lowlands as strangers and intruders."

Like their Celtic ancestors, the Highlanders were tall, robust, and well-formed. Early marriages were unknown among them, and it was rare for a female who was of a puny stature and delicate constitution to be honoured with a husband. As a proof of the indifference of the Highlanders to cold, reference has often been made to their sleeping in the open air during the severity of winter. Birt, who resided among them and wrote in the year 1725, relates that he has seen the places which they occupied, and which were known by being free from the snow that deeply covered the ground, except where the heat of their bodies had melted it. The same writer represents a chief as giving offence to his clan by his degeneracy in forming the snow into a pillow before he lay down! "The Highlanders were so accustomed to sleep in the open air, that the want of shelter was of little consequence to them. It was usual before they lay down, to dip their plaids in water, by which the cloth was less pervious to the wind, and the heat of their bodies produced a warmth, which the woolen, if dry, could not afford. An old man informed me, that a favourite place of repose was under a cover of thick over-hanging heath. The Highlanders, in 1745, could scarcely be prevailed on to use tents. It is not long since those who frequented Lawrence fair, St. Sair's, and other markets in the Garioch of Aberdeenshire, gave up the practice of sleeping in the open fields. The horses being, on these occasions, left to shift for themselves, the inhabitants no longer have their crop spoiled, by their

'upthrough neighbours,' with whom they had often bloody contentions, in consequence of these uncere-
monious visits."*

Dress.

Till of late years the general opinion was that the plaid, philebeg, and bonnet formed the ancient garb of the Highlanders; but some writers have maintained that the philebeg is of modern invention, and that the truis, which consisted of breeches and stockings in one piece, and made to fit close to the limbs, was the old costume. Pinkerton says, that the kilt "is not ancient, but singular, and adapted to their"—the Highlanders—"savage life,—was always unknown among the Welsh and Irish, and that it was a dress of the Saxons, who could not afford breeches."† We like an ingenious argument even from the pen of this vituperative writer, with all his anti-Gaelic prejudices, and have often admired his tact in managing it; but after he had admitted that "breeches were unknown to the Celts, from the beginning to this day,"‡ it was carrying conjecture too far to attribute the introduction of the philebeg to the Saxons, who were never able to introduce any of their customs into the Highlands; and of all changes in the dress of a people, we think the substitution of the kilt for the truis the most improbable. That the truis are very ancient in the Highlands is probable, but they were chiefly confined to the higher classes, who always used them when travelling on horseback. Beague, a Frenchman, who wrote a history of the campaigns in Scotland in 1546, printed in Paris in 1556, states that, at the siege of Haddington, in 1594, "they (the Scottish army) were followed by the Highlanders, and these last go almost naked; they have painted waistcoats, and a sort of woollen covering, variously coloured." The style of dress is alluded to by our older historians, by Major, Bishop Lesly, and Buchanan. Lindsay of Pitscottie also thus notices it:—"The other pairt northerne ar full of mountaines, and very rud and homelie kynd of people doeth inhabite, which is called the Reid Schankes, or wyld Scottis. They be clothed with ane mantle, with ane schirt, fashioned after the Irish manner, going bair legged to the knie."§ Another who wrote before the year 1597, observes that, in his time, "they"—the Highlanders—"delight much in marbled cloths, especially that have long stripes of sundry colours; they love chiefly purple and blue; their predecessors used short mantles, or plaids of divers colours, sundrie ways divided, and among some the same custom is observed to this day; but, for the most part now, they are brown, most near to the colour of the hadder, to the effect when they lye among the hadders, the bright colour of their plaids shall not bewray them, with the which, rather coloured than clad, they suffer the most cruel tempests that blow in the open fields, in such sort, that in a night of snow they sleep sound."||

We shall now give a description of the different parts of the Highland costume:—

The *Breacan-feile*, literally, 'the Chequered covering,' is the original garb of the Highlanders, and forms the chief part of the costume; but it is now almost laid aside in its simple form. It consisted of a plain piece of tartan from four to six yards in length, and two yards broad. The plaid was adjusted with great nicety, and made to surround the waist in

great plaits or folds, and was firmly bound round the loins with a leathern belt, in such a manner that the lower side fell down to the middle of the knee-joint, and then, while there were the foldings behind, the cloth was double before. The upper part was then fastened on the left shoulder with a large brooch or pin, so as to display to the most advantage the tastefulness of the arrangement, the two ends being sometimes suffered to hang down; but that on the right side, which was necessarily the longest, was more usually tucked under the belt. In battle, in travelling, and on other occasions, this added much to the commodiousness and grace of the costume. By this arrangement, the right arm of the wearer was left uncovered and at full liberty; but in wet or very cold weather the plaid was thrown loose, by which both body and shoulders were covered. To give free exercise for both arms in case of need, the plaid was fastened across the breast by a large silver bodkin, or circular brooch, often enriched with precious stones, or imitations of them, having mottoes engraved, consisting of allegorical and figurative sentences.* Although the belted plaid was peculiar to the Highlanders, it came gradually to be worn by some of the inhabitants of the Lowland districts adjoining the Highlands; but it was discontinued about the end of the last century.

As the Breacan was without pockets, a purse, called *sporan* by the Highlanders, was fastened or tied in front, which was very serviceable. This purse was made of goats' or badgers' skin, and sometimes of leather, and was neither so large nor so gaudy as that now in use. People of rank or condition ornamented their purses sometime with a silver mouthpiece, and fixed the tassels and other appendages with silver fastenings; but in general the mouthpieces were of brass, and the cords employed were of leather neatly interwoven. The *sporan* was divided into several compartments. One of these was appropriated for holding a watch, another money, &c. The Highlanders even carried their shot in the *sporan* occasionally, but for this purpose they commonly carried a wallet at the right side, in which they also stowed when travelling, a quantity of meal and other provisions. This military knapsack was called *dorlach* by the Highlanders.

The use of stockings and shoes is comparatively of recent date in the Highlands. Originally they encased their feet in a piece of untanned hide, cut to the shape and size of the foot, and drawn close together with leather thongs, a practice which is observed by the descendants of the Scandinavian settlers in the Shetland islands even to the present day; but this mode of covering the feet was far from being general, as the greater part of the population went barefooted. Such was the state of the Highlanders who fought at Killcrankie; and Birt, who wrote upwards of a century ago, says that he visited a well-educated and polite laird, in the north, who wore neither shoes nor stockings, nor had any covering for his feet. A modern writer observes, that when the Highland regiments were embodied during the French and American wars, hundreds of the men were brought down without either stockings or shoes.

The stockings, which were originally of the same pattern with the plaid, were not knitted, but were cut out of the web, as is still done in the case of those worn by the common soldiers in the Highland regiments; but a great variety of fancy patterns are now in use. The garters were of rich colours, and broad, and were wrought in a small loom, which is now almost laid aside. Their texture was very close,

§ Chronicles of Scotland, lxiv.

|| Certayne Matters concerning Scotland, London, printed 1603.

which prevented them from wrinkling, and displayed the pattern to its full extent. On the occasion of an anniversary cavalcade, on Michaelmas-day, by the inhabitants of the island of North Uist, when persons of all ranks and of both sexes appeared on horseback, the women, in return for presents of knives and purses given them by the men, presented the latter "with a pair of fine garters of divers colours."

The bonnet, of which there were various patterns, completed the national garb, and those who could afford had also, as essential accompaniments, a dirk, with a knife and fork stuck in the side of the sheath, and sometimes a spoon, together with a pair of steel pistols.

The garb, however, differed materially in quality and in ornamental display, according to the rank or ability of the wearer. The short coat and waistcoat worn by the wealthy were adorned with silver buttons, tassels, embroidery, or lace, according to the taste or fashion of the times; and even "among the better and more provident of the lower ranks," as General Stewart remarks, silver buttons were frequently found, which had come down to them as an inheritance of long descent. The same author observes, that the reason for wearing these buttons, which were of a large size and of solid silver, was, that their value might defray the expense of a decent funeral in the event of the wearer falling in battle, or dying in a strange country and at a distance from his friends. The officers of Mackay's and Munroe's Highland regiments, who served under Gustavus Adolphus in the wars of 1626, and 1638, in addition to rich buttons, wore a gold chain round the neck, to secure the owner, in case of being wounded or taken prisoner, good treatment, or payment for future ransom.

Although shoe-buckles now form a part of the Highland costume, they were unknown in the Highlands one hundred and fifty years ago. The ancient Highlanders did not wear neckcloths. Among the different costumes with which we are acquainted, none can stand comparison with the Highland garb for gracefulness. The nice discernment and correct taste of Eustace preferred it to the formal and gorgeous drapery of the Asiatic costume. Its utility, now that such a complete change has been effected in the manners and condition of the people, may be questioned; but it must be admitted on all hands, that a more suitable dress for the times when it was used, could not have been invented.

The dress of the women seems to require some little notice. Till marriage, or till they arrived at a certain age, they went with the head bare, the hair being tied with bandages or some slight ornament, after which they wore a head-dress, called the *curch*, made of linen, which was tied under the chin; but when a young woman lost her virtue and character she was obliged to wear a cap, and never afterwards to appear bare-headed. Martin's observations on the dress of the females of the Western islands, may be taken as giving a pretty correct idea of that worn by those of the Highlands. "The women wore sleeves of scarlet cloth, closed at the end as men's vests, with gold lace round them, having plate buttons set with fine stones. The head-dress was a fine kerchief of linen, strait about the head. The plaid was tied before on the breast, with a buckle of silver or brass, according to the quality of the person. I have seen some of the former of one hundred merks value; the whole curiously engraved with various animals. There was a lesser buckle which was worn in the middle of the larger. It had in the centre a large piece of crystal, or some finer stone, of a lesser size."

The plaid, which, with the exception of a few stripes of red, black, or blue, was white, reached from the neck almost to the feet; it was plaited, and was tied round the waist by a belt of leather, studded with small pieces of silver.

Superstitions.

The Highlanders, in common with most other nations, were much addicted to superstition. The peculiar aspect of their country, in which nature appears in its wildest and most romantic features, exhibiting at a glance sharp and rugged mountains, with dreary wastes—wide-stretched lakes, and rapid torrents, over which the thunders and lightnings, and tempests, and rains, of heaven, exhaust their terrific rage, wrought upon the creative powers of the imagination, and from these appearances, the Highlanders "were naturally led to ascribe every disaster to the influence of superior powers, in whose character the predominating feature necessarily was malignity towards the human race."† The most dangerous and most malignant creature was the *kelpie*, or water-horse, which was supposed to allure women and children to his subaqueous haunts, and there devour them. Sometimes he would swell the lake or torrent beyond its usual limits, and overwhelm the unguarded traveller in the flood. The shepherd, as he sat upon the brow of a rock in a summer's evening, often fancied he saw this animal dashing along the surface of the lake, or browsing on the pasture-ground upon its verge. The *urisks*, who were supposed to be of a condition somewhat intermediate between that of mortal men and spirits, "were a sort of lubberly supernaturals, who, like the *brownies* of England, could be gained over by kind attentions to perform the drudgery of the farm; and it was believed that many families in the Highlands had one of the order attached to it."‡ The *urisks* were supposed to live dispersed over the Highlands, each having his own wild recess; but they were said to hold stated assemblies in the celebrated cave called Coire-nan-Uriskin, situated near the base of Ben-Venue, in Aberfoyle, on its northern shoulder. It overhangs Loch-Katrine "in solemn grandeur," and is beautifully and faithfully described by Sir Walter Scott.§

The *urisks*, though generally inclined to mischief,

† Graham's Sketches of Perthshire.

‡ Ibid.

§ "It was a wild and strange retreat,
As e'er was trod by outlaw's feet,
The dell, upon the mountain's crest,
Yawned like a gash on warrior's breast;
Its trench had staid full many a rock,
Hurl'd by primeval earthquake shock
From Ben-Venue's grey summit wild,
And here, in random ruin piled,
They frowned incumbent o'er the spot,
And formed the rugged sylvan grot,
The oak and birch, with mingled shade,
At noontide there a twilight made,
Unless where short and sudden shone
From struggling beam on cliff or stone,
With such a glimpse as prophet's eye
Gains on thy depth, Futurity
No murmur waked the solemn still,
Save tinkling of a fountain rill;
But when the wind chafed with the lake
A sullen sound would upward break,
With dashing hollow voice, that spoke
The incessant war of wave and rock.
Suspended cliffs, with hideous sway,
Seem'd nodding o'er the cavern grey.
From such a den the wolf had sprung,
In such a wild cat leaves her young;
Yet Douglas and his daughter fair
Sought for a space their safety there.
Grey Superstition's whisper dread,
Debarred the spot to vulgar tread;
For there, she said, did fays resort,
And satyrs hold their sylvan murt,
By moon-light tread their mystic maze,
And blast the rash beholder's gaze."

Lady of the Lake, c. iii. s. 28.

* Martin's Western Islands, 2d Edit. p. 80.

were supposed to relax in this propensity, if kindly treated by the families which they haunted. They were even serviceable in some instances, and in this point of view were often considered an acquisition. Each family regularly set down a bowl of cream for its urisk, and even clothes were sometimes added. The urisk resented any omission or want of attention on the part of the family; and tradition says, that the urisk of Glaschoil—a small farm about a mile to the west of Ben-Venue—having been disappointed one night of his bowl of cream, after performing the task allotted him, took his departure about day-break, uttering a horrible shriek, and never again returned.—The *Daoine Shith*, or *Shi*, ‘men of peace,’ or as they are sometimes called, *Daoine matha*, ‘good men,’ come next to be noticed. Dr. P. Graham considers the part of the popular superstitions of the Highlands which relates to these imaginary persons, and which is to this day retained, as he observes, in some degree of purity, as “the most beautiful and perfect branch of Highland mythology.”—Although it has been generally supposed that the mythology of the *Daoine Shi* is the same as that respecting the fairies of England, as portrayed by Shakspeare, in the ‘*Midsummer Night’s Dream*,’ and perhaps, too, of the Orientals, they differ essentially in many important points. The *Daoine Shi*, or men of peace, who are the *fairies* of the Highlanders, “though not absolutely malevolent, are believed to be a peevish repining race of beings, who, possessing themselves but a scanty portion of happiness, are supposed to envy mankind their more complete and substantial enjoyments. They are supposed to enjoy, in their subterraneous recesses, a sort of shadowy happiness, a tinsel grandeur, which, however, they would willingly exchange for the more solid joys of mortals.” Green was the colour of the dress which these men of peace always wore, and they were supposed to take offence when any of the mortal race presumed to wear their favourite colour. The Highlanders ascribe the disastrous result of the battle of Killiecrankie to the circumstance of Viscount Dundee having been dressed in green on that ill-fated day. This colour is even yet considered ominous to those of his name who assume it. The abodes of the *Daoine Shi* are supposed to be below grassy eminences or knolls, where, during the night, they celebrate their festivities by the light of the moon, and dance to notes of the softest music. Tradition reports that they have often allured some of the human race into their subterraneous retreats, consisting of gorgeous apartments, and that they have been regaled with the most sumptuous banquets and delicious wines. Their females far exceed the daughters of men in beauty. If any mortal shall be tempted to partake of their repast, or join in their pleasures, he at once forfeits the society of his fellow-men, and is bound down irrevocably to the condition of a *Shi’ich*, or man of peace. The *Shi’ichs*, or men of peace, are supposed to have a design against new-born children, and women in childbed, whom, it is still universally believed, they sometimes carry off into their secret recesses. To prevent this abduction, women in childbed are closely watched, and are not left alone, even for a single moment, till the child is baptized, when the *Shi’ichs* are supposed to have no more power over them.*

* The fairies of Shetland appear to be bolder than the *Shi’ichs* of the Highlands, for they are believed to carry off young children even after baptism, taking care, however, to substitute a cabbage-stock, or something else in lieu, which is made to assume the appearance of the abstracted child. The unhappy mother must take as much care of this phantom as she did of her child, and on no account destroy it; otherwise, it is believed, the fairies will not restore her child to her. “This is not my bairn,” said a mother to a neighbour who was condol-

Weddings, &c.

Among the various modes of social intercourse which gladdened the minds and dissipated the worldly cares of the Highlanders, weddings bore a distinguished part, and they were longed for with a peculiar earnestness. Young and old, from the boy and girl of the age of ten to the hoary-headed sire and aged matron, attended them. The marriage invitations were given by the bride and bridegroom, in person, for some weeks previous, and included the respective friends of the betrothed parties living at the distance of many miles. When the bride and bridegroom had completed their rounds, the custom was for the matrons of the invited families to return the visit within a few days, carrying along with them large presents of hams, beef, cheese, butter, malt, spirits, and such other articles as they inclined or thought necessary for the approaching feast. To such an extent was this practice carried in some instances in the quantity presented, that, along with what the guests paid (as they commonly did) for their entertainment at the marriage, and the gifts presented on the day after the marriage, the young couple obtained a pretty fair competence, which warded off the shafts of poverty, and even made them comfortable in after-life. The joyous wedding-morning was ushered in by the notes of the bag-pipe. A party of pipers, followed by the bridegroom and a party of his friends, commenced at an early hour a round of morning calls to remind the guests of their engagements. These hastened to join the party, and before the circuit, which sometimes occupied several hours, had ended, some hundreds, perhaps, had joined the wedding standard before they reached the bridegroom’s house. The bride made a similar round among her friends. Separate dinners were provided; the bridegroom giving a dinner to his friends, and the bride to hers. The marriage ceremony was seldom performed till after dinner. The clergyman, sometimes, attended, but the parties preferred waiting on him, as the appearance of a large procession to his house gave additional importance and eclat to the ceremony of the day, which was further heightened by a constant firing by the young men, who supplied themselves with guns and pistols, and which firing was responded to by every hamlet as the party passed along; “so that, with streamers flying, pipers playing, the constant firing from all sides, and the shouts of the young men, the whole had the appearance of a military army passing, with all the noise of warfare, through a hostile country.” On the wedding-day, the bride and bridegroom avoided each other till they met before the clergyman. Many ceremonies were performed during the celebration of the marriage rites. These ceremonies were of an amusing and innocent description, and added much to the cheerfulness and happiness of the young people. One of these ceremonies consisted in untying all the bindings and strings about the person of the bridegroom, to denote, that nothing was to be bound on the marriage-day but the one indissoluble knot which death only can dissolve. The bride was exempted from this operation from a delicacy of feeling towards her sex, and from a supposition that she was so pure that infidelity on her part could not be contemplated.

The attachment of the Highlanders to their offspring and the veneration and filial piety which a reciprocal feeling produced on the part of their children, were leading characteristics in the Highland character, and much as these mountaineers have dealing with her on the wasted appearance of her infant, then sitting on her knee,—“this is not my bairn—may the d—l rest where my bairn now is!”

generated in some of the other virtues, these affections still remain almost unimpaired. Children seldom desert their parents in their old age, and when forced to earn a subsistence from home, they always consider themselves bound to share with their parents whatever they can save from their wages. But the parents are never left alone, as one of the family, by turns, remains at home for the purpose of taking care of them in terms of an arrangement. "The sense of duty is not extinguished by absence from the mountains. It accompanies the Highland soldier amid the dissipations of a mode of life to which he has not been accustomed. It prompts him to save a portion of his pay, to enable him to assist his parents, and also to work when he has an opportunity, that he may increase their allowance, at once preserving himself from idle habits, and contributing to the comfort and happiness of those who gave him birth. I have been a frequent witness of these offerings of filial bounty, and the channel through which they were communicated, and I have generally found that a threat of informing their parents of misconduct, has operated as a sufficient check on young soldiers, who always received the intimation with a sort of horror. They knew that the report would not only grieve their relations, but act as a sentence of banishment against themselves, as they could not return home with a bad or blemished character. Generals M'Kenzie, Fraser, and M'Kenzie of Suddie, who successively commanded the 78th Highlanders, seldom had occasion to resort to any other punishment than threats of this kind, for several years after the embodying of that regiment."

The Highlanders, like the inhabitants of other romantic and mountainous regions, always retain an enthusiastic attachment to their country, which neither distance of place nor length of time can efface. This strong feeling has, we think, been attributed erroneously to the powerful and lasting effect which the external objects of nature, seen in their wildest and most fantastic forms and features, are calculated to impress upon the imagination. No doubt the remembrance of these objects might contribute to endear the scenes of youth to the patriotic Highlander when far removed from his native glens; but it was the recollection of home,—sweet home!—of the domestic circle, and of the many pleasing associations which arise from the contemplation of the days of other years, when mirth and innocence held mutual dalliance, that chiefly impelled him to sigh for the land of his fathers. Mankind have naturally an affection for the country of their birth, and this affection is felt more or less according to the degree of social or commercial intercourse which exists among nations. Confined, like the Swiss, for many ages within their natural boundaries, and having little or no intercourse with the rest of the world, the Highlanders formed those strong local attachments for which they were long remarkably distinguished; but which are now being gradually obliterated by the mighty changes rapidly taking place in the state of society.

Progress of Civilization.

The transition of the Highlanders, from their ancient, moral, and social condition, to a state of enlightenment and of begun community of character and interests with the inhabitants of the Lowlands, did not commence till the 18th century. None of the many attempts which successive kings and governments had made to break down their peculiar frame-work, or divest them of the wild power which they riotously sported within the mountain-walls of

their fortress-like country, or tame them into the spirit and observances of a people living as one family and acknowledging the sway of one ruling power had, up to the year 1715, been, even in a slight degree, permanently successful. Even the disarming act which followed the rebellion of that year, had little other effect than to strip the few clans who were favourable to government, of their means of rendering it service, and place them bleedingly at the mercy of the exulting majority who brandished defiance at the magniloquent but pithless attempt to seize their claymores and their dirks. Cromwell, indeed, tamed, for a time, their martial ferocity, and taught them to feel the presence of a master by the severe rigour of his martial proceedings, and even threw a ray of enlightenment over the minds, and conferred lasting benefits on the town of Inverness, by promulgating a knowledge of those arts which deeply affect for good a people's social well-being. A revival of his policy, too, in the constructing of forts at intervals over the country, and in the posting within them of strong garrisons to overawe the clans, achieved, in a small degree, during the first half of the 18th century, that silent though sullen respect for the power of government which the results of the disarming act were fitted only to turn into derision. Still, till influences of a moral kind, or higher influences than appeals to their fear, and attempted abridgments of their physical power, could be made to bear upon them, the Highlanders remained among their mountain-fastnesses very nearly the same in character as their ancestors had been for ages. The breaking up of the patriarchal or clan-system by vigorous acts of the legislative and the executive,—the opening up of the country by facilities of communication,—the formation of societies, and the conducting of enterprises to engage it in productive industry,—and the invigoration and extension of its scanty appliances of education and religious instruction,—are the grand means which have effected a change, both as to themselves and as to their results; and they shall now be rapidly detailed, not jointly, nor in the order of the dates of their origin, but separately, and in such order as seems to give most promise of clearness of illustration.

Two years after the quelling of the last rebellion, or in 1748, two acts were passed, and an old one revived, with a view of entirely destroying the clan-system of the Highlanders. One of the new acts abolished hereditary jurisdictions, and was designed to cut asunder the bands of power on the one side, and of feudal servitude on the other, which united the chieftain and his followers; and the other proscribed the use of the Highland dress, and was intended to desecrate those ancient recollections, and fling into oblivion those cherished feelings of clansmanship and predatory mountaineer habits, with which the very sight of the kilt and the philabeg were associated. The revived act was that which hitherto had been so feebly, or rather mischievously exhibited, in *terrorem*, for disarming the Highlanders; and it was now backed with precaution, and carried into execution with a vigour which promised speedily to sweep the mountains of their tools of defiance and rebellion. So energetically did the acts invade and overrun the Highlands, that the system with which they made war took instantly and precipitantly to flight, and made not a stand and attempted not a rally for existence. The Highland peasantry were now made masters of their own actions, but, at the same time, were suddenly driven away from all the modes of life in which they had been used to employ their energies; they were freed, not only from the domination, but also from the guidance of superiors to whom they had been habituated to look for both

the regulation of their conduct, and the supply of their physical wants; they were disencumbered of at once the tools and the plunder of petty war,—the servitudes and the rewards of watching the will and following the motions of their chieftains; they acquired the liberty of roaming the world, or, in any form, attempting honourable adventure, but lost the security of a home and of employment suited to their predilections by attachment to specific localities of soil; and—altogether at the mercy of whatever new character their quondam chieftains might assume, if they remained on their native grounds, or unpiloted by knowledge of the world, and unaided by habits of civilized industry if they moved abroad—they went off, in their new career, like greyhounds in the slip, uncertain whither the chase might lead, and ignorant whether they might pant in disappointment, or give voice in the exultancy of success at its close. In numerous instances the chieftains—now converted into plain landed proprietors—came down with true dignity of character from their barbarous grandeur amid the heath of the mountains to the morally great position of cultivators of the soil and encouragers of an industrious tenantry in the valley; and, combining enlightened regard for their own respectability and income, with patriotic concern for the welfare of their quondam clansmen, so apportioned their estates into farms, and constructed a machinery for giving general employment in the cultivation of the soil or the rearing of stock, as speedily to weave between themselves and their people a bond of connexion quite akin to that which unites encouraging landlord and industrious farmer in the Lowlands, and unspeakably more conducive to the happiness of both, while a thousand times worthier of admiration, than the bond of feudalism which had just been burst. In all such instances, the transition, aided by the appliances which we have yet to explain, was rapid, on the part of both proprietor and tenant, from the character of useless or mischievous romance which had formerly distinguished them, to the quiet and common-place but comfortable and praiseworthy character of peaceful patrons and labourers of agricultural and pastoral life. While the landholders became honourably richer than before, and moved in contact with the amenities of polished society, and imbibed a taste for the refinements of art and of mental cultivation, the tenants speedily acquired both taste for humble luxuries, and a power to procure the means of its gratification, and, before the lapse of many years, exchanged the swinish hovel for the snug cottage, an adherence to uniformity of dress for a fondness to import and imitate recent fashions, and a recklessness and ignorance of the methods of cookery for a considerable appreciation of the delicacies of food. Estates which were laid out at the disruption of the feudal system for the joint welfare of proprietor and inhabitants, in fact exhibit at the present day such close resemblance to the majority of estates in the Lowlands, that, but for their mountain-aspect, and the prevalence of the Gaelic language, and the remains of a strong dash of ancient superstitions, they might be pronounced to have not a physical or a moral feature of difference. Additional to the lairds and the farmers, young gentlemen of family displayed the phases of a beneficial change. Deprived of the wild and turbulent resources in which they might once have hoped to luxuriate among the mountains, and invited away to the trial of new modes of life abroad, they entered and soon loved liberal professions, or became servants of their country in her army or navy, and speedily acquired a greatly more relished enjoyment in systematically expending their energies as aspiring members of one

great commonwealth, than they could have done in lavishing them upon the limited and doubtful interests of a Highland clan.

But while the estates to which we have been referring careered onward to prosperity, a very large portion of the Highland territory became the scene of accumulated disasters upon the people, and, in the first instance, was reclaimed from the evils of feudalism only to originate miseries and occasion deprivation of morals, different in kind from those of the Middle ages, but scarcely inferior in degree. Many landlords—perhaps very considerably the majority—seemed so to recoil from the fall of their feudal grandeur as to earth themselves in the deepest sordidness of spirit, or to seek an amends for the power of despotism which they had lost, in the rigorous and inglorious domineerings of a hard taskmaster. Dissevered from their people as to bonds which enslaved their wills and dictated their services, and disdaining to seek enrichment from their estates by the slow and systematic and humble means of a minutely apportioned farming and pastoral tenantry, they spent not a thought on the destinies of their quondam clansmen, or unceremoniously consigned them to adventure in the countries beyond the mountains, and rented out to one grasping and monopolizing tacksman—who was high-sounding in pretensions, and who promised to make golden returns to his landlord without taxing his nobility with vulgar cares—a wide expanse of territory which ought to have been distributed among large numbers, or even several scores of farmers. Many valleys which formerly teemed with population, and glens once vocal with the wild notes of the pibroch, were, in consequence, abandoned to the solitary and silent wanderings of vast flocks of black cattle and sheep. Enormous numbers of the Highland peasantry now exchanged their once deep devotion to the protecting chieftain for towering scorn and hatred of the unbenignant and selfish landlord; and, spurning the country which they had fondly loved, but which seemed, in biting ingratitude, to fling them from its embrace, sought, on the far-away shores of a foreign land, a retreat where they might nurse their rage and toil for subsistence. Thousands after thousands crowded along in small bands to the seaports of Scotland, and thence sailed away to America; and, sending back accounts of the Canadian wilds which seemed fascinating to an outcast and half-begged Highlander, induced thousands upon thousands more of their countrymen to follow. Nor was the work of deportation limited to a few years immediately succeeding the imposition upon the Highlands of a strictly pastoral and agricultural character. Landlords who, at first, were measured and relenting in the expatriation of their people, and even some probably who, for a time, regarded the quondam clans as all entitled in justice to remain on the lands to which they had been feudally attached, gradually found profit or convenience in making large allotments of territory to tacksmen, and caused the great scene of depopulation at the commencement to be continually repeated with the efflux of years. So late as during the year 1835, no fewer than 3,522 Highlanders, parting with the whole of their little possessions in order to obtain sufficient passage-money, found their way from the ports of Campbeltown, Oban, and Tobermory alone, to the United States and the British colonies, besides great numbers—the quota probably from much the larger portion of the Highlands—who embarked at Greenock and Port-Glasgow. Other Highlanders, not few in number, were driven into demoralization of feeling of a kind quite unredeemed by any of the occasional dashes of nobleness which occasionally

fitted across the vices of the clansmen. Some, cooped up within spheres of action too limited to admit their earning a full sustenance, fell in debt to their superiors, or became partial paupers on their bounty, or contrived mean stratagems of petty-chicanery, and were speedily meshed in wretched habits of low cunning and duplicity; while others plunged into the keen and savage excitement of illicit distillation, and indolently stretching themselves at one time on the heath or in the cave to watch the progress of their occupation, or boldly executing, at another, daring or mendacious schemes to outwit the exciseman, became habituated to fraud and perjury. In consequence, however, of the reduction of the duties on spirits, and the numerous—the too numerous—establishment of legal distilleries, the practice of illicit distillation has, in some districts, wholly disappeared, and, on the whole, has, to a very great and desirable extent, been suppressed. Emigration, also,—if the Long-Island group of the Hebrides, which contributed its due proportion of emigrants, may, as a specimen, be viewed as an index of the whole—has, for several years past, been wholly at a stand. Along, also, with the suppression of illicit distillation, the prevalence of fearfully intemperate habits to which it seems to have given birth, or with which it was intimately associated, has been pent up within limits, and ceases to offer chase to the pursuing moralist over a measureless waste of mountain and flood. The miseries which threatened nearly to overwhelm large portions of the Highlands, therefore, may be regarded as now in a fair course of amelioration. Nor ought we much to regret in the long-run, that the sweep of improving influences comes over a scantier population than they must have encountered, had not emigration drained-off currents of the people to foreign shores. The Highlands, on principles of quiet industry, and modern refinement—unless by some magic manufactures could be introduced to their recesses—are utterly incompetent to maintain the same number of human beings, as on the happily exploded principles of contentment with a dog's food and a pig's lodging, and of predatory incursions into the neighbouring Lowlands. A distribution of the territory of estates which, on frequent and skilful experiment, is found to be most exuberant in produce, and is, consequently, best, not only for the landlord, for the aggregate interests of the national community comports ill with such over-minute allotments as would make farmers of all the successors of the clansmen who followed the chieftain to the foray. The breaking up of the feudal system, then, may have been none the less propitious in its eventual and abiding results, for its having, in the first instance, given birth to extensive disasters.

Roads, Canals, and Steam Navigation.

But the beneficial effects of obliging the Highland population to employ themselves chiefly as husbandmen and graziers could never, to any considerable degree, have been realized, had not the country been laid open by facilities of communication. The Highlands, in their original state, were almost utterly inaccessible from without, and were traversable, within their own limits, only by the lightfooted pedestrian, bearing no heavier a load than the accoutrements of war. During the rebellion of 1715, when the royal troops made a vain attempt to penetrate farther than Blair-Athol, Government began to see the necessity of cutting paths through the mountain fastnesses even as a measure of national police. In 1730, several great lines of road were commenced,—one from Luss, both by the head of Lochlomond and by Inverary, to Tyndrum,—another from Cal-

endar, near Stirling, to the same point,—another, in continuation of these, from Tyndrum, through Glencoe, to Fort-William, and thence along the great glen to Fort-George,—another from Cupar-Angus by Braemar to Fort-George,—and another from Crieff and from Dunkeld by Dalnacardoch and Dalwhinnie, to Fort-Augustus and Inverness. These principal roads, and various branch or connecting ones, eventually extended in aggregate length to about 800 miles, and were provided with upwards of 1,000 bridges; and they were constructed with various expeditiousness, the most important lines being completed within 6 or 8 years after the date of commencement, and those of secondary importance continuing to be in progress till near the close of the century. The workers employed on them were parties of soldiers, rewarded by additions to their military pay, directed by master-masons and overseers, and superintended by a functionary called the baggage-master and inspector-of-roads in North-Britain, who was responsible to the commander-in-chief of the forces in Scotland. The roads were formed and kept in repair by annual parliamentary grants of from £4,000 to £7,000, and, in some instances, were carried forward or ramified at the expense of proprietors through whose estates they passed. They were very far, however, from being a competent provision for the vast and impracticable region which they professed to have laid open. Soon ceasing to be required for military purposes, or for those of pouring in forces to overawe the disrupted clans, they offered, for the purposes of traffic, comparatively limited and imperfect facilities. They passed through the wildest and most mountainous districts; they drained the produce chiefly of territories so poor and so thinly inhabited as to be totally unable to bear the costs of keeping them in repair; and, while leaving many interior and richer districts not far from the Lowlands untraversed and quite untouched, they went no farther northward than the great Caledonian glen, and made no provision whatever for the counties of Caithness, Sutherland, Cromarty, and Ross, the greater part of Inverness-shire, and the vast region of the Western isles. Yet, just at the moment when they required to be vigorously extended, they lay in some risk of being utterly abandoned. Government, wearied with their annual drain on the public treasury, and doubtful of their practical utility, requested a statement of reasons from Sir Ralph Abercromby, the commander-in-chief, and Colonel Anstruther, the general inspector, why they should be continued. But both of these officers, as well as the Highland society, while admitting that the roads were, for the present, no longer requisite for their original objects, so convincingly showed the maintenance and the extension of them to be indispensable to the prevention of a revolt into barbarity and feudalism, or to the progression of the begun work of civilization and social improvement, that parliament, in 1802-3, passed an act for maintaining, at the public cost, the roads which had been made, for contributing one-half of the estimated expense of whatever additional roads and bridges might be desiderated, the other half to be paid by proprietors or counties, and for empowering commissioners to insure the efficient and economical performance of the works. The military roads now continued, for a time, to be kept in repair at the cost of from £4,000 to £7,000 a-year; but, the allowance for them from 1814 to 1819 becoming limited to £2,500 a-year, they fell, except on the two most important lines, into comparative neglect. Nor, in the new state of things, was their decline to be much regretted. Constructed on the old and very

absurd principle of moving, as nearly as possible, in a straight line, they were carried rapidly down into hollows, and driven stiffly up the face of acclivities, as if to exclude from the regions to which they led the way the luxury of a wheeled vehicle; and were, in all respects, strikingly inferior to the roads which might be expected, and which have actually been constructed, under the new act. The Highland counties, particularly those which continued still to be closed up, made prompt claims upon the offered contributions of parliament, by paying down their own moiety for lines of desiderated road. So rapidly were new roads formed—all on principles of expert engineering—that against the year 1820, they extended, in the aggregate, to 875 miles, provided with 1,117 bridges, and had occasioned a cost to parliament of £267,000, to the counties of £214,000, and to individual proprietors of estates £60,000,—in all £541,000. Since 1820, the military and the parliamentary roads have been strictly under one management, and are maintained in repair at the average cost of £10,000 a-year, £5,000 of which is contributed by parliament. In 1839, the total expenditure was £10,057; and the expenditure, deducting costs for casualties, was £8,534. For 8 or 9 years past—and with increasing frequency—the roads have begun to defray a portion of their own costs by bearing the imposition of tolls.

So great a social and moral revolution as the formation of the Highland roads has accomplished, cannot easily be conceived. During a considerable period after the military roads were completed, the region continued in nearly its original state of wildness and anarchy. Attempts to traverse the new tracks were made for many years, either simply on foot, or at best on garrons or little Highland ponies; they were, at first, totally, and, after a period, slowly and hesitatingly aided by the erection of inns; and, for some years succeeding the suppression of the last rebellion, they were rendered perilous by the truculency and ruffianism of gangs of the broken clans or dispersed rebels who haunted the mountain-passes for prey. In 1760, a post-chaise was seen for the first time in Inverness, and, for several years, continued to be the only four-wheeled carriage in the region. But even when vehicles of its class became somewhat known, they were hired with cautious timidity, and packed to suffocation by parties of travellers confederated to bear the heavy costs of hire, and, with not a few risks and adventures in the accidents of springs and harness, lumbered heavily along with their load, occupying eight days in moving from Inverness to Edinburgh. The mails to Inverness also—which were not established till after the Union, and which, for fifty years, were carried only once-a-week and by foot-runners—continued, to the end of the century, to have no more dignified a conveyance than either saddle-bags or single-seated cars. When the new road-act came into practice, however, the change which had so slowly advanced made rapid and large bounds in the onward movement. In 1806, the Caledonian coach began to run between Perth and Inverness, a distance of 115 miles; and performed the journey in two days; and, at the sole risk of one individual, maintained its precarious ground till, after a lapse of years, it provoked rivalry or imitation. In 1811, a coach, carrying the mail, was started between Inverness and Aberdeen. As the various parliamentary roads were opened, or the old military ones improved, coaching on other lines was commenced. In 1819, a mail coach, aided, in the first instance, by the counties and by large allowances for the mail, penetrated to the extreme north, connecting all the southern towns of the kingdom, with Tain, Wick, and Thurso. In 1827, the

number of public coaches converging to Inverness had multiplied to 7,—making 44 arrivals and the same number of departures weekly; 3 of the coaches running up from Aberdeen, 1 running up from Perth, 2 coming in from Tain, Cromarty, Invergordon, and Dingwall, and 1 coming in from Thurso and Wick. Nor have comparatively sequestered and very thinly peopled districts been eventually without the luxury of public coaching. One coach runs between Inverary and Oban; another through Glencroe between Tarbet on Lochlomond and the head of Loch-Fyne; another, between Kilmun to the ferry at Inverary; and another between Stirling and the Trosachs. Smaller public vehicles, carrying the mail and passengers, run also between Tongue and Thurso, and between Golspie and Assynt.—Inns—those momentous accommodations to travellers, and unerring indices to the true state of traffic in a country—began, soon after the commencement of the present century, to spring up in vast numbers, and generally of a quality to indicate a prodigious transition in the social circumstances of the region. In the south Highlands, in the Great glen, on the roads between Fort-William and Stirling and between Dingwall and Portree, and along the grand road from Perth to Thurso, they are, for the most part, commodious and comfortable, sometimes wearing a dash of low-country pretension or even metropolitan elegance, and rarely justifying any of the ideas of discomfort with which many frothy talkers still rashly associate the Highlands. Even on the least frequented roads, except in the north and west of Sutherlandshire, and some less considerable districts, accommodations occur at intervals of from 10 to 15 miles, which, merely claiming to be public-houses, present two-storied and slated exteriors, and floored and apartmented interiors, and display an array of comforts five centuries in advance of the best which Baile Nicol Jarvie, or any living original whom he represented, could find on the very frontiers and garden-ground of the Highlands.—Post-chaises and other travelling vehicles for hire, though not proportionate to the public coaches and the inns, exist in sufficient number to unite with them in the indication of social improvement. On the great road between Perth and Inverness, in many parts of the southern Highlands, at Inverary on the west, and at Tain, Dingwall, and other towns on the east, post-chaises, gigs, post-horses and riding-horses are maintained at the inns. In the south, the east, and the north, one-horse cars, or one-horse four-wheeled vehicles begin to be very generally introduced; and at Fort-William, Ballachulish, Oban, and other places in the west, carts with a swing-seat across the centre are let as a succedaneum for gigs.—Private carriages, from being altogether unknown previous to the road-making period, and exceedingly rare several years after the commencement of the present century, have become comparatively numerous. Even 13 years ago, 160 coaches and gigs might be seen in attendance on the Inverness yearly races; and then also, new ones were so numerously ordered, as to keep four coach-manufactories in Inverness in employment.—Regular carriers have, for a considerable period, been established on all the principal roads, carrying goods, at all seasons of the year, to the towns and to entirely landward districts, and contributing mightily to the demonstration of a vast and beneficial change in the frame-work of society.—Communication of intelligence by letters and newspapers, or the working of the post-office system, is the same on all the great lines of road as in the Lowlands, and penetrates the recesses of the country and the remote positions of the islands with a minuteness of ramification and a frequency and regu-

larity of despatch which seem, at first glance, utterly unattainable among the physical resistances of the region.—Altogether, the state of things which everywhere meets the eye along the public roads—especially when viewed in connexion with the aspect of husbandry, and the facilities for conveying produce and working the ground, which present themselves on the private side-roads—affords abundant demonstration that benign results have very extensively and rapidly achieved by unlocking the mountain-gates of the Highlanders, and paving pathways for them of trafficking intercommunication with their neighbours.

But a prodigious addition to what the roads have effected, is found in the results of cutting the CRINAN CANAL, and of constructing the magnificent work called the CALEDONIAN CANAL. [See these articles.] As regards also the whole coast-line of the continental Highlands, the whole length of the Great glen, and the entire extent of the Western islands, improvement has been achieved probably much more by the constructing and amending of harbours, introduction and exploits of steam-navigation, than in other districts by all sorts of wheeled conveyances along the roads. Parts adjacent to the Clyde, and to the principal ramifications of its estuary, and portions of the western coast and of the islands, have, with the simple appliance of steam-navigation, suddenly passed from a state of wildness and desolation to the possession of almost a suburban character. Large villages or little towns—as in the instances of Helensburgh, Dunoon, Campbelltown, Bowmore, and Oban—have either sprung up from the unoccupied soil, or arisen out of poor and inconsiderable hamlets; and traffic to an extent which, on a highway, would employ a regiment of carters, now flourishes and goes regularly forward in quarters where, in the early part of the present century, scarcely interchange of commodity existed, superior to the rude and trivial barter known to uncivilized tribes. Nor are the changes much or any less marked in the Caledonian glen, and especially on the east coast from the point whence the Highland frontier diverges into the interior to the Pentland frith. From the private resources of enterprising individuals and companies, and nearly to the same amount from the proceeds of estates forfeited at last rebellion, a sum total of £110,000 has been expended on harbours and piers. The consequent increase of traffic, not only by the new method of steam-navigation, but by the old one of sailing-vessels, has been proportionate to the gigantic movements of everything connected with Highland amelioration.

Highland Societies.

Certain patriotic institutions have operated powerfully to rouse the mind of the Highlander from its dormancy, and incite and direct him to avail himself of the advantages which were accumulating round his position. The Highland London society, established in 1778 by General Fraser of Lovat and other native Highlanders, the Highland Club of Scotland, the Celtic society, and the St. Fillan's Highland society, have probably worked with less beneficial results, by indulging a spirit of antiquarianism, and attempting to perpetuate attachment to Highland peculiarities, than if they had launched their whole influence to freight the population onward in strictly practical and modern improvement; yet they have laboured so to polish taste, to diffuse refinement, to obliterate the offensive features of the ancient character, and fix attention on those which fully comport with civilization, that they may be regarded as having, to some extent, assailed the foibles of the

Highlanders through the very avenue of their prejudices. The Highland Society of Scotland, on the other hand, has steadily directed its powerful energies to the promotion of the immediate and most tangible interests of the Highlands, and to the introduction, extension, and adaptation of whatever promises most efficiently to work out their temporal prosperity. This noble institution embodies the patronage and the skill of most of the nobility, landed gentry, and gentlemen-farmers, throughout the country, and of not a few distinguished men of science and of the learned professions. Surveying a width of range and a multiplicity of objects somewhat worthy of its wealth of intellect and its opulence of resources, it promotes the erection of towns and villages, the formation of roads and bridges, the experiments and enterprises of agriculture, the improving of farm-stock, the sheltering processes of planting, the extension of fisheries, the introduction of manufactures, the adaptation of machinery to the useful arts, the co-operation of local influence with public or legislative measures, the diffusion of practical knowledge, the progress of general industry, and the consolidating of the population of the Highlands and the Lowlands into one great fraternal community. The society awards large and numerous premiums to stimulate desiderated enterprises,—and in 1828, begun the publication of the Quarterly Journal of Agriculture, for prize essays, and the dissemination of the newest practical information; it patronizes great annual cattle-shows successively in different towns, and, by means of them, excites and directs a stirring and profitable spirit of emulation among graziers; and, in general, it keeps in play upon the community a variety of influences which, as far as regards mere earthly well-being, have singularly transformed and beautified its character.—The British Fishery society, established in 1780, though far from having accomplished what seemed easily within its reach, and feeble, or at least unsuccessful in movement upon the water compared with the Highland Society of Scotland upon the land, yet seems ordinary in importance only when the vastness of its scene of action is taken into view, and has worked out very considerable advantages to the population of the coasts and the islands. Several towns and fishing-villages, such as Tobermory, Ullapool, and Pulteney-town, near Wick, are indebted to it both for their origin, and for much of the prosperity which they, and the districts around them, enjoy or recently enjoyed.

The appearances of beneficial change, or rather of total revolution, everywhere meet the eye in the walks of agriculture. Previous to the era of improvement, the cultivation and management of the soil were little better than savage. Crops were raised either with or without manure, just as the commodity happened spontaneously to offer itself, or to lie at a slightly inconvenient distance; they were confined to detached and trivial patches of ground naturally fertile; they were wrung year after year, in increasingly scanty pittances, from its exhausted and disheartened bosom, till they could no longer compensate the cost of the effort, and were then forgotten during a period of the land's exhausted rest, and of slowly acquiring "heart" from the growth and decay upon it of spontaneous weeds and grasses; and, either when they succeeded, or when they failed, they merely whetted the appetite or mocked the cravings of misery,—the people, in the one case, acquiring no higher an indulgence than coarse oaten cakes and ale and whisky, and, in the other, subsisting themselves on broth of nettles, or the blood of living animals mixed with oatmeal, or whatever was digestible in the spontaneous produce

of the mountains. Cattle—the chief article of wealth, the main resource for subsistence, and the object of frequent forays and cause of continual intestine commotion—were so overstocked upon the natural pastures common to a tribe or clan, that they were annually starved in large numbers to death; and, in every position, they were jostled out of their rights by absurdly large establishments of horses, maintained nominally for the purposes of tillage and of carrying peats, but really, in a chief degree, for the pampering of laziness or the demonstrations of beggarly consequence. Farms were let on the monstrous principle of runrig to a whole community or township; they passed, in their various subdivisions, successively from hand to hand of the co-occupants; they were the temporary grounds, distinctively of no one, but diffusively of all; they sucked down the labours of the industrious and the skillful to compensate their master for the idleness of the besotted and the blundering; and—as if to amass every conceivable element of absurdity—they were held, with all their monstrous conditions, not of the proprietor, to whom the tenants owed prime service, but of a principal middleman, to whose underling authority they became doubly enslaved. The introduction of the potato, from the eagerness with which the exotic was adopted and the delight with which its easiness of cultivation was observed, might, in other circumstances, have worked a favourable change; but, for a considerable period, it only facilitated early marriages, and occasioned an increase of population, and, in years when the crop failed, made a distressing addition to the former aggregate amount of misery. Improvement on a great scale, or to an extent which marked either an era or a state of rapid progression, did not actually commence in the Highlands, till the formation of the parliamentary roads, or some years after the beginning of the present century. The substitution of carts for ponies, by the saving it caused of time and expense and labour, and the facility it afforded for carrying manure from a distance, gave a powerful impulse to sluggishness of movement. No sooner were the parliamentary roads opened than the people constructed small side-roads in every direction; and, finding how easily they could now bring fuel from their mosses, or seaweed from the shore, or loads of manurial substances from the storehouses of the mountains, felt joyously aroused from their slothful indolence to a state of industrious energy—vying with one another in the substitution of the neat and gardened cottage for the lumpish and squalid hovel, and, in the adoption of new and stirring doctrines which they found promulgated around them respecting the reclaiming of land and the improving of stock. The introduction of carts was so sudden, so general, and so wondrously inspiring as itself to have formed an era; and it immediately led to the introduction, or at least to the multiplication from a few units to hundreds and thousands of ploughs, iron-teethed harrows, and other implements of husbandry, which indicated both acquaintance with the best methods of working the soil, and determination to ply them. At the commencement of the century, stripes of land along the coast or on the frontier were almost the only scenes of cultivation; and even these continued to a great degree loaded with the absurdities of the ancient system, till the invasion of carts and ploughs effected a revolution. In Ross-shire, where a barley-mill was unknown till 1813, where the arable grounds were formerly detached patches, irregularly worked, and free from the arrangement of either field or ridge, many a single farm came, in the course of about twenty years, to produce as much as had formerly been extracted from the area

of the whole county; wheat alone came to be produced to 20,000 quarters a-year, and grain came to be raised not only for local consumption, and for supplies to Inverness, Dingwall, Tain, and other Highland localities, but for exportation, to the amount of 10,000 quarters a-year, to Leith and the great ports of England. Inverness-shire, though possessing a more limited field for agricultural operations than Ross-shire, was equal to it in the energy of improvements, and scarcely inferior to it in their extent. In Sutherlandshire, where so late as 1806 or 1807, the inhabitants retained nearly all their ancient uncultivated habits, living in the most miserable huts, and strangers to every species of comfort and industry, and where the lower grounds were almost wholly neglected and uninhabited, the liberal exertions of the Marquis of Stafford and other proprietors effected a revolution as complete as it was sudden. The population were drawn down from their wretched and useless position in the upper parts of the county, to crofts or small portions of ground marked out for them near the coast; and incited, by the erection for their use of comfortable cottages, and the location of their lands in the neighbourhood most prolific of advantage, and every encouragement of advice and motive, to ply the arts of husbandry productively for themselves and their country; the higher grounds, which they vacated, and which are as well-adapted for pasturage as they were ill-suited to be the sites of man's residence, were converted into extensive sheep and cattle farms; and, in less than twenty years from the first act of innovation, the whole county, as to its modes of tillage and the appearance of its farm-buildings, and all its agricultural properties and appliances, was in a condition to bear comparison with not a few districts of the long-favoured and happily-situated Lowlands. In Caithness, in spite of many of the lands being harassingly fettered by entails, and in spite of the stimulating advantage of roads having been of later attainment than in other districts, improvement displayed her trophies as exultingly as elsewhere, and was not a little aided in obtaining them by the ludicrous blunder so characteristic of a besottedly ignorant people, of the inhabitants who occupied the sea-board and naturally arable district, having driven the first and grand line of parliamentary road as far as possible from their dwellings, and procured it to be carried inland along the base of the mountains. The blunder—which, of course, was discovered immediately after the road was completed—led to the careful cultivation, both of every practicable corner of land below the road-line, and of every patch above it, on the face or among the interstices of the hills where the plough could gain admission; and it occasioned or aided the building of a village at Bonar bridge, the planting of a great tract of country by Messrs. Houston of Creich and Dempster of Skibo, the invasion of the mountain's side at Skibo to the amount of a whole farm, and the trenching of most of the arable part of the Creich estate, and the sheltering of all of it with the best enclosures. An instance of how much and rapidly the county improved is given in the fact, that, in the year 1826, one farmer exported grain, the produce of his own farm, to the value of not less than £2,000. Nor have the southern Highlands been behind the northern in the race of improvement, or unmindful of their greater advantageousness of position; and, but for the tedium of prolonging instances, they might be exhibited, county after county, in aspects of renovation which excite pleasure and almost provoke astonishment. "In my various journeys to the different parts of the country," says the superintendent of the parliamentary roads in 1826,

respecting the Highlands in general, "I notice improvements extending in every direction; and during my short recollection, a considerable extent of moorland, in various places, has been enclosed and converted into cultivated fields. It may also serve to show how systematic farming has become, that societies for the promotion of agriculture and the rearing of stock have been established in all the northern counties. Nor have plantations been behind in this general state of improvement. Many thousands of acres have, within the last 25 years, been planted; upon the Dunrobin estate alone, there have been planted, within the last 25 years, above 9,000,000 of trees; and although the climate is somewhat unfavourable for the growth of large trees, yet the attempts made promise to be attended with profit and advantage in many situations incapable of any other species of culture. The rapid improvements in agriculture have been accompanied with a corresponding change in the habitations of all ranks in the Highlands. Proprietors have expended large sums in the erection and ornamenting of suitable mansion-houses; and, in the houses of gentlemen-tacksmen, every species of comfort and convenience is to be found; while the cotters are gradually exchanging their huts of mud or turf for neat and substantial cottages." No surer criterion of the vast amount of agricultural improvement which has taken place can be found—even abating for the advantageous influence of the war-period upon landed property—than in the fact that the value of Highland estates has undergone a fourfold, a sixfold, and, in some instances, nearly a tenfold increase. The lands of Merkinch, in the vicinity of Inverness, rose in 25 years from a rental of between £70 and £80 to a rental of £600. The estate of Castlehill, belonging to the ancient family of the Cuthberts, was sold in 1779 for £8,000, and resold in lots in 1804 for between £60,000 and £70,000. The barony of Lennox was bought in 1787 for £2,500, and sold 25 years afterwards for £20,000. The property of Redcastle, in Ross, was sold, in 1790, after a sharp competition, for £25,000, and resold, in 1824, to Sir William Fetter, Bart., for £135,000. In Lord Reay's country, in Sutherland, property which formerly yielded a rental of £2,000 rose, in the course of a few years, to a rental of £15,000. The estates of Chisholm, in the romantic district of Strathglass, from being, in 1783, worth only £700 a-year, became, in 1826, worth upwards of £5,000. The lands of Glengary at the death of their proprietor, Duncan Macdonald, in 1788, yielded him not more than £800; and, in 1826, they yielded between £6,000 and £7,000.

Owing to the very great extent of surface which is available only as grazing-ground and sheep-walk, much of the attention which was anciently paid in an engrossing way to stock, required to be perpetuated and enlightened. Great effort and skill have been employed in improving the black cattle by diffusing over the region the best breeds of its choicest districts, and by importing cows from Ayrshire. The Highland cattle are small; but they furnish the shambles with beef of a peculiarly delicate quality; and are driven southward for sale to the number annually of about 20,000 from Inverness-shire, and about the same number from the other northern counties, and of a still larger number from the southern Highlands.—Besides due care being used, on account of the very fine flavour of its mutton, for the black-faced sheep which the commencement of the improving era found in possession of the sheep-walks, attention is universally given on account of the fineness of their wool and the largeness of their size, to imported cross-breeds, and especially

to the Cheviots. Caithness, in the face of agricultural distresses which were just beginning when the incitement of the parliament roads entered its limits, exported annually, for some years preceding 1826, 80,000 fleeces of wool and 20,000 Cheviot sheep. Sutherlandshire, for some time preceding 1834, furnished yearly about 180,000 fleeces, and 40,000 sheep. A report by a committee appointed, in 1832, to inquire into the state of traffic in sheep at Inverness, estimated the annual exportation of sheep from Inverness-shire to be 100,000, and that from all the other northern counties to be about the same number.—Considerable attention has been paid to the breed of horses, for the purposes both of tillage and of draught, and has even, in some instances, been successfully directed to the rearing of horses of the finest description. Highland ponies are small, but strong, hardy, and capable of enduring great fatigue; and are annually driven southward in large numbers for the uses of the Newcastle coal-mines, and for general disposal in the Lowland and the English markets. The larger breed of horses, when properly cared for, are stout, hardy, and serviceable beasts of draught, and, for the purposes of the saddle, as well as of the cart and the plough, are now very generally the offshoot of crossings with south-country horses.—Several valuable species of pigs, both pure and crosses, were introduced at an early period of the career of improvement; and though not a prime or a prominent object, have drawn considerable attention.—For the disposal of the stock of the Highlands, various trysts or markets are held in the interior, and along the southern borders of the region. To supersede the inconveniences of a scattered market, and of purchasers having sometimes to seek out their commodity at the homes and fanks of the farmers, a great annual sheep and wool market was established, in 1817, at Inverness; and here all the disposable fleeces and sheep in the north of Scotland, are usually sold or contracted for in the way of consignment.

The manufactures of the Highlands—excepting in the annual production of about 11,000 or 12,000 tons of kelp, about £200,000 worth of whisky, and an inconsiderable quantity of hempen cloth—are so trivial as to be seen or estimated only by a minute statist. In commerce, however, or in the exportation of the produce of the soil and of the seas, and in the importation of the conveniences and the luxuries of life, the region exhibits an increase of importance quite sufficient to demonstrate that a process of enrichment, or at least of growing prosperity, is going on throughout its territory. The state of traffic by navigation will be seen by reference to our articles CALEDONIAN CANAL, CRINAN CANAL, and those on the various ports; and that of the fisheries, by reference to the articles, WICK, ULLAPOOL, TOBERMORY, and STORNOWAY. The annual exportations from the whole of the Highlands and Western Islands, are estimated by the Messrs. Anderson, in their 'Guide to the Highlands,' at £1,100,000,—consisting of sheep and wool £250,000; black cattle £250,000; herrings £200,000; grain £100,000; whisky £200,000; salmon, kelp, wood, pork, &c. £100,000. Two remunerating productions of a kind not very likely to be generally adverted to, may be particularly specified,—timber and game. Highland timber consists principally of pine, or fir, and birch. The former, when raised from planting, is disposed of chiefly in the form of props for coal-mines; and the latter is sold as material for herring-barrels. Between 200 and 300 cargoes of props, logs, and deals, are annually shipped from the Moray frith. Game, though not strictly an article of exportation, draws profits to the country as directly as if it were.

Highland proprietors now so very generally let the right of sporting on their lands, that moors, varying in their accommodations and resources to suit the different classes of bidders in the market, may be rented at all prices from £50 to £500. Partridges and hares in the low grounds, the ptarmigan and the mountain hare in the lofty uplands, the stately red-deer in the sequestered wilds, the roe in the lower coverts, the heath-fowl as a substitute for the pheasant,—these, and grouse, woodcocks, snipes, wild-ducks, and other game, are what attract the sportsman, and bring rental to the proprietor. The wild eagle, which still occasionally gyrates round the bleak summits of the pinnacled mountains, and builds its eyry in cliffs which claim communion with the clouds, is too sublime an object to be thought of by those whose eyes are earthward even when they tread the outworks of nature, and may be profitably contemplated only or chiefly by those who desire to “mount up on wings as eagles” into an atmosphere purer and loftier than belongs to the every-day walks of life.

Education and Ecclesiastical Affairs.

We have chosen, for the sake of continuity of topic, to trace Highland improvement in temporal matters to its limits, without adverting to the religious and the educational influences which were at work to stimulate and direct ameliorating changes; but we should utterly fail to give a correct view of the region, and of the means of its amelioration, were we not to show in detail how powerfully and steadily these influences have been bearing upon its welfare. Had constructors of roads and harbours, members of civil government and secular societies, exerted a tenfold greater force than they have actually done upon the Highlands, they would probably have recoiled in astonishment from the futility of their efforts, had not the Bible and the Christian minister and the schoolmaster been abroad to mould the minds of the population into a coincidence with the object of their labours.

The Highlands and Western islands, after the extinction of Culdeeism and the full establishment of Popery, were distributed into the six dioceses of Dunkeld, Argyle, Moray, Ross, Caithness, and the Isles. The number of secular clergy, who officiated as parish-priests and as chaplains, though it cannot now be ascertained, seems to have corresponded, so far as the resources of the region would permit, with the sumptuousness and the earthly pomp of the Romish ritual. The monastic orders of all classes appear to have had only 18 establishments, 6 of which were in the Western islands. There seem to have been only 2 collegiate churches for regular canons, at Kilmun in Argyshire, and Tain in Ross-shire, besides the cathedrals or diocesan churches of Dunkeld, Fortrose, Elgin, Dornoch, and Lismore. On the abolition of Popery in 1560, the first draft of the constitution of the Reformed church, portioned the Highlands and Islands, including the Orkneys, into the three districts of Argyle, Ross, and Orkney, and assigned to them 3 of the 10 superintendents which it provided for the kingdom. But there followed struggles between Presbyterianism and Episcopacy, alternate ascendancies of the two systems, and shiftings of scene in the persons and character and creed of the officiating ministers, which operated with a most malign influence, and occasioned almost the whole region to send up rank and fetid crops of poisonous herbage from the manurings of Popery left upon its soil. In the earlier years succeeding the Reformation, the paucity of preachers which could be found for the whole kingdom, the obstacle of the Gaelic language, and the poverty, thinness of popu-

lation, and physical obstructions of the Highlands, prevented many parts of the region from becoming the scene of any pastoral ministrations, or even occasional religious services. So late as 1650, Lochaber, and some other equally important districts, remained untrodden by any Protestant pastor. Even localities which were earlier and somewhat regularly supplied, received, in many instances, no advantage in consequence of the ministers' ignorance of the popular language. The people were profoundly ignorant of the art of reading; and, even though the schoolmaster had gone amongst them, they possessed not a single copy of the scriptures by appeal to which they could have reaped benefit from his labours. Throughout the 17th century, Popery was allowed to riot nearly at will in the western Highlands, and in those of the Hebridean islands which belong to the counties of Ross and Inverness; and Episcopalianism, in the feeble and worthless form, or with the uninfluential and unenlightening appliances which characterized it in Scotland, maintained full possession of the south-east of Ross-shire, the shores of Loch-Linnhe, the districts of Strathnairn and Strathdearn, the vicinities of Inverness, Dunkeld, and Blair, and also exerted considerable dominion in Strathspey, Badenoch, and Morayshire. Presbyterianism, or the working department of the reformed community, even when in the ascendant, was met, therefore, with moral obstacles in the way of attempting to plant a regular ministry, quite as embarrassing as the physical resistance of mountain-barriers and intersecting arms of the sea. Yet, a century, all but 14 years, elapsed after the legal establishment of the Reformation, before the General Assembly seems to have made any very formal attempt either to exercise regular pastoral care over the Highlands, or to demonstrate a consciousness that the region was in existence. In 1646—reddening apparently with a sense of shame for former neglect, or with harassing apprehension as to the fate of the Reformation beyond the mountains—the Assembly at length resolved that a ministry be planted among the Highlands,—that ministers and exhorters who understood the Gaelic language, be sent to them,—that kirks be provided in them, as in the Lowlands,—and that, agreeably to act of parliament, schools be erected in all their parishes. But these resolutions were more easily made than attempted to be carried into execution. Back to the very year of their being adopted, indeed, the town records of Inverness bear evidence of salaries having been paid to schoolmasters of the burgh, and respectively, in 1662 and 1667, they prohibit all persons except the town-teachers, from giving lessons in reading or writing within the royalty, and enacted that “Mary Cowie shall not teach reading beyond the Proverbs;” and, in these particulars, they may possibly bear out an inference that, in a rudimental and crude form, the educational part of the Assembly's purpose was immediately executed in a few of the more populous localities. As to the strictly ecclesiastical part of it, however, few ministers could be found who understood Gaelic, and the few who did declined to accept, amongst a barbarous people, situations “so poor as not to afford bread.”

After the Revolution, in 1688, and the immediately subsequent settlement of the Established church upon its present basis, considerable solicitude was evinced to make more extensive religious and educational provision for the Highlands. Bodies of ministers and probationers were sent, in terms of successive acts of the General Assembly, to itinerate in the unprovided districts, and were supported, while on their missionary tours, by grants from the vacant stipends. All licentiates who understood the

Gaelic language, if on the list of probationers, were prohibited from accepting settlements in the Lowlands; and, if already in possession of an incumbency, were obliged, in the event of receiving calls from Highland parishes, to accept them. Commissions having, in 1617, and at subsequent dates, been appointed by parliament to plant kirks, modify stipends, and remodel parishes, and all their powers becoming, in 1707, vested in the court of session, committees were now nominated to visit parishes which had been civilly settled, with a view to the erection of churches and schools. In 1701, an association was formed called "The Society in Scotland for propagating Christian Knowledge" for "the increase of piety and virtue within Scotland, especially in the Highlands, Islands, and remote corners thereof;" and, after acquiring pecuniary strength and royal patronage, and a charter of incorporation, commenced, in 1712, a series of enterprises which gradually increased in extent, and afforded no mean aid in the departments at once of the missionary, the schoolmaster, and the religious publisher. In 1705, a grant was made by Queen Anne, from proceeds of the quondam bishopric of Argyle, of sums, whose annual interest, in 1838, amounted to £142 15s. 7d., to be expended by the synod of Argyle in supporting preachers, catechists, and schoolmasters. In 1725—in response to an application exhibiting the moral destitution of a people separated into thin and detached clusters by arms of the sea, impetuous torrents, lofty mountains, and extensive moors—£1,000 of annual royal bounty, increased at a later period to £2,000, was placed at the disposal of the General Assembly, and was immediately devoted to the support of 20 preachers and 20 catechists appointed to the most destitute districts. About this period, the Established church—somewhat aided probably, though in an incidental way, by the routings of Popish priests, and of Jacobitical Episcopalian ministers, which followed the rebellion of 1715—had considerably struck its roots into the thin soil of the Highlands, and begun to spread over them a numerous though stunted ramification of presbyteries and kirk-sessions. In 1724, the presbyteries of Lochcarron, Abertarff, and Skye were erected, and, along with the previously formed presbytery of the Long Island, constituted into the synod of Glenelg. In 1726, the presbytery of Tongue was established; in 1729, those of Mull and of Lorn were formed; and in 1742, that of the Long-Island was divided into the two presbyteries of Lewis and Uist.

While the Highlands were thus becoming better provided with pastoral superintendence, they experienced the exertion and the increase upon them of the influence of the schoolmaster and the press. In 1616, an act of the privy council, which had for its avowed object the promotion of "civilitie, godliness, knowledge, and learning," originated the system of parochial education; and, in 1633, the act was incorporated with the laws of the country. In 1646, the General Assembly—in the same act by which they ordered the supply of destitute districts with ministers—made an effort to enforce attention to the formation of parish-schools; and, two years later, they appointed every congregation to contribute an annual collection for aiding the attendance of Highland boys at school. In 1690—the Highlanders then receiving, for the first time, a book in their native tongue—a Gaelic version of the Psalms, and a translation of the Shorter Catechism, were published by the synod of Argyle. In the same year, the General Assembly published, for distribution in the Highlands, 3,000 copies of Bishop Bedell's Irish Bible, and 1,000 copies of an Irish version of the

New Testament. In 1696, new and comparatively stringent laws were made, appointing a school to be set up in every parish in Scotland, and securing to every parochial schoolmaster a house and garden, and a salary of from 100 to 200 merks Scots. In 1699, a Gaelic version of the Confession of Faith was published by the synod of Argyle. In 1705 and 1706, 19 presbyterial and 58 local libraries were erected in various districts. In 1712, the Society for propagating Christian Knowledge commenced its operations by the erection of five schools; and, from that time, it has been in constant movement and increasing activity, extending its sphere of usefulness, both in adding to the number of its schools, and in strengthening its corps of catechists and missionaries. So rapidly did this society increase the momentum of its influence that, instead of only the 5 schools with which it commenced, it had, 7 years afterwards, 48,—13 years later, 109,—and at the beginning of the present century, 200. In 1738, the society, in extension of its plans, instituted schools of industry for instructing females in spinning, sewing, and knitting; and it afterwards gradually augmented their number till, 14 years ago, they amounted to 89. In 1769, the first edition of the Gaelic New Testament, consisting of 10,000 copies, was published by the same society; and, in 1797, it was followed by an edition of 21,500 copies. Still, in spite of all the efforts of teaching and publishing which we have named, the 18th century closed without any considerable enlightenment of the Highland population having been effected. The monstrous mistake was, all the way along, acted on of attempting to educate the young through the medium, not of their vernacular tongue, but of the English language. Children were taught, not to read or to comprehend a book, or the words of which it was composed, but to imitate sounds and repeat the deciphering of signs belonging to a language of which they knew nothing, and when they left school, they found themselves possessed of acquirements which were utterly incapable of being turned to practical account. But even had the schools been framed and conducted on the most judicious principles, they were unspeakably too few in number to make a general impression on the population, and left many a large district—extensive patches and far-away nooks of the enormous parishes of the Highlands—practically as unprovided for as if there had not been a school in the land.

Since the commencement of the 18th century, however, the ecclesiastical and educational and literary history of the Highlands partakes largely of the bright tints of improvement which depict the history of their agriculture and their political condition. In 1802, 5,000 copies of the Gaelic Bible—the first edition of the complete Gaelic scriptures—were published by the Society for Propagating Christian Knowledge; in 1807, 20,000 copies were published of a careful translation, prepared under the direction of Dr. John Stewart of Luss, Dr. Alexander Stewart of Dingwall, afterwards of Canongate, Edinburgh, and the Rev. James Stewart of Killin. In 1811 a Gaelic school society was formed at Edinburgh, for the purpose of promoting education exclusively in the Gaelic language; and in the course of 16 years it raised the number of its schools to 77, attended by 4,300 scholars. In 1812 a similar society was formed in Glasgow, but with the object of promoting education both in Gaelic and in English; and, in 1818, another was formed in Inverness, of seemingly an energetic character; and this, jointly with the Glasgow society, had, in 1827, 125 schools, supposed to be attended by at least 5,000 scholars. In 1823 the sum of £50,000 was granted by Government for

the purposes of church-extension in the Highlands and Islands. With this money were erected, under the superintendence of the inspector of Highland roads and bridges, 33 places of worship, each at a cost of £720, and with from 300 to 500 sittings, and 42 manses, each at a cost of £750, and with the appendages of a garden and a small glebe,—the surplus number of manses being apportioned to churches previously in existence, but without resident ministers. Connected with these erections 42 additional ministers have been provided for the Highlands, at an annual expense to the country of £120 each, or £5,040 in the aggregate. In 1825 a committee of their own number was appointed by the General Assembly to increase the means of education and religious instruction in the Highlands and Islands; and they went to work with such judgment and energy as very soon to set up numerous and efficiently conducted schools,—giving to each school the valuable and the praise-worthy selected appendage of a library. In the same year—1825—was established at Inverness the Northern Institution, for the promotion of science and literature in general, and more particularly with the view of investigating the antiquities and the civil and natural history of the Highlands and Islands. In 1831 a Gaelic Episcopal society was formed for aiding the education of students for the ministry, publishing prayer-books and other productions in the Gaelic language, and providing catechists and schools for the poor of the Episcopalian communion throughout the Highlands. In 1836, and following years, the Commissioners of Religious Instruction, appointed by parliament, in response to loud demands on the part of the General Assembly for church-extension, expended much time and laborious investigation in minute inquiry into the condition of the Highland and the Hebridean parishes; and, in consequence of their report, the parliament of 1838 enacted that if the heritors of any parish divided *quoad sacra* provide schools, they may be endowed. Under this act [1^o and 2^o Victoria, c. 87] the lords of the treasury assumed, as a fit endowment for the schools erected in 41 Highland parishes or districts which have been divided *quoad sacra* under the act 5^o Geo. IV. c. 90, the interest of a sum equal in amount to double the estimated value or cost of the school, school-master's house, and garden, so provided in each district. At various dates, from near the commencement of the century, the United Associate Synod, the Congregational Union of Scotland, and the Baptist Society, adopted measures for contributing influence and labour to the religious amelioration of the Highlands; but, except in instances which are too few in number or too inconsiderable in result, to loom out in a general statistical sketch, they have hitherto been hindered in their efforts by the great obstacle which so long obstructed the measures of the Established church after the Reformation,—the want of suitable men who are acquainted with the Gaelic language. Up to the year 1826, 35,000 copies of the Bible, and 48,700 copies of the New Testament, in the Gaelic language, were issued by the British and Foreign Bible society, making, along with the issues of the Society for Propagating Christian Knowledge, a total of 60,000 copies of the Bible, and 80,000 copies of the New Testament; and since that period several large editions have been issued, particularly by the Edinburgh Bible society. In 1828 a large Gaelic dictionary, in two thick quarto volumes, and compiled by Mr. MacLachlan of Aberdeen, and Dr. MacKay of Dunoon, to supersede two inconsiderable vocabularies which alone previously existed to direct the scholar, was published by the Highland Society of Scotland; and, about the same period, another

Gaelic Dictionary, completed in one large octavo volume, and compiled by Dr. Dewar now of Aberdeen, and Dr. Macleod now of Glasgow, was issued in numbers. Other dictionaries also—a 4to. one edited by Mr. Armstrong of London, and a pocket edition by Mr. Macalpine of Islay—have been published. In 1829 a monthly sixpenny miscellany, called 'the Gaelic Messenger,' and filled entirely with Gaelic composition, was commenced under the editorship of Dr. Macleod; but, though it had, at the first, a considerable circulation, it rapidly declined, and, after about three years, became extinct; but, in 1835, it was revived under the title of 'the New Gaelic Messenger.' Other accessions to Gaelic literature, issued previous to 1836, and almost wholly since the commencement of the present century, are 11 original prose works, principally sermons,—10 separate collections of hymns on sacred subjects, that of Dr. Buchanan's hymns in 11 different editions,—5 editions of Alleine's Alarm to Sinners,—3 of Baxter's Call to the Unconverted,—2 of Boston's Fourfold State,—2 of Doddridge's Rise and Progress,—2 of Guthrie's Great Interest,—2 of Willison on the Shorter Catechism,—5 of Willison's Mother's Catechism,—2 of Willison's Communicant's Catechism,—2 of Thomson's Catechism,—single editions of about 40 religious treatises long known in the dress of the English language, and, for the most part, of highly approved character,—9 or 10 school books,—and about 50 secular works, almost all single editions, and chiefly in the department of Gaelic songs and poetry. According to the report of the General Assembly's Committee, in 1833, the Highlands and Islands, including the Orkneys and the Shetlands—or the synod of Argyle, the presbyteries of Alford and Kincardine O'Neil in the synod of Aberdeen, and the synods of Moray, Ross, Sutherland and Caithness, Glenelg, Orkney and Zetland, comprehending 220 parishes, and a population, in 1831, of 504,955—contained 273 parochial schools, attended by 14,202 scholars,—315 societies' schools, attended by 18,085 scholars,—137 privately endowed schools, attended by 6,314 scholars,—372 unendowed or voluntary schools, attended by 13,728 scholars,—418 Sabbath schools,—20 weekday evening schools,—and about 80 schools of industry supported by the Society for propagating Christian Knowledge;* and according to the Report of the Commissioners of Religious Instruction, there were, in 1838, in the Highlands and Islands, 35 missionaries and 8 catechists supported by the annual royal grant to the General Assembly,—10 missionaries and 33 catechists supported by the Society for propagating Christian Knowledge,—and 3 preachers and 7 catechists assisted or maintained from the fund administered by the synod of Argyle.

But notwithstanding all the seeming greatness and multiplicity of the moral machinery with which the Highlands have been plied, a fearful amount of destitution still exists. From an elaborate work entitled 'Moral Statistics of the Highlands and Islands of Scotland,' got up as the result of minute and searching inquiries, by the Education Society of Inverness, it appears that so late as 1824–5—when the chief portion of the existing appliances had begun fully to bring out their results—one-half of the whole Highland population were unable to read, and upwards of one-third were more than 2 miles, and many thousands more than 5 miles distant from the nearest schools,—and that, in the western parts of the counties of Ross and Inverness, there existed but one copy of the scriptures for every eight persons above 8 years of age, while, in the other parts

* The number of schools of industry, for the instruction of females in useful arts, was, in 1837, 105.

of the Highlands and Islands, including the well-supplied and well-educated Orkneys and Shetlands, there existed only so many copies as left 100,000 persons in total destitution. In the Report of the Commissioners of Religious Instruction, an accumulation of facts is exhibited, evidence the existence of very serious, and, in some instances, appalling evils and deficiencies in the applicability and amount of pastoral superintendence and means of attaining Christian knowledge. All of 74 parishes which the Commissioners visited, excepting 13, are unmanageably extensive to be superintended by their ministers; all, excepting 13, and most of them the same parishes as in the former instance, have internal obstructions from intervening arms of the sea, ferries, torrents, mountains, or tempestuous regions, which prevent the convening of the inhabitants on any one spot, and, in not a few cases, cut off sections of them perennially from participation in the means of religious instruction; 10 of the parishes are so inconveniently divided that districts are as inaccessible as in cases of serious obstructions; 12 are necessarily provided each with more than one church, so as to entail waste of time in travelling on the minister, and the alternation everywhere of the want and the enjoyment of his services; 5 of them have their churches so absurdly situated as to be nearly or wholly useless to portions of the parishioners; 28 of them have churches of a size inadequate to accommodate the church-going population; and all of them, either are totally unassisted by any means of religious instruction but those connected with the Establishment, or have their evils and deficiencies exhibited after allowance being made for such additional means as are afforded. While the Highlands, too, have been emancipated to a delightful extent from the superstitious and immoral observances and vicious customs which somewhat recently enthralled them, and while they seem to be, in a general way, rapidly progressing in a career of temperance and of proper behaviour at funerals, so contrasted to the character which they very recently bore, they still, in the more sequestered districts, are the scenes of folly and superstitious absurdities of opinion, and utterly discreditable pervading moral feeling which would be far more in keeping, in the present day, with the moral scenery of Spain or Brazil than with that of Scotland. Ample scope and verge enough exists in the Highlands for the enterprise of enlightened benevolence; and claims loud and urgent are made by them on the attention of both the patriot and the Christian.

HIGHTÆ, a village $2\frac{1}{4}$ miles south of the burgh of Lochmaben, noticed in the article **FOUR TOWNS**, which see; and a lake halfway between the burgh and the village, covering a surface of 52 acres, and contributing its quota to the rich displays of water scenery, and the variety and abundance of fishy produce for which the parish of Lochmaben is remarkable. See **LOCHMABEN**.

HIGHTOWN, or **HETON**, a village in the parish of Roxburgh, on the turnpike between Berwick and Carlisle; $2\frac{1}{4}$ miles from Kelso. It has a dingy, huttish appearance, ill in accordance with the scenery around it. One of two parochial school-houses is situated in the village. Population about 300.

HILTON, an ancient parish in Berwickshire, united, in 1735, to that of **WHITSOME**, which see. The old church stood on a small hill, and hence drew the name Hilton, or Hilltown, upon the hamlet in its vicinity. The church was anciently a rectory, rated in the Taxatio at 18 marks. In 1464, there appears to have been a litigation at the Papal court respecting this church. In 1362, David II. granted to William de Wardlaw some lands in the

manor of Hilton; the manor having been forfeited to the Crown by Adam de Hilton's adherence to the English king.

HILTOWN, a village in Ross-shire, in the parish of Fearn. It is situated on the coast of the Moray frith, is a good fishing-station, and contains upwards of 100 inhabitants.

HIRSEL. See **COLDSTREAM**.

HIRTA. See **St. KILDA**.

HOBKIRK—anciently and properly **HOPEKIRK**—a parish in the centre of the southern part of Roxburghshire, stretching away in a long stripe from the water-shedding line on the highest ridge of the southern uplands, to the very centre of the county. In extreme length it measures nearly 11 miles; but nowhere is it quite 3 in breadth, and over the tower or northern half, it averages not more than about $1\frac{1}{2}$. The direction of the stripe is east of north; and over one-third of its length from the southern extremity, it is uniformly about $2\frac{3}{4}$ miles broad, and thence to the northern extremity it contracts on the east side till it terminates in an acute angle. The parish at this terminating angle is bounded by Lower Cavers on the west side, and Bedrule on the east side; and along the east, it is bounded by Southdean and Castletown; on the south by Castletown; and along the west, by Upper Cavers and Kirktown. Its superficial area is nearly 30 square miles. The Catlee burn, after a previous course of 3 miles, comes in at a very acute angle from the south, and, over $1\frac{1}{2}$ mile distance, forms the boundary with Southdean. Wauchope burn rises at the southern extremity, flows $4\frac{1}{2}$ miles northward, receives there Harrot burn, which had flowed parallel to it over a course of $3\frac{1}{4}$ miles, and $\frac{3}{4}$ mile lower down, combines with the Catlee burn to form Rule water. The united stream traverses the parish northward till within $1\frac{1}{2}$ mile of its extremity, and over the remaining distance forms the boundary-line with Bedrule. The Rule is strictly a mountain-stream, has a considerable declivity of channel, and, in consequence, is impetuous, and subject to extremely sudden floods and ebbs in the volume of its waters. All the parish—except the south-west corner, which is watered by one of the head-streams of the Slittrig, and has a north-westerly exposure—consists of the vale of the Rule scarcely on the average $\frac{1}{4}$ of a mile broad, and backgrounds of mountainous hills. Slightly more than one-fifth of the whole area is in tillage or parks; nearly 900 acres are under plantation; and all the remainder is waste or pastoral. The soil, all along the vale of the Rule, is a very fertile, deep, strong clay, some parts of it mixed with small channel, and other parts with sand; and, at a distance from the stream, it is light and sandy, lying upon a subsoil of cold till, and, in general, very barren. The most remarkable mountains are Winbrough, Fanna, Rubberslaw, and Bonchester. The first and second, situated in the southern extremity of the parish, rise to about 1,600 feet above the level of the sea, and have such breadth of base as to be each $1\frac{1}{2}$ mile in ascent to the summit. Winbrough commands vistas among circumjacent mountains, and looks out, over the great intervening distance, in each case of about 40 miles, upon the marine waters which gird both the western and the eastern coasts of Scotland. Rubberslaw, situated near the northern extremity, on the boundary with Kirktown and Cavers, and belonging partly to these parishes, lifts its dark, rugged, heath-clad form 1,420 feet above the level of the sea. Bonchester, on the east side of the parish, a little north of its middle, rises to the height of about 1,260 feet, and presents to the eye a round-shouldered and grassy mountain-form of beauty. The parish abounds with

freestone,—in the upper district of a whitish colour, and in the lower of a reddish,—both suitable material for building. Extensive masses of limestone also occur in the south, and, in several places, have long been quarried and burnt. At Robert's Linn, near Limekiln-edge, is a stratum of agate or coarse jasper, out of which many seals and other trinkets have been cut. Parts of it are beautifully clouded and streaked, upon a reddish ground, with blue, crimson, and yellow. On Bonchester-hill, on Rubberslaw, at Wauchope, and in other places, are vestiges of encampments or fortifications. Those on Bonchester indicate a fortalice, both round and square encampments, and, in some places, circumvallations of a more modern date intersecting others more ancient. The situation being naturally one of united strength and convenience, the Romans appear to have called "the good camp," *Bona Castra*,—a name easily convertible by usage into Bonchester. The celebrated Elliott, Lord Heathfield, governor of Gibraltar, who, with consummate vigilance, fortitude, and military skill, against the united naval and military forces of the house of Bourbon, was a native of Hobkirk. The Rev. Robert Riccalton, the author of two well-known volumes of Sermons, was minister of the parish from 1725 to 1769. Thomson, the poet, spent some years with Mr. Riccalton, and is reported to have planned his "Seasons" in the parish, and borrowed from it and adjacent districts much of the scenery which delights and enchants in his descriptions. One road runs up the vale of Rule water for about 7 miles, when it diverges into Southdean; another runs across the parish nearly at its centre; another intersects its southwest corner; and two branch ones run brief distances in its interior. Across the Rule are three stone bridges. Population, in 1801, 760; in 1831, 676. Houses 127. Assessed property, in 1815, £8,784.—Hobkirk is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £206 9s. 3d.; glebe £40. Unappropriated teinds £767 2s. The church is very old, but of unascertained date, and has not been repaired since 1777. Sittings 412. In 1836, the parish-minister stated the population then to be 530 churchmen, 140 dissenters, and 10 persons of no professed religion,—altogether 680. The dissenters are connected with congregations in Hawick and Jedburgh. Salary of the parochial schoolmaster £31, with £22 fees, and £4 13s. 4d. other emoluments. There are two schools non-parochial, but attended by a maximum of only 36 scholars. The church—originally called Hopekirk, from its standing in one of those small vales to which the name Hope is generally applied in the south of Scotland—belonged, from an early date till the Reformation, to the canons of Jedburgh. United to Hobkirk is one-half of the ancient small parish of Abbotrule on the east bank of Rule water; the other half being annexed to Southdean. See ABOTRULE.

HODDAM, a parish in the district of Annandale, Dumfries-shire; bounded on the north by Tundergarth; on the east by Middlebie and Annan; on the south and south-west by Annan and Cummertrees; and on the west by St. Mungo. Its greatest length, from the north side of Brunswark hill on the north, to an angle on the Annan a little below the Factory on the south, is $5\frac{1}{2}$ miles; and its greatest breadth, from the point where it is first touched by Mein water on the east, to the point where it is first touched by Milk water on the west, is $3\frac{3}{4}$ miles. The parish lifts up, at its northern extremity, the beautiful and far-seeing hill of BRUNSWARK, [which see] it thence subsides by a gentle slope into a fine

central plain, about 2 miles square; from this, it glides off, on the east and south and south-west, into luxuriant and lovely haughs; and it is, on all sides, surrounded by gently swelling hills which, like a frame-work, enclose it, with its thriving hedges, and its rows and clumps of flourishing wood, and its fascinating expanse of smiling vegetation, as a picture of no common beauty. The river Annan, over a distance of nearly 4 miles, traces the south-western and southern boundary, rolling along a body of waters about 100 feet broad, dressed everywhere with wood-tufted banks, and tempting the fish-catcher by its stores of salmon, herling, and trout. The water of Milk comes down from the north, and after tracing the western boundary for $\frac{3}{4}$ of a mile, falls into the Annan. A rill rises a brief way within the limits of Tundergarth, and coming in upon Hoddam, traces its eastern boundary over a distance of 3 miles. Mein water, coming down at this point from the east, drinks up the rill, traces the boundary for nearly a mile, and then runs across the parish—here only a mile broad—and then, nearly at right angles, falls into the Annan. Though a mere rivulet, and of short course, the Mein frequently overflows its banks, sometimes changes its channel, and, owing to the gravelly material of the embankments raised to confine it within limits, constantly, in rainy weather, menaces the fields in its vicinity with damage or desolation. The soil, in the haugh or holm lands, is a rich alluvial loam, deep, and exceedingly fertile; in the central plain it is light and gravelly, but comparatively free from stones, and, with proper culture and a fair proportion of moisture, produces rich crops both of grass and of corn; in the rising-grounds and ascent toward Brunswark hill on the north, it inclines to clay, has in many places a sub-soil of cold till, and in a few places lies upon rock, yet, when properly cultivated, is nearly as productive as the soil of the lowlands. Excepting Brunswark, and one or two small patches of surface, all profitably used as sheep-pasturage, the entire area of the parish is arable, well-enclosed, and in a state of high cultivation. Sandstone, limestone, slate-clay, and clay-ironstone are abundant. Coal is found in thin seams, and exhibits such promises of being discoverable of a workable thickness at a considerable depth, as—combined with the vast wealth and advantages which would accrue from a mine in the champaign part of Dumfries-shire—to have induced the expenditure of a considerable sum in exploratory borings. Close on the Annan, about a mile below the point where the river first touches the parish, is Hallguards, the site of the ancient castle of Hoddam. This stronghold is reported to have been the seat of one of the families of the Bruces; and was demolished several centuries ago in terms of a Border treaty. In the 15th century, it was rebuilt, or rather a new and now venerable structure bearing its name was erected by Lord Herries, but not on the same bank of the river, and, in consequence, beyond the limits of the parish: see CUMMERTREES. The mail-road between Glasgow and Carlisle runs diagonally through the parish, cutting it into halves; and five cross-roads, each nearly equal to a turnpike, run in various directions. On the principal road stands the important village of ECCLEFECHAN: which see. The chief modern mansion is Knockhill, about half-a-mile from the Annan. Population, in 1801, 1,250; in 1831, 1,582. Houses 283. Assessed property, in 1815, £7,495. Hoddam is in the presbytery of Annan, and synod of Dumfries. Patrons, the Duke of Buccleuch, and Sharp of Hoddam. Stipend £259 8s.; glebe £43 10s. The church was built in 1817, with a view to the accommodation solely of the landward parishioners, and not of those residing

in Ecclefechan. Sittings 561.—An United Secession congregation in the parish was established before the year 1756; and have their place of worship in Ecclefechan. Sittings nearly 600. Stipend £110, with a house, a garden, and a small park, jointly worth £22.—According to a survey by the parish-minister in December, 1835, the population then consisted of 1,328 churchmen, 356 dissenters, and 11 persons who made no profession of religion,—in all 1,695. These numbers include 123 inhabitants of a district which, in 1836, was erected jointly with districts in the parishes of Annan and Cummertrees into the *quoad sacra* parish of Bridekirk.—The present parish of Hoddam comprehends the three parishes of Hoddam, Luce, and Ecclefechan, which were united in the year 1609. In the charters of the 12th century, Hoddam is spelt Hod-holm and Hod-olm, and is composed of two Anglo-Saxon words signifying 'the Head of the Holm.' The ancient church stood on the haugh or holm on the east bank of the Annan, at some distance below the old castle; and near it was a hamlet called Hoddamtown. The lands and church belonged anciently to the bishop of Glasgow.—Luce consisted of the portion of the united parish which lies south of Mein water. The church stood on the Annan below the influx of the Mein, at a place dotted with two or three houses, which still bears the name of Luce, and where anciently there was a hamlet; but, like the old church of Hoddam, it has been utterly demolished. The lands of Luce and the patronage of the church belonged, before the Reformation, to the noble family of Carlisle; and, in the 17th century, they passed to the Duke of Queensberry.—Ecclefechan, or Eglisfechan, 'the church of Fechan'—an Irish abbot of the 7th century—consisted of the eastern part of the modern parish. The ancient church stood on the south side of the village, but has quite disappeared. Cemeteries around the site of it, and of the other two demolished churches and glebes in three distinct territories belonging to the minister, continue to be memorials of the threefold parochial division of the modern parish.—The parish-school is attended by a maximum of 70 scholars; and two unendowed schools—one of which affords tuition in the classics, French, and geography—are attended by a maximum of 105. Parochial schoolmaster's salary £34 4s. 4½d., with £10 fees, and £1 10s. other emoluments.

HOIAY, one of the small Hebrides, near Harris.

HOLBURN. See OLD ABERDEEN.

HOLME, a parish on the south-east coast of Pomona, in Orkney; extending 9 miles in length, and 2 in breadth, along the sound to which it gives its name, and to the south of Deerness. The soil is a light thin loam, tolerably fertile, and producing more barley and oats than is sufficient for the consumption of the inhabitants. The shores of this parish are generally rocky.—This parish, formerly a vicarage, and divided into two districts, known as Holme and Paplay, is in the presbytery of Kirkwall, and synod of Orkney. Stipend £157 1s. 6d.; glebe £4. Patron, the Earl of Zetland. Population, in 1801, 871; in 1831, 747. Houses 164. Assessed property, in 1815, £256.

HOLME SOUND, a beautiful frith in the Orkneys, lying opposite to the parish of Holme. It affords tolerable anchorage, and is sheltered by the Lambholme, a small circular island in the middle, 3 miles in circumference. On the north-west coast there is a pier, where vessels of 50 tons may unload their cargoes.

HOLM ISLE, one of the Orkneys, constituting part of the parish of Westray. It is a very small island, a short distance from the east side of Papa-Westray.

HOLM of GRIMBISTER, one of the Orkneys, constituting part of the parish of Firth. This is a very small, uninhabited island.

HOLM of HOWTON, one of the Orkneys, constituting part of the parish of Orphir. It is a small, uninhabited island, fit only for sheep-pasture.

HOLM of HUIP, one of the Orkneys, constituting part of the parish of Stronsay. This is a small, uninhabited island, to the north of Stronsay; and is appropriated to the pasturage of cattle and sheep.

HOLMS (THE), three small, uninhabited isles which lie to the north-west of the island of Unst, and constitute part of that parish, and of the Shetland isles.

HOLMS WATER, a rivulet of Peebles-shire, giving name to the ancient parish of Glenholm, and traversing its whole length. The stream rises at Holm-Nick mountain, on the boundary of the county with Lanarkshire, pursues a direction, to the east of north, over a distance of 6½ miles, and then falls into Biggar water ¾ of a mile above the confluence of that stream with the Tweed. In the commencing part of its course it is pent up by the mountains within a gorge, but, as it proceeds, it has a gradually widening basin till it commands a strath of a mile in width, overlooked on both sides by gently ascending grass-clad hills; and it flows softly and sinuously along with such easy motion as is just sufficient to exempt it from the tameness of a sluggish stream. Over most of its whole course the rivulet and its basin, with their soft mountain frame-work, form one of the loveliest of those landscapes for which Tweeddale is celebrated. See GLENHOLM.

HOLMIN, a small island of the Hebrides, near the isle of Mull.

HOLYDEAN. See BOWDEN.

HOLY ISLE. See ARRAN.

HOLYROOD-HOUSE,* the metropolitan palace of the kings of Scotland. The supposed sanctity of this place had—as in some other instances—chiefly constituted its patent for the subsequent possession of temporal honours of the highest order; it may reasonably be supposed, however, that its contiguity to the castle was an additional recommendation. David I. having lived much with Henry I. of England, seems to have contracted, during his residence in that country, a partiality for its pompous monastic usages, to the disparagement of the more simple services which, for so many centuries, had been retained in his own. Here, accordingly, he introduced canons regular from England,—that very class of religious which his brother Alexander I. had thrust into Scone, to the exclusion of the Culdees. Holyrood abbey was founded A.D. 1128. It was denominated 'Monasterium Sanctæ Crucis de Crag,' that is, 'the Monastery of the Holy Rood,' or 'Cross of the Crag.' The latter term respects its situation, as having been erected in the vicinity of that rocky precipice now called Salisbury craigs. In order to give greater celebrity to this religious foundation, and doubtless to increase the number of votaries, a miracle was vamped up, as having had its due influence in determining the mind of David, not

* The authentic orthography, corresponding with the established pronunciation of the country, is *Halyrudehouse*; for the modern name is an English translation. Thus, John Knox, speaking of the queen's arrival from France, says: 'Because the Palace of Halyrudehouse was not thoroughly put in order, (for his coming was more sudden than many looked for,) she remained in Leyth till towards the evening, and then repaired thither.' The term *Holyrud* occurs in the title of a protection from Edward III. A.D. 1335: See Rotul. Scot. i. 350. And we have these lines in Wyntoun:

A' thowsand a' hundyr and twenty yhere,
And awcht to thai, to rekyne clere,
Fowndyd was the Halyrud hows,
Fra' thine to be relygows.

only to erect an abbey here, but to name it that of the Holy Cross. The good king, we are told, having become very desirous to amuse himself by hunting in the forest which surrounded the Maiden castle—as that of Edinburgh was then called—on Rood day, or that of the Exaltation of the Cross, after the solemn mass was ended, disregarded the earnest dissuasions of his devout confessor Alewine. Accordingly, when he had passed through the field where the Canongate now lies, and had reached the bottom of the crag, all his nobles being separated from him, the fairest hart that had ever been seen by human eyes, with very large antlers, so frightened the king's horse that he could not possibly restrain him. The hart followed him so hard, "that he dang baith the king and his hors to the ground." The king, having thrown both his hands between the antlers of the deer, in order to save himself from its stroke, the holy cross immediately slid into his hands. The deer, of course, instantly fled with the greatest precipitation, and, indeed, vanished from his sight, "quhare now springis the Rude well." On the following night he was admonished by a vision "to big an abbay of Channonis Regular in the same place quhare he gat the croce,"—which, by the way, must have been a very singular one, as no man could "schaw of quhat mater it" was, "metal or tré."

This abbey received an increase of revenue by a charter of William the Lion granted between the years 1172 and 1180; and the grant was perfectly in unison with the primary design of the introduction of these canons. For the churches and chapels in Galloway "which of right belong to the abbey of Icolmkill, with all their tithes and ecclesiastical benefices," besides several churches in Fife, which appear also to have belonged to them, are assigned to the canons of Holyrood. The abbot of Holyrood was entitled to hold his court; and accordingly held regular courts of regality, like other barons. For, in the charter from David I., it is said: "I grant, that the said abbot shall have his court in as full, free, and honourable a manner, as the Bishop of St. Andrews, Abbot of Dunfermline, and Abbot of Kelso, enjoy theirs." During the savage incursion made into Scotland by Richard II., when he destroyed so many religious houses, we learn from one MS. of Fordun, that he would also "have consumed the honourable monastery of the Holy Cross, had he not been dissuaded from it by his father-in-law, the Duke of Lancaster, who had formerly, in the time of his necessity, found a refuge here, when he fled from the ferocity of the boors." Wyntoun refers to this circumstance, when speaking of Longcastell, or Longcastre, as he also names him, when "the carlis ras agayne"† the Kyng:

Til Edynburgh on the mornie past thai,
And in til Holy-rode-hous that abbay
Thai mad hym for to tak herby.

CRONIKIL, B. ix. c. 4, v. 35.

* Bellenden's Croniklis, B. xii. c. 16. Lord Hailes [Annals, i. 97] has justly remarked, in regard to this legendary tale, that "it has not even the merit of antiquity;" as "it appears to be a fiction more recent than the days of Boece." There is every reason to think so, indeed; for this writer does not take the slightest notice of it. We can scarcely suppose, that he would have been chargeable with an omission so unlike himself, had he been acquainted with the story. David Scott, with great inadvertency, asserts that David I. not only built the abbey, but "the royal palace of Holyrood-house, a most magnificent edifice."—There is a short chronicle of this abbey, entitled 'Chronicon Sancte Crucis Edinburgensis,' which has been published by Wharton, in his 'Anglia Sacra.' It has been remarked, that the author must have been an Englishman, as the accounts given by him chiefly regard England. This chronicle has been reprinted in a more perfect state, under the title of 'Chronicon Cenobii Sanctae,' &c. by the Bannatyne club. It contains a copy of the charter of foundation by David I., in which Edinburgh is denominated *Edwines-Burg*. When the city is mentioned in the chronicle itself, it is called *Edenesburgh* and *Ednes-*

The royal palace of Holyrood-house has been called "the residence of our ancient kings." But this description is not applicable to it in the same extent as to some other of our palaces. Our princes might occasionally pass a few days here as guests. By James V., it is supposed, a place of residence was built near the south-west corner of the church, about the year 1528; as his name appears at the bottom of a niche in the north-west tower of the palace. It seems certain, that in order to provide for himself a park for hunting, he also enclosed a large quantity of ground adjoining, and surrounded it with a stone wall, about 3 miles in circumference. "James I., Chalmers has observed, "with his queen, resided in the abbey of Holyrood, when they attended public affairs at Edinburgh. In the same commodious hostel, James III. resided, till he was driven from it by treason." For, as he further says, "the abbey, from their accommodation, and their sanctity during rude ages, became the lodgings of kings and nobles." The following remark is certainly well-founded: "We may easily suppose, that the frequency of the royal residence gradually improved the abbey to a palace." The palace, indeed, had begun to rise as early, at least, as the reign of James IV. For his marriage with Margaret, daughter of Henry VII., was celebrated in the palace of Holyrood, in August 1503. To this auspicious marriage, by which our native prince became connected with both the White and the Red Rose of England, we owe that beautiful allegorical poem, by Dunbar, 'The Thistle and the Rose.' Lord Hailes has remarked, that this marriage was "an event on which the fate of the two nations has turned throughout every succeeding age; to it we owe the union of the crowns, the union of the kingdoms, and the Protestant succession." It is in consequence, indeed, of this connubial alliance, that, notwithstanding of the union of the Thistle with the Rose, we, as a nation, can boast of—"Rosa sine spina." Referring to this account, Chalmers has observed, that "at that period, the palace had a chapel within it; and the chaplain was the keeper of the palace." But what Younge calls

burgh. It is continued only to the year 1163, or the 35th year from the foundation of the abbey. This there is less reason to regret, as the account given in it of Scottish affairs is very meagre.

|| In the minute account that has been given us of the progress of the princess from Richmond, and of the celebration of the marriage, by Younge, the English herald, we find that 'the noble company passed out of the towne' of Edinburgh 'to the church of the Holy crosse;' and that, 'after all reverences doon at the church, the King transported himself to the Pallais, thorough the clostre, holdynge allwayes the Qwene by the body; and hys hed barre [head bare], tyll he had brought hyr within her chamber.' It is evident from the narration, that even then the palace had consisted of a variety of apartments. For we read not only of 'the Qwenes chamber,' but of the King's, in which he supped, while the Qwene had much company 'within her awn.' There was also 'the grett chamber,' in which all the guests assembled; 'the Qwenes second chamber,' and 'Kings grett chamber,' which is obviously distinguished from that formerly mentioned, afterwards called the hall. For *Largesse* was cryed thrise tymes in the Kings chamber, in the grett chamber, that is say [high], and in the Halle of the Kyng and of the Qwene." At dinner it is evident that three apartments were occupied; 'the Kings grett chamber,' 'the Kings hall,' and 'the hall wher the Qwenes compans wer satt in lyke as the other.' There was, in the decoration of the palace, a degree of splendour, which, most probably, the English visitors did not expect to see. 'The Kyng sat in a chayr of cramsyn velvett, the pannells of that sam gyte, under hys cloth of astat [state], of blew velvett, figured of gold.—The chamber in which' the Queen 'dined was richly drest, and the cloth of astat wher she satt, was of clothe of golde varey riche.—The Kyng was served in vesselle gytt as the Qwene.—The chamber was hangued of red and of blew, and in it was asyll [canopy] of a state of cloth of gold.—Ther wer also, in the sam chamber, a riche bed of astat, and a riche dresour [a board for plate] after the guyse of the cowntre.' Of one of the chambers, 'the hangynge represented the ystory of Troy towne, and in the glassye wyndowes wer the armes of Scotland and of Inglaund bypert.—The Kings grett chamber—was hangued about with the story of Hercules, togeder with other ystory.—The King's hall' was hangued of th Ystory of the old Troy.—Leland's 'Collectanea,' iv. 290–296.

† Rose against.

‡ Pass.

§ Protection.

the church was undoubtedly that properly belonging to the abbey. For, in p. 290, it is called "the church of the Holy Crosse;" and the Quere or Quire is particularly mentioned. From a deed of James IV., dated at Edinburgh, A.D. 1506, it appears that, during his reign, there was a royal palace, distinct from the monastery of Holyrood, and in its immediate vicinity. For from this paper we learn that divers charters, belonging to the Earl of Huntly, "had been consumed by a fire suddenly taking place in his (the Earl's) chamber, under our palace, near our monastery of Holy Rood, near Edinburgh."

It has been mentioned, in a general way, in the descriptions of this palace, that it was burnt by the English in the minority of Queen Mary. But, as it is rather singular that not only a royal residence, but a place devoted to religion, should be given up to the flames, many readers may wish to know the circumstances connected with this event. Henry VIII. of England, assured that it would be for the interest of both countries, if a lasting peace could be established, proposed the marriage of his excellent son Edward, afterwards the sixth of that name, with the young Queen. To this the parliament of Scotland agreed, entering into a treaty on this ground. But the Queen-mother, Mary of Guise, supported by Cardinal Beaton, and the zealous friends of popery, were determined to defeat this wise plan, and to send Mary to France. Henry felt so indignant, that he determined to avenge the insult offered to him, in a way worthy of his natural character; and, A.D. 1543, sent the Earl of Hertford with a powerful fleet to make depredations in Scotland. The troops having been landed, and come near to Edinburgh, a deputation appeared from the latter, offering the keys of the town, on condition of the inhabitants being permitted to carry off their property, and of the town being saved from fire. They received for answer, that, unless they would deliver up the town unconditionally, all the inhabitants submitting themselves to the will of Henry's lieutenant, he "would put them to the sword, and their town to the fire." The inhabitants having attempted to make resistance, the result is expressed, by the English writer who was on the spot, with as much *nonchalance* as if he had been giving an account of a common bonfire. "It was determined by the sayde Lorde-lieutenaunt, vtterly to ruynate and destroye the sayde towne with fyre; which, for that the nyght drewe faste on, we omittyd thoroughly to execute on that daye; but settinge fyre in thre or iiii. partes of the towne, we repayed for that night vnto our campe. And the nexte mornynge very erly we began where we lefte, and continued burnynge all that daye, and the two dayes next ensueing contynually, so that neyther within the wawles, nor in the suburbs, was lefte any one house vnbrant, besydes the innumerable botyes [booties], spoyles, and pylages, that our souldyours brought from thense, notwithstanding habundance whiche was consumed by fyre. Also, we brent thabbeie [burned the abbey] called Holy Rode-house, and the pallice adioynynge to the same." Accounting all this too little, this humane narrator adds with an air of triumph: "In the meane tyme,—there came vnto vs iiii. M. of our lyghte horsemen from the borders by the Kynges Maiesties appoyntement, who—dyd suche exploitres in ryding and deaustynge the countrie, that within vii. myles euery waye of Edenborough, they lefte neyther pyle [castle], village, nor house, standynge vnbrante, nor stacks [stacks] of corne, besydes great nombres of cattayles which they brought dayly into the army," &c. "Syr Nicholas Poyntz—wan by force the towne of Kynghorne, and the same brent, with certeyne other townes on that syde."—"The

Kynges sayde Lieutenaunt thynkyng the Scotte not to be condyngly ponished for theyr falsed to the Kinges Maiestie, determyned not to returne without doyng the more dyspleasure.—We brake downe the peire of the hauen of Lythe, and brent every stycke of it.—We left neyther pyle, village, towne, nor house, in our waye homewards vnbrant."* Lest due attention should not be given to such intelligence, the writer, a few pages downwards, gives a list of their depredations, adding, however;—"besides a great nombre of villages pyles, and stedes, whiche I can not name." It commences with this agreeable repetition: "The borow and towne of Edenborough, with thabbeie called Holyroode house, and the Kynges palice adioynynge to the same. The towne of Lythe brent, and the hauen and pere destroyed."

This stately abbey, it appears, together with the choir and cross of its church, was at this time destroyed; and nothing left standing but the body of the church, which was a magnificent Gothic structure. The brazen font, belonging to it, was carried off by Sir Richard Lea, knight, captain of the English pioneers; who presented it to the church of St. Alban's in Hertfordshire. The English paid a posterior visit to Holyrood, during the minority of Edward VI., under the good Duke of Somerset, immediately after the fatal battle of Pinkie. The account given of this visit by Patten forms a curious morsel in the history of a military expedition. For he represents them as, on this occasion, coming more with the spirit of reformers, than with that of vengeful depredators. Patten gives this account of their visit. "Thear stode southwesterd, about a quarter of a mile from our campe, a monasterie, thei call it Holly roode abbey. Sir Water Bonham and Edward Chamberlayne gat lycense to suppress it: whearupon these commissioners making first theyr visitacion thear, they found the moonks all gone;"—(and who could wonder at it, as they would not reckon this martial visitation quite canonical?) "but the church and mooch parte of the house well couered with leade. Soon after, thei pluet [plucked] of the leade, & had down the bels (which wear but ii.); and, according to the statute, did sumwhat heaby disgrace the hous." The lead might be of some use to their reforming compatriots. "As touchyng the moonkes, bicaus they wear gone, thei put them to their penions at large; that is, to find their pensions by questing, or by collecting them for themselves."†

After this desolation, it was speedily repaired, and greatly enlarged. The palace then consisted of five courts; which have been thus described. The westmost, which was the outermost court, was larger than all the rest. It was bounded on the east by the front of the palace, which occupied the same space with its present front, and also extended farther south. The three remaining sides of the outer court were bounded by walls; and, at the north-west corner, there was a strong gate, with Gothic pillars, arches, and towers. The next court occupied the same ground with the present central court of the royal palace, and was surrounded with buildings. On the south, there were two smaller courts, also surrounded in the same manner; and another court on the east, bounded on the north by the chapel royal, on the west by a line of buildings covering the same space with the present east front of the palace; on the south, by a row of buildings which are now demolished; and on the north by a wall which divided it from St. Anne's yards.

Alesius, or Alesse, a native of Edinburgh, in his

* Expedition in Scotland, 1554, p. 7-11.

† Patten's Expedition into Scotland, p. 82.

description of this city, published at Basle 1550, says that "the monastery of Holyrood had adjoined to it a royal palace and most pleasant gardens, enclosed by the lake at the bottom of Arthur's seat." These gardens, it is admitted, were very extensive; but whether the language refers to Duddingstone-loch, or to the morass near Restalrig, is doubtful. In the immediate vicinity of the palace, as in that of Stirling, there was a Lions' den. For, according to Sir James Melville, after the murder of Riccio, "the Erles of Atholl, Bothwell, and Huntly,—eschaiped be louping down out of a window, towards the litle garding wher the lyons are ligit."

Great part of the palace having been burned by Cromwell's soldiers, A.D. 1650, it was ordered to be repaired at the Restoration. The present magnificent fabric was erected, according to a design furnished by Sir William Bruce, a celebrated architect in the reign of Charles II. It was at the same time ordered, that the church should be completely repaired; and, as it had been formerly the only parish-church of the Canongate, that it should be set apart as a chapel royal. "It was accordingly fitted up," says Grose, "in a very elegant manner. A throne was erected for the sovereign, and twelve stalls for the knights of the order of the Thistle; but, as mass had been celebrated in it in the reign of James VII., the populace, giving vent to their fury at the Revolution, despoiled the ornaments of the inside of the church, leaving nothing but the bare walls. They even broke into the vault which had been used as the royal sepulchre; in which lay the bodies of James V.; of Magdalen of France, his first queen; of the Earl of Darnley; and other of the monarchs and royal family of Scotland."* James VII. resided here,

while, being yet only Duke of York, he found it necessary to leave England, because of his extreme unpopularity there. He had occasionally the consolation of attending the trials, and of witnessing the tortures, of the persecuted Presbyterians, when they were subjected to "the Boots." The palace was at this time privileged with a press, whence a number of Popish books were issued. The level strip, at the bottom of the high ground behind the abbey, has received the name of the Duke's walk, from its being a favourite promenade of this infatuated man.†

Nothing, regarding the history of this palace, has given it equal interest with its being the more general residence of that beautiful queen, who, as she had been sent to France in her infancy, to avoid the rough courtship of Henry VIII. for his son, returned from it a widow, and almost an entire stranger to that people whom she was called to govern; and who, notwithstanding her natural acuteness and many accomplishments, was ill qualified for the task,—from her French education,—her early and permanent prejudices against that religion which by far the greatest part of her subjects had embraced,—from the powerful influence of the Guises, the most bigotted family in Europe,—from her inheriting the hereditary weakness of her name in being a prey to designing favourites,—from the barbarity of the manners of even her chief nobles, whose religion had not yet taught them to be "pitiful" or "courteous,"—and, perhaps, above all, from her being so unfortunate as to have a rival on the throne of England, who, unable to forgive Mary for her superiority in regard to personal charms, seems, from the hour of her return to Scotland, to have determined to subject her completely to her control, and, for this purpose, without any squeamishness about the means, to employ her own superior craft, whatever should be the consequence: who, in a word, while she professed great zeal for a purer creed, seems no farther to have regarded any form of religion, than as it might be most subservient to the purposes of her own contemptible envy, or unwomanly tyranny. To her, Holyrood-house, from being the scene of much joy, and festivity, and folly, soon became that of deep degradation and heart-rending sorrow. Here, in her very presence, under the protection of her own apartment, and while she was in a situation that would have called forth the exercise of tenderness in the heart of a savage, her nobles entered, at the instigation of the weak and ductile youth whom she had unluckily chosen as her husband, and, regardless of all her entreaties, ruthlessly shed the blood of her secretary. Nothing can possibly excuse such conduct on their part. If Rizzio was really guilty of the crime of which they accused him, they must have been able to bring forward proof of it; and the same power of party, which secured his murder, must have sufficed to accomplish his destruction in a legal manner. But although they had found it an easy matter to infuse matrimonial jealousy into the mind of the imbecile Darnley, there is reason to believe that the actors were themselves under the influence of quite a different species of jealousy,—that of the superior intellect of the more erudite Italian.

In the second floor are Queen Mary's apartments, in one of which her bed still remains. The embroidery on the bed and chairs is said to be chiefly the work of her own hands; and this is highly probable; as, from many specimens yet remaining, which are dispersed throughout the country, it is evident that neither she, nor her maids of honour, were strangers

* Grose's *Antiq. Scotl.* i. p. 28, 29. In a MS. of Sir Robert Sibbald's, preserved in the Advocates' library, is the following passage:—"Upon ye 24th of January, 1683, by procurement of the Bishop of Dunblayn, I went into ane vault on ye south-east corner of ye Abby Church of Hale-Rude; and yr were present, ye Lord Straaaver, and ye Earle of Forfारे, Mr. Robert Scott, Minister of ye Abby, ye Bishop of Dunblan, and several others. We viewed ye body of King James fyft of Scotland. It lyeth within ane wooden coffin, and is covereit we ane leaden coffin: there seemed to be haire upon ye head still. Ye body was twae lengths of my staffe, with twae inches mair, that is, twae inches and mair above twae Scots elns, for I measured the staffe with ane elnward afterwards. The body was colouriet black wt ye balsam that preservet it, which was lyke melted pitch. The Earle of Forfारे took the measure with hys staffe lykwis. Yr were plates of lead, in several long peeces, louse upon and about ye coffin, which carried ye following inscription, as I take it from before ye Bishop and Noblemen in ye yle of said church: '*Illustris Scolorum Rex Jacobus, ejus nom. V. Etatis sue anno XXXI. Regni vero XXX. Mortem obiit in Palatio de Falkland XIV. Decembris, Anno D—ni MDXLII. Cujus Corpus hic traditum est Sepulture.*' Next ye south wall, in a smaller niche, lay a short coffin, with ye teeth in ye skull. To ye little coffin in ye smaller niche, seemeth to belong ys inscription, made out of long plates of lead, in ye Saxon character. '*Magdalena Francis Regi Francia Primaginita, Regina Scolorum, Sponsa de Jacobi V. Regis D—i A—o MDXXXVII ob.*' Yr was ane peeces of a leaden croun, upon ye syde of whilk I saw two *fluor-de-luces* gilded; and upon ye north syde of ye coffin lay two children; none of the coffins a full eln long, and one of ym lying within ane wood chest, ye oyr only ye lead coffin. Upon ye south syde, next ye Kyngis body, lay ane great coffin of lead with ye body in it. The muscles of the thigh seemed to be entire, and ye balsam stagnating in some quantity at ye foot of ye coffin; yr appeared no inscription upon ye coffin, but was maist likelye King Henry Darnley's. And at the east syde of ye vault, which was at ye feet of ye other coffins, lay a coffin with ye skull sawen in twa, and ane inscription in small gold letters gilded upon ane square of ye lead coffin, making yt to be ye body of Deame Jean Stewart, Countesse of Argyle, with ye year of her death, I suppose 1585, or so, I do not well remember ye year." "When last we visited this once stately edifice," says Arnot, "we beheld in the middle of the chapel, the broken shafts of the columns which had been borne down by the weight of the roof, which fell in on the 2d December, 1768, through the extreme avarice of a stupid architect. Upon looking into the vaults, the doors of which were open, we found, that what had escaped the fury of the mob at the Revolution, became a prey to the rapacity of those who ransacked the church after it fell. In A.D. 1776, we had seen the body of James V., and some others, in their leaden coffins. These coffins were now stolen. The head of Queen Magdalen, which

was then entire and even beautiful, and the skull of Darnley, were also stolen; his thigh bones, however, still remain, and are proofs of the vastness of his stature."

† Arnot's *Edinburgh*, p. 309.

to industry. "Towards the outward door of this apartment, there are," says Arnot, "in the floor, large dusky spots, said to have been occasioned by Riccio's blood staining the floor, which washing of the boards has not been able to take out." Pennant, after particularizing "some good portraits," in the other rooms, remarks that "the gallery of the palace," which "takes up one side, is filled with colossal portraits of the kings of Scotland." These, indeed, except a very few, afford a far better proof of the fertility of the painter's fancy, than of the correctness of his taste. The gallery itself is 145 feet in length, by 25 in breadth.

The apartments possessed by the Duke of Hamilton as hereditary keeper of the palace, are all that remain of the old structure. In these lodged the young Chevalier during his residence in Edinburgh; and, a few weeks after, the Duke of Cumberland occupied the very same apartment, and the very same bed, which is still standing. After the defeat of the royal army at Falkirk, General Hawley thought proper to quarter his troops in the gallery of the palace; and these well-disciplined troops, as Arnot has remarked, thought they could not better manifest their loyalty to King George, than by defacing and hewing in pieces every representation of royalty; but the paintings have since been repaired, and are now inserted into the panels of the wainscot. Since that time these apartments afforded an asylum to Charles X. of France, then Monsieur, with a few of the emigrant nobles, betwixt 1795 and 1799, when there was no safety for them in their own country; and the same royal personage, when a second time driven from his indignant country, found refuge with his family here. In the year 1822, his Majesty, George IV., graced and gladdened the long-deserted halls of Holyrood with his royal presence. Here he held his courts, although he resided at Dalkeith, under the roof of the Duke of Buccleuch. Government has recently laid out a considerable sum of money in repairing and renovating this venerable structure, and enclosing it on two sides with a magnificent iron palisade.

The precincts of the palace, including the ground which was first enclosed by James V., to the extent of about 3 miles, afford a sanctuary for debtors. This, it would appear, has the same bounds with the ancient sanctuary belonging to the monastery, for the refuge and protection of criminals. This privilege is, perhaps, founded on the following clause in David's charter:—"I strictly forbid all persons from taking a poind [distrain] or making a seizure, in or upon the lands of the said Holy Cross, unless the Abbot refuse to do justice to the person injured." The person who fled to the abbey was thus secure, if the abbot chose to protect him: for what temporal judge would dare to accuse the holy abbot of injustice? Expressive of the modern indemnity, one who finds it necessary to take the benefit of the girth afforded by the environs of Holyrood-house, is ludicrously denominated an Abbey-laird.*

HOLYTOWN, a considerable village in the parish of Bothwell, Lanarkshire; on the line of post-

road to Edinburgh, by Whitburn and Mid-Calden. The population is chiefly engaged in mining or weaving. An extension church has recently been built here: see BOTHWELL.

HOLYWOOD, a parish in Nithsdale, Dumfriesshire, bounded on the north-west and north by Dunstons; on the north-east by Kirkmahoe; on the south by Dumfries in Dumfriesshire; and Terregles and Irongray in Kirkcudbrightshire; and on the south-west by Irongray. Its form—though, in a general sense, a stripe stretching from east to west—is very irregular, and of very various breadth. From a bend of the Nith below Lincluden on the east, to an angle nearly a mile beyond Speddock-hill on the west, the parish measures, in extreme length, $9\frac{3}{4}$ miles; but its breadth, at both extremities, is contracted nearly or altogether to an acute angle; from the eastern extremity, over $3\frac{1}{4}$ miles of its length, it gradually expands to 2½ miles; over $3\frac{1}{4}$ miles more, it averages $1\frac{1}{2}$ mile; and it now gradually contracts till it is only $\frac{1}{4}$ of a mile, and again expands considerably, and contracts before reaching the western termination. The superficial area is about 14 square miles. All the parish, except some soft-featured and inconsiderable hills on the west, is level, and forms part of the beautifully dressed and richly encinctured vale of lower Nithsdale. About 300 acres of moorland, and 350 of moss, embrown the gentle and limited uplands; and 120 of meadow, and about 550 of wood, variegate and beautify the fine stretch of lowlands; and all the rest of the surface, amounting to upwards of 7,500 imperial acres, is arable. So spirited and successful have been the labours of improvement, that though the parish, 30 years ago, was generally enclosed and under culture, its annual productiveness since that period has doubled in amount. Two rivers enrich the parish with their alluvial deposits, their fertilizing waters, and their fishy treasures; and are aided by several tributary rills, in finely embellishing its lovely landscape. The Nith comes down from the north, forms a tiny islet, which lies like a gem on its bosom at the point of its first touching the parish; runs $\frac{3}{4}$ of a mile eastward, 4 miles south-eastward, and $\frac{3}{4}$ of a mile westward, tracing the boundary-line over nearly the whole distance; and, during its progress, it forms another islet,—runs, in one place, so sinuously as to bound away from the parish, and then career a little into it, and then return to its post of "riding the marches,"—and makes a bend of exquisite beauty round the extreme point of the parish, opposite Lincluden, adorning that celebrated and lovely spot with a glittering crescent of waters. Though fordable at three different places, and tranquil in its current during summer, it sometimes comes down during winter with such speed and bulk as nearly defy the opposition of embankments in the more exposed grounds. The Cairn—or, as it is here usually called, the Cluden—approaches, in a considerable body of waters, from the north; runs, for upwards of a mile, along the north-east boundary; intersects the parish at the most contracted point of its breadth; and then, over a distance of 7 miles, flows onward to join the Nith, at the point of its debouching southward to leave the district. Within $\frac{3}{4}$ of a mile of the confluence, it makes serpentine folds, so as three times to enter the body of the parish and return to the boundary; and a considerable way farther up, it makes a detour, for a mile, into Kirkcudbrightshire; but, over all the rest of the last 7 miles of its course, it traces the southern boundary-line. Glengaber burn rises in the uplands of the parish, flows $1\frac{1}{4}$ mile through it, north-eastward; passes away, for $\frac{3}{4}$ of a mile, beyond its limits; and re-entering it on a south-easterly course, flows 2½ miles bendingly through it, and falls into the Cluden nearly opposite to Irongray church.

* This designation seems not to be of yesterday; for it occurs in a pretty old comic song called 'the Cock-laird.' In this, when our Scottish yeoman makes love to his sweetheart, her demands are rather high for him; as he informs her that, although he possesses as much land as would supply them with meal and barley, having no tenants, he has not money to throw away on vanities. She replies—

The Borrowstoun merchants
Will sell you on tick;
For we man have braw things,
Albeit they sou't break.
When broken, frae care
The fools are set free,
When we mak them lairds
At the Abbey, quoth she.

Five other rills, which are noticeable only in the aggregate, water the parish, and lose themselves in the Cluden. Both the Nith and the Cluden are excellent trout-streams, and produce salmon, herlings, sea-trout, and a few pike. But though the rivers become one at the extremity of the parish, each has its distinct species of salmon; that of the Cluden being considerably thicker and shorter in the body, very much shorter in the head, and, if of more than 2 days run, very observably darker in the colour than the salmon of the Nith.—Near the centre of the parish are limestone, and a hard red freestone; but they are not worked. On the lands which cover them considerable little blocks of lead ore have been turned up by the plough. The modern mansions are Newtonairs and Gribton-house on the Cluden; and Broomrig-house, Cowhill-house, and Pertract-house, on the Nith. The parish is intersected through its breadth by the turnpike, between Dumfries and Glasgow,—along the banks of the Cluden by that between Dumfries and Ayr,—and, in various directions, by 5 other roads. Two small villages, Holywood and Cluden, are both situated in the lower part of the parish; the former with a population of about 180; and both of recent origin. Dr. Bryce Johnston, the author of a work on the Apocalypse, was long minister of Holywood, and furnished the article on the parish in the Old Statistical Account. The only other noticeable name is that of a native, Charles Irvine, surgeon, who received from government a grant of £5,000 for the discovery of the method of rendering salt-water fresh. Population, in 1801, 809; in 1831, 1,066. Houses 187. Assessed property, in 1815, £7,359.

Holywood was anciently celebrated for its abbey. Though no traces of that pile are now visible, memorials of it exist in two excellently-toned bells, which continue to do duty in the belfry of the parish-church, and one of which has an inscription, intimating that it was consecrated by John Wrich* in the year 1154. The abbey stood within the area of the present burying-ground, and was built in the cruciform style. A handsome semicircular arch spanned the entrance; and a fine Gothic arch strode across the body of the edifice, supporting the oaken roof. The upper part of the cross was used as the parochial place of worship so late as 1779; but it was then—with a taste and a parsimony worthy only of a miser—taken down to furnish materials for the present parish-church. Before the abbey was built, and back to a very early age, there was on its site a hermitage, or a cell occupied by a hermit. An Irish recluse of the name of Congal, seems to have been the founder; and he bequeathed, both to the cell, and to the abbey which succeeded it, the name of Dercongall, signifying 'the Oakwood of Congal,'—the name by which even the parish itself is usually designated in the charters and bulls of the 13th century. The date of the founding of the abbey, though unascertained and disputed, must have been betwixt the year 1121, when the order of Premonstratensian monks, to whom it belonged, was established, and the year 1154, the date of the consecration of its surviving bell. The founder is said to have been John, Lord of Kirkconnel, who was of the family of Maxwell. In 1257, the monks had a litigation with their rivals of Melrose, respecting the tithes of Dunscore. In 1290, the abbot sat in the great assembly of the Estates at Brigham. In 1296, Dungal, the abbot de Sacrobasco, with his monks, swore fealty to Edward I. at Berwick. In 1365, the abbot and convent received from David II. a protection, and certain privileges "de sacra nemore." Thomas Campbell, the last abbot, was prosecuted

by the Regent Murray for assisting Queen Mary, after her escape from Lochleven; and he incurred forfeiture, in August 1568. The monks possessed and exercised complete jurisdiction over many lands in Nithsdale and East Galloway. In 1544, the rental of the monastery amounted to £700 Scots, 19 chalders 14 bolls of meal, 9 bolls of bear, and 1 chaldier of malt; but, at the Reformation, it was reduced by plunder to £395 18s. 8d. In 1587, what remained of the property, consisting of the churches and ecclesiastical property of Holywood, Dunscore, Penpont, Tynran, and Kirkconnel, was vested in the Crown; and in 1618, it was erected into a temporal barony, in favour of John Murray of Lochmaben, and his heirs. At the abbey of Holywood, in the reign of Robert I., Edward Bruce, the king's brother, and lord of Galloway, founded an hospital and a chapel, and endowed them with some lands in Galloway. The establishment was ruined during the wars of the succession; but in 1372, it was re-edified by Archibald Douglas, lord of Galloway, and endowed with the Gallowegian lands of Crossmichael and Troqueer.—Opposite the bend of the Nith, at the eastern extremity of the parish, but on the west side of the confluent waters of the Cluden, and hence strictly within Kirkcudbrightshire, though sending their shade, and throwing their attractions upon Holywood, stand the ruins of the ancient college, or provostry, of LINCLUDEN: which see.—Within $\frac{1}{2}$ a mile of the parish-church, are 11—and till recently there were 12—large whin stones, arranged in the form of a Druidical temple, and circularly enclosing a space of about 80 yards in diameter. A grove of oak trees, with which this temple had intimate connexion, seems anciently to have stretched away from the spot 6 or 8 miles north-westward, into the parish of Glencairn; and was so far traceable half-a-century ago, that Dr. Bryce Johnston dug up many of its roots, and recorded a tradition of its having been still in existence in the preceding age; and this sacred grove, this "holy wood," appears to have given name to the parish.

Holywood is in the presbytery and synod of Dumfries. Patron, Crichton of Skeoch. Stipend £234 14s. 4d.; glebe £10 10s.; unappropriated teinds £234 14s. 4d. The parish-church was built in 1779, and has a plain square tower. Sittings 530. Before the Reformation, the church belonged to the abbey of Holywood, and was served by a vicar. There are 3 parochial schools: the first has an average attendance of 75 scholars, and a salary of £25 6s. 8d.; the second, an average attendance of 25 scholars, and a salary of £16; and the third, an average attendance of 35 scholars, and a salary of £10 6s. 8d.,—the salaries in each case being augmented with the fees. A non-parochial school in the village of Holywood, is wholly a school for girls.

HOPE (THE), a river in the parish of Tongue, Sutherlandshire. It may be regarded as a continuation of Strathmore water, which rises in Glengollie. It runs a course of about 11 miles due north, when it enters Loch Hope; whence, after a course of about a mile, it falls into the sea 3 miles east of Loch Eribol. There is good salmon-fishing here.

HOPE (LOCH), a sheet of water in the parish of Durness in Sutherlandshire, about 6 miles in length by half-a-mile in breadth. Its mean depth does not exceed 6 fathoms, and it is gradually filling up by deposits from the water of Strathmore which flows into its head. It has no claims to picturesque beauty.

HOPEMAN, a recently formed harbour on the Moray frith, situated between the harbour of Burchhead to the west, and Lossiemouth to the east. There are 17½ feet water up to good berths in the harbour, touching the pier at spring-tides; and the

* Probably the abbot.

harbour is completely sheltered, having an entrance of only 36 feet, at right angles to the coast, leading from the outer to the inner harbour. There are 5 feet at low water spring-tides at the end of the pier, thus affording communication with steamers at all times of tide. At the top of the outer harbour is a sandy beach, where vessels may lie in a northerly gale, if unable to clear the land, with little or no risk to either vessel or cargo. Fishing-boats are on the fishing-ground when a mile outside the harbour or less, and all kinds of fish caught on the coast are found close to the entrance of the port. Some curious caves have recently been discovered here: see one of our notes to article ELGIN.

HOPETOUN-HOUSE, the princely seat of the Earl of Hopetoun, in the parish of Abercorn, Linlithgowshire. It stands on a beautiful terrace, overlooking the estuary of the Forth, 3 miles from South Queensferry, and 12 from Edinburgh. This magnificent pile, commenced by the famous architect Sir William Bruce, and finished by Mr. Adam, may compare, in the graces of its architecture, with most palaces in Great Britain; and, in the scenic opulence of its demesne, and the gorgeous landscape of wood and vale, of burnished sea and emerald upland which it surveys, it has scarcely a superior, and but few rivals. In August 1822, Hopetoun-house was the last festal-hall of royalty in Scotland; George IV. having been entertained there previous to his embarkation at Port-Edgar, in the vicinity, for England. The Earls of Hopetoun are a junior branch of the family of Hope of Craighall and Pinkie. Sir Thomas Hope, their ancestor, who himself held the office of Lord Advocate, gave no fewer than three sons as senators to the college of justice,—Sir James Hope, his eldest son, who was appointed a senator by the title of Craighall in 1632 and 1641,—Sir Thomas Hope, his second son, who was appointed in 1641, by the title of Lord Kerse—and Sir John Hope, who was appointed in 1649, by the designation of Lord Hopetoun. In 1678, the last of these, Sir John, purchased from Sir William Seton the barony of Abercorn; and about the same time or earlier, he was appointed hereditary sheriff of Linlithgowshire. Having perished in 1682, in the same shipwreck which nearly proved fatal to the Duke of York, his sheriffalty lay in abeyance for his son, Charles, who was born only in the preceding year. In 1702, Charles became sheriff in his own right; and in 1703, was created Earl of Hopetoun, Viscount Airthrie, and Lord Hope. In 1742, he was succeeded in his office and titles by his son John. In 1809, James, the third Earl, was raised to the peerage of Great Britain by the title of Baron Hopetoun; and he was succeeded by his half-brother, the renowned General Sir John Hope, created, in 1814, Baron Niddry of Niddry castle, in Linlithgowshire. This distinguished nobleman, and hero of an hundred battles—whose exploits figure largely in history, and are commemorated by monuments in Edinburgh, in West Lothian, in East Lothian, and in Fifeshire—died in 1823, and was succeeded by his son John, the fifth Earl.

HORDA, one of the smaller Orkney islands, lying in the Pentland frith, between South Ronaldsay and Swinna.

HORSE (THE), a small island in the frith of Clyde, near the coast of Ayrshire, opposite Ardrossan harbour.

HORSESHOE, a safe and commodious harbour in the island of Kerrara, near Oban.

HORSE ISLAND, a small island of Orkney, about 3 miles east of Pomona.

HOUNA, a cape on the coast of Caithness, 2 miles west of Dungisbay-head: see **CANISBAY**. A

mail-boat now crosses and recrosses the frith each day between Houna and the Orkneys; and a mail-gig is despatched to Houna from Wick, and to Wick from Houna with the mail-bag every day in the week. The establishment of these daily conveyances will prove of immense importance to the northern counties.

HOUNAM, a parish in the east of Roxburghshire; bounded on the north and east by Morebattle; on the south-east by Northumberland; on the south-west by Oxnam; and on the west by Jedburgh and Eckford. It approaches, in form, a parallelogram, but with irregular outline; and measures, in extreme length, from East Grange on the north to Blackhall hill on the south, 7 miles,—in extreme breadth, from the boundary east of Heatherhope hall on the east to the boundary west of Smaileluagh on the west, $4\frac{1}{2}$ miles,—and, in superficial area about $22\frac{1}{2}$ square miles, or 14,458 acres. A broad range of the Cheviot hills runs along the south, and sends spurs and offshoots so far inland as to make the whole parish hilly and pastoral. Where the hills are boldest, the surface is a mountainous undulation, beautifully rounded and verdured in its elevations, wearing occasionally a russet dress of heathy and moorland soil, and sinuously cleft into deep narrow dells, or romantic stripes of valley, watered by garulous and sparkling brooks. In the entire parish, not quite 600 acres are arable. At the north-eastern extremity, on the boundary with Morebattle, rises Hounam-Law, the loftiest elevation of all the Cheviots except that from which the ranges take their name, conical in form, 9 miles in circumference at its base, 1,730 acres in its superficies, 1,464 feet in height, accessible up its gently rising sides on horseback, and commanding, from its flat grass-clad summit, a brilliant view of Teviotdale and the Merse, till the far-spreading landscape sinks into the German sea. From this mountain, and the summits which concatenate with it along the east and south, the district declines in elevation toward the west and north-west, till, at these extremities, it becomes little more than a rolling plain. Kale water comes down upon the parish from the south, and traverses it over a distance of 6½ miles, nearly on the line of its greatest length; Capehope burn rises in three headwaters on the southern boundary, and runs 4 miles northward to the Kale. Both streams have alternately a gravelly and a rough and rocky channel, and tumble along with a strength and velocity befitting their mountain origin and nurture; and a short way after their confluence, they bound over a rocky precipice, and form a little cascade called “the salmon leap.” In the rocks of the parish, which are of the porphyry formation, are found beautiful jaspers and agates, and veins of grey amethyst and rock crystal. Whoever combines the tastes of a mineralogist and an angler will find Hounam an opulent and delightful retreat. But the district is chiefly and characteristically remarkable for its pasturing and breeding of sheep. About 13,000 of the best species of the famed Cheviot sheep usually occupy its pastures. Half-a-century ago, they were known and celebrated as a distinct variety under the name of the Kale-water breed, and recently they have been improved by crossing a portion of the ewes with Leicester rams. The parish produces annually about 39,000 pounds of wool. A Roman causeway, or “street,” as it is here usually called, forms for 6 miles the western boundary-line; and it can be traced from Borough-bridge in Yorkshire, away through Roxburghshire northward, past St. Boswell’s green, bendingly toward the Lothians. On the hills in its vicinity in the parish are the traces of encampments and semi-circular intrenchments. But the largest and most

remarkable camp is on the summit of Hounam-Law. Little more than half-a-century ago, a large iron gate, taken down from the camp, was to be seen at Cessford castle, belonging to the Duke of Roxburgh. Greenhill-house, delightfully situated among the hills toward the south, and surrounded by a tastefully arranged and decorated demesne, is a seat of frequent retreat of the Duke of Roxburgh. The only other mansion is Kirkrow, the property of Walter Dickson, Esq. The village of Hounam, though of some antiquity, is small, having only about 50 inhabitants; but it has recently received 2 or 3 architectural additions, and may not improbably become a place of some rural importance. A little terrace of houses, in the immediate vicinity of the village, though not reckoned to belong to it, is whimsically called Thimble-Row, in allusion to the original proprietor having been a knight of the needle. The village is pleasantly situated, on the east bank of the Kale, at the base of gently ascending rising grounds, which lead off to a hilly and almost mountainous back-ground; and it maintains regular communications by carriers with Kelso. Up the vale of the Kale, an excellent road traverses the parish lengthways; and both it and some subordinate roads are provided with good bridges. Population, in 1801, 372; in 1831, 260. Houses 49. Assessed property, in 1815, £5,081.—Hounam is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, Sir George Warrender, Bart. Stipend £205 12s. 8d.; glebe £11. Unappropriated tithes £1,005 17s. 3d. From the 12th century till the Reformation, the church belonged to the monks of Jedburgh, and was served by a vicar. Schoolmaster's salary £34 4s. 4½d., with £11 fees, and £7 other emoluments.

HOUNDWOOD, a *quoad sacra* parish in the Lammermoor district of Berwickshire, included within the limits of the *quoad civilia* parish of **COLDINGHAM**: which see. The parish was erected in 1836. According to an ecclesiastical survey in 1837, it then contained 809 churchmen, 449 dissenters, and 4 persons who made no profession of religion,—in all 1,262. The church was built in 1836, at the cost of £800. Sittings 500. Stipend £66 15s. A chapel belonging to the Establishment was built 46 years ago, on the estate of Renton, and has 200 sittings; but, since the erection of Houndwood church, it has been abandoned. There are in the parish two small villages,—one of which, Preston, has a population of about 230.

HOUNSLOW, a village or hamlet, in the parish of Westruther, Berwickshire, 30 miles from Edinburgh, of comparatively recent date, and containing a population of about 100.

HOORN (LOCH), an arm of the sea on the west coast of Inverness-shire, projected from the sound of Sleat, opposite the south-east end of Skye. It is nearly 5 miles broad at its mouth, and is navigable for 20 miles. Macculloch says that this inlet of the sea forms three distinct turns, nearly at right angles to each other. The characters of these three parts are different, and it is the most interior which contains the peculiar scenery that renders Loch-Hourn so remarkable. About the middle it appears to ramify into two branches; but one of these soon terminates in a deep and spacious bay, surrounded by magnificent but wild mountains. The other branch is continued for some miles, and from one end to the other displays a rapid succession of scenes no less grand than picturesque, and not often equalled in Scotland, but of a character so peculiar that it would be difficult to find a place to which they can be compared. The land, on both sides, is not

only very lofty, but very rapid in the acclivities; while, from the narrowness of the water, compared to the altitude of the boundaries, there is a sobriety in some places, and, in others, a gloom thrown over the scenery, which constitutes, perhaps, the most peculiar and striking feature of this place. Where this arm of the loch terminates, a wild and deep glen conveys the road towards Glengarry. Pennant says, "The scenery that surrounds the whole of this lake has an Alpine wildness and magnificence; the hills of an enormous height, and for the most part clothed with extensive forests of oak and birch, often to the very summits. In many places are extensive tracts of open space, verdant, and only varied with a few trees scattered over them: amidst the thickest woods aspire vast grey rocks, a noble contrast! nor are the lofty headlands a less embellishment; for through the trees that wave on their summit, is an awful sight of sky, and spiring summits of vast mountains. It is not wonderful, that the imagination, amidst these darksome and horrible scenes, should figure to itself ideal beings, once the terror of the superstitious inhabitants: in less-enlightened times a dreadful spectre haunted these hills, sometimes in form of a great dog, a man, or a thin gigantic hag called *Glas-lich*. The exorcist was called in to drive away these evil genii. He formed circle within circle, used a multitude of charms, forced the dæmon from ring to ring, till he got it into the last entrenchment, when, if it proved very obstinate, by adding new spells, he never failed of conquering the evil spirit, who, like that which haunted the daughter of Raguel, was

With a vengeance sent
From Media post to Egypt, there fast bound."

HOUSE, a small island in Shetland, united by a bridge to the island of Barra. It lies in the parish of Bressa, and contains nearly 150 inhabitants. It is 3 miles long, and about half-a-mile broad.

HOUSEHILL, a hamlet in the parish of Paisley, in Renfrewshire. An iron company have recently erected an iron smelting-furnace here, the first that has been attempted in Renfrewshire, though we hope it will be followed with many others. In place of being erected on the surface of the ground, and requiring the application of steam-power to raise the men and materials, the furnace is sunk below ground, and the coal, ironstone, and lime used in the smelting-operations, are wheeled along the surface of the ground, on a line of rails, and thus thrown in with far greater ease than is the case in ordinary furnaces. There is an extensive freestone quarry here. Besides the smelting of iron, and the mining of coal, the company are making both fire and common brick on an extensive scale. The mansion-house of Househill, a modern building, stands between the rivulets Levern and Brock, a little above their confluence. This estate, which for a long time belonged to a family named Dunlop, was lately purchased by William Galloway, Esq., Paisley.

HOUSTOUN AND KILLALLAN, originally separate parishes in Renfrewshire, but so intermixed, that the people in one quarter of Killallan were obliged, if they kept the high-road, to pass close by the gate of Houstoun church to attend public worship at Killallan, and those in another quarter had to travel across the middle of Houstoun parish for the same purpose. From this consideration, as well as the insufficiency of the stipends, and the smallness of the population, these parishes were, in the year 1760, formed into one parish, and the church at Houstoun was constituted the only place of worship for the district, after the death, or removal otherwise, of either of the incumbents. The parish thus

formed—which is now generally called *Houstoun*—is bounded on the south by the river Gryfe, which separates it from Kilbarchan; on the west by Kilmalcolm; and on the north and east by Erskine. It is about 6 miles in length and 3 in breadth, and contains 7,500 acres. In the upper or western district the soil is thin and dry, and the surface is uneven, mixed with rocks and heath, but affording in the intervals good pasturage. About the old church of Killallan there is a finely sheltered track of fertile ground. The lower district is among the flattest and most fertile land in the county, the soil being partly clay and partly loam. Here there is a moss of about 300 acres, which, however, is every year becoming less, from cultivation,—the land thus reclaimed producing good crops. The minerals are, limestone, whinstone, coal, and sandstone. Besides the Gryfe, there are two rivulets, called *Houstoun burn* and *Barochan burn*. The spinning of cotton, which was begun in 1792, is carried on at 6 mills, 5 of which are on the Gryfe, and 1 on *Houstoun burn*. On the last mentioned stream an extensive bleachfield has existed for more than half-a-century. In consequence of these works, an increased population, collected from all quarters, has gradually been formed. *Houstoun* was anciently called *Kilpeter*, that is, ‘the Cell of Peter,’ the tutelary saint, and whose name is preserved in a well to the north-west of the church, in a burn passing hard by, and in a fair, called *St. Peter’s day*, which was annually held in the village in the month of July. In the reign of Malcolm IV. (1153–65) Hugh of Padvinan obtained a grant of the barony of *Kilpeter* from Baldwin of Biggar, sheriff of Lanark. The barony was now called, from its proprietor, Hugh’s-town, corrupted into *Houstoun*, which, in process of time, when surnames came into use, was assumed as the surname of his descendants. These *Houstouns* were the chiefs of that name, and were for centuries of great consideration in Renfrewshire. They repeatedly received the honour of knighthood, and, in 1668, a baronetcy was conferred upon them. About the year 1740, after the family had held the estate for nearly six centuries, it was sold by Sir John *Houstoun* to his relation, Sir John Shaw of Greenock, and by him, soon after, to Sir James Campbell. From Sir James’s heirs (his sisters) it was purchased by James Macrae, ex-Governor of Madras, who left it to James McGuire, eldest son of Hugh McGuire of Drumdow, in Ayrshire, on condition that he should bear his name and arms. This James McGuire, or Macrae, was succeeded by his son James, who, in 1782, sold the estate to Alexander Speirs of Elderslie, grandfather of the present proprietor. The frequent transmissions thus made in the course of 40 years contrast strikingly with the long tenure on the part of the *Houstouns*. The castle of *Houstoun* was a large and ancient structure, surrounded with woods and gardens, and stood upon an eminence overlooking the extensive plain to the eastward. It formed a complete square, with a large area in the inside. There was a high tower on the north-west corner, which was the oldest part of the building, with a lower house joined to the east end of the tower, having vaults below, and a long and wide paved hall above, with antique windows in the front, and without plaster on the roof. The timbers of the roof were arched, and made of massy oak. The other parts of the building appeared to be additions made as they became necessary. On the front to the south were two turrets, between which was the main entry into the area, arched above and secured by a portcullis. This edifice—which was so interesting as an old baronial residence, and which was so much calculated to dignify the surrounding scen-

ery—remained entire till the year 1780, when the whole, except the east side, was barbarously demolished by Mr. Macrae, who, in the true spirit of Utilitarianism, caused the stones to be employed in building the new village of *Houstoun*.—On the north-east of this parish is the estate of *Barochan*, with an old mansion-house, pleasantly situate upon a hill, and well-sheltered with wood. This estate belongs to a very ancient family, named Fleming, who occur so far back as the reign of Alexander III., (1249, 86,) when William Fleming (“*Flandrensis*”) of *Barochan* appears as a witness to a charter granted by the Earl of Lennox. One of his successors, William (or Peter) Fleming of *Barochan*,* was killed at Flodden, and it is said that six of his sons fell with him, a 7th son succeeding to the estate. This William Fleming’s tersel beat the falcon of James IV., upon which the king took the hood from his favourite bird, and put it on the tersel. The hood, and a pair of silver spurs which belonged to Fleming, are still preserved by the family. The hood was ornamented with precious stones, which have gradually disappeared, and now only a few seed pearls remain. Falconry was long practised at *Barochan*. John Anderson, falconer on this estate, was present, in appropriate costume, under the patronage of the Duke of Athol, at the coronation of George IV.—On the left bank of the Gryfe, at the eastern angle of the parish, is the estate of *Fulwood*, which contains land of remarkable fertility. It was acquired by Mr. Speirs of Elderslie, about the year 1777, soon after which the mansion-house, a large modern building, was demolished. *Blackburn*, in this neighbourhood, was acquired by Mr. Speirs at the same time. North-west of *Fulwood* is *Boghall*, now belonging to Mr. Alexander of Southbar. Part of the estate of *Houstoun* now belongs to Mr. Cunningham of Craigends. The number of landed proprietors in the united parish, resident and non-resident, having £5⁰ and upwards of yearly rent, is about 9. Mr. Fleming is the principal resident one.—With regard to antiquities we have several to notice. On the estate of *Barochan* there stands a monument, called *Barochan cross*, which is evidently referrible to a remote period. It consists of a stone cross, which has been neatly hewn, set in a pedestal of undressed stone: the height, pedestal included, being about 11 feet. No letters appear, but there is much wreathed work all round, and two compartments on the east side, and two on the west, containing various figures. In the upper compartment of the east side four persons are represented, clad in garments reaching to the ground; and in the lower one other four appear, bearing spears, or other weapons, in their right hands. In the upper compartment of the west side a combat betwixt a knight on horseback and a person on foot is distinctly traced. The knight is in the act of couching his lance, and the footman is prepared to meet the attack on his shield. In the under compartment there are three figures, the centre one being less in stature than the other two, between whom he appears to be the subject of dispute, the figure on the right evidently interposing a shield over the head of the little fellow to save him from the uplifted weapon of the one on the left. The sculpture is much defaced by the weather, which probably led to the vague and erroneous statement of Semple, that the objects represented are “such as lions and other wild beasts.” When, by whom, or on what occasion this monu-

* In Crawford’s Description of Renfrewshire, and in the Old Statistical Account, this laird of *Barochan* is called William; whereas in the New Account he receives the name of Peter: to reconcile which discrepancy it is conjectured, in the latter work, that he had two proper names; but we think this unlikely, as gentlemen of his rank did not bear more than one proper name at the time in question.

ment was erected, there is no record: the warlike appearance of the figures forbids the supposition, entertained by some, that it was a devotional cross for travellers. An engraving of it forms the frontispiece of Hamilton of Wishaw's Description of the shires of Lanark and Renfrew, printed by the Maitland club, in 1831. Appended to that work there is an article, written by Motherwell, in which it is ingeniously conjectured that this was the place where Somerled, Lord of the Isles, was defeated and slain in 1164, and that the monument is commemorative of that event; but as the chronicles of Man and of Melrose distinctly state, that Somerled landed at Renfrew, and that his defeat and death occurred at that place,—“*ibidem*,”—and as Barochan is 7 miles distant from thence, inland, the conjecture seems groundless. There is a local tradition which ascribes the erection of this memorial to a defeat sustained here by the Danes. Whatever may have been the occasion, the sculptures evidently relate to some warlike achievement; and that a battle did occur here is rendered more probable by the fact, that there have, from time to time, been disinterred, in this neighbourhood, many stone-coffins, containing quantities of human bones, the remains, it may be supposed, of those who fell in the conflict.—In an aisle adjoining to the east end of Houstoun church, there are several sepulchral monuments, respecting one of which the following curious information is given in the Old Statistical Account: “Upon the south wall of the aisle, there is a large frame of timber, on which [are] two pictures, seemingly done with oil colours, but much worn out. On the right side a man in complete armour, resembling that of a knight templar, with an inscription in Saxon characters over his head, some words of which are effaced,—‘*Hic jacet Dominus Joannes Houstoun de eodem, miles, qui obiit anno Dom. m^o.cccc^o.*’ On the left hand a picture of his lady, also much effaced, and over her head the following inscription: ‘*Hic jacet Domina Maria Colquhoun, sponso quondam dicti Joannis, quæ obiit septimo die mensis Octobris, aⁿ. Dom. m^o.cccc^o. quinto.*’ This passage having attracted the attention of Pinkerton, he copied it in his Scottish Gallery, published in 1799, accompanied by the following remarks: ‘Thus it appears that in the commencement of the 15th century, A.D. 1400, 1405, painting was so prevalent in Scotland as to be employed in funeral monuments, not only of great peers, but even of knights of no great eminence nor fame.” In the aisle, above mentioned, there is a tomb of neat workmanship, in freestone, containing two statues, the size of the life, reclining under a canopy. The one is an effigy of Sir Patrick Houstoun, who died in 1450, and the other of his lady, Agnes Campbell, who died in 1456. The knight is dressed in a coat of mail, his head lying on a pillow, and his feet on a lion, which holds a lamb in his paws. The lady is dressed as in grave-clothes. The hands of both are elevated, as in a supplicating posture. Round the verge of the tomb there is an inscription, in Saxon letters, now much effaced.—The Cross of Houstoun is an octagonal pillar, 9 feet long, having a dial fixed on the top, crowned with a globe; the pedestal forms a kind of platform, with two steps all round. This cross is supposed to have been set up by the knights of Houstoun.—At Killallan is an old building now deserted, which formed the parish-church of that district. The font stone for holding the holy water long stood without the choir door, after the Reformation, but it is now built in the

churchyard wall. Killallan seems to be a modification of Kilfillan, ‘the Cell of Fillan,’ the tutelary saint. This belief is supported by an inscription on the church bell, and by some names still preserved. Thus, in the vicinity of the church, there is a large stone, with a hollow in the middle, called Fillan’s seat; and near that there is a spring of water, called Fillan’s well, issuing from under a rock shaded with bushes, in which the country women used to bathe their weak and ricketty children, leaving on the bushes pieces of cloth as offerings to the saint. Such was the force of ancient prejudice, that this superstitious practice was persevered in till the end of the 17th century, when the minister put a stop to it by filling up the well with stones. A fair held annually in January is called Fillan’s day.—The population of the united parish was, in 1801, 1,891; in 1831, 2,745. Houses, in 1831, 238. Assessed property, in 1815, £6,996.—The parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patrons, Speirs of Elderslie, and Fleming of Barochan, alternately. The church was built in 1775; sittings 800. Stipend 8 chalders of oatmeal, and 8 chalders of barley, besides a manse and glebe.—A Roman Catholic chapel, fitted to contain 400 persons, was erected in 1841, the congregation being principally composed of Irish Catholics, or their descendants, employed at the cotton-mills and other works in this quarter.—Salary of parochial school-master £24 4s. 2½d., with £24 school-fees, and £9 of other emoluments. There are 4 other schools, with one teacher to each.

The principal village in the united parish is Houstoun, nearly 7 miles north-west of Paisley. It has arisen since 1781, when it was planned, and began to be feued out in standings for building upon by Mr. Macrae, then proprietor of the barony. It chiefly consists of two streets, one on each side of Houstoun burn, and has a neat appearance, the houses being of good mason work, and generally two stories in height and slated. The old village of Houstoun, a little farther down the rivulet, was mostly demolished by Mr. Macrae when the new one was commenced.—There is a library in the village.—Fairs are held yearly in May for milch cows, young cattle, and Highland cattle.

HOULTON-HOLM, a small pasture island of the Orkneys, about 2 miles south of Pomona island.

HOWAN SOUND, a strait of the Orkneys, between the islands of Eglisay and Rousay.

HOWGATE, a village 11 miles south of Edinburgh, on the road between Edinburgh and Dumfries, in the parish of Penicuik, Mid-Lothian. Here is an United Secession meeting-house, built about the year 1750: see PENICUIK. Population, 120.

HOWWOOD, a village in the parish of Lochwinnoch, Renfrewshire, situate on the high road from Paisley to Ayrshire. The population is about 200. Of late years a practice has been introduced of Anglicising the name of this place, and spelling it Hollowwood, which has been adopted in the New Statistical Account of the parish. This innovation ought to be discouraged, not only as being in bad taste, but also as leading to doubt and confusion in identifying the name of the place.†

HOY, one of the Orkney islands, and a parish;

† In the Railway Companion, by J. Warden, published by J. Morrison, Glasgow, 1841, it is stated (p. 43.) that the village of Howwood was “formerly called Houstoun.” This is a mistake,—the village never had any other name than the present one. It is evidently confounded with Houstoun, which is a different place about 6 miles to the northward. Another error in the same book consists in stating (p. 44.) that Macrae, governor of Madras, who died in 1744, “purchased the estate of Howwood;” whereas it was the estate of Houstoun that he purchased. See HOUSTOUN.

* Crawford and Semple confuse the names and the dates, when noticing this monument, and the painting above mentioned.

formerly a rectory, united to the ancient vicarage of Græmsay. Population, in 1801, 244; in 1811, 282; in 1831, 321. Houses, in 1831, 70. It is $2\frac{1}{2}$ miles south of Stromness, and enjoys weekly communication by steam with Leith and the north-eastern coast of Scotland. This island is about 14 miles in greatest length, and about 5 in greatest breadth. Almost the whole of it is occupied by three large hills, ranged in the form of a triangle, of which that to the north-east, called the Wart hill, is the largest, rising from a plain, with a broad base, to the height of 1,600 feet above the level of the sea. Except along the north shores—which are bordered with a loamy soil and a rich verdure—the soil is composed of peat and clay; of which the former commonly predominates. The ground destined for the production of grain, and that appropriated for feeding cattle, bears but a very small proportion to what is covered with heath and allotted for sheep-pasture. The moors abound with grouse and other game. The climate is healthy. The great disadvantage under which this parish labours is the scarcity of fuel. There are few monuments of antiquity in this island. The ‘Dwarfie stone,’ of which so many ridiculous tales have been so often told, has perhaps no just claim to be ranked in that number. This stone, which lies on the south-east of the Wart hill, on the brink of a valley, is a sand or freestone of the same nature with those on the rock above it, from which it seems to have been broken off either by the hand of man or its own gravity, and to have tumbled to its present site, where it has been afterwards hollowed out into the whimsical form which it now bears. Its greatest length is 32 feet; its breadth 17; its thickness above the surface of the earth not less than $7\frac{1}{2}$ feet; and the inside of it is divided into three apartments, in one of which is something like a bed, 5 feet 8 inches long, by 2 feet broad. The other is a sort of small room; and between them, there is a space that seems to have been intended for a fire-place, as there is a hole cut in the roof, or upper part of the stone, for the smoke perhaps to ascend through. To give it still more the resemblance of a dwelling, a stone of the same nature, and nearly of the same shape, has been rolled down, and placed in such a position as to serve the purpose of a door. Tradition, and some credulous authors, affirm it to have been the habitation of a giant and his consort. In all probability it has been the cell of some hermit. The township of Rackwick is beautifully situated in the extremity of a valley to which it gives name, being closed in on two sides by very lofty precipices of sandstone, but opening with a fine bay towards the western entrance of the Pentland frith, so that every vessel which passes the frith must necessarily come into view here. The inaccessible crags on this shore are the habitation of the ern and the black eagle, which reign among the desolate cliffs and noiseless valleys of Hoy. From the house of Melsetter to the romantic fishing-hamlet of Rackwick, is an uninterrupted series of stupendous rock-scenery, occasionally exceeding 500 feet in height,—sometimes perpendicular and smooth,—in other places rent, shivered, and broken down in huge fragments,—occasionally overhanging the deep, and frowning on the stormy surges of the Pentland frith. From Rackwick to Hoymouth, facing the Atlantic ocean, this rock-scene is continued without any interruption.

See Hoy’s old Man; * whose summit bare
Pierces the dark blue fields of air!
Based in the sea, his fearful form
Glooms like the spirit of the storm;

* A singular pillar of rock, so named by mariners, who fancy that it bears a resemblance, in certain points of view, to an old man.

An ocean Babel, rent and worn
By time and tide—all wild and lorn;
A giant that hath warred with heaven,
Whose ruined scalp seems thunder-riven,—
Whose form the misty spray doth shroud,—
Whose head the dark and hovering cloud;
Around his dread and lowering mass,
In sailing swarms the sea-fowl pass;
But when the night-cloud o’er the sea
Hangs like a sable canopy,
And when the flying storm doth scourge
Around his base the rushing surge,
Swift to his airy clefts they soar,
And sleep amid the tempest’s roar,
Or with its howling round his peak
Mingle their drear and dreamy shriek!

Towards the south and east is an extensive cultivated plain, the shores of which form part of the fine and commodious harbour of Longhope, well-known as a place of safe retreat for vessels passing through the Pentland frith, so famous for the rapidity of its current, and so great a terror to mariners of almost every country. During the last war it was no uncommon thing for a fleet of upwards of a hundred large vessels to set sail together from this harbour, and a fine sight it was to behold so many ships spreading their canvass to the breeze, and moving majestically along the shores of the island.—Hoy is the most interesting district of Orkney, either to the botanist or the ornithologist; and well-deserves the attention of any naturalist who may have an opportunity, leisurely to examine it at different seasons of the year. This island is entirely composed of sandstone, sandstone flag, schistose clay, and, in many parts, a rock of wacken.—The parish of Hoy and Græmsay is in the presbytery of Cairston, and synod of Orkney. Patron, the Earl of Zetland. Stipend £158 6s. 8d.; glebe £8. There are two parish-churches, one in Hoy built about 1780; sittings 182; and one in Græmsay, sittings 182. The minister officiates two Sabbaths in three at Hoy. In Hoy there is a parochial-school, and in Græmsay a school supported by the society for propagating Christian knowledge.

HULMAY, a small island on the west coast of Lewis.

HULMITRAY, one of the smaller Hebrides, near Harris.

HUMBIE, a parish in the south-western extremity of Haddingtonshire, consisting of a main body, and a small detached section. The main body is nearly a parallelogram, stretching north-west and south-west, measuring 5 miles in length, and nearly 3 in average breadth; and is bounded on the north-west by Ormiston; on the north-east by Salton, Bolton and Yester; on the south-east by Berwickshire; and on the south-west by Soutra and Edinburghshire. The detached part is wholly embosomed in Edinburghshire, measures $1\frac{1}{2}$ mile by $\frac{3}{4}$, and lies about a mile distant from the main body. The surface, at the south-eastern and south-western extremities of the parish, climbs up to the summits of the highest range of the Lammermoor hills, and, for some distance inward, descends in a somewhat rapid declivity, and then stretches away in a gently inclined plain to the northern boundaries. In the immediate vicinity of its south-eastern angle rises Lammerlaw, the eminence which gives name to all the Lammermoors, and towers aloft as the king-mountain of the whole range. On the highest grounds, and for some way down the declivity, the parish is strictly pastoral. But in its lower grounds it partakes, in a degree, of the luxuriant and highly-cultivated character for which Haddingtonshire is distinguished as a county; and, as the result of recent and very vigorous agricultural improvements, sends the plough and its attendant implements of culture, a considerable way up the acclivity of the Lammermoor district. Sheltering plantations run

athwart nearly two-thirds of the area; and, near the north-east angle, a plantation of oak, birch, and other trees, covering several hundreds of acres, presses on the boundary with Salton, and forms, with a large contiguous plantation in that parish, a compact and extensive forest. This wood constitutes a beautiful feature on the foreground of the brilliant and far-stretching landscape of the Lothians, to a tourist approaching the district over the Lammermoor hills. Keith water, or the longest head-stream of the Tyne, comes new-born from its source upon the detached portion of the parish, flows along its northern boundary, and through the intersecting part of Edinburghshire to the east, traces for half-a-mile the boundary of the main-body, and then traverses the parish $1\frac{3}{4}$ mile north-eastward, and $1\frac{1}{2}$ mile northward, and leaves it at its north-east angle. Humber burn rises near the south-eastern boundary among the highest of the uplands, and intersects the parish $3\frac{3}{4}$ miles nearly through its middle, flowing past the parish-church, and making a confluence with Keith water a little above Keith mill. Birns burn rises 5 furlongs east of the source of the former stream, and, after a course of half-a-mile, forms the north-eastern boundary-line along the whole side of the parallelogram, and then, at the point of leaving the parish, unites with Keith water to form the Tyne. All the streams afford excellent trouting, and have a sufficient fall and quantity of water to drive machinery. Iron-ore abounds in many places; and there are appearances of coal. In the higher district, the climate is sharp and cold, and, in the lower, more temperate; and, on the whole, it is so salubrious that epidemical distempers, when prevailing in neighbouring parishes, are here seldom and but partially known. On the estate of Whiteburgh are faint vestiges of a Roman castellum stativum, which consisted of 3 concentric circular walls 15 feet distant from each other, each 16 feet thick, and the exterior one enclosing an area of more than an acre. The ruins were carried off at different times during last century, as materials for the mansion, offices, and farm-houses of Whiteburgh.—Keith-house, one of the seats of the Earl Marshall, though of no higher antiquity than 1590, and entirely dilapidated by subsequent proprietors, deserves special notice. Built in the form of a hollow square, one entire side of it, 110 feet in length, and 3 stories in height, was fitted up and used as a hall; and the edifice was, in other respects, suited to the splendour of a family who, at the period of its erection, were the most powerful and opulent in the kingdom. The timber employed in constructing it, was a present from the king of Denmark, as an expression of the high opinion he conceived of the Earl, when negotiating the marriage of the Princess Anne of Denmark with James VI.—The parish, though not traversed by any great line of road, is very abundantly provided, even in its uplands, with facilities of communication. Population, in 1801, 785; in 1831, 875. Houses 184. Assessed property, in 1815, £8,507.—Humber is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patrons, the Crown, and the Earl of Hopetoun. Stipend £272 3s. 7d.; glebe £10. Unappropriated teinds £1,162 16s. 6d. There are two parochial schools, attended by a maximum of 84 scholars; and one non-parochial school, attended by a maximum of 49. The parochial schoolmasters have each about £14 fees, and respectively £28 19s. 10d., and £25 13s. 3d. salary. The parish comprehends the ancient districts of Keith-Hundeby and Keith-Marshall. The adjunct Hundeby was the name of a hamlet near the church of the former district, and has been vulgarized into Humber. The name Keith

seems to be the British *Caeth*, 'confined or narrow,' and may have alluded to the strait channel hemmed in by the steep banks of Keith water. David I. gave the district of Keith-Marshall, or the north-west half of the present parish, to Hervey, the son of Warin, and Keith-Hundeby, or the south-east half, to Symon Fraser. As the church stood within the latter district, Hervey erected a chapel in his own territory for the accommodation of his tenants, and, according to established custom, settled an yearly tribute to the mother or parish church. Keith-Hundeby being afterwards given to the monks of Kelso, a dispute so keen arose between them and the proprietor of Keith-Marshall respecting the amount of the tribute, that it could be decided only by a special adjudication on the part of Joceline, bishop of Glasgow, and Osbert, abbot of Paisley. By intermarriages, the manors of the two districts came, in the 13th century, to be united in one family. During the reign of Alexander II., Keith-Marshall was made a distinct parish with its chapel for a separate and independent church. In the reign of Charles I., William, Earl Marshall, who lineally held the patronage of this church by grant of Robert Bruce to his ancestors, and, at the same time, inherited the manors of both districts, sold the whole property in consequence of the inextricable difficulties in which he had become involved by his politics.

HUME, or HOME, an ancient parish at the southern verge of Berwickshire, now annexed to Stirling in Roxburghshire: see STITCHEL. The parish was anciently four times its present extent, and, in the 12th century, comprehended a considerable part of Gordon and Westruther. The Earls of Dunbar, who were of old the lords of the manor, originally held the patronage of the church. But, in the 12th century, the monks of Kelso obtained possession, not only of the church, but of the whole parish; and they obtained the territory of Gordon and a large part of Westruther, to be erected into parochial independence. The old parish of Hume was, in consequence, reduced to nearly its present limits.

HUME, or HOME, a small village and an ancient castle near the centre of the abrogated parish of the same name; 3 miles south from Greenlaw, 2 north from Stirling, and 5 north-west from Kelso. They stand on the summit of a conspicuous hill, which rises 898 feet above the level of the sea. The village is in a decayed and decaying condition; but anciently it spread out to a considerable extent, and teemed with the retinue and the dependents of one of the most powerful baronial families of a former age.—The castle, once the seat of the potent Earls of Hume, and one of the chief objects of antiquarian interest in Berwickshire, was 50 or 60 years ago in so prostrate a condition as to exist only in vestiges nearly level with the ground. But it was, in a rude sense, restored from its own materials by the last Earl of Marchmont, or at least some walls of it were re-edified and battlemented; and seen from some distance, it now appears, on its far-seeing elevation, to frown in power and dignity over the whole district of the Merse, and a considerable part of Roxburghshire, and constitutes a very picturesque feature in the centre of the wide-stretching landscape. In its original form, it was a lofty and imposing structure; and from the end of the 13th century, when it became the seat of its proud barons, increased in strength with the gradual augmentation of their wealth. But as it could not resist the play of artillery, it was carelessly allowed, after the invention of gunpowder, to go to ruin. A drawing of it may be seen in Grose's Antiquities. The wall and traces of the vaults still exist: and the area—at least half an acre within the outer wall—is now used as a kitchen

garden. The castle figured largely in the history of the times preceding the Restoration, and comes prominently, or at least distinctly, into notice toward the close of the 13th century. The family of Hume or Home sprang, by lateral branches, from the powerful and noted Earls of Dunbar. Ada, the daughter of Patrick, the sixth of these Earls, obtained from her father in the early part of the 13th century, the lands of Home, "in liberum maritagium," and married her own cousin, William, the son of Patrick of Greenlaw, who was the second son of the 4th Earl of Dunbar, Gospatrick. William assumed the name of Home from the lands brought to him by Ada, and transferred it to his posterity. During the reign of Robert III., Thomas Home acquired by marriage the lordship of Dunglass. The family held Home, Greenlaw, Whiteside, and other lands in Berwickshire, under the Earls of March; and, after January 1435, when these Earls incurred forfeiture, they acquired independence, and became tenants of the Crown. As they had risen on the fall of their chiefs, and now followed the fortune of the Dunglasses, they were often appointed conservators of the peace with England. Sir Alexander Home, who succeeded to the property in 1456, was appointed, by the prior of Coldingham, bailie of the several lands belonging to the convent,—an office on which he and his successors placed a high estimate, which they found, by means of an alchemy of their own, to be not a little lucrative, and for the retention of which in their possession they strenuously and perseveringly contended. In 1465, Sir Alexander sat in the estates among the barons; and, in 1473, he was created a lord of parliament. Using with stringent vigour his power as bailie of Coldingham to seize the property of the convent, and make it his own, he was enraged by James III.'s annexation of the priory and its pertinents, in 1484, to the chapel-royal of Stirling, and now attached himself and all his strength to the party of traitorous nobles who plotted the King's death. In 1488, immediately after the unhappy monarch fell a victim to their machinations, Alexander Home, the heir of the first Lord Home, obtained a joint share of the administration of the Lothians and Berwickshire during the nonage of James IV., and was constituted great chamberlain for life; and, in 1490–1, he was appointed by parliament to collect the King's rents and dues within the earldom of March, the lordships of Dunbar and Cockburnspath, Stirlingshire, and Ettrick Forest; and he was thus made dictator of Berwickshire and a ruler of the land. In 1492, he—or a son of his of the same name, for there is inextricable confusion in the historical authorities—succeeded to the lordship of Home, on the death of the first Lord; and he soon after obtained from the infancy of James IV. various lands in the constabulary of Haddington. In 1506, Alexander, the 3d Lord Home, succeeded to his father's office of great chamberlain, to his estates, and to his political power; in 1513, he engaged, as warden of the eastern marches, in a sharp skirmish at Millfield on the Tweed, and, leaving his banner in the field and his brother in captivity with the enemy, sought safety in flight; later in the same year, he led, jointly with Huntly, the left wing of the Scottish army at the battle of Flodden, and left many of his kinsmen and clansmen dead on the field, who fell in a strenuous defence of their valorous and unfortunate King; and immediately afterwards, he was declared one of the standing councillors of the Queen-regent, and appointed the chief justice of all the territories lying south of the Forth. After the expulsion of Margaret from the regency, and the accession to it of the Duke of Albany, Lord Home—who had been

venially using his great power and influence for the amassment of wealth and the promotion of miserly intrigues—plotted with the dowager queen and her husband Angus to seize the person of the infant king, and drawing upon himself the scourge of civil war, saw his fortlet of Fast castle razed, his seat of Home castle captured, and his estates overrun and ravaged, and was obliged to cross the border, and cry for help to the English. He afterwards made predatory incursions into Scotland, was ensnared by Albany and made prisoner, effected his escape from Edinburgh castle, became restored to the regent's favour and to his own possessions, anew embroiled himself with Albany, and, being inveigled to Edinburgh, was convicted in parliament of many crimes, and, in October 1516, publicly and ignominiously put to death. His many offices of great importance were bestowed upon aspirants who had no connexion with his family; and his titles and large estates were forfeited, and, till 1522, remained vested in the Crown. His kinsman, however, took fearful revenge. Home of Wedderburn beset Anthony de la Bastie, who had obtained the office of warden of the marches, and put him to death at Langton in the Merse with circumstances of savage ferocity; and, heading a strong party of his border marauders, he seized the castles of Home and of Wedderburn, and maintained possession of them in defiance of the government. Though formally accused before parliament of treason, the Homes, partly by compromise, and partly by intrigue, were not only saved from conviction, but reinstated in political favour. In 1522, George Home, the brother of the attainted lord, was restored to the title and the lands of the family; and, though he repeatedly embroiled himself, and was twice castigated and imprisoned, by indulging the turbulent spirit which had ruined his predecessor, he did good service in 1542, first by repulsing, jointly with the Earl of Huntly, an incursion by Sir Robert Bowes and the Earl of Angus, and next by opposing and harassing the army led into Scotland by Norfolk. In 1547, in a skirmish which preceded the battle of Pinkie, he received a wound of which he died; and his son and heir being at the same time taken prisoner, Home castle, after a stout resistance by Lady Home, fell into the hands of the Protector Somerset, and was garrisoned by a detachment of his troops. In 1548–9, Alexander, the 4th Lord Home, distinguished himself in the campaigns against the English, and, retaking his family castle by stratagem, put the garrison to the sword. In 1560, he sat in the Reformation parliament; in June 1567, he signed the order for imprisoning Mary in Lochleven castle; and after the Queen's escape, he led 600 followers to the battle of Langside, and, though he received several wounds, is said to have there turned the fortune of the field. In 1569 he veered about, and joined the Queen's friends; in 1571, he was taken prisoner in a factional or party skirmish with Morton, in the suburbs of Edinburgh; in 1573, he was convicted in parliament of treason; and 1575, he died in a state of attainer. Alexander, his son, was put by parliament, in 1578, into possession of his title and estates; in 1589, when James VI. sailed to Denmark to marry the Princess Anne, he was named among those nobles to whom the conservation of the public peace could be confided; in subsequent years he struggled to defeat the seditious purposes of the turbulent Earl of Bothwell, and was rewarded with the grant of the dissolved priory of Coldingham; in 1599, being a Roman Catholic, he was sent by the King on a suspicious embassy to the Papal court; in 1603, he accompanied James VI. to England; and in 1605, he was created Earl of Home. James Home, his son, suc-

ceeded him in his titles and estates in 1619; and he was, in his turn, succeeded, in 1634, by Sir James Home of Cowdenknows. During the civil wars which succeeded, he is said to have been distinguished for his loyalty; and he seems certainly to have been not a little obnoxious to Cromwell. In 1650, immediately after the capture of Edinburgh castle, Cromwell despatched Colonel Fenwick at the head of two regiments to seize the Earl's castle of Hume. In answer to a peremptory summons to surrender, sent him by the Colonel at the head of his troops, Cockburn, the governor of the castle, returned two missives, which have been preserved as specimens of the frolicking humour which occasionally bubbles up in the tragedy of war. The first was: "Right Honourable, I have received a trumpeter of yours, as he tells me, without a pass, to surrender Hume castle to the Lord General Cromwell. Please you, I never saw your general. As for Home castle, it stands upon a rock. Given at Home castle, this day, before 7 o'clock. So resteth, without prejudice to my native country, your most humble servant, T. COCKBURN." The second was expressed in doggerel lines, which continue to be remembered and quoted by the peasantry, often in profound ignorance of the occasion when they were composed:—

"I, Willie Wastle,
Stand firm in my castle;
And a' the dogs o' your town
Will no pull Willie Wastle down."

Home castle, however, when it felt the pressure of Colonel Fenwick's cannon, and saw his men about to rush to the escapade, very readily surrendered to his power, disgorged its own garrison, and received within its walls the soldiery of Cromwell. James, who was Earl when the civil wars began, survived all their perils, and, in 1661, was reinstated in his possessions. Dying in 1666, he was successively followed in his earldom by three sons,—Alexander,—James, who died in 1688,—and Charles, who did not concur in the Revolution, and opposed the Union. Hume castle and the domains around it passed afterwards into the possession of the Earls of Marchmont; a branch of the Hume family, who, for a considerable period, were wealthier and more influential than the main stock, but who failed toward the close of the last century to have male heirs, and, in consequence, ceased to perpetuate their titles. The earldom of Home still survives in the descendants of the ancient family, who now have their seat at Hirsell.

HUNIE, a small island of Shetland, abounding with rabbits, about a mile from the island of Unst.

HUNISH, or RU-HUNISH, the northern promontory of the isle of Skye.

HUNTERS BAY, or RIGG BAY, a bay on the east coast of Wigtownshire.

HUNTLY, a parish in Aberdeenshire, bounded on the north by Cairny and Drumblade; on the east by Culsalmond; on the south by Gartly; and on the west by Glass and Cairny. It extends to about 6 miles in length by 4 in breadth. Houses 748. Assessed property, in 1815, £4,723. Population, in 1801, 2,863; in 1831, 3,545. Huntly comprises the old parishes of Dumbenan and Kinore, which were united in 1727, and the new parish was named Huntly in compliment to the Duke of Gordon's eldest son. The district is watered by the Deveron, which intersects it from west to east; and the Bogie, which flows towards the Deveron from the south, and joins it a little below the town of Huntly. Both of these rivers are here crossed by substantial bridges, while their banks present some beautiful and romantic scenery. Near their junction traces have been discovered of that most sparingly distri-

buted, though by no means rare mineral, plumbago, or black lead, now sometimes called graphite, which is a compound of carbon and iron, and really contains no lead whatever: the specimens were found during attempt to discover lead. Limestone is found in this vicinity, some of which receives a very high polish, and is little inferior to marble. This district is hilly and bleak; but great improvements have been effected, and there are many acres, especially on the banks of the rivers, which are naturally fertile, and form fine arable land. The hills and eminences afford good pasturage, and many of them are adorned with thriving plantations of oak, fir, elm, birch, &c. In particular, the whole of St. Mungo's hill, in the Kinore, or eastern, district, is enclosed and planted. On the west side of this hill is St. Mungo's well, and on the summit is a small lake the bed of which resembles a crater; and abundance of hard and porous matter, like lava, or the scoræ of a forge, with a light spongy stone like pumice-stone, has been found around it. On the banks of the Bogie and the Deveron there are bleach-fields, and corn, barley, and other mills: both rivers contain trout; those of the Bogie being considered particularly good.—Near the bridge of Deveron and the town of Huntly stand the ruins of Huntly castle, the ancient residence of the Gordon family, which was destroyed after the battle of Glenlivet, in 1594; and in the same vicinity, on the opposite side of the Deveron, is their elegant modern mansion, Huntly lodge, surrounded by plantations and pleasure-grounds.—The parish is in the presbytery of Strathbogie and synod of Moray. Patron, the Duke of Richmond. Stipend £185 13s. 9d.; glebe £25. Church built in 1805; sittings 1,800. In consequence of the celebrated Strathbogie proceedings, the foundation-stone of a new church in connexion with the Establishment was laid at Huntly on the 28th of July, 1840; sittings 1,100; estimated cost £1,400.—An Episcopal congregation has been established here since before the Revolution. The chapel was built by subscription in 1770; sittings 140.—An United Secession congregation was established here in 1770. The chapel was built about the year 1809. Sittings 340. Stipend £80.—An Independent congregation was established about 70 years ago. The present chapel was built in 1802. Sittings 500. Stipend £100, with manse and garden.—There is also a Roman Catholic congregation: time of establishment unknown. Chapel built in 1834; cost, with a dwelling-house attached, £1,660 12s. 2d., of which £1,000 were given by Mr. Gordon of Wardhouse. Sittings 350.—Schoolmaster's salary £34 4s. 4½d., with £44 school-fees, and £8 of other emoluments. There are 9 private schools in the parish, and a very handsome free-school, founded by the Duchess of Gordon.

HUNTLY, a burgh-of-barony, and a neat modern town, in the above parish, occupies a dry and salubrious, as well as beautiful situation, in the centre of a fertile district, on the peninsula formed by the confluence of the Deveron and the Bogie; and distant 18 miles south-east of Fochabers; 21 south-west of Banff; 39 north-west of Aberdeen; and 145 north of Edinburgh, on the road between Aberdeen and Inverness. The vicinity of Huntly, before the rise of the town, consisted of little else than barren heath and marshy swamps; but it is now in a state of high cultivation, adorned with trees and numerous neat villas. The hills in its less immediate vicinity are in general covered with thriving plantations. Having arisen since the beginning of last century, Huntly has been laid out on a neat and regular plan, and the place has altogether an air not only of comfort, but even of elegance. The town consists of a series of

well-built streets: the two principal crossing each other at right angles, and forming a spacious market-place or square. The streets are lighted with gas. The parish-church, and the Episcopal, Secession, Congregational, and Roman Catholic chapels, already noticed, are all in the town. There are several religious and benevolent societies, two dispensaries, and a literary society, besides the parochial and other schools. The burgh is a barony under the Duke of Gordon, in whose family was the title of Earl of Huntly, till their elevation to the dukedom, when the earldom was made a marquise. The title of Marquis of Huntly descended to the Earls of Aboyne, at the death of George, 5th Duke of Gordon, in 1836, when the dukedom became extinct. The chief manufacture in Huntly is that of linen thread; but since the termination of the war this trade, as well as the manufacture of linen cloth—which formerly flourished here, to the extent, it is said, of £40,000 per annum—has gradually declined. Large quantities of butter, cheese, eggs, pork, &c., are exported from this vicinity to the London market. The market of Huntly is held on Thursday, and there are several annual fairs. There are three branch-banks, and several insurance agents in the town. Population, in 1831, 2,585. During the great floods in August 1829, the town of Huntly was almost surrounded with water, but fortunately no lives were lost, and little damage was otherwise sustained. The ancient one-arched bridge across the Deveron in this vicinity, from the middle of which the views are very fine, withstood the pressure of the current, and still exists. Across the Bogie, and leading from the south-east side of the town, is another good bridge of 3 arches.

HURLET, a village in Renfrewshire, 3 miles south-east of Paisley. Here coal has been wrought for upwards of 300 years. The seam is 5 feet 3 inches thick, declining eastward with a dip, which is variable, but may, on an average, be accounted 1 in 7. The coal at this place is nearly exhausted; but it still abounds on some neighbouring lands. The manufacture of sulphate of iron or copperas, was introduced into Scotland by Messrs. Nicolson and Lightbody of Liverpool, who established their works at Hurlet in 1753, having previously secured by contract a supply of the pyrites, and other material fit for their processes, found in working the coal, at 2½d. per *hutch* of 200 weight. Till 1807, when a similar manufacture was begun on the adjoining lands of Nitshill, this was the only copperas work in Scotland. In 1820, the Hurlet copperas works were purchased by Messrs. John Wilson and Sons, and converted into an extensive manufactory of alum. The alum manufacture was also first introduced into Scotland by Messrs. Nicolson and Lightbody, who prepared considerable quantities at Hurlet in 1766 and 1767; but their process being defective, it was abandoned in the course of two years; and it was not till 1797, when works were erected here by Mr. Mackintosh of Crossbasket, and Mr. Wilson of Thornly, and their partners, that the making of that article was successfully established. Since that period, the works now mentioned, as well as that established in 1820, have been producing a large and steady supply of alum, manufactured on correct chemical principles. Large quantities of muriate of potash, and sulphate of ammonia, are also made in connexion with this alum process. Ironstone abounds at Hurlet, and the working of it was a few years ago actively commenced by Messrs. Wilson.

HUTTON, a parish in the district of Merse, at the south-eastern verge of Berwickshire. It is, in a loose sense, of a triangular form; but has so many curves and indentations in its outline, as to be of a very irregular figure. It is bounded on the north by

Chirnside, Foulden, and Mordington; on the east by Mordington and the Liberties of Berwick; on the south-east by England; on the south-west by Ladykirk; and on the west by Whitsome and Edrom. Measured as a triangle, it extends 4½ miles on the north side, 3½ on the south-east side, and 4½ on the south-west side. The Whitadder is its boundary-line over the whole of the north, and 1½ mile of the east, and runs partly between rocky banks of inconsiderable height, and produces a few salmon, and great plenty, as well as great variety of trout. The Tweed rolls its majestic volume of waters, in a beautifully curved line, 3½ or 3¾ miles along its south-eastern boundary, overlooked by gentle undulations of the surface along its banks, yielding large supplies of salmon, whiting, and grises, and brings up the tide with a sufficient depth of waters for wherry navigation. The inequalities of the surface along its banks, and similar inequalities along those of the Whitadder, possess capabilities, with the aid of more plantation than they possess, of producing a picturesque effect; and though rising, in the average, to only about 150 feet above sea-level, they beautifully diversify the luscious yet tame plain in the midst of which they rise, and relieve its luxuriant but flat expanse from an aspect of monotony. All the surface of the parish, inland from the rivers, is, with some scarcely noticeable exceptions, nearly a dead level; but everywhere it is thoroughly cultivated, and spreads out before the eye of an agriculturalist the most pleasing of all features of scenery. The soil on the banks of the streams is a deep, rich loam, remarkably fertile, and well-adapted to wheat; and, over a breadth of about a mile in the interior, it is thin, and rests on a strong clay, and, though not infertile, demands the expenditure upon it of skill and labour. The climate is, in general, dry, and possessed of more than average salubrity. Sandstone, though at a considerable depth beneath the surface, everywhere abounds, and on the banks of the Whitadder, is a small stratum of prime gypsum. Paxton house and Tweed-hill, both situated on the Tweed, at a short distance from each other—the latter a neat mansion, and the former a massive and somewhat superb though rather heavy pile, constructed from a design by the famous Adams—send down their wooded demesnes to the margin of the river, and reciprocate with it enhancements of beauty. Spittal house, near the centre of the parish, is a pleasing mansion; and Broadmeadows house, situated on the Whitadder, lifts up a Grecian front of fine white-coloured sandstone. Hutton hall, standing on the Whitadder, in the north-west corner of the parish, consists of a square tower of remote but unascertained antiquity, and an attached long mansion of patch-work structure and various dates. In its most ancient part it is a remarkable specimen of an old Border strength, and is rendered interesting by being still inhabitable. On the estate of Paxton is a manufactory of bricks, house-tiles, and tiles for drains. In various localities are 3 corn-mills, whence flour and decorticated barley are sent, in considerable quantities, to Berwick, for exportation to London. On the Tweed are several regular and productive fishing-stations, chiefly for the capture of salmon in subordination to the London market. Near Tweed-hill house a suspension bridge, 360 feet in length, extremely light and elegant, and constructed, in 1820, at an expense of upwards of £7,000, under the superintendence of Captain Samuel Brown, R. N., conducts a carriage-way across the Tweed. The parish is intersected by the turnpikes between Berwick and Dunse, and between Berwick and Kelso, by way of Swinton; and is amply provided, in addition, with well-kept subordinate roads. The vil-

lage of Hutton stands half-a-mile south of the Whitadder, at about equal distances from the eastern and the western limits of the parish, and contains a population of 260. There is another village, called **PAXTON**, which see. Population of the parish, in 1801, 955; in 1831, 1,099. Houses 211. Assessed property, in 1815, £10,302.—Hutton is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £235 16s. 3d.; glebe £25. Unappropriated teinds £405 1s. 10d.—Besides the parochial school, there are three private schools in the parish, viz. two in the village of Hutton, and one in the village of Paxton. The master of the latter has a free school and dwelling-house from Mr. Home of Paxton-house. The present parish comprehends the ancient parishes of Hutton and Fishwick. Hutton, or *Hotten*, signifying 'wood-town'—was the northern district; and Fishwick—or 'the fishing hamlet'—was the district on the south and along the Tweed. The monks of Coldingham obtained Fishwick from the Scottish Edgar, and held it till the Reformation. The ruins of its church and cemetery still exist. The Rev. Philip Redpeth, the editor of the *Border History*, and the translator of Boethius' *Consolations of Philosophy*, was minister of Hutton.

HUTTON AND CORRIE, an united parish in the district of Annandale, Dumfries-shire. It commences on the north in a point, and very regularly, but slowly, expands, till, at a distance of $7\frac{1}{2}$ miles, it has acquired a breadth of $3\frac{1}{4}$ miles; it then, over a distance of $1\frac{1}{2}$ miles, first expands to $4\frac{1}{2}$ miles, and next contracts to $3\frac{1}{2}$; and it now suddenly expands to $5\frac{1}{2}$ miles, and thence, over $4\frac{1}{2}$ miles to its southern extremity, regularly contracts to $2\frac{3}{4}$. Its entire length is thus $13\frac{3}{4}$ miles from north to south, while its average breadth is somewhat short of 3. It is bounded on the east by the water-shedding-line of heights between Annandale and Eskdalemuir; on the south-east and south by Tundergarth; and on the west by Dryfesdale, Applegarth, Wamphray, and Moffat. Dryfe water rises nearly at the northern point of the parish, intersects all the northern division nearly along its middle, and bending to the south-west, passes away into Applegarth, a mile below Hutton church: see the **DRYFE**. Milk water comes in from the north-east about $1\frac{1}{2}$ mile below its source, and, over a distance of 6 miles, traces the south-eastern and the southern boundary. Corrie water rises in a lochlet of its own name on the eastern boundary, flows south-westward $4\frac{1}{2}$ miles through the parish, and then tracing the western boundary over a distance of $2\frac{1}{4}$ miles, falls into the Milk. Of 28,000 imperial acres, which the whole area is computed to comprehend, about 3,000 are arable, about 4,500 are employed for the rearing and grazing of black cattle, and about 15,000 are occupied as sheep pasture. The black cattle are Galloways; and the sheep, with some trivial exceptions, are all of the Cheviot breed. There are in the parish 3 in-

considerable hamlets. In various localities are remains of ancient fortifications, two of which only are noticeable. In an angle formed by the Dryfe, 6 miles from its source, Carthur hill, rising almost perpendicularly to the height of 400 or 500 feet, bears aloft on its pinnacled summit the vestiges of what seems to have been a strong fort. On one side of the vestiges there is a well, which was evidently bored by artificial means in the rock, and which still holds water. A hill opposite to Carthur, immediately on the other side of the Dryfe, has similar vestiges, though no well; and between the two hills, on the banks of the stream, there appear to have been two strong square enclosures, which may have served as a connecting link between the elevated fortifications. The parish, though hilly and sequestered, and long treated as if but the outskirts of a wilderness, is now intersected by two important lines of road, and traversed by several subordinate roads, and is accommodated with bridges across the rivers. Population, in 1801, 646; in 1831, 860. Houses 133. Assessed property, in 1815, £6,795. The parish is in the presbytery of Lochmaben, and synod of Dumfries. Patron, Johnstone of Annandale. Stipend £241 3s. 1d.; glebe £15. Unappropriated teinds £326 18s. 7d. The church was built about 130 years ago, and enlarged in 1764. Sittings about 320.—There are parochial schools for both of the united parishes, attended jointly by a maximum of 180 scholars. Hutton schoolmaster's salary £27, with £20 fees and £2 10s. other emoluments. Corrie schoolmaster's salary £42 6s. with £3 fees, and £10 other emoluments.—Hutton consists of the northern division of the present parish, or the part of it which is watered by the Dryfe. It was originally a chapelry dependent on the church of the old parish of Sibbaldby, now annexed to Applegarth; and, after various disputes and settlements, was erected into a separate parish previous to the 13th century. In 1220 it was converted into a prebend of the chapter of Glasgow. Corrie, or the southern division of the united parish, was, as to its lands and ecclesiastical patronage, held in the 12th century by a vassal family of Robert de Bruce; and it continued in their possession, and gave them its name till the reign of James V.; and at that date it was carried by the heiress of Corrie, by matrimonial alliance, into the possession of the Johnstones. Hutton and Corrie were consolidated into one parish in 1609.

HUTTON (LITTLE). See **DRYFESDALE**.

HYNDFORD, a small barony and district in Lanarkshire, which gave the title of Earl to the noble family of the Carmichaels of Hyndford. Sir James Carmichael of Hyndford was elevated to the peerage by the title of Lord Carmichael, in 1647, and his grandson was created Earl of Hyndford in 1701. The peerage became dormant at the demise of the 6th Earl, in 1817.
